According to the report on the working of the Factories Act in Madras Presidency during 1914 the number of factories increased from 354 to 391 and the operatives from 78,764 to 81,217. The past four years witnessed a great increase in the number of women operatives, of whom there were 14,175 in 1914 as against 6,468 in 1911; the number of girl operatives increased from 773 to 1,926 in the same period.

The additional factories registered comprise 15 rice mills, 2 railway works, 6 oil presses, 7 cotton ginning, 1 jute mill, 1 tannery, 1 leather works, 1 tile works, and 3 printing presses. No factories were established developing entirely new lines of industry. As in 1913 a number of decorticators have been installed in cotton-ginning factories for shelling groundnuts, and in addition a small soap works has been added to one rice factory. The new spinning mill of the Madura Mills Co. was completed and over 60,000 spindles were at work at the end of December.

Of the total number of operatives in all factories 5,353 were employed in Government and local fund factories, an increase of 475 over 1913, while the remainder were employed in privately owned factories, 23,063 being in cotton and 1,839 in jute spinning and weaving mills.

Monazite Sand in Travancore.

Local newspapers have lately been directing attention to the possibilities for commercial development of the large deposits of monazite sand in Travancore, South India, the statement being made that Brazil has hitherto been supplying the gas-mantle industry with this sand, but that the war has dislocated the trade and supplies are being sought from other countries as well. The production of monazite in British India in 1913 was valued at over \$200,000. Most of the output was exported in a raw state. It is used for the extraction of thorium and carium, two rare earths upon which the brilliancy of gas mantles depends. A European firm recently purchased land in South Travancore for the express object, it is said, of carrying on an export trade in monazite. It is now announced

that under a recent order of the British Government the export of monazite sand from British India except to the United Kingdom is prohibited.

Proposed Commercial Museum at Madras.

The South India Chamber of Commerce at Madras is desirous of having opened in this city a commercial museum similar to the proposed British India Mercantile Bureau to be established at Calcutta, details of which were published in *COMMERCE REPORTS* for August 9, 1915. It is suggested that exhibits obtained for the Calcutta collection should be duplicated for Madras, as the latter city is far away from Calcutta, and also the addition of a museum to the Bureau of Industrial Information started here recently would, the South India Chamber maintains, be a valuable help to the trade of this port.

SPHAGNUM MOSS AS A SURGICAL DRESSING.

The present need for enormous quantities of hospital supplies in Europe has directed attention to many articles that heretofore have been put to little use in surgery. One of these is the common bog moss, *Sphagnum cymbifolium*, which is now being employed as an absorbent dressing on the Continent. A short description of the method of gathering and preparing the moss, transmitted by Consul Augustus E. Ingram, of Bradford, England, was published in *COMMERCE REPORTS* for September 15, 1915; as supplementing this earlier article, the following clippings from the Manchester Guardian should be of interest:

Another interesting outdoor industry—or, rather, occupation, for most of it is voluntary work—has received an impetus through the war. This is the gathering and preparing of sphagnum, or bog moss, for surgical dressings. Many tons of this moss are sent from collecting depots in Scotland to the military hospitals in Edinburgh. Smaller quantities even find their way from the English lake district to London hospitals. Sphagnum moss, in the ordinary course of events, becomes the chief constituent of peat. Proprietors of grouse moors, however, do not at all object to the removal of large quantities of this moss, as in it are laid the eggs of the heather beetle, which causes so much disease in heather. There are bright and dark green kinds of sphagnum, but the best sort for hospital dressings is pink. It has long, soft, close-growing fibers and resembles chenille or the ravellings of a thick carpet.

Points of Superiority.

The reputation of sphagnum moss as a surgical dressing has spread from the British Isles. Many cases full of these dressings have been used in hospitals at Boulogne and elsewhere in France and by French and Belgian Red Cross hospitals, while some have gone as far as Malta, Alexandria, Gallipoli, and Serbia. In some particulars the sphagnum moss is much superior to other dressings, and its properties are valuable in the treatment of compound fractures due to gunshot wounds. It has greater springiness than cotton wool, and the patients like it better for that reason. It has the power not only of absorbing discharges, but of diffusing them throughout the whole pad, while cotton wool absorbs quickly, but passes the discharge straight through to the bandages and bedclothes. The moss dressing also disinfects, possibly by the air in its numerous fine tubules. Sphagnum has long been known to gardeners as a moist moss in which to grow some plants, especially orchids, but it is chiefly during the present war that extensive use has been made of it by surgeons in the dressing of wounds.

While, in the United States, large quantities of bog moss are used by florists and nurserymen for packing plants and trees, so far as can be ascertained it is not used in this country for dressings.

UTILIZING SOUTHERN SCRUB PALMETTO.

[Special Agent Garrard Harris.]

The scrub palmetto (of which there are several varieties, the most common being *Serenoa serrulata*) is a veritable pest in Florida, where vast areas are densely covered with the growth. Heretofore it has been put to little economic use; now, however, a process has been perfected whereby mattings, binder twine, and the like are made from the fiber extracted from the leaves. This fiber takes dye readily, and its wearing qualities are said to surpass anything yet found in the way of floor coverings. Machines are set up in the palmetto fields and the leaves fed into them while green.

An aspect of the new industry that is of considerable value, aside from the manufacture of floor coverings, is that the twine made from the leaves is easily handled by grain binders, knots being tied without difficulty. For the manufacture of twine, however, the species known as the "cabbage" palm (*Sabal palmetto*) is employed, as it yields a fiber 3 to 5 feet long.

[Samples of the palmetto products (rug, binder twine, etc.) may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices. Ask for file No. 766.]

Native American Species.

A standard reference work states that the "cabbage" palm (*Sabal palmetto*) is native to the maritime parts of the United States from Florida to North Carolina. It attains a height of 40 to 50 feet and has a crown of large palmate leaves, the blade 1 to 5 feet in length and the footstalks long. The flowers are small, greenish, and in long racemes; the fruit black, about as long as a pea pod, and inedible. The leaves are made into hats, mats, etc., and are also largely used for thatch. The terminal bud or "cabbage" is often eaten. The wood is extremely porous, but is preferred to every other kind of wood in North America for wharves, as it is very durable and not liable to be attacked by the teredo. The streets of Savannah and some other Southern cities are lined with these trees.

A second American species, the "saw" palmetto (*Serenoa serrulata*), occurs from South Carolina to Florida. It has a short stem and numerous clustered fan-shaped leaves, while its berries have certain medicinal properties. A still smaller species is the dwarf palmetto (*Sabal adansonii*), a stemless plant which bears a cluster of leaves a foot or two long.

Not Commercially Exploited.

So far the scrub palmetto of Florida has been regarded as of little economic value. The leaves have been cut and shipped abroad (mainly to Germany), where they are turned into the "artificial palms" so extensively used for permanent decorative effects. Exports of palmetto leaves to Germany from the Florida customs district had an aggregate value of \$11,650 in the year ended June 30, 1914. The shipments to other States in this country, of course, are very much larger. The fiber has been used to some extent for mattress stuffing, and upon special order has been utilized in mixing plaster.

While the plant contains some tannic acid, the commercial production of tanning extract has so far not been attempted on a large

scale because of the competition of other materials more easily and cheaply obtained. Bees evince a fondness for the flowers of the scrub palmetto, but the resulting honey is dark colored and has a peculiar taste.

SWEET WINES FOR SOUTH CHINA.

[Vice Consul A. E. Carleton, Hongkong, Sept. 18.]

It is still an open question, apparently, among the larger wholesale liquor dealers in Hongkong whether a reasonably large market could be formed among the Chinese for sweet wines at a moderate price. At present there is a fair sale of this class of wines, but the trade is by no means important.

Of all the sweet wines, the Chinese are particularly partial to port, and the curious fact is that the best port in the local market is sold to the Chinese almost exclusively. The average quality of port is, however, the usual kind sold. The Chinese are likewise taking to a so-called champagne of the cheap kind, and these are about the only two sweet wines consumed by the Chinese. The European trade is not large, although considerable quantities are sold to ships; but these wines can be taken out of bond in Hongkong and do not properly enter into the local market consumption.

The natural sweet wines come from Spain and Portugal, and Marsalla, Muscatel and the like bring a price of from \$5 to \$6 gold per dozen quarts. Italian vermouth, which is classed among sweet wines, is by far the most important in bulk imported and brings about \$5.50 gold per dozen liters (liter=1.056 quarts). In regard to port, the prices vary a great deal, or from \$5.50 to \$25 gold per case of 12 quarts, duty paid.

An Australian vermouth is being introduced into the Hongkong market since both the French and Italian product have increased a great deal in price, but it remains to be seen whether this Australian wine will prove popular. A light claret has a good sale, particularly among the Portuguese residents of the colony. There is no market for hocks, but light white wines are being used somewhat more extensively than formerly.

Under the Hongkong liquor ordinances, 1909 and 1911, the following duties are in force and are included in the prices quoted. Export orders and ships' stores are duty free, and for such these duties will be deducted if shipped in quantities of not less than 2 gallons.

	Gold.
Champagnes and sparkling wines.....per dozen quarts or 2 dozen pints..	\$2. 52
Port, sherry, and Madeira.....do.....	2. 02
Other still wines and home-bottled clarets.....do.....	1. 26
Brandy.....do.....	3. 53

Curaçao, D. O. M., chartreuse and kummel.....do.....	4. 41

AMSTERDAM'S SALES TO UNITED STATES.

(Consul Frank W. Mahin, Amsterdam, Netherlands, Oct. 8.)

The declared value of the exports from the Amsterdam consular district to the United States during the quarter ended September 30, 1915, was \$4,659,350. For the corresponding period of 1914 the value was \$7,818,565; of 1913, \$6,549,854; of 1912, \$6,192,825. The lower value this year is more than accounted for by a slump in tobacco exports. In the September quarter of 1914 the declared value of the tobacco shipped from the Amsterdam district to the United States was \$4,654,758; this year, in the corresponding three months, it was only \$966,336—a difference of \$3,688,422.

It should be noted, however, that tobacco shipments during July—September last year were more than twice the usual value for the third quarter, the value in previous September quarters being about \$2,000,000. The very great value last year is explained by the statement from tobacco dealers that when the war broke out all tobacco belonging to Americans which was in Amsterdam was immediately sent to the United States.

Reasons Assigned for Falling Off in Tobacco.

The relatively small export of tobacco to the United States in the quarter just closed was due to several causes, as explained by dealers. Tobacco bought by Americans in March, April, and May, 1915, was sent immediately to the United States instead of being divided into shipments during July, August, and September, as in other years. This immediate shipment last spring accounts for the fact that in the June quarter the value of the tobacco exports to the United States was 25 per cent more than in the June quarter of 1914.

Other reasons for the lower value of the tobacco exports are the relatively small crop and poor quality of the tobacco which was marketed—this being the growth of 1914. Prices for the varieties bought by Americans were about the same as last year, though the quality was inferior. Dealers state that Americans take the best qualities, and that this year the quantity thereof was too small to supply their usual orders. One dealer says that there has not been a crop for 30 years so "bad" as the one sold this season; but the promise for next year is said to be excellent on account of very favorable reports from the crop now growing in the Dutch East Indies.

The Diamond Business.

A comparison of the chief export article, in value, shows the declared value of diamonds sent to the United States in the September quarters of 1915, 1914, 1913, and 1912 to have been \$2,673,526, \$1,102,738, \$2,775,115, and \$2,872,342. As 1912 and 1913 were normal years, these figures indicate that the diamond business with the United States has practically resumed its usual volume.

The relative condition of the industry will be shown most clearly by a tabulation of the diamond exports to the United States during the first three quarters of the past four years:

Period.	1912	1913	1914	1915
First quarter.....	\$2,046,201	\$3,579,080	\$1,685,620	\$1,202,003
Second quarter.....	3,606,794	4,052,984	2,090,711	1,642,368
Third quarter.....	2,872,342	2,775,115	1,102,738	2,673,526
Total, 9 months.....	8,525,337	10,407,179	5,138,069	5,517,897

The unusually large exports during the first nine months of 1913 were due to the hastening of shipments to avoid the increased American import duty on diamonds taking effect in October of that year; the fourth quarter's diamond exports amounted to only \$663,679.

Value of all Exports for Nine Months.

The total declared value of all exports to the United States during the first nine months of this year was \$13,284,800. During the corresponding period of 1914 it was \$20,574,377; of 1913, \$22,523,671; of 1912, \$20,485,847. The decline of \$7,000,000 and \$9,000,000 this year, in comparison with 1912 and 1913, can be attributed to the smaller exports of diamonds and tobacco. The difference in declared value between this year and 1914 is due to a decline of \$4,100,000 in tobacco, of \$550,000 in hides and skins, of \$500,000 in coffee, and of various smaller amounts in other food products. Coffee entirely disappeared from this consulate's export records for the September quarter of 1915. On the other hand, several articles have increased in value of export this year, such as seeds, paint, paper, and Haarlem oil.

AGRICULTURAL ADVANCEMENT IN THE CAUCASUS.

[Experiment Station Record, U. S. Department of Agriculture, Oct., 1915.]

In response to the increasing demand for assistance in agricultural research and education, the viceroy of the Caucasus, Russia, appointed in 1913 a commission of the leading farmers and specialists to consider the more efficient correlation of the various agricultural agencies. Their report when submitted recommended the concentration of all educational, experimental, and extension work under the Board of Agriculture, with the establishment of agricultural stations at suitable points, the employment of district agriculturists, and a system of advisory work by Government specialists.

A permanent commission was also suggested, with the chief of the agricultural section of the Caucasus as president and with representatives from the Tiflis Botanical Gardens, the Caucasian Sericultural Station, senior specialists of the Board of Agriculture, officials connected with the various land-improvement and educational services, members of the civil veterinary section, and the Imperial Agricultural Society of the Caucasus as members, the commission to be supplemented by the addition of district agriculturists, superintendents of agricultural establishments, other specialists, and in general of all persons competent in agricultural affairs, as desired. A reference section and statistical and editorial bureau were projected.

The early opening of the Tiflis Polytechnic Institute with an agricultural section, the establishment of schools for intermediate agricultural education, and the introduction of practical agriculture into the elementary school system were also advocated. In 1913 about \$500,000 was expended for agricultural advancement in this region, of which \$35,000 was for agricultural organization, \$300,000 for experimental work, \$10,000 for live-stock improvement, \$25,000 for aid to agricultural societies, and \$20,000 for destruction of insects and for exhibitions, meetings, collection of statistics, and other activities.

A NOVA SCOTIA SCHOOL OF SALESMANSHIP.

[Consul General Evan E. Young, Halifax, Oct. 22.]

With the object of increasing the efficiency of clerks and salesmen a School of Salesmanship is being promoted by the Retail Merchants' Committee of the Halifax Board of Trade, and from the support thus far promised by the retail merchants of the city it appears certain that the proposal will soon become a reality.

According to the present plans classes will be held at the Nova Scotia Technical College, located in this city, two or more evenings a week according to the number of clerks and sales people enrolled. All the classroom work will be held in the evening so as to obviate any encroachment upon the clerks' working time. The course will extend over a period of three months and, in addition, textbooks will be furnished for home study and at the lectures demonstrations will be given in the art of selling. The only expense devolving upon those attending the school will be in the purchase of the textbooks, and it is thought that this amount will not exceed \$5. An effort is now being made to obtain the services of a competent instructor, and from the support thus far promised by the local merchants no difficulty is anticipated in providing the funds necessary to finance the undertaking.

The subjects to be dealt with in the course of study include: The Profession of Salesmanship; Methods of Marketing; Health and Appearance; Self-Study and Development; Study of the Customer; Successful Reasoning; Study of Goods or Service; The Conducting of Sales; Retail Salesmanship; Selling to Dealers; Selling of Specialties; Long-Range Salesmanship; Sales Organization and Management; Credits and Collections; Laws that Salesmen Should Know; Correct and Faulty Diction; Selling One's Own Services.

MOTOR-TRUCK DEMONSTRATION IN PARAGUAY.

[Consul Samuel Hamilton Wiley, Asuncion, Sept. 28.]

The representative of an American motor-car company who is now traveling in South America brought to Asuncion on September 22 the first motor truck that has ever been in the Republic of Paraguay. The Banco Agricola, a Government institution, paid the expenses of bringing the truck from Buenos Aires.

Numerous demonstrations of the truck were given, more especially to show its possibilities as a freight carrier and hauler on the bad roads of the country. The President of the Republic, the Ministers of War and Interior, and the Director of Public Works rode on the truck over one of the worst roads and were very favorably impressed. In addition to the actual demonstrations of the truck, motion pictures of its performances were exhibited at the most popular cinematograph for several nights. These pictures attracted considerable attention and have been the subject of no small comment.

It is probable that several of these trucks will be purchased here. There is a plan on foot to form a transportation company using motor trucks to serve districts not on the railway or river, whose sole means of communication at present consists of bullock carts and pack animals.

AMERICAN CYCLES FAVORED BY COLOMBIA.

[Consul Ross Hazeltine, Cartagena, Sept. 10.]

Adverse street and road conditions in the Cartagena consular district have greatly retarded the sales of bicycles and motor-driven vehicles. The very high cost of gasoline and lubricating oil has also tended to restrict imports of motor cycles. The city streets are narrow, and, except for a mile of paved streets, are in poor condition. There are no outlying roads suitable for excursions.

Gasoline costs \$0.40 a gallon retail, and \$0.36 wholesale. Lubricating oil sells at the same price. Both are manufactured locally. In spite of these factors, however, the importations of bicycles, motor cycles, and accessories through the port of Cartagena during the last calendar year were valued at \$15,359, as against \$6,742 during the fiscal year ended June 30, 1914. American manufacturers enjoy about two-thirds of the trade. The customhouse statistics for these periods were:

Countries.	Fiscal year June 30, 1914.	Calendar year 1914.
United States.....	\$4,607	\$11,533
Great Britain.....	1,278	2,761
Germany.....	857	766
France.....		299
Total.....	6,742	15,359

Duty Adds Relatively Small Amount.

The import duty adds a relatively small amount to the original cost. According to item No. 855 of the import tariff schedule, the duty on bicycles, tricycles, and velocipedes, with or without motors, is \$0.05 a kilogram levied on the gross weight. Including the surtax of 2 per cent of the duty, the total duty is equal to \$2.31 per 100 pounds. Thus the duty on a bicycle amounts approximately to \$1.25, if packed lightly, while the duty on a motor cycle is \$7.50 to \$8.

Bicycles are usually sold by the dealers for cash, while motor cycles are purchased on monthly installments. Bicycles for this district should be most fully equipped. The outfit should include lamp, bell, coaster brake, mud guards on both wheels, and a complete tool kit. Motor cycles should be quoted with extra parts.

There are only four motor cycles in this city, and only one active agency. Three of the machines are American made and the fourth is of Italian make. Correspondence and advertising matter should be in Spanish. Weights should be quoted, gross and net, in kilos. Prices may be quoted in American currency.

[A complete list of dealers in and importers of bicycles and motor cycles in Cartagena may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 66523.]

Through the efforts of Consul Augustus E. Ingram, American transparent celluloid sheets have been placed on the Bradford market, a firm in that English city expressing entire satisfaction with the business connection thus formed.

PORTUGUESE DEMAND FOR AMERICAN TOOLS.

An American company which exports machines to various foreign countries informs the Bureau of Foreign and Domestic Commerce that it has learned, through correspondence with Mr. Jorge A. Malheiro, Engineer in Chief of the Portuguese Railways, of an exceptional opportunity for the sale of American tools abroad.

The management of the Portuguese Railways is planning to relocate all its shops, and part of the plan is to be carried out during 1916. It will replace many of its machine tools with new ones, and intends to order them in the United States.

Mr. Malheiro, the Engineer in Chief, suggests that American manufacturers of machine tools would find it advantageous to send catalogues of their goods, and expresses the opinion that there has not been sufficient effort in this country to gain such markets abroad as are offered by Portugal and other smaller countries. The important public service that he represents has not received a single catalogue of any American industry since the opening of the present war, and yet it would gladly look to this country for its supplies.

The American company that has been dealing with the Portuguese official recommends that catalogues be sent to Mr. Malheiro, whose address is Santa Apolonia, Lisbon, and that they should be in Portuguese or French if possible, preferably Portuguese. "At least," it says, "the letters accompanying the catalogues, if the latter are in English, should be in French."

THE BRADFORD WOOL EXCHANGE.

[Vice Consul Hamilton C. Claibourne, Bradford, England, Oct. 12.]

Every Monday and Thursday hundreds of members of the Bradford Exchange meet to buy and sell wool, to arrange the details of transportation and delivery, to contract for fabrics as well as raw materials, and to discuss the various exigencies of this industry. Groups of men gather on the corners and in the streets as often as on the floor of the Exchange. There are 2,250 subscribing members, consisting of wool merchants, top makers, combers, spinners, dyers, manufacturers, machine makers, and hundreds of business men from all parts of the world where wool is used or produced. Within a radius of 15 miles from Bradford are produced, in addition to every variety of woollen and worsted, great quantities of mohair, alpaca, cashmere, cotton and silk fabrics, carpets, rugs, blankets, tapestries, plushes, and velvets.

According to a report of the local Chamber of Commerce the 600 square miles adjacent to Bradford support a population of a million and a quarter inhabitants, more than one-half thereof being engaged in or dependent upon the wool and its kindred industries. Bradford is the commercial and distributing center for a network of neighboring manufacturing towns, all engaged in the sale or manufacture of textiles.

Inasmuch as four-fifths of Great Britain's wool manufactures are carried on in the West Riding of Yorkshire, a great bulk of this trade is ultimately transacted on the Bradford Exchange, where practically all vegetable and animal fibers known to the textile industry may be bought or sold.

TRADE EXTENSION IN DUTCH WEST INDIES.

[Consul H. C. von Struve, Curaçao, Sept. 30.]

Owing to the smallness of the field and to the fact that practically all lines of merchandise for which there is much demand are regularly imported from the United States, the opportunities for trade extension in Curaçao are usually so unimportant that their publication as trade opportunities is not justified. The consulate's work in that line is therefore generally confined to putting American dealers and manufacturers in direct communication with local dealers and agents. During the quarter just ended an American piano manufacturer was thus put in touch with a local agent, and as a result one piano has been sold and the line is being actively advertised.

A local dealer in clothing states that, due to the advice of this consulate, he has succeeded in obtaining in the United States a quality of flannel underwear that takes the place of similar goods heretofore imported from a European house, and that he will in future handle the American article, as he finds that it compares favorably in price and quality with the European brand. He states that he encountered considerable difficulty in persuading the American manufacturer to make up the garments in the exact shape that he wanted, as the manufacturer at first insisted upon making them up as they are desired in the American market.

SATISFACTORY SOUTH AMERICAN SALES REPORTED.

A salesman for an American company, who has had considerable previous experience in South America and who is making an extended trip through the most important cities of the South American Republics, in writing to Commercial Agent E. C. Porter, of the Bureau of Foreign and Domestic Commerce, made some interesting statements.

This salesman finds that American salesmen in South America are well satisfied with the results which they have been securing. The results have been especially satisfactory in hosiery and underwear, where large orders have been obtained, as the stock in these lines in the South American Republics has been depleted during the last 15 months. There is relatively little importation at the present time from Europe, although salesmen from Spain, Italy, England, and France were met.

An advertising campaign of French and English goods is being conducted and is being directed against all other products, but the merchants do not seem to be particularly impressed.

Satisfaction is expressed by merchants in regard to American goods in so far as quality is concerned, but they complain about the higher prices and packing.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 403 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Dextrine, maize oil soap, No. 19211.—An American consular officer in the United Kingdom reports that a firm desires to be placed in touch with manufacturers of dextrine and maize oil soap. Samples and prices f. o. b. American port should be submitted. Cash will be paid for the goods before shipment from American port. Cable address may be obtained from the Bureau or its branch offices.

Textiles, No. 19212.—An importing firm in Paraguay informs an American consular officer that it desires to receive samples and prices of piece goods. Linen goods must be in bolts of 18.30 meters, and cotton goods, such as percales, etc., should be in bolts of 35 to 40 meters. Correspondence, literature, and full information should be in Spanish. Measurements in metric system. Samples of textiles wanted are expected, and when they arrive may be examined at the Bureau or its branch offices.

Hardware, jewelry, trunks, etc., No. 19213.—A commercial attaché of the Department of Commerce reports that a large exporting firm in the Netherlands desires to establish commercial relations with exporters of hardware, cheap jewelry, trunks, lamps, cutlery, and enameled goods.

Linoleum, No. 19214.—An American consular officer in Portugal reports that a firm in his district wishes to act as agent for a manufacturer of higher-class linoleums, especially inlaid and parquet inlaid. Correspondence may be in English.

Buttons, dress trimmings, ribbons, laces, etc. No. 19215.—A report from an American consular officer in the United Kingdom states that a man desires to represent, on a commission basis or otherwise, exporters of buttons, dress trimmings, ribbons, laces, and other goods suitable for the dry goods trade. References given.

Machinery, No. 19216.—A firm in France informs an American consular officer that it desires catalogues and quotations on knitting machinery. Quotations on a basis of cash with order, f. o. b. New York, or preferably c. i. f. port of destination, are desired at once. Correspondence should be in French, if possible.

Brass and raw cotton, No. 19217.—An American consular officer in Italy reports that a man has requested to be placed in communication with manufacturers desiring agents for brass and raw cotton. References given. Correspondence may be in English, Italian, French, or German.

Electrical goods, No. 19218.—A report from an American consular officer in India states that a business man in his district desires to communicate with manufacturers of electrical goods.

Buffalo horns, No. 19219.—A commercial agent of the Bureau reports that a foreign consular officer desires names and addresses of American exporters of buffalo horns. Communications giving the average market prices will be appreciated.

Steel cylinders, No. 19220.—A business man in the United States informs a commercial agent of the Bureau that he desires to communicate with manufacturers of steel cylinders or tubes for holding carbonic gas.

Machinery, No. 19221.—A commercial agent of the Bureau reports that a representative of an Australian firm is in the United States and desires to be placed in touch with manufacturers of confectionery machinery.

Machinery, No. 19222.—A representative of a firm in Argentina, who is now in this country, informs a commercial agent of the Bureau that he wishes to be placed in touch with manufacturers of machinery for cleaning, etc., hides, sheepskins, and wool, and sewing grain bags.

Machinery, No. 19223.—An American consular officer in England reports that a firm in his district desires to correspond with manufacturers of machines for boring holes in ivory buttons.

Brushes and brooms, No. 19224.—A representative of a firm in Switzerland, who is now in this country, informs the Bureau that he desires to be placed in touch with manufacturers of brushes and brooms; also the materials used in the manufacture of these products.

SWEDISH-AMERICAN LINE TO START THIS MONTH.

[American Minister Ira N. Morris, Stockholm, Oct. 18.]

Mr. Broström, Minister of Marine, states that it is the intention of the Swedish-American Steamship Co. to begin sailings during the month of November. The vessel which the company has acquired from the Holland-America Line and which now bears the name *Potsdam*, will hereafter be known as the *Stockholm*. The Government here is much interested in the prospects of this line, and it is to be hoped that it will have all the success that it merits by inaugurating direct passenger and freight service between Sweden and New York.

[Dispatches relating to the plans for the Swedish-American line were published in COMMERCE REPORTS for Oct. 25, Aug. 20, and Mar. 2, 1915.]

CONSULAR TRADE CONFERENCES.

Consul General W. Henry Robertson, of Buenos Aires, Argentina, reports that he will be in the United States on leave from November 19 to December 31, 1915. From November 19, for one week, his address will be care of the Branch Office, Bureau of Foreign and Domestic Commerce, in New York, and for the remainder of the period his address will be 806 Charles Street, Fredericksburg, Va.

More Boats for the Banana Trade.

[Special Agent Garrard Harris, Havana, Nov. 4.]

The banana trade between Central America and the United States is to be further facilitated by the operation of five additional steamers which the United Fruit Company has just taken over from the Elder-Fyfe Line. These boats were formerly devoted to the service of supplying Central American bananas to English markets.

ARRANGEMENTS FOR SHIPPING AUSTRALIAN WHEAT CROP.

[Report of Canadian Government Trade Commissioner, Melbourne, Sept. 29.]

Subject to favorable weather conditions continuing until the crop is harvested, it is estimated by the authorities in the various States that the yield of wheat in Australia this year will approximate 145,000,000 bushels. The wheat yield in the several States is, at this date, officially estimated as follows:

	Bushels.
New South Wales	60,000,000
Victoria	40,000,000
South Australia	25,000,000
Western Australia	20,000,000

The official estimates are considered to be optimistic by the large exporting firms, who express the conviction that the total wheat yield will not exceed 125,000,000 bushels, against 25,000,000 bushels in the year 1914-15, 106,600,000 bushels in 1913-14, 94,880,000 bushels in 1912-13, and 73,894,000 bushels in 1911-12.

The wheat-shipping scheme, arranged by the Commonwealth Government, by which the chartering of steamers for the transportation of wheat and other produce oversea has been placed in the hands of two prominent Australian firms, who will be remunerated by a commission not exceeding 1½ per cent. Whatever freight is paid, the commission bears no charge beyond the maximum of 4d. (8 cents) per ton, so that if the freight rates are high the chartering brokerage will not amount to 1½ per cent. Shippers, however, will be charged a chartering commission of 5 per cent to reimburse any expenditure incurred by the Government, but after the expenses are covered the residue will be paid to the States from which shipments have been made. From the present outlook it is not considered likely that sufficient ships can be chartered to take away the estimated surplus available for export within a reasonable period. Thus there will be only one channel through which the charters are to be arranged, whereby, it is considered, competition for tonnage will be eliminated. The agents appointed by the Government are now endeavoring to effect charters both locally and oversea with the hope of submitting a definite statement by October 15. The Freight Arrangements Act, assented to September 13, empowers the Federal Treasurer to borrow up to £100,000 (\$186,650) from the Commonwealth Bank at 5 per cent per annum to finance the chartering of steamers or sailers. It is provided that the act shall come into operation during the coming wheat season, but shall not continue in force after the expiration of six months from the end of the present war.

FOREIGN REPRESENTATIVES' ADDRESSES.

American consular officers have frequently voiced the request, through the pages of COMMERCE REPORTS, that firms in the United States having branches or agents in foreign countries should notify the consul in whose district these representatives are stationed. Consul Roger C. Tredwell, of Leghorn, Italy, now makes the further suggestion:

American manufacturers should communicate the names and addresses of their branches or agents in foreign countries to all of the consular officers in such countries. The advantage to be gained by consular officers having on file a list of all the representatives of American trade in the country to which they are assigned is so great that it requires no further exposition.

NEW PACIFIC LINE BENEFIT TO PHILIPPINE ISLANDS.

[Vice Consul A. E. Carleton, Hongkong, Sept. 27.]

An official announcement has been made regarding the new Pacific steamship company which has been formed in Holland under the name of the Java-Pacific Line, and the first steamer of which will be dispatched from Batavia, Dutch East Indies, on December 15, for San Francisco. There will be four boats on the run, giving practically monthly sailings. The average capacity of these boats will be from 10,000 to 12,000 tons. The Java company's boats will carry a limited number of first-class and steerage passengers. The boats of the other lines will probably carry only steerage.

The companies interested in the new Pacific service are the Java-China-Japan Line, the Nederland Royal Mail Line, and the Rotterdam Lloyd Royal Mail Line. The first-mentioned company will furnish two of the boats and the two others one each. If the business warrants, other boats will be added later.

The inauguration of this service is no doubt due in some considerable measure to the efforts of the Government of the Philippine Islands, as it was necessary to relieve the difficulties which resulted from the withdrawal of the Pacific Mail by inducing other lines to include Manila among their ports of call. The San Francisco Chamber of Commerce has likewise been deeply interested in the extension of the Java Line to the Pacific Coast.

Ten or twelve years ago, the Java-China-Japan Company considered the advisability of extending its service to Vancouver, but it was deemed then that the conditions did not warrant an Oriental-Pacific connection. Following the withdrawal of the Pacific Mail, and as a result of the abnormal freight rates, it was decided that all interests would be materially benefited by the new service.

[Previous announcements regarding this line were published in **COMMERCE REPORTS** for Nov. 5 and Nov. 10, 1915.]

EFFECTIVE TRADE-PROMOTION WORK.

Vice Consul Mahlon F. Perkins reports that as a result of Foreign Trade Opportunity No. 13111 an order has been placed by one of the most important Chinese printing establishments with an American firm for a large rotary lithographing press. Before the arrival of the press, and at the request of the managers of the corporation, an arrangement was effected whereby the American firm was to supply an expert for the period of one year for the purpose of placing the press in operation and for the instruction of the native employees. At the time of making this arrangement it was intimated that an order would be placed for a second machine. The consular officer is now informed that this second order has been given in recognition of the satisfactory results of the first order.

It is understood that the corporation having made contracts for the printing of a large order of Government bonds and several million dollars' worth of provincial bank notes is now operating the original press about 15 hours a day, and that at this rate it will take about 15 months to complete its contracts, necessitating an order for the second press. In order to meet the demands of its increasing business the corporation contemplates the purchase of one or two additional large printing presses in the coming year. It is understood this order will be placed with American manufacturers.

COAST AND GEODETIC SURVEY CHARTS IN POST OFFICES.

Arrangements have been made with the Post Office and Treasury Departments by which the charts and nautical publications of the Coast and Geodetic Survey will be brought to the attention of the public in the principal seaport cities on the Atlantic and Pacific coasts, and at some cities in the interior. A framed copy of the most important chart of the locality will be placed in a prominent position in the lobby of the post office in each city, together with a placard bearing information as to how the charts and publications may be obtained.

The results obtained by the survey are published in charts on various scales, including sailing charts, general charts of the coast, and harbor charts; tide tables, issued annually in advance, giving the time and height of the tides at all the principal ports in the United States and at some foreign ports; coast pilots, with sailing directions covering the navigable waters; notices to mariners, issued weekly and containing the latest information necessary for safe navigation; catalogues of charts and publications; and special publications on geodesy, terrestrial magnetism, and other subjects pertaining to the work of the survey. A special publication descriptive of the work may be obtained on application to the Division of Publications, Department of Commerce.

Places Where Charts May be Purchased.

The charts, coast pilots, and tide tables are sold at the office of the Survey in Washington, at the suboffices of the Survey, and by agents in the principal cities. Prices are given in the chart catalogue, which is supplied to applicants without charge. Lists of publications available for free distribution may be obtained from the Division of Publications, Department of Commerce.

Framed charts will be displayed, as announced, at post offices in these cities: Augusta, Bangor, Bar Harbor, Bath, Eastport, Portland, and Rockland, Me.; Boston, Fall River, Gloucester, and New Bedford, Mass.; Newport and Providence, R. I.; Bridgeport, Hartford, and New Haven, Conn.; New York, N. Y.; Atlantic City, N. J.; Wilmington, Del.; Philadelphia, Pa.; Baltimore, Md.; Washington, D. C.; Norfolk, Newport News, and Richmond, Va.; Wilmington, N. C.; Charleston, S. C.; Savannah, Ga.; Jacksonville, Key West, and Pensacola, Fla.; Mobile, Ala.; Gulfport, Miss.; New Orleans, La.; Galveston, Tex.; San Juan, P. R.; Cleveland, Ohio; Chicago, Ill.; Los Angeles and San Francisco, Cal.; Portland, Oreg.; Seattle and Tacoma, Wash.

The suboffices of the Survey, at which there are stocks of charts for sale, are: Boston, Mass., Customhouse (office of commercial agent); New York, N. Y., room 403, Customhouse; San Francisco, Cal., rooms 308-10, Customhouse; Seattle, Wash., room 202, Burke Building; Manila, P. I., Intendencia Building; Galveston, Tex., room 19, Cotton Exchange Building; New Orleans, La., 1020 Hibernia Bank Building (office of commercial agent).

Vessels of the Lighthouse Service are supplied with copies of charts covering their districts. Charts may be obtained from them in places where there are no agencies, or where the agents are out of the particular chart desired.

ARGENTINA'S PROPOSED INTERNAL LOAN.

[American Ambassador F. J. Stimson, Buenos Aires, Oct. 14.]

La Prensa, in yesterday's issue, states that the Argentine Government is preparing for an internal loan of 120,000,000 pesos, Argentine paper (\$50,952,000, United States currency), through the Bank of the Nation, which will be authorized to suggest to its depositors the purchase of the Government 5 per cent notes with all or part of their moneys on deposit, at a price of 90, to net the investor 5.56 per cent. Arrangements will then be made for loaning the necessary cash to the depositors on the security of these same bonds.

Another article on the subject appeared in the Standard, one of the English papers of this city, this morning. It said, in part:

There will be bonds of the nominal amount of 120,000,000 pesos at the disposal of the Government if the projected budget for next year should be sanctioned by Congress, and it has been already approved by the budget committee of the Chamber of Deputies. The following plan for the disposal of the bonds has been devised and will be submitted to Congress: The Bank of the Nation is to offer to sell to its depositors and to those of the private banks the bonds of the Credito Argentino Interno held by the Treasury and those that are intended to be issued at the price of 90 per cent of their nominal value, and the Bank of the Nation will be authorized to hold the bonds and to collect the coupons on account of the purchasers; the National Government will, so long as the bonds are left with the Bank of the Nation for safety, guarantee the punctual payment of the interest, and will also undertake to repurchase the bonds at 90 per cent at any time if the persons entitled to them should desire to reconvert them into cash.

The Bank of the Nation would be paid one-half per cent for taking care of the bonds and receiving the coupons and paying the sums received to the owners of the bonds. The private banks charge their customers 1 per cent for those operations. It has not been stated whether the bank commission is to be paid by the Government or by the bondholders.

[An article on the Argentine national budget and its preparation was published in COMMERCE REPORTS for Oct. 6, 1915.]

SPAIN SEEKS AMERICAN STEEL FOR ITS KNIVES.

[Consul Wilbur T. Gracey, Seville, Sept. 28.]

Steel knives are extensively manufactured in Spain, and one of the manufacturers, whose principal office is in Seville, is seeking supplies of steel for their manufacture on account of a shortage of raw material. He informed the American consul at Seville that he used annually about 100 tons of steel, and had no objection to paying cash against documents for materials purchased. He desires to import through Seville or Valencia. His factory is in Alicante Province.

The consul believes that the United States will be depended upon to supply the steel needed during the present war. Knives manufactured here are of special shape and size and the manufacturers of this country are known to produce a superior quality of goods. It is doubtful if American-made knives could take the place of the Spanish article, unless the American manufacturer will secure samples of those made here and make exact duplicates. There is a call here also for penknives and cheap safety razors.

[The consul has forwarded samples of the steel strips required by Spanish knife manufacturers, which may be seen by interested persons at the Bureau of Foreign and Domestic Commerce or its branch offices. Two of these are plain flat steel bands, and the others have a slightly wedge-shaped cross section. The address of the inquirer for steel may also be obtained from the Bureau or its branch offices. Refer to file No. 67910.]

MARKET FOR SHOE POLISHES IN COSTA RICA.

[Consul Samuel T. Lee, San Jose, Oct. 12.]

Formerly the Continent furnished most of the shoe polishes imported into Costa Rica, especially blacking, but since the war this class of merchandise has been supplied exclusively from the United States.

To become really popular, the blacking should be put up in small tins that could be retailed profitably at the equivalent of 3 cents gold. Fully 90 per cent of the demand is for a black wax polish without a liquid cleaner. Tan shoes are not commonly worn and white shoes are seldom seen except in the cities of Limon and Puntarenas. Shoe polishes pay duty at the rate of \$4.22 gold per 100 pounds gross weight, and in packing the tare should be kept as low as possible.

Brand Names—Terms.

If a trade name is proposed for this market it would be wise to select some simple word, preferably Spanish, that would soon become well fixed in the minds of the consumers. Too much stress can not be laid on the importance of selecting names easily pronounced by Spanish-speaking people.

The leading importers here are listed with Dun's and with Bradstreet's and the local banks can also give credit ratings. These dealers often buy for cash to obtain liberal discounts, especially when the selling qualities of a staple article are well known to them. At other times important dealers obtain three to six months' time and pay interest on the account at the rate of 6 per cent per annum.

Sales Methods.

Any manufacturer planning a real campaign in the markets of Spanish America ought at least to have in his employ a good Spanish correspondent and be equipped with descriptive literature in the Spanish language giving best prices and terms for export; but the most effective way to win this trade is to work the field through properly qualified, Spanish-speaking salesmen.

The exclusive-agency plan for a staple article of almost prime necessity is not always to be recommended. The element of the agent's personality, his financial standing, and his energy and general business capacity are such important factors in the introduction of a new article in a foreign field that it is often inadvisable to thus center all chances of success on one individual or firm. The more important staple articles of trade sold in this district are not, as a rule, distributed by a single individual or firm, but are handled by all importers dealing in those lines, who work directly with the factory or else through a reliable commission house in the country of origin.

[Consul C. Donaldson, Port Limon, Oct. 19.]

Port Limon Uses Light Dressings.

Practically all of the shoe polish and dressings imported into the Port Limon district are brought in by large wholesale houses that import general merchandise (such as are known in the United States as department stores), of which there are two doing business here at present. Owing to climatic conditions in this section white canvas and white kid or buck shoes are much worn, also the lightweight

tan leather shoe, and the bulk of the polish imported is for use on such footwear.

The most practical way to promote trade in the Port Limon district is to send good representatives with samples; the next best way would be to send samples direct to the local importers. The English language is in general use here, especially among wholesalers, the largest houses being American and German. The smaller merchants use the Spanish language almost exclusively. Therefore, correspondence should be in English and Spanish, as local firms generally use both languages.

Transportation facilities are good. There are direct lines of steamers weekly from New York, Boston, and New Orleans, which make the trip in 8 to 10 days, including all stops at way ports.

[A list of importers of shoe polishes and the names of three banks in the San José consular district and the addresses of the two Port Limon firms that control the bulk of the trade there, as well as two smaller concerns, may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file Nos. 67907 and 68452.]

BURMA USES INCREASING NUMBER OF BOILERS.

[Consul Maxwell K. Moorhead, Rangoon, Burma, Sept. 20.]

The imports of boilers into Burma, although not large, show a considerable increase in the past three years. During the year ended March 31, 1913, boilers were imported to a value of \$62,380, of which the United Kingdom supplied 76 per cent, the United States 17 per cent, and Germany 5 per cent. The next year imports increased to \$124,730, 72 per cent being supplied by the United Kingdom and 24 per cent by the United States. The year ended March 31, 1915, showed only a small decrease notwithstanding the depressed condition of trade due to the war, the total imports of boilers being valued at \$122,030, of which the United Kingdom supplied 81 per cent and the United States 18 per cent.

Annual Imports of Boilers, by Countries.

The values of imports of boilers into Burma, by countries, during the three years ended March 31, 1913 to 1915, in United States currency were:

Countries.	Value.		
	1912-13	1913-14	1914-15
United Kingdom.....	\$47,940	\$69,080	\$99,947
Straits Settlements.....	370	3,810
Germany.....	3,240	810	940
United States.....	10,790	50,950	21,110
Total.....	62,380	124,730	122,030

Burma is not an industrial or manufacturing country, the cultivation of rice being by far the most important occupation of the inhabitants. Boilers are used, however, by a few rice and sawmills, as well as oil refineries. A few of the rubber estates and miners also use them.

[Lists of engineers and users of boilers, including oil refineries, rice millers, mines, sawmills, railways, electric-power companies, and rubber estates, in Burma, may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67,815.]

EXPORTS TO UNITED STATES FROM THREE GERMAN DISTRICTS.

[Consul General Henry H. Morgan, Hamburg, Sept. 30.]

Hamburg's Shipments to This Country and Island Possessions.

The declared value of exports from the Hamburg consular district to the United States and its island possessions for the nine months from January 1 to September 30, 1915, compared with those for the corresponding periods in 1914 and 1913, were:

Exports.	Jan. 1 to Sept. 30		
	1913	1914	1915
From Hamburg:			
Raw materials.....	\$8,890,067	\$7,972,251	\$901,424
Manufactured goods.....	6,525,081	5,910,325	600,595
Food products.....	1,572,377	1,527,456	62,038
Miscellaneous.....	1,747,473	929,288	152,025
Total to the United States.....	18,734,997	16,239,321	1,106,082
Total to Philippine Islands.....	1,479,317	1,045,850	65,653
Total to Porto Rico ¹	161,274	90,955	6,344
Total to Hawaiian Islands ¹	24,285	63,338
From Luebeck to United States.....	311,176	236,637	8,619
From Kiel to United States.....	10,068	12,348	1,090
From Kiel to Philippine Islands.....	619
Grand total.....	20,661,756	17,788,440	1,187,788

¹ No exports from Luebeck and Kiel to Porto Rico or Hawaiian Islands.

[Consul General Julius G. Lay, Berlin, Oct. 1.]

Declared Exports from Berlin Consular District.

Declared exports to the United States from the Berlin consular district for the quarter ended September 30, 1915, compared with the quarter ended September 30, 1914, were:

Places of destination.	1914	1915
United States.....	\$3,535,897	\$774,963
Philippines.....	54,790	3,300
Porto Rico.....	186
Hawaii.....	135
Total.....	3,591,023	778,263

[Consul Alfred W. Donegan, Magdeburg, Sept. 30.]

Magdeburg's Exports to United States for the Quarter.

The total exports to the United States from Magdeburg for the quarter ended September 30, 1915, according to invoices certified at the American consulate, were valued at \$130,422. The amount fell somewhat below that for the quarter ended June 30, 1915, which was \$195,794. The exports to the United States from this district for the past seven months were principally leather gloves. These constituted 98 per cent of the total for the quarter just ended. No shipments were made to the Philippines, Porto Rico, or Hawaii during the quarter.

Export figures for the September quarters of the past five years and for the first nine months of each of these years show the large

falling off in the trade of this district with the United States this year. These figures are:

Year.	Jan. 1 to Sept. 30.	July 1 to Sept. 30.	Year.	Jan. 1 to Sept. 30.	July 1 to Sept. 30.
1911.....	\$8,397,414	\$2,245,606	1914.....	\$9,047,500	\$1,673,061
1912.....	9,035,224	3,782,733	1915.....	2,050,663	130,422
1913.....	10,240,687	3,728,757			

Of the nine months total this year, about 70 per cent was composed of potash and salt shipments in January and February, before the potash embargo, and about 20 per cent of leather glove shipments.

THIEVES' MARKET IN SAN LUIS POTOSI.

[Consul Wilbert L. Bonney, San Luis Potosi, Mexico, Oct. 18.]

The so-called thieves' market in San Luis Potosi is one of the curious and characteristic institutions of the city. It consists of a series of small booths along the side of the public market; in these booths every article known to the hardware, plumbing, and novelty trades may be found at second-hand in every conceivable state of preservation or decay. The name of the market is no reflection upon the proprietors nor upon their patrons, but is an implication that thieves sell in this market their miscellaneous plunder.

Here are found tools and implements, knives and pistols, plow points, door knobs, bottles, hinges, valves and elbows, chain, bridle bits, razors, religious books from the old Barcelona press, cheap jewelry, and occasionally odd pieces of table silver. In fact, any bit of portable and nonperishable merchandise may be bought or sold in the thieves' market. It constitutes a serious competition for the hardware stores, for if the householder finds himself in need of a door knocker, a hinge, or a pane of glass, his first resort is to this market. Many parts of implements from the plantations find their way to this market. The proprietors are said to deal in more valuable goods, such as precious stones and metals, but these are not shown to the public nor offered to strangers. Antique pieces of brass work, china, and silver may sometimes be found, but these should be purchased with the customary caution.

There are no fixed prices. The dealer gets what he can, depending largely upon the patience of the customer. The pawnshops turn over to this market cheap articles in hardware and jewelry which are not redeemed or sold at auction. Carpenters and cabinetmakers find here their odd pieces for repair work, such as locks and keys, fancy screws, and hinges. American goods are sometimes seen, particularly barber's supplies, cheap watches, buttons, and safety razors. Imported articles in San Luis Potosi are always expensive, and articles of metal, even of native manufacture, are relatively high; such articles are not discarded when worn, but find their way to this market and are used again and again. It is a sort of clearing house of commodities. To an extent it supplies the lack of specialized stores and prevents waste.

FISH INDUSTRY OF SPAIN.

[Consul Wilbur T. Gracey, Seville, Sept. 13.]

The fishing industry is one of the largest and most important of the local trades of Andalusia, and the Revista Comercial, official organ of the chamber of commerce, recently gave some particulars concerning it that will undoubtedly prove of interest to American dealers and importers.

This article states that the annual production of fish in Spain amounts to 102,000,000 pesetas (approximately \$19,686,000) and that 150,000 men are employed, which means the support of 750,000 persons. There are 586 steam and 15,194 sailing vessels engaged in the industry, also 800 curing and drying factories; the value of vessels, nets, and other paraphernalia being approximately 32,000,000 pesetas (\$6,176,000). Included in this are the Government taxes on the 27 fishing grounds.

Annual Production of Tinned Fish—Comparison with France and Italy.

The annual production of tinned fish in Spain is said to be 3,500,000 cases of 10 tins to the case. The Revista Comercial states that the pack of Portugal is about 1,500,000 cases and that of France 1,000,000 cases. Spain is thus the principal producer of this product among these three nations, which practically have a monopoly of the industry in Europe.

One of the largest packers in the Seville district reports that the statements appearing in the Revista Comercial are by no means exaggerated, and that the pack of Spain is considerably larger than the combined packs of France and Portugal. He states that the impression prevalent throughout the world that the French and Italian packs are large is probably due to the fact that large quantities of Spanish fish products are shipped abroad bearing French and Italian labels. According to his statements, practically no fish of Italian pack is shipped out of that country, being all needed for home consumption, and the foreign shipments consist almost entirely of Spanish-packed products bearing Italian labels. This is also largely true of the French products, though a certain quantity of French-packed fish is exported. This packer states that he personally packs in his establishment five well-known brands of French sardines, and also packs several brands with Italian and German marks. In his opinion, the estimate as given in the Revista Comercial rather underestimates than overestimates the Spanish pack.

The article in the Revista Comercial continues by stating that the value of the fish packed amounts to 17,000,000 pesetas (\$3,281,000) for the raw fish, to which must be added the amount expended for oil, tins, labor, etc., which will make the value of the annual Spanish pack when ready for the market approximately 40,000,000 to 45,000,000 pesetas (\$7,720,000 to \$8,685,000) per annum.

Quality of Spanish Goods—Export Markets.

Although in past years the industry has suffered considerably because of the low quality of the oils employed and defective preparation and packing, these faults have been remedied, and it is said that Spanish goods now compare favorably with the finest qualities produced elsewhere.

Although the exportation of Spanish tinned fish has not grown as rapidly as might have been hoped for by the producers, it is said that they are making headway in the American (probably meaning South American) markets and in the Orient, even though a considerable quantity is sold to French merchants, who relabel the tins and reexport them as French products. The article says:

Italy would be the natural market for Spanish fish products, but the Spanish packers feel that the import duties there are practically prohibitive and that lowering of these rates is necessary to the development of the industry, especially as Portuguese packers have an advantage over their Spanish competitors because of there being no import duty on tins or solder in Portugal, whereas in Spain packers must pay 14 pesetas (\$2.70) for each 100 kilos (220.46 pounds).

Spanish Market for Codfish and Salmon.

The Spanish people, especially the poorer classes, are large users of fish products, especially the dried codfish, herring, and sardines, the first named being imported in considerable quantities.

At the present time there is a shortage of codfish in Seville, and merchants state that at least 4,000 bales of 50 kilos (110.23 pounds) each could be sold if the fish were now there.

Codfish that comes there for the summer trade usually is secured from Iceland or Norway, as it is harder and better withstands the summer heat, which sometimes reaches 120° in the shade at Seville. The Iceland quality now sold on that market is received c. i. f. Seville at about 50s. (\$12.15) per bale of 50 kilos (110.23 pounds). For the winter trade Newfoundland and Labrador fish is satisfactory.

One firm, whose address may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices (refer to file No. 67127), desires a sample shipment of 50 to 100 bales of codfish, in order to test the quality, and the manager states to the consul that he will guarantee payment of 50 per cent of the value of such a sample shipment but could not make outright purchases until he was aware of the quality of the goods. The usual purchase of this firm is said to be about 1,000 bales per month.

There is also a considerable trade in tinned salmon here, and the addresses of persons who are interested in the importation of these products may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67127.

THE SARDINE INDUSTRY IN SPAIN.

[Consul General Carl Bailey Hurst, Barcelona, Sept. 8.]

Sardines are found chiefly in the Atlantic Ocean, forming great schools or banks extending from the coast of Ireland to the Canary Islands. They are also found in considerable quantities in the Mediterranean, probably coming from the Atlantic, attracted by the higher temperature of the water. However, sardine fishing is of less importance on the Mediterranean shores of Spain than on the Bay of Biscay and the Gulf of Cadiz, where the principal factories for canning sardines are located.

The supposed difference between sardines found in various parts of the world has been much disputed, but repeated investigation has demonstrated that no generic difference exists, as the sardine is not a sedentary fish and inhabits the ocean at large, migrating from coast

to coast in search of food and mild waters. This explains its appearance and disappearance, both dependent upon the movement of warm currents, and its particular abundance on the coast of Galicia. Near Finisterre, in close proximity to the Gulf Stream, the sardine is usually first seen.

Various Sizes of Sardines.

The length of the sardine varies from $4\frac{1}{2}$ to 8 inches and the weight from 0.84648 to 2.39836 ounces. Sometimes a few are found measuring as much as $8\frac{1}{2}$ inches long, but this is extremely rare and none exceed 10 inches. The sardine is known by many names, according to locality and development. In Galicia those of 9 centimeters (3.54 inches) in length, weighing less than 26.4555 pounds a thousand, are called "parrocha," and when 6 or $6\frac{1}{2}$ inches long "mediano" or "medianillo"; they are really known as sardines only when they reach the size of from $7\frac{1}{2}$ to $7\frac{3}{4}$ inches in length, weighing from 132.2773 to 154.3236 pounds a thousand. There is also a class of small sardines, found in Cantabrian as well as Galician waters, called "anchoa." This variety does not exceed $2\frac{1}{2}$ to 3 inches and ordinarily weighs 0.17637 or 0.21164 ounce.

Where and When the Sardine is Found.

The sardine is always found in the superficial waters of the Mediterranean, where fishermen encounter it during all seasons; the quantity, however, varies considerably with the season. During the spring the sardine appears only at brief intervals, in small masses; during summer and autumn it is always abundant (especially when the sun is bright), except when the weather is cold, excessively hot, or stormy. During periods of calm the sardines are numerous and their stay prolonged. They remain near the coast and their first appearance in considerable quantities is in February or March. This is generally in the Gulf of Lyon on the coast of Cataluna, after which they are found on the shores of Rosellon, Languedoc, Toulon, and farther east.

In the waters of the North Atlantic, on the contrary, the sardine is entirely absent during the winter, not appearing until March or April to any noticeable extent. This fish is encountered on the shores of the Iberian Peninsula, later in the southern part of the Gulf of Gascony, and so on farther north—always influenced, as in the Mediterranean, by climatic conditions and also, it has been found, by the configuration of the ocean bed.

The sardine in both waters derives alimentation from minute bodies adapted to the smallness of its mouth and teeth. Protozoans are its principal food. In the Mediterranean sardines are found permanently around the capes covered by what is called "planicie continental," which is rich in neritas, and near shores where plankton abounds.

No Danger of Reduction in Supply.

Much attention has been given to sardine culture, but taking into consideration the rapid multiplication of this fish there would seem to be no danger of its being exterminated or even appreciably reduced. An indication in support of this belief is found in the fact that the sardine multiplies perennially in the Mediterranean and is subject to constant taking by net. The danger of persecution from

larger predatory fishes is obviated in a measure by nature, because the eggs, as well as the sardines themselves in their early stages of development until about 1 inch in length, are transparent, passing unnoticed by their enemies.

Statistics of Industry—Number of Fishermen and Factory Operatives.

Thousands of men in Spain are engaged in sardine fishing. The approximate figures, according to the latest statistics, are: Galicia, 27,000; Cantabrian coast, 11,000; Andalusian coast (Cadiz and Huelva), 5,000.

The Spanish industry of canning sardines in oil is carried on most extensively in Huelva, Galicia, Santander, Asturias, Vizcaya, and Guipuzcoa. About 30 years ago it began to develop, following the French methods, but its progress was not very rapid until within the last 15 years, during which time the evolution in the manner of fishing and the use of all modern appliances have tended to bring the industry to its present prosperous condition. The best machinery and apparatus are now employed at the canning factories.

According to recent statistics of the Centro de Información Comercial del Ministerio de Estado, Spain produces annually, on an average, more than 1,500,000 cases of sardines in oil of 100 tins to the case. More than two-thirds of these are exported from Galicia alone, Vigo being the chief port of shipment.

The sardine industry of Santander, as carried on in Castro-Urdiales, Laredo, Santona, Requejada, San Vicente de la Barquera, Camillas, and Suances comprises about 300 sailboats and 90 steamers of an approximate value of \$198,000, which, with various other appliances employed, represents a capital of \$270,000, employing 2,500 fishermen in addition to 1,500 operatives in the canning factories.

In the Province of Huelva, the principal ports where the sardine industry is located, are its capital, Huelva, Isla Cristina, and Ayamonte. In this latter port alone the production of canned sardines varies between 2,000 and 3,000 metric tons (metric equals 2,204.62 pounds) annually. This merchandise is almost entirely exported to France, Germany, England, and Italy, although some consignments are made direct to South America. The four countries mentioned reexport in large measure these sardines. The packers themselves can not do this for lack of steamship lines. The number of operatives employed in the canning fluctuates between 800 and 1,000 females and 400 and 500 males, including in these figures numerous children. It is estimated that about 3,000 metric tons of sardines, valued at \$270,000, are packed in salt, mostly for consumption in Spain.

In the naval station of Ferrol, including San Sebastian, Bilbao, Santander, Gijon, Ferrol, Coruna, Villagarcia, Pontevedra, and Vigo, there are 410 sardine canning and export firms; in the Cadiz station, embracing Huelva, Cadiz, Algeciras, Cueta, Malaga, Melilla, and Teneriffe, there are 80; and in the Cartagena station, which includes the extreme points of Alicante and Barcelona, 32 such firms are established.

Exports to Chief Purchasing Countries.

During 1913 Spain exported 19,926 metric tons (metric ton equal 2,204.62 pounds) of sardines, valued at \$5,824,304. The countries to

which the greater part of this article of food was exported are given, with amounts purchased, in the following table:

Countries.	Value.	Countries.	Value.
France	\$1,767,327	Italy	\$345,903
Germany	885,672	Cuba	282,531
Argentina	817,984	United States	208,950
Portugal	374,000	Chile	123,453

The total value of sardines exported from Spain, according to official statistics, during 1914 was \$3,511,049, the itemized official statistics as to countries of destination not being available yet.

(The chief sources of the foregoing report were: La Industria Sardinera en Espana, 1915; Resúmenes Mensuales de la Estadística del Comercio Exterior de Espana, December, 1914; Estadística General del Comercio Exterior de Espana, 1913.)

STEEL MANUFACTURE IN SOUTH AFRICA.

[Consul Edwin N. Gunsaulus, Johannesburg, Sept. 15.]

For two or three years certain steel products especially designed for use by mines and railways, including bars of all sections, fencing standards, and light rails, have been manufactured in a modest way in the Transvaal. The material used is altogether scrap iron and steel, of which there is a large accumulation in the country, principally acquired from the South African railways. The two companies in the Transvaal now manufacturing these steel products are the Union Steel Corporation of South Africa, at Vereeniging, and the Dunswart Iron & Steel Works (Ltd.), at Dunswart, near Johannesburg, both of which seem to find a good market for their output, which, of course, is relatively small.

According to a report by the Government Mining Engineer, it has been decided to put the Union Steel Corporation on a sounder commercial basis in order to acquire further plant and machinery. These additions will include a 15-inch mill, a 22-inch cogging mill, and additional melting and reheating furnaces.

At present the capacity of the plant is restricted by the sluggish working of the hydraulic press which presses and cuts the ingots into bars. When the large cogging mill starts work these delays will cease. With the new plant it is hoped to roll rails up to 35 pounds and produce about 10,000 tons annually. Furnaces and automatic machines for making bolts, nuts, and rivets are now being started. The works now employ about 70 white and 100 colored laborers.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

SOUTH WALES TRADE NOTES.

[Consul William L. Jenkins, detailed as Vice Consul at Swansea, Wales, Oct. 14.]

Imports of Sugar.

Referring to an article from the Swansea consulate on Loaf Sugar, published in **COMMERCE REPORTS** for September 3, 1915, the duty given therein on sugar exceeding 98° polarization as \$0.4455 per hundredweight (112 pounds) will be raised to \$2.27 a hundredweight if the proposed budget is passed. It may also be stated that no sugar may be purchased from abroad at present, except by the Royal Commission on the Sugar Supply, London. The Chancellor of the Exchequer stated in his budget speech that although he was raising the duty on sugar to \$2.27 a hundredweight, the Royal Commission were at the same time reducing the basis price by \$0.48 to \$0.72 a hundredweight so that the increased duty which will be chargeable to the consumer will be only \$1.21 a hundredweight or just over \$0.01 on the pound. The Royal Commission desire it to be known, under date of October 13, that the proper retail prices for sugar under ordinary circumstances at present are as follows: Granulated, \$0.08 a pound; white Javas, \$0.075 a pound; and cubes, \$0.12 a pound.

Reduction of Swansea's Lighting.

The Swansea Corporation Highways Committee has decided on a substantial reduction of the town's lighting, by which it is estimated about \$20,000 a year will be saved. Nearly 1,000 lamps will be left unlit under this scheme.

Settlement of Wage Dispute in Flannel District.

At a recent meeting of the masters and workmen of the Drevach and Velindre districts, Carmarthenshire, an amended offer of 12½ per cent war bonus was accepted by the workmen. This advance, together with several other mining concessions, will raise the workers' wages to a point nearly 25 per cent above the previous standard, and will mean a large increase in the cost of producing Welsh flannels, for which these districts are well known.

New Welsh Industries.

In the work of promoting industries to find work for the unemployed, it may be mentioned that a quarry has been opened at Bettws-y-coed, and that in the near-by valley a macadam quarry has been started. In the same district the residents have started to make pill boxes in an attempt to capture for the future some of the trade which had been in Continental hands.

The Iron Trade.

During the past week the blast furnaces have been busily operating and the product of pig iron was heavy. Steel works generally were flourishing. Iron and brass foundries, together with the engineering and fitting shops, were so short of regular hands that they found it increasingly difficult to cope with orders.

Zinc refining continues of interest in Canada. The British Columbia Government will give financial help to a Victoria reduction company for establishing a demonstration plant at Nelson.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Machinery, No. 19225.—The Bureau is in receipt of a letter stating that a man in Brazil desires to purchase machinery used in extracting oil from seeds. Correspondence should be in Spanish.

General representation, No. 19226.—A letter to the Bureau states that a man in Peru desires to represent American manufacturers. No particular line is mentioned.

Flavoring extracts, fruit flavors, etc., No. 19227.—An American consular officer in India reports that a bakery desires catalogues and prices, c. i. f. port of destination, for flavoring extracts, fruit flavors, coffee paste, and cream yellow powder. It is also suggested that catalogues and price lists be sent to the American consulate.

Lamps, leather articles, jewelry, etc., No. 19228.—A letter to the Bureau states that a business man in Peru desires to be placed in communication with exporters or manufacturers of electric hanging and portable lamps of bronze or gilded metal, terra-cotta or imitation marble figures, busts, and groups; leather articles, such as card cases for men, with and without silver trimming; purses for women, traveling cases, with and without fittings; solid gold and plated jewelry, with or without stones; mesh bags for women, and pocket cigarette cases.

General agency, No. 19229.—The Bureau is in receipt of a letter stating that a man with a knowledge of Spanish, and the customs of the Latin-American countries, desires to represent American manufacturers in South American countries.

Scientific instruments, No. 19230.—An American consular officer in Russia reports that there is an urgent demand for scientific instruments for chemistry, physics, electromechanics, astronomy, mineralogy, geology, zoology, physiology, surgery, anatomy, and meteorology, to be used in educational institutions.

Dry goods, hardware, etc., No. 19231.—The Bureau is in receipt of a letter stating that an exporting agency is about to reopen a branch in one of the Latin-American countries, and wishes to represent American manufacturers on a commission basis in dry goods, hardware, and optical and photographic supplies. References given.

Hardware and general fixtures, No. 19232.—A representative of a firm in England informs a commercial agent of the Bureau that he is interested in purchasing jute web, lamp burners, perforators, penknives, pliers and nippers, screw eyes, canvas gloves, cornice poles, and pen cleaners. Further information may be obtained from the Bureau or its branch offices.

Ice-making machinery, No. 19233.—An American consular officer in Spain reports that a man in his district wishes to act as agent on a commission basis for the sale of ice-making machinery. It is stated that there is a demand for small machines making approximately 10 pounds of ice per hour. Correspondence may be in Spanish. It is requested that catalogues be sent to the American consulate.

Glucose, No. 19234.—A report from an American consular officer in Brazil states that a company is desirous of purchasing glucose for the manufacture of candies. Prices, discount lists, and full information are requested.

Copper, No. 19235.—A firm in Greece informs an American consular officer that it desires to communicate with exporters of sulphate of copper with a view to importing same. Quotations should be c. i. f. port of destination. Payments arranged to suit seller. Correspondence may be in English. References given.

Wearing apparel, etc., No. 19236.—A commission agent in Venezuela informs an American consular officer that he desires to represent manufacturers or exporters of millinery, silk goods, silk underwear, and ready-made clothing for women, and also medicinal preparations.

Haberdashery, No. 19237.—A firm in China desires to be placed in touch with manufacturers of men's furnishings, such as hats, shirts, socks, and ties. Correspondence may be in English.

RECORD PRICES AT GOVERNMENT FUR SALE.

Record prices were obtained for both blue-fox and white-fox skins, at the sale of Government furs from Alaska, conducted by Funsten Bros. & Co., in St. Louis, Mo., on October 21, 1915. Average prices and their increase over those at the previous sale were given in **COMMERCE REPORTS** for October 22, 1915. The United States Bureau of Fisheries has prepared a more extended report, furnishing some interesting facts regarding this public auction.

The sales were: Total of 513 blue-fox skins, \$58,726; 65 white-fox skins; \$1,596; 70 beaver skins, \$892.50; total, \$61,214.50. Five lots of blue-fox skins, graded "extra-extra," each lot made up of four matched pelts, sold for \$245, \$250, \$253, \$255, and \$273, respectively, per skin. Three silver-blue skins brought \$255 each, and many lots graded as "No. 1" sold for \$160 to \$230 per skin. The average price at which blue-fox skins sold was \$114.45, an advance of about \$72 per skin over the last sales for the department.

The best grade of white-fox skins sold for \$30 and the lowest grade for \$17, the average being \$24.55 per skin.

Seventy beaver skins, which had been confiscated by the department because taken during closed time, brought from \$9 to \$17 per skin.

The market for silver-fox skins appears to be normal, and the prices received for 137 skins sold immediately after the Government skins were disposed of elicited spirited bidding. One pair of Alaska silver-fox skins brought \$2,610, and other pairs brought \$1,850, \$1,370, \$1,270, \$1,210, \$1,160, and \$1,060, respectively.

CONSULAR TRADE REPORTS IN RUSSIA.

[Consul F. Willoughby Smith, Batum, Oct. 3.]

Through the efforts of this office a firm in Baku is now buying regularly from the United States about \$40,000 worth of wire per month for industrial purposes.

NOTES FROM CHILE.

[Commercial Attaché V. L. Havens, Santiago, Sept. 26.]

Government Commissioner to Study Banking Legislation.

Mr. Edgardo M. Greve has been commissioned by the Chilean Government. "ad honorem," to study banking legislation in the United States, with special reference to reforms of the Federal Reserve Board.

Railway Construction—New Shops for State Railways.

The equivalent of \$145,000 United States gold has been appropriated by the National Congress to continue the work on the railway from Iquique to Pintados, on the Pintados-to-Soronal section.

The final arrangements for the contract for the construction of the new shops for the State Railways by the Niles-Bement-Pond Co. have been discussed by the directors of the State Railways and apparently nothing remains to be done but the settlement of unimportant details. Indications are that work will be started within a reasonably short time. This is the most important work pending on the West Coast of South America, in the sense that it means the introduction of a great variety of high-grade American labor-saving machinery.

New Electrical Companies.

The Compañía Eléctrica Caupolicán (address: Rengo, Chile) has been organized with a capital of 800,000 paper pesos (about \$130,000 American gold) to take over certain electrical machinery already installed and to purchase the concession for lighting the towns of Rengo, San Fernandom Rancagua, Peumo, San Vicente, and eight others.

La Compañía de Luz Eléctrica de Constitución has been organized, with a capital of 60,000 Chilean paper pesos (about \$10,000 United States gold), for lighting and providing power to the town of Constitución, located in the Province of Maule, on the coast. Constitución has a population of about 6,500 and is a popular seaside resort.

[The addresses of directors in these two companies may be had upon application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 831.]

RUBBER PRODUCTION IN MALAY PENINSULA.

[Consul General John P. Bray, Singapore, Straits Settlements, Sept. 7.]

In checking up the estimate of the 1915 rubber production in the Malay Peninsula, quoted in **COMMERCE REPORTS** for June 23, 1915, I interviewed most of the leading rubber merchants of Singapore, and the opinion prevails that, instead of a smaller output this year, there will be an increase of at least 20,000 tons as compared with 1914. One of the largest corporations dealing in rubber in Singapore writes me on the subject as follows:

Referring to your letter of yesterday's date, we would beg to inform you that the official figures of the plantation production of rubber in the Federated Malay States and Straits Settlements for the year 1914 amounts to 50,400 tons. These figures include transshipments from Java and Sumatra amounting to a few hundred tons.

For the first six months of 1915 the official figures give a total of 35,550 tons, or an increase of 13,200 tons over the figures for the corresponding period of 1914. It is estimated that the total production from these sources for the year 1915 will approximate 70,000 tons.

CONSUMPTION AND SUPPLIES OF COTTON IN UNITED STATES.

According to preliminary figures compiled by the United States Bureau of the Census, the cotton consumed in the United States during October, 1915, totaled 500,635 bales compared with 451,899 bales for the same month last year. The cotton on hand at the close of the month in consuming establishments amounted to 1,345,749 bales compared with 715,623 bales at the close of October, 1914, and the amount in public storage and compresses totaled 4,171,474 bales compared with 3,777,469 bales on October 31, 1914. The active cotton spindles during October numbered 31,379,385 against 30,461,320 for the same month in 1914.

Linters not included above were 68,944 bales consumed during October in 1915 and 30,102 bales in 1914; 130,031 bales on hand in consuming establishments on October 31, 1915, and 65,174 bales in 1914, and 71,372 bales in public storage and at compresses in 1915, and 41,753 bales in 1914. Linters consumed during three months ending October 31 amounted to 186,274 bales in 1915, and 83,146 bales in 1914.

Imports of foreign cotton during October were 13,506 bales of 500 pounds each compared with 12,150 bales for the same month in 1914, and the exports of domestic cotton and linters (running bales) during the month totaled 674,655 bales against 497,132 bales for October, 1914.

TO SELL AMERICAN FURNITURE IN THE ARGENTINE.

Further evidence of the interest of American furniture manufacturers in the markets of South America is afforded by the fact that a number of them have appointed an American, Mr. W. G. McNair, to represent them in Buenos Aires. Mr. McNair expects to establish himself permanently in Buenos Aires, branching out from there to other sections of South America, particularly Brazil, Uruguay, and Chile.

It is quite likely that this project will increase in a notable manner the exports of furniture to South America. Heretofore the principal line of our furniture marketed in South America has been office furniture, as household furniture has been supplied to a large extent from Europe, or has been produced in South American countries themselves, notably Brazil. The prevailing taste in South America is for period furniture rather than extremely plain or highly ornamented articles, and this is the kind which will probably be most pushed in the present instance. The firms which Mr. McNair represents, the chief of which is a prominent Grand Rapids concern, turn out a high grade of period furniture and should consequently have little difficulty in competing on the Argentine market.

Hawaiian soil is being used to build up the small coral island in the Pacific known as Midway and used as a relay station by the Commercial Pacific Cable Co. A quantity is taken there every three months by the schooner that is sent with food supplies for the operators. The task of building the island has progressed so far that it is possible to keep a cow on the pasture.

COMMERCE THROUGH THE SAULT STE. MARIE CANALS.

The following tables show the quantity of each of the principal commodities and the number of passengers carried through the United States and the Canadian Sault Ste. Marie (Soo) Canals during October and for the season, until October 31, 1914 and 1915:

[From a report of the United States engineer in charge of the United States canal at Sault Ste. Marie, Mich.]

CANADIAN HERRING FISHERIES.

[Consul O. Gaylord Marsh, detailed as vice consul at Ottawa, Nov. 9.]

It is reported that an American firm being unable to secure Scottish herring on account of war conditions recently offered to purchase 50,000 barrels of Canadian herring at a very high price if the fish could be obtained in a satisfactory condition. This is particularly noteworthy, as Canadian herring now sells at \$2.50 a barrel, while the Scottish product has been selling at \$10 to \$15 a barrel. The low price of the Canadian herring [as well as all other herring in the Western Hemisphere] is due to imperfect and unsatisfactory curing and packing.

The Canadian herring fisheries are said to be the richest in the world, and the quality of the fish is quite as good as the North Sea product. This industry of Canada has great opportunities at the present time, and an effort is being made to cause such inspection, standardization, and advertising of the product as will enable it to command the markets which, with improved conditions, will be found awaiting it.

REGULATION OF PRICE OF RICE IN JAPAN.

[Consul General George H. Scidmore, Yokohama, Oct. 5.]

At the Cabinet Council on October 1, the Japanese Government finally decided to establish the Beika Chosetsu Kai (Society for Regulating the Price of Rice), and on October 2 the Department of Agriculture and Commerce considered the selection of members of the society. According to the "Asahi" (Osaka), the membership of this body will number 70 in all, comprising several representative business men from Tokyo, Osaka, Kobe, and other important officials, about 40 officials of agricultural associations, agricultural and industrial banks, and large landowners, 10 members each of the House of Peers and the House of Representatives, and some officials of the Department of Agriculture and Commerce. It is expected that they will meet about October 20 for the first time, when they will start discussing ways and means of regulating the price of rice.

OFFICIAL NUMBERS FOR MERCHANT VESSELS.

The following is a statement of official numbers and signal letters awarded to merchant vessels by the Bureau of Navigation, Department of Commerce, during the week ended November 6, 1915:

Name.	Official number.	Signal letters.	Tonnage.		Year built.	Where built.	Home port.
			Gross.	Net.			
SAIL.							
Schooner barge:							
Montauk	718744	LFQT	1,371	1,267	1915	Wilmington, Del.	Wilmington, Del.

^a Date and place of build unknown. Rebuilt at Bristol, R. I., 1915.

^b Foreign-built vessel admitted to American registry under the act of Aug. 18, 1914.

^c Formerly the Mexican steamship *Mazatlan*.

Foreign-built vessels admitted to American registry under the act of August 18, 1914, since June 30, 1915, total 20, of 50,865 gross tons.

TRADE-EXTENSION WORK IN SOUTH AFRICA.

[Consul E. A. Wakefield, Port Elizabeth, Sept. 22.]

Several specific results from the trade-extension work of the Port Elizabeth consulate have recently come to the attention of this office. One of these involved the sale of alfalfa cultivators from a stock of implements held at this port. Paints, oils, incubators, small hardware and tools, and druggists' sundries are other lines of American goods that have been introduced through the agency of correspondence that passed through this office.

The importance of having catalogues on file in American consulates is well exemplified by results within the past quarter. Through information obtained in this manner American electric lamps, heaters, cookers, and irons have been introduced on the Port Elizabeth market, and one make of iron, which is approved by the city electrical engineer, has met with an extensive sale. Further, the representative of one of the large importing houses of South Africa has gone to the United States to establish trade connections there after consulting the catalogues on file in this consulate.

REPORT ON HYDROGRAPHIC WORK IN FAR EAST.

[Consul J. K. Caldwell, Vladivostok, Siberia, Sept. 24.]

A report has been made here on the work of the hydrographic expedition in the Pacific Ocean in 1914. The survey of the shore from Cape Ekaterin to Cape Taiganos was successfully accomplished. Here many mistakes in the existing charts were discovered, as well as the existence of a very dangerous rock, situated in the steamer track from the south up to Guigiga. Even at medium depths, the rock is submerged and presents a great danger to navigation.

After the survey was made as far as Taiganos, the steamer crossed the Penginskaya Gulf to Cape Ugolny and began further operations from there.

While crossing the gulf the expedition came across shallow waters and a row of stones projecting above the water level some 6 miles from the eastern shore. "The high and rocky coast of that part of the Penginskaya Gulf would hardly cause one to expect such stones," says the report, "but they were there and in order not to ground the expedition had to calculate when it would be low tide so that if the steamer should ground on any of these rocks the rising or high tide would float her. This method was not practicable everywhere. For instance, in Rekin Gulf there are only 8 to 10 feet of water at low tide and the work had to be done, even at the risk of grounding, at high tide. Nearly as far as Podkargernaya Bay numerous rocks and shallows hindered the progress of the work, but the expedition succeeded in eluding them."

The work along the western shore of Kamchatka was carried on successfully and the expedition succeeded in including the whole western shore of the peninsula down to Cape Lapatka, returning to Nikolaiefsk on August 26.

The total length of coast surveyed is about 1,000 sea miles.

AN EXAMPLE OF BAD PACKING.

[Consul General L. J. Keena, Valparaiso, Chile, Oct. 4.]

The unsatisfactory condition in which two lots of American chloride of lime reached Valparaiso is clearly shown by photographs which have been sent to Washington. It is plainly evident that merchandise in such broken and battered drums is unsalable.

The mistake made by the exporter was in shipping chloride of lime to Chile in drums of the same weight and thickness used for shipment within the United States. It may be also that the exporter of this lime has been in the habit of shipping this product so packed to East Coast ports and to Europe without loss by breakage, but it must be remembered that in Chile all unloading is done from ship to lighter and from lighter to pier, and that both handlings must often be done in rough weather. The importers say that they have never had any bad experience in regard to the packing of this product as received from Europe.

[The two photographs referred to, which show the damaged condition in which the consignments reached Valparaiso, may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices; ask for file No. 68189.]

CHEAP BEER FOR SOUTH CHINA.

[Vice Consul A. E. Carleton, Hongkong, Sept. 21.]

The stopping of imports of German beer in the Hongkong and South China markets has caused the local purveyors some difficulty in meeting the demands of the trade, particularly in cheap beer for Chinese consumption. The Japanese exporters have extended their business to an enormous extent in comparison with their former trade, as previous to the war the German beer dominated the market. The Japanese are selling these days between 500 and 600 cases a week of the cheaper grades, and there is no apparent serious competition.

A prominent wine merchant is after a cheap beer to compete with the Japanese product; and if American producers can place in Hongkong c. i. f. a beer that will not cost over \$3.65 gold for four dozen quarts, there will be undoubtedly a steady and profitable business. This price would yield to the middleman a very small profit, but the turnover would be sufficient probably to give in the long run a fair remuneration for the trouble and expense entailed in advertising and pushing the beer.

An English ale is now having splendid sales at about \$22 gold c. i. f. Hongkong per cask of 50 imperial gallons. The duty is about 11 cents per gallon. This increase in price is due to the enhanced cost of the cask, for in normal times the beer is delivered in Hongkong at about \$20 gold per case. There is also a cheap Canadian beer on the market which costs laid down in Hongkong about \$4 gold per case, and probably this can be sold even cheaper.

AMERICANS SHOULD KNOW BEST SHIPPING ROUTES.

[Consul W. Roderick Dorsey, Tripoli, Libya, Sept. 27.]

A merchant in Tripoli recently forwarded a small trial order to a firm in the United States. The American firm appealed to him to know the "most direct route for shipment." This information the exporter might have obtained at home, through any navigation company entering Mediterranean waters, through some shipping broker, the various "exporters' guides," or the Bureau of Foreign and Domestic Commerce. Such questions should not be addressed to foreign merchants, unless absolutely necessary. They efface that impression of knowledge of export trade which inspires confidence to place orders. If American manufacturers hope to hold such openings as they may obtain because of the European war, they must acquire the perfect knowledge of all the small details of exporting that formerly influenced trade in favor of European competitors.

It may not be amiss to repeat for the benefit of others who may have orders from local merchants that there are no direct sailings between Tripoli and the United States, but transshipments can be made at Genoa, Naples, Palermo, and Malta. If, as is probable, the freight rate for the long haul from America is the same to all these ports, then consignments should be booked for transshipment at either Naples, Palermo, or Malta, because of the shorter haul and consequent lower freight to this port as compared with Genoa.

CLOSER COOPERATION WITH CONSULS URGED.

[Consul Augustus E. Ingram, Bradford, England, Sept. 30.]

It is unfortunate that many American exporters, who have written to the Bradford consulate for trade information and have been sent the addresses of local firms interested in this line of goods, fail even to acknowledge the receipt of the consulate's letter. If it were possible for them to advise this office it would be of great service here to know what the result was. Even if the American concern did not effect a sale it might be possible for the consulate to smooth away some difficulty; or at any rate the experience would be helpful to this office when a similar inquiry was made, or when, as is often the case, the same firm writes again, say next year, and makes identically the same inquiry. At times one is forced to believe that these commercial inquiries of consular officers are made wholesale and little or no individual attention given to each letter sent out. In commercial work, especially in introducing goods, it is well to remember that—as in picking fruit—handwork secures the best results.

It is understood at this office that it is a practice of many American firms when they receive more orders than they can fill to ignore all superfluous applications. While such a practice may not give offense to those who understand the American business man, it does create an unfavorable impression in foreign countries, where probably a slower speed of business activity enables business firms to give due regard to the little courtesies of life that in the aggregate count for so much with them. It would pay American firms to consider this, and it certainly would help American consular officers in their work for American exporters.

THIS SEASON'S CATCH OF MEXICAN CRAWFISH.

[Consul Claude E. Guyant, Ensenada, Lower California, Oct. 28.]

The 1915 season for taking crawfish from Lower Californian waters, which lasts the greater part of the year, has just ended. This industry, which is controlled by a Mexican concessionaire, has been increasing in local importance during the past few years and the 1915 output, as declared at this consulate, for export amounted to 373,534 pounds, valued at \$33,697 United States currency. This is an increase of \$10,000 over the exports of 1913, and of \$19,000 over those of 1912. Figures for 1914 are not available.

The entire catch is exported from Ensenada to San Diego, Cal., whence it is distributed to western United States markets.

The profits of a well-known London and Australian firm of merchants show a decrease of a little more than \$40,000 during the last year for which figures have been prepared, but considering that only a fortnight of their year was outside the war period, this was considered satisfactory. In 1912-13 the amount earned was \$298,175; in 1913-14 it was \$303,144; and in the past year, \$262,757. The company is paying 6 per cent dividends, as in every year since this rate was reached, in 1910-11.

TRADE-EXTENSION WORK IN BRADFORD DISTRICT.

[Consul Augustus E. Ingram, Bradford, England, Sept. 30.]

As part of its trade-extension work the Bradford consulate forwarded numerous trade opportunities for publication in **COMMERCE REPORTS** during the past year. In endeavoring to ascertain the success met with by the inquiring firms, many of the difficulties which they encountered in seeking to open new trade connections were brought to light.

Taking, for example, the "opportunity" for wall papers that was published December 4, 1914, the inquiring firm reports that it received replies from two houses in the United States, only to learn that the dimensions of American wall papers are not the same as are demanded here. The rolls of wall paper sold in England are 12 yards long and 21 inches wide; the American rolls were 8 yards long and 18 inches wide. The length, however, is not so important as the width. The Bradford firm stated that within the last few weeks a combine had been formed of all British manufacturers of wall paper and that dealers would practically be compelled to purchase all supplies of ordinary wall paper from British makers. Its understanding of the situation was that firms in this country would be open to purchase only specialties or fancy wall papers from the United States. The firm referred to is now selling American leather wall papers.

F. O. B. Quotations Lost Order.

Another Bradford concern, which wished to secure a supply of plates, reports that it has not been able to place any orders, as the American firms quoted prices f. o. b. at their factory and it has been most difficult to ascertain locally the freight and other charges. The consulate has endeavored to assist the inquirers, but freight rates have been advancing so rapidly that they have not been able to determine the delivered cost of the plates. They have therefore been forced to buy supplies in England, but will continue their correspondence.

This is only another instance of the advisability of American exporters quoting c. i. f., or at least going to the trouble of advising prospective purchasers as to the probable or approximate freight and other charges. Recently local dealers received samples and prices of tobacco pipes manufactured in Missouri, but as the prices were f. o. b. factory it was practically impossible for the firms, despite their interest in the matter and all the assistance this office could give them, to ascertain the freight rates. Shipping firms offered to cable to New York for the information, but any rates so obtained would only be for that date. Moreover, the Missouri firm gave their prices in dollars and cents, and in one case this caused the matter to be laid aside.

A Matter of Hosiery Needles.

A hosiery manufacturer near Bradford recently asked this consulate's assistance in obtaining American hosiery needles. As the need was urgent, inquiry was made by this office of the American consular agent at Leicester, who kindly sent the names and addresses of several British agents of American makers. Supplies

could not be obtained from them. The hosiery manufacturer then got into communication with an American firm, but its prices were very high. For instance, for a German latch needle (No. 60 for half hose) which he had purchased before the war in Leicester for 50s. (\$12.17) per thousand the American firm asked \$44, with freight and all expenses added. Moreover, the German firm was always willing to accept orders for 1,000 needles of a kind, while the American firm somewhat reluctantly accepted orders for 1,000 of a kind, stating that 5,000 was its usual minimum.

The manufacturer now has his needs, which are comparatively small, filled for some time, but it is evident that he feels that the American firm is not treating him with such consideration as to lead him to continue to do business with it longer than is absolutely necessary.

MORE SPINDLES FOR JAPANESE MILLS.

[Translation from the Osaka Mainichi Shimbun, Oct. 8.]

Japanese cotton-spinning companies are competing with one another in schemes for increasing the number of spindles in their factories, the plans calling for completion by the first half of 1917. However, difficulty in securing the necessary machinery is delaying the installations. The following list shows the dates when the various companies had expected to receive their new equipment:

Name of company.	Number of spindles ordered.	Agreed date of shipment.
Fuji Spinning.....	50,000	Last half of 1916
Amagasaki Spinning.....	28,000	About May, 1916.
Osaka Amalgamated.....	41,000	Do.
Toyo Spinning.....	30,000	Do.
Fukushima Spinning.....	20,000	Now preparing.
Toyoda Cotton Spinning.....	8,500	Should be loading now.
Settsu Spinning.....	8,000	During 1916.
Mitsui-Shanghai.....	50,000	Do.
Matsuyama Spinning.....	5,000	Do.
Sakai Cotton Spinning.....	20,000	Do.
Temma Spinning.....	15,000	Do.
Owada Spinning.....	10,000	Do.
Hinode Spinning.....	10,000	Not yet decided.
Nagasaki Spinning.....	10,000	Do.

The cost of spinning machinery, in comparison with its cost during the first part of this year, has increased 10 to 20 per cent, and, in comparison with the cost during the last half of last year, actually 30 to 40 per cent.

[The number of spindles in Japan on Dec. 31, 1914, the mill output and sales of yarn in the last two years, and other recent data of Japan's cotton-spinning industry are given in a monograph that the Bureau of Foreign and Domestic Commerce has just issued as Special Consular Reports No. 74. Copies of this pamphlet may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., or from any of the branch offices of the Bureau; price, 5 cents.]

Corundum mining in the United States has ceased, while Canadian production dropped from \$239,091 in 1912 to \$72,176 in 1914. Artificial abrasives have displaced the natural products.

FLUCTUATIONS IN SOUTH AFRICAN TRADE.

[Vice Consul Charles H. Helsler, Cape Town, South Africa, Sept. 21.]

The war in Europe has had a remarkable effect on trade within the Union of South Africa, and is more and more influencing importations into this country. The tendency has been to increase the importations in some cases, though in other cases a noticeable decrease has occurred.

For the first eight months of this year the imports of merchandise into the Union amounted in value to \$87,738,318, as against \$110,612,368 in the first eight months of last year. This shows a decrease for this year of \$22,874,050. The decrease has not been continuous, however, as it was registered almost entirely in the early months of the year. For the past few months there has been a steady expansion in the volume of merchandise introduced from over-sea, and during the month of August the value exceeded that of imports recorded during August of last year by \$337,257.

Although the imports have steadily increased during the last few months, it is not improbable that there will be fluctuations in the months to come. South African merchants as a whole are not disposed to introduce large stocks until the outlook becomes clearer, and there is a general inclination to continue business on the smallest holdings which will suffice to meet demands.

Articles and Ports Affected by Changes in Trade.

The principal imports that have shown increases were: Wheat, drugs and chemicals, bags (coal, grain, etc.), spirits (potable), confectionery, and preserved fish.

The chief decreases were in cotton manufactures, machinery, apparel and slops, leather goods, hardware and cutlery, haberdashery and millinery, woolen manufactures, iron and steel manufactures, flour, wood and timber, motor cars and parts, furniture, electric wire and fittings, agricultural implements, manures and fertilizers, railway material, tobacco, musical instruments, and jewelry.

The fall in the imports of machinery, agricultural implements, wood and timber, manures and fertilizers, and electric appliances is especially noticeable, as it indicates the temporary suspension of developmental work in the Union. The heavy reduction in the introduction of motor cars, motor bicycles, etc., is doubtless an indication of the community's desire to forego luxuries for the present.

Imports at Cape Town, East London, and Durban showed gains in August, while receipts at Port Elizabeth and those through the port of Lourenco Marques in Portuguese East Africa fell below the figures for August, 1914. The respective values were: Cape Town, \$2,468,669 (against \$2,232,765 in August, 1914); Port Elizabeth, \$2,326,571 (against \$2,729,566); East London, \$1,489,903 (against \$1,120,891); Durban, \$4,244,556 (against \$3,583,958); Lourenco Marques, \$1,188,438 (against \$1,663,399); other ports and stations, \$128,885 (against \$179,186).

Oilstones and scythestones produced in the United States increased from \$8,000 worth in 1880 to a record of \$366,857 in 1903, and dropped to \$167,948 in 1914.

CONDITIONS IN JAPAN'S INDUSTRIAL CENTER.

[Translation from the Osaka Mainichi Shimbun, Oct. 2.]

Owing to the stopping of exports, the lack of raw materials, and other causes the industries of Osaka at one time felt the effects of the war acutely. The manufacture of glass practically ceased and knitting mills discharged many workers and endeavored to reduce expenses by heavy cuts in the wages of those kept on the pay roll. Lately there has been a heavy increase in the exportation of glass to Australia and India and large orders for knitted goods have been received from Russia, Australia, and Great Britain, so at the present both of these industries are in a flourishing condition. Wages are now about 20 per cent higher than before the war.

Besides the industries mentioned there has been a great increase in the demand for copper and antimony, and while not on a large scale the very marked activity of the brick industry is attracting considerable attention. The production of paper, soap, paints, dyes, and chemicals has increased as substitutes are necessary for the goods formerly imported and which can not now be obtained. The steel and shipbuilding industries are also quite flourishing, owing to the activity of the shipping industry with its persistent demand for more ships.

Amalgamation of Small Factories.

In order to qualify themselves to obtain orders from abroad, the small factories, which have heretofore been independent, are showing a tendency to amalgamate. This is working a marked change in industrial conditions in Osaka, bringing with it, as it does, an increase in the size of the factories and in the number of employees; a marked rise in wages, also, can not be avoided.

The following figures compiled by the Osaka Prefectural Government show the increases in the number of factory hands of all kinds and set at rest any doubts as to the good condition of the industries:

Industries.	Number of factory hands.		Industries.	Number of factory hands.	
	July, 1914.	October, 1914.		July, 1914.	October, 1915.
Brick.....	523	1,138	Paper.....	813	1,027
Iron and steel works.....	20,415	21,471	Rubber goods.....	1,018	1,194
Shipbuilding.....	2,468	2,918	Chemicals.....	879	963
Glass.....	5,309	6,709	Buttons.....	3,428	3,861
Wool weaving.....	485	697	Metal goods.....	13,098	13,156
Leather.....	596	2,114	Cotton spinning.....	30,331	35,009
Knitted goods.....	7,531	8,961	Dyes.....	3,222	3,365

The rate of increase since the beginning of the war is about 18 per cent.

El Grito del Pueblo Ecuatoriano, a publication at Guayaquil, Ecuador, prints an article in which it is stated that a representative of capitalists in the United States has announced plans for a steamship line between that city and Philadelphia under the Ecuadorian flag. The announced purpose of the company, capitalized at \$3,000,000, is to exploit the iron mines and cattle industry of the South American country, four ships to be placed on the route. A translation of the article is forwarded by Consul General Goding.

EFFORTS TO DEVELOP TUNGSTEN SUPPLY IN BRAZIL.

[Consul General A. L. M. Gottschalk, Rio de Janeiro, Brazil, Sept. 22.]

The scarcity of tungsten in the United States has been sufficient to cause certain American firms to send representatives to South America to ascertain whether or not this mineral is obtainable in commercial quantities. But as in the case of most of the mineral wealth of Brazil, the extent of the deposits, the availability of the ore in commercial quantities, and the prices at which such products may be bought are still entirely problematical.

Dr. Orville Derby, the Director of the Brazilian Geological Service, states that the data on hand concerning tungsten in Brazil are extremely vague; that a few years ago some wolframite was being separated from copper ore at Enoruzilhada, in the State of Rio Grande do Sul, but that the company has since suspended operations. He also states that scheelite is known to occur in old gold washings at Sumidouro de Marianna, in the State of Minas Geraes, but presumably not in workable quantities.

A mining engineer informs me that in his exploration trips in the interior of the country he encountered deposits of tungsten in the States of Espirito Santo and Minas Geraes, considerable quantities of wolframite being available in the former State, and scheelite in small quantities in the latter State. American firms which are interested in these minerals, as well as in tantalite, might well write to this engineer, who states that if he is applied to he will be glad to investigate these matters further in the hope that an opportunity may arise for the commercial exploitation of the minerals mentioned. His address may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67949.

BRITISH SHEEP FOR JAPAN.

[Extract from Japan Chronicle of Sept. 28, by Consul General George H. Seidmore, Yokohama.]

The Japanese Department of Agriculture and Commerce is to spend 30,000 yen (\$14,940) annually on rearing of sheep, beginning with the financial year 1916-17. About 200 head of sheep will be purchased from England and kept on the pastures at Tsukisamushu, Hokkaido. Should these renewed experiments in sheep raising in Japan prove remunerative the authorities will take steps for the encouragement of this branch of agriculture among farmers. The Japanese authorities are apparently convinced that sheep raising in Japan will turn out successful, but it should be remembered that much depends upon the demand for mutton, which is not an accepted article of food in this country. (In fact the odor and taste are exceedingly repulsive to nearly all Japanese.)

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Ferromanganese, etc., No. 19238.—A firm in Spain informs an American consular officer that it desires to import ferromanganese, ferrosilicon, and aluminum in bars, either as agents or to buy direct. Correspondence should be in Spanish.

Flutophone, No. 19239.—An American consular officer in Scotland reports that a man in his district desires to communicate with manufacturers of a musical instrument known as the "Flutophone."

Water wings, No. 19240.—A report from an American consular officer in Switzerland states that a wholesale dealer and importer in haberdashery is anxious to be placed in touch with manufacturers of water wings. References given.

Iron nails, No. 19241.—An American consular officer in the Canary Islands reports that a packing jobber desires f. o. b. prices on iron nails for locking together banana crates and tomato boxes. The dimensions of the nails wanted are as follows: Length $1\frac{1}{2}$ inches, gauge 14; $1\frac{1}{2}$ inches, gauge 13 $\frac{1}{2}$; $1\frac{1}{2}$ inches, gauge 15; $1\frac{1}{2}$ inches, gauge 15; and 1 inch, 16 gauge. Nails are wanted in 100-pound barrels, and the firm wishes to pay cash against shipping documents.

Felt floor coverings, No. 19242.—A retail firm in Spain desires to import felt floor coverings of wool or hair felt for laying under carpets. A sample of the felt desired may be examined at the Bureau or its branch offices. (Refer to File No. 68506.)

Men's wearing apparel, No. 19243.—A commercial attaché of the Department of Commerce informs the Bureau that a business man in Brazil desires to have illustrated catalogues on men's haberdashery, hats, umbrellas, overcoats, etc. If possible, literature should be in Portuguese; if not, English may be used.

Advertising novelties, No. 19244.—A commercial agent of the Bureau reports that a man in New Zealand desires to represent manufacturers of advertising novelties of all descriptions. Catalogues, price lists, and full information are requested.

Codfish, No. 19245.—A report from an American consular officer in Spain states that there is a request for prices on 50 kilos of codfish. References given.

Sulphur black and monosulphonic acid, No. 19246.—An American consular officer in Switzerland reports that a company is desirous of getting in touch with manufacturers of sulphur black and monosulphonic acid, which can supply same in any desired quantities. Quotations c. i. f. port of destination. Correspondence may be in English.

Wood, No. 19247.—A business man in Spain informs an American consular officer that he wishes to import wood for manufacturing oars. Reference is given. Correspondence should be in Spanish.

Pharmaceutical products, No. 19248.—A firm in Italy desires to be placed in communication with manufacturers or exporters of pharmaceutical products. Correspondence may be in English.

Combs, No. 19249.—An American consular officer in Spain reports that a man in his district wishes to receive catalogues, samples, prices, and terms for combs made of celluloid, ebonite, or gallalith. Correspondence and all literature should be in Spanish. Cash will be paid on arrival of goods at Spanish port.

Feeding bottles, etc., No. 19250.—A report from an American consular officer in the United Kingdom states that a company desires to be placed in touch with manufacturers of glass bottles, used in the drug trade; feeding bottles; willow boxes for ointments; and clinical, dairy, food, and bath thermometers.

Goose quills, No. 19251.—The Bureau is in receipt of a communication stating that a cigar factory desires to purchase goose quills, cut at about 4 centimeters, such as are used in the manufacture of certain kinds of cigars. Samples of quills may be examined at the Bureau or its branch offices.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Panama Canal supplies, No. 2776.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until November 26, 1915, for furnishing, by steamer, free of all charges on dock at either Colon (Atlantic port) or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama, iron castings, wrought-iron or steel pipe, mule shoes, horseshoe nails, screws, cotters, tacks, turn-buckles, bronze bars, brass chains, shovels, manure forks, mop handles, tool handles, brooms, scrub brushes, roof brushes, paint brushes, snatch blocks, tackle blocks, lanterns, buckets, oil cans, lantern globes, window glass, scythestones, steel tapes, rules, plumb bobs, gate valves, hose couplings, door bolts, locks, hasps, hinges, door hooks, furniture casters, hose, packing, asbestos gaskets, sash cord, chalk line, twine, tarpaulins, sheeting, bunting, railway flags, cheesecloth, oilcloth, linoleum, emery cloth, sandpaper, leather belting, belt lacing, ship's felt, cork, boiler lagging, crayons, metal polish, beeswax, candles, potassium chlorate, borax, lye, paper, and white-oak lumber. (Circular No. 990.)

Construction work, No. 2777.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until December 21, 1915, for the construction complete (including mechanical equipment and approaches) of the United States post office at Attleboro, Mass. Drawings and specifications may be obtained from the custodian of the site at Attleboro or at the Washington office.

Steel towers, No. 2778.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until January 8, 1916, for the construction of 400-foot steel towers at the radio station at Guam. Plans and specifications may be obtained on application to the Bureau of Yards and Docks.

Lifeboats, No. 2779.—Sealed proposals will be received at the office of the United States Coast Guard, Treasury Department, Washington, D. C., until November 30, 1915, for the construction of Beebe-McLellan self-bailing, water-ballast surfboats, with centerboards. Plans and specifications and further information may be obtained on application to the Supervisor of Lifeboats, Room 522, Customhouse, New York, N. Y.

Panama Canal supplies, No. 2780.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until December 1, 1915, for furnishing, by steamer, free of all charges on dock, at either Colon (Atlantic port) or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama, steel shapes, plates, and bars, steel and iron chain, steel and iron pipe, pipe fittings, valves, sink plugs, cocks, ejectors, lavatories, copper tubing, manila rope, mop heads, flax swabs, rubber bands, manila paper, wagon rims and spokes, and lumber. (Circular No. 991.)

Construction work, No. 2781.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until December 22, 1915, for the construction complete (including mechanical equipment and approaches) of the United States post office at Aurora, Nebr. Drawings and specifications may be obtained from the custodian of the site at Aurora, or at the Washington office.

Wrecking building, No. 2782.—Sealed proposals will be received at the office of the lighthouse inspector, Charleston, S. C., until December 7, 1915, for tearing down four-story brick mill building and disposing of material as specified, including placing of bricks as riprap outside bulkhead on Ashley River, front of Charleston Lighthouse Depot. Further information may be had on application to the above office.

Dredging, No. 2783.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until December 11, 1915, for dredging at the navy yard, New York, N. Y. Plans and specifications may be obtained on application to the commandant of the navy yard named or to the Washington office.

SUPERIOR U. S. CLAY MAKES INDUSTRY INDEPENDENT.

American glass manufacturers who have felt the necessity of depending upon foreign clays will be able hereafter to assert their independence of foreign material, as a result of experiments that have been conducted by the United States Bureau of Standards. The Pittsburgh laboratory of that bureau, which is located near one of the chief centers for the industry in the United States, working in cooperation with the clay-pot industries, has learned that glass refractories (pots in which the glass is melted) can be prepared from American clays, with resulting better quality than that of the article manufactured with the addition of German plastic clays.

The mixture prepared from American clays proved superior in the glass-corrosion tests, both to the mixtures prepared with German clays alone, and to those prepared from American and German clays combined.

The director of the Bureau of Standards states that the value of the results of this single investigation to American industry far surpasses the entire amount the Government has expended in the clay-products work since the time of its organization. The opinion of those in charge of the experiments is that from now on no foreign clays will be needed in this branch of manufacture. The work inaugurated by these experiments is now ready to be tried out on a large scale.

REMOVAL OF EMBARGO ON FURS IN RUSSIA.

[Telegram from Commercial Attaché Henry D. Baker, Petrograd, received Nov. 13, 1915.]

The Council of Ministers has authorized the exportation to allied and neutral countries by any route of the following furs: Beaver, otter, sable, black and gray-black fox, blue arctic fox, elk, seal, ermine, marten, skunk, and karakul, finished or unfinished. No applications for permission to export are now required.

[For earlier references to the relaxation of embargo on furs, see Commerce Reports, Aug. 8 and Oct. 9, 1915.]

BUSINESS MEN INTERESTED IN SPECIAL AGENT'S WORK.

Much interest is being shown in the work of Mr. Stanley H. Rose, special agent of the Bureau of Foreign and Domestic Commerce, who is now traveling in the United States for the purpose of interviewing manufacturers and others concerning the details required in building up an export business. This is taken as further evidence of the steadily growing interest in foreign trade on the part of the business public of the country, and the lack of information with which the business man is too often confronted when attempting to establish an export business.

It has been found desirable to add a number of cities to the itinerary of Mr. Rose, and the schedule which he will follow, up to the end of the year, is:

Lincoln, Nebr.....	November 16-17	Louisville.....	December 6-8
Omaha, Nebr.....	November 18-19	Cincinnati.....	December 9-11
Des Moines.....	November 22-23	Marletta.....	December 13-14
Davenport (Including		Johnstown.....	December 16-17
Moline).....	November 25-26	Reading.....	December 20-21
Burlington.....	November 29-30	New York.....	December 23-24
St. Louis.....	December 2-4	Washington.....	December 27

After the holidays Mr. Rose also expects to visit a number of other cities, especially those in the Southern States. Any manufacturers living near the places which he will visit can arrange for special appointments to discuss export details by getting in touch with the secretary of the commercial organization in any of the cities named.

Besides giving information concerning export details, Mr. Rose offers for inspection a number of publications of the bureau on special markets for American goods, and has with him a set of stereopticon slides for illustrating the work of the Bureau of Foreign and Domestic Commerce. As he has traveled in many foreign countries and has been actively engaged in the export business in the United States, his information and advice are of the practical sort which American manufacturers most desire.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 3	Itinerary being arranged.

NEW DIRECT NEW YORK-CANARY ISLAND LINE.

[Consul George K. Stiles, Tenerife, Canary Islands, Sept. 25.]

A new line of steamers, forming another direct monthly service between New York and Canary Island ports, was inaugurated on September 20 by the arrival at Las Palmas, Grand Canary, of the first vessel dispatched by the Ocean Transportation Co. of New York City. Three steamers have already been announced as placed on the new line, and this number will be added to so as to permit of a regular monthly service in each direction. The first vessel reloaded here with fruit for Barcelona, where return cargo direct to the United States was waiting.

Announcement has already been made by the local agents that the second vessel of this new American company had been forced to refuse freight for this district a full month before the date set for its departure from New York. At the same time it is complained here that freight for these islands has been waiting on the New York docks for many months.

Recent Cargoes Instructing.

The trend of the trade between the United States and the Canary Island is clearly indicated by certain recent cargoes arriving here. Ships' manifests show that tobacco, hams (fresh and cured), canned goods, automobiles, and heavy machinery figure prominently in present-day cargoes. Comparisons made with pre-war statistics bring out the fact that tobacco is now imported direct from the United States, whereas it was previously bought from Hamburg in very large quantities, and that there was a very large direct importation of American canned goods (hitherto usually bought through British middlemen) in the first half of 1915.

Also, since January 1, the American automobile has practically driven all other makes from this market. The steamer from New York that reached here September 20 brought 10 automobiles, all American makes, and three of them trucks for heavy hauling, the like of which had never before been seen in these islands. As stated, considerable heavy machinery, including boilers and stationary engines, has likewise begun to arrive in this district from the United States.

NIPPON LINE ANNOUNCES EXTENSION OF SERVICE.

[American Ambassador George W. Guthrie, Tokyo, Japan, Sept. 28.]

I am informed by an official of the Nippon Yusen Kaisha that the company has decided to inaugurate, as soon as possible, a direct regular service between the Far East and New York, via the Panama Canal, in order to meet growing trade requirements. This line is intended to supplement the monthly service from New York to the Far East, which is at present maintained by round-the-world steamers dispatched from Japan to Europe via the Suez Canal.

[A dispatch from Consul General Scidmore, at Yokohama, quoting statements from the Japan Daily Mail, in relation to the report that the Nippon Yusen Kaisha had been admitted to the New York Shipping Conference, was published in **COMMERCE REPORTS** for Nov. 3, 1915.]

GUAYAQUIL MARKET CONDITIONS IN SEPTEMBER.

[Consul Frederic W. Godling, Guayaquil, Ecuador, Oct. 15.]

A satisfactory activity was noted in the cacao market during September; prices were firm and advanced slightly, the resumption of operations by the exporters having the effect of sustaining the price fixed by the Asociación de Agricultores at \$11.54 per 100 pounds. The month's exports, which totaled 5,488,043 pounds, went to: United States, 1,937,473 pounds; British Columbia, 3,600; Chile, 4,634; France, 1,253,275; Italy, 180,702; Spain, 273,702; Sweden, 108,136; and to the United Kingdom, 1,726,521 pounds.

The demand for coffee was weak, the prices per 100 pounds for first-grade being \$7.27 and for second-grade \$6.84. There were exported to Chile 276,462 pounds and to Panama 41,175 pounds.

Hides were in somewhat better demand, with a tendency toward lower prices; serranos sold for \$14.96, criollos for \$14.10, and picados for \$7.26 per 100 pounds. The exports to the United Kingdom were 800 hides, weight, 18,421 pounds; and to the United States, 10,764 hides, weighing 223,304 pounds.

The price of ivory nuts was firm, shelled nuts selling for \$1.50 per 100 pounds, France receiving 135,386 pounds and the United States 10,265 pounds.

The rubber market was steady, the prices per 100 pounds during the month being \$23.50 for maroma, \$19.02 for hojas, and \$8.55 for serrano blanco.

NEW ANGLO-HISPANO STEAMER SERVICE.

[Consul General Carl Bailey Hurst, Barcelona, Spain, Oct. 12.]

Public announcement has been made that a new line of steamers with regular sailings has been established between Bilbao, Spain, and various ports in England. The vessels will touch, after leaving Bilbao, at such Spanish ports as may offer cargo, as well as at Oporto and Lisbon in Portugal, and sail thence to Tyne, Tees, and Hull, touching at London, Middlesbrough, and Newcastle. Armstrong, Lord & Co., of Newcastle-on-Tyne, are directors of the lines "Frutera" and "Affriteurs Réunis" and the vessels of both of these companies will be engaged in the service now inaugurated. Modesto, Pineiro y Cia, of Santander, are the Spanish agents of the new line, which is to be known as the "Intera."

In view of the growing demand in Spain for transportation facilities, this new steamship service is welcomed as a timely assistance to the foreign commerce of the country. It may be mentioned that there is a constant demand here for sound seagoing vessels, and high prices are being paid. A vessel was recently sold in Barcelona for over \$100,000, which was valued early in 1914 at \$20,000.

When the new water system for Madrid is completed, reports Consul Robertson Honey, of that Spanish capital, it is estimated that the supply will exceed 206,000 gallons per minute and that, in addition, there will be a hydroelectric production of 21,000 horsepower (constant).

AUXILIARY RADIO EQUIPMENT ON STEAMER TESTED.

A report on the test of the auxiliary radio equipment installed aboard the Merchants & Miners Transportation Co.'s steamship *Howard* has been made by the United States Bureau of Navigation. This test was made because of the difference of opinion and the absence of any official information as to whether or not certain types of auxiliary apparatus and their sources of auxiliary power supply fully comply with section 1 of the act of June 24, 1910, as amended July 23, 1912.

The Department of Commerce believes it to be necessary that the various types should be officially submitted to tests from time to time, to furnish the desired information. The test on the steamship *Howard* was conducted from July 13 to 19, 1915, en route from Norfolk to Boston, and return from Boston to Baltimore, by F. A. Kolster, of the Bureau of Standards, and R. Y. Cadmus, radio inspector, of the Bureau of Navigation.

The Edison battery installed on the steamship *Howard* consists of 100 cells type B-4-H, W. S., rated at 80 ampere hours. This battery supplies power to run a 110-volt motor, which drives the one-half kilowatt, 500-cycle generator of the radio transmitting equipment, and also supplies power for 25 or more deck lights. The voltage of the battery when fully charged is 140. It is necessary, therefore, to have a resistance in series with the battery in order to cut down the voltage at the terminals of the motor to 110. The resistance supplied for this purpose is adjustable, so that as the battery voltage gradually drops the voltage at the motor terminals can be kept at 110 by decreasing this resistance.

One test of the battery was made, using only 90 instead of 100 cells. The initial voltage of these 90 cells after charge was about 125. No resistance was used in series.

The Bureau states that the 90-cell battery apparently meets the four-hour and six-hour service requirements of the act of June 24, 1910, amended July 23, 1912, and the London International Convention, respectively.

The motor generator set furnished with this equipment is of the inductor type. The radio transmitter furnished is of modern design, efficient, and easily operated. Provision has been made for the use of wave lengths of 300, 450, and 600 meters. The transmitter may be set for any of these wave lengths by means of a simple switch. The antenna current was found to be about 6 amperes for 450 and 600 meters and about 4 amperes for 300 meters.

Under these conditions it is believed that the requirement of 100 miles communication will be fulfilled, as indicated in the range tests conducted while en route from Norfolk to Boston and return to Baltimore.

UTILITY COMMISSION CREATED IN CANADIAN PROVINCE.

[Consul Samuel C. Reat, Calgary, Alberta, Canada, Oct. 30.]

The Province of Alberta has just created a Utility Commission consisting of three members. It will exercise a general supervisory control over all public utilities in Alberta, and also act as an advisory board on municipal improvements involving bond issues. The chairman receives a salary of \$7,200 and each of the other members \$6,000. This Utility Commission is unique in the Dominion.

AUSTRALIAN TENDENCY TO DOLLAR EXCHANGE.

[Report of Canadian Government Trade Commissioner, Melbourne, Sept. 29.]

The most disturbing factor in Australian trade with Canada and the United States in recent months has been the marked variation in the rate of conversion from dollars into sterling. The lowest rate advised was \$4.48 to the pound, which represented a loss of about 10 per cent to the purchasers of goods invoiced in dollar currency. This variation has completely upset the even tenor of trade between the North American Continent and Australia. Sellers of staple lines of Canadian and American goods have been obliged to quote dollar prices, thus throwing the loss, by conversion into sterling, on to the purchaser, or, if quoting sterling prices based on a named fixed rate of exchange, having the fluctuations adjusted by the Australian buyers of the goods. This naturally has made business difficult and buyers have been operating on a "hand-to-mouth" policy. The visit of the British Finance Commission to the United States has already had a steadying effect upon exchange, which to-day is reported at, nominally, \$4.75, and consequently there is a tendency for Australian buyers to operate on quotations submitted in dollars.

PRODUCTION OF MUSENNA BARK IN THE SUDAN.

[Agent and Consul General Olney Arnold, Cairo, Egypt, May 21.]

A firm of manufacturing chemists in the United States recently asked for a sample of musenna bark (*Albizia anthelmintica*), which the firm informed me was indigenous to Kordofan, in the Sudan. I received, upon application to the Sudan Government, samples of the bark from the Director of the Commercial Intelligence branch of the Government at Khartoum. In forwarding these samples, the director informed me that, so far as he was aware, there was no existing trade in this product, but that if any demand for it appeared to be likely he would endeavor to arrange for a supply of the bark, provided details as to price and quantity required were furnished.

[Samples of musenna bark have been forwarded from the consulate general at Cairo, and will be loaned to interested persons upon application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 61876.]

BOUNTIES FOR ENCOURAGEMENT OF INDUSTRIES.

[British Board of Trade Journal, Oct. 14.]

The bounties paid by the Australian Government during the year ended June 30, 1915, totaled [values converted to United States gold]:

Bounty paid on—	Rate.	Number of payees.	Amount paid.
Combed wool or tops, exported.....	(a).....	2	\$37,008
Tobacco, leaf.....	1 cent per pound.....	21	1,699
Fish, preserved.....	2 cents per pound.....	2	780
Fibers, flax and hemp.....	10 per cent on market value.....	15	376
Coffee, raw.....	4 cents per pound.....	8	345
Fruits, dried (except currants and raisins) or candied, and exported.....	10 per cent on market value.....	4	474

^a 2 cents per pound to Dec. 31, 1915, for the first 1,000,000 pounds made by any one manufacturer, and 1.5 cents per pound for each pound in excess of 1,000,000 pounds made by any one manufacturer.

SHORT-WEIGHT SHIPMENTS OF CASSIA BARK.

[Consul General A. L. M. Gottschalk, Rio de Janeiro, Brazil, Oct. 1.]

Complaints have been made to this office by importers of cassia bark from the United States that shipments are reaching here in short weights.

Cassia bark comes from China (Amoy and Canton) and is sent to New York in bond for reexportation. It is packed in very light wooden chests of some 30 kilos (66 pounds) each, and reaches here invoiced at the original bond weight, with weight lists attached and a statement of the original tare. In one instance, on a lot of 50 cases, a total difference of 90 kilos (198 pounds) was detected in the gross weight, all the cases being intact. This difference, the importers claim, can hardly be attributed to loss of weight from natural causes, such as drying out, etc. Further, the local commission house has taken the same lot of 50 cases of cassia bark and weighed the containers separately, in order to ascertain the fairness of the charge for "tare," and claims to have found here alone a difference of 20 kilos (44 pounds).

The attention of American exporters of cassia bark should be directed to this. Competition is very keen by reason of the activities of local Italian and Portuguese agents. Prior to the European war Brazil's imports of cassia came to her almost entirely through the free port of Hamburg, despite keen competition from Genoa. Since the outbreak of the war many small local Portuguese commission houses of Rio de Janeiro have entered the field (Lisbon having also to-day a "free zone for reexportation"), and thus our American exporters of the article are placed in competition with sources of supply which seem to be serving the local market better than they.

PROPOSED NEW TAXES FOR THE NETHERLANDS.

The new taxes which the Dutch Minister of Finance has included in his budget estimates are calculated to yield the Netherlands an additional revenue of some 61,000,000 florins (\$24,522,000), according to press dispatches. Holders of foreign stocks will be called upon to pay 1 florin per thousand on their holdings; taxes on church property and pious foundations are expected to bring in 1,400,000 florins (\$562,800), on beer 3,600,000 florins (\$1,447,200), on tobacco 6,000,000 florins (\$2,412,000), and on railway-seat tickets 2,000,000 florins (\$804,000). A source of revenue that is unique is the proposed tax on all Christian names in excess of one at the registration of births.

MEXICAN BORDER CONDITIONS IMPROVED.

[Vice Consul William P. Blocker, Piedras Negras, State of Coahuila, Nov. 6.]

The situation in the Piedras Negras consular district is much improved; in fact, fighting has become a thing of the past. The passenger, freight, and other trains of the Mexican National Railroad are operating daily to and from southern points without molestation.

Many Americans and other foreigners are crossing the International Bridge daily en route to their homes in the interior, with a view to again settling down to work and rebuilding their business. Those coming out say conditions are becoming better each day.

MUNICIPAL OWNERSHIP OF PUBLIC UTILITIES.

[Consul Samuel C. Reat, Calgary, Alberta, Canada, Oct. 30.]

The city of Calgary made its initial venture in municipal ownership in the year 1900, when it purchased the system of the Calgary Gas & Water Works Co., which formed the nucleus of the present system of waterworks. This was followed in 1904 by constructing a municipal electric light plant, the amount voted being \$60,000, and operations were started in December, 1905. In September, 1908, construction of a municipally owned street railway system was started. This report will deal with each utility separately.

The Waterworks.

Calgary obtains its water supply from the neighboring Bow and Elbow Rivers. The intake on the Elbow which furnishes the city a supply of 8,000,000 gallons per 24 hours is located about 14 miles west of Calgary in the foothills of the Rocky Mountains, and approximately 300 feet above the general level of the city's chief business thoroughfare. The new pumping station on the Bow River, with its present equipment is capable of supplying 20,000,000 gallons per 24 hours.

A pressure of 85 pounds per square inch is maintained in the mains, and with the aid of the pumps this can be materially increased in times of emergency. A reservoir of 16,000,000 gallons capacity stands on the gravity line 200 feet above the level of the center of the city. Hilly portions of the city, at too great an elevation to be well supplied by the ordinary water service, are treated as a high-level zone and dealt with independently. Water is pumped into an elevated storage tank of 100,000 gallons capacity, from which it is distributed to said districts.

The purchase of the waterworks company formed the nucleus of the present system, which comprises over 190 miles of water mains, 13 miles of 30-inch wood stave pipe in the gravity line, 9,879 connections, 1,027 hydrants, 140 public water taps, and 12 public water troughs. The following schedule shows the domestic rates:

Number of rooms.	Rate per annum.	Additional conveniences.	Rate per annum.
5.....	\$3.00	Basin in private dwelling.....each..	\$1.00
6.....	8.50	Water-closet.....do..	1.00
7.....	9.00	Baths.....do..	2.00
8.....	9.50	Sinks or taps or additional fixtures, first free, additional sinks or taps, each.....	.50
9.....	10.00	Terraced lawns, per 1,000 square feet.....	1.00
10.....	10.50	Lawns or gardens, per 1,000 square feet.....	.50
11.....	11.00	Criminals.....each..	2.00
12.....	11.50	Horses.....do..	2.00
13.....	12.00	Carriages.....do..	2.00
14.....	12.50	Aunts.....do..	2.00
15.....	13.00	Cows.....do..	2.00
		Water motors.....do..	5.00
Each additional room..	.50	Public standpipes or taps.....do..	6.00

A discount of 12½ per cent is allowed on all flat rates if paid within 10 days of the date the account is rendered. Meters are fixed in all buildings or places where water is consumed in large quantities. The following figures show the meter rates:

Minimum meter rates per year for each private service supply: ½-inch service, \$12; ¾-inch, \$12; 1-inch, \$18; 2-inch, \$48; 4-inch, \$96; 6-inch, \$150.

Consumption up to 1,000,000 gallons per month: First 20,000 gallons, 22 cents per 1,000 gallons; next, 50,000, 14 cents per 1,000; next 130,000, 12 cents per 1,000; next 300,000, 10 cents per 1,000; next 500,000, 8 cents per 1,000.

Special manufacturers' rates for consuming over 1,000,000 gallons per month: First 1,000,000 gallons, 8 cents per 1,000 gallons; second 1,000,000, 7 cents per 1,000; all over 2,000,000, 6 cents per 1,000.

A discount of 12½ per cent is allowed on all meter rates if paid within 10 days of the date the account is rendered.

Last year's balance sheet shows the following satisfactory results:

Revenue	\$398, 421. 76
Expenditure	364, 709. 66
Surplus	33, 712. 10

In addition to the above surplus this utility has paid all its debenture interest and debenture sinking fund and has provided a depreciation reserve account totaling \$458,001.32 on December 31, 1914. The surplus for 1915 to August 31 shows \$14,506.53.

Electric Light and Power Department.

The capital expenditure of this utility amounts to \$2,643,591.01. The capacity of the plant is 15,000 kilowatts. The mode of obtaining power is by steam turbine and vertical reciprocating engines, boilers being fired by natural gas, with coal stand-by.

The power is now being purchased under a bulk contract from the Calgary Power Co., a local hydroelectrical corporation which has two large generating plants, one at Kananaskis and one at Horse Shoe Falls, both located on the Bow River 58 miles west of the city, from which place power is brought by means of transmission lines.

The hydroelectric power company also operates the city's power plant as a stand-by unit, under a contract that expires in May, 1916, thereby relieving the city of the cost of being prepared to take care of interruptions.

The plant consists of over 20 miles of overhead 3-phase No. 00 copper wire and 23,635 feet of No. 00 12,000-volt, 3-phase, paper-insulated, lead-covered, underground cable; the overhead line is carried on a graded 45-foot lead, also the necessary cross arms, insulators, pole-top switches, etc.

The overhead lines interconnect the Calgary Power Co.'s substation with the city substation through a 1-circuit line, and also connect the power company's substation with the city's generating station through two separate 3-phase lines, also one loop line 14 miles in length.

The underground cable of this system interconnects the generating station and the city's new substation through two separate 3-phase cables, each cable being of sufficient capacity for the station, so that in case of trouble on either cable the other is capable of carrying the load while repairs are being carried out.

The current is distributed throughout the city over fifteen 2,300-volt, 3-phase circuits ranging in size from 1-0 to 300,000 circular mills. Underground feeder cables are used to supply the current to the center of distribution of the most important lighting circuits, with the object of making the source of supply as reliable as possible. The 2,300-volt system consists of 233 miles of pole line.

From the transformers the current is distributed to the customers over secondary feeders, which are mostly single-phase, 3-wire, 110 and 220 volts for lighting, and 3-phase, 220 volts for power.

The department has in service 14,130 meters ranging in capacity from 5 to 200 amperes.

Street Lighting—Substations—Organization.

The street lighting consists of over 1,600 lights, of which 830 are magnetite arcs ornamental and pendant; 200 alternating current in-closed arcs; 40 flame arcs; four hundred and forty 250-watt 6.6-ampere high efficiency tungstens; and 113 ornamental 5-light standards. The lights are placed approximately 566 feet apart on avenues and 46 feet apart on streets, except on principal business thoroughfares, where they are placed at intervals of about 90 feet. They are fed and controlled by 25 separate circuits and light about 200 miles of the city's streets and avenues.

Two substations were constructed and equipped in 1912. One is located at Ogden, near the entrance to the Canadian Pacific Railroad shops, and the other at Seventh Street West and Ninth Avenue.

The Ogden substation has a transformer capacity of 3,000 kilowatts. The equipment consists of six 500-kilowatt, 1,200-volt, single-phase step-down transformers; one 500 and one 300 kilowatt motor generator sets; one arc-light regulator, together with necessary switching equipment and control apparatus.

The Ninth Avenue and Seventh Street west substation has a transforming capacity of 6,000 kilovolt-amperes and direct-current generating capacity of 2,000 kilowatts. The equipment consists of two 3,000-kilowatt-ampere, 3-phase, 12,000-volt transformers and two 1,000-kilowatt motor-generator sets, 7 arc-light regulators, and also the necessary automatic voltage regulators, switching equipment, etc.

During 1912 the department was rigorously reorganized by the city electrical engineer, who appointed competent officers to take charge of each important branch of the department, these officers being held entirely responsible for the efficient execution of all matters under their jurisdiction.

A clerk of works was delegated to keep a record of all time and material on each job and file a copy of same in the office, so that it is always available for reference.

Distribution Record System.

Plans have been made of the distributing system, showing all primary lines and location of transformers; a complete filing-record system has been installed, wherein is kept all data concerning the load and general characteristics of each transformer, together with a plan of the secondary circuit to which the transformer is connected.

Another important feature is a meter filing record card system, which shows the meter location, a curve showing its accuracy, when last tested, and also the capacity, reading, and date meter was set and first put into service.

The city plant began operations in December, 1905, with a lighting rate of 14 cents per kilowatt hour and power rate of 10 cents per kilowatt hour. By-laws have since been passed readjusting rates per kilowatt hour, as follows:

December 20, 1907, light, 14 cents; power, 10 cents. August 24, 1908, light, 12 cents; power, 7 cents. April 13, 1909, light, 11 cents;

power, 6 cents. May, 1911, light, 9 cents; power, from 1 to 2 cents, according to amount consumed; this reduction was made when the department was first supplied with hydroelectric power. August 5, 1912, light 7½ cents; power, from 1 to 2 cents, according to amount consumed. February 16, 1915, light, 5 cents, and minimum monthly charge also reduced from \$1 to 75 cents; power, from 1 to 2 cents, according to amount consumed.

The reductions speak well for general management of the department. The following statistics also prove that, in spite of the periodic reductions in the rates, the department has been able to show a satisfactory surplus each year since its inception. The statement covers the receipts, expenditures, and surplus of the department from 1906 to 1914, inclusive:

Year.	Revenue.	Expenditure.	Surplus.
1906.....	\$23,166.98	\$16,518.20	\$6,648.78
1907.....	58,172.67	35,878.37	22,294.30
1908.....	85,560.65	58,777.70	26,782.95
1909.....	116,668.36	111,484.84	5,183.52
1910.....	193,099.82	170,692.50	22,407.32
1911.....	206,227.95	202,247.48	3,980.47
1912.....	384,173.32	366,382.41	17,790.91
1913.....	544,348.40	445,177.09	99,171.31
1914.....	670,512.24	592,654.28	77,857.96

This department has paid all its debenture interest and sinking fund and in addition has a depreciation reserve account, which totaled \$178,922.78 at December 31, 1914.

Calgary Municipal Street Railway.

The city of Calgary, having then a population of 35,000, successfully launched an up-to-date street railway service on July 5, 1909. For several years capitalists endeavored to get the franchise, claiming that it could not be operated at a profit. The city, however, did not give this away, but voted \$476,000 to build and operate it as a public utility, and although it was not anticipated that more than operating expenses would be received for a few years, it has been a success from the start. Beginning with 12 cars of the most modern type "pay as you enter" it returned the city interest charges and a surplus of \$10,000 for contingent account during the first six months of its operation.

This work was carried on by five paving contractors, and one track construction company which had the contract for the unpaved section, the city doing all special work, intersections and overhead, under the supervision of the city engineer and the superintendent of the street railway.

All materials and construction are of the best, tubular steel poles being used on the paved sections; the pavement is composed of granitoid, wood block, bitulithic, and asphalt; the track on such sections being laid on a sub-base of 4 inches of cement, with 6-inch ties, being spaced 4 feet apart, grouted in with cement, representing on the granitoid pavement sections 17 inches of bed.

The rails are 60 and 80 pound Lorain, 6-inch and 7-inch section, 60 feet long, high T bonded with double compressed bonds; all intersections are manganese steel, supplied by the United States Steel Co., and Hadfield's, of Manchester, England.

Overhead feeder wires are of aluminum, and all material is of the best quality, nothing being spared to make the system permanent in every particular.

After a completion of the work, as first estimated, a surplus was saved sufficient to purchase 6 additional cars, 46½ feet long, which were received July 1, 1910, giving an equipment of 18 cars. In September, 1910, a further by-law was voted to extend the line 24 miles and purchase 12 additional cars and equipment, at a cost of \$484,000. These cars were received and 24 miles of additional extensions constructed in 1911, giving a total mileage of 40½ miles and 30 cars.

The taxpayers on October 3, 1911, further indorsed spending \$375,000 to construct 12 additional miles of track, purchase 18 passenger cars, 1 scenic car, and 1 sprinkler car, add to the car barn, and equip the system with all modern appliances, which has been carried out.

With the decision of the Canadian Pacific Railway to erect their western shops in Calgary, a further by-law was passed to construct 3 miles of lines to these shops and to purchase complete six 46½-foot cars, at a cost of \$82,000, making the equipment 54 passenger, 1 observation, and 2 sprinkler cars—55½ miles of track, which, with 3½ miles donated to the city, makes a total of 59 miles. With this gift came a donation of 86 acres of a park on the Bow River, beautifully situated, wooded, and also water suitable for boating.

During the past year all the line feeders within three-quarters of a mile of the power house have been placed under ground. Two additional substations for light and power for the railway are under construction, which will increase the railway power 1,200 kilowatt hours.

At present power is supplied by two 500-kilowatt direct-driven steam units as an auxiliary and one 300-kilowatt and one 1,500-kilowatt motor generator, for which power is purchased from the Calgary Power & Transmission Co. at \$30 per horsepower year. The power department is separately operated, supplying the city with light and power, and charges the railway for such power as it uses at 1½ cents per kilowatt hour.

Trolley Fares Charged—Wages of Employees.

Five classes of tickets are used—"school," good to and from school for adults and any time for children, 10 for 25 cents; "work," good morning and evening, 8 for 25 cents; "ordinary," 25 in book form, \$1; and pads of civic employees' tickets, 30 for \$1, the latter charged to the department in which they are used. On market days a "return-from-market transfer" is granted free.

No passes are issued, but transfers are made from the different routes at 10 different points in the city, and a labor fare between 12 and 2 p. m. is being considered.

Employees are paid a sliding scale, representing, after three months' service, 28 cents per hour; second six months, 30 cents per hour; for the second year, 32 cents per hour; for the third year, 34 cents; and after three years, 35 cents per hour. Time and one-half is paid to men working on holidays. Free winter coats and half cost of first uniforms are granted, with free uniforms after one year.

A sick benefit association in connection with the street railway was organized May 1, 1912, and is composed of all the operating

staff, with proper officers and constitution. The fees are \$2 entrance and \$1 per month thereafter, one-half of which is paid to the association's treasurer by the street railway department, which reduces the cost to \$1 entrance and 50 cents per month. For this, on a duly signed certificate from the medical health officer of the city, who acts as the association doctor, members receive \$1.50 per day during sickness after four days and free private ward in hospital in case of injuries received in the service or operations.

The railway department also furnishes free club rooms, piano, pool, shooting galleries, etc., where concerts, competitions, and dances are regularly held.

Under agreement with the railway all employees agree to become members, and also, if required, become district constables, so that they maintain order on the system if necessary. The system is operated by the city commissioners, with a superintendent in charge.

Summary of Results.

The municipal street railway for the year ending June 30, 1915, shows that the net income, after all operating expenses, taxes, interest on funded and floating debts had been paid, was \$83,879.21 for the period from June 30, 1915, to June 30, 1915. From this amount there were deducted reserves and sinking fund charges, leaving the municipal street railway with a surplus of \$8,894.32 for the period covering the first year of the great world war.

The cost of construction and equipment per mile of road owned by the city is \$31,331.85. The gross earnings for the period from June 30, 1914, to June 30, 1915, were \$611,826.85. The total funded debt of the system is \$2,280,210, on which \$106,359.48 interest was paid during the period named. Salaries and wages paid totaled \$277,894.17, and total operating expenses, including salaries and wages, were \$428,797.18. The total number of employees is 272. The ratio of operating expenses to gross earnings during the same period was 70.08 per cent and of operating expenses and taxes to gross earnings 70.62 per cent.

Including main lines, siding, and turnouts, the total track of the system aggregates 71.5 miles, while there are 87 cars of all classes with equipment ready for operation.

The total number of passengers carried during the period, including both fare and transfer, reached the enormous number of 19,073,278.

The operating expenses per car mile were 15.191 cents, while the car earnings per car mile were 21.328 cents. General statistics follow:

Year.	Passengers carried.	Miles operated.	Cars operated.	Miles of track.	Number of employees.	Surplus.
1910	3,649,697	500,622	15	16.5	62	\$29,435.53
1911	7,176,086	601,086	22	16.5	102	87,206.64
1912	12,941,630	1,643,378	48	54	246	107,253.40
1913	16,996,658	2,648,234	65	70.5	348	69,492.82
1914	16,213,731	3,112,407	65	71.5	232	3,831.60
1915	19,073,278	3,112,407	50	71.5	232	8,894.32

Like the other utilities of Calgary, the street railway has paid all its debenture interest and sinking fund, and has also provided an adequate depreciation reserve, which totaled \$311,351.80 on December 31, 1914.

HULL OIL AND SEED TRADE FOR NINE MONTHS.

[Consul Charles M. Hathaway, jr., Hull, England, Oct. 15.]

Imports of oil seeds into Hull from January 1 to October 5, 1915, compared with those for the corresponding period of 1914, according to the Hull Chamber of Commerce, which excepts palm kernels and peanuts, were:

Articles.	1914	1915
Linseed.....quarters.....	779,940	820,191
Rapeseed.....do.....	141,839	75,474
Castor seed.....do.....	184,428	113,938
Cottonseed.....		
Egyptian.....tons.....	91,031	159,974
Bombay and other.....do.....	170,672	23,288
Soya beans.....do.....	56,145	101,184
Palm kernels.....do.....		23,298
Peanuts.....do.....		6,718

Linseed in quarters of 410, 416, and 424 pounds; rapeseed, quarters of 416 and 424 pounds; castor seed, quarters of 480 pounds. Ton equals 2,240 pounds.

Extraordinary Depletion of Stocks of Cotton Seed.

Except for soya bean and rapeseed, the stocks of oil seeds in warehouse were very far below those of the corresponding date in 1914. The present depletion of stocks of cotton seed is regarded as extraordinary.

During the portion of 1915 under review 24,150 tons of oil cakes were imported, as against 18,337 tons in 1914. Exports of oil for the same periods were:

Oil exports.	1914	1915
Linseed.....tons.....	3,902	18,304
Cottonseed.....do.....	2,568	4,464
Soya.....do.....	4,014	2,033

The heavy increase of linseed and cottonseed-oil exports was mostly in the first six months of 1915. Increasingly stringent export regulations have greatly reduced the export figures for the last three months.

VALPARAISO CUSTOMHOUSE RETURNS FOR NINE MONTHS.

[Consul General L. J. Keena, Valparaiso, Chile, Oct. 6.]

The customhouse returns at Valparaiso for September, 1915, in terms of United States currency, were \$330,071 greater than in September, 1914. The revenue from the export tax on nitrate was \$2,266,620 in September, 1915, compared with \$1,640,632 in September, 1914. That imports have not yet reached a normal level is shown by the difference between the September returns from import duties in these two years—\$1,145,727 in 1914 and \$838,824 in 1915.

The receipts for the first nine months of these two years from export and import taxes, storage dues, and consular fines were \$25,115,370 in 1915 and \$35,840,340 in 1914.

INCREASED UNITED STATES IMPORTS FROM VANCOUVER.

[Vice Consul G. C. Woodward, Vancouver, British Columbia, Oct. 9.]

The record of declared exports from the Vancouver consular district to the United States for the first nine months of 1915 shows large increases over 1914 in numerous items, greatly counterbalancing the reductions that are found in some other directions. So large are some of the percentages of increased shipments that the total amount for the nine months was \$17,379,202, compared with \$9,163,490 for the first nine months of 1914. The total of wood manufactures was \$5,622,451, compared with \$4,021,635 in 1914. Among the items that made up this total were: Shingles, \$2,678,047, increase from \$1,742,128; siding, \$377,273, increase from \$109,493; silo staves, \$106,436, instead of \$2,616; lumber, \$685,399, instead of \$386,480; logs, \$706,846, instead of \$279,351. Items which were included under lumber last year are: Ceiling, \$9,298; flooring, \$63,578. Total shipments of vegetables were valued at \$29,474, compared with \$1,950 in the first nine months of 1914. Rice increased from \$44,613 to \$181,943.

Other items showing increases were: Horses, other animals, casings, fertilizers, hair, calfskins, leather, automobiles, brewers' grits, fire brick, fire clay, bullion, bonds, cascara bark, drugs and sundries, furniture, preserved fish, window glass, electrical hardware, junk, ore, paper-mill equipment, canned goods, flour, apples, preserved milk, mutton and veal, rubber, and sulphur. Declared exports of bonds were valued at \$1,161,349, with no figures for 1914.

CHINESE CHILLED MEAT FOR PHILIPPINE MARKET.

[Vice Consul A. E. Carleton, Hongkong, Oct. 2.]

The first consignment of chilled beef ever exported from Hongkong left on September 28, the destination being the Philippine Islands. The shipment consists of 80 tons, the greater portion being bullock beef and carcasses of mutton. The cattle are slaughtered in the colony under the personal supervision of the government veterinarian and are chilled by a local company which has secured the premises of the defunct Oriental Brewery works. The Hongkong government has limited for the present at least the shipment of more than 80 tons at one time, but no special restriction has been placed on the export of chilled meat for the entire year. The local government allows the exportation of 500 head of cattle to Manila monthly, and 1,000 head monthly to the Dairy Farm Co. (Ltd.) for slaughtering purposes. The first shipment of live cattle to Manila will shortly be made, as the last of the restrictions have been removed.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 403 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Automobile accessories, No. 19252.—An American consular officer in Spain reports that a company desires to communicate with manufacturers of automobile accessories, such as tires, gasoline, oil, etc. Correspondence may be in English.

Rubber balls, No. 19253.—A firm in Switzerland desires to establish commercial relations with American manufacturers of rubber balls used as toys for children. Samples are solicited.

Furs, No. 19254.—A report from an American consular officer in Canada states that a company desires to be placed in communication with firms interested in the purchase of opossum, wallaby, and bear skins. Correspondence may be in English.

Caustic potash, No. 19255.—A firm in Italy informs an American consular officer that it desires to establish commercial relations with producers or exporters of caustic potash. References given. Terms, cash against documents. Correspondence may be in English.

Postal cards, No. 19256.—An American consular officer in Spain reports that a publishing firm desires, through its representative, to import large quantities of postal cards with views of landscapes, scenes, buildings, or localities in the United States, as well as all kinds of novelty postal cards, colored and otherwise. Correspondence is desired in Spanish.

Machinery, No. 19257.—A report from an American consular officer in South Africa states that a man desires to receive catalogues, price lists, and other information from manufacturers of machinery for making paper bags. Machines must be capable of producing paper bags from one-half to twenty-five pounds capacity, motor driven, work drab or union paper, and be equipped with a printing attachment.

Steel containers for oxygen, No. 19258.—A report from an American consular officer in Italy states that a firm desires to import steel tubes or containers for oxygen. The containers should be strongly constructed without seams, so as to stand alone, have a cover for protection, and contain 35, 40, and 50 liters of water and weigh, respectively, 62, 75, and 90 kilos. (Liter=2.113 pints, kilo=2.2046 pounds.) An illustration of the container desired is submitted with the report and may be examined at the bureau or its branch offices. (Refer to File No. 63520.)

Electric meters and transformers, No. 19259.—A firm in Spain informs an American consular officer that it desires to be placed in touch with manufacturers of electric meters, transformers, bells, electric-light carbons, lamps, and all kinds of electric specialties. Correspondence may be in English.

Diamonds, No. 19260.—The Bureau is informed that a firm in Switzerland desires to sell small cut diamonds in the United States.

Knitting machinery and needles, No. 19261.—A report from an American consular officer in Portugal states that a company desires to communicate with firms handling knitting machinery and needles. Correspondence may be in English.

Stationery, paper, etc., No. 19262.—An American consular officer in Russia reports that a business man is interested in the following goods: Paper and envelopes in boxes, railway measuring tapes, rules of steel and wood, post cards, painting brushes for schools, letter scales, toys, dolls of good qualities, table bells, etc. Prices must be quoted c. i. f. Vladivostok. Russian values, weights, and dimensions are requested.

Groceries, No. 19263.—An American consular officer in the French West Indies reports that there have been a number of inquiries for the names of wholesale dealers in groceries.

Knitting-machine needles, No. 19264.—A report from an American consular officer in Spain states that a manufacturer dealing in knitting machines and accessories is desirous of purchasing quantities of knitting-machine needles of all kinds for the cotton, woolen, and silk knit industries. Terms of sale and full information requested.

ELECTRIC CABLE BETWEEN SWEDEN AND DENMARK.

[Consul General Ernest L. Harris, Stockholm, Sweden, Oct. 20.]

An electric cable has been laid for industrial purposes between Helsingborg, in Sweden, and the opposite coast of Denmark. It is capable of transmitting 40,000 volts. The cable itself was delivered by a German firm.

NEW SWEDISH FREIGHT LINE TO ENGLAND.

[Consul General Ernest L. Harris, Stockholm, Oct. 20.]

The Swedish Steamship Co., Helsingborg-Luggude and Vola, has established a new freight line to England, known as the Swedish Line Liverpool-Manchester-Baltic. The object is to carry piece goods from Liverpool and Manchester to Sweden and eventually to Denmark and other Baltic ports, where cargoes will be received for the British West Coast. The line will consist of three steamers and will begin operations in November.

DUTCH GLASS FACTORIES SEEK AMERICAN SODA.

[Commercial Attaché E. W. Thompson, The Hague.]

The Gazette de Hollande of October 20, 1915, says that the glass industry at Leerdam, Netherlands, in which 1,400 workmen are employed, is threatened with a stoppage as a result of the total prohibition of export of soda from Britain, soda being one of the raw materials in the manufacture of glass. The stock of soda on hand is sufficient for six weeks. Serious efforts are being made to buy the soda in America, but this entails great expense. Meanwhile, a meeting of soda consumers in this country was held at Amsterdam yesterday. As a result, a committee was formed to act for the united consumers.

Further information will be supplied by the American Export Chamber of Commerce, Amsterdam.

AMERICAN TRADE FOR ONE WEEK.

The imports, duties collected, and exports for the week ending November 13, 1915, at the 13 principal customs districts of the United States, handling 91 per cent of total imports and exports, based on transactions in the month of September, 1915, were:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah).....	\$38,503	\$1,464	\$1,506,933
Massachusetts (Boston).....	3,750,610	232,151	2,421,863
New York.....	20,758,285	3,100,073	80,404,743
Philadelphia.....	1,132,214	236,730	2,384,444
Maryland (Baltimore).....	398,229	16,624	4,200,410
Virginia (Norfolk).....	48,454	2,312	1,204,243
New Orleans.....	428,765	29,362	3,752,718
Galveston.....	82,563	978	4,706,266
San Francisco.....	2,910,946	78,491	2,546,984
Washington (Seattle).....	992,032	7,181	2,900,261
Buffalo.....	728,555	19,812	1,586,678
Chicago.....	677,796	142,831	83,290
Michigan (Detroit).....	698,790	47,196	2,184,134
Total.....	32,640,772	3,917,135	81,242,927

The cotton exported during the week ending November 13, 1915, at the 12 principal customs districts of the United States, follows:

Districts.	Bales.	Districts.	Bales.	Districts.	Bales.
Georgia.....	21,273	Philadelphia.....		San Francisco.....	
Massachusetts.....	883	South Carolina.....		Washington.....	9,892
Maryland.....	12,348	Virginia.....		Total.....	154,096
New York.....	9,353	Galveston.....	68,232		
North Carolina.....		New Orleans.....	37,063		

METHODS OF ELECTROLYSIS MITIGATION.

A paper giving a brief general statement regarding electrolysis and corrosion, and presenting a detailed discussion of the various methods of electrolysis mitigation that have been proposed or tried for protecting underground structures, has just been issued by the United States Bureau of Standards. Methods of mitigation are treated under two heads, namely, those applicable to pipes and those applicable to the railway return system. The conclusion is drawn that while certain of the methods applicable to pipes, particularly pipe drainage and insulating joints, are often valuable, they should in general be used as auxiliary measures only, the chief reliance being placed on reducing potential drops in the railway return to reasonably low values. Where return feeders are necessary for accomplishing this, insulated feeders are preferable, because more economical.

In the last chapter there is presented a discussion of the principles on which regulations concerning electrolysis mitigation should be based, and the responsibilities of owners of underground utilities as well as of the railway companies are emphasized.

Copies of this publication, Technologic Paper No. 52, may be obtained without charge from the Bureau of Standards, Washington, D. C.

PORTO RICO SEEKS INCREASED TRADE WITH UNITED STATES.

The Bureau has received a communication from the officials at Porto Rico announcing that the Insular Government will at any time give information, gratis, to merchants and manufacturers of the United States who wish to extend their trade to Porto Rico. Communications should be addressed to G. F. Correa, Chief of Insular Government Bureau of Information, San Juan, P. R.

Besides inviting attention to what they have to offer, the islanders have also started to boom their territory by means of publications. They have recently issued a book entitled "Porto Rico, the Riviera of the West," and a pamphlet on Porto Rican coffee, which have been received by some trade organizations in this country.

While these efforts are being made to extend the existing commercial relations, Porto Rico already enjoys a considerable volume of trade with the United States. For the year ended June 30, 1915, the island shipped to this country domestic merchandise valued at \$42,306,350. It received in return from the United States domestic goods worth \$30,149,764 and foreign goods worth \$780,067.

IMPORTS AND EXPORTS OF COPPER.

The imports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan during the week ended November 6, 1915, were as follows: Ore, matte, and regulus (copper contents), 969,248 pounds valued at \$96,111, of which 712,080 pounds came from Peru, 99,218 pounds from France, and 91,178 pounds from Newfoundland. The imports of ingots, plates, etc., totaled 953,521 pounds valued at \$168,984, of which 602,621 pounds came from Japan and 350,900 pounds from Canada.

The domestic exports of ingots, bars, etc., during the week from the customs districts named amounted to 5,820,478 pounds valued at \$1,059,324, of which 2,241,175 pounds went to Sweden, 1,652,869 pounds to France, 706,337 pounds to Italy, and 508,744 pounds to England.

NEW SWEDISH EXPLOSIVE FOR SHELLS.

[American Minister Ira N. Morris, Stockholm, Oct. 4.]

For many years a superphosphate company here has been experimenting with new explosives, and now seems to have found one warranting extensive manufacture. It is very powerful, and one of the principal ingredients is perchloride of ammonia prepared in some special way. "Kausolit," as it is called, has great explosive power and seems especially adapted for shells.

The company is erecting a new factory at Trollhattan, and it is expected to be finished early next year. Only chlorate will be manufactured there. It is estimated that the yearly production will amount to about 1,300 tons. At the old factory, at Mansbo, the annual production is about 1,900 to 2,000 tons, and plans are being made for enlarging this factory.

NOTES FROM THE NETHERLANDS.

[Commercial Attaché Erwin W. Thompson, The Hague, Oct. 8.]

Coal Supply.

The coal supply of Holland is still a serious question. Ordinarily, Germany and England together supply about 7,000,000 tons for Dutch consumption, but now this source is much restricted. Germany has recently passed a regulation limiting the quantity of coal that may be exported to Holland to 80 per cent of normal, and English exports are much restricted. If reasonable freights could be secured, American coal could be sold in large quantities in Holland.

Cotton Growing in Dutch East Indies.

Cotton growing in the Tropics is a perennial subject for promotion. The latest is a small syndicate in the Island of Flores, Dutch East Indies, near Java. It starts with a Government subsidy of \$12,000. Cotton has been grown in the East Indies for many years without making any impression on the world's markets or even appearing in the official export statistics. There should be no climatic difficulty in growing good cotton in that latitude, which is between 9° and 10° south—about the same as central Brazil.

Government Fish Kitchens.

Consumption of fish is promoted by the Dutch Government by maintaining public fish kitchens, where fried fish are sold at very low prices. This encourages the native fishing industries at times when there are troubles in shipping. It also provides work in the cooking and selling, and encourages people to live on their own resources. Public demonstrators have been appointed for teaching the proper methods of cooking fish; and this subject has been made a specialty in schools teaching household economy. During June the Government sale of cooked fish was 400,000 pounds and in July 600,000.

It was proposed to accumulate cooked fish in cold storage during the week, against the extraordinary demand on Fridays, but so far this has not proved successful.

[Consul Frank W. Mahin, Amsterdam, Oct. 15.]

Rubber Production in Dutch Indies.

According to reports published in the Amsterdam press, the rubber production of the Amsterdam-Tapanoei Rubber-Culture Co. was 50,156 pounds during the first nine months of this year, against 23,886 pounds during the whole of the year 1914; and that of the Belgian-Netherlands Culture Co. was 467,950 pounds during the first nine months of this year, against 366,700 and 363,850 pounds during the whole of 1914 and 1913, respectively.

Herring Fisheries Prosperous—Direct Cable to United States.

Official reports published in the local press show that the Dutch herring fishery is very prosperous this year. During the first nine months the catch was 110,000,000 pounds, against 73,000,000 in the corresponding period of 1914. This year compares favorably with and in some respects excels 1913, which was exceptionally prosperous.

The Amsterdam Chamber of Commerce is discussing the laying of a direct cable from the Netherlands to the United States or of wireless connection between the two countries.

Benevolent Projects for the Unemployed in Amsterdam.

A voluntary committee of citizens of Amsterdam has undertaken to supply free instruction and entertainment for unemployed people in this city. The committee's intent is to ameliorate the distress of the unemployed by providing them with the free loan of books from libraries, free access to reading rooms, free admission to lectures, museums, concerts, and classes for certain instruction; and free use of bowling alleys, gymnasiums, and swimming baths. Also, provision is made for their admission to moving-picture entertainments of approved character. The city treasury contributes 20,500 florins (\$8,241) toward the expenses of this benevolent work. Any further expenses will be met by individual contributions.

MACHINE TESTS WEARING QUALITY OF CLOTH.

[Consul Augustus E. Ingram, Bradford, England, Oct. 7.]

A machine for testing the wearing quality of cloth has been produced in Bradford. It may be found of interest to American firms which manufacture, sell, or use textile fabrics. Relative wearing qualities of different pieces of cloth may be determined by placing them in the machine and giving them a uniform number of rubs, perhaps 200 each. This makes it possible to compare one kind of cloth with its imitation, or to compare cloth samples of the same character from different mills.

A piece of cloth is clamped in a rigid jaw, and passes over a rubbing surface formed by dull blades set in a cylinder. This cylinder makes one revolution clockwise, then one in the opposite direction, and this is recorded by a counter as one rub. The other end of the cloth is clamped to a roller, on which is placed the quadrant, from which any number of weights can be suspended, and thus put the cloth in tension. The machine can be driven by an electric motor. When the cloth is worn through the machine automatically stops.

[Leaflets describing this machine, and others describing a hydraulic cloth-strength testing machine and a hydraulic yarn-testing machine, may be obtained by persons interested from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 68059.]

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.....	do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Posario, Argentina.....	do.....	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 3	Itinerary being arranged.

THE RAND AS AN INDUSTRIAL AND COMMERCIAL CENTER.

[Consul Edwin N. Gunsaulus, Johannesburg, Union of South Africa, Sept. 20.]

Attention has so often been directed to the paramount importance of the Witwatersrand (the district covered by the great gold-mining industry and popularly termed the "Rand") as an industrial and commercial center, in comparison with other parts of South Africa, that American manufacturers and those of other exporting countries rightly look to Johannesburg as the great central market for the South African trade.

This favored trade condition obtains largely, of course, because of the fact that the Rand possesses the world's biggest gold industry—60 miles of continuous gold-bearing reef, studded with mines in active operation day and night—on which depends in a great measure the material prosperity of the entire country, as well as the world's supply of gold. While some of the mineral industries, particularly diamond mining, in which the Transvaal also figures largely, are adversely affected by the war, the gold-mining industry of the Transvaal promises to produce this year a record output of gold, even surpassing the high-water mark reached in 1912 of \$188,813,865. For the eight months of 1915 up to August 31 the total gold output of the Transvaal was 5,957,166 fine ounces, of \$123,144,023 value, being a gain of 425,916 ounces over the corresponding period of last year. It is thus estimated that the gold output of the Transvaal for the present year will approximate 40 per cent of the world's yield for this period.

Progress in Scientific Methods—Johannesburg the Hub.

The steady expansion of the gold-mining industry of the Rand is accounted for not only by the improved efficiency of the labor supply and the scientific methods of gold extraction employed, but by the extension of milling plants and the advent to the producing stage of several new mines, as the result of recent development. It is but natural that the existence of this great industry, with its 200,000 or more employees, and with the steady flow of gold largely distributed in wages, and its purchases of machinery and supplies, buildings and construction, etc., should have had a far-reaching influence on the Rand during the years of its rapid rise and expansion. This is well exhibited in the growth of the city of Johannesburg, which is not only the headquarters and vital center of the gold industry but long since became the largest city and the industrial and commercial metropolis of South Africa as it is also one of the most important importing centers of the world.

Not only is Johannesburg the chief trade and importing city of South Africa, as well as one of the world's greatest markets for certain lines of imported products, but in point of wealth, bank clearings, and commercial transactions generally this city has a distinct lead over any of the other cities of this country. The census of 1911 gave Johannesburg a population of 253,274, and that of the Rand approximately 500,000, although there has doubtless been a considerable increase during the intervening period. Tributary to Johannesburg and the Rand is the populous city and district of Pretoria, the administrative capital of the Union, which lies 35 miles distant from Johannesburg, while scattered throughout the Transvaal Province and Rhodesia are numerous other important towns and trade districts

for which the city of Johannesburg is the natural distributor of imported products and from which commercial center supplies are mostly received. All of this territory, as well as the Orange Free State Province (of which Bloemfontein is the chief city and commercial center) is within the Johannesburg consular jurisdiction.

SECOND ANNUAL POULTRY SHOW IN BRAZIL.

[Consul General Alfred L. Moreau Gottschalk, Rio de Janeiro, Oct. 5.]

Under the auspices of the Sociedade Brasileira de Avicultura (Brazilian Poultry Association) the Second Annual Poultry Show of Brazil was held at the Quinta de Boa Vista in Rio de Janeiro, September 18 to 23, 1915.

Some 40 exhibitors took part in the exposition, which was not crowned with quite the success that had been anticipated, by reason of three postponements, the selection of a building at the Quinta de Boa Vista, a park some three-quarters of an hour's ride from the city, and the absence of adequate preliminary advertising.

There were about 1,500 fowls on exhibition, the Orpingtons forming the largest exhibit of a single breed. Barred and White Plymouth Rocks, White Leghorns, Rhode Island Reds, Black Minorcas, Campines, Gantams, and Pekin ducks were all well represented, but the heavier Asiatic breeds, such as Cochins, Langshans, and Brahmas, which are generally regarded as difficult to raise in this tropical climate, were little in evidence. The English Orpingtons are preferred here because of the heavier type demanded by the English standard. On the other hand, the American types of Barred Plymouth Rocks and White Leghorns have met with favor here, and the Barred Rocks on exhibition were really a credit to the American specialty breeders from whom they had been imported.

The birds were classified by breeds, and subclassified as cocks, hens, pairs, trios, and pens.

It is rather disappointing that American manufacturers of poultry supplies did not manifest more interest over the report transmitted by this office prior to the poultry show and printed in *COMMERCE REPORTS* for July 19, 1915, in which the consulate general endeavored to provide every facility for the display of American poultry appliances and products through Mr. Curtis F. Huebener, the owner of the local American Poultry Farm, of Rua da Padreira, 58, Cascadura, Rio de Janeiro. He exhibited, among other American devices, several Cyphers incubators and brooders, and in competition with several English makes was awarded the first prize on each of these machines. In all he was awarded 81 prizes on his birds and appliances, making for the establishment—which is the only American one in Rio de Janeiro—a grand total of 137 prizes won at the first two poultry shows held in this country.

The exposition was honored by visits from the President of the Republic, several of the cabinet ministers, and other Federal and municipal officials, the general tendency among Government circles being to encourage agriculture as much as possible.

[A list of the more prominent exhibitors, with their addresses, transmitted by the consul general for the use of American firms and breeders who may be desirous of entering into the South American export trade in thoroughbred fowls and poultry appliances, may be had from the Bureau of Foreign and Domestic Commerce and its branches; call for file 68495.]

FOREIGN TARIFFS.

ARGENTINA.

[Ambassador F. J. Stimson, Buenos Aires, Sept. 29, 1915.]

Postponement of New Petroleum Classification.

The enforcement of the new tariff classification and regulations for petroleum and petroleum products recently promulgated has been postponed until January 1, 1916, by a presidential decree of September 28. [A detailed account of the rates of duty applicable to various petroleum products was published in *COMMERCE REPORTS* for Oct. 15, 1915, p. 218.]

COLOMBIA.

[Diario Oficial, Aug. 18, 1915.]

Duty on Reimported Articles.

It appears that it has been the practice in Colombia, at least in certain customhouses, to admit free of duty goods imported as substitutes for those previously imported and returned to the country of origin after clearance through the customs and the payment of duties. An order of the Minister of Finance of August 5, 1915, prohibits such exemptions and provides that articles reimported into Colombia, as well as those intended to replace reexported articles, shall in the future be subject to the usual import duties.

ICELAND.

[Consul General E. D. Winslow, Copenhagen, Sept. 20, 1915.]

Export Duties.

A law authorized by the King of Denmark under date of September 16, 1915, provides for an export tax on shipments from Iceland of fish, fish oils, butter, wool, salt meats, sheepskins, sealskins, horses, and sheep.

An interesting feature of the law is the provision that duty is to be levied on the difference between the price of the products prevailing before the war and the present price, the amount of duty being fixed at 3 per cent of such excess value.

JAPAN.

[Consul General George H. Scidmore, Yokohama, Oct. 2, 1915.]

Proposed Revision of Customs Tariff.

Owing to the effect of the war on the foreign trade of Japan, the Japanese Finance Department has been engaged for nearly a year in conducting investigations, with a view to the revision of the customs tariff and the extension of the system of drawback and of the customs warehouse system. The new drawback regulations are to be put into effect in the near future by imperial ordinance, while the tariff revision measure, which is to include the changes in the customs warehouse regulations, is to be taken up at the coming session of the Japanese Diet.

It is stated that the general tendency of the revision, which is to affect a large number of articles, will be the reduction or abolition

of the duties on certain raw materials used in domestic manufactures, the importation of which has recently been much restricted, and increased duties on articles such as drugs and medicines, the domestic production of which has been stimulated because of the war. The tariff revision is expected to result in some decrease in the customs receipts.

SALVADOR.

[Chargé d'Affaires Henry F. Tennant, San Salvador, Oct. 5, 1915.]

Reduced Duty on Cotton Bags.

A presidential decree of October 2, 1915, in effect October 4, reduces the duty on cotton bags not exceeding 108 centimeters in length and 70 centimeters in width from 0.75 to 0.20 peso per kilo (from \$29.58 to \$9.88 per 100 pounds, inclusive of surtaxes). The duty on such cotton bags under the new customs tariff of Salvador, which is to go into effect January 1, 1916, is reduced from \$0.50 to \$0.18 per kilo (from \$22.22 to \$8.18 per 100 pounds). [Meter (100 centimeters), 39.37 inches.]

UNITED KINGDOM.

[Consul C. M. Hitch, Nottingham, Sept. 29, 1915.]

Agitation for Duty on Laces and Embroideries.

Since the introduction of the budget law in Parliament, providing for the levying of customs duties on certain additional articles imported into the United Kingdom, there has developed a strong sentiment in Nottingham in favor of a tariff on cotton and silk laces and embroideries. The Chamber of Commerce has taken the matter in hand, and, through its chairman, has made strong representations to the Chancellor of the Exchequer.

The two main arguments relied upon by the advocates of a tariff are: (1) That laces and embroideries are luxuries and therefore should be heavily taxed, especially at this time, in the interest of economy and to discourage as far as possible the importation of foreign goods; (2) that the lace industry of Nottingham has been seriously affected by the war, and foreign laces should therefore be taxed in order to protect home industries.

URUGUAY.

[Diario Oficial, Aug. 11, 1915.]

Regulation of Sale of Cattle Dips.

By a decree of August 7, 1915, the sale in Uruguay of all substances for the destruction of cattle vermin is prohibited unless the preparations have been approved by the Executive on the recommendation of the officials of the animal sanitation service, to whom samples must be submitted. Application for authorization of sale must state the qualitative and quantitative composition of the product and the general conditions of its use, specifying the minimum time required to effect a cure, etc., and must be accompanied by a deposit of 250 pesos (peso, \$1.034) as security for the expenses of testing. Containers of approved preparations must bear a yellow label on which is printed in black the full text of the certificate authorizing their sale.

AMERICAN EXPORT TRADE WITH THE DUTCH COLONIES.

[Consul Frank W. Mahin, Amsterdam, Netherlands, Oct. 15.]

Apparently a favorable opportunity exists for American manufacturers to secure a large share of the import trade of the Dutch East Indies, comprising the populous and prosperous islands of Java, Sumatra, etc.

The foreign trade of those colonies is done principally through Amsterdam. Many agencies, several of them large corporations, in this city are concerned in this trade. Some are engaged exclusively in exporting goods to the colonies. According to statements made to this consulate by various agencies, they have obtained supplies hitherto from Germany almost entirely, but now can obtain practically nothing from that country. Consequently, they are looking toward the United States. Many of their wants have been reported by this consulate in "Trade Opportunities," but the opportunity before the United States seems important enough to give the subject the widest possible publicity. Altogether, these agencies deal in practically every manufactured article. One corporation described its business as including "everything from needles to locomotives," and probably a thousand different articles.

The classes of goods most required in the Dutch East Indies are glassware, earthenware, porcelain, iron and steel products, and small wares generally, such as dolls, toys, and all sorts of trinkets and showy trifles, for which the demand is great among the natives and Chinese. But for many other goods a large market exists there.

It is suggested that American manufacturers with products available for export study the needs of the Dutch East Indies, and also communicate with the Department of Commerce and with the American consular officers in Holland and in the islands mentioned.

It is not essential that all the goods exported thither should come to Holland. Some of the Amsterdam agencies have offices in the colonies, with which there may be direct dealings.

Some of these Amsterdam agencies act merely as representatives of manufacturers, selling on commission; others buy on their own account, paying cash against documents, or otherwise, as may be arranged. The conditions are usually stated in the "Trade Opportunity" reports from this consulate.

SOUTH AFRICAN YOUTHS MAY ENTER AMERICAN SCHOOLS.

[Consul E. A. Wakefield, Port Elizabeth, Sept. 29.]

There have been several inquiries at the Port Elizabeth consulate for general information concerning American schools and colleges. A specific inquiry, just received, relates to technical schools teaching mechanical engineering and colleges conducting a high-grade commercial course. Mr. Dirk Pieter Gnodde has two sons who are to be educated in England or America. Detailed information as to the two courses mentioned may be sent to Mr. Gnodde in the care of this consulate or direct to post-office box 406, Port Elizabeth, South Africa.

All literature descriptive of American schools and colleges received at this office will be filed for reference.

THE PAINT TRADE OF ANDALUSIA.

[Consul Wilbur T. Gracey, Seville, Spain, Oct. 7.]

A recent inquiry into the Andalusian paint trade undertaken by the Seville consulate brought to light the fact that while the trade is principally in the hands of British exporters, still American paints are finding a market and the sales could probably be enlarged.

The importations consist almost wholly of colored paints in tins of 125 and 250 grams (4.4 and 8.8 ounces) and white paint in tins of 1 kilo (2.2046 pounds) and upward. The colors most called for are said to be white, sky-blue, black, vermilion, ochre, clear gray, green, and Bengal pink.

Special Call for Protective Coating for Cans.

Oil paints, varnish paints, and enamels are found on the market, and there is a special call for paints suitable for coating the interior of cans used in packing olive oil and for the large steel and iron tanks in which such oil is stored before shipment, the special requirement being that the paint must not affect the flavor or odor of the oil and that it must prevent contact with the tin whereby the oil would quickly become rancid.

There is an exceptionally large call for this class of paint here, and a suitable protective coating of this nature is sure to command a large sale if it can be delivered at prices that make it possible to compete with British goods. Enamel paints are now more largely used for this purpose than other qualities, but owing to their high price it would seem that some other product might satisfactorily be introduced for this purpose. The color would not be important, the only requisite being a fluid that will keep the oil from becoming rancid through contact with the metal containers.

As the exportation of olive oil is one of the most important industries of this district, and over 38,000 short tons are exported annually, how great is the need for a regular supply of protective paint becomes apparent. Paint of this nature is received here in small kegs or barrels and comes from England direct.

Color Washes Also Much Used.

The territory under the jurisdiction of the Seville consulate contains a population of 5,170,000 persons and covers 54,059 square miles, and according to the latest statistics there are over 533,000 edifices in the 48 cities and 519 towns. As the summers are hot and paint quickly fades and scales, it can be easily seen that a considerable quantity of paint is required for houses.

Buildings in the Seville district are built of brick or stone covered with plaster, which receives an annual coating of colorwash, so that there is a large call for colors, color washes, distempers, etc. Interior walls are similarly color washed, but with a cheaper quality of un-washable distempers. Black paint is almost universally used for the many iron window bars and the iron entrance doors that are found in every house, although occasionally aluminum paint is used for this purpose.

Sales Methods.

British firms usually have their agencies established in Spain, and their traveling men call from time to time showing new lines, etc.

Commission agents who wish to act for American firms suggest that the best method of entering the trade would be to give some one of them the exclusive agency, supply him with a sufficient number of small sample tins for distribution to the trade, so that dealers may become familiar with American lines (with which they are not now well acquainted), and allow him a small sum for advertising purposes during the initial stages.

There is no local prejudice against American goods—in fact, the superiority of American goods seems to be recognized; but the local business men say that there is a lack of confidence in American firms due to their insistence upon cash in advance or against documents. Such terms, according to their minds, indicate that the American business men have no confidence in the business integrity of Spanish business men; and where there is no mutual trust, especially with the Spanish people, there is little inclination to trade.

This point of "lack of confidence" is so continually met with that one becomes convinced it is one of the reasons which prejudice Spaniards against the American exporter, which make them purchase from America only when compelled by circumstances to do so, and which cause them to revert to exporters of other lands as soon as corresponding prices can be obtained.

Local Stocks—Catalogues in Spanish.

Stocks of paints are usually carried by local dealers, and it is probable that any American exporter really desiring to exploit this market would be obliged to arrange to carry a stock on hand here. Several Seville firms desire to act as agents and state that they are in position to handle the exclusive sale of paints throughout Spain, as they have agents in other parts of the Kingdom.

Catalogues should be in the Spanish language and should be accompanied by full color charts. Prices, terms, discounts, etc., should be clearly stated without such involved quotations as 50, 20, 10, 10 and 5 per cent, which are not understood by the foreign purchasers; and the trade should be stimulated by advertising in local newspapers, weekly and monthly magazines, and on billboards, theater curtains, motion-picture screens, etc.

Quoting Prices.

Quotations should in all cases be either c. i. f. Seville or f. o. b. American port, the former being preferable, but, owing to present fluctuating freight rates, very difficult to give. Payments will usually be made in drafts on London or Paris banks. British firms are in the habit of giving four to six months' credit on this class of goods, and it is probable that American firms will have to grant the same terms if they desire to secure business, especially in the introductory stages.

Prices may be quoted in gold pesetas (with a fixed value of 19.3 cents to the peseta) or in pounds sterling. The quotation of prices in dollars is not as suitable for this market as either of the other currencies mentioned, as it becomes necessary to convert such dollar prices into pesetas or sterling before a comparison can be made with the prices quoted by British firms; and as a general rule firms here will not take the trouble to convert prices accurately and use a nominal rate, which gives only approximate values.

Ordinarily, packing charges are not included in the cost of the goods; that is, the tins or barrels in which paint is packed are usually

supplied free, but outer packings are additional. As a general rule, American prices are higher than for British lines, and as the freight rates are 20 to 30 per cent higher than from British ports, the trade has been somewhat restricted.

American Packing is Satisfactory.

The attractiveness and convenience of the tin has much to do with the sale of paints on the Spanish market. The British use a patent tin that can be easily opened by prying off the lid. This is hermetically sealed when the goods are packed, and the lid can be replaced when the paint is partially used and the remainder thereby kept fresh. A small square or diamond on the label shows the color of the contents of the tin, and as a general rule the entire top of the can is painted with the same color. The 125 and 250 gram tins are usually packed two dozen to the case.

The complaint of "poor packing" by Americans, which has been so much a subject of report from abroad, does not seem to be considered here. During the two years the writer has been stationed in Seville no complaints of poor packing have arisen, and it is probably true that most of the firms now doing an export business in the United States have learned that careful packing is necessary for over-sea cargoes. Such shipments as have come directly under the writer's notice have been exceptionally well packed. The quality of wood used in American packing cases appears to be better than that usually employed by exporters in other countries. Cases are usually carefully strapped when necessary, and the used cases frequently command a better price when sold locally than those from other places, and the wood is sought after by local carpenters for various purposes.

[The addresses of four paint dealers in Seville, and, in addition, a list of the firms mentioned in the foregoing report as having inquired for paints at the Seville consulate, may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 68478.]

EXPOSITION OF JAPANESE PRODUCTS IN CHILE.

[Ambassador Henry P. Fletcher, Santiago, Oct. 1.]

An exposition of Japanese products was opened in Santiago on September 3, to continue until the end of October. The exposition was organized by Japanese business men, under the leadership of the president of the Tokyo Chamber of Commerce, with a view to taking advantage of present conditions to introduce Japanese goods into Chile. Another object of the exposition is to discover the particular products that can most advantageously be shipped to this country on the return trip of the steamers which carry nitrate to Japan. If such products can find a market here, an increased shipment of nitrate will be possible. Thus far the sale of utilitarian articles, such as cottons and silks, has been very successful.

The exposition is being held in buildings loaned by the Government, and the formal opening was attended by the President of Chile, the cabinet, and most of the members of the diplomatic corps. All the exhibits are offered for sale, and those articles that are not sold and do not remain in the country will not have to pay any customs duty. Those articles sold, however, will have to pay full duty.

[Earlier reference to this exposition was made in *COMMERCE REPORTS* for Aug. 13 and 28, 1915.]

PRICES PAID FOR ANIMALS AT SEVILLE CATTLE FAIR.

[Consul Wilbur T. Gracey, Seville, Spain, Oct. 2.]

One of the great events of the autumn in Andalusia is the cattle fair at Seville, held annually. Statistics given by the *Revista Comercial*, journal of the Chamber of Commerce of Seville, show that 105,632 animals in all were brought to this year's fair—5,781 horses, 4,664 donkeys, 4,449 mules, 8,448 cows, 22,683 sheep, 9,504 goats, and 50,103 pigs.

No figures are available for the number of sales that took place, but some information is given regarding the various classes. Only a few horses were sold, principally for riding purposes. Donkeys were sold at 30 to 35 Spanish dollars each (a Spanish dollar is now worth 94 cents United States currency). Mules of the finest strain were sold at 190 to 210 Spanish dollars; lower grade animals at 100 Spanish dollars. Young mules were sold at 140 Spanish dollars.

Cows were sold at \$81 to \$90, Spanish currency; oxen, from \$90 to \$115; heifers, 1 year old, \$87. Sheep changed hands at \$4.70 to \$5, but were scarce, as farmers prefer to sell these animals on the farms. Milk goats, of which there were a considerable number of good quality, were sold at \$15 to \$17 each. Goats for killing purposes brought \$4 to \$4.50, and male goats changed hands at \$8 to \$9.

Pigs, which are raised in great numbers in Andalusia, were exhibited in immense droves, and formed the real basis of the fair. The largest animals which arrived on the first day were sold at \$26 each. The price came down somewhat before the last day, and animals were sold at \$20 to \$24. For medium-sized pigs, prices of \$9 to \$13 were paid, according to month in which born. The average price for pigs per arroba (25.34 pounds) during the fair was from \$3.75 to \$3.80.

[A review of the swine industry of Andalusia appeared in *COMMERCE REPORTS* for June 26, 1915, and a report on autumn prices was published in the issue of Oct. 25.]

NOTTINGHAM MAKES BID FOR NEW INDUSTRIES.

[Consul C. M. Hitch, Nottingham, England, Oct. 7.]

The recommendation of the industrial development committee of the Nottingham city council, that a new department, to be known as the department of industries, be created, has been unanimously approved by the council, and an annual appropriation of \$2,500 made for the new department. It is proposed that an organized effort be made to secure new industries. With that object in view, it was suggested that information be collected as to new industries in all parts of the country, so that, as occasion arose, the advantages of Nottingham as a manufacturing center might be placed in a favorable light before the persons interested.

The industrial committee was empowered to appoint an experienced official for a period of two years, at a salary of \$1,250 per annum, who should devote his entire time and energies to securing new industries.

It was pointed out that the city owned considerable vacant property, and that this property should be offered at a low price, or at a very reasonable rental, for new enterprises. It was generally believed that there would be a great industrial awakening at the end of the war, and that Nottingham should be ready to take advantage of every opportunity.

AMERICAN PAINT POPULAR IN CUBA.

[Consul P. Merrill Griffith, Santiago, Oct. 22.]

American paints and varnishes are very popular in Santiago de Cuba, both on account of the excellent quality which is usually exported and the low freight rates and preferential duties.

Imports of paints from the United States into the whole of Cuba amounted in 1913 to 5,734,922 pounds, valued at \$473,327, out of a total importation of 10,206,989 pounds, valued at \$769,273. In 1914 the imports from the United States amounted to 5,017,123 pounds, valued at \$418,952, out of a total importation of 8,998,102 pounds, valued at \$661,213.

Imports of varnishes from the United States amounted in 1913 to 82,474 gallons, valued at \$70,742, out of a total importation of 96,492 gallons, valued at \$86,356. In 1914 the imports from the United States amounted to 64,080 gallons, valued at \$56,622, out of a total importation of 72,757 gallons, valued at \$66,288.

With the excellent local financial conditions and the new improvements under way on sugar plantations and elsewhere an opportunity is presented at present for the extension of American trade in this line. Some American houses have resident agents in Havana, which facilitates the filling of orders received from interior points.

[The names of the leading dealers in paints and varnishes in Santiago de Cuba will be found in the new Trade Directory of Central America and the West Indies, for sale at 60 cents per copy by the Superintendent of Documents, Washington, D. C., and by the branch offices of the Bureau of Foreign and Domestic Commerce.]

"ABACAXI" AS AN ARTICLE OF EXPORT FROM BRAZIL.

[Consul A. T. Haerberle, Pernambuco, Brazil, Oct. 4.]

This district produces a pineapple known as the *Abacaxi*, in distinction from the usual *Ananas*, a name here given to the ordinary pineapples, which is smaller. It is believed that if there were steamers making the trip from this port to the United States in from 14 to 16 days, considerable trade could be developed in the exportation of abacaxis during the season—October, November, and December.

This consulate has made an investigation as to the cost of marketing abacaxi. It estimates that the cost of the fruit per barrel, cost of barrel, and cartage would make the total cost, placed on board here, about \$1. The insurance per barrel would be \$0.20; freight rate per barrel, \$0.90; other expenses, \$0.40; making total cost per barrel to place on the market in New York, \$2.50. This would be about 12 cents per pineapple or, including loss on the voyage, about 15 cents.

It is believed that these pineapples—many weigh 2 kilos (4½ pounds) and are exceedingly luscious—should sell for 30 cents wholesale.

On account of the low rate of exchange, this business is especially favorable. Abacaxis are now shipped to Buenos Aires, where the Pernambuco variety has a very good reputation, selling for very high prices. They are shipped there in perforated flour barrels.

Mining of chrome iron ore is active at Black Lake, Quebec Province, Canada.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Spinning machinery and looms, No. 19265.—An American consular officer in Spain reports that a firm manufacturing cotton fabrics wishes to import cotton-spinning and weaving machinery. It is stated that large orders are contemplated.

Hosiery and knitted wear, No. 19266.—A letter to the Bureau states that a business man in Switzerland desires to correspond with exporters of hosiery and knitted wear for men and women.

Drugs, medicines, etc., No. 19267.—The Bureau is in receipt of a communication stating that a man in Colombia desires names and addresses of manufacturers of drugs, patent medicines, bottles, and labels for druggists. Correspondence in Spanish is preferable.

Hosiery and underwear, etc., No. 19268.—A commercial agent of the Bureau reports that a representative of an Australian firm is in this country with a view to establishing commercial relations with manufacturers of hosiery, underwear, ribbons, buttons, and shoes for women and children.

Acetic acid, cornstarch, etc., No. 19269.—A report from an American consular officer in Switzerland states that there is a demand for acetic acid 80 per cent, aluminum sulphate, and cornstarch. Quotations are desired c. l. f. port of destination. Correspondence may be in English.

Clinical thermometers, No. 19270.—An American consular officer in Spain reports that a merchant desires to import large quantities of clinical thermometers. References given. Correspondence in Spanish desired.

Printing machinery, furniture, etc., No. 19271.—A letter to the Bureau from a business man in India states that he desires to communicate with exporters of printing machinery, furniture, paints and varnishes, art enameling, agricultural implements, seeds, and first-class books for technical and trade schools. He also desires trade journals devoted to these lines.

Slide rules, No. 19272.—The Bureau is in receipt of a letter from a company in the United Kingdom requesting names and addresses of manufacturers of engineers' slide rules. Considerable quantities are wanted.

Rice and flour mills, etc., No. 19273.—The Bureau is in receipt of a letter from a commission merchant in Porto Rico stating that he desires names of manufacturers and exporters of rice, flour mill, and packing house products, with a view to becoming a representative.

Furniture, No. 19274.—A letter to the Bureau states a business man in Colombia desires catalogues, price lists, and full information on cane chairs and low-priced furniture.

Spool cotton, hosiery, etc., No. 19275.—A commercial agent of the Bureau writes that a representative of a firm in the Netherlands is in this country to establish commercial relations with manufacturers of spool cotton, serges for men and women, linings, hosiery, silk goods, buttons, woolen underwear, and dress shields.

Insurance, No. 19276.—An American consular officer in the Dominican Republic reports that a man desires to correspond with fire, accident, and life insurance companies which would care to do business in that country. Correspondence may be in English.

Gilt silver thread, No. 19277.—A report from an American consular officer states that a company in India desires to be placed in touch with manufacturers of gilt silver thread. A sample of the thread desired may be examined at the Bureau or its branch offices. (Refer to File No. 68516.)

Nursery stock, No. 19278.—A report from an American consular officer in a Portuguese possession states that a man desires catalogues, prices, freight charges, and full information concerning nursery stock, such as orange, plum, pear, and apple trees and berry stock, especially gooseberry.

Stationery articles, No. 19279.—A firm in Italy informs an American consular officer that it desires to correspond with manufacturers of paper, pens, pen-holders, pencils, erasers, cutlery, typewriter ribbons, stamp pads, and other stationery articles. Samples are requested wherever possible. Correspondence may be in English.

EXPORT DUTY ON MINERALS AND PETROLEUM IN PERU.

[Telegram from Consul General William W. Handley, Callao-Lima, received Nov. 15, 1915.]

A law levying an export duty on gold, silver, lead, copper, and other metals, and on borax and petroleum was enacted November 14. [It is supposed that this measure is the one which has been under discussion for some time and which was referred to in *COMMERCE REPORTS* for Oct. 23, 1915 (p. 342). Upon receipt of a detailed report by mail, a further article will appear in *COMMERCE REPORTS*.]

FRENCH EMBARGO DECREES AND SUSPENSION OF DUTIES.

[Telegram from Consul General A. M. Thackara, Paris, Nov. 13, 1915.]

A decree of November 9 suspends import duties on eggs, poultry, and fresh or salt butter. A decree of November 6 prohibits the exportation from French colonies and protectorates, except Tunis and Morocco, of stone fruits, bones, carbonate of soda, acetate, and pyrolignite of lime. A decree of November 11 prohibits the exportation from France of the following articles: Pepper, ground emery, natural corundum in grains or powder, artificial corundum (alundum), carborundum, and manufactures of these substances, such as whetstones, emery wheels, paper, cloth, or other articles. These prohibitions are subject to the usual exceptions.

[The duties suspended by the decree of November 9 are the following, stated in francs per hundred kilos and applicable to imports from the United States: Eggs of poultry or game, 10.00; poultry, 30.00; butter, fresh or salted, 30.00.]

NO SUSPENSION OF CANADIAN COASTING LAWS.

[Consul Henry P. Starrett, Fort William, Ontario, Sept. 20.]

In reply to an inquiry from the Winnipeg agent of an American ship firm, the Minister of Trade and Commerce at Ottawa denies the accuracy of the statement, recently made in the local press, that the Dominion Government had decided to permit American vessels to trade between Canadian Lake ports. [See *COMMERCE REPORTS* for Sept. 23, p. 1411.] He adds: "Unless pressing necessity later on favors suspension, there is no likelihood of any change in existing laws."

PARCEL-POST ARRANGEMENT WITH ARGENTINA.

[Announcement of United States Post Office Department.]

A parcel-post convention having been concluded between the United States and Argentina, to take effect October 15, 1915, parcel-post packages for Argentina will be admitted on and after that date to the mails for said country made up in and dispatched from this country.

Parcel-post packages exchanged between the United States and Argentina must not weigh more than 11 pounds (or 5 kilos) nor measure more than 3½ feet in length and 6 feet in length and girth combined.

Postage must be paid in full at the following rates, viz:

In the United States on parcels for Argentina, 12 cents for each pound or fraction of a pound, and in Argentina on parcels for the United States, 30 centavos per kilo or fraction of a kilo.

Parcel-post packages for Argentina can not be registered.

The parcel-post regulations on pages 113 to 117 of the Postal Guide for July, 1915, apply to parcel-post packages for or from Argentina.

Parcel-post mails for Argentina will be made up at the post office at New York. Postmasters will cause due notice of the foregoing to be taken at their offices and the widest possible publicity given thereto.

MOVIES USED TO ADVERTISE BOLIVIA'S INDUSTRIES.

The Republic of Bolivia, in South America, is the first foreign country to make use of the movies in advertising its industries among the business men of the United States. Four reels of films have been prepared, based upon subjects that are intended to give some idea of the wealth, resources, and business activities and customs of that nation, and these have already been shown to several organizations of American business men, through the courtesy of the Bolivian minister at Washington.

The Chicago branch office of the Bureau of Foreign and Domestic Commerce has had several opportunities to present these views before important clubs and associations, and a notable degree of interest was aroused. This is the first time that any considerable number of American business men have been able to observe the actual daily conditions under which the activities of one of the South American nations take place.

The film and the lantern slide are both being used by the Bureau to bring the various sections of this country into touch with the foreign-trade work, for the views relating to the work of the Bureau itself have been cordially received when exhibited by the various branch offices throughout the United States.

American Hospital Supplies for China.

Recent sales of American goods at Amoy, China, accomplished through Foreign Trade Opportunities by Consul Lester Maynard, included hospital supplies as follows: One 30-horsepower boiler, 5-horsepower engine, washing machine, 2 steam-jacketed rice cookers, steam pump, steam hot-water heater, kitchen range, and sundry hardware. A sterilizer, surgical instruments, etc., to the value of \$1,000 were purchased for an operating room.

MEXICAN OIL DEVELOPMENTS.

[Vice Consul Thomas H. Bevan, Tampico, Nov. 4.]

During October a well of approximately 10,000 barrels was brought in by the *Compania Petrolera Hispana-Mexicana*, S. A. It is in the Panuco district, adjoining the Harmon and Dutch Shell gushers. A small flow of oil was struck at 2,070 feet and the main bulk 5 feet deeper.

Need of Dredging Bar.

A month has passed since the conference between the representatives of the oil companies and the Mexican Government officials in which it was decided to have the Mexican dredge *Tampico* proceed to Tampico immediately, and nothing has yet been accomplished toward dredging the bar. The dredge is at Frontera undergoing repairs and is expected to arrive in Tampico soon. The channel in the river has reduced the bar to about 20 feet, and the pilots are taking out steamers drawing as much as 19½ feet, or 2½ feet more than they would allow a month ago.

Crude-Oil Shipments to the United States.

Crude oil shipments to the United States for October amounted to 986,616 barrels as compared with 886,245 during October last year, and 1,032,704 during October, 1913. Shipments in barrels were as follows: 109,693 to Port Arthur, 105,820 to Philadelphia, 87,731 to Tampa, 85,039 to Galveston, 78,000 to Baltimore, 78,000 to Sabine, Tex., 68,672 to New Orleans, 63,064 to Lynchburg, Tex., 62,000 to Perth Amboy, N. J., 58,000 to Port Aransas, Tex., 41,000 to New York, 40,000 to Portland, Me., 38,428 to Norfolk, 20,000 to Ponce, Porto Rico, 20,000 to Key West, 16,169 to Freeport, Tex., and 15,000 to Baton Rouge, La. There was also a shipment of 30,000 barrels to Montevideo, Uruguay.

The Penn-Mex Fuel Co. and the *Compania Mexicana de Petroleo El Aguila*, S. A., shipped 681,968 barrels to United States ports from Tuxpam, Mexico. The Penn-Mex Fuel Co. shipped 251,948 barrels to New York; 64,017 to Baton Rouge, La.; 62,385 to Sabine, Tex.; and 22,860 to Campana, Argentina. Shipments of *Cia. Mexicana de Petroleo El Aguila* were as follows: 115,238 barrels to Philadelphia, 62,396 to Galveston, 28,294 to Jacksonville, 24,829 to New York, 22,000 to Port Tampa, 20,000 to Sabine, and 7,000 to Warners, N. J.

In addition a number of shipments were made to Europe and to the company's refinery at Minatitlan, Mexico.

RUSSIAN FUR DEALERS.

Commercial Attaché Henry D. Baker, at Petrograd, has transmitted a list of Russian fur dealers who attend each year the great fair at Nizhni Novgorod. The list shows their addresses at the fair, which ordinarily lasts from about July 25 to September 22, and also their addresses during the remainder of the year. The Nizhni Novgorod addresses are usually the same from year to year. The list may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 792.

SPANISH RAISIN, WINE, AND OLIVE OIL YIELD.

[Consul Claude I. Dawson, Valencia, Spain, Oct. 28.]

The July forecast of the Denia raisin and Valencia wine crops of this district (see *COMMERCE REPORTS* for Aug. 9, 1915) is generally confirmed by official statistics announced in the government *Buletín de Agricultura Técnica y Económica* for September, 1915.

As regards raisins, and the size of the crop, the situation is considerably worse than at first anticipated, it being pretty well established that it will scarcely exceed 10,000 metric tons (2,204.6 pounds to the ton). Thus it will be 20 per cent smaller than the low-level crop of 1912 (12,500 tons).

High Prices.

However, what the crop lacks in size will be more than compensated by the money return to producers, judging by the market situation thus far. The gross value is likely to exceed that of a crop double in quantity marketed at the average prices of the past three or four years unless a sudden pronounced slump occurs in the demand. The prices at which raisins have been sold up to this time are fantastic. From the season's opening they have been exceptionally good. Starting September with extremes of \$6.75 and \$9.65 per hundredweight (110 pounds) for the various grades, they finally reached \$8.68 and \$13.50, respectively; and though some inferior qualities are still quoted at the lowest figure, select fruit remains firm at the higher rates.

This situation is without precedent in the annals of the trade, and, though it seems impossible for prices to go higher, some producers hesitate to release their holdings, fearing to lose a possible further advantage of which they have a vision in the continued English demand at prices ranging from 70s. to 91s. (\$17.03 to \$22.14) per hundredweight for half and quarter boxes.

The causes of this abnormal situation have less to do with crop shortage than with circumstances over which producers and traders have no control. It is believed that a much larger crop, if available, would prove highly profitable this season.

The short crop has had some influence on the raisin situation, of course. It caused much speculation, but its effects were probably beneficial through holding in check the speculative spirit among producers, which is manifested more or less every season whenever the market shows sustained upward tendencies.

Raisin shipments thus far are 53 per cent behind those of last season on this date, the figures being 4,205 against 9,063 tons. The statistics show only 1 per cent exported to the United States and 3 per cent to Canada.

Short National Yield of Wine—Combating the Phylloxera.

The national statistics on wine production show a 37 per cent decline in the yield of must this year over last, the respective figures being 10,112,481 and 16,167,940 hectoliters (267,141,916 and 427,109,279 gallons). This district, however (as appears from the same statistics), seems to have given a yield little less than last year, the difference being between 1 and 2 per cent only.

The small national yield, coupled with equally bad results in France and Algeria, resulted in a sharp advance of Spanish wine, so that present business and winter prospects are more favorable from

the commercial standpoint. Wine shipments this fall to France from the Alicante region are said to exceed 5,000 tons, and considerable activity is also noted at Valencia.

Widespread invasion of phylloxera in Spain, with consequent loss of productive value of vineyards, moved the Government to favorable action on the proposal to lower the tax value of land affected. A royal order of July 22, 1915 outlines the procedure to be taken by property owners who desire to benefit therefrom.

Apropos of the phylloxera situation and efforts to eradicate it, a local trade paper quotes the Italian daily, *Il Popolo Romano*, to the effect that experiments now under way in the Province of Lecce, Italy, may result in a practical and efficacious method of combating the disease. It appears from the article in question that a farmer planted tomatoes between the vines in an infected field in the hope of deriving a larger income than the constantly decreasing grape crop would produce. A short time thereafter, as the tomato plants developed, he observed with surprise that the vines took on new life, showing signs of vigor such as they had not shown in years.

Not knowing the cause of the phenomenon, but being of an investigating turn of mind, the farmer uprooted several tomato plants on whose roots he found thousands of dead insects. This led to further investigations by a committee of experts, which is now going on. The scientific explanation is that tomatoes, belonging to the *Solanaceae* family, contain the poisonous alkaloid solanine which destroys the insect which prays on the vine.

The local paper referred to recommends a trial by Valencia farmers, especially since it can be done without much trouble or expense.

[Consul Percival Gassett, Malaga, Oct. 19.]

The Vintage in Malaga.

The vintage in the Malaga district has turned out poorly this season, the yield of must having been only about 35 per cent of a normal year. This is due to the vines having suffered from various causes, principally mildew.

Prices for wine will be very high this year owing to the demand from Algeria and France, where the vintage has also been poor. Dry wines, which usually bring 16 to 18 pesetas per hectoliter of 12 grades (\$2.96 to \$3.33 for 26.417 gallons), are selling to-day at 29 pesetas (\$5.37). Alcohols which used to be worth 120 to 125 pesetas (\$22.22 to \$23.15) the hectoliter are now bringing 175 pesetas (\$32.40). This is due to the demand for alcohol from France owing to the requisition by the French Government of the national product.

Olive Oil in Malaga.

A plentiful yield of oil is expected this season in the Malaga district, as the fruit is reaching maturity under the most favorable conditions. The general opinion is that the quality will be satisfactory in every respect. Gathering will commence the end of October or beginning of November, but until crushing is over the output can not be ascertained.

Notwithstanding the expected large yield, high prices for olive oil will prevail this year, as Spain will be looked to principally to supply the needs of the rest of the world in this respect, the crop of olives in Italy being small and neither Turkey nor Greece being in a position to produce much oil.

BRITISH, GERMAN, AND AUSTRIAN SHIP-TRANSFER RESTRICTION.

Copies of the British, German, and Austrian laws in regard to the transfer to foreigners of their national ships have been furnished by the United States Bureau of Navigation, for the use of Americans who may be interested in shipping. The information conveyed by these copies of existing laws is especially valuable at the present time, when efforts are being made to extend American ownership of ships engaged in international traffic.

A bill to restrict the transfer of British ships to persons not qualified to own British ships makes the provisions:

1. A transfer made after the 12th day of February, 1915, of a British ship registered in the United Kingdom, or a share therein, to a person not qualified to own a British ship, shall not have any effect unless the transfer is approved by the Board of Trade on behalf of His Majesty, and any person who makes, or purports to make, such a transfer after the commencement of this act, without that approval, shall, in respect of each offense, be guilty of a misdemeanor.

2. This act shall apply to British ships registered at foreign ports of registry, and to British ships registered in any British possession other than those mentioned in the schedule to this act, and it applies to British ships registered in the United Kingdom.

3. (1) This act may be cited as the British ships (transfer restriction) act, 1915, and shall be read as one with the merchant shipping acts, 1894 to 1914.

(2) This act shall have effect only during the continuance of the present war.

The scheduled countries are British India, Canada, the Commonwealth of Australia (including Papua and Norfolk Island), New Zealand, South Africa, and Newfoundland.

The German law of October 21, 1915, forbids the transference, in whole or part, of the ownership in merchant vessels that are already built or in the course of construction, to persons who are not German subjects. Contravention, or such attempt, will be punished severely, also when committed by Germans abroad.

The "Handels-Museum," the official publication of the Austrian Museum of Commerce, announced in its issue of September 9 a decree of the ministry of commerce, dated August 27, with reference to the sale of merchant vessels to foreign countries. The provisions of this decree are:

1. All legal business by which the ownership of Austrian merchant vessels shall be wholly or partly transferred to subjects of foreign governments requires special consent of the ministry of commerce. Such legal transactions closed without said consent are prohibited and invalid.

2. Transgressions of this decree, in so far as not subject to criminal punishment, will incur a fine of up to 5,000 crowns or imprisonment for six months.

3. This decree enters into force on the day of publication.

PUBLIC EXHIBIT OF BRITISH GOODS IN NEW ZEALAND.

The British Trade Commissioner for New Zealand announces that the Wellington Chamber of Commerce is organizing a free public exhibition of British manufactures to be held one week in February, 1916. It is not to be a trade fair, but an effort to educate consumers. The Commissioner suggested that the following goods would be suitable for exhibit: Stationery, toys, fancy goods, cheap clocks, bent-wood furniture, china and glass, cotton underwear and hosiery, buttons, trimmings, lace, etc. A demand also exists for such goods as furnishing fabrics, dress goods, chemicals for industrial purposes, chemical manures, and seeds.

STATE PRODUCTION OF QUININE IN ITALY.

[Consul W. F. Kelley, Rome, Oct. 2.]

For several years past the Italian Government has operated laboratories for the production of quinine for medicinal purposes, especially for use against malaria and other fevers. The Director General of the "Regie" has recently published a report upon the State quinine production during the fiscal year ended June 30, 1914, and it is from this report that the following data are taken:

The total receipts from this industry in the year under review were \$611,283 and expenditures \$451,304, showing a net profit of \$159,979, a sum considerably less than that realized during the preceding year, chiefly owing to the increased cost of the raw materials. The whole of this profit was devoted to scientific investigation, drainage of unhealthful districts, free distribution of quinine, and other preventive and curative measures against malaria.

Sales and Consumption.

The total sales of prepared quinine in the fiscal year 1913-14 amounted to 80,782 pounds, an increase of 1,891 pounds over the preceding year. A smaller demand from Greece and Bulgaria caused a falling off in total exports.

The average consumption in all Italy per 1,000 inhabitants was 10,077 grains in the year under review, an increase of 1,296 grains. The Province of Foggia, in southeastern Italy, showed the largest consumption (44,198 grains per 1,000 population), and the Province of Carrara the smallest (77 grains per 1,000). In the Province of Rome the consumption was 22,547 grains; in Milan, 6,960 grains; Turin, 6,019 grains; and Naples, 3,349 grains per 1,000 population.

The largest quinine laboratories are at Turin, but the rapid growth of the demand for this product has necessitated the establishment of laboratories in Rome and other parts of the Kingdom as well.

IDEAL HOME EXHIBITION IN AUSTRALIA.

[Sydney Morning Herald, Oct. 19; supplementing note on "Ideal Home Competition in Australia," in *COMMERCE REPORTS* for Oct. 12, 1915.]

An ideal home exhibition is to be opened by the Governor on Monday, October 25, in the Sydney Town Hall. The exhibition is being organized by the Institute of Architects. The idea is to build and furnish a home which will entail a minimum amount of work for the housewife and to demonstrate how a home can be made beautiful at comparatively little cost to the owner. A model cottage, costing £700 (\$3,406), is to be erected on the floor of the town hall, and it will be decorated and furnished in an artistic but inexpensive manner. Several of the large city firms will also erect rooms furnished in an artistic style. The arts-and-crafts section will show over 100 of its exhibits for the beautifying of the home.

Consul General William W. Handley, of Callao-Lima, reports that the customs revenues collected at the eight maritime ports of Peru during August amounted to \$243,310, as contrasted with a total of \$186,948 for the corresponding month of 1914.

OLIVE-OIL MANUFACTURE IN PALESTINE.

[Consul Otis A. Glasebrook, Jerusalem, Asiatic Turkey.]

All olive oil made in the Jerusalem consular district, whether by the older processes or by more modern machinery, is considered as edible without refining, with the sole exception of that last pressed from the bruised berries. This, being dark and containing much of the pulp, is fit only for the soap industry, and then only after being mixed with better qualities.

Type of Crusher Used.

The old native oil presses consist of a circular stone trough elevated a little from the ground, in which a stone disk rotates around an upright shaft. This disk turns on its edge like a wheel and is operated by a horse, mule, or camel. One man is constantly stirring, removing, and replacing the olives as they are crushed, another man carrying the whole olives to the mill and returning with the crushed ones. Once sufficiently crushed they are placed where they can be filled into circular baskets that have a small opening and are quite flat. These baskets have been in use for a long time.

The older extraction method, and one still much in use, calls for a wooden box for a mold, in which a large piece of coarse goat's-hair cloth is laid. The box is filled with the crushed berries, pressed compactly together, after which the cloth is folded over the top in a cater-cornered style. These are now ready for the press. This method of crushing the olives is the oldest known, possibly dating back hundreds of years, as ruins of mills would seem to indicate.

Modern mills using imported machinery, when without power, employ exactly such a crusher; when driven by a motor, as many now are, two smaller stone disks are used, both placed on the same axle. In all cases these stones are from the local native quarries.

Primitive Oil Presses.

With the primitive oil presses, there is built in one of the walls of the room a recess just large enough to admit the baskets of crushed berries and reaching to the ceiling, with a small cistern below to receive the oil. In the center of the room is a mammoth wooden screw. A large beam extending across the room has one end entering the recess above mentioned, while in its center lengthwise is a screw in which the larger one operates.

Once the olives are crushed and filled into baskets or haircloth, they are placed one upon another in the press recess, the screw is turned around and around by means of a stick of wood run through a hole for the purpose, and the gigantic beam descends, reducing the pile of baskets to half the height, while the oil runs in streams into the reservoir below. This press, being of insufficient strength, does not at once extract all the oil, so the pressed pulp is subjected to a second crushing and squeezing and then packed away in a corner of the room until the olive season is over. It is then ground for the third time and re-pressed.

These primitive devices, while they still exist, are rapidly falling into disuse, as they are too laborious and do not produce as much oil as the more modern ones.

Modern Presses—Olives Left to Ripen.

The modern iron oil presses are either imported from France or are copies made by local machine shops. Those used where no power exists have the pressing screw operated by a long, large beam pulled by rope and tackle, while the newer types have presses operated by kerosene engines. With these metal presses but one squeezing is the rule, after which the pulp is subjected to a second crushing and pressing only for the dark soap oil. During the pressing process boiling water is poured on the pulp to make the oil separate more easily.

Since the natives are not at all particular about cleaning their mills, especially with the old type of press, the rancid oil from the previous year soon impregnates the new. Besides this, the natives commonly collect their entire crop before beginning to press, piling the berries on the flat stone roofs of their houses. The olives thus lie in a heap, often for weeks, being left until the first winter rains descend upon them—all of which is thought to help ripen the olives and thereby to produce more oil. It possibly may do so with the primitive methods, but this heating of the fruit results in a sharp and rancid product, which taste, however, the natives do not seem to mind.

Storage Methods—Shipments to United States.

A few modern mills endeavor to produce a better table oil, which they sell at an advanced price. In these the berries are not allowed to heat, and are pressed soon after being picked. The oil is stored in metal tanks, which are scoured before using, as is all the machinery employed, very sweet and clear oil being thus obtained. Some even collect the oil that of itself flows away from the crushed berries before being pressed, which is considered very superior. No methods of filtering or refining are known. The oil is simply allowed to settle and cure itself; and while it has a sharp taste when quite fresh, this taste is soon lost.

There was \$3,200 worth of olive oil shipped from this district to the United States in 1914, the invoices being certified at the Jaffa consular agency.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name	Post	Expiration of leave.	Address.
Stammers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.....	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Posorio, Argentina.....	do.....	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willy R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewis, E. L.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 3	Itinerary being arranged.

FOREIGN TARIFF NOTES.**ARGENTINA.**

[Boletín Oficial, Aug. 25, 1915.]

Shipments of Potatoes "To Order."

By an Argentine decree of August 21, 1915, shipments of potatoes must be placed in a customs warehouse for examination by the sanitary officials before clearance will be permitted, and such consignments will not be admitted for inspection unless the consignee be named or unless the importer or his agent assume responsibility for the payment of the storage and other charges. Shipments accompanied by certificates from Argentine agricultural experts in the ports of exportation are excepted from this provision. [For previous notice regarding sanitary certificates to accompany potatoes destined for Argentina, see Foreign Tariff Notes No. 11, p. 137.]

[Boletín Oficial, Sept. 3, 1915.]

Standards for Canned Vegetable Products.

A presidential decree of August 28, 1915, in effect October 1, provides that all canned goods of vegetable origin imported into Argentina shall be subject to regulations substantially similar to those already in force for products of animal origin. The importation is prohibited of canned vegetables which are adulterated or artificially colored and those which contain preservatives or poisonous substances or which have been altered. In sauces containing more than 60 per cent of water and in other canned goods of all kinds, however, the use of less than 100 milligrams of boric acid per kilo of product will be permitted. The importation of products containing less than 30 milligrams of metallic copper per kilo will also be allowed. Samples of all products are to be submitted for analysis to the National Chemical Laboratory or a branch thereof, and clearance of consignments will not be permitted until a certificate of approval from the above office is presented. [The schedule of charges for analysis at present in effect prescribes a fee of 5 pesos gold (\$4.82) per 2,500 kilos (or fraction thereof) for the analysis of industrial products subject to inspection. For previous regulations governing standards, analysis, etc., of alimentary products, see Foreign Tariff Notes No. 9 (p. 52), No. 10 (p. 95), No. 11 (p. 136), No. 12 (p. 175), and No. 13 (p. 203).]

CHINA.

[Consul John F. Jewell, Chefoo, Sept. 29, 1915.]

Opening of Lungkow to Foreign Trade.

The opening of Lungkow, Province of Shantung, as a trading port has now been definitely decided upon by the Chinese Government, and it will be formally opened to foreign trade on or about November 1, 1915. An office of the Chinese Maritime Customs will be established at once, and necessary improvements to the port will doubtless be made at an early date.

COLOMBIA.

[Diario Oficial, July 17, 1915.]

Import Duties at Puerto Córdoba.

A presidential decree of July 1, 1915, fixes at 5 per cent ad valorem the duty on goods imported into Colombia through the custom-

house of Puerto Córdoba, which is situated on the upper Amazon River.

[Diario Oficial, July 21, 1915.]

Duty on Trunks Used as Shipping Containers.

A decree of the Minister of Finance of Colombia provides that when trunks are used as containers for imported articles, if the trunks are subject to a higher rate than the contents, the two shall be dutiable separately if listed separately on the invoice, but that if any of the contents is dutiable at a higher rate the trunks shall be subject to the duty of the article on which is imposed the highest rate.

[The Colombian customs regulations provide that when the receptacle or inner packing is dutiable at a higher rate than the article it contains, the container must be separately declared and its weight specified in the consular invoice. If not declared separately, the entire contents of the package will be subject to duty at the higher rate applicable to the container. Where the duty leviable on the container is less than that applicable to the contents, the entire package is to be subject to the higher rate. It appears that this latter provision has not always been observed in the case of trunks and hampers used as containers of imported products, these receptacles having been admitted at the lower rate prescribed by the tariff for such articles.]

GUATEMALA.

[El Guatemalteco, Sept. 13, 1915.]

New Schedule of Consular Fees.

A presidential decree of September 9, 1915, provides for a new schedule of fees to be collected by Guatemalan consular officers for legalizing shipping documents, beginning October 1, 1915. The charge for certifying invoices for goods exported to Guatemala is fixed at 2 per cent ad valorem, which represents a reduction in the case of shipments valued at less than \$700 but amounts to a substantial increase over former fees for consignments of value exceeding that amount. The other consular fees provided for by the recent order are as follows: For the legalization of ship manifests, \$10; for the certification of sets of bills of lading (4 copies), \$1, and for each additional copy \$1; for legalizing health certificates, \$2; for certifying signatures of documents required by the Guatemalan authorities, \$3. [The consular fees given on p. 38 of Tariff Series No. 24 (Consular Regulations of Foreign Countries) should be changed in accordance with the new schedule.]

PORTUGUESE COLONIES.

[Diário do Governo, Sept. 8, 1915.]

Export Duty on Coffee in Angola.

The enforcement of the provisions of the law of August 19, 1914, increasing the export duty on uncleaned coffee shipped from Angola has been postponed until February 1, 1916, by a Portuguese law of September 8, 1915. From that date there will be collected on uncleaned coffee shipped through the ports in the Conventional Basin of the Kongo an export duty of 10 per cent ad valorem, while that exported through other ports will be subject to a tax of 25 per cent ad valorem. [The provisions of the original law were reported in Tariff Notes No. 14, p. 25.]

PACKING GOODS FOR VALPARAISO.

[Consul General L. J. Keena, Valparaiso, Chile, Sept. 24.]

The present widening of miscellaneous exports from the United States to Chile has given rise to repeated complaints in regard to American packing.

It should be remembered, in packing goods for shipment to Valparaiso, that all merchandise has to be unloaded here in slings from ship to lighter in practically an open roadstead and again hoisted in a sling from the lighter to the wharf, and that the water is rougher at the wharf, to the extent of the backwash, than the more open water at the ship anchorage. Packing for Valparaiso, therefore, can not be done on the basis of what would be considered satisfactory strength for shipments to Rio de Janeiro or Buenos Aires, where ships are unloaded in still water and ordinarily discharge directly onto the docks.

If merchandise coming from the United States to Valparaiso without transshipment is subject to severe handling because of the methods of unloading at this port, merchandise transhipped at Panama undergoes almost twice the risk of breakage. There further seems to be so steady a percentage of loss of merchandise out of cases which are transhipped at Panama and arrive here in a broken condition that it would appear that a part of the rough handling en route is intentional.

A Satisfactory Packing Case.

At present it is customary for local importers of general merchandise to insure against theft as well as against breakage on merchandise from the United States, because improper packing allows the ends to be unstrapped, lifted, and set back without particularly defacing the case. The illustration below shows an English packing case which is stated by a local importer to be so well constructed and so well covered that it requires no insurance against theft.

It will be noticed from the illustration that the end blocking and the end battens entirely cover the joinings of the side with the top

and bottom of the case and give the case great rigidity. This type of case is used for general merchandise, shoes, shirts, collars, haberdashery, etc.

The case is zinc lined. It is 3 feet 4 inches long by 2 feet 4 inches in height and width. The ends are 1½-inch boards, the sides 1-inch, and the battens are made of strips ¾ by 3½ inches. It is strongly iron-hooped right around the battens, and well nailed. For a case of this type the importer pays an extra charge of 25 to 30 shillings (\$6 to \$7.25) to the British exporter.

AMERICAN TRADE-MARKS IN CHINA.

[Commercial Attaché Julian H. Arnold, Shanghai, Sept. 18, 1915.]

The Chinese buyer lays great stress on the trade-mark or "chop," and once a certain "chop" has found favor with him he will give it special consideration. For this reason there is a great temptation on the part of others to imitate an established trade-mark for use in connection with the introduction of inferior goods, the result of which is the eventual disappearance from the market of the original articles.

It is therefore extremely important that the American manufacturer seeking a market in China register the trade-mark covering his product in Shanghai through the American Consulate General and also in Tokyo, through the American Embassy, the latter action being necessary to guard against imitations by Japanese manufacturers for sale by Japanese dealers in China. As a further precaution against imitation, the American manufacturer or dealer who contemplates entering the Chinese market should so embody the name of his firm or establishment in the Chinese trade-mark that the firm name and the product become inseparable. He should also always, without fail, embody the Chinese characters for "Made in America" in his trade-mark or "chop." I can not urge too strongly upon our American manufacturers the universal use of the phrase "Made in America" translated into Chinese characters in connection with all products which they wish to place upon the Chinese market. [A previous report from Commercial Attaché Arnold giving more details in regard to this subject is on file in the Bureau of Foreign and Domestic Commerce and will be loaned upon application.]

CONSULAR TRADE PROMOTION IN GREECE.

[Consul General Alexander W. Weddell, Athens, Oct. 11.]

This consulate general continues busy consulting with prospective Greek importers, furnishing lists of American manufacturers, transmitting telegrams for inquirers in Greece to exporters in the United States, and vice versa. While results are not usually known, these efforts during the last quarter year have resulted in placing orders with American shippers as follows: Flour. \$20,000; rice, \$7,350; coffee, \$20,000; tanning extracts, \$15,000; automobiles and accessories, \$4,000; electric lamps, \$1,000; corn products, \$15,000; paper, \$15,000. This does not include large and valuable cargoes of American wheat and coal brought in through established channels.

MARKET FOR HARDWARE IN WESTERN FRANCE.

[Consul Kenneth Stuart Patton, La Rochelle, France, Oct. 21.]

The hardware trade of La Rochelle district is almost wholly retail, the local industries (the manufacture of brandy, glove leather, and casein) requiring very little of such articles. The trade in foreign hardware is indirect, the supplies coming chiefly from Paris and Bordeaux. The concerns handling such ware, while locally important, are not large enough to be interested in direct purchases from abroad in normal times. Since the outbreak of the war the inability to obtain stocks from the usual sources has obliged dealers to purchase outside of the usual channels, and they would be pleased to get in touch with American concerns which could make prompt delivery.

At present enameled ware of all kinds is greatly needed. Tools are difficult to obtain, but as the local demand is small there is little to be done in this line. Nails and screws are still to be had with difficulty, and as the sale is small there is little chance of direct importation from abroad. Purchases would be made if necessary from importing houses in Paris or Bordeaux. Lanterns, which were imported from England prior to the war, are in demand, as the English supply is insufficient. Lamp chimneys are also in great demand.

The cutlery used locally is manufactured at Thiers, Chatellerault, and Bordeaux, and as the supply is sufficient for the needs of the region there is little hope that outside competition would be successful. For carriage and wagon hardware the call is negligible; but for such cast-iron products as kitchen utensils and cooking stoves there is an emphatic demand. A leading hardware dealer states that a serious American exporter of enameled ware, hardware, and lamp chimneys would have little difficulty in placing his goods, as almost any terms of sale would be acceptable. Prices have increased in most lines from 25 per cent up.

[The addresses of hardware dealers in La Rochelle district may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. 68352.]

KEEP CONSULAR CATALOGUE FILES UP TO DATE.

[Consul E. A. Wakefield, Port Elizabeth, South Africa, Sept. 29.]

During the recent rush to obtain certain products, the importation of which was interrupted by the war, the Port Elizabeth consulate was visited many times by those in quest of information regarding American wares. This office had in its files catalogues describing nearly every article concerning which inquiry was made. In several instances, however, these catalogues were so old and the prices quoted so obviously incorrect in connection with the present-day conditions that dependable information could not be given.

It is suggested that exporters who believe in and make use of the commercial facilities afforded by the American Consular Service renew their catalogues, with correct prices, at least once in two years. As an illustration of the necessity for this it may be stated that fully one-half of the catalogues in the Port Elizabeth consulate at the present time are of little practical use save as furnishing the names of manufacturers and exporters.

PROSPECTIVE SPANISH COAL PRODUCTION.

[Consul General Carl Bailey Hurst, Barcelona, Oct. 5.]

From data gathered in the chief coal-mining districts of Spain it is estimated roughly that the probable production of coal in Spain during the second half of the year 1915 will amount to 2,402,000 metric tons of 2,204.62 pounds each. The quantity of coal on hand in Spain at the mines, coal yards, and railway depots at the end of July, 1915, is estimated at 250,000 metric tons. Importations are expected to amount to 1,200,000 metric tons. These amounts bring the total coal supply expected in Spain before December 31, 1915, to about 3,850,000 metric tons. The consumption during the last half of the year is estimated at 3,600,000 metric tons, which will leave a surplus of 250,000 metric tons.

The slight rise in the domestic output of coal is not in proportion to the country's wealth in this mineral, and Spanish economists deplore the fact that, with its rich coal deposits, Spain does not produce all that is needed for consumption in the Peninsula as well as a margin for export. Limited transportation facilities, lack of miners, and high railroad tariffs have militated against the development of mining, and even with the present stimulus of increased industrial activity in Spain, a larger coal output must be gradual.

CANNED-FOOD FACTORY FOR TSINGTAU.

[Consul Willys R. Peck, Tsingtau, China, Oct. 2.]

A company has been organized in Tsingtau to establish a canned-food factory which will pack meat and fruits, for both of which the Province of Shantung is famous. Tsingtau is the foremost port in China in the export of beef, and owing to the introduction of many varieties of good European peach, pear, and other fruit trees, the port also exports considerable fruit in season. The by-products of the factory will form an important feature.

The capital of the company is \$100,000 Mexican (\$39,900 gold), one-fourth paid up. The stockholders include prominent Japanese financiers and Chinese here. The chief engineer is a Japanese, who is a graduate of a fisheries school. The latest model machinery is being made in Tokio, and operations will be started immediately on its arrival in Tsingtau.

This is one of the first joint Japanese-Chinese enterprises to be established in Tsingtau, and it is believed that it will be highly successful.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Herbs and plants, No. 19280.—An American consular officer in Italy reports that there is an opportunity for exporters of medicinal herbs and plants to find a market in that country.

Sulphate of copper, No. 19281.—A report from an American consular officer in Greece states that a firm desires to establish commercial relations with exporters of sulphate of copper, with a view to placing orders at once. Formerly the imports were made in casks of 560 pounds, the usual guaranteed strength being 98 to 99 per cent pure. Quotations are desired c. l. f. destination. Payment will be arranged to suit seller. There is no import duty on this article.

Candles, tooth powder, etc., No. 19282.—A report from an American consular officer in East Africa states that a merchant desires to receive catalogues on candles, candlesticks, fountain pens, and tooth powder of a cheap grade. Correspondence may be in English.

General representation, No. 19283.—A firm in Uruguay informs the Bureau that it desires to act as agent for American manufacturers. No particular line is mentioned.

Vegetable extracts, No. 19284.—A report from an American consular officer in Norway states that a firm wishes to correspond with manufacturers and exporters of vegetable extracts for use in making bouillon cubes. Samples and lowest quotations are requested.

Photographers' chemicals, No. 19285.—An American consular officer in Italy reports that a firm wishes to purchase the following photographers' chemicals: Corn fatty acid, stearic acid, white double pressed, 140° F., caustic soda, 76 per cent, and oleic acid, pale. Correspondence may be in English.

Patent medicines, perfumery, and light hardware, No. 19286.—A company in India informs an American consular officer that it wishes to correspond with manufacturers of patent medicines, perfumery, and light hardware, with a view to acting as manufacturers' agent. References given.

Champagne, No. 19287.—A commercial attaché of the Department of Commerce reports that a man owning large vineyards in France desires to have a representative with an established clientele in the United States to sell a high-grade champagne. There are 700,000 bottles ready for export now, and any quantity in excess of 100,000 bottles can be exported annually. References given.

Pharmaceutical products, etc., No. 19288.—An American consular officer in Italy reports that a man in his district desires to be placed in communication with manufacturers of pharmaceutical products and medicines. References given. Correspondence may be in Italian or French.

Chicory, No. 19289.—A report from an American consular officer in India states that a firm desires to correspond with exporters of chicory and requests that samples and quotations be sent. It is stated that 5 tons a month are required; chicory to be packed in 56-pound tins and 4 tins to a case.

Machinery, paper, etc., No. 19290.—A commercial agent of the Bureau reports that a man in the printing business in the Dutch East Indies is now in this country and desires to represent firms manufacturing book-sewing machines; blank books; paper, bag, and box making machinery; bond, printing, and marble paper; ledger books; and perforating machinery.

Paper, No. 19291.—A commercial attaché of the Department of Commerce informs the Bureau that there is an urgent demand in France for paper for use in printing establishments. If possible, correspondence should be in French.

Window glass, No. 19292.—A report from an American consular officer in France states that a merchant in his district wishes to correspond directly with manufacturers of window glass. Purchase to be on a cash basis. Correspondence in French is preferred.

BRANCH OFFICES CAN NOT OFFER DIRECT ADVERTISING.

Many requests have been received recently by the branch offices of the Bureau of Foreign and Domestic Commerce from firms outside of their respective districts that advertising matter which is forwarded be given to inquirers. While the Bureau and its branches are making all possible efforts toward the extension of American trade in this country and abroad, it is unable to comply with these numerous requests. The branch offices have been instructed that they are not allowed to engage in direct advertising for commercial firms.

CHINA MAIL LINE INCREASES CAPITAL.

[From Daily Commercial News, San Francisco, Cal.]

The China Mail Steamship Co., which was recently organized and has already purchased the steamer *China*, has decided to increase its capital stock from \$2,100,000 to \$5,000,000, owing to the stock subscriptions coming in, and also to the end that the company may more readily finance the deals necessary to acquiring additional steamers.

Look Tin Eli, president of the Canton Bank, of San Francisco, and president and general manager of the new company, has just announced the appointments, effective immediately, of an assistant to the president and general manager and a general passenger agent. Men who held important positions with the Pacific Mail were chosen. Head offices are to be established here.

CIRCULAR TO THE HEMP TRADE.

The Bureau of Insular Affairs, Washington, D. C., is in receipt of a cablegram from the Governor General of the Philippine Islands, dated November 17, advising that during the month of October Philippine government fiber inspectors inspected and stamped 79,423 bales abaca and 2,415 bales maguey, as follows: Abaca, A, 400; B, 752; C, 2,216; D, 4,890; E, 9,011; S-1, 1,909; S-2, 1,849; S-3, 746; F, 11,411; G, 3,248; H, 2,042; I, 12,209; J, 10,889; K, 3,369; L, 10,071; M, 3,277; strings, etc., 1,134. Maguey: One, 175; two, 1,525; three 637; D, 78.

PROGRESS ON CENSUS OF MANUFACTURES.

The field work on the census of manufactures, conducted by field agents of the United States Bureau of the Census, has been closed. The work of classifying, editing, tabulating, comparing, adding, and summarizing the statistics is now well organized, and the Director states that it should proceed rapidly.

During October preliminary notices relating to the census of manufactures were issued for 55 cities, making a total of 63 since the work was started. At the corresponding date for the 1909 report similar statistics had been published for only five cities. During October 27,709 schedules were classified, making a total of 279,792 classified to date, and 17,000 schedules were tabulated, making a total of 43,000 tabulated to date.

A large number of establishments failed to make reports to the special agents, claiming in some instances that they sent their reports by mail, and in other cases it is found that the reports must be made from offices or establishments not located in the respective districts of the special agents. The Bureau is therefore carrying on an extensive correspondence with manufacturers to secure original returns and corrections for defective reports. In instances where the 1914 reports show a decrease in business as compared with that of 1909, both schedules are returned for a verification and for information as to whether or not the reports for the two years were made on the same basis.

SOUTH AMERICAN INQUIRIES ABOUT U. S. CITIES.

In response to a request from the city of São Paulo, Brazil, for information in regard to the finances of American cities, the Bureau of Foreign and Domestic Commerce has prepared a collection of publications on the subject from various sources, and these are being forwarded by the State Department through the American consul at São Paulo.

While this work was being completed by the Bureau, the American consul general at Rio de Janeiro, Brazil, transmitted a similar request from the officials of that city, asking for publications on American municipal improvements, public works, construction laws, and administrative organization or reform, especially in relation to the principal cities of the country.

Consul General Gottschalk states that the request from Rio de Janeiro appears to be made in accordance with a spirit now prevailing in Brazil toward looking to the United States as a pattern in many lines.

The Bureau of Foreign and Domestic Commerce is preparing to meet the request of Rio de Janeiro by furnishing as promptly as possible a comprehensive collection of publications of the class desired. American cities desiring to assist in the placing of such information before South American officials are urged to send their publications to the Bureau, to be forwarded to South America.

"Cantaloupe Marketing in the Larger Cities" is a new monograph for sale at 5 cents by the Superintendent of Documents, Washington, D. C.

AMERICAN TRAINING FOR FOREIGN STUDENTS.

That a young Chilean, anxious to complete his training in the schools of the United States, was willing to work his way to this country on a nitrate boat so that he might save what money he had to carry him through his first year's work is an indication of the great interest being aroused among South Americans in the educational opportunities offered by this country.

This young man was a graduate from the College of Agriculture in Santiago and wished to do post-graduate work in one of the California institutions. Unfortunately, he was not able to earn enough money in advance to make his continuance in school possible unless he could secure some employment while carrying on his studies. To save what money he had for the first half year's work, he arranged to come to this country on a sailing vessel carrying nitrates. He appealed to the American commercial attaché in Santiago, Mr. V. L. Havens, for advice and assistance, and was given letters to the Bureau of Foreign and Domestic Commerce, which, through its branch offices on the Pacific coast, was able to assist him in arranging for his school work and in obtaining a position where he could make enough money to continue his education.

Chilean Students in the United States.

Commercial Attaché Havens has exhibited great interest in the education of Chilean students in the United States. As Mr. Havens is himself an engineer, he has been consulted by a number of young men desiring to take up this profession, some of whom have attended schools in Chile but who desire to complete their education in this country. The bureau has been able to assist Mr. Havens by putting him in touch with a number of American institutions which furnished information regarding schools.

The commercial attaché at Santiago is a member, and the only foreign member, of a committee on foreign education of Chilean youths organized in that city. It has been decided to give legal form to this committee, because several wealthy men have promised to donate funds for the payment of the passage of students who are unable to pay their own way to the United States, and subscriptions can not be accepted except by legally organized bodies.

The late president of the Banco Hipotecario of Santiago has left a fund, of which the manager of the bank is trustee, which is to be invested so as to improve the opportunity for study by Chilean youths in commercial courses. There is a good commercial school in Santiago, but further training is desired in banking, international exchange, railways, statistics, etc.

Work of the Bureau of Education.

The United States Bureau of Education, because of the many requests for information from foreign countries regarding educational opportunities in this country, has issued a publication showing the organization of American education with special reference to universities, colleges, and professional schools; the admission requirements, with special reference to the needs of foreign students; and an outline of the general and specific opportunities to be found at our higher institutions of learning. This bulletin contains details of the courses offered by about 60 of the leading American institutions; it also

gives a list of the principal departments of schools of these institutions devoted to various branches of liberal, scientific, and professional study. For each institution there is a statement of the usual expenses. At the end of the bulletin are statistical tables giving the names of our higher institutions of learning, their location, the number of members enrolled, the number of students, the income, and the endowment. Copies of this bulletin have been furnished to the commercial attachés of the United States in South America for their guidance in answering the inquiries regarding American schools.

Activities of the Boston Chamber of Commerce.

During the visit to Chile of the delegates from the Boston Chamber of Commerce, 1913, a proposal was advanced by the Chilean Government for the cooperation of the chamber in finding places for the graduates of Chilean universities as paid apprentices in New England manufacturing concerns or industrial plants for two or three years of practical training with the idea that these young men will afterwards return to their own country with a knowledge of American methods, machinery, and products, and thus ultimately strengthen the commercial ties between the United States and Chile. The project was very carefully investigated by a committee of the chamber of commerce, which found that only a comparatively few industrial plants in New England now provide for training American students along the lines contemplated by the Chilean Government and that these courses could be extended to include foreign students as well. The committee suggested that the plan has possibilities sufficient to insure success if placed upon a broader basis.

At the Second National Foreign Trade Convention, held in St. Louis January 21, and 22, 1915, Prof. Jeremiah W. Jenks, of the school of commerce, accounts, and finance, of New York University, in discussing commercial education for foreign trade, placed emphasis upon this very problem. Prof. Jenks stated:

* * * What I suggest is this: that you take from your own establishments men who are already well trained so far as their general education is concerned, men whom you trust, whom you believe are the ones you want to send abroad in responsible positions. Keep them employed in your work on half time; say half a day at a time; or, if you like, continuously for half a year; and the rest of their time let them devote to specific study in educational institutions of subjects along the lines you wish to have them trained in. Or, if you have not just the men you wish, why would it not be a wise plan to say to the educational institutions: "If you will supply me men of the right caliber I will agree to pay them, say, \$60 a month for the time being for half of their time. They shall come into my establishment in the forenoons and do work there, being shifted from department to department during a period of three or four years, until they understand my business as well as it can be understood by an able young man in that length of time. The rest of their time, afternoons and evenings, shall be devoted to specific study along lines that I shall arrange with you, so as to give them the fundamental training they need." * * *

Prof. Jenks's plan is the broader proposal of the Boston Chamber of Commerce, which suggested that before such opportunities can be offered foreign students similar arrangements must be provided for American young men.

Cooperation of Industrial Establishments and New York University.

New York University has, in fact, opened a course in foreign trade, and a group of large industrial establishments have agreed to employ in their offices three to four men on part time for eight months

in a year. These men will devote part of their time to the university course. During the other four months they are to be given whatever employment their employers consider advantageous. The course is primarily for graduate students, but it is proposed that a young man recommended by manufacturers, merchants, or exporters will be permitted to enter even if he has not attended college. The course as outlined covers four years. The men are to be given a grounding in at least two foreign languages. Elementary instruction will be given during the first year, followed by more detailed studies in foreign trade, such as marine insurance, commercial laws, financing foreign trade, and exchange. The fourth year will be devoted to actual work in a foreign field.

Technical Training for Foreign Students.

Prof. Leo S. Rowe, of the University of Pennsylvania, has just returned from South America much impressed with the desirability of an arrangement by which young South Americans may secure positions in large American manufacturing establishments in order to gain practical experience. At his suggestion, the Secretary of Commerce has called the matter to the attention of the heads of 14 large American concerns, and in a few days the results of this preliminary canvass will be published in **COMMERCE REPORTS**. At the same time a definite announcement will be made of the plan the Bureau of Foreign and Domestic Commerce has in operation for bringing together the young Latin Americans desiring American technical training and the American firms that have facilities for furnishing such training.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 3	Itinerary being arranged.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

CENTRALIZING HONOLULU'S PUBLIC BUILDINGS.

[A. H. Stephens, correspondent, Honolulu, Hawaii, Oct. 19.]

The Civic Center idea is rapidly becoming an actuality in Honolulu, the Outdoor Circle, an organization of some 500 women, having worked incessantly for several years with this object in view. It is now believed that the new Federal Building will be placed on what is known as the Irwin site, directly opposite the Executive Building (formerly the royal palace).

The Superintendent of Public Works of the Territory of Hawaii, with the approval of Gov. Pinkham, will follow out the same plan with contemplated additions to the Territorial grounds. Capitol Square, in the center of which is the Executive Building, also contains the Archives Building and a wooden structure known as the Bungalow. It is proposed to raze the Bungalow and to erect in its stead a three-story edifice for the use of the various land departments, including the Registrar of Conveyances, the Surveyor General, the Commissioner of Public Lands, and the Superintendent of Public Works. In the same square a "commission" building will be erected to house the many commissions that are part of the government of the Territory. It will contain a large central hall, which will be available for public meetings, with smaller office rooms for the use of the commissions.

The "Center" Will Cover Several Blocks.

It will be the work of the next legislature to make the necessary appropriations for these buildings. At its last session \$40,000 was set aside for the repair of the Executive Building and the restoration of the grounds. This work is now nearing completion.

With the Executive Building as a nucleus, the Civic Center as proposed will cover several city blocks. Adjoining the proposed site for the Federal structure is the Judiciary Building, whose grounds will be beautified as soon as work is completed in Capitol Square. Back of the Executive Building is the new National Guard Armory, while it is contemplated by the government of the city of Honolulu to erect a modern structure on another side of the square. The fourth side is well taken care of by the handsome public-library structure. Plans are afoot for the expenditure of \$14,000 in completing the interior of the armory, that sum having been appropriated by the last legislature for fitting out company rooms and making other needed additions.

SUGAR MACHINERY FOR BARBADOS.

[Consul Chester W. Martin, Bridgetown, Barbados, B. W. I., Oct. 25.]

A Barbados planter has just purchased in the United States machinery for a complete modern sugar mill to be delivered in time for handling next year's crop. The purchaser went to New York and has expressed himself as greatly pleased with both the machinery and the price at which it was obtained. Other purchases will undoubtedly follow.

Sword fishing has been active on the Nova Scotia coast, fishing otherwise being quiet.

GROWING USE OF AUTOMOBILES IN CUBA.

[Consul P. Merrill Griffith, Santiago de Cuba, Oct. 22.]

There is a constantly increasing demand for automobiles in Santiago and throughout this consular district. Most of the city and suburban roads are macadamized and, although made several years ago, are in excellent condition for either business or pleasure.

Ninety per cent of the cars already in use are of American manufacture, the remainder being chiefly Italian and French. While a fair number of high-priced automobiles are owned here, the greatest demand in this section is for a low or medium price, strongly built car with a serviceable hood for protection against the heavy rains as well as the sun.

On account of the excellent condition of the roads in this city and vicinity, the low freight rates, the popularity of American cars, and the excellent local financial conditions, now is the time for American manufacturers to make arrangements for the extension of their trade in this section of Cuba. Of course, the most satisfactory way to do this is to send out competent representatives who are acquainted with trade conditions and the customs of the people and thoroughly conversant with the Spanish language.

[Official American statistics show the following shipments of motor vehicles from the United States to all Cuba in the last two fiscal years: Commercial automobiles—1914, 19 vehicles, value \$33,500; 1915, 21 vehicles, value \$34,607. Passenger automobiles—1914, 297 cars, value \$254,428; 1915, 1,359 cars, value \$745,695. Auto parts—1914, value \$48,217; 1915, value \$101,420. The addresses of five Santiago importers of motor cars and accessories may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. 68291.]

PEAT AS A FUEL FOR BOILERS.

[Consul Frank W. Mahin, Amsterdam, Netherlands, Oct. 14.]

The scarcity of coal in the Netherlands since the war began has led to search and inquiry in all directions for relief by the use of substitutes or otherwise. [The Netherlands uses vast quantities of foreign coal yearly. In 1913 the imports totaled 22,429,730 tons; in 1914, 17,946,325 tons.] Along this line, an Amsterdam newspaper prints an extract from a scientific journal stating that "turfpoeider" (peat in a powdery form) has long been used in Sweden as a fuel for stationary boilers, and that recent experiments in that country with railroad locomotive boilers show that 1½ tons of peat powder equal 1 ton of the best English coal for steaming purposes.

This leads the Amsterdam newspaper to remark that according to estimates the peat moors of the Netherlands contain at the present time fully 100,000 million kilos (about 100,000,000 long tons) of ready-to-burn peat, which is equivalent to about 75,000,000 tons of best English coal, according to the Swedish experiment, and that this fuel is immediately available. The newspaper adds that the price of "burgerturf" (a short, hard peat burning a long time) is 11 to 13 florins (\$4.42 to \$5.23) per ton, while the best English coal costs 16 florins (\$6.43).

[The peat industry of the Amsterdam district was described in Daily Consular and Trade Reports for February 19, 1914.]

INCREASED PRICES FOR SPANISH AGRICULTURAL PRODUCTS.

[Consul General Carl Bailey Hurst, Barcelona; Oct. 4.]

A meeting of the principal Spanish sugar manufacturers has been recently held to study the outlining of zones for sugar-beet growing in Spain and to fix the price of the beets. Owing to the general increase in the value of agricultural products the price of the sugar beets was raised from 35 pesetas (\$6.30) to 40 pesetas (\$7.20) a metric ton of 2,204.62 pounds, the extra 5 pesetas (\$0.90) being credited to the profit of the grower. The actual selling price of sugar will consequently rise, but to what extent has not yet been decided upon.

Some public sentiment against the increase in the price of comestibles of domestic production has manifested itself in various quarters and an effort is being made to have the Government intervene for the protection of consumers. In September, 1914, sugar was sold in this district at 83.50 pesetas (\$15.03) per 100 kilos (220.462 lbs.) on the condition that retailers limit sales to 5 sacks, of 60 kilos (132.277 lbs.) each. Now the price is 90 pesetas (\$16.20) per 100 kilos and the limitation is removed.

The same conditions exist in regard to other products. Beans, which last year were sold at 52 pesetas (\$9.36) per 100 kilos, cost this year 68 pesetas (\$12.24); rice has risen from 35 pesetas (\$6.30) to 47 pesetas (\$8.46); domestic lentils from 54 pesetas (\$9.72) to 80 pesetas (\$14.40); onions from 12 pesetas (\$2.16) to 25 pesetas (\$4.50); and potatoes from 10 pesetas (\$1.80) to 14 pesetas (\$2.52). This advance in prices coincides strangely enough with unusually abundant local crops of these products, an exceptional rainfall which injured the vineyards having been highly beneficial to truck farms and vegetable gardens. It is hoped here that the Government will find some means to relieve a situation of far-reaching importance.

AGRICULTURE IN SPAIN.

[Consul Robertson Honey, Madrid, Oct. 15.]

The Madrid Chamber of Commerce, in the current issue of its official publication, calls attention to the fact that of Spain's 19,500,000 population 4,000,000 are engaged in agricultural pursuits—about 21 per cent. The area of Spain is 121,636,395 acres. Of these 59,305,054 are devoted to pasturage and uplands, 39,536,703 to cereals and vegetables, 8,648,654 to the olive and grape industry, and 6,177,610 to nonspecified products.

The total annual value of Spain's agricultural products is 4,800,000,000 pesetas (peseta is the equivalent of about 19.6 cents American). The compiler adds that this figure would probably be 5,000,000,000 pesetas if data were available as to wool, honey, cheese, manure, milk, etc.

During September 112 steamers, 1 sailer, and 2 yachts entered the port of Santos, Brazil—45 under the Brazilian flag, 22 the British, 11 the French, 11 the Italian, and 26 under other flags. Only two flew the American ensign. Of the total tonnage, reports Charles L. Latham, Brazilian vessels represented 30,617 tons and foreign 241,517 tons.

DAIRY PRODUCTS IN GLASGOW AND WEST OF SCOTLAND.

[Consul J. N. McCunn, Glasgow, Scotland, Sept. 23.]

In the Scottish milk trade, the purchase unit is the gallon, and the price varies according to the season of the year and the situation of the farm relative to the consuming market. In the case of dairy farms adjacent to towns and in populous industrial districts, the retail price varies from 20 cents per gallon in summer to 32 or 36 cents per gallon in winter, according to the district.

Within recent years creameries and cheese factories have been established in the various districts, and these very often serve as collecting depots for sweet milk, which is then sent into the consuming centers. The use of steam wagons for this purpose is proving highly economical when compared with railway charges. Most of these creameries are worked on the cooperative system, and although the price obtained by the supporting farmers may, in the first instance, be less than that obtainable by private contract, the results in the long run are usually more satisfactory.

The production of milk, butter, and cheese by dairy farmers in Glasgow and the west of Scotland has shown a decided increase since the beginning of the war. Formerly the tendency was in many cases toward producing milk alone. The war, however, has brought about a rise in the prices of milk, butter, and cheese, particularly of the last mentioned.

Dutch Holstein Cattle Finding Favor—Feeding and Labor.

In the production of milk, cows of the dairy shorthorn and Ayrshire breeds are considered the best in this district, and as the rainfall is greater than in the eastern and southern sections dairy farms are chiefly under grass. Recently the Dutch Holstein cattle have been finding favor with Scotch dairy farmers, the output of milk being very satisfactory.

The cost of feeding cows throughout the year at present may be averaged at \$3.65 per week. For farm labor (which is now scarce) the prices have increased during the war. The average wage now for a married dairyman is from \$6.07 to \$7.29 per week, including free house, garden, meal, and potatoes. The wages of dairymaids vary from \$116.80 to \$145.98 per annum.

Some indication of the rise in prices of feeding stuffs is seen when it is considered that prior to the war linseed cake (American) per ton of 2,240 pounds was about \$45.01, or \$9.73 less than present rate. The other feeding stuffs have been raised pro rata.

An interesting result of the war is the great decrease in the sale of milking machines. This is due to the increased expense of rubber and the great difficulty in obtaining Russian oil, which was formerly used as the motive power.

Spain's Wine and Grape Production.

Figures submitted by Consul General Carl Bailey Hurst, of Barcelona, place the 1915 production of grapes in Spain at 1,790,073 metric tons of which 1,658,638 tons were devoted to wine making, against a production of 2,800,010 tons of grapes, 2,589,227 tons of which were devoted to wine making, in 1914. These figures would point to a clerical error in the data submitted by the consul at Madrid and published in **COMMERCE REPORTS** for October 25, page 359.

CIGAR AND GAS LIGHTERS FOR SPAIN.

[Consul Percival Gassett, Malaga, Oct. 18.]

There would probably be no market in Andalusia for any cigar lighter that operates by turning a wheel with the thumb. These lighters were formerly seen here, but are now considered old-fashioned, being superseded by Austrian and other makes in which by thumb pressure on a knob the lid flies up and produces the spark that lights the gasoline.

To be salable here a cigar lighter should be about 2½ inches long by 1½ inches wide and ¼ inch deep—about the size of an ordinary silver match box—that can be carried conveniently in the lower waistcoat or trousers pocket, and not of the shape of a fountain pen and carried like one in the upper waistcoat pocket with the handle showing.

The sale of matches in Spain is a Government monopoly, so that no device by which their purchase is avoided is permitted unless a tax is paid. Consequently each cigar lighter that is openly offered for sale must bear the Government mark stamped on it showing that the tax of 2 pesetas gold (or 38 cents) has been paid.

The best wax matches sold at the estancos (stores where only tobacco, matches, and stamps are for sale) in the south of Spain are poor in quality and cost almost 2 cents for a box containing 50 matches—a prohibitive price for the poorer classes of Spaniards, who have very limited means; cheaper matches at 1 cent a box are even poorer quality. So that to avoid this expense many people manage to obtain and use cigar lighters; but if a lighter does not bear the Government stamp it would be confiscated and the owner fined 10 pesetas (about \$1.93).

Cigar lighters cost here, with the special tax paid, as follows: White metal or nickel, 5 pesetas (about 92 cents); silver, 12 to 25 pesetas (about \$2.22 to \$4.63).

The usual terms obtained from European manufacturers are three to four and sometimes six months from date of bill of lading, and sometimes from date of receipt of goods.

A gaslighter would be a novelty in Spain, especially one with a round file; however, the same tax of 38 cents would probably be required on each one sold, and possibly also on each renewal of the file, even though it cost only 5 cents. Furthermore, while every man here smokes cigarettas, comparatively few people use gas for lighting or cooking, so that the market for these lighters would be extremely limited.

[The names of those who sell cigar lighters in Malaga can be obtained on application to the Bureau of Foreign and Domestic Commerce and its branches; refer to file 68399. Correspondence with Malaga firms must be in Spanish to be of any use.]

Blackwood Timber of India.

The Bombay blackwood, or rosewood, (*Dalbergia latifolia*) of southern India, and its export supply is described in a new Government bulletin, priced at 10 cents (international money order) by the "Superintendent of Government Printing, 8 Hastings Street, Calcutta, India." The average prices realized at some India Government sales of this blackwood is 65 cents per cubic foot for dressed logs.

SIAM'S RICE CROP AND PROSPECTS FOR NEXT YEAR.

[Vice Consul Carl C. Hansen, Bangkok, Siam, Sept. 9.]

A report on Siam's paddy (rice) crop for 1914-15 has recently been issued by the Ministry of Lands and Agriculture. According to that report, the total area under cultivation for 1914-15 was 5,096,000 acres, against 5,286,000 acres for 1913-14, and the total yield of paddy for the 1914-15 season was 462,601,768 tons, compared with 476,681,416 tons for the preceding season.

There has been a fairly rapid increase in the rice cultivation in Siam within the last quarter of a century. Although no statistics are available as to the increase in the area under cultivation, it is definitely known that the rice exports from Siam have more than doubled during that period. At the same time, the value of the rice exported has advanced from \$1.22 to \$2.04 per picul (133½ pounds).

Methods of Cultivation and Varieties of Rice.

The plowing and planting season generally begins in April, when the rain has fallen sufficiently to admit of "wet plowing," and continues until the end of the rainy season, in October. During this time several varieties of rice may be cultivated, ripening at different dates, so that planting and harvesting can be carried on successively. The earliest rice ripens in 70 days and the latest in about 6 months from the time of sowing, but generally the harvesting begins in October and lasts until February or March of the following year.

More than 40 varieties of rice are said to be cultivated in Siam, but the so-called garden rice forms the bulk of the rice that is exported and is the best as to quality. The total rice exports for 1914-15 amounted to 1,226,269 tons, against 1,314,858 tons for the preceding season.

Predictions Regarding Crop for Next Year.

There was a lack of rain during July and early in August, and in several districts rice had to be sown over again two or three times. The planted rice showed "yellow." However, during the latter part of August abundant rain fell, and the best authorities now say that at least 75 per cent of the average normal crop may be realized for 1915-16.

[A previous statement regarding crop prospects in Siam was published in *COMMERCE REPORTS* for Sept. 17, 1915.]

SPICES FROM GRENADA.

[From report of the governor of Grenada, Windward Islands, published in London, September, 1915.]

The cultivation of spices in Grenada is confined almost entirely to nutmegs, with their derivative mace. The area devoted to the cultivation of nutmegs is not increasing, and has remained stationary for years, owing to the decline in prices. Mace has of late years commanded a relatively favorable price, and has had the effect of making nutmegs a profitable crop. Although the area devoted to the cultivation has not been extended, the output of the island has steadily increased during the past ten years, and has just doubled during the decade. This is due to the fact that the crop of a nutmeg tree tends to increase steadily with the age of the tree. The production last season was 1,372,940 pounds, while four years ago it was 909,280 pounds.

A NEW PEAT-DISTILLATION PROCESS.

[Consul Charles A. Holder, London, England, Oct. 18.]

A new process for the distillation of peat has recently been patented in Great Britain and other countries by which coke, fuel oil, toluol, ammonia, paraffin wax, and acetone are obtained in sufficient quantities and of such high grade as to prove of great value. The process has been in practical operation now some six months and seems to promise to revolutionize the peat industry and to furnish sources of fuel oil to the British Navy which may possibly make it independent of foreign oils.

Peat, as taken from the peat beds, contains from 80 to 90 per cent of water and is of a fibrous cellular structure so that by hydraulic pressure it is possible to lower the water content only slightly. An important part of the new process is a macerator that breaks up the fibrous cellular tissue and thus allows a more complete separation of the water. After passing through the macerator the broken peat is compressed into briquets, which are dried until they contain not more than 25 per cent of moisture, and then fed into a hopper from which they pass into the retort.

Retort the Basis of the Patent.

The retort, though very simple, is the basis of the patent. It contains several chambers where different degrees of heat are applied. In the first a temperature of 300° C. (572° F.) is used for driving out the moisture remaining in the peat. In the next chamber the temperature is about 450° C. (842° F.), and here decomposition of the peat takes place. In the last chambers the temperature runs up to 600 or 800° C. (1,112 to 1,472° F.), and the oil and water are volatilized. By means of a worm screw, briquetted peat is passed in at one end of the retort and peat charcoal is discharged continuously at the other end, while from the various chambers the oil, water, ammonia, etc., are drawn off in the form of vapor and removed from longer contact with the heat.

After leaving the chambers the vapors pass through a condensing system which is so arranged that the heavy oil collects at one place and the water and light oil in the form of vapor, together with some combustible gases, collect in another place. The combustible gases are separated from the water and oil and are utilized in keeping up the temperature of the retort, after it has obtained its initial heat from coal, and they are ordinarily sufficient to carry on the subsequent processes without the addition of any further coal.

Coke of Special Value for Steel—By-Products.

The coke obtained by this process contains 92 per cent carbon, 1 per cent moisture, 1.3 per cent volatile matter, and 5.7 per cent ash, and is very hard. It can be left with a larger percentage of moisture, and in this way, since it is softer, it can be used as fuel for domestic purposes. Its chief value, however, is in the manufacture of steel, owing to its wonderful hardness and the high percentage of carbon contained. Various steel makers have certified to its great value for this purpose. From a ton of peat nearly one-third of a ton of coke, valued at 25 to 30 shillings (\$6.08 to \$7.30) is obtained.

The oil promises to be particularly useful as a fuel because of its low sulphur content. An examination of the oil showed it to be a

most satisfactory substitute for petroleum. The amount of ammonia obtained per ton of peat is estimated at 20 pounds, with a value of 1 penny (2 cents) or more per pound. Both the oil and the ammonia contain water, but this is readily removed by the application of heat. In addition to these products about 20 pounds of paraffin wax, valued at 3 or 4 pence (6 or 8 cents) per pound, is obtained, and toluol and acetone; the quantity and value of the latter have not yet been ascertained. The paraffin wax is of good quality and can be employed for candle making and other purposes.

With peat costing about 8 shillings (\$1.95) per ton delivered in the hopper, dry, it is believed that by this process a profit of not less than 15 or 20 shillings (\$3.65 or \$4.87) per ton will be obtained; and this does not include any allowance for the toluol and acetone, which may prove to be more valuable than all the other products together.

Different Results in Different Localities.

Peat from different localities gives different results, some peat containing larger amounts of volatile matter than others, and some peat having a low nitrogen content while in others it is high. The yield of oil from English peat (Yorkshire) was 26.5 gallons per ton. By varying the conditions of distillation light or heavy oils may be produced as desired. The yield of oil, gas, and ammonium sulphate can be controlled by regulating the length of time or the degree of heat to which the peat is subjected in the retort.

Of the many attempts that have been made to utilize peat this method is said by many experts to promise most.

POULTRY-RAISING APPLIANCES FOR ITALY.

[Consul W. F. Kelley, Rome, Oct. 12.]

In view of the continued rise in the prices of all food products, many plans have been formulated by the municipality of Rome and by private associations to combat the increasing cost of living. A meeting was held recently in Rome to form an association for the encouragement of poultry raising in Italy. It was stated that, although this industry is at present important in this country, by the adoption of scientific and modern methods it would be possible to bring the Italian production of eggs and poultry up to \$100,000,000 a year. At present the export of these products from Italy is prohibited, but it is proposed to organize societies in different centers to make preparations which will enable Italy to become one of the principal egg and poultry producing countries of Europe, so that upon the conclusion of peace this country may at once enter the world's markets.

This idea seems to have found general favor, and if carried out will open up a large market in Italy for incubators, coops, brooders, and poultry appliances and supplies. Offers should be made in the Italian language to the Comitato Agricolo di Roma, 26 Piazza S. Stefano del Cacco, Rome, Italy.

"Retail Ice Cream, a Bacteriological Study," a new Agricultural bulletin, may be had for 5 cents from the Superintendent of Documents, Washington, D. C.

YOKOHAMA SPECIE BANK STATEMENT.

At the meeting of shareholders on September 10, 1915, to receive the report and accounts of the Yokohama Specie Bank for the first half of the current year an address was delivered by the bank's president, Mr. Inouye, who stated:

The country's foreign trade for the term shows a general decrease both in exports and imports. In addition to the supply of munitions of war to the friendly powers, the exports to Great Britain, India, and Australia increased considerably, and this fact had the effect of offsetting the decrease in exports to the United States and China. Imports from China and Australia increased, though not remarkably, but there was a decline in the imports from Great Britain, France, Germany, and Austria-Hungary.

The value of exports from Japan during the term amounted to 300,914,017 yen (\$149,855,180), and of imports to 288,742,534 yen (\$143,793,782), making a total of 589,656,551 yen (\$293,648,962). Compared with the corresponding period of last year, exports showed a decrease of 11,155,057 yen (\$5,555,517), and imports of 93,991,182 yen (\$46,807,600), a total decrease of 105,146,839 yen (\$52,363,126). The fact remains that the foreign trade during the term resulted in an excess of exports over imports amounting to 12,171,483 yen (\$6,061,398). This is a matter for congratulation in so far as Japan's debts to foreign countries are concerned.

Business Favorable for First Half of Current Year.

The business of the Specie Bank for the term was rather favorable, compared with the first six months of 1914, in spite of the marked decrease in the country's foreign trade referred to above. Commercial bills sold and forwarded from Japan abroad amounted to 128,210,000 yen (\$63,848,580), while those purchased were 153,680,000 yen (\$76,532,640), a total of 281,890,000 yen (\$140,381,220). Compared with the corresponding period of last year there was a decrease of 2,370,000 yen (\$1,180,260).

The gross profits of the bank for the past half year, including 1,335,248 yen (\$664,953) brought forward, amounted to 19,885,045 yen (\$9,902,752), of which 16,346,421 yen (\$8,140,517) has been deducted for interest, taxes, current expenses, rebates on bills current, bad and doubtful debts, bonuses for officers and clerks, etc., leaving a balance of 3,538,624 yen (\$1,762,235) for appropriation.

The directors now propose that 400,000 yen (\$199,200) be added to the reserve fund and recommend a dividend at the rate of 12 per cent per annum, which will absorb 1,800,000 yen (\$896,400).

From the balance sheet presented the following figures are extracted: Liabilities—capital (paid-up), 30,000,000 yen (\$14,940,000); reserve fund, 19,600,000 yen (\$9,760,800); deposits (current, fixed, etc.), 163,455,607 yen (\$81,400,892). Assets—cash account, 34,885,931 yen (\$17,373,194); bullion and foreign money, 5,124,358 yen (\$2,551,930); total assets, 324,378,790 yen (\$161,540,637).

LEGATION WANTS TRADE JOURNALS AND CATALOGUES.

[American Minister William H. Hornibrook, Bangkok, Siam, Sept. 29.]

There has been appearing in the Bangkok Daily Mail the following notice relating to the commercial reading room which it is proposed to open at the American legation:

From October 1 there will be established at the United States Legation a commercial reading room for the purpose of providing merchants and importers in Siam with reliable data concerning American manufacturers, commission houses, and exporters. American newspapers, trade journals, and magazines will be kept on file.

As soon as the legation is settled in its new quarters this commercial reading room will be thrown open to the public. It is hoped that many American trade journals and newspapers and descriptive catalogues of American products suited to the Siamese market will be forwarded.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Printers' and lithographers' supplies, No. 19298.—An American consular officer in Spain reports that a merchant dealing in printers' supplies on a commission basis is desirous of corresponding with manufacturers of printing inks, paper, lithographic crayons, ink, needles, and rollers. Correspondence in Spanish is preferred but French or Italian may be used.

Caustic soda, chloride of lime, etc., No. 19294.—A commercial attaché of the Department of Commerce in the Netherlands reports that there is a demand in that country for caustic soda, chloride of lime, and alum used by cotton mills for bleaching and dyeing.

Water filters, No. 19295.—The Bureau is in receipt of a letter stating that an importing firm in the Netherlands desires quotations on water filters, with the drop system. Quotations f. o. b. New York or c. i. f. Java are solicited.

Corset materials, No. 19296.—A letter to the Bureau states that a business man in Spain desires to correspond with manufacturers of corset materials and equipment used in making corsets; also such articles as ribs of horn and whalebone, steels, hooks and eyes of all varieties, elastic webbing, rubber for garters, buckles, fasteners for same, brass eyelets, and machinery for inserting eyelets, etc. Samples, prices, and full information are requested as soon as possible.

Aluminum visiting cards, No. 19297.—The bureau is in receipt of a letter stating that a man in Chile desires quotations and samples from manufacturers of aluminum visiting cards. Samples of the cards wanted are forwarded, and may be examined at the Bureau or its branch offices. (Refer to File No. 76.)

Brewery tanks, No. 19298.—A report from an American consular officer in France states that a brewery desires to buy four vertical 2-ring tanks, each with a capacity of about 74 hectoliters (1,954 gallons), with their accessories, and two vertical 2-ring tanks with a capacity of 16 hectoliters (423 gallons), with their accessories. Tanks are to be placed in a refrigerating room in connection with a bottling plant, and should be provided with a water level and interior cooling coils. They must be of sheet iron in order to stand a pressure of at least three atmospheres. Quotations are desired f. o. b. New York or c. i. f. port of destination. Correspondence may be in English.

Paper, No. 19299.—A letter from a man in Argentina states that he desires to establish commercial relations with manufacturers of metal, tissue, and transparent paper. It is requested that samples of the metal paper, giving kinds, colors, sizes, and weight of each leaf be sent, and, also samples of waxed, tissue, and transparent paper of various grades, from the finest to the most ordinary, with full information be sent. Samples of the various kinds of paper may be examined at the Bureau or its branch offices. (Refer to File No. 75.)

Goose quills, No. 19300.—A commercial attaché of the Department of Commerce reports that a cigar and cigarette manufacturer in Switzerland desires to purchase a large quantity of goose quills for insertion in the ends of cigars and cigarettes. Samples of the quills desired may be examined at the Bureau or its branch offices. Correspondence in French, if possible. (Refer to File No. 843.)

Red gum lumber, No. 19301.—An American consular officer in a neutral country reports that there is a demand by a government department for red gum lumber. It is suggested that lowest prices, and very best terms be given in the correspondence, which should be in Spanish, and the measurements, preferably, in the metric system.

Sewing machines, sewer pipe, hardware, etc., No. 19302.—A report from an American consular officer in Argentina states that a company desires to secure the exclusive agency for manufacturers of sewing machines, clay sewer pipe, hardware, potatoes, foodstuffs, fruits, and shoes. References given. Correspondence may be in English.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Buoys, No. 2784.—Sealed proposals will be received by the lighthouse inspector, Portland, Me., until November 29, 1915, for furnishing 275 spruce spar buoys, delivered at Portland, Me. Information upon application to above office.

Construction work, No. 2785.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until December 28, 1915, for the construction complete (including mechanical equipment, excepting lighting fixtures, and approaches) for the post office at Seymour, Conn. Drawings and specifications may be obtained from the custodian of the site or at the Washington office.

Dredging, No. 2786.—Sealed proposals for dredging in Newark Bay and Passaic River, N. J., will be received at the United States Engineer's office, Room 802, Army Building, 39 Whitehall Street, New York, N. Y., until December 14, 1915. Information on application to the United States Engineer's office.

Motor boat, ice house, and cooking range, No. 2787.—Sealed proposals will be received by the lighthouse inspector, Buffalo, N. Y., for the purchase of one motor boat, one ice house, and one cooking range. Information on application to above office.

Construction work, No. 2788.—Sealed proposals will be received at the Office of the Supervising Architect, Treasury Department, Washington, D. C., until December 30, 1915, for the construction complete (including mechanical equipment and approaches) of the United States post office at St. Petersburg, Fla. Drawings and specifications may be obtained from the custodian of the site, or at the Supervising Architect's office.

Navy Department supplies, No. 2789.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., until December 14, 1915, for furnishing the following materials. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired. Schedule 9011, cedar, Port Orford, boat boards; and schedule 9020, white ash, oak logs, 20 inches square, average length 30 feet; and until December 7, 1915, for schedule 9012, reworking brass scrap; schedule 9013, wrought pipe; schedule 9014, loud-speaking telephone system; schedule 9015, tinned asparagus, tinned spinach; schedule 9016, white medium cotton canvas; schedule 9017, woodworkers' lathes, saw table (for wood); schedule 9018, marine water tube boilers; and schedule 9019, woolen socks.

Labor and material, No. 2790.—Sealed proposals will be received at the Department of the Interior, Washington, D. C., until December 4, 1915, for furnishing labor and material, unless otherwise specified, which shall be required in installing plumbing, marble, tile, and terrazzo work in Room 374 of the Patent Office Building, Washington, D. C., in accordance with plans and specifications for the work, copies of which may be obtained on application to the chief clerk of the department. Proposals should be securely enveloped and marked, "Proposals for plumbing, marble, tile, and terrazzo work, Room 374," and be addressed to the Secretary of the Interior.

Subsistence stores, No. 2791.—Sealed proposals will be received at the General Depot of the Quartermaster Corps, 115-123 East Ontario Street, Chicago, Ill., Quartermaster's Depot, United States Army, Kansas City, Mo., or the Quartermaster's Depot, United States Army, Omaha, Nebr., until November 23, 1915, for serial numbers 125, bacon; 131, sliced beef; 205, sales lard; 261, pork sausage; 262, V. S. sausage; 287, beef tongue.

Metal filing cabinets, No. 2792.—Sealed proposals will be received at the Medical Supply Depot, United States Army, 543 Greenwich Street, New York, N. Y., until November 26, 1915, for 25 metal filing cabinets for blanks and documents, as per sample and specifications at depot. Tops and cornices to be made interchangeable. Cabinets must be so constructed as to permit of the addition thereto of the standard document file section. Cabinets to be boxed separately for shipment.

DATE SELECTED FOR STARTING NEW SWEDISH LINE.

[American Minister Ira N. Morris, Stockholm, Oct. 25.]

The steamer *Stockholm*, of the new Swedish-American Steamship Co., will arrive at Goteborg on December 3, and will depart on its first voyage to New York about December 11.

JAPANESE BANKER ON TOUR OF UNITED STATES.

Baron Eiichi Shibusawa, a leading banker of Japan, who is visiting the United States to study banking facilities and to further trade relations between the two countries, has arrived in Seattle, Wash., with the party of seven that is accompanying him on his tour. From Seattle he will proceed to Chicago, arriving in the Illinois city on November 22. After spending three days in Chicago, the visitors are due in Pittsburgh November 25 for a two days stay; Philadelphia the 27th, one day; New York, the 28th; Boston, the 29th, two days; return to New York, the 30th, for five days; Washington, December 5, two days; Houston, Tex., December 8, two days; Los Angeles, December 12, one day; and will conclude the tour at San Francisco on December 14.

GOVERNMENT SAVINGS AND LOAN FUND IN SALVADOR.

[Diario Oficial, Oct. 16.]

Official publication has just been made of a law of Salvador providing for the establishment of a stock company for savings and mutual loans among the employees of the treasury department. Under the provisions of this law the disbursing offices shall deduct a certain proportion of the salary of each employee, to be credited as savings and to be used as a fund for loans to members in time of need. All administrative details will be under the direction of a governing board. This law is to be put into effect on January 1, 1916.

CANADIAN WHEAT GREATLY EXCEEDS EARLY ESTIMATES.

[Consul General Frederick M. Ryder, Winnipeg, Manitoba, Nov. 12.]

The first estimate of the wheat crop of Western Canada from an authoritative source shows that it will exceed 300,000,000 bushels. This estimate was issued November 10 by the Northwest Grain Dealers' Association. It places the wheat figures for the 1915 crop at 307,280,000 bushels. Estimates made at the commencement of harvest operations were considered extravagant at 240,000,000 bushels.

The quantity of wheat inspected in Winnipeg up to November 1, 1915, 108,226,900 bushels, is over 100 per cent more than up to the same date last year. Four times the amount held by farmers at November 1 last year is in their possession now, indicating that the grain movement will continue until the 1916 harvest operations commence.

The association's other estimates are: Oats, 338,995,200 bushels; barley, 39,202,000 bushels; flax, 4,264,000 bushels.

[Consul Samuel C. Reat, Calgary, Alberta, Nov. 1.]

Working 24 Hours a Day in Flour Mills and on Farms of Alberta.

Alberta will thrash more than 30,000,000 bushels of wheat and more than 70,000,000 bushels of oats, with other field crops to correspond. The flour mills of Calgary and other cities of Alberta are working twenty-four hours per day. The elevators and the railways are pushed to capacity to handle the grain. The farmers are, wherever they can secure the men, working twenty-four hours per day on their thrashing operations, and the bulk of the tremendous yield will probably be thrashed before the weather becomes severe.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D.C.
Maynard, Lester.....	Amoy, China.....	do	Do.
Grace, William J.....	Adeu, Arabia.....	Dec. 16	Association of the bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D.C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 3	Do.

ANDALUSIA OLIVE CROP.

[Consul Paul H. Foster, Jerez de la Frontera, Spain, Oct. 21.]

Competent authorities give the increase in the present crop of olives over that of 1914 as 25 per cent for the district of Jerez de la Frontera and as 50 per cent for the entire district of Andalusia. The crop is needing rain, and the next few weeks may produce an increase or decrease in the estimates mentioned as well as an effect on the quality of this year's crop.

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he received in stock during the week ended November 13 the following new United States Government publications of a business character, which he will sell at the nominal prices affixed:

Map of Mississippi, issued by the General Land Office, reprint.—Showing topography, county lines, railroads, public lands, etc. Price, 25c.

Utilization of Atmospheric Nitrogen, Special Agents Series No. 52, reprint.—Work by Thomas H. Norton, covering present supply of nitrogen, synthetic production of ammonia, synthesis of nitric acid from atmospheric nitrogen and oxygen, Schonherr and other processes, calcium cyanamide from atmospheric nitrogen, coal waste, and pent, etc. Price, 15c.

Financial Developments in South American Countries, Special Agents Series No. 103, reprint.—Covers financial conditions in South American countries, covering banking, government finances, emergency measures, etc. Price, 5c.

Consular Regulations of Foreign Countries, Tariff Series 24, reprint.—Important work on shipments to foreign countries, covering filling out of invoices and other business forms, consular regulations, consular fees, etc. Price, 10c.

Report of Selby Smelter Commission, Mines Bureau Bulletin 98.—A voluminous report (528 pp.) on investigation of the Selby smelter plants, involving effect of smelter smoke, etc., conditions in vicinity of smelting plants, and also methods for saving valuable by-products in smelter smoke. Price, \$1.25.

Digestibility of Some Animal Fats, Agriculture Department Bulletin 310.—Article by C. F. Langworthy on nature of the diet, experimental methods, digestion experiments, etc. Price, 5c.

Phosphate Rock and Methods Proposed for Its Utilization as a Fertilizer, Agriculture Department Bulletin 312.—Covers phosphate deposits in the United States and use of phosphate rock in the making of fertilizer materials. Price, 5c.

Food Values of Corn and Corn Products, Farmers' Bulletin No. 298.—Covers structure and composition of corn, milling, cooking, hulled corn, corn breakfast foods, pop corn, digestibility of foods made from corn, economy, etc. Price, 5c.

Cheese and Its Economical Uses in the Diet, Farmers' Bulletin 487, reprint.—Includes articles on cheese making, description of different varieties of cheese, care of cheese in the home and its uses as food, with many recipes for preparation thereof. Price, 5c.

OFFICIAL NUMBERS AWARDED MERCHANT VESSELS.

The following is a statement of official numbers and signal letters awarded to merchant steam screw vessels by the Bureau of Navigation, Department of Commerce, during the week ended November 13, 1915:

Name.	Official No.	Signal letters.	Tonnage.		Year built.	Where built.	Home port.
			Gross.	Net.			
Carolina	213756	9	6	1915	Wilmington, N. C.	Wilmington, N. C.
Morris Adler	213747	2,481	1,494	1915	Ashtabula, Ohio.	Detroit.
Richard F. Young	213751	LFQK	268	182	1915	Grassy Point, N. Y.	New York.
Silver Shell	213752	LFQM	5,605	3,422	1915	Wilmington, Del.	Wilmington, Del.
Virginia	213751	LFQN	3,289	1,980	1915	Camden, N. J.	Boston.

The number of foreign-built vessels admitted to American registry under the act of August 18, 1914, since June 30, 1915, was 20 of 50,865 gross tons.

A big sagebrush plow exhibited at the San Francisco Exposition is said to be capable of turning under thickets of brush 6 feet high.

AMERICAN CONDENSED MILK SHOWING RAPID GAINS IN EXPORTS.

American condensed milk is being exported in record-breaking amounts with sales aggregating 37,235,627 pounds in the fiscal year 1915, against less than one-third that amount in 1911. Public inquiries for up-to-date information on the subject have been so numerous that the Bureau has prepared an advance statement showing the distribution of condensed milk from the United States to the different countries.

Cuba leads the world among the foreign markets for this American product, her annual purchases almost equaling the combined sales to all Europe. Very large amounts are sold also in the Orient, chiefly Japan, China, and the Philippine Islands.

The following table shows the leading markets in the fiscal year 1915, with a summarization for several prior years:

Exports of American condensed milk, 1915, in order of magnitude.

Countries.	Pounds.	Value.	Countries.	Pounds.	Value.
Cuba.....	8,391,400	\$765,400	Brazil.....	600,900	\$56,700
England.....	4,017,100	243,300	Jamaica.....	552,700	44,900
Belgium.....	3,332,900	281,800	Chosen (Korea).....	426,600	48,200
Japan.....	2,731,000	318,700	British Honduras.....	274,500	24,200
Netherlands.....	2,511,200	186,600	Chile.....	253,000	21,000
Philippine Islands.....	2,531,000	192,300	Honduras, Central America.....	241,500	20,700
China.....	2,499,000	210,600	Other countries.....	1,443,800	120,000
British South Africa.....	1,867,300	129,100			
Asiatic Russia.....	1,849,400	115,300	Totals: 1915.....	37,235,600	3,066,600
Panama.....	1,389,400	103,400	1914.....	16,209,100	1,341,100
Hongkong.....	879,000	74,000	1913.....	16,525,900	1,432,800
Mexico.....	767,100	62,300	1912.....	20,642,700	1,651,900
Peru.....	637,400	47,000	1911.....	12,180,400	936,100

The first three months of the fiscal year 1916 were characterized by a further expansion in exports of condensed milk. For July the total was 5,172,300 pounds; for August, 7,043,600 pounds; and for September, 9,786,200 pounds, making the sales in three months 22,002,100 pounds, or more than those for the year 1912.

Imports of fresh and condensed milk in 1915 aggregated \$2,556,800 and are now averaging about \$225,000 per month.

WHEAT SHIPMENTS FROM TSINGTAU TO JAPAN.

[Translation from Japanese newspaper at Tsingtau, China, forwarded by Consul Willis R. Peck, Sept. 30.]

In the freight that entered Tsingtau over the Shantung Railway during August wheat and Chinese coins reached the highest values. Wheat flour and other cereals ranked next. The export of wheat and Chinese coins will be reduced to much smaller figures in the future.

At the end of August there were 63,821 bags of wheat (about 5,289 metric tons) in the warehouses at Kobe, Japan, all exported from Tsingtau, and valued approximately at \$174,257. Taking into account the wheat exported in the early part of September, the total export since June is said to amount to 20,000 tons. The price of Japanese wheat is weak, and firms holding large quantities are seriously affected.

HONGKONG MARKET FOR AMERICAN SPONGES.

[Vice Consul A. E. Carleton, Hongkong, Sept. 30.]

Practically all of Hongkong's present supply of sponges is imported from Great Britain, although the origin is Turkey. These Turkish sponges are chemically bleached with oxalic and hydrochloric acid, with the result that they rot quickly and their sale is somewhat limited in the colony. The natural bleached sponge is not to be found on the market, or, at least, the supply is very small indeed, and no doubt American sponges would soon become popular.

The Hongkong consulate general is informed that the best American sponge for this market would be the sheep's wool of medium size. The Philippine Islands produce a sort of a grass sponge which is used principally for industrial purposes, and there ought to be a fairly ready market for this class in both Hongkong and Canton. There is a fair supply of rubber sponges of American origin for sale and these are more or less popular, since the consumer does not take readily to the artificially bleached sponge.

[A list of possible Hongkong sponge buyers may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. GS347. Only negligible quantities of domestic sponges have been shipped from the United States to Hongkong in the past. Official American statistics show exports of but 1,436 pounds, value \$867, in the fiscal year 1913; 40 pounds, value \$24, in 1914; and 63 pounds, value \$43, in 1915. The American shipments to all countries in the years named were: 205,484 pounds, value \$177,059; 209,470 pounds, value \$173,866; and 117,618 pounds, value \$109,635.]

EGYPT'S COTTON CROP FOR 1915.

[Egyptian Gazette statement of Oct. 20, forwarded by Consul Arthur Garrels, Alexandria.]

The following is the estimate of the cotton crop of 1915 made by the ministry of agriculture. Yesterday Mr. Gerald Dudgeon came to the Khedivial Bourse, Alexandria, and posted it up. It is as follows (1 feddan equal 1.038 acres; 1 cantar equal 99.049 pounds):

The restriction by law of the cotton-growing area was expected to result in the sowing of about 1,350,000 feddans, but according to the returns obtained by the Sarrafs for the Department of Direct Taxes only 1,186,000 feddans were actually planted with the crop in 1915.

A check survey conducted in a few localities showed that the aggregate of the cotton areas given for these localities corresponded very nearly with the Sarrafs figures. It was thought inadvisable, therefore, to make any correction of the figures given by the Direct Taxes Department. This figure, viz, 1,186,000 feddans, is that which has accordingly been taken as the basis of the estimate of the yield. The damage due to the pink seed worm has been computed by a method based upon a careful examination of the results obtained in the field. By this method, checked by inspection of the more important localities, the cotton crop of Lower Egypt is estimated at 3.99 cantars per feddan, and that of Upper Egypt at 4.49 cantars per feddan, making an average for the whole of Egypt of 4.10 cantars per feddan, and a total, based on an area of 1,186,000 feddans, of 4,863,000 cantars.

This is an estimate of the 1915 crop alone, and takes no account of the balance of the crop of 1914 which has been held over until this year. Should the whole crop of 1915, together with an appreciable quantity of last year's crop, which is believed to have been held back, reach Alexandria before the end of the cotton season, the deliveries will be somewhat higher than the above-mentioned estimate.

Vice Consul Woodward reports that British Columbia's yield of oats is 4,096,000 bushels, compared with 3,171,000 last year, and all other grain 608,000 bushels, compared with 456,000.

HALIBUT GROUNDS SURVEYED FOR PACIFIC NORTHWEST.

During July, August, and September the steamer *Albatross*, of the United States Bureau of Fisheries, carried on investigations of the fishing grounds lying off the Oregon and Washington coasts. This work was in continuation of a survey made in 1914, and was addressed particularly to little known or unknown grounds suitable for halibut.

The first trip of the *Albatross* was to grounds off the coast of Washington, from Grays Harbor to Flattery Banks, but the abundance of ground and blue sharks rendered the location unpromising for the establishment of a fishery at that time. Two favorable halibut bottoms were discovered approximately 27 miles southwest of Grays Harbor.

The second trip covered the same region by lines of soundings intended to determine the possible existence of offshore banks rising from the deep waters. One such bank was located as apparently the top of a submerged mountain, rising 6,000 feet from the floor of the ocean. The depth ranged from 525 to over 830 fathoms. The bank is not shoal enough for fishing, but it suggests the possible existence of other banks that might be of greater practical importance. The location of the bank is about 278 miles from Cape Flattery light, the latter bearing N. 66° E.

A third trip covered the region off the Columbia River, and south as far as Cape Meares. Good halibut bottom was found S. 71° W. of Columbia River Lightship, 17 miles out. South along the 100-fathom curve to Cascade Head good halibut bottom was noted for nearly the entire distance in 110 to 120 fathoms. A patch of very good bottom was located 22 miles northwest of Cape Meares light in 94 fathoms. The largest ground located by the *Albatross* lies between Tillamook Head and Cape Falcon, 28 to 30 miles from the coast. The bottom is of coarse and fine gravel, black sand and rocks, and an abundance of life was noted at the surface of the water.

A full report on this survey is now being prepared and, with accompanying charts, will be issued as soon as practicable.

MOTOR CARS FOR HONDURAS.

[American Minister John Ewing, Tegucigalpa, Oct. 14.]

A list of motor-car owners, prepared from the municipal register, appeared in yesterday's *Neuvo Tiempo* and disclosed the fact that 19 cars (both pleasure and commercial) are in use in Tegucigalpa. While the item was an advertisement inserted by the local agent of a popular, low-priced American car, it is of interest because all of these automobiles have been purchased within the past few months as the result of a demand created by the construction of only one motor highway.

Other articles appearing in the same issue of the journal indicate that the people are now awakening to the benefits that will accrue from the endeavors of the present administration to open up similar highways reaching every section of Honduras. When this work is accomplished, the demand for automobiles will be vastly increased, and it would be well for American manufacturers to prepare themselves to secure this trade.

PROTECTION OF INDUSTRIES IN SPAIN.

[Consul General Carl Bailey Hurst, Barcelona.]

In response to the petitions of various industrial societies and in pursuance of the policy of the Spanish Government to foster domestic production and export, the creation of a commission to study all conditions bearing upon this phase of national prosperity has been authorized by a royal decree.

The president of this commission is the General Director of the Spanish Customs and other members will be representatives of Spanish industrial bodies, technical experts chosen by the professors of certain schools and various officials, all to be named by the Spanish Treasury Department. The duties of the commission will consist in studying existing industries in Spain that, owing to peculiar internal or foreign conditions or need of expansion, would be benefited by Government support, with a view to increased exportation. The commissioners will also investigate such industries as the Government may specially indicate. It will consider from a practical standpoint the desirability of furthering the exportation of agricultural, mineral, or other domestic products, decide whether the results would be favorable or unfavorable to the development of natural resources, and suggest such means, including financial aid, best adapted to attain the end sought by leading economists in this country.

The decisions reached by the commission will be embodied in a report setting forth, among other matters, the best manner of granting concessions proposed; the conditions connected with the manufacture of merchandise the export of which it is designed to stimulate; and the most equitable form for the distribution of Government aid. After being passed upon by the commission such report will be laid before the Spanish Treasury Department.

PAPER DOILIES AND OTHER NOVELTIES FOR HONGKONG.

[Vice Consul A. E. Carleton, Hongkong, British China, Oct. 1.]

There is apparently a good market in Hongkong for American dainty paper doilies, paper ruffles, paper soufflé cases, and the like. While only a small quantity of these goods is sold, this is perhaps due to the fact that the stocks carried are neither large nor varied; the purchaser is restricted to a few styles and designs, for which high prices are asked. No doubt, if American manufacturers care to interest themselves, considerable trade would result. The paper napkins on sale here are of Japanese origin, and it would be a question of price whether American wares could compete. In normal times there is a good market for menu cards, as practically nothing but the Japanese cards can be obtained; and as these follow well-established lines, without variation in design and quality, it is thought that new designs and ideas would be most acceptable locally.

[A list of possible Hongkong importers of paper doilies and other paper table novelties may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. 68348.]

The completion of the aerial tramway across the Whirlpool at Niagara Falls is noted by Consul James H. Goodier. It cost \$50,000 and will be in operation by the end of the year.

SANITARY EQUIPMENT FOR HONGKONG HOMES.

[Vice Consul A. B. Carleton, Hongkong, British China, Oct. 4.]

In general there is an increasing demand in Hongkong for better equipped bathrooms, and recently inquiries have been made at the Hongkong consulate general for catalogues describing American ranges with hot-water attachments, a better arrangement for heating the water for the bath being the chief requirement.

A modern bathroom is rather the exception than otherwise, and it is generally only in the newer dwellings, particularly those constructed in the apartment-house style, where reasonably equipped bathrooms have been installed. The Chinese have made no attempt to put in up-to-date equipments, with the exception of a few homes owned by Chinese with Western training, and if the idea should obtain that a modern bathroom is a necessity there would be an immense trade here.

Shanghai Tub Losing Popularity.

The "Shanghai tub" is losing its popularity to a certain extent; it is unsanitary in some ways, as, for instance, the outlet for the water has no outside pipe connection, and the water or some portion thereof is likely to remain on the bathroom floor. But, as before indicated, the chief necessity is the provision of facilities for heating the bath water, whether the Shanghai tub remains or a modern outfit complete is installed. In many houses there is a makeshift shower bath, but without the needle shower and other attachments, and few of these have connections with the bath-heating apparatus.

At present in Hongkong there would be no demand for closets with flush fixtures, as the dry-closet system is still in vogue, and this will not be changed until the sewerage system has been extended and there is sufficient water for flushing purposes. The Government is building another reservoir which will give plenty of water even in the driest season. In connection with the bathroom an enameled lavatory with hot and cold water connections is likewise needed.

C. I. F. Quotations.

Interested firms in the United States should send complete catalogues with prices, discounts, terms of payment preferred, and similar information to Hongkong commission houses [a list of which may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices; ask for file No. 68349]. American exporters are urged to quote terms c. i. f. Hongkong, as it is impossible for Hongkong importers to estimate prices otherwise.

RUSSIAN EMBARGO REGULATIONS.

The Bureau of Foreign and Domestic Commerce is in receipt of a number of copies of a translation of the embargo provisions of Russia and Sweden, forwarded by the commercial attaché at Petrograd, which will be distributed to those interested upon application. Besides giving lists of the articles under embargo on September 15, 1915, the document contains detailed instructions regarding applications for permission to export prohibited products from Russia.

The first shipment of this season's apples and pears from British Columbia arrived at Sydney, Australia, on September 24.

WORK OF SOCIETY FOR TESTING MATERIALS.

The increasing activities of the American Society for Testing Materials are fully presented in five publications it has recently issued. The most important of these volumes is the 756-page yearbook, containing the standards and tentative standards of the society. Another publication of 250 pages contains a summarized list of standards, charter and by-laws of the organization, information concerning the International Association for Testing Materials, with which it is affiliated, roll of membership, board of officers, committees, technical problems, and numerous other facts of interest to those who have occasion to deal with specifications for materials and allied subjects.

A smaller book, containing information about the society, states that it was formed in 1898 as a branch of the international organization, was incorporated in 1902 as the American Society, and that it still maintains a close relation to the parent organization. Membership may be held by individuals, firms, corporations, technical or scientific societies, companies, teaching faculties, and libraries. The work is done largely through its technical committees, which present reports and recommendations at the annual meeting. There are now 38 technical committees, with a total membership of 932.

Mr. Edgar Marburg, the secretary-treasurer, who is professor of civil engineering at the University of Pennsylvania, Philadelphia, Pa., announces that four of the bureaus of the United States Navy hold perpetual membership in this society, and that at the request of the Baldwin Locomotive Works that company has been granted the society's permission to publish many of its standards relating to specifications for iron and steel products in English, French, Spanish, Portuguese, and Russian, with a view to their serving as a basis in the purchase of locomotives throughout the world.

The United States Bureau of Standards is represented on many of the technical committees of the society, and is an active participant in its work. Mr. Marburg calls attention to the fact that similar work in the field of standardization of specifications is being done in England by the British Engineering Standards Committee, under the auspices of the leading technical societies, manufacturers, and consumers, and with liberal financial support on the part of the Government.

The annual report of the society's executive committee says of its usefulness: "The increasing use of the standard specifications of the society in Federal, State, and municipal circles, apart from their extensive adoption in ordinary commercial channels, is significant of the confidence placed in the work of the society, and emphasizes the reciprocal obligation upon the society to justify that confidence in connection with everything to which its name is attached. It may not be known to the membership at large, for example, that the purchases for the Panama Canal have been made largely under its standards, 27 of the standard specifications of the society being now used by the purchasing department of the canal; also that the United States postal cars are purchased subject to the A. S. T. M. standard specifications. Again, nine of the standard specifications have been adopted—in some cases with slight modifications—in connection with the boiler code recently prepared by a committee of the American Society of Mechanical Engineers, which is expected to be adopted in many States by legal enactment."

CONSTRUCTION WORK ABROAD.**AUSTRALIA.**

[Consul General J. I. Brittain, Sydney, Oct. 21.]

New Buildings at Sydney.

Building operations in the suburbs of Sydney during the first eight months of 1915 have not been so brisk as during the like period of 1914. There were erected 4,373 buildings, costing \$11,347,573, as against 6,798, costing \$17,370,553, during the similar period in 1914.

Construction Projects in State of Queensland.

The British Government trade correspondent at Brisbane reports that several projects are engaging the attention of the Government of Queensland, among which may be mentioned the erection of abattoirs, the extension of a number of railways, and the development of coal mines and oil wells. He adds that State ownership of hospitals is also contemplated, and that a commission has been established to deal with the long-outstanding question of the Mackay harbor improvements.

[Sydney Herald, Oct. 8.]

Electricity for Mountains.

A deputation representing the Blue Mountain Shire yesterday waited upon the officer in charge of local government, Mr. Garlick, with a request for an enabling bill to permit the shire to borrow \$125,000 to install electric lighting at Blackheath, Springwood, Mount Victoria, and Medlow. Mr. Garlick promised to bring the matter under the notice of the minister.

Joint Royal Commission for Border Railways.

An order in council appointing a joint royal commission, representing New South Wales and Victoria, to inquire into the question of border railway connection, has been agreed to by the State executive at Melbourne.

AUSTRIA-HUNGARY.

[Consul Benjamin F. Chase, Fiume, Oct. 13.]

Proposed Railway Construction Work in Croatia.

Il Popolo, a local newspaper of this date, announces new railway construction work in this consular district as follows, translated from the Italian:

The Direction of the State Railway has decided to construct a double track along the line of railway from Karlovac to Ostaric. Yesterday there was a survey. The technical experts report that owing to the bad condition of the ground each kilometer (five-eighths of a mile) will cost \$32,480. The distance is about 11 kilometers.

CANADA.

[Consul Samuel C. Reat, Calgary, Alberta, Nov. 1.]

Reduction Made in Year in City's Public Works.

Compared with previous years, Calgary's total public expenditure this year will be small—\$500,000, compared with \$1,326,562 in 1914 and \$2,025,941 in 1913. These figures show how the public works of Calgary have been cut down since the war began.

CHINA.

[Translated from *Novosti Zhisni* of Sept. 30 by Vice Consul William Morton, Harbin.]

Mr. Seadzi, an agent of the South Manchuria Railway, has arrived at Harbin and made arrangements for presenting to the municipal council a plan for constructing a complete tramway service for Harbin. It is said that practically all the equipment will be of Japanese manufacture.

[Previous references to plans for a tramway for Harbin appeared in *COMMERCE REPORTS* for Oct. 12, 1915.]

DUTCH WEST INDIES.

[Consul H. C. von Struve, Curaçao, W. I., Oct. 26.]

Oil Refinery in Curaçao.

The Bataafsche Petroleum Maatschappij, the company engaged in erecting an oil refinery here (see *COMMERCE REPORTS* No. 80, Apr. 6, 1915), has opened an office. The local address is: Bataafsche Petroleum Maatschappij, Pieter Jansen, manager, Curaçao, W. I.

NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Oct. 9.]

Draining Swamp Lands.

The Minister of Lands for New Zealand has been authorized to expend any sum up to \$364,987 for the drainage of the swamp lands about Auckland and in other parts of the Dominion. It might be well for manufacturers of dredging and ditching machinery to send printed matter, with prices, to the Minister of Lands, Wellington, New Zealand. As I understand it, much of the work can be done by machinery, and American dredging and ditching machinery are the best in the world, and well adapted to this work.

It might also be well to send printed matter, with prices, to a special list of firms in position to handle this class of machinery, for there are other drainage schemes under way.

[The consul general's list may be had from the Bureau of Foreign and Domestic Commerce; refer to file 68777.]

SPAIN.

[Consul Wilbur T. Gracey, Seville, Oct. 29.]

Extension of Telephone Lines in Seville.

Referring to the report from this office published in *COMMERCE REPORTS* for May 21, 1915, reporting the proposed extension of the telephone lines of Seville to near-by towns, permission has now been granted for the extension of the said lines to 22 towns. Some of the towns are said to be petitioning for immediate connections, while others are waiting until proper financial arrangements can be made.

It is said that the inauguration of the first line will be observed with ceremonies by the authorities and others who are invited, and a banquet will be served.

It is expected that the first line will be installed between Seville and Guillena, as this is one of the near-by towns that has a considerable daily commerce with Seville.

Further information regarding the lines, with the addresses of the companies interested, will be found in *COMMERCE REPORTS* for May 21.

FOREIGN TARIFFS.**MADAGASCAR.**

[Consul James G. Carter, Tamatave, Sept. 6, 1915.]

New Consumption-Tax Law.

A new schedule of consumption taxes in Madagascar, to continue in effect five years, was enacted July 7, 1915, and went into effect August 20, 1915. In general the rates are the same as under the old law and apply equally to foreign and local products, but certain alcoholic liquors are subject to increased taxes, as are also fireworks, and a new tax of 1 franc each has been levied on firearms. Corsets, parasols, umbrellas, and hats are also added to the list of articles subject to internal tax, an impost equal to the minimum rates of the French customs tariff being levied thereon. The duty on opium is decreased and its importation prohibited except for officinal purposes. The law also provides that the previous exemption of jute and hemp bags from consumption tax shall be limited to those intended for reexportation. [For the previous schedule of consumption taxes and modifications thereof, see Foreign Tariff Notes No. 2, p. 52, and No. 13, p. 200.]

PERU.

[L. B. Clark, secretary to commercial attaché, Lima, Oct. 7, 1915.]

Proposed New Duties.

A proposed law submitted by the President of Peru to the Chamber of Deputies and published in *La Prensa* of October 7, 1915, provides for an increase in the consular fees for certifying shipping documents from 1 to 2 per cent of the invoice value of the shipment and imposes an import duty of 10 per cent ad valorem on a number of industrial products now admitted free of duty. Provision is also made for a tax of 0.25 centavo per kilo (\$1.10 per short ton) on all merchandise imported through the ports of Callao and Mollendo destined for consumption in Peru. The latter impost, it is stated, is intended to defray certain customhouse handling charges previously borne by the Government.

The President of Peru gives as the reason for the levying of the new import duties the necessity of immediately obtaining additional revenue, and it is pointed out that coal, foodstuffs, and other articles of necessity have not been included in the list of dutiable products. The following is the list of articles, formerly free, which are to be dutiable at 10 per cent ad valorem: Iron bars, zinc bars, tin in bars and sheets, sheet iron, pig iron, lead bars, fencing wire, round wire, round axles, iron bands, rivets, brass oil cans, quicksilver, copper bars, asbestos, empty bottles, asbestos cement, Roman and Portland cement, fire brick and tiles, retorts, earth for clarifying wines, earth mold, refractory earthenware, bark for tanning, split bamboo, knees for boats, unfinished staves, rough logs, ordinary lumber (poplar, ash, and oak), fine unworked lumber, ship paint, tar and pitch, tools and implements for all industries, stills of copper or of other metals, pumps for use in mining and boiler pumps, boilers, motor trucks, railway and tramway freight and passenger cars, railway hand cars, boats, jack screws, injectors, engines, machinery for use in agriculture, mining, and other industries, cranes, spare parts for sewing machines, sulphide of arsenic, dry fodder, copper sulphate, disinfectants, hops, and quinine.

Upon the enactment of the law, equivalent specific duties are to be substituted for the rate of 10 per cent ad valorem, as the duties pre-

scribed for most other products by the Peruvian customs tariff are specific. The law is to go into effect immediately upon enactment, the income received from the new duties prior to December 31, 1915, to be applied to disbursements under the budget law for 1915.

RUSSIA.

[Vestnik Finansov, Sept. 27 (Oct. 10), 1915.]

Prohibition on Products of Enemy Countries

An order of the Ministry of Commerce and Industry, under date of September 22 (Oct. 5), 1915, prohibits the importation into Russia of the products of the soil and industry of the countries at present at war with Russia, with the exception of the articles included under the following items of the Russian tariff: 51(5), 90, 92, 93, 96-116, 117(2), 124-135, 137, 139-147, 148(1), 155, 161, 167, 169, and 178. The articles covered by the above tariff items, which are to be admitted subject to the discriminating rates provided for enemy products are animal oils, chemicals, tanning and dyeing materials, various metals and metal manufactures, tools, machinery and apparatus, and printed matter of various kinds. In promulgating the above order, the Department of Customs states that the prohibition affects only such products as may be recognized by the customs authorities as originating in enemy countries. In the case of articles imported from allied or neutral countries without the requisite certificates of origin, or with certificates which may not be considered satisfactory by the customs authorities, such products are to be admitted, in the absence of proof of enemy origin, at the rates prescribed for products of German, Austro-Hungarian, or Turkish origin, which include a discriminating surtax of 100 per cent for dutiable goods and specific rates for free goods. [See Foreign Tariff Notes No. 16, pp. 90-91.]

Imports Without Certificates of Origin.

The Vestnik Finansov for October 4(17), 1915, contains a complete list of products which may be imported into Russia without certificates of origin. The list, which is too extensive for publication, is substantially the same as that summarized in COMMERCE REPORTS for October 28, 1915. Information with regard to specific articles will be furnished upon application.

[Vestnik Finansov, Oct. 4 (17), 1915.]

Increased Excise on Matches.

An imperial decree of September 14(27), 1915, provides for considerable increases in the excise taxes on domestic and imported matches, to remain in effect until January 14, 1918. The same decree also fixes maximum prices for safety matches. Information in regard to the new rates and maximum prices will be furnished upon application.

URUGUAY.

[Diario Oficial, Sept. 28, 1915.]

Reduction on Denatured Cottonseed Oil.

Denatured cottonseed oil has been added to the list of raw products for industrial use subject to an import duty of 5 per cent ad valorem in Uruguay, according to a resolution of September 27, 1915. [A surtax of 4 per cent ad valorem is to be added to the above rate. The duty on cottonseed oil (edible and other) was previously 0.15 peso per kilo (\$7.49 per 100 pounds, including surtaxes).]

RIO GRANDE DO SUL STOCK RAISERS STRENGTHEN UNION.

[Vice Consul Robert L. Keiser, São Paulo, Brazil, Sept. 21.]

The union of stockraisers in Rio Grande do Sul was organized in 1913. Among the objects of the association are: The promotion and solicitation from the Government of revision of the laws in favor of rural development; increase and betterment of transportation facilities; reduction of freights; the establishing of agencies to facilitate direct importation and wholesale purchases by the members of anything of use in perfecting the cattle industry, such as blooded stock for breeding purposes, wire and fencing, salt, wood, windmills, agricultural and dairy machinery, motors, engines, pumps, materials for construction of water reservoirs, seeds, insect destroyers, veterinary instruments, and general farm implements and tools; and the publishing of a technical magazine for free distribution among the members.

The growth of the association has been very rapid. More than 1,600 members are enrolled. Head offices are maintained in the city of Porto Alegre, with a staff of competent assistants, including a veterinary surgeon. The association has taken a very active part in various agricultural and industrial movements in the State, especially the contemplated construction of a beef-packing establishment in the city of Rio Grande.

"A Estancia" is a well-prepared monthly magazine published by the Union, and contains technical studies, as well as general information regarding the cattle industry of the State. It is desired to exchange this magazine with similar publications in the United States. Catalogues of the various articles imported by the Union are also desired. The address to be used is: União dos Criadores, Porto Alegre, Rio Grande do Sul, Brazil.

SISAL-GROWING ENTERPRISE IN VENEZUELA.

[Consul Homer Brett, La Guaira, Oct. 23.]

The National Government of Venezuela has entered into a contract with the Compania Anonima de Fibras y Cordeles de Caracas for the encouragement of cultivation of fiber-producing plants in the country. The company is obligated to plant, itself or through another company or person, not less than 200,000 stalks of sisal (*Agave sisalana*) or other similar plant, not more than 2,000 per hectare (2.47 acres), and to supply up to 25,000 bundles of sisal annually for six years, to be distributed among farmers who desire to attempt planting the crop, each lot of plants to be accompanied by a book of instructions upon cultivation of textile plants.

The Government grants the company free introduction, for six years, of 250 metric tons (metric ton=2,204 pounds) annually of the fiber needed for its factory. The company is to begin planting in 1916 and to complete the contract requirement before the end of 1917. It is estimated that the plantations will be in full bearing in six years.

Consul General A. Gaulin, of Marseille, France, suggests—as have many others—that American firms receiving assistance from a consul should notify such officer whenever his advice has been of practical use.

WELSH INTEREST IN BALATA AND TEXTILE BELTING.

[Consul William L. Jenkins, detailed as vice consul, Swansea, Oct. 7.]

No machinery belting is manufactured in the Swansea consular district. Before the outbreak of war, textile belting had made strong inroads on the leather trade, and the increased price of leather, estimated at 60 per cent higher than 15 months ago, has added impetus to this already strongly developed tendency. Figures showing the imports and exports of this class of goods for the United Kingdom for the past five years are given. There are no official statistics for the Swansea district. Using the hundredweight of 112 pounds as the unit, the quantities and values for the United Kingdom were:

Year.	Leather.		Woven hair or cotton.		Other sorts.	
	Hundred-weight.	Value.	Hundred-weight.	Value.	Hundred-weight.	Value.
IMPORTS.						
1910	3 099	\$186,372	6,595	\$301,421	4,008	\$179,508
1911	4 171	267,682	6,259	313 150	5,559	264,425
1912	4,395	285,172	6,542	312,439	5,737	277,236
1913	5,192	325,467	3,901	188,183	6,703	306,750
1914	4,219	279,172	2,332	105,068	3,992	179,837
EXPORTS.						
1910	39,448	2,503,433	39,763	1,641,796	22,094	1,896,436
1911	40,140	2,585,532	40,014	1,737,409	31,048	1,914,238
1912	45,031	2,764,362	51,125	2,133,279	23,372	1,902,743
1913	48,903	3,323,935	60,346	2,638,548	26,108	1,915,357
1914	35,964	2,788,308	47,870	2,182,202	19,800	1,342,619

The Netherlands, Germany, and the United States supplied about equal amounts of leather belting in 1912, 1913, and 1914; Germany supplied 98 per cent of the woven hair or cotton belting in 1912, 97 per cent in 1913, and 75 per cent in 1914. Of the other kinds not specified, from 40 to 50 per cent came from Germany; Norway ranked second, and the United States third in exports to the United Kingdom.

Principal Importing Countries for Various Classes.

Of the exports of leather belting, the principal importing countries in order of importance were India, Russia, Brazil, and Argentina; of woven hair or cotton belting, India, the United States, and Russia; of the "other sorts," the Transvaal, Canada, and France.

The popular widths of belting sold in Swansea are from 2 to 8 inches, particularly the 3, 4, 5, and 6-inch sizes. Conveyor belts are sold up to 24 and 36 inches in width. Local dealers seem satisfied with the British goods they have in stock, and evince little interest in handling American lines. Only one firm is willing to receive American quotations, which should be in English currency, c. i. f. Swansea.

[An article on textile beltings, in which the properties of balata that fitted it for this use were described, was published in *COMMERCE REPORTS* for June 19, 1915. The name of the firm in Swansea willing to receive American quotations for balata and textile belting may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67955.]

Veneers, especially 3-ply, are in considerable demand in Australia.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Hardware, hosiery, suspenders, etc., No. 19303.—An American consular officer in Brazil reports that a firm in his district desires to communicate with manufacturers of builders' hardware; hosiery, cotton and fine linen; suspenders; garters; dress fasteners, buttons of all kinds; aluminium combs, and other varieties; hooks and eyes, etc.

Shoes, No. 19304.—A report from an American consular officer in Italy states that a dealer would like to establish commercial relations with firms exporting shoes for women and children. Quotations should be mailed to the American consulate.

Bottles, No. 19305.—An American consular officer in the Far East reports that a wholesale and retail dealer in gaseous drinks, wines, and liquors desires to receive prices and terms from manufacturers of bottles of 1 liter, 92 and 65 centiliters.

Woodworking machinery, No. 19306.—A lumber merchant in France informs an American consular officer that he desires to obtain catalogues and prices of woodworking machinery. The inquirer intends to equip a new woodworking establishment. Quotations are desired c. i. f. port of destination, if possible, or f. o. b. New York with freight estimates. Correspondence may be in English, and weights and measurements should be stated in metric units. Drawings of the types of machines wanted may be examined at the Bureau or its branch offices. (Refer to File No. 68608.)

Small oil or petrol engines, No. 19307.—The Bureau is in receipt of a letter stating that a firm in the United Kingdom desires names of manufacturers making small oil or petrol engines suitable for light barn and dairy machinery. Catalogues and price lists quoting best terms for an exclusive agency are requested.

Waterproofing and dyeing of cloth, No. 19308.—A letter to the Bureau states that a company in England desires to obtain the names and addresses of firms dyeing and waterproofing cloths.

Clocks, combs, etc., No. 19309.—An American consular officer in South Africa reports that a wholesale merchant desires to receive catalogues on cash boxes, clocks, watches, combs, brushes, fountain pens, and soap of various kinds, etc. The cheaper grades of these articles are wanted. Correspondence may be in English.

Drugs, pins, watches, etc., No. 19310.—A letter to the Bureau from a man in Russia states that he desires to represent American firms exporting drugs, pins, watches, paper, needles, combs, and shoes for women and children.

Fancy articles for advertising, No. 19311.—The Bureau is in receipt of a letter from a firm in Switzerland stating that it desires novelties in paper goods for advertising, especially articles of interest to hotels, restaurants, and buffets.

Wall paper and decorative materials, No. 19312.—A report from an American consular officer in France states that a manufacturers' agent is desirous of establishing commercial relations with manufacturers of wall paper and high-class decorative materials.

Gold sheets for gilding silks, No. 19313.—An American consular officer in France reports that a firm engaged in the gilding business desires to be placed in communication with manufacturers of gold sheets to be used in the textile industry for gilding silks. It is stated that cash will be paid for all purchases. Correspondence in French is desired.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

SWISS PURCHASING TRUST OPERATING.

[Cablegram from American Minister P. A. Stovall, Berne; supplementing statements in COMMERCE REPORTS for Nov. 2 and 9, 1915.]

The Swiss Importation Trust (Société Suisse de Surveillance) began operations on November 18.

AMERICAN FIRM GETS LARGE CONTRACT IN URUGUAY.

[Cablegram from American Legation, Montevideo, Nov. 16.]

For sewerage and waterworks construction in Salto, Paysandu, and Mercedes, Uruguay, local representatives of an American contracting company have signed, ad referendum, a contract with the Government involving nearly 5,000,000 pesos (\$5,170,000).

[An announcement that an American bid would probably be submitted on the work at Salto was published in COMMERCE REPORTS for Nov. 8, 1915.]

SHIPPING FACILITIES TO NEW ZEALAND IMPROVE.

[Consul General Alfred A. Winslow, Auckland, Oct. 12.]

Shipping facilities between the east coast of the United States and New Zealand have materially improved within the past three months, and it seems clear that from now on the trade between the United States and Australasian ports will be handled very satisfactorily, if one is to judge from the following from the New Zealand Herald, a leading daily of this city:

A large number of vessels, which were interned at various ports, have been released by the Imperial authorities, and are now doing useful duty as British merchantmen. The A and A line (American and Australian Line), have secured six of these vessels, and the following steamers will shortly load at New York for New Zealand ports, coming via the Panama Canal: *Paratiah* (ex *Berlin*), *Conargo* (ex *Altona*), *Toromeo* (ex *Tibercious*), *Talauca* (ex *Wolan*), *Araluen* (ex *Scharzfels*), and *Dongarra* (ex *Stolzfelds*).

These steamers should be able to handle the rapidly increasing business between these countries, which makes that much easier for American manufacturers and exporters to come after this trade in earnest.

CANADIAN CITY PLACES LOAN IN UNITED STATES.

[Consul Samuel C. Beat, Calgary, Alberta, Nov. 12.]

The city of Calgary has borrowed \$2,000,000 in New York, pledging therefor the arrears of taxes due the city on November 21, 1915, and amounting to \$2,800,000. Three-year 6-per-cent Treasury notes will be issued by the city, the price obtained being 97.

Under the terms of the loan all arrears of taxes collected after November 21, 1915, are to be remitted to the firm in New York City monthly and placed in trust account for the redemption of the Treasury notes, this fund to bear interest at 4 per cent.

The notes mature as follows: \$600,000 December 1, 1915; \$700,000 December 1, 1916; \$700,000 December 1, 1917. The city reserves the right of calling in all or any part of the second and third maturity on December 1, 1916, or any interest-paying date thereafter, by giving 60 days' notice; principal and half-yearly interest payable in gold, at the holder's option, in Montreal, Toronto, Calgary, or New York.

The offer was made by the New York firm on the understanding that it is to be given the privilege of securing on the most favorable terms possible the £281,000, to be transferred to London, England, to pay a like amount of Treasury notes maturing in London December 30, 1915, and any profit on account of the favorable rate of exchange is to go to them.

The loan will net the city of Calgary \$1,940,000 and is payable to the city as follows: \$1,400,000 on or before December 30, 1915, \$300,000 in 30 days therefrom, and the balance in 60 days therefrom.

WORK OF EXTENDING LATIN-AMERICAN TRADE DESCRIBED.

A review of what has been and is being done by the Department of Commerce to push the trade of the United States with Central and South America is presented in a letter from Secretary William C. Redfield to Senator Francis S. White, of Alabama. This statement, giving details of the work of commercial attachés and special agents of the Bureau of Foreign and Domestic Commerce, and of the assistance received from consular representatives, is in reply to a letter from the Senator, making inquiry as to what has been done to press the sales of the products of Southern manufacturers in Latin-American countries.

RECEIPTS OF FISH AT NEW ENGLAND PORTS.

According to the Bureau of Fisheries, the fishing fleet landing fish at Boston and Gloucester, Mass., and Portland, Me., in October, 1915, included 303 steam and sail vessels. These vessels landed during the month 477 trips at Boston, aggregating 11,501,750 pounds of fish, valued at \$321,658; at Gloucester, 224 trips, aggregating 5,917,881 pounds, valued at \$214,451; and at Portland, 119 trips, amounting to 807,169 pounds, valued at \$22,626. The total for the three ports during the month was 820 trips, aggregating 18,226,800 pounds of fresh and salted fish, having a value to the fishermen of \$558,735.

BUREAU OF MINES PRODUCES RADIUM AT REDUCED COST.

Secretary of the Interior Lane, through the United States Bureau of Mines, has made public the methods whereby the bureau has been able to produce radium for less than one-third its present selling price. The cost of radium at the Denver experiment station of the bureau, including the higher cost of first experimental work, was \$37,000 for each gram of radium metal. The market price of radium for the last two or three years, according to the Bureau of Mines, has been from \$120,000 to \$160,000 per gram.

"The result of the ability of the Bureau of Mines to produce radium for \$37,000 a gram," said Secretary Lane, "has at least made it possible for two great hospitals in the country to obtain a goodly supply of radium for use in the treatment of cancer, that dreadful disease that is costing the lives of 75,000 human beings every year in the United States." Up to the present time 5 grams of radium have been extracted from the carnotite ores, and about half of it has been delivered in finished form to the Kelly Sanitarium in Baltimore and to the Memorial Hospital in New York.

"The Bureau of Mines produced this radium in cooperation with what is known as the National Radium Institute, which was organized for the purpose of studying the curative properties of radium and not for private gain. These investigations have from the first been under the direction of Dr. C. L. Parsons, of the Bureau of Mines, the funds being furnished under cooperative agreement between the National Radium Institute and the Bureau of Mines, by Dr. Howard A. Kelly, of Baltimore, and Dr. James Douglas, of New York.

"The application of radium in the treatment of cancer and other malignant growths has made much more rapid progress in the last two years than is generally appreciated, even by the medical profession. All kinds of opinions may be easily had from the laity and from cancer experts; and the public can draw almost any conclusion from the statements appearing in the newspapers, but preference should be given to the opinions of those persons who have had extended experience in the use of radium in sufficient quantities to enable them to speak authoritatively.

Sufficient Quantity of Radium Must be Used.

"One thing regarding radium therapy that has been developed is that if the gamma rays of radium are to be successfully applied to the cure of cancer, a much larger quantity of radium must be used than is possessed by not more than two or three individual surgeons or hospitals in the United States. I know of no individual or hospital that has had the privilege of working with so much as half a gram of radium that does not report cures in increasing number or that is not able to treat even advanced cases with increasing success as a knowledge of technique is developed. The extent and variety of cures reported and the helpful effects of the gamma rays at depth are almost in direct proportion to the quantity of radium that can be applied at one time to the patient.

"I do not mean that radium in comparatively small amounts may not be effective, but in two American hospitals that have a half a

gram of radium or more, results are being obtained daily that unquestionably will not be duplicated elsewhere until equal quantities are available. Physicians and surgeons who do not have this much radium have no right to criticize or condemn the physicians who have more and who are obtaining results.

"At the time the Bureau began its radium investigations the miners and prospectors in Colorado and Utah who were engaged in the mining of carnotite ore were receiving between \$75 and \$80 a ton for their ore, this price being for the ore delivered in New York for shipment to Europe. The ore was being sent abroad in quantity and was not being treated in this country, although one or two companies were rapidly purchasing from prospectors claims at \$50 to \$200 and thereby laying the foundation of a future possible monopoly in this rare material. It was hoped that methods could be found that would enable miners and associations of miners to extract the radium from their own ores, place it on the market, and obtain profits that had been going to foreign manufacturers.

Price of Ore Doubled in Two Years.

"By August, 1914, when the European war came on, carnotite ore was selling for more than twice the price that had been obtained in the summer of 1912, this being undoubtedly due to the Bureau of Mines calling attention to the situation as it existed at the beginning.

"At this time there were 16 to 20 grams of radium contracted for abroad, chiefly in Germany, at prices above \$120,000 a gram. Seemingly the war has not affected the market price, but simply the amount produced.

"As to the selling price of radium in the future the Bureau of Mines makes no prediction, but it does not follow that the selling price will decline because of the cheaper methods of production. The situation is somewhat analogous to the production of gold, diamonds, or any other material that is in steady demand but occurs only in small quantities. Beyond doubt the amount of radium in nature is exceedingly small. Other deposits of radium ore may be found, but it is highly improbable that the past rarity of radium ores will be greatly modified, so that the price of the radium will largely depend on the ability to procure the raw material.

"According to the best evidence that the Bureau of Mines can obtain there is not sufficient ore available to maintain for many more years the rate of production in 1914.

"When this radium work was taken up it was the desire of the department to show beyond doubt that, if authorized by Congress, the radium could be procured from ores then owned by the people at a cost approximating one-third the market price and that it was much better policy for the Government to obtain the radium so greatly needed in the hospitals of the Army, Navy, and Public Health Service at this low cost than to give these ores to large corporations and then purchase as radium material that had belonged to the people at a price insuring large profits to the possessors.

Carnotite Areas Prospected and Most Valuable Claims Located.

"Unfortunately, the bill introduced into Congress in 1914 which would have accomplished this purpose failed to pass and in the meantime the carnotite areas have been thoroughly prospected and the

most valuable claims located. Accordingly, we must be content with the good that may come to the American people through the radium being extracted in the plant of the National Radium Institute until such time as the Government may furnish funds sufficient to enable it to purchase in the open market such ore as may be necessary to supplement the little that remains unlocated on Government land.

"The report of the bureau on this new and cheaper method of producing radium from carnotite ores is highly technical in its character and will only interest those chemists who are engaged on such work. The methods devised are entirely new and differ from former methods not only in detail but in apparatus used. The time of operation is much shorter than in any other plant now producing radium and the commercial recovery is much greater. Furthermore, it is believed that the cost of production is less than that in any method used heretofore. It should be remembered, however, that the methods apply solely to the treatment of carnotite ore and are not necessarily applicable to pitchblende or autunite.

"The methods of extracting the radium that have been evolved may be utilized, under intelligent technical control, by any firm, association, or corporation that can obtain the raw material. Although being patented for the benefit of the people, the processes may be used freely by anyone within the United States."

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D.C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Tosario, Argentina.....	do.	203 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D.C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lowes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 3	(*)

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

OIL PRODUCTION IN SARAWAK.

[Vice Consul John Nimmo Wardrop, Sandakan, British North Borneo, Sept. 18.]

The Sarawak Gazette of August 2, 1915, makes the following quotation from the Financial Times:

The Sarawak concessions worked by the Anglo-Saxon Co. yielded 65,185 tons, against 26,043 tons in 1913. The oil is still being refined in Sumatra pending a larger production, which would make construction of a local refinery profitable.

The 65,185 tons apparently represent the yield of the Sarawak workings for the calendar year 1914.

DRUG MATERIALS FROM WEST CHINA.

[Consul E. Carleton Baker, Chungking.]

The Province of Szechwan is well known for its medicines and medicinal materials, as large quantities are used in other parts of China and there are considerable shipments abroad. Recently a long list of the important local medicinal materials was shown to an American drug expert, who designated a number that could be used to advantage by pharmacists, etc., in the United States. A list of the articles so designated was submitted to the local Chamber of Commerce with the request that samples of each be collected for the consulate and that some data be furnished concerning the amount available each season and the prevailing prices. This request was complied with courteously and promptly. Following is the list of samples furnished, with a brief description of each; the prices are for the early summer, 1915:

Aconitum wilsoni, *A. fischeri*, and *A. hemslayan*.—Of these aconite materials, *A. wilsoni*, known to the Chinese as "chuan wu," can be obtained for \$0.85 United States currency per 100 pounds. About 55,000 pounds a year can be supplied by this part of China. *A. fischeri*, known in Chinese as "fu tzu," brings \$3.28 per 100 pounds; supply available, 400,000 pounds a year. About 27,000 pounds of *A. hemslayan* are available each year and it sells for \$3.14 per 100 pounds. Among the Chinese it is known as "ts'ao wu."

Artemisia sp.—This wormwood sells at \$1.88 per 100 pounds and about 15,000 pounds a year are available. It is known locally as "yin chen."

Asarum himalaicum.—The sample of "hung yen" submitted is considered poisonous. It sells for \$9.39 per 100 pounds and 200,000 pounds are available annually.

Cannabis sativa.—This oil-bearing seed may be purchased locally for \$1.78 per 100 pounds, about 15,000 pounds a year being available. Among the Chinese it is known as "huo ma yen."

Cinnamomum cassia.—This well-known material can be purchased for \$1.13 per 100 pounds in west China. About 250,000 pounds are available annually; known to the Chinese as "kuan kuei."

Coptis chinensis.—This is a bitter herb of the crowfoot family. Two varieties are sold locally. One, known as "ya huang lien," is sold for \$47 per 100 pounds, 13,000 pounds a year being the output. The other variety, known as "wei huang lien," is much cheaper, selling for \$3.76 per 100 pounds. Thirteen thousand pounds are available each year.

Croton tiglium.—These familiar oil-bearing seeds are sold in west China for \$2.63 per 100 pounds, and about 250,000 pounds are available each season. They are known to the Chinese as "pa tou."

Foeniculum vulgare.—Fennel seed sells for \$3.05 per 100 pounds and 150,000 pounds are available. It is known to the Chinese as "hsiao hui."

Glycyrrhiza asperima.—Licorice root is sold at \$11.28 per 100 pounds, and 700,000 pounds are produced annually. It is known locally as "kan tsao."

Rheum officinale.—This rhubarb root is sold locally at \$10.33 per 100 pounds, and 250,000 pounds are available annually. It is called by the Chinese "ta huang."

Scutellaria sp.—These seeds are known to the Chinese as "chuan lien tzu" or "huang chin tzu," but further details were not obtained.

Zanthoxylum bungei.—These seeds are available at \$11.80 per 100 pounds. About 150,000 pounds are produced annually. The seeds are called "hua chiao" by the Chinese.

Zingiber officinale.—This ginger sells for \$1.88 per 100 pounds and the supply amounts to 1,000,000 pounds a year. It is known locally as "kan chiang."

Huang pei and *pi hsieh*.—These are barks included with the samples without further identification. *Huang pei* sells at \$1.41 per 100 pounds, 250,000 pounds a year being available. About 200,000 pounds of *pi hsieh* are produced annually; no price given.

[The 18 samples of medicinal materials supplied by Consul Baker may be examined at the Bureau of Foreign and Domestic Commerce

or its branch offices. The names of two exporting firms at Chungking may be obtained from the Bureau or its branches. Refer to file No. 63302.]

PUGET SOUND'S IMPROVED SHIPPING FACILITIES.

[Commercial Agent W. B. Henderson, Seattle, Wash.]

The steamers *Keishin Maru* and *Tosan Maru* have been added to the service of the Osaka Shosen Kaisha between Puget Sound and China and Japan. In addition, the *Unkai Maru No. 2*, which is under charter to the shipping firm of Frank Waterhouse & Co., reached Seattle recently with a 2,000-ton cargo of oriental freight. After discharging, the vessel had a full cargo booked for the Orient.

The vessel *Golden Shore*, from Littleton, New Zealand, by way of Newcastle, New South Wales, came to Puget Sound, under charter to Hind Rolph Co., to load lumber from Seattle and Everett and return to New Zealand.

Five new ships—four of them heavy freighters and one a passenger ship—have recently been added to the Seattle-Alaska trade. The *Kansas City* was purchased in San Francisco and has arrived in Seattle. She will be remodeled into a passenger ship and rechristened *Alaska*. The Alaska Transportation Co. has two other new ships—the *Burlington* and *Bennington*, recently purchased Great Lakes freighters. These will be overhauled and renamed the *Juneau* and *Valdez*, respectively. The Admiral Line adds the *Rutland* and *Ogdensburg*. These also will have new names—*Clark* and *Sebree*. They are large freighters.

There have been, for some weeks past, several factors working toward the establishment of better shipping facilities between this section and the west coast of South America, and it is not improbable that the first of the coming year will see a marked improvement in this direction.

MILAN CONSUL AND COMMERCE CHAMBER COOPERATE.

[Consul John H. Grout, Milan, Italy, Sept. 30.]

The Milan consulate is in frequent receipt of large numbers of letters from American business houses, requesting such information as will assist in increasing trade with this consular district. The American Chamber of Commerce in Milan, also, is dealing daily with a large volume of inquiries. It is suggested that those addressing this office inclose carbon copies of their letters, to be handed over to the American Chamber of Commerce in Milan, and thus two interested organizations will give the matter attention.

Where a carbon copy is inclosed, it will not be necessary to state that it is intended for the Chamber, as that will be understood. Letters addressed to the American Chamber of Commerce in Milan need not be accompanied by carbon copies. Many lines of business are represented in the membership of the organization, and this facilitates obtaining information, and often establishing good business connections. Letters from American purchasers should preferably be addressed to the Chamber of Commerce.

BRADFORD JUVENILE EMPLOYMENT BUREAU.

[Vice Consul Hamilton C. Claiborne, Bradford, England, Oct. 18.]

Among the many noteworthy Bradford municipal enterprises for children's welfare is the Juvenile Employment Bureau. By an admirable system of cooperation between teacher, medical officer, and employer the mental and physical capabilities, as well as the predispositions of the boys and girls, are considered in connection with the opportunities offered in office or mill.

Three months before each child leaves school a card is sent to the education office, giving a record of health and school career and offering suggestions as to the kind of employment most suitable for the case under consideration. A member of the district committee then calls upon the child's parents and in many instances suggests a course at the city's night schools, or makes an appointment with parents and child to call at the bureau, where full information regarding employment may be had. Especially worthy of note is the manner in which employers have responded to the opportunities of the bureau; in fact, during the past year inquiries from employers were more numerous than from children.

The scope of this work is by no means limited to children leaving school, and perhaps one of the most important phases of juvenile employment in Bradford is the reconsideration of the cases of those who are dissatisfied and unsuccessful in their positions. The children's clinic and the open-air schools are coordinated with the employment bureau and, by early diagnosis of defects and diseases, have obtained excellent results in the prevention and cure of disabilities and embryonic maladies. Numerous cases have been recommended to the juvenile board for open-air employment, and others are designated to report at intervals to the medical officer in charge.

[A copy of the report of the juvenile bureau for the year ended July 31, 1915, may be examined at the Bureau of Foreign and Domestic Commerce or its branch offices. Ask for file No. 68240.]

CANARY ISLANDS HAVE NO SPONGE FISHERIES.

[Consul George K. Stiles, Tenerife, July 6.]

An Ohio firm makes inquiry as to the supply of sponges in Canary Island waters. Despite the fact that the Canary Archipelago lies in a latitude favorable to the growth of sponges of all kinds, there are no commercial sponge fisheries here nor have any sponge growths been found in the waters around the islands.

This is said to be due to the fact that the Canary group, being composed of a cluster of deeply submerged volcanic peaks, now considered extinct, is surrounded by extremely deep waters. The shores of the islands descend so abruptly into the ocean bed that thousands of feet of water can be encountered only a few hundred feet from the tide levels of the islands.

According to the authorities of the Scientific and Nautical School maintained in Tenerife by the Spanish Government, this tremendous depth of the ocean bed surrounding the Canaries explains the absence of any sponge growths near them.

TSINGTAU'S TRADE IN RAW COTTON AND COTTON YARN.

[Consul Willis R. Peck, Tsingtau, China, Sept. 30.]

The Japanese newspaper in Tsingtau has published articles on the export of raw cotton from the Province of Shantung and the trade in cotton yarn. It states that a considerable amount of raw cotton finds its way to Japan, about 2,000 bales going to Osaka by each steamer. Most of this cotton is shipped by Chinese merchants, and with the new crop, soon to be marketed, it is expected that the cotton market in Tsingtau will be brisk.

"The annual import of cotton yarn into Tsingtau from Japan," says this newspaper, "in the period before the war is reported to have reached a value of 10,000,000 yen (about \$5,000,000), and it has remained the largest import ever since the outbreak of hostilities. The high price of raw cotton in international markets recently has encouraged good prices for cotton yarn, and the variety bearing the 'Fan' trade-mark is quoted at the remarkable price of \$57.87. The large Japanese dealers say that the improved exchange and brisk demand from the Chinese is creating the best business in five years."

In discussing the raw cotton situation, the newspaper says that the strong prices ruling for cotton in Japan have affected the price in Tsingtau, China. The usual price of \$0.069 per pound has gone up to \$0.078 per pound. It is, however, quoted in Osaka, Japan, at \$0.088 per pound, and the price in Tsinan, Shantung, at present exchange being equivalent to \$0.078 per pound, even if freight and other charges are added and deduction made for loss of weight in transit, it still can be sold at \$0.086 per pound without losing money.

MODERN CREAMERY FOR CORNWALL.

[Consul G. B. Taggart, Cornwall, Ontario, Canada, Oct. 26.]

The new model dairy and butter factory that is building in Cornwall will soon be completed. The equipment and its installation will cost about \$3,500 and will consist of the most modern machinery, including the usual clarifier, pasteurizer and cooler, bottler, sterilizer, washer, tanks, pipes, pump, cans, and bottles. There will also be a 600-pound churn and butter worker, and a refrigerator 7 by 10 by 11 feet. Power will be furnished by an electric motor. All this equipment came from American branch houses.

This dairy enterprise plans to buy and sell milk and cream and manufacture butter. The milk will be handled in as sanitary a manner as possible. Delivery will be made before breakfast—a convenience which Cornwall has not heretofore had. The supply of milk and cream will be purchased from the farmers in this dairying district. Most of the milk has heretofore been taken to the cheese factories, and the farmers will doubtless profit by this new demand for their milk. The milk will be bought by weight, and the price will be regulated by the cheese prices.

The butter will be made from pasteurized cream. Up to this time Cornwall has bought its butter from creameries in the Province of Quebec, and in Ontario Province from creameries as far distant as Belleville.

GERMAN METHOD OF UTILIZING WASTE BONE BLACK.

[Consul General Julius G. Lay, Berlin, Oct. 4.]

Only recently has the waste bone black, discarded by refiners of sugar, petroleum, and glucose, and by other decolorizing institutions, been a subject of serious study in Germany by these factories.

The method of refining, at first, largely determined what disposition they would make of their waste material. For instance, in large sugar refineries filtration processes are essential. If the waste bone black is used as an absorbent during the filtration it can not be sold for other industrial purposes without being revived and again purified. During the last few years filter presses have been so improved that they are now largely used instead of bone black. Various German patents treat of processes to purify bone black after it has been used as an absorbent. One of the most prominent of these patents covers a process to purify bone black, using a gaseous sulphurous acid instead of diluted hydrochloric acid.

Relative Values of Unpurified, Semipurified, and Pure Product.

Several industrial chemical firms at Berlin, Hamburg, and other large German cities buy up, collect, and purify waste bone black. Chemical firms and refineries offer bone black for sale in an unpurified, semipurified, and absolutely pure condition, either moist or entirely dry. Bone black unpurified can be purchased by the German carload (22,046.2 pounds) at prices ranging from \$1.90 to \$9.52 per 100 kilos (220.46 pounds), according to quality. The semipurified product in a moist condition sells at \$17.85 per 100 kilos, while the same product purified brings \$33.32 per 100 kilos. Bone black moist, chemically purified with acid, sells at \$69.02 per 100 kilos; the same product dry at the much higher price of \$130.90 per 100 kilos.

Germany's foreign trade in bone black, bone ash, and animal charcoal for 1912 and 1913 and for the first six months of 1914, compared with the corresponding period of 1913, amounted to: Imports in 1913, \$174,216; in 1912, \$144,942; exports in 1913, \$282,268; in 1912, \$235,144; imports first six months of 1914, \$64,498; corresponding period in 1913, \$70,686; exports for half year in 1914, \$150,654; in 1913, \$141,848.

[Lists of German manufacturers of bone black, manufacturers of animal charcoal, sugar refiners, and oil refiners may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67934.]

LUBRICATING OILS IN BERMUDA.

[Consul Carl R. Loop, Hamilton, Nov. 5.]

About 100 barrels of lubricating oils are consumed annually in Bermuda, consisting approximately of 20 barrels low-grade motor-boat oils, 50 barrels marine oils, 20 barrels kerosene-oil lubricants, and 10 barrels heavy cylinder oils. The principal uses are for motor boats, steamships, and machinery. As far as can be ascertained, all lubricating oils used in Bermuda come from the United States, and the prices paid therefor per gallon f. o. b. New York are as follows: Kerosene oil, \$0.40; low-grade motor-boat oil, \$0.25; marine oils, \$0.30; heavy cylinder oils, \$0.60.

[A list of Bermuda dealers in lubricating oils forwarded by the consul may be had from the Bureau of Foreign and Domestic Commerce; refer to file 68600.]

ATTACHÉ POINTS WAY TO BETTER AMERICAN PACKING.

[Commercial Attaché Julian H. Arnold, American Legation, Peking, China, Sept. 29.]

Considerable evidence of bad packing on the part of American shippers has been seen here. Bales of American cotton sheetings have arrived in Shanghai in very bad condition, owing to inferior packing, while alongside these poorly packed American bales were beautifully wrapped British bales. Machinery has arrived in Shanghai with parts broken on account of careless packing. I have myself received furniture from American manufacturers in a most dilapidated condition on account of the packing. All our consuls in China have probably had specific instances brought to their attention.

There is one phase of American packing for foreign shipment which does not seem to have been included in criticisms directed against American shippers. Perhaps, instead of using the expression "bad packing," it would be better to say "unintelligent packing," for there have been numerous instances in which goods were packed too well, involving unnecessary expense. For instance, recently in Shanghai, American hardware-trade possibilities were investigated, and several dealers said that much American hardware came to China packed too well, materially increasing the cost of the goods in this market. Some articles which would carry easily without any chance of breakage were packed like glassware. Packing boxes were placed within packing boxes, adding to the freight charges.

In several instances American manufacturers and exporters have taken the liberty of adding charges for crates and packing without much consideration for the proportionate cost which these items bear to the articles shipped. One big American mail-order house, which has a very extensive trade throughout the Orient, is credited with being extremely careful in regard to its packing, but is criticized because its added charges for crates and packing are disproportionately high.

I would suggest that American shippers place in packages shipped a printed slip calling for comments from the consignees on the packing of the parcels received by them, and in this way, in course of time, they will probably receive valuable suggestions. The only way to overcome this criticism is to understand wherein the fault lies in each specific instance.

AMERICANS ACCEPT MADRID PUBLICITY OFFER.

[Consul Robertson Honey, Madrid, Spain, Oct. 16.]

As a result of the publication of the article entitled "Madrid Chamber of Commerce Offers Gratuitous Publicity" in **COMMERCE REPORTS** for August 25, short notices of American firms desiring Spanish agents for their products form fully half of the two pages of "Trade Opportunities" in the current issue of the chamber's *Boletín Oficial*. At the end of the "Opportunities" a paragraph (in Spanish) tells of the reciprocal service offered by the Madrid consulate:

The American consul in Madrid informs Spanish merchants who would like to do business with his country that a notice from them would be published without charge in the official journal of the United States, **COMMERCE REPORTS**. All requests should be directed to the offices of the consulate, Lealtad, 9.

INCREASING INTER-AMERICAN TRADE.

[Ambassador Frederic J. Stimson, Buenos Aires, Argentina, Oct. 4.]

Under the caption, "Increasing inter-American trade," *La Nación*, a leading newspaper of Buenos Aires, recently discussed the economic principles underlying a successful commercial campaign in the southern Republic and the best methods to employ in seeking to win these markets permanently. After recounting the expansion of commerce between the United States and South America as one of the problems most engaging the governors, manufacturers, and capitalists of the former country at the present time, the journal continues:

Must Adopt Competitors' Tactics.

The Secretary of the Treasury, Mr. McAdoo, has drawn up a program of ways to strengthen relations between the United States and the South American Republics (especially Argentina and Brazil) that embraces banking projects to grant credit for the formation and encouragement of steamship companies with direct and regular sailings, uniformity in the regulations governing interchange, and, finally, a Pan American congress to meet annually at Washington to consider, advised by traveling commissions, all matters in connection with commercial advancement.

The project is sound, but in being put into practice it may meet with stumbling blocks if the steps taken are based only on the situation created by the war. In the permanent holding of the advantages secured one must not lose sight of relations traditionally established with European commerce, banking, and manufacture, and commerce with Europe will try to recover its place later.

The chief requisite that the American will need to meet with definite success is, then, the adoption of the ways and means by which their competitors, for the moment withdrawn, managed to secure a preeminent position in our interchange. These ways and means considered the advantages of long credits, offering facilities which encouraged us to acquire their goods, and were based on a detailed study of the Argentine market, its demand, expenses, qualities, prices, and individualities of consumption.

Investment of Capital the Best Method.

The most efficient way of conquering these markets is the financial, the economic way, which gets into touch with the country's progress through the public works and service and identifies itself with the prosperity and development of the Nation. In consequence, the investment of American capital ought to be made in such undertakings as will weld it firmly and organically to the vitality of the country. Loans for progressive schemes, such as port works and railroads, and furnishing permanent capital for improvements are part and parcel of the program of trade expansion and radiation quite as important as schemes of a purely commercial nature, which latter create relationships at once unstable and contingent.

In view of these considerations, the main objective of the American policy of expansion in this country must be financial quite as much as merely commercial, for it is the former which must strengthen the bonds between the two countries and establish relations identified with the growth of the sources of the country's wealth and its factors. Capital from North America, besides being of a banking nature, must be economically applied to develop the sources of the country's riches.

The investment of North American capital, preferably circulatory, should be the desideratum of the North American campaign.

A large order for paper-box machinery is expected to result, reports Consul General A. Gaulin, of Marseille, France, from a Trade Opportunity that was published in *COMMERCE REPORTS* for September 28, and other opportunities will likely result in considerable purchases of glucose and of bronze powders for printing purposes in the near future.

NATAL'S TRADE FOR HALF YEAR.

[Consul William W. Masterson, Durban, Natal Province, South Africa, Sept. 28.]

Natal's trade returns for the six months ending June 30, 1915, while \$5,481,123 (or 16 per cent) below the total value in the first half of 1914 are still not discouraging in view of the war and its consequences. Compared with the corresponding months of last year the imports and exports into the Province during January-June reached a value of:

Months.	Imports.		Exports.	
	1914	1915	1914	1915
January.....	\$4,074,744	\$2,489,730	\$2,375,762	\$1,221,083
February.....	3,606,737	2,461,991	1,890,708	1,480,636
March.....	4,122,777	3,004,766	1,653,100	1,832,394
April.....	3,774,870	3,366,980	1,932,306	2,816,531
May.....	3,809,380	3,961,511	1,398,544	1,120,590
June.....	4,274,067	3,457,128	1,162,695	1,241,293
Total.....	23,662,571	18,802,096	10,333,175	9,712,527

Of the imports during the first six months of the current year the British Empire supplied \$13,781,646 worth, against \$16,272,388 worth in January-June, 1914, the United States coming next with \$2,386,536 worth, against \$2,114,456. The British Empire also took the bulk of the exports—\$7,387,556, against \$7,445,102 last year—and the United States was again second in the list, with purchases valued at \$680,998, as contrasted with \$73,786 in the first half of 1914. This increase in the exports to the United States consisted almost wholly of South African wool, which, as noted in COMMERCE REPORTS for May 1 and 8 and June 22, has recently found a market there.

Falling Off Due to Lack of Vessels.

When one studies the shipping record for the six months under review the reason for the falling off in the Province's commerce becomes apparent, for during the first half of 1914, 704 vessels entered and 717 cleared from the port of Durban, whereas in January-June, 1915, there were but 441 entrances and 433 clearances, with corresponding decreases in the cargo totals. The comparative figures follow:

	Entered first 6 months—		Cleared first 6 months—	
	1914	1915	1914	1915
Number of vessels.....	704	441	717	433
Net registered tonnage:				
Coastwise.....	616,028	438,761	676,583	427,231
Over-sea.....	1,528,308	758,168	1,477,128	754,046
Tons of cargo landed or shipped:				
Coastwise.....	11,580	10,452	132,545	123,291
Over-sea.....	352,529	260,871	692,963	612,730

• Includes bunker coal.

There is no question that had shipping facilities been as usual a loss in trade would not have occurred. High freights also had their effect, the rates in some instances being twice those of normal times.

UNITED STATES TRADE WITH AUSTRALIA GROWS.

[Consul General J. I. Brittain, Sydney, Australia, Oct. 8.]

The exports from the port of Sydney, Australia, to the United States during the nine months ended September 30, 1915, show a decided increase, as compared with the corresponding period in 1914, notwithstanding the excessively dry weather in Australia and restrictions due to the war. The value of the exports by quarters was:

Quarter ended—	1914	1915	Increase.
March	\$3,257,813	\$6,523,028	\$3,265,215
June	1,543,629	2,033,120	489,491
September	1,477,647	8,922,222	7,444,575
Total	6,579,089	17,778,370	11,199,281

There has been a very decided increase in tonnage and number of vessels from the United States to Sydney during these nine months, as compared with the similar period in 1914. The figures, compared with those for the first nine months of 1914, were:

Quarter ended—	Vessels arrived.			Tonnage.		
	1914	1915	Increase.	1914	1915	Increase.
March	6	7	1	17,318	20,671	3,353
June	7	17	10	14,850	27,095	12,245
September	8	24	20	12,751	34,501	21,750
Total			31			37,348

Beginning in December, the Oceanic Steamship Co. will put in service an additional passenger vessel between Sydney and San Francisco. By this new arrangement a vessel will sail from Sydney to San Francisco every three weeks instead of once a month, as at present.

There has never been a more opportune time for improving the shipping facilities between Sydney and the Pacific coast of the United States. Larger vessels, with greater speed, would be welcomed by the people of Australia and our Pacific coast.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

Five hundred bushels of potatoes to the acre is the accomplishment of a Nova Scotia farmer. How he did it is told by the Halifax Herald of November 12, 1915, to which attention is called by Consul General Evan E. Young, of Halifax.

KOLAR GOLD OUTPUT LIKELY TO LAST 20 YEARS.

[Dr. W. F. Smeeth, Director of Department of Mines and Geology in Mysore, India, in *Mysore Economic Journal*; article forwarded by Consul Lucien Memminger, Madras, Sept. 22.]

The mining of the Kolar gold field is the most important industry in Mysore State, if we exclude agriculture. Although confined to a small strip of country, less than 5 miles in length, it has already yielded gold to the value of nearly \$214,126,000. Including receipts from the sale of electric power and water, the net annual return to the Government is about 30 lakhs of rupees (\$973,300) while the yearly wage bill is over 80 lakhs of rupees (\$2,595,467).

The possibility of the extinction of this industry, or the probability of its continuance, is obviously a matter of considerable moment, but anything in the shape of a very definite pronouncement is out of the question.

The auriferous veins lie in a narrow belt of hornblende schists, about 3 miles in width, which is cut off on both sides and below by a later intrusive gneiss. The auriferous veins are believed to be older than the gneiss, and will therefore be cut off, along with the schists, at some depth below surface. This depth represents the ultimate limit of the Kolar gold field, and I see no reason to apprehend that it will be less than 10,000 to 15,000 feet from the surface and perhaps more. The cut-out may, of course, occur closer to surface, but the above figures are reasonably probable, and we need not hunt trouble.

Mines Now Down to Depth of 5,000 Feet.

The mines are now down to a depth of rather over 5,000 feet on the inclination of the veins, or to a maximum vertical depth of some 4,900 feet from the surface. This has taken over 30 years, and if we assume a downward development of 200 feet per annum we shall have reached a vertical depth of about 8,000 feet in 20 years, which is well within the ultimate limit suggested above. It is not improbable that with a low temperature gradient and efficient ventilation, mining can be carried down to 8,000 feet, and we need not speculate about greater depths; but it may be noted that down to this depth the whole of the ore will not be worked out in 20 years and that the total period of work will be more, probably 30 years.

We are assuming, however, that not only do the veins continue, but that the auriferous portions of them or the "shoots" continue to occur with sufficient frequency and of sufficient size to keep up the returns. No one can foresee if this will be so, but, while I see no reason to apprehend any systematic diminution for many years, it would be sound to contemplate reduction of output in the later years.

[Descriptions of the Mysore gold mines in the Kolar district were given in the *Handbook of India* (634 pages), published this year by the Bureau of Foreign and Domestic Commerce, and in *Daily Consular and Trade Reports* for August 30, 1913. Copies of the *Handbook of India* may be obtained at \$1 each from the Superintendent of Documents, Government Printing Office, Washington, D. C., or from the branch offices of the Bureau of Foreign and Domestic Commerce.]

The Danish hay crop is estimated at 1,149,000 tons, a drop of 471,000 tons from last year, reports Consul General Winslow.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Bromide of potassium, No. 19314.—An American consular officer in Italy reports that a firm desires to correspond with producers of bromide of potassium.

Balsa trees, No. 19315.—A letter to the Bureau states that a man wishes to be placed in communication with importers of balsa trees. It is stated that a shipload could be furnished.

Soda fountains, No. 19316.—A report from an American consular officer in Italy states that the consulate would like to receive catalogues and price lists of soda fountains. Complete details as to construction and operations should be furnished.

General representation, No. 19317.—A real estate agent in France informs an American consular officer that he desires to represent manufacturers and exporters anxious to introduce goods on the French market. References given. He does not specify any particular line.

Automobile and motor supplies, No. 19318.—A merchant in Spain, dealing in automobile and motor supplies, desires to purchase these goods from American manufacturers on his own account, or act as agent. Correspondence in Spanish is preferred.

Cardboard, paste, office furniture, etc., No. 19319.—An American consular officer in South Africa reports that a merchant wishes to receive catalogues and information on cardboard; photographic paste; office furniture, such as tables and desks; mirrors; and glass cutters, all to be of a cheap grade. Correspondence may be in English.

Wooden spools, No. 19320.—A company in Scotland informs an American consular officer that it wishes to correspond with manufacturers of wooden spools, samples of which may be examined at the Bureau or its branch offices. (Refer to file No. 68686.)

Electrical supplies, No. 19321.—A report from an American consular officer in Russia states that an organization has requested catalogues, price lists, samples, and terms from firms manufacturing electrical supplies, such as carbon for arc lamps, with direct current; material for street lamps, with and without wicks; switches; safety devices, socket, with and without keys; meters, etc. Correspondence should be in Russian.

Domestic labor-saving devices, No. 19322.—An American consular officer in England reports that a firm desires to correspond with manufacturers of domestic labor-saving devices and novelties of various descriptions. References given.

Cotton waste, No. 19323.—A report from an American consular officer in the East Indies states that a firm desires samples and quotations on first and second qualities of cotton waste for engineering and factory work. It is stated that 25 tons annually can be used. Terms to be arranged to suit seller. Correspondence may be in English.

Machinery, No. 19324.—A firm in Colombia informs an American consular officer that it desires information, catalogues, and prices on machinery for the weaving of jute cloth and bags. Correspondence in Spanish is preferred.

Electrical appliances, No. 19325.—An American consular officer in the Canary Islands reports that a business man in his district desires to establish commercial relations, on a commission basis, with manufacturers of electrical appliances. Correspondence should be in Spanish.

Skating and bowling-alley supplies, No. 19326.—A company in Central America informs an American consular officer that it contemplates erecting a bowling alley and skating rink and requests that all information, literature, and suggestions, together with catalogues and prices of skates, skating-rink supplies, and bowling-alley fixtures, be sent to it.

Toys, No. 19327.—A teacher in care of one of the art schools in Australia informs an American consular officer that she desires to be placed in communication with manufacturers of toys. Catalogues, giving prices, are desired as soon as possible.

STANDARDS BUREAU MAKES SUPPLIES NOT FOUND IN MARKET.

The impossibility of obtaining certain grades of chemical porcelain ware, such as pyrometer tubes, mortars and pestles, etc., in the regular markets, has compelled the United States Bureau of Standards to make use of its own resources in supplying the lacking articles. The bureau reports that its efforts in that direction have produced very satisfactory results.

RETURN POSTAGE IN U. S. STAMPS VALUELESS ABROAD.

[Consul General E. D. Winslow, Copenhagen, Denmark, Oct. 18.]

Many American firms inclose in their letters to the Copenhagen consulate stamped envelopes with American postage or postage stamps of the United States. These envelopes and United States stamps can not be used in this Kingdom for postage. Persons and firms in the United States finding it expedient to send reply postage should make use of the international reply coupon, which can be purchased at all post offices in the United States, and these coupons can be exchanged by this consulate for postage in Denmark to be used on letters destined to the United States.

TEN MONTHS' TRADE OF FRANCE.

[Cablegram from American Consul General A. M. Thackara, Paris.]

The total value of the French foreign trade, except gold, silver, etc., for the 10 months ended October, 1915, was \$1,742,653,356; against \$1,961,187,642 for the same period in 1914. The imports amounted to \$1,270,569,952, against \$1,105,606,290 for the first 10 months of 1914, and the exports \$472,083,404, against \$855,581,352. The imports of food products were valued at \$411,818,382, against \$284,864,333; industrial materials, \$491,660,359, against \$630,890,752; and manufactures, \$367,091,211, against \$189,851,205. The exports of food products amounted to \$86,033,224, against \$102,423,556; industrial materials, \$102,049,329, against \$235,686,196; manufactures, \$258,011,471, against \$454,840,591; and postal packages, \$25,989,380, against \$62,631,009. The imports for October, 1915, were valued at \$14,320,423, compared with \$46,227,939 for the same month in 1914. The exports amounted to \$50,611,162, against \$35,396,779.

AMERICAN TRADE RECORD.

American foreign trade rose to the new high level of \$5,000,000,000 in the 12 months ending with October, 1915, according to figures made public by the Bureau of Foreign and Domestic Commerce, Department of Commerce. Imports of merchandise amounted to \$1,691,748,013, compared with \$1,880,414,501 in the preceding period, while exports aggregated \$3,318,634,636 against \$2,140,847,829 in the 12 months ending with October, 1914.

October exports also established a new high record, rising to \$334,638,578, or \$33,961,756 above the former record made in September last, and comparing with \$194,711,170 in October, 1914, and \$271,361,464 in October, 1913. October imports were \$148,529,620 against \$138,080,520 in October, 1914, and \$177,987,986 in October, 1912, the former October record.

The export balance for October was \$186,108,958, against \$56,630,650 in October, 1914, and for the 12 months ending with October \$1,626,886,623, compared with \$260,433,328 in the preceding period.

Free merchandise comprised 70.91 per cent of the total imports of October, 1915, as against 62.97 per cent of those of October, 1914.

Gold imports during October, 1915, amounted to \$79,669,359, against \$5,945,003 in October last year, and gold exports were valued at \$2,938,300 in October, 1915, compared with \$50,301,972 in October, 1914. October thus showed a net inward gold movement of \$76,731,059 instead of a net outward gold movement of \$44,356,969 in October last year. For the 12 months ending with October gold imports aggregated \$357,061,165, compared with \$58,001,088 in the preceding period, and gold exports for the 12 months ending with October amounted to \$30,532,386, against \$225,194,301 a year earlier. A net outward gold movement of \$167,193,213 in the 12 months ending with October last year has been followed by a net inward gold movement of \$326,528,779 in the 12 months just ended.

FRENCH PENALTY FOR SALE OF SHIP TO FOREIGNER.

[Cablegram from American Embassy, Paris, Nov. 20.]

The following appeared in Journal Officiel November 14, 1915:

Article one. During the present war and until the expiration of a period of six months following the cessation of hostilities, any voluntary sale to a foreigner of a French seagoing vessel is prohibited both in France and abroad. However, exceptions to this prohibition may be authorized subject to conditions to be specified by the Minister of Marine.

Article 2. Any deed executed in contravention of the preceding stipulation shall be void and the vendor rendered liable to a term of imprisonment varying from 1 to 6 months and a fine of from 16 to 500 francs, or to one of these two penalties alone. Moreover, the ship shall be confiscated, and in the event of its capture not having been effected, the court shall order in substitution of confiscation the payment of a supplementary fine equal to the half of the vessel, which shall be determined by the court.

Article 463 of the Penal Code relating to attenuating circumstances may be applied even regarding confiscation, in place of which there may be imposed a fine of less amount than the value of the ship.

[Copies of the British, German, and Austrian laws in regard to the transfer to foreigners of their national ships were given in **COMMERCE REPORTS** for Nov. 18, 1915.]

COTTON GINNED, CONSUMED, ETC.

According to a preliminary report issued by the United States Bureau of Census, the number of bales of cotton ginned from the growth of 1915 prior to November 14, 1915, was 8,777,794 (counting round as half bales and excluding linters), compared with 11,668,240 bales for the same period in 1914 and 10,444,529 bales for 1913. Round bales in 1915 amounted to 82,582, compared with 31,904 bales for 1914 and 74,167 bales for 1913. The number of sea-island bales included in the 1915 figures was 69,477, compared with 54,197 bales for 1914 and 51,950 bales for 1913.

The statistics for 1915 are subject to slight corrections when checked against the individual returns of the ginners being transmitted by mail. The corrected statistics of the quantity of cotton ginned this season prior to November 1 are 7,382,578 bales.

Cotton consumed during the month of October, 1915, amounted to 500,635 bales. Cotton on hand in consuming establishments on October 31 was 1,345,749 bales, and in public storage and at compresses 4,171,474 bales. The number of active consuming cotton spindles for the month was 31,379,385. Domestic cotton exported during October, 1915, was 674,655 running bales, and foreign cotton imported, 13,506 equivalent 500-pound bales.

FISHERIES BUREAU WORKERS TO BE SEEN ON FILMS.

The work that the United States Bureau of Fisheries is doing in the interest of the fishing industry of the country is soon to be illustrated by the use of motion pictures. In connection with its fish-cultural operations, the Bureau of Fisheries has secured temporarily the services of an expert operator, who has been assigned to duty on the upper Mississippi River, to take views of the rescue operations and the activities in connection with the propagation of the freshwater mussel.

The film maker will later go to the Great Lakes to take views illustrating the whitefish and lake-trout operations. On the completion of this duty he will be assigned to other fields.

The entire work of the Division of Fish Culture of the Bureau of Fisheries will be fully illustrated when the motion-picture tour is completed, and the results will be available for exhibition wherever there is an interest in this branch of the work of the Department of Commerce.

MANCHURIAN MERCHANTS REGARD AMERICAN TERMS SEVERE.

[Translated by the American consulate at Harbin from the Harbinski Vestnik (official organ of the administration of the Chinese Eastern Railway) of Oct. 10.]

Merchants at Harbin, in reply to inquiries, are complaining that the principal obstacles in the development of trade with the United States are the difficult terms insisted upon by American firms. For example, these firms insist that half the money must be paid down with the order and the other half paid upon the arrival of the steamer delivering the goods at the nearest port. These terms are indeed very hard, if one takes into consideration the lack of credit at present.

NEW REGULATIONS GOVERNING EXPORT PROCEDURE.

The announcement that new United States regulations relative to export procedure will become effective January 1, 1916, has created such intense interest among manufacturers and shippers that the Bureau of Foreign and Domestic Commerce, Department of Commerce, has found it necessary to reprint the new order with explanatory text. That pamphlet is just off the press and is being supplied free of charge to those interested, upon application to the above-mentioned office. All shipments for export to foreign countries or to Alaska, Hawaii, and Porto Rico will be affected by the new regulations.

Accuracy of statement and completeness of description in export statistics are the primary objects of the new procedure. Heretofore the data received by the Bureau of Foreign and Domestic Commerce have frequently been lacking in these respects, largely by reason of the fact that interior shippers consign to their agents at the seaboard for export goods unaccompanied by adequate descriptions for use in making export declarations. The new regulations seek to remedy this defect.

The importance of detailed and accurate returns as a basis for the statistical information published by the Bureau of Foreign and Domestic Commerce is apparent when it is realized that the export trade of the country now exceeds \$3,000,000,000 annually and is rapidly increasing. With practically all commodities participating in that growth, interest in commercial procedure is widespread and to meet the demand for authoritative instructions regarding the new requirements in export trade, the main features of Treasury Decision No. 35708, containing the regulations on that subject, have been summarized as follows:

1. A simplified form of shippers' export declaration has been prescribed, alike for exports by rail and by vessel. It is so drawn up as to prevent the disclosure of the value of goods to persons outside the customs service. The duplicate to be handed over to the shipper's agent at the seaboard or to the common carrier as proof of compliance with customs requirements will contain no statement of value.

2. The oath to shippers' declarations for export by water may be taken before any person authorized to administer oaths and not as heretofore exclusively before the collector of customs at the port of exportation. This will facilitate the preparation of export declarations by the original shipper instead of by his agent at the seaboard, who is less cognizant of the character and value of the merchandise and the country of final destination. Manufacturers themselves are urged to make out the export declarations wherever practicable, to assist in which work the Bureau of Foreign and Domestic Commerce cheerfully supplies to those interested Schedule B containing the official classification of all merchandise entering export trade.

3. The requirements on the part of common carriers have been somewhat simplified and hereafter copies of the waybills will be accepted from the railroad companies in lieu of car manifests. In vessel manifests a notation that the values are as stated on the shippers' declarations will be accepted in lieu of a detailed statement of the value of each shipment.

4. On and after January 1, 1916, the legal requirement that goods shall not pass out of the jurisdiction of the United States until shippers' declarations are presented in due form will be strictly enforced. Exception will be made only when the carrier gives bond to produce within 15 days export declarations (originals or duplicates) for all shipments.

Compliance with the new regulations will impose no hardships on exporters who have been observing the legal requirements. On the

contrary their convenience is served, and the cooperation of shippers generally will aid the Bureau of Foreign and Domestic Commerce in publishing full and accurate information regarding the export trade, and thus furnish to the manufacturers of the country an accurate business guide.

PRODUCTION AND DISTRIBUTION OF RICE IN ITALY.

[Consul W. F. Kelley, Rome, Oct. 16.]

The Bureau of Agricultural Statistics at Rome has for some time past been conducting investigations regarding the present stocks and probable production of foodstuffs in Italy, with a view to enabling the Government to take any necessary precautionary measures to avoid a shortage of supplies. The results of the investigation have been published in a local trade paper.

The culture of rice is an important and growing industry in Italy, and the country is the principal European producer of this cereal, which enters into the preparation of foods in Italy to a far greater extent than in the United States. After wheat, which is so largely consumed in the form of macaroni, spaghetti, etc., rice is the most important cereal article of consumption. Any shortage would therefore seriously affect the general population.

The production of rice in Italy has been: From 1904 to 1913, average annual production, 502,489 metric tons (metric ton=2,204.62 pounds); 1909 to 1913, average annual production, 475,044 tons; 1913, total production, 543,200 tons; 1914, total production, 543,000 tons.

Change Produced by Raising Coarser Kind of Rice.

The exportation of prepared rice was 61,200 metric tons in 1912, 44,700 metric tons in 1913, and 50,000 metric tons from January to July, 1914. The production of 1913 and 1914 was notably greater than the average of the preceding years, for the reason that a coarser kind of rice was raised, which is more productive and has greater power of resistance to climatic changes. The estimates of the Bureau of Agricultural Statistics, for 1915, give a production of 530,000 metric tons, which is less than the last two preceding years but greater than the average of the last 5 or 10 years.

Imports of rice into Italy, even before the outbreak of the war, were never very great, and have decreased considerably since then, probably because the price of imported rice has more than doubled during the war, chiefly as a result of increased freight rates. As, however, the production is sufficient to supply the demand for home consumption, there is a very limited market in Italy for imported rice.

JAPAN GETS RUSSIAN SHIP ORDER.

[Far Eastern Review, Shanghai, September, 1915.]

A shipping company at Odessa has decided to place with a Japanese dock company an order for constructing several passenger steamers of a large type. The order includes eight steamers of the first-class type. The company will order several steamers later for use in the foreign service. The Odessa agents of the Japanese dock company, together with Russian engineers, are drawing the designs.

GOOD SUMAC CROP IN SICILY.

[Consul Samuel H. Shank, Palermo, Italy, Oct. 19.]

The 1915 sumac crop is above a normal one. Last year's crop amounted to nearly 40,000 tons and this year's crop will be one-third larger. The quality of the greater part of the crop is very good, but about one-fourth is inferior in grade, as there was too little rain in certain sections.

Prices are a little lower than last year, although the old stock was entirely sold out. This is due to the increase in the crop and also to the uncertainty of exportation. Last year limited quantities were exported to Germany and Austria. By royal decree exportation will be permitted till October 30, but unless another decree is issued exportation will stop. Prices f. o. b. Palermo are now \$4.15 to \$4.44 per 220 pounds for natural and \$5.80 to \$6 for ground sumac. There is no prospect of a drop in prices, as the dealers have purchased at a price which will compel them to maintain the present prices.

Imports of sumac into the United States during the past three fiscal years ended June 30, 1915, have been as follows:

Sumac.	1913		1914		1915	
	Pounds.	Value.	Pounds.	Value.	Pounds.	Value.
Unground.....	621,366	\$12,420	1,335,566	\$32,238	1,258,204	\$32,613
Ground.....	14,112,112	289,255	9,678,719	231,580	12,048,917	294,434
Extract of.....	1,270,825	44,568	1,463,297	59,022	727,449	35,060

Ground sumac, which had been dutiable on entering the United States at three-tenths of a cent per pound, was by the tariff act of October 3, 1913, made free of duty, while the duty on the extract was reduced from five-eighths of a cent to three-eighths of a cent per pound. Unground sumac was continued on the free list.

BURMA USES AMERICAN COMPANY'S SEWING MACHINES.

[Consul M. K. Moorhead, Rangoon, Sept. 20.]

During the year ended March 31, 1914, there were 16,306 sewing machines imported into Burma. Of these 13,667 came from the United Kingdom, 2,549 from Germany, and 25 from the United States. In the year ended March 31, 1915, imports decreased to 10,832, of which the United Kingdom supplied 9,723; Germany, 1,067; and the United States, 21. This decrease was, of course, due to the war.

The great majority of sewing machines sold in Burma are the product of the Glasgow factory of an American corporation. This company maintains a branch office in Rangoon, under the management of a European superintendent, and also maintains agencies in every town of any size throughout the Province. Sales are made on long credits and by monthly payments. The department stores of Rangoon also sell sewing machines.

[A list of department stores and commission agents in that city may be obtained by application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67816.]

OYSTERMEN OF PUGET SOUND ORGANIZE.

[Commercial Agent W. B. Henderson, Seattle, Wash.]

An organization has just been perfected for the purpose of increasing the output of the oyster beds in the waters adjacent to Olympia and Shelton. The association is known as the Olympia Oyster Growers' and Dealers' Association, and the members are confident that they will be able to produce a sufficient number of oysters to make them a staple article of food in the Pacific Northwest. The president of the organization is G. W. Ingham, of Olympia. E. N. Steele, of the same city, is secretary, and there are in the organization several other officers, including three vice presidents, a treasurer, and a board of directors.

These men realized some years ago that better methods of cultivation of oysters must be adopted if the bivalve was to hold its own as a commercial article. There is a decidedly increased demand from the rapidly growing population of the Pacific Coast States for oysters. This demand was greater than the supply, and as oysters became scarcer the price climbed higher and higher. This scarcity was superinduced partly by the natural enemies of the oyster and partly by the havoc of the elements. The Olympic oyster, which has its habitat near Olympia and Shelton, grows only on beds between low and high tide. As a result the oyster is in danger of cold during the long run outs in winter and in danger of perishing in the summer months when the beds are exposed.

Large Amount Spent in Building Concrete Dikes.

In view of these facts the oystermen have spent considerable sums of money building concrete dikes. It costs in the neighborhood of \$1,000 per acre to protect the beds with dikes, and as a result of that work a few inches of water are kept over the beds all the time, thus protecting the oysters from extremes of heat and cold.

By working the beds along scientific lines, starfish are eliminated and mussels destroyed. The starfish devour the oysters, and as mussels require the same food as the oyster they deplete the food supply. The Federal Government is cooperating with the oystermen to the extent of permitting the destruction of certain kinds of oyster-eating ducks.

With the means above mentioned the oyster growers have been able to increase the supply of oysters by guarding against the elements, protecting against natural enemies, and increasing the food supply. They have also increased the size of the oysters. It is said that the association proposes to work to increase the supply of oysters still further; to maintain the hygienic standard under which this sea food is marketed; to conserve the oysters; to "boost" the oyster as a product of the Pacific coast; and to establish the Olympic oyster as a staple article of food. Nearly all the oyster growers in the vicinity of Olympia and Shelton have joined the association.

The recent sale of an American cement mixer to the city of Kingston and of two carloads of raisins to a wholesaler in that Canadian port resulted from the trade-extension efforts of Consul Felix S. S. Johnson.

ELECTRIC POWER PLANTS IN BANGKOK.

[Vice Consul Carl C. Hansen, Bangkok, Siam, Sept. 20.]

Bangkok, the only city in Siam supplied with electric power for industrial purposes, has two electric light and power plants, namely, the Siam Electricity Co. (Ltd.), a private stock company, and the municipal light and power station, owned and operated by the Siamese Government [and described at some length in Daily Consular and Trade Reports for Nov. 28, 1914].

The Siam Electricity Co. (Ltd.) began operation in 1890 as a Danish company, but a few years ago Belgian capitalists acquired a controlling interest in the business. This concern has had a successful career, paying for many years a dividend of 12 per cent, and the shares have trebled in value. It is furnished with Terrarie, Thompson, G. E. C., and other motors; Morley, G. E. C., Short, and other dynamos. The total capacity of the plant for alternating-current power is 4,885 kilowatts and for direct 1,850 kilowatts. The alternating current is of 50 and 100 cycles; the phases used for motors, 3 or 1; voltage, 100, 220, 500, and 3,500. The voltage ordinarily used for direct-current motors is 500.

The Government power station operates under a similar system, but supplies power for Government purposes only.

Few Industries Use Power—Imports of Electrical Goods.

The Siam Electricity Co. (Ltd.) supplies power for the Bangkok overhead-trolley system of tramways for some local printing presses and pumps, but there are no manufacturing plants requiring electric power. In the rice and sawmilling industries steam power is used, and besides docking, boat building, and ice and aerated-water making there are no other industrial plants of any importance in Siam.

The imports of electrical goods and apparatus into Siam declined from \$415,851 in 1913-14 to \$174,982 in 1914-15, but the high figures for 1913-14 are accounted for by the large imports for the new Government power station during that year. The average yearly value of imports for the half decade ended March 31, 1913, was \$233,861. The contribution to these imports by the leading countries during the fiscal year 1915 was: United States, \$23,637 worth; Germany, \$61,941; United Kingdom, \$41,335; and Japan, \$25,892.

Electric motors, electric tram-car equipment, telephone and telegraph supplies, X-ray apparatus, electric fans, bells, batteries, and a variety of similar goods are in demand. The import duty on all electrical machinery and supplies is 3 per cent ad valorem.

NOVA SCOTIA TOWN-PLANNING ACT.

The publication of a brief article on "Town Planning in Nova Scotia" in COMMERCE REPORTS for June 22 last brought to the Halifax consulate general a number of requests from the United States for copies of the act, which Consul General Evan E. Young obtained and forwarded to the inquirers. He has also forwarded copies to the Bureau of Foreign and Domestic Commerce, and these may be examined by interested persons either at the Bureau's Washington office or at its various branches. Ask for file No. 68373.

TRADE-EXTENSION WORK BY CONSULAR SERVICE.

[Consul Wilbur T. Gracey, Seville, Spain, Oct. 22.]

Reports from this office regarding the shortage of coal in Seville published in **COMMERCE REPORTS** for June 8 and 24, 1915, have resulted in one cargo of American coal being shipped here and another 2,600-ton cargo in transit sold. One company reports that it has appointed an agent in Barcelona, through whom the order was received, and another states that "through information which you furnished to interested parties in your territory we have received an order for coal, which we expect to ship at an early date."

The consulate having received an inquiry regarding the possible sale of rubber goods in Seville, published a trade note in Spanish in a local commercial journal, and a firm in Buffalo now writes: "We are pleased to advise you that we have received a number of inquiries, and we have secured some business from one firm in question. * * * We have every reason to believe that this firm will prove quite a profitable connection, especially as soon as we make metric sizes."

Another local firm advises the consulate that through this office they have gotten in touch with another rubber goods manufacturer in the United States, have already sent them an order, and have gotten the promise of one Spanish firm to purchase all of its large supply of rubber goods from the American manufacturer.

A grinding and separating machinery manufacturer in Ohio writes the consulate that he is in communication with parties whose addresses were given him by this consulate, and the last communication received states that he has "a customer for our machinery."

A road-making machinery firm in Ohio writes the consulate that it has made a sale of machinery to a party in Seville.

Another manufacturer of drills and machinery states that he has "been fortunate in closing an agreement for an exclusive representative for Spain, who has sent several nice orders and remittances."

A glass company in West Virginia writes the consulate that through the efforts of this consulate it has been able to secure a representative for the whole district of Andalusia.

Other results have undoubtedly been satisfactory, but the above are the only ones that have come directly to the notice of this consulate during the past three months.

SINO-AMERICAN BANK REGISTERED.

[National Review of China, Oct. 9.]

The long-planned scheme of a Sino-American bank with a capital of \$10,000,000 silver (about \$5,000,000 U. S. currency), promoted by Chang Chen-hsun, the ex-President of the Chinese Business Men's Party to America, Hsiang Jui-kun, the ex-Minister of Agriculture and Commerce, and Yang Ju, has been registered in the Ministry of Finance. The shares will be equally subscribed by American and Chinese capitalists. It is reported that \$3,000,000 (\$1,500,000 U. S. currency) has already been subscribed by the Chinese promoters.

The value of millstones produced in the United States dropped from \$200,000 in 1880 to \$43,000 last year.

DAIRY PRODUCTS AT MARSEILLE, FRANCE.

[Vice Consul Paul H. Cram, Marseille, France, Oct. 11.]

The Marseille consular district, which has an area of about 20,400 square miles, includes the Mediterranean region of France, except the Department of the Alpes-Maritimes, and also embraces the island of Corsica. The climate, distinctly different from that of the rest of France, is essentially dry, with long, hot summers and mild winters. The rainfall, insufficient for the requirements of pasture lands, is very unequally distributed over the different seasons of the year.

The production of cow's milk is strictly limited to the local demand for the unmanufactured product, except in a few places. The annual production in this consular district is estimated at 32,640,000 gallons. Owing to the lack of grazing lands, the cows are kept in stables throughout the year. Consequently, rural localities present no advantages over cities for the production of milk. On the contrary, cities and their suburbs are very important centers of production, on account of their greater facilities for marketing. At Marseille 15,000 cows are nearly sufficient to meet the local demand.

Small Per Capita Consumption of Butter.

In southern France the per capita consumption of butter is considerably smaller than in the United States. It is considered a luxury rather than a necessity. In many households of the middle class butter is served only a few times a month. Furthermore, in this region, as in all Mediterranean countries, vegetable oil, particularly olive oil, is generally utilized for cooking purposes instead of butter.

Owing to favorable climatic conditions and the character of the grazing lands, the production of ewe's milk is considerable. In fact, the utilization of this milk for the manufacture of Roquefort cheese is the only branch of the dairy industry in this district which has attained notable success. Practically the entire industry is in the hands of 12 or 15 firms established at Roquefort. These firms have founded branch establishments in various parts of southern France, particularly in Corsica and the Departments of the Gard and the Hérault. The latest available statistics concerning the production of Roquefort cheese in this district are: Department of Hérault, 840 metric tons of 2,204.62 pounds each; Corsica, 735 tons; and Gard, 420 tons.

It is estimated that about 11,000 gallons of ewe's milk were treated by individual farmers and minor establishments, which refused to state the amount of their production.

Changes from Season to Season in Feeding Cattle.

In this region the daily ration of milch cows, which costs about \$0.50, is usually composed of the following elements: Hay, 17.63 to 26.45 pounds; bran, 13.22 to 22.04 pounds; and copra oil cake, 6.61 to 8.82 pounds. In January and February, when the olive trees are trimmed, the cuttings replace hay to a certain extent, in the proportion of 2 pounds of foliage for 3 pounds of hay. Practical experience has shown that these leaves, which are readily accepted by the cows, tend to increase the yield of milk. Marseille and Aix receive annually about 800 tons. In winter, the outer shell of the almond is occasionally utilized, and is said to communicate to the milk an agreeable flavor. In summer, hay is replaced by 66 to 77 pounds of green fodder.

AMERICAN SHOES FOR ITALIAN LOCAL NEEDS.

[Consul John H. Grout, Milan, Oct. 20.]

The Milan consulate learns that there is an excellent opportunity here for the extension of trade in American shoes. Imports from England and France have almost wholly fallen off, and none are being received from Germany or Austria. Stocks of men's and women's shoes are decreasing. The representative of a Swiss concern visited this district recently, and was almost swamped with orders. Had he confined himself to an endeavor to secure trade by the method pursued by some American firms, that of correspondence alone, his results would probably have been very small.

American firms desiring to enter this market, and to hold it, should send their representatives here at once, prepared to fill orders by cable. Such representatives should carefully canvass the trade and study conditions. Best of all, representatives should be sent over here to remain permanently, and at least establish branch offices, if not open stores.

The Chamber of Commerce of Milan and the American consulate have of late been receiving requests from shoe dealers, asking to be placed in communication with manufacturers in the United States, with a view to purchasing and dealing in American goods. Some of them formerly dealt in foreign goods. By giving attention to this market at once, a reasonably permanent trade can be established. It is reported that some American firms, in various lines, consider that the time to come here is at the close of the war. But those who come here now, and succeed in establishing their goods, will be in a better position to hold what they gain against the keen competition which will surely start up after the war. The great thing to do to-day is to get the goods here; convince the Italian business man that what the United States furnishes is as good or better in quality than the goods he formerly bought; to study his needs, and to treat him in such a way that when the tide does come back, it will find certain lines of American goods firmly entrenched.

EMU PLUMES FROM BRAZIL.

[Consul A. T. Haeblerle, Pernambuco, Oct. 10.]

A local firm informs this consulate that it is interested in exporting emu plumes. It believes that it could export 1,000 kilos (2,204.6 pounds) per year, principally from April to October.

The feathers are artificially prepared here to look like aigrettes. The last lot exported to France, when prices were low, sold for 20 francs per kilo (\$1.75 per pound). They are also exported to Rio de Janeiro, Brazil. The feathers are not assorted and are sold by weight. The small ones are used for making dusters.

It is said that the birds are shot in order to obtain the feathers, but that they are found in large numbers, as they multiply very rapidly. The feathers are long and handsome.

[The consul forwarded samples of the plumes and the name of the firm wishing to export. These are available on application to the Bureau of Foreign and Domestic Commerce and its branches; refer to file 68546.]

STATUS OF LA PLATA AND CAMPANA AS PORTS.

[Consul General W. Henry Robertson, Buenos Aires, Argentina, Sept. 24.]

Because of questions which had often come up at this consulate general, especially in granting bills of health to vessels destined for the United States or the depositing of papers in this office by American vessels arriving in this country, the Administrator of Customs at Buenos Aires was asked to state whether La Plata was an independent port, or a subport under Buenos Aires, or whether it was to be considered entirely within the port of Buenos Aires and an integral part of it. The same questions were asked in regard to Campana, at which, as in the case of La Plata, considerable quantities of American petroleum are landed.

The Administrator of Customs states that, so far as concerns service in connection with port matters, as distinguished from customs service, La Plata is an integral part of the port of Buenos Aires, and that both are regulated by law No. 8389, under the superintendence of the General Direction of the Ports of Buenos Aires and La Plata, conformably to the decree of October 18, 1912. In the matter of customs service the port of La Plata is entirely independent from that of Buenos Aires and the customhouse there operates separately.

The port of Campana is independent of that of Buenos Aires in its entire mechanism, with the exception of the sanitary control of vessels, etc., which are under the charge of the National Department of Hygiene.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.....	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Fosario, Argentina.....	do.....	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 3	(a)

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 403 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

PERUVIAN BUDGET ESTIMATES FOR NEXT YEAR.

[Consul General William W. Handley, Callao-Lima, Oct. 7.]

The Peruvian Government has under consideration several projects for increasing the national revenues, which will probably be given early consideration during the present session of Congress. On October 6 the Minister of Finance submitted to Congress his estimates of the revenues and expenditures of the Government during the year 1916, calculating the total revenues of the Republic at \$13,076,042 and the expenditures at \$13,413,619, showing an apparent deficit of \$337,577.

He estimated the income of the Republic during 1916 from all sources, based on the revenues of 1915, as customs—maritime, \$3,163,225; river, \$262,791; taxes (various), \$3,645,738; Government monopolies, \$3,667,881; Government-owned wharves, \$13,117; divers revenues, \$762,483; telegraph department, \$155,728; postal service, \$433,900; wireless service, \$7,299; tax paid by the Peruvian Corporation (Ltd.), \$58,398; police and judicial fines, \$35,038; warehouse receipts, \$41,365; tax on paper money issued, \$176,167; explosives, \$7,300; school tax from municipalities, \$615,612.

Retrenchment in National Expenditures—New Taxes.

The estimated expenditures of the various branches of the Government for 1916, as set forth by the Minister of Finance, are:

Purpose.	1915	1916	Purpose.	1915	1916
Legislation.....	\$476,633	\$476,633	War and Marine.....	\$3,524,273	\$2,777,706
Government.....	2,320,023	2,417,643	Interior.....	608,991	629,477
Foreign Relations.....	238,153	275,962			
Justice.....	2,339,633	2,296,270	Total.....	14,470,435	13,413,619
Finance.....	4,852,720	4,509,919			

The reduction in the appropriations for the Departments of War, Finance, Interior, and Justice would indicate that the President's program for retrenchment in national expenditures is being put into effect, there being a decrease in the appropriations for 1916, in comparison with the present year, of \$1,056,816.

The apparent deficit of 1916 is to be offset by three new forms of taxation, projects of which have been submitted to Congress: (1) An increase of the fees of Peruvian consular officers from 1 per cent to 2 per cent; (2) an additional surtax of 0.25 centavo per kilo (\$1.22 U. S. gold per metric ton or \$1.10 per short ton), gross weight, imposed at the customhouses of Callao and Mollendo on all importations for national consumption; (3) a tax of 10 per cent ad valorem on certain articles now imported free of duty.

The Montreal correspondent of the Manchester (England) Guardian cabled that, on account of the unusual conditions of exchange prevailing in England, the city of Montreal, Canada, saved about \$40,000 on the semiannual interest charges due November 1. The amount of interest due in Great Britain was £240,652 (\$1,171,133); the saving was the difference between the par exchange at $9\frac{1}{2}$ per cent and the current rate at about $5\frac{1}{2}$ per cent. According to the Guardian, this is the first time that such a thing has occurred in the payment of interest by the city.

BETTER FINANCIAL CONDITIONS IN BAHAMAS.

[Consul William F. Doty, Nassau, N. P., Oct. 27.]

Financial conditions have considerably improved since the latter half of 1914. The legal rate of exchange has continued to be £1 sterling, equivalent to \$4.878.

The Bank of Nassau, whose paid-up capital amounts to \$48,780 and whose deposits exceed \$300,000, issues notes fully secured, according to local authorization of denominations of £1 and 4 shillings, respectively. British gold and silver are current also, sufficient for normal requirements. There is a much smaller amount of American gold and silver coins and certificates in use. The American notes, if of the denomination of \$5 and upward, are accepted as American gold. One-dollar notes usually are worth only 4 shillings. American silver half-dollar pieces are equivalent to 2 shillings and the quarter dollar to 1 shilling.

Interest Rates Become Normal—Deposits Increase.

Interest rates have become normal, at present 6 per cent, as compared with 8 per cent about a year ago. The Royal Bank of Canada, Nassau Branch, whose deposits are estimated at about \$500,000, announces a considerable increase in deposits during recent months and that its operations have indicated improving business conditions. Its buying rate for drafts is one-half of 1 per cent, sight drafts; discount, one-half of 1 per cent, 60 days; 1 per cent, 90 days; selling rate, $1\frac{1}{2}$ per cent; collections, $1\frac{1}{2}$ per cent plus one-fourth of 1 per cent on bills of lading. The selling rate during many months after the commencement of war advanced from three-fourths of 1 per cent to 2 per cent, but more recently has lowered to $1\frac{1}{2}$ per cent.

The Bank of Nassau has advanced, at 4 per cent interest, whatever funds the Colonial Government has required under the act authorizing a local loan of \$146,340 at 5 per cent interest, repayable in 20 years. A spirit of close economy is evident in legislation and in the domestic life of the inhabitants. Conditions have been hard in some communities on the Out Islands, where a few industries have been at a standstill. Despite the stringency in various quarters, there have been no mercantile failures, although settlement of obligations has frequently been delayed.

TRADE-PROMOTION WORK BY A FRENCH CONSUL.

[Consul Wesley Frost, Cork (Queenstown), Ireland, Oct. 26.]

The French consul at Dublin, Ireland, has recently been spending several days at Cork in the interests of French manufacturers and exporters. The consul, M. Jean L. des Longchamps, "was specially interested in making inquiries for those manufacturers who, owing to the cessation of certain importations, were left without materials which were very requisite for their business, because he is under the impression that all these can now be easily procured from France."

The consul gave his Dublin address to the local newspapers, with the statement that he is most anxious to give any information possible on business matters to Irish manufacturers or those looking for French goods. M. des Longchamps was accompanied during his tour of Cork factories by a representative of the French vice consulate at Cork.

TRANSMITTING PARCELS BETWEEN AMERICA AND RUSSIA.

[Commercial Attaché Henry D. Baker, Petrograd, Oct. 19.]

During the present abnormal war times, with a serious shortage existing in Russia of railway cars, and unusual delays and difficulties attending the usual methods of shipping merchandise, special importance attaches to all conveniences for sending parcels by mail. An immense increase of such business is reported at the Russian post offices, which has somewhat strained their resources.

A helpful feature of parcel-post transmission between the United States and Russia is that such mail matter goes in sealed pouches, which are apparently not opened in transit across Sweden, whereas, if the goods they contained were shipped through Sweden in other ways, they would probably be detained in that country, owing to the great variety of articles on which Sweden has placed an embargo. Individuals or firms mailing articles from the United States to Russia; however, should be careful to send certificates of American origin; otherwise such goods would have to pay double the ordinary rates of duty.

The Russian-American Chamber of Commerce in Moscow has been giving considerable attention to the subject of postal parcels to the United States, and has submitted a memorandum as to its activities in the matter, explaining the present arrangement for sending such parcels via Archangel and Great Britain. A translation of the memorandum is as follows:

At the meeting of the Russian-American Chamber of Commerce, held on August 24, the question was brought up of the extreme importance of establishing a direct exchange of postal parcels, both with and without statement of value, between the United States and Russia. At the meeting of the governing board of the chamber it was ascertained that for about five or six months after the commencement of hostilities the dispatch of parcels between the United States and Russia was a matter of the greatest uncertainty.

In February, 1915, the Head Administration of Post and Telegraph established the exchange of small postal parcels with the United States via Finland, on condition that the parcels were sent to Petrograd and could be sent only without declaration of value. On April 29, 1915, the Head Administration of the Post and Telegraph limited the parcels to the United States and excluded the dispatch from Russia of gold and silver goods, as well as money, coins, watches, etc. On August 2, 1915, the Head Administration of the Post and Telegraph stopped the acceptance of parcels destined for America via Finland and on August 3, 1915, stopped the exchange of parcels between Russia, England, and France via Archangel. Parcels intended for the United States were held until the receipt of further instructions.

The consequences to exporters and importers in America and Russia were extremely serious and the management of the Russian-American Chamber of Commerce determined to ask the Head Administration of the Post and Telegraph to establish immediately an exchange of parcels between Russia and the United States via Archangel and Vladivostok. On October 8, 1915, the Russian-American Chamber of Commerce received a notice from the Head Administration of the Post and Telegraph as follows:

"In reply to the communication of September 24, 1915, the Head Administration of the Post and Telegraph informs the Russian-American Chamber of Commerce that the acceptance of parcels of small weight destined for the United States of America and Canada, temporarily suspended in consequence of the upsetting of the exchange via Sweden, has now been renewed and takes place via Archangel and Great Britain. Instructions to this effect have been given to the executive departments of the post and telegraph."

Several steamers have been chartered by the Australian representatives of British Columbia paper mills to load "news printing paper" for Australian ports.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Hosiery, No. 19328.—An American consular officer in New Zealand reports that a business man in his district desires to act as agent for manufacturers of woollen, silk, and cotton hosiery for women and children. Samples, price lists, discounts, terms, and full information are requested. Cash will be paid against shipping documents at port of delivery.

Machinery, No. 19329.—A report from an American consular officer in Spain states that a company desires to import machinery for sensitizing photographic paper and films. References given. Correspondence may be in English.

Cotton yarns, No. 19330.—A firm in the United Kingdom informs an American consular officer that it is desirous of importing cotton yarn, suitable for covering electric bell wire, electric-light flexible cords and cables. Samples of the yarn desired may be examined at the bureau or its branch offices. (Refer to File No. 68764.)

Flour, rice, etc., No. 19331.—An American consular officer in Venezuela reports that a firm of commission merchants wishes to represent exporters of flour, rice, or any other commodity. A credit of 90 days is requested. Correspondence may be in Spanish or English.

Carpets and mats, No. 19332.—A firm in Portugal informs an American consular officer that it desires to represent manufacturers of carpets and mats, and that it is in a position to handle a large quantity. Samples of the mats desired may be examined at the Bureau or its branch offices. (Refer to file No. 68762.) Correspondence may be in English.

Agricultural implements, No. 19333.—A report from an American consular officer in the United Kingdom states that a firm desires to purchase hoes and other agricultural implements for shipment to India. Catalogues, price lists, and date of delivery are requested. References given.

Cotton waste, No. 19334.—An American consular officer in the East Indies reports that a firm desires samples of cotton waste suitable for motor cleaning. Quotations on a 5-ton lot (11,200 pounds), in bales of 560 pounds, are solicited. Terms to be arranged to suit seller. Correspondence may be in English.

Screens, No. 19335.—A commercial attaché of the Department of Commerce reports that a company in England is desirous of being placed in communication with actual manufacturers of barium platino-cyanide fluorescent screens used in connection with X-ray apparatuses. It is stated that a large quantity is wanted.

Kerosene lamp burners, No. 19336.—An American consular officer in Portugal reports that a firm in his district is in the market for kerosene lamp burners, flat and round. If prices are satisfactory, the following order will be placed at once: 1,000 flat burners, per sample No. 5; 1,000 round burners, per sample No. 6; 1,000 flat burners, per sample No. 7; 1,000 burners, per sample No. 8; and 1,000 burners, per sample No. 10. Samples may be examined at the Bureau or its branch offices. Cash will be paid against shipping documents. Correspondence should be in Portuguese.

Oxygen gas cylinders, No. 19337.—A report from an American consular officer in Spain states that a firm is desirous of importing about 400 oxygen gas cylinders, and would like to receive offers from manufacturers of this article. The cylinders preferred contain about 40 cubic decimeters and must have supported a test of 300 atmospheres. Correspondence in Spanish is preferred.

Machinery, No. 19338.—A letter to the Bureau states that a business man in Mexico desires catalogues and full information regarding machines for making pearl, bone, or horn buttons and tin spoons.

Gloves and hosiery, No. 19339.—A commercial attaché of the Department of Commerce reports that a company in Chile desires to be placed in communication with manufacturers of cotton and mercerized lisle gloves and hosiery. The hosiery is desired for children and the gloves for both women and children. Samples of each may be inspected at the Bureau or its branch offices. (Refer to File No. 875.) Note: Sealed letters should bear 5 cents postage.

SHIPMENT OF TOBACCO TO NETHERLANDS.

[Cablegram from Commercial Attaché Erwin W. Thompson, The Hague.]

Tobacco may be shipped to Holland without consignment to the Oversea Trust. [For previous notices regarding consignment to the Netherlands Oversea Trust, see COMMERCE REPORTS, Oct. 27, 1915, p. 252.]

AMERICAN IMPORTS AND EXPORTS OF COPPER.

The imports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan during the week ended November 13, 1915, were as follows: Ore, matte, and regulus (copper contents), 2,883,574 pounds valued at \$315,740; and pigs, ingots, etc., 2,739,439 pounds valued at \$461,477. Cuba and Chile furnished a large percentage of the ore, matte, and regulus, while England, Chile, Spain, Japan, and Canada, in the order named, supplied all the pigs, ingots, etc.

The American exports of pigs, ingots, etc., from the customs districts named during the week amounted to 18,874,973 pounds valued at \$3,690,214. The principal countries of destination were as follows: France, 9,650,928 pounds; Italy, 4,831,591 pounds; England, 1,805,897 pounds; Sweden, 1,459,788 pounds; and Greece, 585,942 pounds.

FISHERMEN ATTRACTED BY BUREAU'S WORK.

The work of the United States Bureau of Fisheries in surveying the black-fish grounds off the coast of North Carolina has attracted some attention to this fishery. In addition to the activities of local fishermen, a small sloop from New Jersey has engaged in this fishery for the winter, and it took 1,100 pounds of fish on its first trip. A local boat took 2,800 pounds the same week.

AMERICAN TRADE IN CEDRATS.

The report from the American consulate at Athens on the trade in cedrats in the Levant, which appeared in **COMMERCE REPORTS** for November 4, 1915, suggests a new industry for the United States. Quantities of these cedrats are imported. They might be grown in Florida and California. The domestic market would probably not be extensive, as the use of cedrats is now confined to one religious denomination, but the industry would be worth while. The chief difficulty is cultural, for the fruit requires most minute attention and must ripen in midsummer (off-season) in time for ceremonial use. However, as the fruit is especially fine for preserving, those ripening at other times could be conserved.

The Bureau of Foreign and Domestic Commerce has made an investigation of the cedrat trade in the United States, the following report being from the New York office:

"The question of the importation of cedrats into the United States was taken up with a number of the more prominent Hebrew merchants in New York and persons who were in a position to give the desired information.

"As a result of the interviews with these people, it was ascertained that they agreed that it would be well worth while for American planters to attempt to grow cedrats in the United States. About 50 years ago such an attempt was made to grow cedrats in the United States. The domestic demand for the fruit was very small, and most of the fruit was exported to Germany.

"Under normal conditions a cedrat set retails at \$1.50 to \$2 each. On account of the war there has been a scarcity, and the sets have sold as high as \$7 or \$8. The men interviewed pointed out that if cedrats could be retailed at approximately 50 cents the demand would be enormous, the Hebrew Publishing Co. establishing its estimate as high as 200,000.

"There is a small quantity of cedrats grown in California, but they are not nearly as good as those coming from Greece and do not command as high a price.

"Cedrats have been imported from Palestine and from Greece. Those coming from Greece are said to be better than those from Palestine. It takes a number of years before the plant yields a very high-class fruit, and this is a comparatively new industry with Palestine.

"It was impossible to ascertain the exact figures as to the amount of cedrats imported which remain in New York. Approximately 65 per cent remains in New York and the balance is sent into other cities of the United States."

BRITISH DEMAND FOR GENERAL HARDWARE.

[From report of Canadian Government Trade Commissioner, Birmingham, England, Oct. 19.]

Inquiries continue to be received for mechanics' hand tools, galvanized wire, wire rods, dowels, wooden handles, wire nails, screws, nuts, and bolts, washboards, and twine. One firm expresses the general opinion of the majority of firms handling ironmongers' supplies: "As you are no doubt aware, trade is very good in this country. Any quotations you can obtain for us from Canada will be gladly welcomed and considered."

FINANCIAL AND BUSINESS OUTLOOK IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Oct. 11.]

Business conditions in New Zealand continue excellent, considering the times, and American exporting interests can come after this business with confidence, for the future looks good. Money is easy and the trade balance is decidedly in favor of this country and promises to continue. The New Zealand Trade Review covers the matter clearly in the following:

For the twelvemonth ending with August 31 our exports reached the record total of \$136,531,779, while our imports only totaled \$93,929,499, leaving a handsome surplus of \$42,602,280. In ordinary times such a surplus would mean a supply of money more than the local market could comfortably find suitable investment for. However, conditions are much changed through the war, and it is not easy to raise loans outside the Dominion. The Government is raising a loan of \$9,733,000 locally at 4½ per cent free of income tax, and this, with the usual outside interest obligations to be met, will absorb a fair proportion of the surplus. It appears to us, however, that there will still be an ample supply of funds available for all ordinary business requirements. Mortgage rates are liable to be somewhat firmer, owing partly to the higher standard of rates set by the Government loan, and also to the fact that the provisions of the moratorium act make this class of business a less-favored form of investment than formerly.

American imports are on the increase, but not to the extent that conditions seem to warrant, for the reason that not enough personal work has been done here during the past year.

American exporters should offer their wares to the New Zealander rather than to wait for him to come after them. Such a move would pay in the end, as it has in the past when it has been tried.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expira- tion of venue.	Address.
Summers, Madio.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D.C.
Maynard, Lester.....	Amoy, China.....	do.....	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.....	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D.C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argen- tina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 10	(a)
Chamberlain, George A. b.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotos Club, 110 West Fifty-seventh Street, New York City.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

^b Consul George A. Chamberlain, of Lourenco Marques, reports his arrival in the United States and gives his address until Dec. 31, 1915, as the Lotos Club, 110 West Fifty-seventh Street, New York City.

JAPAN FURTHERS DYESTUFF ENTERPRISE.

[Extract from Japan Mail of Oct. 15, by Consul General George H. Scidmore. For previous announcement regarding this Japanese dyestuff enterprise see COMMERCE REPORTS for Oct. 2, 1915.]

Detailed regulations relating to the enforcement of the Japanese Dyestuffs, Medicine, and Chemicals Manufacture Encouragement Law were proclaimed yesterday in the form of an imperial edict and departmental orders.

According to these more than 6,000,000 yen (\$2,988,000) should be the capital in the case of a company which specializes in the manufacture of dyestuffs, and more than 1,200,000 yen (\$597,600) in the case of a company manufacturing glycerine and carbolic acid, the material of explosives. In each case the subsidy from the Government will be granted only to one company. Anyone who desires to organize a subsidized company is requested to apply to the Minister of Agriculture and Commerce for permission to establish his projected company. When the capital is paid up, the first general meeting of the shareholders completed, and the new company duly registered in the court, the promoters of the company are entitled to ask for a subsidy.

The Government is bound to subsidize the company so as to enable it to pay a dividend of 8 per cent per annum, making up the deficit if any exists. The company must lay aside one-twentieth of its net profits as a reserve fund. If its shares be issued above par, the balance must be included in the reserve fund. Besides a special reserve fund is to be provided in order that it may become self-supporting as soon as possible. To this fund will go one-half of the excess of the net profits from which 8 per cent per annum dividend has been paid. The rest of the excess may be distributed among the shareholders. The maximum of the dividend out of this source shall not, however, exceed 4 per cent per annum. The residue must be included in the special reserve fund. On the other hand, the conduct of the subsidized company is to be placed under the strict surveillance of the Government.

[Japan Mail, Oct. 16.]

Prompt Planning for Dyestuff Company.

The authorities appear to be very hopeful regarding the dyestuff company promotion, declaring that the company may be organized before the end of the month; that is, before Baron Shibusawa, who is acting as mediator between the Government and the private business men concerned, leaves for the United States. In business circles, however, the whole affair is viewed in a different light, private interests not being at all reconciled to the official plan of rigid control, and therefore reluctant to joint the scheme as promoters. The points of dissent will be submitted to a conference of experts, which will be convened at the Department of Agriculture and Commerce on October 17.

The principal difficulty is the ministerial limitation to protection and the resulting loss to the unprotected manufacturers. Under the official plan a semiofficial plant is to be organized in Kyushu to distill raw material produced by the Government Iron Foundry, and only laboratories are to be organized in Tokyo and Osaka. The mills

already in operation in these cities are thus left outside of the new concern and must meet competition from the powerfully officially protected company. It will not be an easy task to relieve the clash of interest between the protected company and the business community.

AMERICAN TRADE FIGURES FOR LAST WEEK.

The imports, duties collected, and exports for the week ending November 20, 1915, at 13 principal customs districts of the United States were:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah).....	\$10,495	\$200	\$422,027
Massachusetts (Boston).....	3,039,804	247,774	2,018,633
New York.....	17,182,185	3,079,771	66,413,506
Philadelphia.....	1,115,874	186,849	2,123,167
Maryland (Baltimore).....	479,984	49,654	2,031,570
Virginia (No. folk).....	25,958	45,744	1,601,912
New Orleans.....	1,515,493	19,409	2,511,327
Galveston.....	24,396	3,458	3,139,449
San Francisco.....	342,579	12,546	1,673,094
Washington (Seattle).....	3,513,470	37,071	1,799,811
Buffalo.....	920,131	33,784	1,641,923
Chicago.....	491,244	139,645	68,086
Michigan (Detroit).....	750,302	40,786	3,153,285
Total.....	29,412,374	3,927,701	87,997,794

The above figures show a favorable balance on merchandise transactions for the week ending November 20 in the 13 customs districts of \$58,585,420. The 13 districts cited handled about 91 per cent of the import and export business of the country, based on the transactions in September, 1915.

Cotton exported during the week ending November 20 amounted to 98,279 bales, making the total since August 1, 1915, approximately 1,704,223 bales.

AMERICANS HOPE TO EXTEND FILTER-PAPER INDUSTRY.

An interesting problem has arisen from an informal conference at the United States Bureau of Standards. A paper company in this country has become interested in the manufacture of filter paper of the highest grade, the supply of which is being rapidly exhausted. The company sent an expert to the bureau to obtain all possible information relating to the manufacture of such paper.

English paper mills at this time are making a determined effort to get control of the American market, now that the German mills are unable to supply this important grade. The bureau therefore considers that it is an opportune time for starting this new branch of an important industry, and is making every effort to furnish the desired information.

Samples of various makes and grades are being examined, and specifications for both the paper and its performance under given conditions are being determined. The facts obtained will be supplied to any mills attempting to make this grade of paper.

HONGKONG PIECE-GOODS MARKET IMPROVED.

[Consul General George H. Anderson, Hongkong, Oct. 2.]

After a year of waiting and of work to dispose of stocks on hand, Hongkong piece-goods importers have started to buy in comparatively heavy volume for next year's trade, and the closing months of 1915 are likely to show marked activity in purchases, though sales will probably not keep pace with them.

The marked advance in the price of goods in Europe and the general cotton situation as reported here have led to current action, although it has been felt for some time that it was only a matter of a comparatively short time before purchases in considerable volume would be made. For more than a year the market has rested under heavy stocks and small demand. With the opening of the current season the trade found itself with stocks of such size and nature that even good clearances could bring no relief before summer. Clearances so far during the year have not been as large as was anticipated and they are not very satisfactory at the present time, in spite of the fact that a considerable volume of goods is moving at prices for which the goods could not be duplicated at the factories.

Prices in grays and whites still ruling here are far below quotations in Europe and the United States for similar goods. In fancy goods home prices have so far risen as to almost entirely shut off sales here for the time being. Everything considered, however, piece-goods experts in this market consider the situation far better than it has been since the outbreak of the war.

There is also a fair demand for woollens, the first recovery in this market since the year following the Chinese revolution. Prices are now so high that little trade will probably be done for some time, but the tone of the market in such goods is distinctly improved.

The volume of business in cotton yarn has fallen off greatly as a result of the advance in prices. With the present level of prices, the year will close with a dull yarn market.

In the piece-goods market generally there is a much stronger demand for American goods than has existed for years, the impression being that American prices, quality for quality, are much more favorable than they have been heretofore. American manufacturers also seem more disposed to meet special demands of the market in a way to invite business. It is noted in local piece-goods circles that British piece-goods representatives are not so closely in touch with the market as they have been, hardly a single Manchester or Bradford traveler having visited this port for months.

EUROPEAN LINE BY JAPANESE COMPANY.

[Extract from Japan Times of Oct. 20, by Consul General George H. Scidmore, Yokohama.]
New Osaka Shosen Kaisha Service.

It is reported that in view of the prosperity of trade on the European line the Osaka Shosen Kaisha has decided to open a service on the line side by side with the Nippon Yusen Kaisha, having already ordered four vessels of 12,000 tons each from the Osaka Iron Works. One of these ships will be completed by the end of next year, while the other three will be begun in the early part of next year, a fleet of European vessels being thus completed by the first half of 1917. When the scheme is realized the company's affairs in London will be taken charge of by Samuel & Samuel.

INDUSTRIAL AND COMMERCIAL CONDITIONS IN CANADA.

[Consul General John G. Foster, Ottawa, Nov. 9.]

Evidence of greatly improved industrial and commercial conditions in Canada is steadily accumulating, the splendid agricultural crops being largely responsible. In some instances they are more than double those of the previous year.

Every able-bodied man should have full employment during the coming winter. The employment of women in factories is also likely to be larger than usual, and for the immediate future at least the financial situation of the Canadian people is much better than at the close of 1914.

The railway earnings show striking gains. During October the three big Canadian railway systems reported earnings amounting to \$21,656,191, an increase of 34.2 per cent over October, 1914; during each of the previous six months of 1915 decreases resulted from railway operations as compared with the corresponding months of 1914.

Canadian bank clearings for the week ending October 28, 1915, amounted to \$192,516,066, an increase of \$33,776,375 compared with the similar week last year.

The Dominion revenue for October amounted to \$14,440,333 as against \$10,641,254 in the corresponding month last year. For the seven months from April 1 to October 31 the revenue was \$87,683,848, or nearly \$7,000,000 greater than in the like period of the calendar year 1914. The ordinary expenditures during this seven-months period amounted to \$56,347,603, or about \$9,000,000 less than for the like period of the previous year. The extraordinary and capital account expenditures during these seven months were \$74,013,915, of which total \$53,359,158 were outlays occasioned by the war.

The net debt of Canada on October 31, 1915, amounted to \$492,528,492, an increase of \$139,853,093 as compared with the October 31, 1914, statement.

It has been officially announced that a Domestic Dominion loan of probably \$50,000,000 will be offered for popular subscription about the end of the present month.

ALCOHOL STOVES IN CANADA.

[Consul O. Gaylord Marsh, detailed as vice consul at Ottawa, Nov. 9.]

A noteworthy feature of drug-store and hardware-store window displays in Ottawa has been the prominence given to alcohol stoves of American manufacture. Many of the stoves exhibited are small and are designed to use solidified alcohol. Larger stoves with grates and having considerable utility value are also carried in stock and displayed.

The German-made alcohol stove, due to its quality and cheapness in price, was a strong competitor in this market previous to the war. By way of comparison, an American liquid alcohol stove with one grate sells at about \$5, while a similar stove of German make formerly sold at about \$3. Considering the large number of these stoves displayed it would seem that there should be ample inducement to American manufacturers to make a determined effort to maintain their products in this market, even when competition again becomes greater.

CANADIAN SUBSIDIES FOR AGRICULTURAL PURPOSES.

[Consul General R. E. Mansfield, Vancouver, British Columbia, Oct. 30.]

In 1913 the Federal Government appropriated \$500,000 to be divided among the various Provinces in the Dominion, on the basis of population, to supplement their own expenditures for agricultural purposes. British Columbia's grant was \$47,335. Pending the establishment of an agricultural college, the appropriation was used for the following purposes:

Women's Institutes	\$2, 500
Farmers' Institutes	5, 000
Demonstrations in crops and poultry	7, 500
Demonstrations in dairying	5, 000
Demonstrations in horticulture	2, 500
Cow testing	2, 500
Instructors in agriculture	7, 500
School gardens	1, 000
Demonstrations in field work	2, 500
Live-stock judging	1, 000
Fruit-packing schools	1, 000
Bulletins	2, 500
Miscellaneous	4, 335

These services are a considerable and useful addition to the activities which the Province conducts with its own funds.

ARBORICULTURE IN PERSIA.

[Vice Consul Ralph H. Bader, Teheran, Aug. 14.]

Except in the Provinces bordering the Caspian Sea and in Kurdistan, where there is sufficient rainfall, there are no natural forests in Persia. On account of the lack of transportation facilities, all the timber consumed in the great plain of Iran is grown locally by irrigation. The trees that one learns to associate with every Persian landscape are the poplar and the plane tree, which the Persians call the Chenar. The plane tree requires very little water, grows quickly, and attains to an immense size and great age. The natural form of plane trees is spreading, but the Persians plant them in dense rows, and by lopping off the branches when young and by constant thinning these trees grow to a great height.

The area of a cultivated wood is generally not large, the usual size being 3 to 6 acres. The plane tree and the poplar serve for building purposes in Persia, as does the pine in the United States. Great groves of walnut are also grown in the north of Persia, the nuts being used for food. So scarce and costly is wood in Persia that even branches and the trees that are removed from the groves when the size of a man's finger are carefully collected and transported to the towns to be used for firewood and for other purposes.

CONSULAR TRADE EFFORTS IN BRITISH GUIANA.

[Consul George E. Chamberlain, Georgetown, Oct. 1.]

As a result of the efforts of this consulate during the past quarter 10 American agencies have been placed in this district, also an American equipment for a first-class 3-chair barber shop. The new agencies include the following lines: Cotton piece goods, collars, neckwear, ladies' underwear, gents' underwear, bags and trunks, leaf tobacco, and general imports.

IMPROVED COPRA CURING IN PHILIPPINES.

[Manila Daily Bulletin, Oct. 7.]

Bureau of Agriculture officials at Manila have returned from inspecting a modern copra drying plant recently constructed in the center of a big coconut district near Magdalena, Laguna Province. This plant cost about \$10,000, according to the statement of the proprietor, and is probably the most modern plant in the Philippines. The building has concrete floors and walls and an iron roof, and is practically fireproof. The drying plant consists of a row of 36 connected ovens, each with a capacity of six big trays of coconuts. The capacity of the plant is estimated at 150 piculs (20,000 pounds) of copra every 24 hours. The copra is dried by hot air from a furnace which is fed by coconut husks. This hot air is forced through the ovens by a big revolving fan, which is run by an oil engine. The floor of the ovens is of sand, which helps to hold the heat. Big perforated pipes extend at the top from oven to oven, thus equalizing the distribution of the hot air. An excellent quality of white copra is produced. The factory has only been in operation a short time, and none of the copra has been marketed, but it is of such excellent quality that it is sure to command a fancy price.

PRESENTS SURVEY OF PERUVIAN SUGAR INDUSTRY.

[Consul General William W. Handley, Callao-Lima, Sept. 30.]

An interesting pamphlet has been issued by the minister of Fomento containing detailed statistics and a general survey of the sugar industry in Peru during 1914.

As regards the production of sugar, raw and refined, the quantity increased from 183,954 metric tons in 1913 to 228,055 tons in 1914, a difference of 44,100 tons (metric ton=2,204.62 pounds). The area of cane under cultivation was 100,640 acres. The number of laborers employed in the industry is given as 21,881. The consumption of sugar in the Republic during 1914 is estimated at 33,072 metric tons. The exportation of sugar in 1914 amounted to 176,670 metric tons, or an increase of 32,769 tons over the preceding year.

The pamphlet contains also facts about the production and consumption of alcohol and furnishes a complete list of the sugar plantations of the Republic.

[A copy of the publication will be loaned to interested persons who apply to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 68325.]

RECORD YEAR FOR SWEDISH STATE TELEGRAPHS.

[Consul General Ernest L. Harris, Stockholm, Oct. 20.]

According to an estimate of the Director of the Swedish State Telegraphs the present year will be a record one as concerns the number of messages sent and the increase in the income connected therewith. It is calculated that the receipts in 1915 will amount to \$2,432,000 contrasted with \$2,160,000 in 1914. The increase in the income of the telephone service this year over 1914 will amount to \$830,000.

ONTARIO HOTELS MAY HAVE ROPE FIRE ESCAPES.

[Consul O. Gaylord Marsh, detailed as vice consul, Ottawa, Canada, Nov. 10.]

The Revised Statutes of Ontario, dealing with the prevention of accidents by fire in hotels and other similar buildings, provide for rope fire escapes. The law says:

The keeper of every hotel shall provide and keep in each of the sleeping apartments or bedrooms which are above the ground floor, a fire escape for the use of guests occupying the same.

Such fire escape shall be sufficient within the meaning of this act if it consists of a rope not less than three-quarters of an inch in thickness, and of sufficient length to reach from the room or apartment in which it is kept to the ground below, and is kept in a coil or other convenient position in each of said bedrooms or sleeping apartments; and if the outside window or opening of such sleeping apartment or bedroom is provided with proper, secure, and convenient fastenings or appliances to which one end of the rope may be safely secured or fastened; provided that the provisions of this subsection shall be deemed to be sufficiently complied with by the substitution for the rope therein mentioned, with the approval of the inspector, of the fire escape known as the "natural-drop fire escape," consisting of a cylindrical casing made of canvas or any other suitable material, and provided at the top with a metal ring supported by chains from the window, the lower portion of the casing extending into proximity with the ground.

In case any hotel is provided with outside stationary or other fire escapes, differing from what is herein provided for, by means of which, in the opinion of the inspector of the license district in which any such hotel is situated, a reasonable, safe, and convenient means of egress from the sleeping apartments or bedrooms is provided in case of fire, the same shall be deemed a compliance with this act, so far as relates to all sleeping apartments or bedrooms from the outside windows or openings of which there is access to the said fire escapes.

The rope fire escapes observed have a substantial ring fastened to the window casing, a rope being securely fastened to the ring and neatly coiled and hung on the wall by the side of the window. The equipment is quite inexpensive and not unsightly.

PLANS TO HANDLE LUMBER TRAFFIC OF NORTHWEST.

[Commercial Agent W. B. Henderson, Seattle, Wash.]

Plans to handle the heavy traffic from the lumber belt of the Olympic Peninsula have been made in connection with the completion, a few days ago, of the track of the Seattle, Puget Sound & Western Railway to a connection with the Port Townsend & Puget Sound Railway. Both roads are subsidiaries of the Chicago, Milwaukee & St. Paul Railroad, and in the taking over of the Puget Sound railroad all trestles have been filled and the roadbed has been placed in condition to handle the lumber shipments.

The company is constructing a three-track line from the slip at Port Townsend, and a barge service to Seattle, which will be operated from Portage to Seattle. Another line which adds considerably to the transportation facilities at the head of the Puget Sound section has been finished by the laying of tracks on $7\frac{1}{2}$ miles right of way of the Oregon-Washington Railroad & Navigation Co.'s line from Plum Station to Olympia, thus giving to that city two transcontinental lines for the first time in its history. The new line will connect with the Northern Pacific at Point Defiance, near Tacoma.

SANTO DOMINGO'S EXPORTS TO UNITED STATES.

[Vice Consul Robert K. Williams, Santo Domingo, Oct. 2.]

The total value of the declared exports from Santo Domingo, Dominican Republic, to the United States and Porto Rico for the quarter ended September 30, 1915, shows a marked decrease, when compared with the corresponding quarter of 1914. During the 1914 quarter there was one month which was not affected by the war. At present there are no exports to Europe, such as formerly went via the United States, and there has been a great falling off in grand totals. There are no cases of "optional reshipment to Europe," by way of the United States, as in the corresponding quarter of 1914.

During the September quarter of 1914, \$95,284 worth of sugar was shipped from this port to the United States, of which \$14,957 was billed "optional reshipment to Europe," while in the quarter just ended not a single shipment of sugar is reported, for the reason that the market was better earlier in the calendar year, the sugar producers were able to sell their product to a much better advantage, and they did not have to hold it for an advance in the market as they did last year. If, therefore, the amount of sugar is deducted from the total, the exports of the September, 1914, quarter to the United States and Porto Rico fall very much below the exports of the corresponding quarter in this year.

Cacao shows an increase this year, coffee a falling off, and hides and skins an increase. The sugar men declare the war has been to their advantage, enabling them to sell for a better price than if they had to meet the competition of the European sugar-beet producers. Products which were formerly shipped to Europe are now going to the United States and Porto Rico, and in return the Dominicans are purchasing more from the United States than they did prior to the war.

The exports to the United States from Santo Domingo for the September quarter amounted to \$63,508, compared with \$126,860 for the corresponding quarter in 1914. Shipments of cacao were valued at \$31,426, compared with \$22,078; coffee, \$3,303, compared with \$12,498; goatskins, \$5,591, compared with \$2,738; hides, 11,114, compared with \$6,653; and wax, \$10,358, compared with \$5,518.

AMERICAN SOAP FOR THE AZORES.

[Consul Walter H. Schulz, St. Michaels, Oct. 30.]

Inquiries have been received at this consulate regarding American soaps. An article comparing favorably with an English product known as "Sunlight Soap," seems to be in demand. About \$75,000 worth of soaps, including the toilet variety, are imported by the Azores annually. Samples of the most popular local brands will be sent to American firms interested in the market. Such firms are invited also to submit samples of their products for the commercial exhibit of the St. Michael's consulate. Only cheap and moderate-priced articles should be sent, as the market can not absorb others. A cold-water laundry soap, it is suggested, would have a good sale, as clothes are not boiled by a majority in the washing process.

All samples should be sent through the mails, divided in small parcels and plainly marked with the word "samples," and addressed "American Consulate, St. Michael's, Azores."

SIAM'S FRONTIER TRADE WITH BURMA.

[Vice Consul Carl C. Hansen, Bangkok, Sept. 10.]

Siam's frontier trade with Burma has received considerable attention lately, owing to the extension of the Siamese northern railway, which is now under construction. In about two years the road will reach Chiangmai, the northern capital of Siam, and with its completion much of the Siam-Burma transfrontier trade will be diverted to this new route.

The caravan trade routes pass in two distinct directions, one between Burma and northern Siam and the other between Burma and southern Siam, but figures are given for the combined trade of both of these routes. The present method of transportation is by Shan ponies and pack mules.

According to an official statement recently issued by the Burmese Government the overland trade between Siam and Burma for 1914-15 amounted to a total of \$3,380,077 gold, against \$3,257,090 for the previous year.

Increases Shown in Import and Export Trade.

The value of the imports from Burma to Siam for 1914-15 was \$1,432,175, while the exports from Siam to Burma totaled \$1,947,902, as compared with \$1,398,273 imports and \$1,859,517 exports for the preceding year.

The values of the principal imports from Burma were: Cotton yarn and piece goods, \$270,351; wearing apparel, \$60,989; silk piece goods, \$42,878; metals and manufactures of, \$36,431. The biggest import item consisted of 2,607,976 silver rupees, but of these, however, 1,661,681 (\$539,101) were reexported to Burma. The rupee, the standard silver coin of Burma, has a large circulation in northern Siam, because the Burmese teak-timber contractors in Siam receive their pay in this currency, which they subsequently return to their own country.

The chief frontier exports from Siam to Burma during 1914-15 consisted of 572,655 cubic feet of teak timber, valued at \$362,401, which was floated to Burmese ports by way of the Salween River; 17,556 head of cattle, \$295,254; 246 elephants, \$397,022; native drugs, \$1,460; jewelry and precious stones, \$2,657; silk piece goods, \$91,147; and native tobacco, \$6,353. The 246 elephants imported from Siam were for use in teak-timber extraction from the Burmese forests.

Cultivation of Rice One of Chief Industries.

The population of northern Siam numbers about 2,500,000, and cultivation of rice, which is their staple food, is one of the chief industries, but as a rule only sufficient rice is grown for local consumption, and there is no surplus for export.

The most important industry in this district is teak logging, but for the fiscal year ended March 31, 1915, the teak logs which passed the duty station at Paknampoh numbered only 58,888, while the yearly average number of logs floated by river to this station is about 100,000, and besides these about 20,000 logs pass yearly by the River Salween to Moulmein, Burma.

Pebble manufacture is a new industry in Nevada. Foreign pebbles for grinding cement, etc., imported into the United States in 1914 had a value of \$479,146.

POTASH FROM THE SEAWEED OF THE SARAGOSSA.

[Commercial Agent Thomas H. Norton.]

The current shortage of potash compounds has assumed most serious dimensions. The ordinary commercial chloride of potash (80 per cent muriate of potash) is now quoted at \$600 per ton. The rate in July, 1914, was \$38.

Attention has been directed to the possibility of exploiting deposits of seaweed which are present in such abundance in the so-called Saragossa Sea of the Central Atlantic. Vast amounts of this seaweed are thrown upon the coasts of the Bahamas. In one harbor, the accumulations of hundreds of thousands of tons render at times navigation almost impossible.

The dried kelp obtained from this seaweed contains on an average 9 per cent of potash. In a recent communication by Consul W. F. Doty, of Nassau, it is suggested that efforts should be made on a large scale to exploit this source of potash. Concessions might be obtained for operations on the Bahama Islands, or the work could be carried on directly in the Atlantic.

Although this source of potash-bearing material lies so near to the seaports of the Southern Atlantic States, where such large amounts of potash are currently required as fertilizer, it would appear doubtful whether the proposition offers any advantage over the utilization of the kelp on our Pacific littoral.

Kelp from Pacific Coast Contains More Potash.

As shown in the recent report issued by this Bureau on "Potash production in California and potash from kelp," the dried kelp from the Pacific coast contains 18.9 per cent of potash. The nitrogen content is also far higher than that of the seaweed in the waters of the Atlantic.

The desirability of securing potash at any price whatever is now so marked that it might possibly be well to consider the question of undertaking an exploitation of the Saragossa weed.

Full data concerning this seaweed can be obtained from the Marine Biological Bureau of the Carnegie Institute at Washington. A prominent fertilizer company in Georgia has also instituted investigations in this connection and it plans to send an expedition to the Bahamas for further exploration.

In the meantime the efforts to perfect and expand the production of potash from the kelp of the California coast are being advanced on a scale of increasing importance. There is but little doubt that, in harmony with the suggestions contained in the recent studies on this subject published in *COMMERCE REPORTS*, the California production will be enormously augmented in the early future. There is great hope that it may prove of the most pronounced value in relieving the potash famine at present so much felt in the tobacco and cotton fields of the South.

[A more extended discussion of potash production in California, by Commercial Agent Norton, of the Bureau of Foreign and Domestic Commerce, was published in *COMMERCE REPORTS* for June 12, 1915.]

"Silver Fox Farming," just issued, discusses sites, methods of breeding, costs and profits; for sale at 5 cents by Superintendent of Documents, Washington, D. C.

AUSTRALIAN COMMERCIAL NOTES.

[Consul General J. I. Brittain, Sydney, Oct. 21.]

Good Bank Conditions.

The Sydney banks indicate a substantial increase in deposits. The September, or winter quarter, just closed, is not a period when deposits usually grow, but it indicates increased deposits over the June quarter of \$8,726,528, and for the year \$35,038,800. Many people have let their deposits accumulate in preference to investing them either in securities or property, and the recent Commonwealth loan has not perceptibly checked the accumulations.

Exhibition of British Manufactures.

The Sydney Chamber of Commerce has decided to hold another Trade Fair similar to the recent one, at which were exhibited Australian and British manufactured goods. At present 64 firms have signified their desire to exhibit. The tendency will be to encourage the sale of goods manufactured in the British Dominions.

Higher Duty Wanted on Rubber Goods.

Sydney papers report that a delegation representing the rubber-workers' union waited upon the Australian minister for customs and requested that a duty of 100 per cent be placed on imported rubber goods. The president of the union said they did not fear British competition but deprecated the present trend of trade toward America. He stated that the imports from the United Kingdom in 1907 were \$661,844, or 58 per cent of the imports, and in 1913 \$1,182,559, or 40 per cent of the imports, but at present the bulk of the rubber imports were from the United States. Recently American manufacturers have taken substantial orders for automobile tires in Australia and New Zealand.

Demonstrating Machinery.

A man interested in the Colonial Sugar Co. of Australia told me to-day that American manufacturers of cane-cutting machinery were sending moving-picture films here to demonstrate the working of cane-cutting machines which they wish to sell. The enterprise of the American manufacturers is highly appreciated.

Drought Affects Sugar-cane Growing.

Sydney newspapers say that the drought in the sugar-growing districts of northern Australia continues unabated; in two of the leading districts there has been no rain during the last month. Where irrigation was not available there has been no planting, though in irrigated areas some fine crops can be seen. Kalamia Mill has now finished crushing; the tonnage of cane being 17,000 as against 72,000 last year. In another district 20 points of rain is said to have fallen during the month of September. The total to the end of September this year was 21 inches, as against 58½ inches to the end of the month of September, 1914.

Japanese Ship Subsidy.

A news item published this morning from Melbourne says the Japanese Government has notified the Department of External Affairs that the following are the Australian subsidies under the navigation contracts for the next four years: 1916, \$86,332; 1917, \$79,616; 1918, \$84,190; 1919, \$93,631.

TRADE EXPANSION AND INTELLIGENCE BUREAU.

[Commercial Attaché William C. Downs, Melbourne, Australia, Oct. 1.]

A meeting called by the Lord Mayor of Melbourne to consider the formation of a Trade Expansion and Intelligence Bureau, which has been advocated by Melbourne's evening paper, was held at the Town Hall on September 15 and attended by about 200 of the leading merchants and manufacturers of the city. The following resolution was adopted:

That with a view to increasing Australian production and manufacture, increasing our over-sea trade, and finding new markets at home and abroad, a Trade Expansion and Intelligence Bureau be established, and that a committee be appointed from this meeting to form a constitution and devise ways and means of carrying out the object in view.

Considerable diversity of opinion was expressed at the meeting as to the scope and usefulness of such a bureau. If it were to be purely of a local character, it was considered by many speakers that its functions could be as well performed by the existing Chamber of Commerce and Chamber of Manufacturers. On the other hand, the promoters of the enterprise voiced the desire and intention of inviting the cooperation of the other States of the Commonwealth, and undertook to communicate with the mayors of other Australian cities with a view to the formation of similar bureaus in those cities which would be associated with that of Melbourne. It was also hoped that recognition and practical support might be received from the Federal and State Governments.

Tentative Plan of Organization.

A committee of 24 was appointed by the lord mayor to put into effect the provisions of the resolution. This committee has had several meetings, but has not as yet perfected plans of organization. The general propositions, however, are:

That a trade expansion and intelligence bureau be established in a convenient and central position in the city.

That importers, exporters, manufacturers, and any person engaged in the production or distribution (wholesale or retail) of commodities be eligible for membership.

That a register of trade opportunities offering in Australia and abroad be opened at the Bureau, with the most up-to-date information available as to markets, shipping facilities, agencies, etc.

That the register be free for inspection by members, and that, in addition, facts of special importance be circulated among members in the form of bulletins.

That communication be opened with trade organizations at home and abroad for the exchange of reports and cooperative effort for mutual advantage.

In the general propaganda made by the Melbourne newspaper, which originated the plan, frequent references have been made to the excellent organization of the United States Bureau of Foreign and Domestic Commerce and the very valuable aid given by it to American manufacturers in the practical promotion of the sale of their goods in foreign countries.

Correction.

In the table on page 2 of Supplement to COMMERCE REPORTS No. 50a (British India), published on November 15, 1915, the value of the exports from Calcutta to the United States in 1913-14 should read \$60,121,714 instead of \$80,121,714.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Paper, shoe laces, hosiery, etc., No. 19340.—A commercial agent of the Bureau reports that a man in the United States desires samples and prices on the following articles for firms in Uruguay: Boot and shoe laces; waste, and toilet paper; toilet soaps; face powder; drugs and chemicals of all kinds; feather and fiber dusters; shoe creams; rubber heels; wooden toothpicks; silk, cotton, and lisle hose; etc.

Automobiles and accessories, etc., No. 19341.—A letter to the Bureau states that a man in Norway desires to establish commercial relations with manufacturers of automobiles and accessories, electrical materials, and machinery for manufacturing pneumatic automobile and cycle tires and tubes, and tin cans for "brisling."

Chemical products, No. 19342.—An American consular officer in Spain reports that a commission merchant desires to purchase large quantities of chemicals, such as chloride of lime, chloride of calcium, and acetone. Bank reference given. Correspondence may be in English.

Woolen cloth, paper, furniture, etc., No. 19343.—A commercial attaché of the Department of Commerce reports that a man in Chile wishes to represent American exporters of woolen cloth for men's clothing, all kinds of shirtings, cheap grades of stockings and socks, furniture of every description, all kinds of paper, cheap jewelry, combs, etc. Bank and commercial references furnished.

Sweaters, No. 19344.—A report from an American consular officer in England states that a firm in his district wishes to import cotton or woolen sweaters, in all colors, for women and children, for shipment to South Africa. Price f. o. b. American port, but not to exceed \$7.50 per dozen. Bank references furnished.

Beef, vegetables, condensed milk, etc., No. 19345.—A commercial agent of the Bureau reports that a firm would like to be placed in communication with exporters of salted beef (not frozen), corned and preserved beef, salted vegetables, condensed milk in tins and barrels, turpentine, powdered starch, macaroni and vermicelli, edible oils, etc. It is stated that these articles are to be exported to Sweden and the Netherlands.

Newspapers, window glass, soap, etc., No. 19346.—A commercial agent of the Bureau reports that a man in India desires to purchase the following goods: Newspapers packed in 5 hundredweights per bale, window glass, soap, caustic soda, and tartaric acid.

Motorcycles and automobile accessories, No. 19347.—A letter to the Bureau states that a firm in Norway would like to communicate with manufacturers of motorcycles and automobile accessories, such as headlights, lamps, horns, air cocks, priming cups, and lubricators, etc.

Combs, underwear, hosiery, etc., No. 19348.—The Bureau is in receipt of a letter stating that a man in Ireland desires to be placed in communication with firms manufacturing combs, underwear, and hosiery for women and children, corset laces, boot and shoe ornaments, cheap buttons, and gloves for women and children.

Chemical products, No. 19349.—An American consular officer in Spain reports that a man in his district desires to be placed in touch with manufacturers of chemicals, such as chloride of lime and chloride of calcium. References given. Correspondence may be in English.

Lard, bacon, tobacco, etc., No. 19350.—A report from an American consular officer in the Canary Islands states that a man would like to establish commercial relations with manufacturers or exporters of lard; bacon; tobacco (Kentucky preferred); boots and shoes for men, women, and children; cotton and worsted hosiery; felt hats; and confectionery. Correspondence in Spanish is desired.

THE SWISS IMPORT TRUST.

[Cablegram from the American consulate general, London.]

The Foreign Office announces that the Swiss import trust, called Societe Suisse de Surveillance Economique, commenced operations November 16 as the only authorized consignee in Switzerland of shipments from allied countries of contraband and embargoed articles.

MARKET FOR TOMATO SAUCE IN NORWAY.

[Consul Maurice P. Dunlap, Stavanger, Oct. 14.]

Inquiries have recently been received concerning American tomato sauce suitable for packing fish. As stated in a recent report [published in COMMERCE REPORTS for October 8], Italian tomato sauce has been used almost exclusively in the past by the Norwegian fish factories. Since Italy's entrance into the war, however, there has been considerable speculation as to the continuance of adequate supplies from that source, and very recently it has become apparent that some part of the supplies will have to be imported from other countries. The Italian tomato crop of the last season was not large, as the Italian Government had much of the tomato land planted to corn, and in addition the yield per acre was below normal.

Prices of tomato sauce have risen to as high as 75 shillings per 100 kilos (\$8.30 per 100 pounds), delivered at Stavanger. This is from 50 to 100 per cent higher than the prices prevailing before the war.

Six of the local commission agents are anxious to receive samples and quotations from American firms. One of these agents states that samples of American sauce received during the last month were too thin. This particular importer wants the "double concentrated" sauce if possible.

[The names of the six agents may be obtained from the Bureau of Foreign and Domestic Commerce or its branches. Refer to file No. 68188.]

BIDS FOR SURVEY STEAMERS.

Sealed proposals will be received by the United States Coast and Geodetic Survey, Washington, until December 30, 1915, at 12 o'clock noon, for the purchase of the Coast and Geodetic Survey steamers *Gedney* and *McArthur*. These vessels are now at Seattle, Wash., where prospective bidders may inspect them at any time. The exact location of the vessels can be had on application to the inspector, United States Coast and Geodetic Survey, 202 Burke Building, Seattle, Wash.,

Each bid for each vessel must be accompanied by a certified check in the sum of \$250, payable to the order of the Superintendent of the Coast and Geodetic Survey. The checks of unsuccessful bidders will be returned immediately after the acceptance of the proposal of the successful bidder, but the check of the successful bidder will be retained as a guarantee for the liquidated damages that would be incurred by the Government should the successful bidder default in making the payments in accordance with his proposal, and in view of the difficulty in estimating such damages with exactness they are hereby fixed, estimated, and computed at \$250. If no default be made, the amount of the check, \$250, will be credited to the purchaser as a first payment on the vessel.

Full payment for the vessel must be made within 30 days after the acceptance of the proposal, and it is to be distinctly understood that no title, right to possession, nor any property right whatever shall pass to or be vested in the purchaser until the full amount of the purchase price, as stated in the accepted proposal, has been paid to the Superintendent of the Coast and Geodetic Survey.

It is also understood that bidders in submitting proposals, even though it is not specifically stated, agree to all of the conditions, provisions, and stipulations, as stated in this letter of invitation.

Descriptions of the *Gedney* and *McArthur* can be had on application to the Washington office or to the offices of the Coast and Geodetic Survey at Seattle or San Francisco.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D.C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D.C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 3	(a)
Chamberlain, George A.....	Lourenço Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

CHARTING OF THE KUSKOKWIM RIVER COMPLETED.

On the eastern shore of Bering Sea, from Nunivak Island to Nushagak, stretches what is perhaps Alaska's most unfrequented coast line, touched by waters leading into an even less-frequented river. For the past five seasons, a steamer of the United States Coast and Geodetic Survey has been engaged on the field work connected with the charting of the approach and entrance to the Kuskokwim River, a work completed during the past season by the steamer *Yukon*. As a supplement to the coast work, a reconnaissance survey was made inland from Bethel, the head of deep-sea navigation. This was carried for 550 miles to McGrath, the main settlement on the upper river. A steamer afforded the means of taking astronomical instruments up the river and the fair weather afforded opportunity for the determination of positions along the river's course. As some previous positions were found as much as 50 miles in error, a new map of the river will fill an urgent need in future developments in this region.

Second only to the Yukon in size, the Kuskokwim is visited yearly by but two or three small steamers, which ascend as far as Bethel; but the recent publication of charts has made it possible safely and confidently to navigate the channel through the vast area of mud flats which lie off the river's mouth, a feat formerly extremely hazardous and requiring sometimes weeks to accomplish. The comparison of present with previous freight rates tells the story of putting the Kuskokwim on the commercial map.

[Previous articles on the Kuskokwim River work were published in *COMMERCE REPORTS* for March 27, April 7, and April 23, 1915.]

WORLD'S PRODUCTION OF RAW SILK.

[L'Économiste Européen, Oct. 29.]

The world's production of raw silk in 1914 is estimated at 21,870 metric tons, as compared with 27,720 tons in 1913. The following table shows the raw-silk production of different sections of the world in five-year averages from 1871 to 1910 and for the years 1911 to 1914:

Years.	Europe.	Levant.	Extreme Orient.	Total.
	<i>Metric tons.</i>	<i>Metric tons.</i>	<i>Metric tons.</i>	<i>Metric tons.</i>
1871-1875	3,676	678	5,194	9,546
1876-1880	2,475	639	5,740	8,854
1881-1885	3,630	700	5,108	9,438
1886-1890	4,340	738	6,522	11,600
1891-1895	5,518	1,107	8,670	15,295
1896-1900	5,220	1,552	10,281	17,053
1901-1905	5,312	2,304	11,476	19,092
1906-1910	5,460	2,815	14,908	23,183
1911	4,330	2,960	17,280	24,570
1912	4,982	2,233	19,700	26,915
1913	4,245	2,315	20,760	27,320
1914	4,860	1,555	15,455	21,870

These totals do not include silk both produced and manufactured in the countries of the extreme Orient.

A \$250,000 palatial hotel, now building at Victoria Falls, in Africa, is to be opened next year, being leased to the Rhodesia Railways (Ltd.).

COST OF PRODUCTION OF MUSLIN UNDERWEAR.

The manufacture of women's muslin underwear in the United States has reached a total annual production of \$30,000,000 to \$40,000,000, with an aggregate investment of \$15,000,000, and the industry has practically no foreign competition. The successive stages in the making and marketing of this class of clothing are explained in a report just issued by the Bureau of Foreign and Domestic Commerce on the cost of production of women's muslin underwear.

Field agents of the Bureau obtained the information that has been collected from 65 establishments located in nine States. Some of the plants were large and some small, but all are declared to have been fairly representative of the industry. Their aggregate sales during their last business period, usually one year, amounted to \$14,619,518, so that a good proportion of the total output was represented. The work was begun in January, 1914, and the Bureau was aided by the owners of the plants selected, as well as by the association known as the Cotton Garment Manufacturers of New York, the manager of which sent to all its members a circular letter expressing his approval of the Bureau's plans and urging their cooperation.

An important fact which is brought out in the report now published is that a manufacturer can do business on very little capital and that many factories which started with very small capital have developed into large enterprises. The net sales of the establishments visited ranged from less than \$30,000 to more than \$1,000,000 during the last business periods. The total net sales of 43 concerns in New York City were \$9,331,662, an average of \$217,015 per establishment; the total net sales of 22 concerns elsewhere were \$5,287,856, an average of \$240,357 per establishment. It is estimated that the entire number of establishments in this industry in 1913 was 400, and more than one-half were located in New York City. Other States from which reports were received are Massachusetts, Connecticut, New Jersey, Pennsylvania, Maryland, Illinois, Missouri, and Wisconsin.

The bureau finds that practically all of the women's muslin underwear made in this country is trimmed more or less with lace and embroidery, and the average cost of the trimming is about 55 per cent of the total cost of the materials used. The present rate of duty on women's muslin underwear made of cotton and trimmed with lace or embroidery is 60 per cent ad valorem, which is the highest ad valorem rate of duty in the cotton schedule, and which differs but slightly from the rates under the tariff act of 1909. The same rate of duty is placed upon all cotton laces and embroideries. Manufacturers estimate that of the trimmings used in the making of muslin underwear from 25 to 40 per cent of the lace and from 5 to 15 per cent of the embroidery are of domestic manufacture. During recent years there has been a great increase in the quantity and improvement in the quality of both the lace and the embroidery made in the United States.

The capital employed in business at the beginning of the year by the 65 establishments from which reports were received amounted to \$4,150,357, or an average per establishment of \$63,852. Of the 65 establishments, 59 earned profits and 6 had losses on their year's business. Thirty-four earned a manufacturing profit of more than 20 per cent on the capital employed in the business, one concern earn-

ing fully 100 per cent. The average manufacturing profit of all the companies on the capital employed in the business was 21.01 per cent.

The average manufacturing profit of all the establishments on the net sales was 6.78 per cent. Eleven of the concerns earned a manufacturing profit of more than 10 per cent and 37 a manufacturing profit of more than 5 per cent on net sales; the highest being 15.24 per cent. The great difference between the profit based on capital and that based on net sales is due to the fact that in this industry there is an average annual turnover of about $3\frac{1}{2}$ times the capital employed.

This publication, Miscellaneous Series No. 29, is the first of a series of reports on the cost of production in the clothing industry to be issued by the Bureau of Foreign and Domestic Commerce. The other reports which will follow relate to hosiery, knit underwear, shirts and collars, and men's ready-made clothing. A report on pottery has already been issued, and reports on the cost of production of textile machinery and cane sugar are in course of preparation. Copies of the report described may be procured from the Superintendent of Documents, Government Printing Office, Washington, D. C., or from the branch offices of the Bureau, at 20 cents each.

JAPANESE GOLD HOLDINGS STEADILY INCREASE.

[Extract from Japan Times, Oct. 21, forwarded by Consul General George H. Scidmore, Yokohama.]

The Nippon Yusen Kaisha liner *Kamakura Maru*, which arrived at Kobe yesterday from London, has brought £250,000 sterling (\$1,216,625) from India, to the account of the Bank of Japan. This is the second shipment of gold from India, and will be closely followed by others.

Gold holdings of the country have steadily increased, and, according to the estimate taken on the 15th instant, the hoards kept abroad amount to 313,000,000 yen (\$155,874,000) and the metal kept at home to \$56,274,000. The whole amount, it is estimated, will attain \$263,940,000 by the end of the present year, as Japan is entitled to a big payment for exports to her credit for the latter months of the year, while her liabilities to be paid in the same period are valued at \$2,689,200 for November and at \$2,091,600 for December, as interest on Government bonds.

The prime cause for this inflation of Japan's gold holdings may be found in the steady expansion in the export trade, but there are also other important causes contributing greatly to the accumulation of hoards. The receipts of shipping companies, for instance, have greatly increased lately on account of the unheard-of prosperity. According to the latest reliable investigations, the net takings of Japanese shipping companies for the past half year are estimated at \$49,800,000 in round figures, of which something like \$24,900,000 is due from overseas. Another factor which is by no means negligible is remittances from Japanese abroad, estimated at considerably more than \$9,960,000 already this year.

Even if all obligations are duly paid, Japan can get at least 150,000,000 yen (\$74,700,000) more of gold by the end of the present year, and easily pay off all loans maturing in the near future out of the gold accumulated, without suffering the least on that account.

REPORT ON AMERICAN COTTON INDUSTRY.

A bulletin soon to be issued by the United States Bureau of the Census will show, for the American crop of 1914, a production of 15,905,840 running bales of cotton, counting round as half bales (equivalent to 16,134,930 bales of 500 pounds each, gross weight), worth \$591,130,000, and of 7,186,000 tons of cotton seed, worth \$128,950,000; and for the "cotton year" ended July 31, 1915, a consumption of 5,597,362 bales (exclusive of linters), exports of 8,322,688 bales, net imports of 363,595 bales, a supply on hand at the beginning of the year of 1,365,864 bales and at the end of the year of 3,936,104 bales, and cotton spindles active at some time during the year to the number of 31,964,235. The production of linters from the crop of 1914 was 832,401 running bales; the quantity consumed during the year, 411,845 bales; and the quantity exported, 221,875 bales. For the entire world the production of lint cotton destined for factory use was 24,764,000 and the mill consumption 19,761,000 net 500-pound bales. The production both in the United States and in the world was the greatest in the history of the industry.

Texas alone produced 4,592,112 equivalent 500-pound bales, or more than one-fourth of the total American crop of 1914; while seven States—Texas, Georgia, Alabama, South Carolina, Oklahoma, Mississippi, and Arkansas, each with an output of more than 1,000,000 bales—together produced seven-eighths of the crop.

The closer delinting of cotton seed is strikingly shown by the figures for linter production. Between 1899 and 1914 the output of this product increased from 114,544 bales to 856,900 bales, or by nearly 650 per cent. Many mills now obtain over 100 pounds of linters per ton of seed treated, or more than double the yield of a few years ago.

Texas Leads in Great Increase for Three-quarters of a Century.

During the three-quarters of a century from 1839 to 1914 the production of cotton in the United States increased from 2,063,915 to 15,905,840 running bales, or by 671 per cent. The greatest increase, both absolutely and proportionally, shown by any State is that for Texas, whose production in 1914, 4,390,200 running bales, was nearly 75 times as great as its crop of 1849 (the earliest year for which census statistics for that State are available), which was 58,072 bales.

The average price obtained by the growers for the 1914 cotton crop was 7.33 cents per pound—more than 6½ cents less than in 1910 and more than 5 cents less than in 1913. The averages for the last five crops were: 1910, 13.95 cents; 1911, 9.56 cents; 1912, 11.48 cents; 1913, 12.48 cents; and 1914, 7.33 cents. The average price obtained by the growers for cotton seed from the crop of 1914 was \$17.90 per ton—nearly \$8 less than in 1910 and \$4.50 less than in 1913. The prices for the five crops were: 1910, \$25.80; 1911, \$17.10; 1912, \$19.20; 1913, \$22.40; and 1914, \$17.90.

Although the crop of 1914 was the largest ever grown, exceeding that of the preceding year by nearly 2,000,000 bales, its total value—cotton and cotton seed combined—was estimated at only \$720,080,000, equal to about seven-tenths of the value of the 1913 crop, which was over a billion dollars. About 18 per cent of the total value of the 1914 crop was contributed by cotton seed.

At the beginning of the cotton year, which ended July 31, 1915, the supply of cotton and linters on hand in the United States was 1,577,448

running bales (counting round as half bales), of which amount 989,980 bales were held in consuming establishments; and during the year the ginnings were 16,738,241 running bales and the net imports were 363,595 equivalent 500-pound bales. During the year the American mill consumption of cotton and linters amounted to 6,009,207 bales and the exports to 8,544,563 bales; and there remained on hand at the end of the year a total of 4,364,890 bales.

Growing Amount Consumed by American Mills.

The amount consumed by American mills was greater than in any preceding year, but the exports fell off somewhat in quantity and very much in value as compared with 1914. The value of cotton and linters exported during the fiscal year ended June 30, 1915, was \$376,217,972, whereas in the preceding year the value of such exports had amounted to \$610,475,301. Exports to Great Britain and Ireland increased from 3,581,501 bales of 500 pounds each during the fiscal year 1914 to 3,919,749 bales in 1915; to Italy, from 537,357 to 1,127,400 bales; to Holland, from 35,053 to 544,035; to Spain, from 297,339 to 464,504; to Japan, from 353,440 to 428,806; and to Canada, from 150,993 to 182,790. On the other hand, the exports to Germany dropped from 2,884,324 to 294,194; to France, from 1,139,399 to 692,699; to Belgium, from 227,474 to 5,057; to Austria-Hungary, from 106,511 to 455; and to Russia, from 99,076 to 82,125. Exports to European countries other than those just named increased during the year from 63,725 to 898,096 bales.

The small amount of cotton imported into this country is principally Egyptian, which is used for mercerizing and in the manufacture of thread, knit goods, and lace.

During the three-quarter-century period from 1840 to 1915 the consumption of cotton in the United States increased from 236,525 to 6,009,207 bales, or about twenty-fivefold. The greatest cotton-manufacturing State is Massachusetts, which consumed 1,282,937 bales during the year; North Carolina, with a consumption of 910,154 bales, stood second; South Carolina, with 811,564 bales, third; and Georgia, with 659,853 bales, fourth.

Development of Cotton Manufacture in Southern States.

The manufacture of cotton in the South had been carried on for many years, but only in a small way prior to the decade 1870-1880, when the industry in that section began to grow rapidly. During that decade and in each of the two succeeding ones the consumption of cotton in these States nearly trebled, and during the past 15 years it has more than doubled. During the quarter century from 1890 to 1915 the consumption in the cotton-growing States increased by nearly 500 per cent, while the increase in the New England States was only 46 per cent and that in the United States as a whole was less than 140 per cent. Since 1912 the annual consumption in the cotton-growing States has amounted to more than one-half of the total for the United States, and in 1915 these States consumed 3,026,969 bales (exclusive of linters), compared with 2,570,393 bales manufactured in all other States. During the five-year period 1911-1915 the consumption in Georgia increased by 38.9 per cent, in South Carolina by 32.1 per cent, and in North Carolina by 31.4 per cent. The greatest actual increase was that reported for North Carolina, 217,695 bales.

Although the bulk of the world's cotton crop is produced in the United States, a considerable quantity is grown in other parts of the

world. In all about 9,800,000 bales of cotton destined for mill consumption were raised in India, Egypt, China, Russia, and other countries. The production in the four countries named amounted to over 8,000,000 bales, or about seven-eighths of the total production outside of the United States. The production of commercial cotton of India alone in 1914 is estimated at 3,826,000 bales. Other countries producing more than 100,000 bales in 1914 were Brazil, Persia, Mexico, Turkey, and Peru in the order in which named, and about 325,000 bales were produced in still other countries.

The increase in the use of cotton throughout the world during the past century is strikingly shown by a comparison of the figures for 1811 with those for the cotton year 1913-14, the latest in which normal conditions have prevailed in the industry. In the earlier year the world's production was estimated at about 1,100,000 bales, whereas in the later the total consumption by cotton mills was more than 21,000,000 bales. In the past 15 years alone the increase has been about 40 per cent.

NEW GLASS FACTORY IN JAPAN.

[Extract from Japan Mail of Oct. 16 by Consul General George H. Scidmore, Yokohama.]

At Tsurumi, midway between Tokyo and Yokohama, a big glass factory is being built by the Asahi Glass Co., which already has two big mills at Amagasaki and Tobata, these being in full operation to meet an ever-increasing demand from at home and abroad. The new mill, which is planned to turn over a big amount of sheet glass, will be completed by the early part of next year, if work progresses normally.

The company, which is almost the sole supplier of the goods, not only in Japan but in the East, is quite justified in taking this step to increase its plant, for all markets in the East now turn to this company for the supply of the goods which they can not get from either America, which is too engrossed in the turn-over of Europe-bound goods, or from Belgium.

China, the Dutch Indies, Manchuria, Australia, British India, and other Eastern countries, which began to buy the goods from Japan soon after the war stopped the supply of goods from Europe, still continue to send fresh orders. The intensity of demand from overseas is well reflected in the increasing shipment of the goods at Moji. Every liner which touches at the port takes several hundred boxes of sheet glass intended for those Eastern markets.

In the domestic market, where the season for the greatest demand has just set in, after a depression of long duration, the usual activity of the season is enhanced by a large demand from war-goods factories which are enlarging their plants. Orders from the Hokkaido are also increasing at the approach of the winter season there.

Prices are on the upgrade, even if no artificial measures be taken, but wholesalers recently announced that prices would be raised. Their decision has, however, placed them in an awkward position, since they must suffer from a reaction when the goods are supplied by the Asahi Glass Co. more liberally than now, as foreign demand slackens. Accordingly the market is now beset with disorder.

With the completion of the new mill the company's output will be increased to more than 600,000 tons.

OFFICIAL NUMBERS FOR MERCHANT VESSELS.

The following is a statement of official numbers and signal letters awarded to merchant sail and steam screw vessels by the Bureau of Navigation, Department of Commerce, during the week ended November 20, 1915:

Name.	Official number.	Signal letters.	Tonnage.		Year built.	Where built.	Home port.
			Gross.	Net.			
Sail:							
Golden Gate ^a	213770	LFGV	2,340	2,273	1888	Whitehaven, Eng.....	San Francisco.
Steam screw:							
Amazonia ^c	213782	LFQR	2,199	1,327	1891	Newcastle-on-Tyne, England.	New York.
Edna ^d	213743	LFQG	1,783	1,135	1903	Bergen, Norway.....	San Francisco.
Pacific.....	213799	LFQS	6,034	4,380	1915	San Francisco, Cal.....	Do.

^a Formerly British ship Golden Gate.

^b Foreign-built vessel admitted to American registry under the act of Aug. 18, 1914.

^c Formerly Brazilian steamship Amaraia.

^d Formerly Mexican steamship Maatlán.

The total number of foreign-built vessels admitted to American registry under the act of August 18, 1914, since June 30, 1915, was 22, of 56,996 gross tons.

PLANS OF MERCANTILE BANK OF THE AMERICAS.

The Mercantile Bank of the Americas, the organization of which in New York was mentioned in COMMERCE REPORTS for October 5, 1915, is not establishing its own branches in Central and South America, but is making connections with existing concerns in those countries. Commercial Agent Porter, in charge of the New York office of the Bureau of Foreign and Domestic Commerce, has received from the officials of the bank the information that the field for the extension of its services lies in Central America and the northern Republics of South America.

The Mercantile Bank of the Americas has made connections with banking institutions or bankers in Nicaragua, Venezuela, Costa Rica, and Honduras. The general manager will leave New York shortly to take an extended trip through Central and South America, with a view to studying conditions and furthering the business of the bank.

ACCELERATOR FOR HARDENING CONCRETE.

Experiments have been made by the United States Bureau of Standards to develop a method for accelerating the hardening of concrete, in order that the material might be used in revetment work in place of the willow mats that have been used in the past along the Mississippi River. The Bureau finds that 4 per cent of calcium chloride added to the mixing water increases the strength of the concrete at the age of one day 100 per cent or more. In some cases the strength of the concrete in which the calcium chloride was used at the age of two days equaled 75 per cent or more of the strength normally attained in one month.

The Bureau of Standards believes that the findings of this investigation will be of appreciable value in concrete construction.

RUSSIAN WOOD-PULP AND PAPER SITUATION.

[Consul General John H. Snodgrass, Moscow.]

The wood-pulp industry has not yet sufficiently developed in Russia, but its prospects are bright, in view of the abundance of raw material supplied by the immense forest area in Russia and of the growing demand for paper both in Russia and in foreign countries. The chief material for the manufacture of paper is wood pulp, treated mechanically or chemically.

The use of rags as a raw material is rapidly diminishing; they are still used for the manufacture of the best grades of paper in other countries, but in Russia rags are also used for the manufacture of medium grades, and the lack of this raw material is often the reason for the closing of paper mills. Russia, however, has sufficient timber, and there are larger forests of pine and aspen in Russia than in any other country on the globe. At the same time there are many deciduous trees in Russia which are little used for construction purposes, and can therefore be profitably utilized for making wood pulp. There are also many wind-fallen trees in the dense forests hindering normal growth. It is stated that waste material at the wood mills would also be available for this purpose.

All these materials, which could easily replace rags, the supply of which does not meet the demand, are little utilized in Russia. Therefore the paper industry in Russia is growing slowly and the imports of paper are increasing each year.

Imports of Paper Pulp.

There is a general shortage of paper pulp, which is imported in increasing quantities. The following table shows the imports into Russia of chemical and mechanical wood-pulp in 1913 and 1914 and the principal sources of supply:

Countries of origin.	Chemical pulp.				Mechanical pulp.			
	1913		1914		1913		1914	
	Tons.	Value.	Tons.	Value.	Tons.	Value.	Tons.	Value.
Finland.....	4,057	\$173,580	13,050	\$523,000	16,032	\$615,000	11,250	\$319,000
Germany.....	2,946	126,035	(a)	(a)	3,136	87,945	(a)	(a)
All other countries.....	1,816	77,716	2,440	103,000	1,398	46,879	2,620	82,000
Total.....	8,819	377,331	15,490	636,000	20,566	749,824	15,870	401,000

(a) Not available.

The figures for 1913 include the imports over all frontiers, but only about 1½ tons of mechanical wood pulp, valued at \$42, and 15½ tons of chemical wood pulp, valued at \$663, were imported over the Asiatic frontier in that year; the figures for 1914 refer to the European frontier only. The figures given for chemical pulp in both years include a small amount of pulps from rags, straw, peat, etc.

Production of Wood Pulp in Russia.

The Russian wood-pulp industry is steadily growing, however, as is illustrated by the following figures: Mechanical wood pulp, 20,592 tons in 1900, 41,040 tons in 1908, 49,608 tons in 1912; wood cardboard, 12,708 tons in 1900, 22,950 tons in 1908, and 31,070 tons in

1912; chemical wood pulp, 28,922 tons in 1900, 119,092 tons in 1908, and 170,082 tons in 1912. In comparison with 1900 the manufacture in Russia of mechanical wood pulp and wood cardboard has grown two and a half times and that of chemical wood pulp almost sixfold. The quantity of chemical wood pulp manufactured is increasing steadily.

For the last few years an increase of capital invested in this industry is noticeable, but on the whole the output of the half product in Russia is limited in comparison with the production of other countries of far smaller forest areas. For instance, the United States produces 2,700,000 tons of mechanical and chemical wood pulp per annum, Sweden produces not less than 900,000 tons of chemical wood pulp, and Germany, with a forest area of 34,970,000 acres, about 9,000,000 tons of mechanical and chemical wood pulp.

The greater part of the production of these countries is used by the local mills for making paper. Russia, as has been noted, produces only 250,000 to 250,000 tons of mechanical and chemical wood pulp, whereas the requirements for paper, in connection with the expected development of trade in Russia and the introduction of compulsory education, will necessarily increase to a great extent. In the consumption of paper Russia stands behind England, France, Sweden, Spain, and Portugal. Statistics show that in 1906 the consumption of paper per individual in Russia was 5 pounds, in England 50 pounds. At an increase to 10 pounds per individual in Russia (allowing for a present consumption of 7 pounds per individual), the demand for paper will increase from 216,000 to 252,000 tons, and there will be a corresponding increase in the demand for wood pulp.

Wood-Pulp and Paper Situation in Foreign Countries.

The extensive consumption of paper in England, France, and Belgium is causing in these countries a great need for wood pulp. Thus the demand of the world's market is growing each year; from 2,160,000 tons in 1911 it grew to 2,700,000 tons in 1912, the imports of wood pulp in several countries being distributed as follows: Belgium, 160,000 short tons; Great Britain, 1,035,000 short tons; Italy, 102,000 short tons; United States, 605,000 short tons; and France, 460,000 short tons.

These countries, as well as many others, are continually increasing their demand for half products. The requirements of wood pulp are increasing in the United States, but Great Britain is the greatest importer of wood pulp, and continues to develop its paper industry in connection with the growing demand for paper and paper products both in England and in other countries.

Sweden exports up to 950,000 tons of wood pulp per annum, and Norway 825,000 tons. As regards half products and products, Germany occupies first place, having exported in 1912, 490,000 tons of paper, cardboard, and paper goods.

In connection with the growth of the demand for raw material, Germany had commenced even to change its forestry systems by reducing the cutting of trees. Germany, nevertheless, has not sufficient raw material, and for the last few years has been importing 30 per cent of the chemical wood pulp required by German paper mills. Seventy-five per cent of this, valued at millions of dollars, was exported to Germany by Russia. Russia exports a comparatively small

quantity of wood pulp. In 1913 the exports of this article were valued at \$133,000, and of paper at \$149,000.

The statistics published in 1914 in Germany show that the paper-mill production, if normally carried on, proves very profitable, which was illustrated by the 10, 15, and 20 per cent dividends paid by the mills in 1913 and by the growing number of paper mills in Germany, notwithstanding the surplus of paper stocks noted in recent years.

Outlook for Russian Wood-Pulp and Paper Industries.

There is no doubt that the raw material hitherto exported from Russia to Germany could be utilized in Russia for the production of wood pulp, cardboard, and paper, the demand for which is growing both in Russia and abroad. There are many obstacles in the way of the development of this industry. For the development of the chemical wood-pulp industry considerable capital is necessary, as well as a guaranteed supply of raw material for some length of time, and trained workmen. More technical knowledge in the production is also necessary; this would facilitate the utilization of waste material and make the product cheaper.

DOLLAR LETTERS OF CREDIT IN RUSSIA.

[Commercial Attaché Henry D. Baker, Petrograd, Sept. 21.]

A prominent American traveler now in Petrograd took with him from New York a letter of credit made out in terms of American dollars and another letter of credit made out in terms of English pounds sterling. On his way here he had occasion to draw money in the Netherlands, Germany, Denmark, and Sweden, and found that to local banks in these countries the dollar letter of credit was acceptable, as also to the banks in Petrograd. The letter of credit in pounds sterling was taken along chiefly as a precaution in case of any difficulty over the dollar letter of credit, but in all the countries visited en route it proved an unnecessary precaution.

In Petrograd the value of the American dollar in Russian rubles is quoted daily at the banks, the same as the English pound sterling. An American drawing money on his dollar letter of credit can know exactly what it is costing him for exchange and how much may be charged up to his bank account in America against drafts arriving. If, however, he draws money on a letter of credit in pounds sterling, he can not figure exactly what the exchange amounts to until he can get information as to the exact value of the English pound sterling in New York when his draft reaches there via London. Apparently the cost of exchange, at least in Petrograd, is approximately the same, whether the drafts are drawn directly on New York or negotiated through London, but in the former case there is a decided advantage in being able immediately to enter up in one's private account the exact amount of exchange, whereas in the second case one may have to wait for some time to get the information exactly.

In consequence of the greatly increased importance of New York City as a world financial center, since the present war started, banks in foreign countries have had an increased disposition to arrange for direct financial operations with New York instead of using London as an intermediary. Moreover, at present the value of the ruble in American dollars is perhaps even more closely studied than the

value in pounds sterling, exchange with New York being an all-important factor in the financial situation here, especially as Russian exports to the United States have of late been insignificant in comparison with the value of the imports. It would seem decidedly advantageous to American financial interests and would materially assist travelers if the practice of issuing dollar letters of credit could be adopted generally by the bankers of the United States, so that all foreign banks might become accustomed to them and never fail to accept them.

Travelers' Checks and Letters of Credit Compared.

Travelers' checks, which appear to have been increasingly used in recent years in the United States, have, like the dollar letter of credit, the advantage of being issued in terms of American currency. Since the war started, however, such checks have sometimes been cashed at a considerable discount in Russia, owing to the decline in the exchange value of the ruble. A considerable disadvantage, however, has occurred in cashing such checks (since the war started) in Russia, where there has been a serious depreciation of the currency. A travelers' check has printed on it a fixed value for the ruble in dollars (\$0.515 to the ruble), and the traveler when he presents the check may have denied to him the difference between the value of the ruble at the present rate of exchange and the value as printed on the check.

Some of the local banks in Russia have been inclined to be fair to holders of these checks and give them in rubles the true equivalent of the value in dollars, but others have insisted on giving them only so many rubles as the checks would seem to call for, which at lately prevailing rates of exchange would represent a loss of about 30 per cent. In the case of dollar letters of credit, however, the holder of such letter of credit in drawing money seems able always to draw at the banking rate of exchange prevailing on the day the money is drawn.

WORK ON SEA-HERRING FISHERIES CONCLUDED.

The sea-herring fisheries and oceanography of the Gulf of Maine received the attention of workers on the *Grampus*, which on October 30, concluded a six months' cruise along that section of the Atlantic coast, covering upward of 5,000 miles. The United States Bureau of Fisheries, which the ship represented, reports that in the Gulf of Maine and neighboring waters the *Grampus* occupied 73 oceanographic stations, and took about 60 samples of herring (large and small) between Lockport, Nova Scotia, and Nantucket, Mass. About 12,000 herring were examined, and a large series of scale samples secured.

A large collection of data was obtained relating to the general fisheries of the region covered, in addition to the special line to which the party was assigned. The assistant of the bureau detailed to this work has returned to Washington to study the samples secured.

A giant Diesel engine at the San Francisco Exposition, says the management, burns fuel oil at a cost of only 62 cents an hour and produces 500 horsepower.

SELLING MOTOR VEHICLES IN CENTRAL AMERICA.

[Special Agent Garrard Harris.]

A tour of the countries of Central America by a motor-vehicle salesman following a carefully planned itinerary would undoubtedly lead to the establishment of a good trade, though large immediate results should not be expected. The lack of good roads will be found the chief obstacle to the selling of motor vehicles in these countries. When a salesman talks cars, he necessarily calls attention to the need of better highways, and when good roads are finally constructed, there will be not only a market for motor vehicles, but the most important factor in the general development of the country will have been supplied.

An Itinerary from New Orleans to Panama.

Starting from New Orleans, the salesman would put in first at Belize, British Honduras, then catch the "tramp" or banana boat to Stann Creek, and from Stann Creek take a steamer to Livingston, Guatemala, which is the port of entry for the great coffee district of Alta Verapaz. There are practically no roads for motoring in any of these places, but some missionary work might be accomplished.

From Livingston the salesman can get a launch to Puerto Barrios, Guatemala, and from there take a boat for Puerto Cortez, La Ceiba, and other points on the north coast of Honduras, coming back to Barrios and up to Guatemala City. Guatemala has people of wealth who are buying cars and building roads, and there should be a good opportunity there. The port of San Jose de Guatemala is next on the line of travel, and at this port the salesman takes a steamer for Acajutla, Salvador, going from there to San Salvador. The roads are fairly good in this section. San Salvador itself is wealthy and progressive, and possibly a number of orders could be secured for both freight trucks and passenger cars. There are several good towns that can be worked from this city, Santa Ana being one of the most important.

From Salvador the salesman might go to Tegucigalpa, Honduras. The road between San Lorenzo and Tegucigalpa, the "Carretera del Sur," is one of the finest highways in all Central America. It is a model, made with American machinery, and is 80 miles long. The grades, however, are as high as 11 per cent at some points, and there are some abrupt curves. There are two or three competing auto lines on this road now, one of them having a mail contract and express service, but possibly two cars and a big truck could do some business at reduced rates. Two-wheeled ox carts now carry the freight in from 6 to 10 days. The rest of the country is broken, and good roads are scarce. San Lorenzo is the mainland port for Pacific Honduras. The maritime port is Amapala, on Tigre Island, where the salesman may take ship for Corinto, Nicaragua. From Corinto he can go by rail to Managua, Masaya, Granada, and other points. The country in this section is not so broken, and the cost of building roads is less. A certain amount of road is available, and there should be some market for trucks for the sugar estates.

Coming back to Corinto, the salesman takes ship for Puntarenas, Costa Rica, which is a good, growing town. From here he can go by rail to San Jose, the capital, where he should have plenty of time, for from this point he can work several promising towns in the

vicinity. Costa Rica has some of the best roads in Central America, and should provide a fine opening for motor trucks to handle coffee. From Port Limon the salesman can take a boat for Colon, and then go on to Panama.

Expense and Time Required for the Tour.

The salesman's expenses for ordinary travel and hotels will be about the same as in the United States, but he should be allowed more latitude in the matter of time and in the exercise of judgment and initiative. If a firm sends out a first-class man in whom full confidence can be placed—and no other kind should be sent—he should not be hampered with too many instructions. He should be able to speak Spanish well, and to feel at home in any society, for he will be expected to participate to some extent in the social life of his prospective customers. This he can do without extravagance or dissipation, but it will require a fairly liberal allowance of time. Many American salesmen have to leave their fields half worked because their orders compel them to rush through business as at home—a short-sighted policy for Latin-American business.

OREGON PAPER AGAIN FINDS MARKET IN AUSTRALIA.

[Commercial Agent E. G. Babbitt, San Francisco, Cal., Nov. 5.]

For the first time in more than a decade, stated the Morning Oregonian in its October 21 issue, Oregon paper mills are shipping their products to Australia. An order for 2,000 tons of news print has just been filled for Sydney, Melbourne, and other cities of the Commonwealth at the Camas, Wash., plant of a large Oregon manufacturer and the paper taken to Portland for shipment. The paper is put up in both rolls and bales and is understood to be in the nature of a trial order. In former years the mills in the Portland territory did a heavy business with Australia, but on account of the lack of adequate shipping facilities, this business was lost and the Australian people began buying their paper in Europe.

The clipping from the Oregonian was submitted to the San Francisco branch by the local agent of the paper company, who had been supplied by this office with information as to shipping facilities to Australia and the west coast of South America.

AMERICAN SUBSTITUTE FOUND FOR FOREIGN LIME.

A firm of importers in New York, which was receiving high-priced lime from Germany and Austria, has found in this country a lime which is a good substitute for the foreign product. It is used for abrasive purposes, principally as a cleaner before nickel plating, or in combination with other materials for buffing purposes on nickel-plated work.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 403 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Paper, No. 19351.—A letter to the Bureau states that a large paper importer in India desires samples, lowest prices, and terms of cream laid, cream wove, printing, colored, drawing, wrapping, manifold, kraft, parchment, and flint papers in different sizes and weights from 8 pounds and upward. It is requested that the minimum quantity and time required to fill orders be stated in the first correspondence.

General representation, No. 19352.—A commercial agent of the Bureau reports that a man in Brazil is opening a mail-order house and desires to be placed in touch with manufacturers of goods suitable for such business.

Commission agent, No. 19353.—An American consular officer in Spain reports that a man in his district desires to act as commission agent for firms wishing to introduce their goods in that country. Correspondence should be in Spanish.

Fertilizers, No. 19354.—The Bureau is in receipt of a letter from a firm in Cuba stating that a fertilizer is being manufactured in that country, and they desire to find a market for it in the United States. It is composed of the following substances: Nitrogen, ammonia, phosphoric acid, and phosphate.

Silk thread, etc., No. 19355.—A commercial attaché of the Department of Commerce reports that an American in Chile desires to represent American firms manufacturing silk thread for sewing and embroidering. The silks are sold in skeins, on spools, cards, and in a number of different ways for use in the manufacture of socks, stockings, and women's clothing, etc.

Salt cake, No. 19356.—A letter to the Bureau from a man in Canada states that he wishes to be placed in communication with exporters of salt cake, to be used in the manufacture of wood pulp. It is stated that 5,000 tons can be used annually.

General representation, No. 19357.—The Bureau is in receipt of a letter from a firm in South Africa stating that a company desires to represent American exporters. No particular line is mentioned.

Cycle car and automobiles, No. 19358.—A commercial agent of the Bureau writes that a firm in Sweden desires to secure an agency for a cycle car and a small cheap roadster. References can be furnished by the firm.

Disinfectant, No. 19359.—The municipality of Port Elizabeth, Port Elizabeth, South Africa, will receive tenders until December 8, 1915, for furnishing 3,000 gallons of fluid disinfectant, to be delivered, all charges paid, at the municipal depot, Port Elizabeth, not later than February 29, 1916, delivery to be made in casks, which latter are to remain the property of the municipality. Tenders should be addressed to the Town Clerk, Port Elizabeth, South Africa, indorsed "Tender for Disinfectant," accompanied, if possible, with a gallon sample plainly labeled.

Rice and sugar, No. 19360.—An American consular officer in Greece reports that a man desires to purchase rice and sugar. The rice should be of a long, slender grain, distinctly translucent, with some polish, and must be packed in double bags; the sugar desired is both granulated and domino. Quotations on rice and sugar should be per 100 kilos (220 pounds) c. i. f. Piræus. Correspondence may be in English.

Flour, No. 19361.—A report from an American consular officer in Spain states that a man is interested in the importation of flour, and wishes samples, prices, and terms. Correspondence may be in English.

Women's knitted underwear, No. 19362.—A company in Australia informs an American consular officer that it desires to be placed in communication with manufacturers of cotton vests and all kinds of knitted underwear for women.

Ostrich feathers, No. 19363.—A commercial agent of the Bureau reports that a firm in South Africa desires names of importers or sellers of ostrich feathers of all grades. It is stated that the firm can execute orders of any size promptly.

ITALIAN HEMP FOR UNITED STATES.

[Cablegram from American Embassy, Rome.]

Foreign Office states that permission will be given for the exportation of 13,000 quintals of hemp to the United States, two-fifths to be shipped December and three-fifths immediately afterwards.

FOREIGN EXCHANGE IN HONDURAS.

[Consul E. M. Lawton, Tegucigalpa, Nov. 7, 1915.]

The unfavorable rate of foreign exchange prevailing in Honduras was slightly modified during the month of October, 1915, exchange on New York and New Orleans falling from 310 for the first half of the month to 305 for the latter half. There was practically no demand for exchange on London, Paris, and Hamburg, and such European settlements as there were were made on the basis of New York quotations, with the addition of the cost of dollar exchange. Buying rates are usually about 10 points lower than selling rates, to which the above quotations refer.

STATIC LOAD TESTS FOR CONCRETE BEAMS.

The first of a series of concrete investigations of large-size test members has been started by the United States Bureau of Standards. The making of 36 concrete beams, 8 by 11 inches in cross section, and 13 feet long, is the initial step in the work. These are to be subjected to static load tests, the beams being piled in a criblike manner and then further loaded by a platform carrying a dead weight. The deflection, etc., of the beams will be measured from time to time, and after one year's observation, a duplicate set of beams will be tested to destruction.

SPECIAL AGENT TO CONFER WITH BANKERS.

In order to give bankers and other financial men interested in South America the benefit of this observation while on a recent tour of South America, Mr. W. H. Lough, special agent of the Bureau of Foreign and Domestic Commerce, is planning a short trip to various large cities of the United States during the coming two weeks. According to present arrangements, he will be in Cincinnati November 29 and 30, St. Louis December 1, Minneapolis December 2 and 3, Chicago December 4 to 7, Detroit December 8, Cleveland December 9, and Pittsburgh December 10, returning then to New York. He will also probably visit other Eastern cities at a later date.

Mr. Lough considers that the time is opportune for the establishment of further facilities for financing our trade and investments in South America, and that the cooperation of financial interests in the United States in placing a bank or a system of banks in South America is feasible. He also expects to suggest to interested financial men a plan for an organization to facilitate the financing of our export trade, obtaining credit information, etc. Several banks in the cities named already have active foreign departments and assist their customers in building up South American business, and it is these banks particularly which will probably be interested in Mr. Lough's suggestions.

Publication on Banking Opportunities.

This work of the special agent follows the recent publication of a comprehensive monograph on the subject of the banking situation in South America, entitled "Banking Opportunities in South America," Special Agents Series No. 106, obtainable from the Superintendent of Documents, Government Printing Office, Washington, for 20 cents. In this book, the result of an investigation in South America covering the first part of the present year, Mr. Lough reviews the various factors entering into the problem of establishing American banks in the principal countries of South America. After giving a general survey of the banking field he goes at some length into the history of the present English and German banks in South America, indicating by figures of capitalization, dividends, etc., what has been the success of each one. Special attention is given to the situation in Peru and Chile, where Mr. Lough considers that the best present opportunities for American institutions are to be found.

This publication, together with a pamphlet previously issued by the Bureau of Foreign and Domestic Commerce entitled "Financial Developments in South America, Special Agents Series No. 103 (also written by Mr. Lough and obtainable from the Superintendent of Documents for 5 cents), will be invaluable to any banker or other financial man who contemplates participating in the establishment of new institutions in South America.

What is probably the largest leather belt (34 inches wide, double) ever sent to Argentina, according to the Louisiana Planter and Sugar Manufacturer, was sold by a New York firm, which sent a representative to the Province of Tucuman and, working in conjunction with its local agent, secured some excellent business in that section.

NOTES FROM URUGUAY.

[Diario Oficial, Oct. 9.]

Montevideo Harbor to Have New Dredge Boat.

The work of deepening the harbor of Montevideo is to be facilitated by the purchase of a new steam tug boat. This is made possible by an appropriation of 1,000,000 pesos (\$1,034,000) for dredging materials in a law enacted September 24, 1915. [Previous reports on the dredging of the port of Montevideo were published in Consular and Trade Reports for Mar. 21 and Dec. 30, 1913, and Mar. 11, 1914.]

[Diario Oficial, Oct. 13.]

New Bond Issue.

The national bank of Uruguay (Banco Hipotecario) is authorized by a law of October 6, 1915, to issue bonds to the value of 5,000,000 pesos (\$5,170,000). These bonds, to be known as series Q, are to bear 6 per cent annual interest, payable quarterly, with the usual amortization service. Both interest and sinking fund are fully guaranteed by the Government. [Previous notes on the finances of Uruguay were published in COMMERCE REPORTS for June 11 and June 15, 1915.]

[Diario Oficial, Oct. 19.]

Competition for Artistic Decoration of Medical College.

Official approval has just been given to a project for the artistic decoration of the buildings of the college of medicine of the University at Montevideo. The decoration is to consist of sculpture of an allegorical and historical character in the assembly rooms, corridors, amphitheaters, etc., of the medical department. A special commission is to be named to submit detailed plans for the location, dimensions, and general nature of the work to be ordered. From among these plans the board of directors will select those which it approves for the basis of the designs to be offered by artists who may wish to compete for this work.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 10	(*)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.

*The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

TARIFFS ON CHRISTMAS GIFTS SENT ABROAD.

Many weeks in advance the preparations are made for the international tours of Santa Claus. Americans who are planning to send Christmas presents to persons in foreign countries want to be sure that those who receive the gifts will not be compelled to pay any charges. Many letters come annually to Washington asking what to do to avoid any difficulties. The communications have already begun to arrive, and are being answered by the Bureau of Foreign and Domestic Commerce, Department of Commerce.

The writers of these letters, which, before the end of the year, will have come from every part of the country, are particularly interested in tariff rates which must be paid on gifts in the lands to which they are sent.

Many persons who write to Washington, asking for tariff rates in particular countries, fail to specify the kinds of articles that are to be sent abroad as Christmas gifts. It is quite necessary that such details should be given in order to learn the amount of the tax. The Bureau can not send out an entire tariff schedule in answer to each letter, and even if it did very few persons would know what to do with it after they received the document.

Many persons in the past have asked what method should be adopted in order that the tariff charge might be paid at the point of shipment in this country, by the giver of the gift. All such queries have been answered uniformly with the statement that there is no direct way in which the import duty charged by another country can be paid here, but if the package is placed in the charge of an express company provision can be made for payment of duty by the express agent abroad.

Although there is no exemption from customhouse charges for Christmas gifts, there are some conditions under which certain gifts going from country to country may escape payment. Some Governments rule that wedding presents brought in by subjects shall not be taxed. Some also exempt possessions that are part of an inheritance. But the season of universal giving is not on the tariff calendar as one when the pathways between the nations shall be cleared of obstructions.

WOMEN TRAM CONDUCTORS IN LEEDS.

[Consul Homer M. Byington. Leeds, England, Oct. 28.]

Women tram conductors have now appeared upon the electric cars of the Leeds Corporation Tramways. The first corps, composed of 20 young women dressed in blue serge tunics and skirts with red facings and wearing uniform caps, has proved very satisfactory, and it is stated that the number to be employed may reach 200. The rate of pay proposed is the same as that of the men, 5½d. (\$0.11) per hour, which for full time means 27s. 6d. (\$6.68) per week.

[Mention of the employment of women as tram conductors and mail carriers at Nottingham, England, was made in COMMERCE REPORTS for Oct. 14, 1915.]

Demonstrations in canning and bottling fruits, vegetables, and meats are being given in the Transvaal by the Union of South Africa Government under the auspices of the Small Holders' Society.

SWEDEN NOT A FUR MARKET.

[Consul General Ernest L. Harris, Stockholm.]

It would probably be difficult, if not impossible, for American houses to obtain supplies of furs from Sweden, for the reason that Swedish dealers are themselves more or less dependent upon Leipzig, London, and Russia; in other words, Swedish dealers get practically the same furs in the same markets as do American dealers. These furs are chiefly ermine, fine marten, fox, and otter.

As there are no trappers in this country, there can be no shipments from them, neither are there any exporters. There are only manufacturing dealers, who export to foreign countries providing prices are favorable and it suits them to do so. Terms are cash against bill of lading. It is impossible to ascertain to what countries furs are shipped from Sweden at present. It is known, however, that some Stockholm firms have sent mixed shipments of fox skins to the United States.

Fur Ranching May be Undertaken.

While Sweden was at one time a very important fur producer, it is doubtful if the Kingdom will ever again hold a prominent position in this regard. This is certainly true of wild animals. What the future may hold out in the way of breeding fur animals in the great peat lands of the north is a matter of mere speculation. However, there is some talk of starting a breeding industry along the lines that have been successful in the United States and Canada, for there are few European countries which have more excellent natural conditions for creating such an industry than has the northern part of Sweden.

It might be mentioned here, as showing the trend of the times, that a manufacturer in Stockholm went to Russia in September to purchase 1,000,000 crowns (\$268,000) worth of furs, it being rumored here that furs were very cheap in Russia then. The venture was purely speculative, as it was his intention to store these furs until prices reach a higher figure than at present.

GRAPE AND WINE PRODUCTION OF ITALY.

[L'Économiste Européen, Oct. 29.]

According to the latest information from Rome, the 1915 harvest of grapes for wine making is much less than that of the two preceding years and than the average for 1909-1913. The figures are as follows, in metric tons of 2,204.6 pounds: 3,820,000 tons in 1915, as compared with 6,808,400 tons in 1914; 7,999,200 tons in 1913 and 7,096,700 tons during the five years from 1909 to 1913. The principal producing regions and their estimated yields are the following, according to the forecasts of Vinicolo: Emilia, 660,000 tons; Venetia, 440,000 tons; Sicily, 500,000 tons; Piedmont, 440,000 tons; Campania, 350,000 tons; Tuscany, 320,000 tons; Lombardy, 235,000 tons; Apulia, 185,000 tons; Latium, 140,000 tons; The Marches, 120,000 tons; Abuzzi e Molise, 110,000 tons.

The wine yield, estimated at 24,000,000 hectoliters (634,000,000 gallons), against 43,000,000 hectoliters (1,136,000,000 gallons) in 1914 and 52,000,000 hectoliters (1,374,000,000 gallons) in 1913, is said to be of inferior quality, while in France, in spite of a large decrease in the harvest, the wine is generally superior in quality to that of last year.

AMERICAN OUTBOARD MOTORS FOR CHINA.

[Commercial Attaché Julean H. Arnold, Peking, Oct. 4.]

While at Shanghai recently, it came to my attention, during a conversation with an American firm, that there will probably be a good opportunity for the sale of American outboard (detachable) motors in connection with inland water transportation in China, provided American manufacturers can produce a 5-horsepower motor capable of operating with crude petroleum.

My informant stated that Swedish manufacturers have put a motor of this sort on the market and that unless he can find an equivalent American motor he will probably be obliged to seek an agency for the Swedish article. He stated that it is estimated that as many as 8,000 owners of native craft in a certain section of China could be induced to use outboard motors, provided a cheap and easily operated motor could be produced capable of working on crude petroleum or at least on ordinary kerosene. It appears that through a working agreement with various companies handling gasoline the price is maintained at a figure far in advance of that ruling in America, and for this reason it is difficult to sell motors driven by gasoline.

American manufacturers of outboard motors may secure further particulars in regard to this matter by corresponding with the Shanghai firm referred to [whose address may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices by asking for file No.857.]

[Possible markets for these motors in Dalren and Nanking were the subject matter of articles that appeared in **COMMERCE REPORTS** for July 9, 1914, and Jan. 21, 1915.]

TRADE NOTES FROM THE AZORES.

[Consul Walter H. Schulz, St. Michael, Oct. 30.]

Portugal Purchases Pineapple Plants.

St. Michael's pineapple plants are being shipped to Portugal, where efforts are being made to create a pineapple industry. Preliminary experiments are reported as successful.

American Roofing Gives Satisfaction.

The introductory shipment of American roofing material for use on the new theater at St. Michael has been put in place. In a newspaper interview, the supervising architect expressed himself as greatly pleased with the material, especially lauding its adaptability in quick construction. [Mention of this roofing shipment was made in **COMMERCE REPORTS** for Sept. 9, 1915.]

Four thousand cases of glass for hothouse purposes have been received here from Lisbon to repair damage done by a recent hailstorm. [See **COMMERCE REPORTS** for Oct. 12, 1915.] Each case contained 100 panes measuring 12 by 12 inches. Some 10 by 12 panes also were received. The c. i. f. price was 160 reis per kilo, or a little less than 6½ cents per pound.

Milking machines are being introduced in some parts of the south coast of Australia. The Sydney Herald says that one installed on a Rocky Hall farm is proving a success; with two men some 45 cows can be milked and the separating done in an hour.

SPOKANE CAPITAL IN BRITISH COLUMBIA MINES.

[Consul General R. E. Mansfield, Vancouver, B. C., Nov. 2.]

The city of Spokane, Wash., has derived enormous benefit in the past from the attention given by its business men to mining in British Columbia. With four exceptions, every important silver-lead mine in the Slocan is owned or controlled by Spokane capital, which has taken from the mines of this portion of British Columbia nearly \$8,000,000 in dividends and profits, or probably four times the amount of the original investment.

Record Year in Mineral Production.

The present year should constitute a record in the mineral production of the Province. Rossland is producing about 30 per cent more ore than last year. While the Kootenay mines did not ship much ore in the first half of the year, they are doing well at the present time, the shipments of silver-lead ores aggregating about 2,000 tons a month. The zinc shipments should also be taken into consideration. One smelter has treated about 400,000 tons of ore so far this year. Another has treated about 800,000 tons, and a third 300,000 tons. Two copper companies are handling about 25,000 tons a month each. The stamp mills are treating about 5,000 tons a month of gold ores.

The mineral production of British Columbia is about 11,000 tons a day, and the completion of new plants under construction will bring this output up to 20,000 tons a day, or a production from the metal mines of the Province aggregating about \$30,000,000 a year. The Boundary is the largest producing district, with an output of about 30,000 tons a week. The Coast comes next, with a production of about 20,000 tons a week. Rossland, with an output between 7,000 and 8,000 tons a week, East Kootenay, with a production of from 1,000 to 2,000 tons, and Slocan, with 1,000 tons a week, follow in order. The ores of the Slocan are, however, much the highest in average value.

Ceramic Development in British Columbia.

Much attention is being given to the development of ceramic industries in British Columbia, where there are clays capable of producing pottery and refractory products, which have not as yet been undertaken. A thorough investigation is being made of some of these clays and refractory materials, with a view to utilizing them, with the result that there is every promise of new industries being developed from the mining of these clays. Then there are several known deposits of infusorial earth, talcose minerals, feldspars, and magnesite, which could no doubt be profitably utilized.

[Consul Thomas D. Bowman, Fernie, B. C., Nov. 2.]

Year's Mining Record in Fernie District.

The official reports of the two Provinces of British Columbia and Alberta, recently published, covering the mining industry for 1914, give some interesting statistics which were not available at the time the annual report from this district was written. Mining is the principal industry of this consular district.

There was a general decrease in mining activity during the latter part of 1914, although at the beginning of that year, the prospects had indicated a marked increase of activity. Operating mines and

smelters were obliged to close and development work ceased. This directly affected the coal mines. The railroads depend to a great extent upon the supply of ores to keep freight traffic active. Most of the coal produced here is used as steam coal. When the shipments of ores ceased the demand for coal decreased. The very important by-product—coke—also depended upon the smelters for a market.

Despite all this, the metal mines particularly made a good showing and appear to be now resuming normal activity.

A small but very active coal region in southwestern Alberta, the official Crows Nest mining district of Alberta, is the only part of that Province included in this consular district. All of the metal mines of this district are in British Columbia. The district's gross output of coal in 1913 was 3,340,789 tons and 2,296,707 tons in 1914. The gross coke production was 385,536 tons in 1913 and 291,812 tons in 1914. There are but two active coal districts in British Columbia—the Coast district and the Crows Nest Pass district, the latter being identified as the Fernie consular district. The Crows Nest district of southwest Albert is its continuation. Comparative figures show that the Crows Nest Pass district of British Columbia produced, roughly, about one-third of the total coal produced in the Province in 1914.

The metal products of the Fernie district were valued at \$14,637,138 in 1913 and \$10,420,590 in 1914. The total value of metal products for the Province of British Columbia in 1914 was \$15,790,661. Hence it may be seen that the mines of the Fernie consular district, comprising the official mining districts of East Kootenay, West Kootenay, and Grand Forks, and Greenwood of the Boundary district, produced approximately two thirds of the total mineral production for the Province. While no statistics are yet available for this year, there appears to be an improvement in the activity of metal mines.

[Vice Consul G. C. Woodward, Vancouver, B. C., Nov. 5.]

Dominion Assay Office at Vancouver.

The Dominion Assay Office in Vancouver has an equipment of the latest design. In the melting room is a bullion balance, with two sets of weights and one set of test weights, each ranging from one one-hundredth of an ounce to 500 ounces; electrically protected steel vaults; two No. 7, one No. 4½, and one No. 2 gas melting furnaces, of 1,200, 400, and 100 ounces capacity, respectively; four cast-iron pouring tables, three measuring 2 by 4 feet each and one 2 by 3 feet; a swinging crane over the larger furnaces for lifting the melts; a crusher and pulverizer for crushing and pulverizing the slags; a cast-iron shipping table, electric drill, gas-heated drying plate, iron crucible table, cleaning bench, cooling tank, etc.

The muffle furnace room is equipped with four gas muffle furnaces; a fume chamber; platinum parting apparatus, consisting of two dipping hooks, two boilers, and two trays, each containing 36 cups, and other necessary apparatus.

The loss in weight by assaying is seldom more than the one-hundredth part of an ounce. Two assays each are made by two assayers, these assays to agree within 1.6 of a part, otherwise the bar must be

remelted and reassayed. For the fine gold contained in the deposit \$20.67 per ounce is paid, and the price paid for the silver is according to the market value.

This office during the month of October received 238 deposits, valued at \$458,053, as compared with 147 deposits, valued at \$155,441, during the month of October, 1914, an increase of 91 deposits and of \$302,612 in value.

MOLASSES AS A PERNAMBUCO EXPORT ARTICLE.

[Consul A. T. Haeberle, Pernambuco, Brazil, Oct. 2.]

There are numerous sugar mills in the Pernambuco district of Brazil, and, as many still use the "pan" process, there is a large supply of molasses. Practically all the sugar mills operate distilleries, producing rum and alcohol, for which there is a local demand. The result is that nearly all the molasses is consumed locally, with an average price of about \$7.50 per "pipe" of 127 gallons. The price of alcohol naturally establishes the price of molasses. Alcohol (test of 38° to 42° Cartier) is now quoted from 30 to 35 cents per "canada," 1.43 gallons.

Several American schooners are now bringing coal from Norfolk, Newport News, and other ports and returning empty. Some arrangement might be made with the owners of these vessels for carrying barrel staves to points in Brazil.

It is believed that sugar mills generally would rather export the molasses than distil it, provided the return were equal to that derived from alcohol. The molasses from this section, however, ferments much more readily than that shipped from the Barbados. On account of the heat in transit, therefore, leakage would be a very serious factor unless it were practicable to use, say, steel drums.

It is suggested that it might be well to consider the possibility of exporting alcohol from Brazil, instead of molasses, inasmuch as the bulk relation between molasses and alcohol (41° Cartier) is as 3 to 1, and also because this would eliminate the serious problem of leakage.

SIAM'S PURCHASES OF LUBRICATING OIL.

[Vice Consul Carl C. Hansen, Bangkok Sept. 10.]

According to statistics furnished by the Bangkok customs officials, imports of lubricating oil into this port during the year ended March 31, 1915, amounted to 396,948 gallons, valued at \$114,264 gold, as compared with 333,934 gallons, valued at \$91,509, in the preceding fiscal 12 months. The value of these imports in the five fiscal years preceding 1914 was \$45,489 for 1909, \$56,264 for 1910, \$57,649 for 1911, \$52,565 for 1912, and \$67,150 for 1913. The imports during the last two years were supplied by:

Imported from—	1913-14	1914-15	Imported from—	1913-14	1914-15
United States	\$61,160	\$40,556	Germany	\$4,799	\$454
Singapore	2,827	20,218	All other countries	853	353
United Kingdom	16,708	19,974			
Netherlands India	5,986	18,917	Total	91,500	114,264
India	176	13,786			

CHINESE MARKET FOR AMERICAN CONDENSED MILK.

[Consul G. C. Hanson, Swatow, Oct. 11.]

The demand in this district for tinned milks is rapidly increasing, and this increase will be maintained because of the growing fondness on the part of all classes of Chinese for this article.

The Chinese maritime customs figures for the importation of milk, condensed, in tins, and evaporated cream, for the last five years are: 1910, 21,197 dozen; 1911, 22,659 dozen; 1912, 26,544 dozen; 1913, 27,921 dozen; 1914, 31,694 dozen. These figures show that despite the "ups and downs" of trade, due to revolutionary and other disturbances, the imports of this article are constantly increasing.

The milks sold in this market are Eagle Brand (American), St. Charles Cream (American), Shepherds' Brand and Milkmaid Brand (Anglo-Swiss). Milkmaid Brand seems to dominate on the local market. The Anglo-Swiss Condensed Milk Co., which manufactures this brand, has established strong agencies in all parts of China. This district is supervised by the Amoy agent, who makes periodical trips to Swatow. At Canton and Hongkong there are also agencies. The Canton office has adopted the plan of making its young traveling salesmen master the Chinese language, which is of great help in establishing and supervising native agencies and in advertising propaganda. This policy, which has been used to great advantage by the Standard Oil Co. and the British-American Tobacco Co., has borne fruit, as the increased sales of Milkmaid Brand testify.

The local agency is in the hands of a Chinese firm, which also handles Eagle Brand and St. Charles Brand. The March 1, 1915, retail price list of this firm quoted the following prices per can:

	Local Mexican.	United States.		Local Mexican.	United States.
Milk:			Milkmaid—Continued.		
Eagle.....	\$0.45	\$0.17	Evaporated cream.....	\$0.28	\$0.10
Cream, St. Charles.....	.30	.11	Natural milk.....	.28	.10
Milkmaid (Blue Label).....	.35	.14	Coffee and milk.....	.50	.19
Milkmaid (Black Label).....	.40	.16	Chocolate and milk.....	.50	.19
Milkmaid:			Nestle co.coa.....	1.25	.46
Thick cream.....	.65	.21	Nestle Food.....	.80	.30

These prices appear comparatively low at present.

The Anglo-Swiss Condensed Milk Co. does not advertise in either of the two local vernacular newspapers. There is forwarded a copy of an advertisement, with its translation, that is printed daily in the Peking Gazette, Peking, so that the company's style of advertisement may be shown. The trade-mark or "chop," which is essential for fixing the Chinese mind on a particular brand of goods, is an appropriate girl with two pails.

There appears to be no reason why enterprising American condensed-milk manufacturers should not be able to compete successfully in this market. The article is a food product, a demand for which exists and can be increased enormously among the prosperous Chinese of this part of Kwangtung Province, which is supplied through Swatow. A certain amount of patience, the expenditure of some money for advertising purposes, and courage to bear a "cut-rate" campaign that may be inaugurated by competitors already in the field, are all that are needed. The market exists, and there is a

firm established here willing to represent an American house in this district. This firm solicits correspondence on the subject.

[The address of the firm will be furnished and the copy of the advertisement may be seen on application to the Bureau of Foreign and Domestic Commerce; refer to file 63870.]

CONVERSION OF IRISH PEAT INTO MANURE.

[Consul Wesley Frost, Cork (Queenstown), Oct. 26.]

Irish agriculturists are greatly interested in the alleged discovery of a method of converting ordinary peat into a highly concentrated fertilizer by a simple and inexpensive bacterial treatment. The discoverer is Prof. W. B. Bottomley, of the Royal Botanic Society, and his experiments have been indorsed by many British scientists and organizations of high reputation. Prof. Bottomley's principle is that bacteria facilitate the chemical processes connected with plant growth, and the peat bacterial culture immensely facilitates food absorption by vegetables and other farm crops. He has exhibited specimens of mature potatoes grown in seven weeks by the use of the peat fertilizer, and states that an acre of land treated with 1 ton of the peat manure has produced 41 per cent more potatoes than an acre treated with 80 tons of ordinary farm manure. The manufacture of the peat fertilizer is so simple that it is being carried on by a man and a boy.

The British Board of Agriculture is not yet convinced that the value of the new manure has been demonstrated on a broad scale, and consequently has declined to take it over. A commercial company is partially organized, but Prof. Bottomley is anxious to have a national committee formed which will utilize his product at once. The council of the Royal Botanic Society is taking steps toward the formation of such a committee.

The peat supply of Ireland has been much reduced during the past half century, and if cut for manufacture into fertilizer on a large scale there is some question whether the raw material would hold out for more than a few years.

BRAZIL'S PURCHASES OF FOREIGN COAL.

[Consul General A. L. M. Gottschalk, Rio de Janeiro, Oct. 19.]

American participation in the coal trade of Brazil since the beginning of the present European war is disclosed by the following table, made up from statistics gathered at the various ports of this Republic:

Months.	From United States.	Total imports.	Months.	From United States.	Total imports.
1914.	<i>Metric tons.</i>	<i>Metric tons.</i>	1915.	<i>Metric tons.</i>	<i>Metric tons.</i>
August.....	5,387	100,139	March.....	26,684	90,156
September.....	55,349	116,910	April.....	34,141	115,450
October.....	32,412	100,546	May.....	61,428	128,816
November.....	25,277	82,530	June.....	73,449	111,579
December.....	19,620	104,368	July.....	101,394	126,139
			August.....	89,576	118,749
1915.			Total.....	561,150	1,346,147
January.....	19,360	89,261			
February.....	17,073	61,406			

Of the imports during the 13 months under review Rio de Janeiro took 918,795 tons, Santos 131,895, Pernambuco 94,241, Bahia 58,070, Para 45,793, and Rio Grande 44,902 tons.

FOREIGN TARIFFS.

CANADA.

[Customs Memorandum No. 1965B, Nov. 5, 1915.]

Temporary Admission of Tourists' Automobiles.

The provisions regarding the temporary admission into Canada of tourists' automobiles (see Foreign Tariff Notes No. 1, pp. 21-22, and No. 3, p. 92) have been amended as follows:

When a nonresident owner of an automobile manufactured abroad desires to bring such a machine into Canada for a stay of not more than 10 days, he shall in all cases report at the customhouse at the frontier port in Canada and present a certificate to the Collector of Customs who, if satisfied that the machine is imported in good faith, may admit the same without formal entry, and may issue a certificate, in duplicate, the original to be given to the owner, who shall present it to the collector at the port of departure from Canada.

The new provision is an extension of the permission granted under the former regulations, which allowed temporary free admission of automobiles for a period not exceeding seven days. The following is a facsimile of the certificate to be signed by tourists taking machines into Canada:

Signature.....

The above automobile and outfit have been identified to my satisfaction and have been exported through this port.

Signature....., Customs Officer.

[Consul Harry A. Conant, Windsor, Ontario, Nov. 17, 1915.]

Commencing November 9, 1915, American tourists traveling in Canada in automobiles will be allowed to stay 10 days without giving bond for the reexportation of their cars, instead of 7 days as under the regulations in effect during the last few years.

The collector of customs at Windsor believes that the change will result in an increase in the number of American tourists entering Canada, and will offset the increased license fees for automobiles that went into effect at the beginning of 1915.

During 1914, when the fee was fixed on the flat-rate plan, 3,200 licenses were issued to American citizens at the port of Windsor, according to the statement of the local collector of customs. It was estimated by the Canadian Government, after an investigation, that each automobile carrying tourists from the United States contained on an average four passengers. The daily expense of each passenger was placed at \$5, so that the approximate daily amount spent by American tourists entering Canada by way of Windsor was \$64,000.

The new license fee, based on horse power, resulted in a decrease in the number of licenses issued by the customs officers at Windsor to 1,800 for the current year. The revenue derived by Ontario business houses from tourists was cut in two this year, and the new license fees are blamed for this loss.

DENMARK.

[Manchester Guardian, Oct. 26, 1915.]

Restrictions on Exports.

An arrangement has been made in Denmark whereby the staple exports of that country, of which Great Britain has been a heavy consumer, are not to be entirely diverted from their normal destinations, because of unusual economic conditions occasioned by the war. The following explanation of the situation as regards exports was furnished by the Danish Agricultural Commissioner in London:

The difficulty of keeping up the trade with England arose from the fact that from September onward the Germans and Austrians have been anxious to buy the butter at a shilling a pound higher price than could be realized here. An order was issued on the 11th instant by the Danish Minister of Justice prohibiting the export of butter except through such firms as were authorized by the Minister of Agriculture and on conditions prescribed. Only those firms will be authorized which give a declaration to a joint committee of the trade and the dairy associations that they will divide their exports between the markets to the west and to the south in a proportion fixed by the joint committee, and will send a signed declaration with each consignment stating the quantity and destination. These declarations, collected by the customs, will enable the joint committee to check the export and to see that the prescribed proportion comes here. A similar arrangement was made in March with regard to Danish bacon. Although 60 per cent higher prices can be realized in other markets for both bacon and butter, by far the larger part of the bacon comes here, and it is hoped that the butter will soon again come here in the same proportion. It is described as a very uncommercial and extraordinary arrangement, necessitated by the state of war, involving a very heavy weekly sacrifice on the part of the Danes, but made for the purpose of maintaining trade with the old customers and for other ulterior reasons.

NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Sept. 6, 1915.]

Tariff Changes.

According to a telegram received from the American Consul General at Auckland November 8, 1915, the recently proposed changes in

the New Zealand customs tariff (referred to in **COMMERCE REPORTS** for Sept. 21, 1915) have been enacted with certain modifications and, under the provisions of a previous resolution, are to be effective from August 27, 1915.

As shown in the table below, electrical machinery and appliances imported from countries subject to the general tariff, including the United States, are subject to increased duties, and chassis for motor vehicles, formerly admitted free, are now dutiable, while the rates on bicycles, motorcycles, and fittings therefor have been reduced. The proposed duty on mineral oils was not adopted. Besides certain changes in the classification of spirits, oils, bicycle fittings, and materials for the manufacture of carriages, wagons, and motor vehicles, the following changes in rates have been made, and it is stated in the telegram from the Consul General at Auckland that a general surtax of 1 per cent ad valorem is to be imposed, presumably applying to all imports, free as well as dutiable. The preferential rates are limited to imports from the United Kingdom and certain British colonies.

Tariff No.	Articles.*	New rates.		Old rates.	
		General.	British preferential.	General.	British preferential.
	Cordials, bitters, liqueurs, spirits, and spirituous mixtures and flavoring essences, and fruits preserved with alcohol (tariff Nos. 30, 32, 40, 45, 47, 48, 49, 53, 64), per proof or liquid gallon, according to the case.	17s.	17s.	16s.	16s.
169	Electrical machinery and appliances, including generators, motors, lamps, and transformers.	Per cent. 20	Per cent. 10	Per cent. 15	Per cent. 10
170	Bicycles, tricycles, motor cycles, side cars, and parts thereof, not specified.	20	10	30	20
ex190	Motor vehicles for road traffic, not specified, including motor cars and motor carriages, and bodies for motor vehicles.	30	10	30	20
	Chassis.	20	10	Free.	Free.
202	Fittings for bicycles, tricycles, and motor cycles (including handlebars, plain forgings and stampings, rims not bored, spokes, etc.).	10	Free.	20	Free.
385	Gas, hot-air, and oil engines of all kinds.	20	10	20	Free.

* Rubber tires, solid and pneumatic, for vehicles of all kinds, including motor cycles and bicycles continue exempt from duty.

† Fruits preserved with alcohol are subject to an additional duty of 25 per cent ad valorem.

MOTION-PICTURE SITUATION IN COSTA RICA.

[Consul C. Donaldson, Port Limon, Oct. 5.]

French and Italian films are almost universally in use at the motion-picture theaters of Port Limon and district. However, it is patent to any observer that when, at rare intervals, an American film is exhibited the general public prefers it to those of European production; yet the latter have the "right of way," and either on account of cheapness or because of prejudice, are about the only films seen. As a result of this disregard of public opinion the motion-picture business is falling off, and now an exhibition only once or twice a week fails to attract an audience and the theaters are almost empty.

The custom in this country has been for one firm [whose address may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices by referring to file No. 67737] to import all the films, which afterwards are shown in turn in the different theaters in Costa Rica.

VENEZUELA'S TRADE IN REFINED SUGAR.

[Consul Homer Brett, La Guaira, Oct. 18.]

The Venezuelan import tariff, with all surtaxes added, taxes muscovado sugar at the rate of \$3.42, and white or refined sugar at \$10.27 per 100 pounds, gross weight. The retail price is 25 cents per kilo or approximately 12 cents per pound, for the domestic product, which is fairly white but lumpy. Importations of refined sugar were 147,000 pounds for 1913 and 49,492 pounds for the six months ended June 30, 1914.

As there are 2,800,000 people in Venezuela, it is seen that in the exceptionally prosperous year 1913, the per capita importation of refined sugar was only one-eighteenth of a pound. Apart from the purchases of diplomatic officers, the Government, and others entitled to customs exemptions, it was confined to cut loaf, confectioners' and fancy grades not produced locally, as, in ordinary grades, the country makes more than is needed for consumption, and the high retail price is maintained only by a combination of producers that export all surplus. As five modern centrals are about to begin operations there is no likelihood of increased importations.

A great deal of sugar is consumed in Venezuela, but nearly all of it is in the form of the brown cakes known as "papelón." Some of these are exported to England, but there seems to be no demand for them elsewhere abroad. Trinidad ships some brown sugar to the eastern ports of the Republic. It is not believed that there is any sugar trade in Venezuela large enough to interest a manufacturer. It is purchased in small lots by all wholesale grocers, nearly always through export houses in New York, which give from four to six months' credit.

[Lists of wholesale grocers in La Guaira, Caracas, Carupano, Cumana, and Ciudad Bolívar may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 63635. Up-to-date lists of business houses in La Guaira and Caracas, Venezuela, may also be found in the "Supplement to the Trade Directory of South America," recently issued by the Bureau. This publication is for sale at 5 cents per copy by the Superintendent of Documents, Government Printing Office, Washington, D. C., or by the branch offices of the Bureau of Foreign and Domestic Commerce.]

The ore bodies in British Columbia, it is found, extend to a greater depth than would have been thought possible 10 years ago. Vice Consul Woodward of Vancouver reports that the Rossland mines and mines in the coast district have been developed to a depth of 2,200 feet, the Slocan mines to more than 1,000 feet, a mine on Texada Island to 1,500 feet, and numerous others to considerable depths.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 308 United States Customhouse; Seattle, 923 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Codfish, No. 19364.—An American consular officer in Spain reports that two firms in that country are desirous of being placed in communication with exporters of codfish, with a view to importing the commodity. Correspondence in Spanish is preferred. Cable addresses are also given.

Tape No. 19365.—A commercial attaché of the Department of Commerce reports that a man in the United Kingdom wishes to be placed in communication with manufacturers of tape to be used in making hospital tents. A sample of the tape desired may be examined at the Bureau or its branch offices. (Refer to file No. 860.)

Wool grease, No. 19366.—A commercial agent of the Bureau reports that he is in receipt of a letter from a firm in South Africa stating that it desires to be placed in communication with American importers of wool grease. It is stated that 1,600 to 2,000 pounds a month can be supplied.

Ferryboat, No. 19367.—A report from an American consular officer in Honduras states that a man in his district desires to purchase a small steamboat. The boat would have to be shipped in sections to Puerto Cortes, then transported overland, over the roughest kind of mountain roads, and reassembled at point of destination. It must be of light draft, to permit landings at shallow points, and is to be used to transport passengers, stock, and freight. Correspondence in Spanish is preferred.

Laundry soap, No. 19368.—A firm in Italy wishes to establish commercial relations with manufacturers of laundry soap with a view to securing an exclusive agency. References are furnished. Correspondence may be in English.

Device to prevent pipes from freezing, No. 19369.—An American consular officer in Chile reports that an engineer in charge of waterworks desires samples, illustrations, prices, and catalogues of devices for preventing the freezing and bursting of water pipes. The devices are to be used principally on small house connections about 1 inch or less in diameter, in the installation of water meters. It is stated that the temperature seldom goes below 15 degrees Fahrenheit.

Machinery, construction materials, etc., No. 19370.—A report from an American consular officer in Chile states that a firm desires to act as representative or agent of manufacturers of machinery, construction materials, oils, rice, and food products. Correspondence and literature should be in Spanish or German. References are furnished.

Rubber articles, leather bags, etc., No. 19371.—A commercial agent in charge of the Chicago branch of the Bureau reports that a company in France desires catalogues, prices, and terms for sole agency of rubber articles for medicinal use, women's mesh and leather bags, and pocketbooks.

Paper, hardware, etc., No. 19372.—A report from a commercial attaché of the Department of Commerce states that an American residing in Chile desires to act as representative of firms manufacturing paper, hardware, or any other line. It is stated that he has had considerable experience in dealing with Spanish people. References are given.

Post cards, No. 19373.—An American consular officer in France reports that a sales agent in France desires to purchase picture post cards with or without texts in the French language. "Beauty types" of women drawn by popular American artists sell well. The cards should be artistic in subject, coloring, and finish, as well as of good stock.

Cotton, silk, and woolen goods, etc., No. 19374.—A report from an American consular officer states that a man in Persia desires to establish commercial relations with manufacturers of cotton, silk, and woolen goods, boots, and shoes. Samples, prices, and terms should be sent at once. Correspondence may be in English.

Six months Siamese trade shows decrease	824		

CONSULAR WORK SELLS AMERICAN GOODS IN DENMARK.

As the result of Trade Opportunities forwarded by the consulate general at Copenhagen and other trade-extension efforts by that office, \$7,000 worth of American motor equipment, \$2,000 worth of American plows, 6,000 tons of steel wire, \$2,500 worth of wax, \$5,000 worth of coffee, sugar, and cocoa, \$380,000 worth of cottonseed cake, and \$6,000 worth of leather goods have been sold in that Danish port. Letters received by Consul General E. D. Winslow tell of other trade that has been secured by exporters in the United States through information supplied by him but do not specify the particular articles dealt in.

DROUGHT IN SOUTH AFRICA.

(Consul E. A. Wakefield, Port Elizabeth, Oct. 6.)

While much has been written concerning droughts in South Africa it is extremely doubtful if conditions in certain sections of the Port Elizabeth district ever were worse than at present. Many thousand cattle and small stock have already been lost and the situation is daily becoming worse. Unless relief is experienced soon in the driest sections, there will be practically no stock left.

Probably cattle have felt the effects least of all, and sheep are supposed to have suffered less than ostriches and Angora goats. Last week Mr. Hurndall, president of the Angora Goat Farmers' Association, estimated that 400,000 head of small stock had perished in the Jansenville and Aberdeen districts alone. Ostriches have suffered heavily, but the supply of feathers on the local market is quite sufficient to supply all demands. The welfare of the farmer means the welfare of the whole district. Consequently, with decreased production and slightly inferior grades, it is difficult to be optimistic regarding the business outlook.

Rains have fallen in Port Elizabeth and vicinity and in certain country districts during the last few days, but apparently the worst-stricken places have not had rains. At present the weather indications are for further rains, and it is possible that the drought may yet be broken before it is too late.

EXPORTS FROM SHANGHAI TO UNITED STATES.

[Consul C. E. Gauss, detailed as vice consul, Shanghai, China, Oct. 12.]

The exports from Shanghai to the United States, as declared at this consulate general during the half-year ended June 30, 1915, amounted to \$12,459,656, United States currency, an increase of more than \$4,000,000, compared with the figures for the corresponding period of 1914. Of this \$4,000,000 increase, however, more than \$2,000,000 is accounted for by gold shipments from the banks to the United States; \$840,557 represents shipments of crude antimony and antimony regulus, and almost \$500,000 is for shipments of indigo.

The statistics for July and August, 1915, show equally high increases over the shipments for 1914, July figures having reached \$3,109,948, compared with \$1,365,345 in 1914, and those for August, \$3,598,305, compared with \$1,510,044. These increases also are due to gold shipments, amounting to about \$1,500,000, and to dyestuff shipments, equalling \$800,000 in two months.

During the eight months ended August 31, more than \$3,700,000 in gold bars left Shanghai for the United States; nearly \$1,000,000 in antimony shipments, and \$1,300,000 in indigo.

Various Interesting Increases in Shipments.

There were other interesting increases during the first half of the year, as, for instance, in bristle shipments, which increased from \$38,068 in 1914 to \$90,671 in 1915; egg albumen shipments, which reached \$275,000 in 1915, as compared with \$157,779; and large increases in the shipments of musk, peanuts, skins, sausage casings, bean oil, and pongee silks.

There were decreased shipments of eggs, which in 1914 were valued at \$355,571 and in 1915 at \$77,768. This is accounted for partly by the lack of shipping facilities and partly by the fact that the egg shipments from China are understood not to have been a complete success in the United States. Cottonseed-oil shipments fell off from \$480,615 in 1914 to \$258,865 in 1915. Tea shipments fell off during the first half year, as compared with 1914, but there were increased shipments in August.

Wool shipments increased from \$617,278 to \$1,022,735, but there were no other increases or decreases of particular importance.

KARACHI MAY BUY AMERICAN ELECTRICAL SUPPLIES.

[Consul James Oliver Laing, Karachi, India, Oct. 7.]

Conferences have been held here with a representative of a local firm, with the object of clearing up certain banking and credit matters. The firm has also been supplied with catalogues as a means of obtaining a possible \$50,000 order for American electrical supplies. The house intends taking up this business on a large scale, and probably will order in the United States. This electrical branch has not developed sufficiently to be called a success, but a firm so wealthy and influential, showing an interest in American goods, may produce important results.

[The name of the firm mentioned may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69054.]

DEMAND FOR AMERICAN SACKS FOR SHIPPING ORE.

[Consul Thomas W. Voetter, Antofagasta, Chile, Oct. 20.]

There is considerable delay here in securing supplies of jute sacks from India, such as are used to ship concentrates of tin, and the price of metal sacks has risen considerably. It has been suggested that possibly supplies of sacks made from cotton could be obtained in the United States, to serve acceptably for shipping tin ores, etc. Important characteristics of a sample forwarded are the close weave and weight, which give the requisite strength for shipping heavy ores and prevent leakage of fine ores; the method of finishing, which leaves the small opening at the middle of the top, for the insertion of the funnel through which the sack is filled, and the strings left for finishing the closing of the filled bag. Cotton bags to compete with the jute should be finished the same way.

The tin concentrates are as fine as sand in some cases, and heavy. The size of the bags should be that of the sample, although sizes one or two inches smaller in width and length, as well as some a little larger, are also used. The Bolivian coat of arms is generally printed on one side, for shipments from that country, though in some cases it is omitted. If the United States can supply an article like that submitted, or one of the same style and size, of some other fabric, which will serve the purpose, samples with prices should be sent to addresses which are forwarded.

[The sample mentioned, which is of jute and was made and finished in India, will be loaned upon application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 68676. The list of firms in Chile and Bolivia using such bags may also be obtained from the Bureau or its branch offices under the same file number.]

ORANGE AND RAISIN MARKETS SOUGHT BY ADVERTISING.

[Consul Felix S. S. Johnson, Kingston, Ontario, Nov. 20.]

The California Associated Raisin Co., which for the past two years has been carrying on a vigorous advertising campaign in Canada and the United States, with the object of popularizing the sale and consumption of raisins, comprises more than 6,000 growers. The California Orange Growers have carried on a similar campaign in Canada. This cooperative advertising of raisins and oranges, by voluntary action on the part of the growers, marks a step in the direction of obtaining new markets for their products. It will, doubtless, be a growing factor in the marketing of other American goods which were not considered, heretofore, advertising possibilities.

CUSTOMHOUSE BROKERS IN RIO DE JANEIRO.

A list of customhouse brokers in Rio de Janeiro, together with the names and addresses of their respective bondsmen, has been forwarded by Consul General A. L. M. Gottschalk from that city. The list is published in the supplement of the Boletim da Alfandega do Rio de Janeiro, and will be loaned to interested persons upon application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69066.

AMERICAN GOODS POPULAR IN WESTERN GREECE.

[Consul A. B. Cooke, Patras, Greece, Oct. 28.]

American goods, which are being imported into the Patras district in rapidly increasing quantities, are almost without exception giving satisfaction to both importers and consumers. Practically every week some merchant here reports to the consulate the excellent quality of some American product which he is handling. Among the articles approved by the local trade within the past few weeks are staves, lumber, sugar, hosiery, cabots, antiseptic cotton and gauze, sulphate of copper, and refrigerators. Many other lines are apparently giving no less satisfaction.

Staves and Lumber Imported—Kinds of Wood.

The staves imported are usually of a reddish wood, apparently beech. They are a finished product, except that they are not beveled and grooved for heading, and are of uniform grade, without flaws or knots. They are superior to the European stave, which formerly held this market, and are more satisfactory to importers, since they are of lighter weight and hence pay less duty at the customs, and being practically finished call for far less work by local coopers.

The lumber imported has been of white pine or spruce. American exporters have scored a good point on this market by having the lumber prepared in the exact dimensions called for here. The result is that it requires much less labor to manufacture the cases, for which the lumber is used to meet demands of the export currant market.

Cotton Goods and Hosiery—Antiseptic Cotton and Gauze.

American cabots, the importation of which began here in 1914, are pronounced by local dealers superior to anything in that line seen on this market. Trade in them is steadily growing. It is hoped that they are merely the forerunners of American cotton goods in general.

American hosiery appeared here this year for the first time, but may now be seen in more than one haberdasher's windows. The retailers are quick to call the attention of their customers to the new American goods. Imports thus far have been of a fairly good grade of hose and half hose, together with some coarser grades. One of the leading haberdashers stated a few days ago that his first order had been sold off in a most satisfactory way, and he had sent in orders for a further supply.

American antiseptic cotton and gauze also made their appearance here for the first time this year. Both are proving their excellence. The proprietor of one of the oldest and most important pharmacies, commenting a few days ago on his American stock, stated: "The American cotton and gauze which we are now handling are superior to anything of the kind we have ever had, although we have handled these articles from practically all the leading European markets."

Merchants Learning That American Prices are Satisfactory.

American goods, with a few conspicuous and some inconspicuous exceptions, have until recently been unknown on the markets of this district, which had their well-established channels of trade, and had been accustomed for years to secure supplies of various sorts from the same old sources. Until recent years, communication with the United States was indirect and slow. Merchants were accustomed to look

upon that country much, for instance, as they are disposed to look upon Japan now—as a country too remote to be seriously considered in the purchase of their supplies. There seems to have been a deep-rooted idea that America was a very dear country. It is interesting to note the surprise with which the local merchants frequently learn, by actual test, that American articles are quite as reasonable and as good, sometimes better, than those they have been accustomed to get from other markets.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.	903 G. Birch Avenue, St. Paul, Minn.
Peck, Willis R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 10	(*)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

COAT AND HAT HOOKS FOR SOUTH AMERICA.

Special Agent S. S. Brill, who has recently returned to the United States from a tour of South America during which he investigated, on behalf of the Bureau of Foreign and Domestic Commerce, the market for hardware in the southern Republics, brought with him samples of coat and hat hooks that are finding a sale there. One, designated sample No. 137, is a japanned hook the cost price of which is 22 cents United States currency and the selling list price 32 cents per dozen. Another, sample No. 138, is a fancy nicked hook costing 59 cents and selling for 75 cents per dozen. Other styles which have quite a large sale are No. 223, a cast-iron plain japanned coat and hat hook priced at 8½ cents per dozen, and No. 222, also of cast-iron japanned, but with porcelain knobs, priced at 12 cents per dozen.

These sample hooks are on display in the New York office of the Bureau, where they may be inspected by interested firms. Ask for the numbers given above under file No. 692.

Consul John A. Gamon at Puerto Cortes, Honduras, reports that during the month of October the rate of exchange prevailing in that port was 35½ cents gold for the Central American silver peso, or a premium of 181.69 for the American gold dollar.

JAPANESE TOYS AGAIN SOUGHT BY OTHER COUNTRIES.

[Extract from Japan Advertiser, Oct. 21, forwarded by Consul General George H. Scidmore, Yokohama.]

The Japanese toy trade has for some time been in bad straits. This has in turn caused the awakening of Japanese manufacturers to the necessity of introducing an improvement both in make and quality. As a result, Japanese toys are again in demand abroad, especially since the outbreak of the war. The supply from certain European sources for the United States, Australia, England, and the South Seas having practically stopped, these markets are now asking for Japanese substitutes, and a considerable number of cases is being shipped by every steamer. Many orders are arriving, but since the prices are comparatively low, only about half of these orders are being filled.

Apart from the question of price, the weak point of the Japanese industry is still its small scale, and any big order can not be met at one time, even by a combination of factories. Most factories are at present busy in making Christmas toys for export. In an ordinary year Christmas orders would long ere this have been placed and completed, but this year orders have been delayed, and the factories are still busy. Especially is this the case in Tokyo, Yokohama, Shidzuoka, and Nagoya, where wages are higher by 15 to 20 per cent. Moreover, the raw materials are high in price, and the manufactured toys are dearer by 20 to 24 per cent, especially if made of celluloid, metal, and colored paper, these materials being now 40 to 60 per cent higher than at this time last year.

As to the designs, the various war subjects, such as miniature aeroplanes, guns, torpedo boats, dirigibles, and soldiers, find most favor, as was the case last year. At present the demand is largest in the United States, where it is mostly met by the Japanese. It is said that various export firms in Yokohama are receiving orders covering several months to come.

COSTA RICA SEEKS FLOWER AND VEGETABLE SEEDS.

[Consul Samuel T. Lee, San José, Costa Rica, Oct. 9.]

Flower and vegetable seeds are now being imported into San José principally from the United States. Before the European war, probably 50 per cent of the vegetable seeds came from France, but most of the flower seeds have been imported from the United States for many years. The lighter seeds, both flower and vegetable, are often brought in by parcel post.

The leading importer here buys chiefly in bulk, and uses his own labels and packets containing cultural instructions in Spanish. The larger jobbers do not carry seeds in stock, but import for their customers as ordered. The largest importer carries a big stock of flower, vegetable, and grass seeds on hand at all times, and purchases some of his varieties from points as far away as Australia.

Prices f. o. b. New York or New Orleans on larger shipments are well understood by local dealers and c. i. f. prices are unnecessary. Many of the dealers here buy for cash, to take advantage of liberal discounts.

[Lists of importers of seeds in San José, Puntarenas, and Cartago, Costa Rica, may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67738.]

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he received in stock during the week ended November 20 the following new United States Government publications, which he will sell at the nominal prices affixed:

Educational Directory, 1915-1916, Education Bureau Bulletin 43, 1915.—List of educational institutions in the United States, including universities, colleges, high schools, normal schools, kindergartens, public schools for the blind, deaf, feeble-minded, etc., with list of officials. Price, paper, 20¢.

Exercises with Plants and Animals for Southern Rural Schools, Agriculture Department Bulletin 305.—Outline of a course of study in plant and animal life in rural schools, arranged by months. Price, paper, 15¢.

Features of the Sheep Industries of United States, New Zealand, and Australia Compared, Agriculture Department Bulletin 313.—Covers general conditions of sheep industry in New Zealand, Australia, and United States, embracing flock management, breeds, wool, sheep-raisers' organizations, etc. Price, paper, 10¢.

The Bonavist, Lablab, or Hyacinth Bean, Agriculture Department Bulletin 318.—Covering cultural characteristics, seed production, varietal characters, and botanical names. Price, paper, 5¢.

Insect and Fungous Enemies of the Grape East of the Rocky Mountains, Farmers' Bulletin 284, reprint.—Embraces principal insect enemies of the grape, with detailed descriptions of the diseases and methods of extermination, including insecticides, fungicides, spraying, etc. Price, paper, 5¢.

Grasshoppers and Their Control on Sugar Beets and Truck Crops, Farmers' Bulletin 621.—Including general description of the grasshopper problem west of the Mississippi River, with description of species, habits, natural enemies, and methods of control. Price, paper, 5¢.

Handling and Shipping Citrus Fruits in the Gulf States, Farmers' Bulletin 696.—Practical work on the transportation of citrus fruits, including causes of decay in transit, prevention of losses, harvesting, packing, and shipping operations, field handling, packing-house handling, refrigeration, precooling, etc. Price, paper, 5¢.

Shippers' Export Declarations and Export Procedure, issued by the Bureau of Foreign and Domestic Commerce—Covers a reprint of Treasury Decision 35708, with the addition of an explanatory introduction by Chief of the Bureau of Foreign and Domestic Commerce. Price, paper, 5¢.

Uniform System of Accounts for Gas Corporations and Electric Corporations in the District of Columbia, as prescribed by the Interstate Commerce Commission in accordance with the act of Congress approved March 3, 1909, Public Law 303, first issued 1909, reprint—Prescribed system of accounts for gas and electric corporations. Price, paper, 10¢.

Shot Firing in Coal Mines by Electricity Controlled from Outside, Mines Technical Paper 108.—Covering general description of outside shot-firing system and detail description of some systems now in use. Price, paper, 5¢.

Mine-Ventilation Stoppings, with Especial Reference to Coal Mines in Illinois, Bureau of Mines Bulletin 99, prepared by Bureau of Mines under cooperative agreement with the Illinois State Geological Survey and the Department of Mining Engineering of the University of Illinois. Price, paper, 10¢.

Portland Cement Materials and Industry in the United States, Geological Survey Bulletin 522, reprint—Covers the Portland-cement industry in general, raw materials, Portland cement resources of United States, etc. Price, cloth, 65¢.

Excavation Machinery Used in Land Drainage, Agriculture Department Bulletin 300.—Practical work on machines for dredging, digging, etc., covering development of excavating machinery, and detailed description of certain types of dredges. Price, paper, 15¢.

A prominent New York manufacturer has notified the Bureau of Foreign and Domestic Commerce of his success in securing trial orders for his wares in both the Canary Islands and the Azores through the efforts of the American consuls stationed there.

SIX MONTHS SIAMESE TRADE SHOWS DECREASE.

[Vice Consul Carl C. Hansen, Bangkok, Sept. 23.]

The total value of all imports into Siam through the port of Bangkok for the first six months of 1915 was \$13,878,105, against \$16,488,883 for the corresponding months of 1914, a decrease of \$2,610,778 for the current year. This decrease was accounted for by the loss of \$2,077,477 in the class of general merchandise, \$77,685 in alcoholic liquors, and \$455,610 in treasure.

The total exports for the January-June period of 1915 were valued at \$19,741,379, compared with \$23,178,349 for the first six months of 1914, a decline of \$3,436,970 for 1915, the decrease amounting to \$2,452,947 in rice, \$765,624 in teakwood, and \$217,970 in other exports.

The falling off in imports was attributed mainly to the continued low price of rice, which left the Siamese farmer no surplus with which to buy foreign goods. The general advance in prices and freights also caused importers to restrict their purchases abroad, and finally the lack of adequate and suitable shipping facilities greatly retarded the import business. The results were especially unfavorable in the case of imports from the United States, for the reason that there are no direct shipping lines between the United States and Siam, and on account of the war the customary transshipment of goods at British ports became very difficult.

Destination of Rice and Teak Exports.

The rice and meal exports for the six months under review amounted to 811,797 short tons, of which 140,779 tons were shipped to European ports and 671,018 tons to other ports, against 182,284 tons to Europe and 536,510 tons to other ports during the corresponding months of 1914.

Of the total teakwood exports of 18,172 tons for the first half of 1915, the shipments to Europe amounted to 1,769 tons; to India and Colombo, 12,123; and to other destinations, 725 tons.

During the first six months of the current year the Siamese products invoiced at the American consulate general for shipment to the United States were: Hides, 35,917 pounds, valued at \$4,465 United States gold; 56,000 pounds of tungsten ore, value, \$12,851; 620,731 pounds of white pepper, value, \$100,729; and 14,616,332 pounds of rice, value, \$219,419.

[An article on Siam's frontier trade with Burma was published in **COMMERCE REPORTS** for Nov. 24, 1915.]

INDORSEMENT OF INSURED AND C. O. D. PARCELS.

[Announcement to postmasters by the United States Post Office Department.]

In complying with the instructions contained in article 8, page 80, of the July, 1915, Postal Guide, it is not sufficient when a parcel is presented for acceptance for insurance or collection on delivery merely to inquire whether it contains fragile or perishable matter or to accept the statement of the person presenting the parcel that it contains "Merchandise." Postal employees must ascertain in each instance what articles the parcel contains, and, if fragile or perishable matter is inclosed, shall cause the parcel and each coupon of the insurance tag to be properly marked. The question of whether a parcel shall be indorsed is to be determined by the postmaster or postal employee accepting the article and not left to the discretion of the sender.

CHILE'S DEMAND FOR ROOFING AND WALL BOARD.

[Consul General L. J. Keena, Valparaíso, Sept. 22.]

Corrugated iron, plain or galvanized, is used almost entirely as roofing in Chile. The import statistics for 1913 give some idea of the amount of this material used in the country.

Imports of corrugated iron in sheets, not painted or galvanized, were: From Great Britain, 1,063 metric tons (metric ton=2,204.62 pounds); Germany, 30 tons; Belgium, 69 tons; United States, 1,202 tons; total, 2,364 tons.

Imports of corrugated iron sheets, galvanized, were: From Great Britain, 13,061 metric tons; Germany, 116 tons; Belgium, 4 tons; United States, 15,553 tons; Argentina, 4 tons; total, 28,738 tons.

Galvanized, corrugated iron now sells for about \$6, United States currency, per quintal of 101.4 pounds, in Valparaíso, duty paid (duty, \$0.99 U. S. currency per 100 pounds). Before the war the price of galvanized corrugated iron was \$4.90, United States currency, per quintal. The cash discount on these prices is 8 per cent.

There are two reasons for this general use of corrugated iron for roofing purposes—first, because, as this is a country subject to periodical earthquakes, a light roofing is needed; second, because the heavy rains in central and southern Chile make necessary a roofing which will give substantial protection.

To introduce any other type of roofing in Chile would be difficult. Possibly the port through which it would be most easy to introduce prepared roofing would be Antofagasta, as that northern section of Chile has little or no rainfall.

Opportunity for Sale of Wall Board for Ceilings.

Chile offers an excellent opportunity for the introduction and sale of wall board for ceilings. The type of ceiling generally found here is of matched wood. Earthquakes make it impossible to use plaster ceilings. The lumber employed for ceilings is partly of native production and partly imported from the United States and Canada. A wall-board ceiling should have an advantage over the wooden ceiling, both in the matter of lightness of weight and ease of placing. Its cost in this country would depend on the rate of duty charged on it by the customhouse authorities. This rate, as far as I can learn, has not yet been set. Unplaned pine lumber pays a duty of \$0.066 United States currency per square meter.

To introduce wall board for use in making ceilings it is suggested that the manufacturers take the matter up with houses which handle building material in Chile and have offices in New York. These companies could give a practical opinion on the subject, and also establish the customhouse rate by presentation of samples, and would be in a position to place and handle such merchandise throughout Chile.

The present general type of construction calls for the use of wooden studding, filled in with adobe bricks for all inner and to a considerable extent also for outer walls in houses.

[A list of the companies that handle building material in Chile, and also have offices in New York, may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 68270.]

PROFITS OF INDIA'S COTTON MILLS.

[Consul Carl F. Delchman, Bombay, Oct. 15.]

India ranks sixth among the world's cotton yarn manufacturers, having 6,800,000 spindles. Three-fourths of these are in the Bombay Presidency. The following review of the textile industry of Bombay for the year 1914 by the Times of India is therefore of much interest:

[In the figures for data the terms "lakhs" equal one hundred thousand, and "crores" ten million, and the figures are expressed with decimal fractions. The price is expressed in annas, which is the equivalent of an English penny or 2 cents United States currency. The Indian bales of cotton weigh 392 pounds.]

We have in India about 271 mills, about 68 lakhs spindles, 104,000 looms, employing 260,000 hands, and consuming about 2,140,000 bales of cotton. We produced last year 68.27 crore pounds of yarn. Out of this 24.50 crores went for the production of 27.43 crore pounds of cloth, 19.79 crore pounds were exported to foreign countries, leaving a balance of about 23.97 crore pounds for home consumption. In Bombay itself we have 30 lakhs spindles, about 49,000 looms, employing 110,000 hands and consuming 10.78 lakhs bales of cotton.

A Disappointing Year.

The year under review was a disappointing one from every point of view; and there has been a considerable fall in the profits. The total profits came to 89.17 lakhs of rupees, which include commission paid to the agents, 24.75 lakhs. If you exclude commission the net profits come to about 64.42 lakhs of rupees. Out of the above net profits, weaving is responsible for 56.89 lakhs of rupees. You will thus see that the profits earned by the spinning mills are next to nothing. They come to about 7.53 lakhs of rupees, although the David Mills, alone made a net profit of 7.34 lakhs. Taking a group of 15 spinning mills with about 6 lakhs of spindles I find that 2.40 lakhs of spindles earned a profit of 14.17 lakhs of rupees, while the rest of the spindles lost 9.63 lakhs. The most gratifying feature of the result for 1914 is the wage bill, which came to 2.37 crores of rupees. For the purposes of comparison, I will give you the following table, which will show the progress of the industry from a money-making point of view. The profits include agents' commission.

Year.	Profits.	Spindles.	Looms.
1905.....	3.47 crores.....	25.60 lakhs.....	28,000
1906.....	3.14 crores.....	26.14 lakhs.....	28,500
1907.....	1.85 crores.....	26.13 lakhs.....	32,000
1908.....	1.31 crores.....	27.34 lakhs.....	36,000
1909.....	1.21 crores.....	28.00 lakhs.....	39,700
1910.....	.60 lakh.....	28.24 lakhs.....	42,000
1911.....	.52 lakh.....	28.90 lakhs.....	42,500
1912.....	2.60 crores.....	28.85 lakhs.....	43,400
1913.....	1.82 crores.....	29.25 lakhs.....	45,350
1914.....	.89 lakh.....	30.09 lakhs.....	49,000

Profits Fall Off.

You will see from the above that there has been a considerable falling off in profits, and I am afraid the year 1915 will be no better; if anything, worse. Several yarn mills have gone into liquidation and a few others will follow. Yarn and cloth have both been disappointing, but the former has been losing ground for years past. It is strange that some of the mills which have gone into liquidation earned good profits in previous years, and at the time of their winding up by voluntary liquidation they had some of the ablest men in Bombay on their boards. In 1905 Bombay exported 6.51 lakhs bales to China; in 1913 we exported 4.05 lakhs bales; and last year we exported 3.24 lakhs bales. The present outlook is far from bright. There has been a sudden rise in cotton, which has jumped up some 75 rupees per sandy (784 pounds) in about six weeks. The American crop, which for the previous season came to 16,000,000 bales, is now reckoned at about 12,000,000 and under. As to the cotton crop in India, although the late rains have materially improved prospects, it is still expected to be a short one. A month ago the estimated stocks of cloth were put down at 2.50 lakhs bales, and

our annual production is computed at 5.5 lakhs bales. Owing to the abnormal rise in cotton, dealers have shown anxiety to clear previously purchased goods, and during the last few weeks it is reckoned that 50,000 bales have been cleared. The stocks of yarn in China, sold and unsold, are reckoned at 1.25 lakhs. There has been a rise of 1½ anna per pound in yarn and about 1 anna in cloth, owing to the rise in the price of cotton; but in spite of this rise there is a distinct loss of one-fourth anna per pound in yarn, while cloth is making a profit of one-half anna per pound. For the year 1914 the shareholders of the yarn mills got a dividend of 4.7 per cent on their capital, while the dividend obtained by the shareholders of the weaving mills came to 5.88 per cent on their paid-up capital.

Japanese Competition.

The wages for 1912 were 2.68 crores per annum; for 1913 they came to 2.47 crores; and for 1914, 2.87 crores of rupees. The excise duty paid by the cloth mills in India at the rate of 3½ per cent came to 24.50 lakhs in 1905; for 1914 it came to 56.33 lakhs. Owing to the war and cessation of imports from enemy countries the Government and the people appear extremely anxious to capture some of their trade. How that can be accomplished in the absence of industries which can not be started in a day, and which could not stand on their legs without some kind of protection, I am not able to see. It is said that Japan is forging ahead. She has practically driven us out of the Chinese market in yarn, and she is bound to monopolize the trade which Germany and Austria are losing. The Government is at the back of the Japanese people.

AMERICAN HUSTLE GAINS DURBAN MOTORCYCLE MARKET.

[Consul William W. Masterson, Durban, Natal, Union of South Africa, Aug. 23.]

The motorcycle is the most popular vehicle in Durban. A larger number of them are now seen on the streets than of motor cars, or even bicycles. Their popularity is enhanced by the side car.

An excellent opportunity is offered for American manufacturers of motorcycles to establish agencies in Natal. About the first of the year an American firm of motorcycle manufacturers established an agency in Durban, and since that time, by advertising in the papers, by hustle, and by reasonable prices, it has succeeded in establishing a remarkably successful trade, until now fully half the motorcycles seen on the streets are of this company's manufacture.

These particular American machines are made to retail at £50 (\$243.33). The agent has informed this consulate that another shipment, consisting of 120 machines, will arrive this month, and that at this time 100 have been delivered and paid for.

This firm of American motorcycle manufacturers has a repair shop in connection with its salesrooms, so that when a part is broken, or becomes worn out, repairs can be made instantly, a necessary convenience in connection with any machine, for any purpose, that is sold abroad.

ITALIAN FOREIGN TRADE OF PRESENT YEAR.

[Consul General David F. Wilber, Genoa, Oct. 28.]

The combined value of the exports and imports of Italy for the first eight months of 1915, according to Italian official statistics, was \$688,507,074. The exports reached a total of \$302,232,369, an increase of \$5,146,644 over the corresponding period of 1914. The imports amounted to \$386,274,705, a decline of \$37,592,224 from those for eight months of the preceding year.

BELFAST MARKET FOR AMERICAN HOUSEHOLD HARDWARE.

[Consul Hunter Sharp, Belfast, Ireland, Oct. 21.]

As the previous source of supply is now cut off, American manufacturers of household hardware would, no doubt, have a fair opportunity to obtain a share of the trade of the Belfast market. Some of the principal articles of household hardware which have been imported into Belfast are:

Enameled wares.—Flat-bottomed kettles, brown, blue, or speckled outside, and white inside, to hold 3, 4, 5, or 6 pints. The cost prices per dozen were: For 6½-inch bottom, \$2.25; 7½-inch bottom, \$2.66; 8-inch bottom, \$3.16; 8½-inch bottom, \$3.53.

Enameled steel stew pans, to cost per dozen: Size 4½ inches, \$0.93; 5½ inches, \$1.03; 6½ inches, \$1.22; 7½ inches, \$1.46; 8 inches, \$1.82; 8½ inches, \$2.31; 9½ inches, \$2.92.

Enameled teapots, seamless, Scotch-pattern spout, electrically welded, plain or speckled outside, white inside: To hold about 2 pints, \$1.95 per dozen; 3 pints, \$2.31; 4 pints, \$2.80.

Enameled basins, to retail as follows: Size 12 inches, \$0.12 each; 13 inches, \$0.16; 14 inches, \$0.20; 15 inches, \$0.24.

Enameled pie dishes, white inside, to retail as follows: Size 8 inches, \$0.61 per dozen; 8½ inches, \$0.73; 9½ inches, \$0.79.

Enameled pie dishes, white inside, were imported to retail at the following prices for the respective sizes: Measuring 10½ inches, \$0.87 per dozen; 11 inches, \$0.93; 11½ inches, \$1.05; 12½ inches, \$1.28.

Enameled milk pans (double), to cost per dozen: To hold 2 pints, \$3.41; 3 pints, \$3.89; 4 pints, \$4.50; 6 pints, \$5.47.

Enameled pails, with bail handle, without covers, costing per dozen: Size, 10½ inches, \$2.19; 11 inches, \$2.56; 12 inches, \$2.92.

Covers for enameled pails, to cost per dozen: Size, 11 inches, \$1.82; 12 inches, \$2.43.

Suggested Change in Style of Goods to be Shipped.

The United States is now sending to this market enameled steel hollow ware, with a granite color both inside and outside, but these particular goods would be more suitable for the trade here were they enameled white inside.

White metal and aluminum.—Tea, dessert, and table spoons and forks of this class are much wanted in this city at present. Tea and dessert spoons of aluminum, now on this market, are greatly in demand. Dessert spoons cost about \$2.92 per gross and teaspoons about \$1.70 and \$1.82 per gross.

Padlocks.—Those similar to the cheap, self-colored spring, with one or two keys, about 2½ inches wide, to cost about \$0.73 per dozen, would sell well in this market.

Wire door mats.—Those of good quality, costing per dozen: Size 24 by 14, \$3.83; 28 by 16, \$4.74; 30 by 18, \$5.35. The cheaper quality cost per dozen: Size 24 by 14, \$2.07; 28 by 16, \$2.56; 30 by 18, \$3.16.

Frying pans.—Those of heavy-gauge steel, tubular handled, cost per dozen: Size 9½ inches, \$1.38; 10½ inches, \$1.56; 11 inches, \$1.70; 12 inches, \$1.91.

Clocks.—The trade here has been in the following: Alarm clocks, to cost from \$3.65 to \$8.76 per dozen; eight-day clocks, to retail from \$2.43 to \$3.04 each; one-day clocks, imitation marble (of wood), to cost about \$1.82 each.

Sundry household articles.—Articles of this class having a ready sale in this market are: Butter prints, butter spades, scrubbing brushes, lanterns, oil lamps, oil-lamp burners, can openers, chair nails, enameled chambers, corkscrews, enameled colanders, white-metal cruets, cup hooks, egg slices, egg whisks, egg spoons, egg timers, hammers, iron spoons, lemon squeezers, potato mashers, garden rakes, saws, scales, scissors, skewers, and saltcellars.

Local Merchants Encourage American Shipments.

Local merchants state that if American manufacturers can deliver these goods in Belfast according to specifications, at approximately the same prices as are herein quoted, there should be a good opening here for the extension of trade in these articles.

Prior to the war European merchants sent representatives to this market about two or three times a year with samples. They generally delivered the bulk of their orders within two months, and payments were usually made on their next journey. They always allowed 2½ per cent discount, with free cases. Their packing was very good, and allowances were at once made in cases of shortage or breakage. Furthermore, these travelers often bought samples in this country, improved on them, and sold them at reduced prices.

If American manufacturers wish to do a direct trade, they should submit samples and quote prices for deliveries at the principal ports in the United Kingdom. Belfast dealers are accustomed to buy through English or Scotch agencies or branches, and they seldom depart from this practice. Owing to the comparatively small quantities in which purchases are usually made, local firms consider it to their advantage to buy in this way rather than to import direct, as they procure quicker deliveries and better credit terms, getting a discount of 5 per cent for one month and 2½ per cent for three months.

[Lists of the principal local firms dealing in household hardware and sundry household articles and of manufacturers' agents for those goods may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 68723.]

FREE NIGHT SCHOOLS IN ONTARIO.

[Consul George W. Shotts, Sault Ste. Marie, Ontario, Canada, Nov. 9.]

Many of the principal cities of the Province of Ontario have organized free night schools for the benefit of the general public. Half the cost for teachers and equipment is paid by the Province and half by the city.

Such night schools have been organized in Sault Ste. Marie, with some 32 classes, each with 15 to 30 pupils. The branches taught here are dressmaking, millinery, cooking, mechanical drawing and shop mathematics, arithmetic and English, electricity, accounting, senior English, senior mathematics, physics and chemistry, and building construction and architectural drawing. The classes in dressmaking and cooking seem to be the most popular, having quite a waiting list of applicants. Millinery, mechanical drawing and shop mathematics, arithmetic, and English come next in popularity.

The instructors in the academic branches are chosen from among the city's legally qualified school-teachers, and those for the industrial branches are selected from the staffs of various successful business firms.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Coal, No. 2793.—Sealed proposals will be received at the United States Engineer's Office, Customhouse, Norfolk, Va., until December 20, 1915, for furnishing about 3,000 tons of bituminous coal. Information on application to the United States Engineer's Office.

Navy Department supplies, No. 2794.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., for furnishing the following materials. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 9021, rolling registers and oak railroad ties; schedule 9022, expanded-metal lockers; schedule 9023, pipe threading and cutting-off machine; schedule 9024, convertible steel-plate fans, 3-horse-power motor ammunition hoists, and turret-turning motors; schedule 9025, 400 cubic-foot capacity ventilating set; schedule 9026, metallic life rafts, with outfits; schedule 9027, megaphones; schedule 9028, angle and gate valves; schedule 9029, bar steel; schedule 9030, galvanized iron or steel buckets, water-closets with covers, and dry lampblack; schedule 9031, mortise locks for sliding doors, padlocks, wardrobe cylinder locks, wire mesh, garnet paper, brass machine screws, and brass wood screws; schedule 9032, uncut mica, steel boiler rivets, and sheet steel; schedule 9033, stay binding, ships' bugles, polishing paste, liquid metal polish, soap powder, fresh-water laundry soap, and toilet soap; schedule 9034, "Connellsville" coke; schedule 9035, toilet paper; schedule 9036, coarse concrete sand and broken stone and stone screenings; schedule 9037, coal for rivet forges, red dry lead, white lead in oil, lard oil, cast-iron pipe fittings, and malleable-iron unions; and schedule 9038, bar brass.

Docking and repairing light vessels, No. 2795.—Sealed proposals will be received at the office of the Lighthouse Inspector, Milwaukee, Wis., until December 1, 1915, for docking and repairing light vessels. Blank proposals and particulars may be obtained on application to the above office.

Remodeling, No. 2796.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until December 30, 1915, for the remodeling of the United States Courthouse (old appraiser's stores) at Galveston, Tex. Drawings and specifications may be obtained from the custodian at Galveston or at the Washington office.

Wire, No. 2797.—Sealed proposals will be received at the office of the Chief Signal Officer, War Department, Washington, D. C., until December 6, 1915, for furnishing the Signal Corps with 40,000 feet of counterpoise, rubber covered and braided, wire; 40,000 feet pothead wire, 36 mills (Spec. 340-B, 403-A, 430-G, 581-A); and 40,000 feet wire, pothead, 36 mills (in accordance with A. T. & T. specifications).

Remodeling, No. 2798.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until December 29, 1915, for the extension, remodeling, etc., of the United States post office and courthouse at Missoula, Mont. Drawings and specifications may be obtained from the custodian at Missoula or at the Washington office.

Sale of vessels, No. 2799.—Sealed proposals will be received by the Superintendent, Coast and Geodetic Survey, Washington, D. C., until December 30, 1915, for purchase of Coast and Geodetic Survey steamers *Gedney* and *McArthur*. These vessels are now in Seattle Harbor, where prospective bidders may inspect them; exact location of vessels may be had on application to Inspector, Coast and Geodetic Survey, Seattle, Wash. Further information may be had on application to the Superintendent or to the Inspectors of Coast and Geodetic Survey, at 202 Burke Building, Seattle, Wash., and 310 Customhouse, San Francisco, Cal.

Cartridge cloth, No. 2800.—Sealed proposals will be received at Picatinny Arsenal, Dover, N. J., until December 13, 1915, for furnishing and delivering at

Picatinny Arsenal, 6,000 square yards of extra heavy weight silk cartridge cloth, in accordance with specifications which may be had on application to the above-named arsenal.

Surfboats, No. 2801.—Sealed proposals will be received at the office of the United States Coast Guard, Treasury Department, Washington, D. C., until December 18, 1915, for the construction of Beebe-McLellan Self-Bailing Power Surfboats, 1915, delivered f. o. b. at place of construction. Bidders should state the number of working days for the completion and delivery of each boat. Plans and specifications, instructions to bidders, etc., may be had on application to the Supervisor of Lifeboats, Coast Guard, Room 522 Customhouse, New York, N. Y.

SCARCITY OF PEAS IN GREAT BRITAIN.

[From report of Canadian Government Trade Commissioner, Birmingham, England, Oct. 19.]

Wholesale houses report a scarcity of blue peas in the United Kingdom, and inquiries are being received for the names of Canadian firms in position to export. The annual imports of peas by the United Kingdom are valued at approximately \$5,000,000. In normal times large quantities are purchased from Russia, Germany, the Netherlands, Japan, British India, and New Zealand. Of these imports of "peas (not fresh) other than split peas," totaling \$4,610,015 in value in the fiscal year 1913-14, Canada furnished \$28,868 and the United States \$20,036 worth. The imports during the fiscal year 1914-15 dropped to \$2,474,391, of which Canada supplied \$36,981 and the United States \$29,296.

The price of peas is advancing and there does not appear to be any relief in sight. Some idea of the increase can be ascertained by comparing the quantities and values of imports during the first 9 months of 1914 and 1915. Imports during the former period were 837,831 hundredweight (hundredweight=112 pounds) valued at \$2,160,400, and during the latter period 719,920 hundredweight, valued at \$2,712,984, an advance of \$1.04 per hundredweight.

MATCHES FOR COSTA RICA.

[Consul C. Donaldson, Port Limon, Nov. 5.]

The value of matches annually imported through this port for consumption throughout the Republic of Costa Rica, is about \$50,000, of which 92 per cent formerly came from Germany, 5 per cent from England, and about 3 per cent from France. This trade is being diverted to the United States, because of lack of transportation facilities from Sweden, where practically all the matches used in these countries are made, having come here through Germany and other countries.

The principal importers of matches in this district are the large wholesale and retail department stores, which import practically every kind of goods for which there is a demand.

[The addresses of these firms may be had from the Bureau of Foreign and Domestic Commerce; refer to file 68361.]

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Dolls, toys, etc., No. 19375.—A letter to the Bureau from a business man in England states that he desires to communicate with manufacturers of dolls, toys, fancy goods, and similar articles, with a view to representing them on a commission basis.

Sulphate of ammonia, fertilizers, etc., No. 19376.—A commercial agent of the Bureau reports that a firm in Africa desires to represent American manufacturers of sulphate of ammonia, machinery for sugar plantations, chemical fertilizers, and bone meal.

Aloe fiber, No. 19377.—The Bureau is in receipt of a communication from a commercial agent stating that a firm in Africa is desirous of finding a market in this country for aloe fiber.

Millinery, etc., No. 19378.—A letter to the Bureau from a man in Argentina states that he wishes to communicate with manufacturers or exporters of millinery, fancy goods, or any other line that they desire to sell in Argentina.

Novelties, No. 19379.—A trade organization informs the Bureau that a man in Italy desires to be placed in communication with manufacturers of novelties, with a view to handling such goods as a merchant or on an agency basis. Bank references are given.

Shoes, hosiery, etc., No. 19380.—The Bureau is in receipt of a letter stating that a man who is contemplating going to Colombia wishes to obtain an agency from manufacturers of shoes, hosiery, cloth goods, and novelties, especially all lines of goods sold in a department store.

Paper, pharmaceutical products, hosiery, etc., No. 19381.—A letter to the Bureau states that a company in Egypt desires to represent on a commission basis manufacturers of paper, pharmaceutical products, hosiery for women and children, soaps, optical goods, furniture, toys, corsets, jewelry, pearl buttons, waists, etc.

Castor oils, paraffin, etc., No. 19382.—An American consular officer reports that there is an inquiry in Russia for names and addresses of manufacturers of castor oil, paraffin, and rosin. Prices should be quoted in rubles, c. l. f. Russian ports, weights in poods.

Electrical materials, etc., No. 19383.—An American consular officer in Spain reports that an electrical and machinery supply house desires to represent manufacturers of electrical material, such as motors, transformers, protective apparatus, centrifugal pumps, machine tools, brick-making machines, and electric automobiles. Interested firms should be prepared to negotiate along liberal lines of credit, and are requested to forward propositions and technical guarantees, together with catalogues fully describing goods and showing weights, dimensions, capacities, etc. Correspondence should be in Spanish.

Bamboo, No. 19384.—A report from an American consular officer states that a man engaged in the lumber business in Brazil is in a position to furnish manufacturers with bamboo used in the manufacture of certain classes of furniture. It is stated that 50,000 pieces could be furnished each month.

Electrical supplies, No. 19385.—An American consular officer in China reports that a trade organization in Siberia desires to place a large order for carbons for incandescent street lamps using direct current; also switches, sockets, rosettes, plugs, and meters. Samples, catalogues, price lists, and terms of sale are solicited.

Chloride of lime, No. 19386.—A firm in Canada informs an American consular officer that it desires to get in touch with manufacturers or exporters of chloride of lime. Correspondence may be in English.

SEASON'S OUTLOOK FOR FRUIT IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, New Zealand, Oct. 27.]

The prospects for the stone fruits crop in New Zealand this season is poor, owing largely to the fact that the last season crop was a record one, but the outlook for pears and apples is good. Fruit growers this year are having an unusually hard battle with slugs and snails, which have been multiplied by the extended wet weather.

FLAX SUFFERS FROM PEST IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, New Zealand, Oct. 27.]

The operations of a flax grub or worm resembling a caterpillar are playing havoc with the green flax in certain portions of the flax-growing sections of New Zealand that is becoming quite alarming in some cases. The Government has sent an expert biologist into the field to study conditions and to see what can be done to exterminate the pest. If something can not be done soon the output must be seriously curtailed in many sections.

AFRICAN MARKETS FOR AMERICAN MANUFACTURES.

[Commercial Agent E. C. Porter, New York, Nov. 24.]

A well-known firm in East Africa has recently written to the branch district office of the Bureau of Foreign and Domestic Commerce, in New York City, speaking favorably of the opportunities for American goods in Africa.

The letter states that houses and manufacturers in one of the continental countries have done an enormous business in the markets in Portuguese West Africa and in the French and Belgian Congo. Notwithstanding the fact that long terms of credit have been given in these markets, this firm does not believe it will be necessary to follow this custom in order to develop the field, although 60 and 90 day credits should be allowed.

The letter further states that there is an exceptionally good market for canned goods, galvanized iron and zinc, iron in bars, calicoes, furnishings, boots and shoes, and a number of other articles.

SWEEPING POWDERS USED IN LONDON.

[Commercial Attaché A. H. Baldwin, London, Nov. 12.]

Several different makes of sweeping powders or compounds are on the market in London for use when sweeping plain or polished floors, linoleum, carpet, or other floor covering in households, offices, shops, factories, warehouses, public buildings, etc. A small quantity of such a compound is strewn on the floor surface and is then swept up, the advantages claimed being that the powder prevents the rising of the dust during sweeping, and, incidentally, it cleanses the floor through the elimination of dirt and dust particles.

One make of sweeping powder is sold in London at 12 cents and 24 cents for small packages containing quantities sufficient for use in private households. It is also obtainable in larger quantities in kegs or sacks as follows: Twenty-eight pounds, \$0.73; 56 pounds, \$1.22; 100 pounds, \$2.07. Another brand is marketed at \$3.40 per 100 pounds (this includes the price of the retainer, 97 cents, which is credited when returned). [The name of a London firm interested in the American manufactures of sweeping powders may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices.]

TRADE ACTIVITIES OF THE MARACAIBO CONSULATE.

[Consul G. K. Donald, Maracaibo, Venezuela, Oct. 14.]

During the quarter ending September 30 sixty-six trade enquiries were answered by the Maracaibo consulate. These were on such varied subjects as aeroplanes and guinea pigs. Many agencies were established for American manufactures, among them being pianos, office furniture, filing equipment, and toilet articles. Lists of dealers in certain lines were corrected for trade publications and directories (Kelly's Directory, the Western Brewer, Dun's Review, Tea & Coffee Trade Journal, El Comercio, Office Appliances, etc.).

Two new local commission houses were opened during the quarter, and it was gratifying to note that before any arrangements were made the facilities of the consulate were sought and obtained. Many salesmen called and were given all the assistance possible. The daily newspapers and trade publications on file here were eagerly sought, not only by traveling Americans but also by Venezuelans.

IMPORTS INTO SOUTH AFRICA FOR SEPTEMBER.

[Vice Consul John W. Dye, Cape Town, Oct. 11.]

The following table shows the value of the imports into the Union of South Africa through the various channels during the month of September, 1914 and 1915.

Ports.	1914	1915	Ports.	1914	1915
Cape Town.....	\$2,312,912	\$3,038,068	Laurens Marqes.....	8801,517	31,340,520
Port Elizabeth.....	2,309,076	4,009,518	Other ports and stations..	231,227	75,918
East London.....	931,914	1,438,572			
Durban.....	7,196,269	4,910,581	Total.....	9,081,947	18,012,387

BANK COLLECTIONS IN PERU.

[Consul General William W. Handley, Lima, Oct. 12.]

Below is given a copy of a memorandum which the Banco del Peru y Londres, the principal banking institution of Peru, is sending to its American clients, setting forth its reasons for not remitting promptly to the United States the proceeds of drafts which have been sent to the bank for collections, viz:

The difficulty in obtaining drafts on Europe and the United States at the moment of effecting a collection for account of some client abroad obliges us to credit the collection in a "provisional account" until such time as we may be able to obtain the necessary drafts with which to make remittance.

The demand for paper continues very much in excess of supply, owing, principally, to the general closure of credits and to the placing of money in the United States.

Our production is in considerable excess of our consumption, but unfortunately the crisis and consequent distrust withdraw from the market a large amount of drafts.

These difficulties are especially severe for this establishment, which has to effect collections for a very elevated amount.

The foregoing statement made by the bank is substantially correct, as there is undoubtedly a scarcity here at present of drafts on New York and London, and this condition is likely to last for some time. Probably the main reason for the bank's desire not to remit at the present time is because 30 days' sight drafts on New York cost here at present \$4.24 to the pound sterling and three days' sight drafts \$4.18 to the pound.

Some American merchants have taken exception to this procedure, claiming that by holding their funds in the "provisional account" of the Lima bank they are deprived of its use, which entails a loss and requires them to borrow a similar amount in the United States, paying interest thereon.

The only suggestion the writer has to make in this matter is that inasmuch as the Banco del Peru y Londres, and in fact nearly all the banks of Lima, pays at present an annual interest on time deposits of 2 per cent for two months, 3 per cent for three months, 4 per cent for six months, 5 per cent for nine months, and 6 per cent for one year, it would appear that American merchants would be justified in requesting these banks to pay their usual rate of interest on time deposits for the amounts held to the credit of the bank's "provisional account," thereby meeting the expenses of the American client for borrowing a like amount in the United States.

MANUFACTURE OF BRONZE POWDER IN FRANCE.

[J. H. Needham, Secretary to American commercial attaché at Paris.]

The following is a quotation from the *Agence Economique & Financiere*, of Paris, a daily publication which is considered very reliable:

Les Etablissements Grivolin, of which the main office is at Toulouse, and which has heretofore specialized in the manufacture of paints and varnishes, has just created a new department of its industry, that of the manufacture of bronze powder and powder of aluminium, two products in which the Germans have been enjoying a monopoly in France. We understand that for this purpose the Société above named has issued new capital stock in the amount of 350,000 francs, each share being for 250 francs.

TELEPHONE DEVELOPMENT IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Oct. 27.]

The telephone system of New Zealand is being rapidly developed by the National Government with up-to-date material and appliances and much of it is now coming from the United States. According to the Government Public Works Statement for 1914, 12 new exchanges were opened and the number of exchange connections increased by 4,846. A length of 390 miles of pole line and 2,136 miles of wire were added to the telegraph and interurban telephone system, and 515 miles of pole line and 34,325 miles of wire to the telephone exchange local system, while 1,637 miles of telegraph and interurban telephone lines were overhauled and reconstructed.

During the year 46 coin-in-slot telephones were installed, making a total of 139 slot telephones open for public use. The substitution of underground cable for aerial cable and the conversion of earth-working exchanges for the metallic circuit system is stated to be proceeding steadily. "On account of the abnormal conditions caused by the war," says the minister, "some delay has been experienced in obtaining equipment for automatic telephone exchanges, but the provision of suitable building accommodation and underground cable equipment has been steadily proceeded with."

The telephone service in this city is rapidly being changed to the automatic system, which is giving splendid satisfaction, and the instruments are all manufactured in the United States.

The service is good and covers the Dominion. The public telephone is exceptionally good, and the charge within the city is only 2 cents for three minutes. The yearly rate for a business phone is \$34.06 within half a mile of the exchange, and for a residence phone \$24.60, within 1 mile of the exchange, and \$2.43 for each additional mile in each case.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D.C.
Maynard, Lester.....	Hong Kong, China.....	do.	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City
Dawson, William.....	Rosario, Argentina.....	do.	903 Goodrich Avenue, St. Paul, Minn.
Pock, Willys B.....	Tsingtan, China.....	Jun. 31	Department of State, Washington, D.C.
Mosersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammors, Thomas.....	Shanghai, China.....	Dec. 10	(a)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Cheshire, Fleming D.....	Canton, China.....	Bureau of Foreign and Domestic Commerce, Room 400, Customhouse, New York, N. Y.

*The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

BRADFORD SHIPMENTS TO UNITED STATES.

[Vice Consul Hamilton C. Claiborne, Nov. 2.]

The declared exports from the Bradford (England) consular district to the United States during October, 1915, were valued at \$2,675,124, as compared with \$1,866,067 in the corresponding month of 1914, and \$1,231,057 during September, 1915. The total exports of raw wool for October totaled \$1,752,038, which is the largest amount recorded in the history of this consulate for any month except April, 1897, when the wool exports reached \$2,265,895 as a result of this product being on the free list.

The exports of wool during October, 1915, showed a gain over the corresponding month of 1914 of \$1,643,936. With the exception of September, 1914, the total exports from the Bradford district for the month of October, 1915, exceed those of any month since the beginning of the war. In contrast to the increase noted in the exportation of raw wool, there has been a large decrease in woolen dress goods, coat linings, woolen cloths, mohair plushes, wool yarns, and mohair yarns. A substantial increase, however, is observed in cotton cloth over the exports for the corresponding month in 1914.

Effect of Relaxation of Embargo on Wool Exports—Cloth Shipments.

The relaxation of the embargo on crossbred and English wools which became effective on October 14, 1915, has proved a great stimulus to Bradford exports, the large shipments under license being interpreted as meaning that the contracts for military cloths are nearing completion and that the supply of wool in England is sufficient for immediate military purposes.

The decrease in the shipment of cloths is largely attributable to the fact that all worsted and woolen goods, even those containing a cotton warp or weft, must be accompanied by a Government permit for exportation, or a certificate from the local chamber of commerce stating that such cloths are not of the weight, design, and quality used for military purposes, with full information as to destination and consignee. The recommendation of the Bradford Chamber of Commerce is sought in practically all woolen and worsted shipments from the West Riding of Yorkshire.

Exports of cotton goods to the United States from Bradford show an increase during October over the corresponding month of 1914 of \$44,501.

Increased Exports of Silk Yarns—Decreases in Exports.

Exports of silk yarns showed an increase over October, 1914, of \$97,125. The embargo on silk noils is still observed, and but one case of a permit has come to the attention of the writer, this being granted upon the representations of an American consignee who made affidavit before a State commissioner that the noils were for home manufacture and consumption.

The following is a list of articles with the amount of decrease in value of exports to the United States during October, 1915, compared with the corresponding month in 1914, and is significant in representing the effect of high prices and the new requirements for the exportation of woolen goods: Woolen cloths, \$189,319; mohair cloths, \$120,761; woolen linings, \$171,588; dress goods (woolen), \$168,799; mohair plushes, \$50,804; wool yarns, \$66,335; mohair yarns, \$78,359.

RAILWAY MOTOR COACH.

[Consul General Alfred A. Winslow, Auckland, Oct. 27.]

The New Zealand Government is preparing to handle the suburban passenger traffic on the State railways in this Dominion in a more economical and satisfactory way than by the usual steam lines, and with that in view has ordered a specially designed internal combustion engine electric rail coach, as described by the following clipping from the Auckland Star, a leading daily of this city:

In continuation of its experiments with motor rail coaches for dealing with the light and frequent services required in the suburban districts of the Dominion, the railway department has ordered a 200-horsepower petrol electric rail coach from the Thomas Transmission Co., an English firm, which has evolved what is claimed to be a greatly improved means of conveying power from the petrol motor to the driving wheels. The disadvantage of petrol motors in railway work is the lack of elasticity in power output. However, by using the motor to generate electricity, which is then employed through an electric motor, the difficulty is overcome. The latest motor coach to be ordered for the New Zealand railways has an eight-cylinder petrol motor, with a power transmission feature which is quite unique, being a combination of electric and mechanical. In working up speed the electrical machines are used, but when the vehicle has reached a speed at which the motors can be run at an economical speed geared direct to the road wheels, a direct mechanical drive comes automatically into use, the more complicated electromechanical drive being automatically put out. During trials in Birmingham the engine pulled loads of 120 and 200 tons, and it is intended to give a speed of 40 miles per hour on the level. It will be capable of pulling a trailer.

USE OF CEMENT DRAINTILE IN ALKALI SOILS INCREASING.

As a result of the publication by the United States Bureau of Standards of its experience in testing, during a year's period, cement dRAINTILE in alkali soils, two large contracts have been let in Utah. One is for more than 200 miles of cement dRAINTILE, and the other for about 68 miles of cement tile.

The bureau has more extended tests under way, and believes that if the tile continues to resist the action of alkali in experimental drains as it has in the single year's tests, this will result in the extensive use of cement dRAINTILE in Western districts, with appreciable saving to irrigation farmers.

The bureau is now testing tile placed two years ago in alkali districts, and superintending the placing of new test specimens and taking samples of soil, water, and tile.

FLEECY FABRICS ON SWISS MARKET.

Vice Consul Leon Böhm de Sauvanne, in forwarding samples of fleecy fabrics sold in Berne, states that the principal houses selling these goods in that Swiss city have direct connections with the manufacturers. He also says that two important local firms informed him that Zurich and Geneva, which have factories making women's wrappers, dressing sacques, and children's clothes, present larger markets for the sale of fleecy fabrics than does Berne, which has no establishments of this character.

[The samples above mentioned may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. 67555.]

1907 28.

NEED OF SHIPPING LINES TO SOUTH AMERICA.

Secretary of Commerce Redfield has made public the following letter dated November 18, 1915, which he received from the Columbus Bolt Works Co., of Columbus, Ohio, relative to the necessity for the establishment of lines of shipping vessels between United States ports and those of South America:

HON. WILLIAM C. REDFIELD,
Secretary of Commerce, Washington, D. C.

DEAR SIR: In connection with export from the United States to South America there is one difficulty presenting itself at the present, which in our opinion will greatly handicap the exporting by this country to South America after the settlement of the present unpleasant conditions in Europe, and we are taking the liberty of calling this to your attention, although we presume steps have been taken to overcome this difficulty, but if others have called this to your attention we desire to add to their statement, and the wish we desire to make is this:

To a certain extent goods made in the United States are different from those made in European countries, and it will be necessary to a more or less degree to substitute different styles than the people in South America are now purchasing in various lines of material; and this being the case, the trade of South America will naturally drift back to European countries unless it will be possible in some way to establish a line of shipping vessels between the United States ports and those of South America that will be able to deliver the goods to those points quicker than from European connections.

We believe questions of shipments will largely govern the adoption of standards used in this country. Our attention has been forcefully called to this by the fact that we shipped some material in August and to our definite knowledge this shipment has just arrived at point of delivery. We are informed by our representative that shipments from Europe are never longer than from two to three weeks on the way, and we are calling this to your attention, thinking perhaps you might wish to take steps to eliminate the delays of transportation.

BRITISH POTTERY EXPORTS AND IMPORTS.

The British Board of Trade returns show that the value of British pottery exported from the United Kingdom in October, 1915, was \$890,720, compared with \$864,431 in October, 1914, and \$1,446,080 in October, 1913.

For the ten months ended October 31, 1915, the exports amounted to \$8,295,981, compared with \$11,098,214 for the same period in 1914, and \$13,884,480 for 1913.

The value of pottery imported into the United Kingdom in October, 1915, was \$110,250, compared with \$45,234 for October, 1914, and \$482,187 for 1913.

The value of the imports of pottery for the ten months ended October 31, 1915, was \$760,571, compared with \$3,581,778 for the same period of 1914, and \$4,302,463 for 1913.

AUSTRIAN GRAPE SEED AS A RAW MATERIAL.

[Consul General Albert Halstead, Vienna, Nov. 5.]

The grape seed to the ordinary individual, is simply a waste product, but the value of many kinds of neglected waste products as now being taught by the Austrian Ministry of Commerce calls attention to one of these overlooked raw materials. The oil is to be extracted from the grape seeds remaining after this year's vintage and used suitably, while the cake and extract meals remaining will be utilized as stock food.

ITALIAN MARKET FOR AMERICAN LUMBER.

[Consul William F. Kelley, Rome, Oct. 30.]

For many years Italy has imported lumber from foreign countries to the value of \$25,000,000 annually, principally from Austria-Hungary and Russia, and to a smaller extent from the United States. In these imports the Rome consular district plays an important part, as practically no lumber is produced in this part of Italy.

Italian economists, statesmen, and business men are engaged in the study of means to render Italy less dependent upon imports for the maintenance of the national industries, and the question of lumber imports has been examined. The available timber in all Italy, however, is inadequate for the needs of the country, and it is not considered possible, even by the adoption of a rigid system of afforestation and scientific methods of cultivation, to increase the supply sufficiently to cover the demand.

Albania's Great Forests—Immediate Opportunity for American Lumber.

It has been pointed out that in the adjacent territory of Albania there are vast virgin forests of pine, beech, elm, ash, and oak, which, under careful management and systematic exploitation, would supply the Italian market for many years with practically all the wood required. While this plan necessarily depends upon many contingencies, there is little doubt that the forests of Albania will become one of the principal sources of supply for the Italian market, owing to the vast natural lumber wealth of that country, its proximity to the Italian market, and the possibility of an exchange of Italian products for Albanian lumber.

In the meantime there is a very large demand in this district for lumber and wood of all kinds, owing to the absence of supplies from Austria-Hungary. Railroad ties and planking are especially in demand, and it would appear that American lumber should find a good market in this country. The great difficulties to be overcome are the high freight rates—owing to the comparative lack of return freights—and heavy insurance premiums. Apparently the freight difficulty can be solved only by obtaining special time charters for vessels to carry the lumber to Italy. It is possible that, in a certain measure, return freights could be found in cork wood and mineral ores from the island of Sardinia, within the limits of this consular district. While this enterprise would be in a sense speculative, it is believed that it would merit the serious study of American lumber exporters.

Suggestions for American Lumber Exporters.

A great difficulty to the Italian purchaser of American lumber is his inability to understand the technical expressions that govern the trade in the United States. For instance, no Italian merchant would understand a cable recently brought to this consulate for interpretation by a prospective buyer, quoting a price "per running foot." The amount spent on this telegram was absolutely wasted, irrespective of the valuable time lost in seeking explanations and coming to an understanding. Cubic feet can easily be converted into cubic meters by an Italian buyer, when he understands that sales are by cubic feet, but he must have a straight offer in plain, untechnical terms to work upon before he is in a position to judge the value of any quotation.

In quoting for large contracts with firms in Rome or in Italy it is not always necessary to conform to specifications in minor details. For example, railroad ties, telegraph poles, etc., are frequently demanded bored, drilled, chamfered, or turned in a certain manner; and this work would not be profitable for the American exporter to undertake. It is frequently possible to close a contract for such supplies, excluding the minor details, but care should, of course, be taken to have a clear understanding on both sides as to the exact specifications and the obligations incurred.

[The names of several large lumber dealers and contractors in this consular district who are desirous of obtaining quotations for American lumber may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69068.]

MANUFACTURING FIRM AIDED BY "COMMERCE REPORTS."

[Commercial Agent E. G. Babbitt, San Francisco, Nov. 10.]

A letter from a manufacturing concern in Southern California, setting forth advantages which the firm has derived from information furnished by the Bureau of Foreign and Domestic Commerce has been received at this office. The following excerpts may be of interest:

About two months ago we subscribed to **COMMERCE REPORTS**. It seems strange that we should have been doing more or less of an export business for the last 10 years and never before have been in touch with the Government service. We are surprised and delighted at the help **COMMERCE REPORTS** has been to us.

Last year we sent one of our salesmen to Australia and New Zealand and trade has increased nearly 500 per cent over any preceding year. We wish now to cultivate the South American trade for one season and then send a salesman down there.

We shall take pleasure in calling at your office at the earliest opportunity, that we may become more familiar with the data you have to offer.

GERMAN POTASH SYNDICATE INCREASES PRICE OF SACKS.

[Consul Talbot J. Albert, Brunswick, Nov. 1.]

The potash syndicate has given notice that it has again increased the price of sacks. The kainit and carnallit sacks for 100 kilos (220 pounds) cost since October 7, 1915, 83 cents apiece; the potash manure sacks for 100 kilos, 36 cents; the peat-mull admixture (Torfmullbeimischung) cost 1 cent more. The syndicate at the same time reserves the choice of material out of which the sacks are made—jute, textile, or cotton. Consumers have been repeatedly requested not to take their supplies in sacks. At the same time the syndicate declares that it is ready to receive freight-free for refilling jute sacks which have been used and are in sound condition, but only such as have a capacity of 100 kilos. A charge of 1 cent will be made for the refilling of used sacks for double hundred weight. This order is valid during the continuance of the war.

Wanted supplies of trouser clasps have been secured in the United States by a Leeds firm, and cream of tartar substitutes and fancy goods will probably be obtained here also as the result of correspondence following the publication in **COMMERCE REPORTS** of Trade Opportunity notes submitted by Consul Homer M. Byington, of that English city.

MARKET FOR HARDWARE IN PARAGUAY.

[Consul Samuel Hamilton Wiley, Asuncion, Oct. 22.]

The value of hardware imported into Paraguay during 1913 (the latest year during which commercial conditions were normal) was \$1,500,685. The principal countries of origin were Great Britain (\$622,478), Germany (\$479,847), United States (\$208,063), France (\$22,698), and Belgium (\$96,604).

The division hardware, in the customs classification of Paraguay, includes a wide range of articles, many of which are not included in the term as used in the United States. The imports under this head from Great Britain include tram cars and equipment to a considerable value; from Belgium, cement; and from the United States, agricultural implements and sewing machines. The greater part of the hardware, as this term is understood in the United States, is imported from Germany, Great Britain, France, and the United States, especially from Germany.

The competition of Germany, Great Britain, and France being at present to a great extent eliminated, there exists an excellent opportunity for American hardware manufacturers to capture the market here. This can not be done, however, by procuring a list of dealers here and bombarding them with catalogues and letters, principally in English. The hardware dealers here are of the opinion that American manufacturers should take pains to study their lines and to provide them with the articles they want, in the qualities and styles they want.

Classes of Goods Wanted—Method of Entering Market.

There are practically only two classes of hardware and cutlery sold in Paraguay—very good quality sold at high prices, and very poor quality sold at very low prices. The latter class is the one in most demand and should be the subject of the closest study. Apart from its being the class in greatest demand, it includes the greatest number of articles that are not manufactured in the United States or not manufactured in the qualities used here.

American manufacturers desiring to enter the hardware market in Paraguay should make a study of the articles offered for sale here, of the styles and qualities of these articles, and of the prices at which they have been sold by European manufacturers. By doing this and by duplicating the articles at prices as low as they have been supplied by European manufacturers they can gain the hardware market of Paraguay. If this is not done, the dealers here will buy small lots from the United States for present needs and will postpone ordering goods in quantity until the European manufacturers are again in a position to supply them.

Special Articles Wanted.

The following is a list of a few articles used here which either are not manufactured in the United States or are not manufactured in the qualities used here:

Steel narrow butts, of the same pattern as those made in the United States, made in the cheapest quality of steel, unpolished, in sizes of $2\frac{1}{2}$, 3, $3\frac{1}{2}$, 4, $4\frac{1}{2}$, 5, 6, and 7 inches.

Dead locks, French pattern, in sizes of 3 by $3\frac{1}{2}$, $3\frac{1}{2}$ by $4\frac{1}{2}$, $3\frac{1}{2}$ by 5, and $3\frac{1}{2}$ by $5\frac{1}{2}$ inches, made up of very cheap material. This pattern lock is used here almost exclusively.

Tape lines, of linen and steel tape, marked in meters and centimeters on one side and in Argentine varas on the other. The Argentine vara is 34.0944 inches and is used principally as a wood and timber measurement.

Cook's knives, French pattern, of very cheap material, in sizes of 4 to 14 inches.

Pin steel butts, called here "fichas," with three leaves, in polished steel and in nickel plate.

Bridle bits, polished steel, blued steel, and nickel plated, of a special pattern. The American bit is unsalable here.

Machetes are sold here in quantities of 6,000 to 8,000 dozens a year at \$0.60 to \$5 per dozen. The pattern and prices must be well studied.

Hammers, French pattern, are sold here in large quantities, made of a very cheap grade of cast iron with common handles.

[A list of the principal hardware dealers of Paraguay may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69042.]

OFFICIAL NUMBERS FOR MERCHANT VESSELS.

The following is a statement of official numbers and signal letters awarded to sailing and steam screw merchant vessels by the Bureau of Navigation, Department of Commerce, during the week ended November 20, 1915:

Name.	Official number.	Signal letters.	Tonnage.		Year built.	Where built.	Home port.
			Gross.	Net.			
Sail: Golden Gate...	213770	LFQV ^a	2,340	2,273	1888	Whitehaven, England.	San Francisco.
Steam screw: Amazonia.....	213762	LFQR	2,190	1,327	1891	Newcastle-on-Tyne, England.....	New York.
Edna.....	213743	LFQG	1,783	1,135	1903	Bergen, Norway ..	San Francisco.
Pacific.....	213769	LFQS	1,034	4,380	1915	San Francisco, Cal..	Do.

^a Foreign-built vessel admitted to American registry under the Act of Aug. 18, 1914.

^b Formerly British ship Golden Gate.

^c Formerly Brazilian s.s. Amazonia.

^d Formerly Mexican s.s. Mazatlan.

Foreign-built vessels admitted to American registry under the act of August 18, 1914, since June 30, 1915 numbered 22, of 56,996 tons.

SWATOW MARKET FOR NAILS.

[Consul George C. Hanson. Swatow, China, Oct. 20.]

Imports of wire nails into Swatow have fallen off on account of the war. The import figures for the last six years follow: 1910, 317 tons; 1911, 397 tons; 1912, 406 tons; 1913, 584 tons; 1914, 488 tons; 1915 (9 months), 227 tons.

The fact that wire nails are coming into Swatow in quantities not sufficient to supply the normal demand, warrants the assumption that there is an opportunity in this market for American manufactures of this article.

[Samples of nails used in Swatow may be seen at the Bureau of Foreign and Domestic Commerce or its branch offices, which will also supply the names of importers who would be interested in hearing from American manufacturers. Refer to file No. 69070.]

BANK STATEMENT OF FEDERAL RESERVE BOARD.

A further increase of about \$13,000,000 in net reserve deposits, a gain of over \$10,000,000 in combined total reserves, and an addition of about \$5,000,000 to total gold reserves is indicated by the weekly bank statement made public by the Federal Reserve Board at close of business on November 26, 1915. The New York bank reports a gain of \$8,400,000 in total reserve and of \$4,300,000 in gold reserve; Philadelphia shows an increase in total and gold reserves of over \$2,000,000, while Kansas City and Cleveland each report an increase of over \$1,000,000 in their gold and total reserves. The gold resources of the system, including the amounts of gold under control of the Federal Reserve agents, stand at present at \$492,200,000, compared with \$482,700,000 shown at the end of the preceding week. The gain of gold by the system was about \$59,000,000 for the last month, about \$133,000,000 for the last three months, \$194,000,000 for the last six months, and over \$263,000,000 for the last year. The proportion of gold held by Federal Reserve agents, either in their own vaults or in Washington, has risen during the last six months from slightly over 18 to about 35 per cent of the total gold resources of the system.

The total amount of commercial and bank paper in the hands of the banks, \$48,900,000, shows an increase of \$3,800,000 over the preceding weekly total. This gain is due chiefly to the larger amounts of discounts held by the three Southern banks and the considerable purchases of acceptances reported for the past week by the Boston and New York banks. The present week's totals for both classes of paper are larger than for any previous week and together constitute about 55 per cent of the total earning assets. The three Southern banks report about 62 per cent of the entire amount of discounts held, against about 60 per cent the week before and about 70 per cent three months before. The share of bankers' acceptances in the total bill holdings of the banks stands now at about 33 per cent. The distribution of the paper by maturities indicates considerable gains in the holdings of bills with the longer maturities. Thus the proportion of paper falling due after 30 but within 60 days from date of statement increased during the week from 35.1 to 37.4 per cent, while the proportion of paper maturing after 90 days (mostly agricultural and live-stock paper) increased from 7.4 to 7.8 per cent of the total. A large relative decrease from 27.3 to 22.7 per cent is shown for paper maturing after 10 but within 30 days, while the percentage of paper maturing within 10 days shows an increase from 10.2 to 12.6 per cent.

Additional purchases of \$245,000 United States bonds are reported by four banks. The amount of warrants on hand shows a decline of about \$211,000, New York and Philadelphia reporting the largest decreases for the week. The ratio of earning assets to capital is 163 per cent, compared with 156 per cent for the preceding week and 142 per cent about three months ago.

All banks, except Atlanta, show substantial gains for the week in net reserve deposits. New York reports an increase of about \$7,000,000, while Kansas City, Boston, and Cleveland report gains of over \$1,000,000 each. The gain in net deposits was \$54,000,000 for the last month, about \$81,000,000 for the last three months, about \$106,000,000 for the last six months, and about \$149,000,000 for the last year.

Federal Reserve agents report a total of \$187,800,000 of notes outstanding, an increase for the week of \$4,600,000. Against this total they hold \$171,000,000 of gold, \$100,000 of lawful money, and \$17,600,000 of paper. The banks report a total note circulation of \$165,800,000 and a net liability thereon of \$13,400,000.

The following table shows the resources and liabilities of the Federal Reserve banks at the close of business on May 28, August 27, October 29, November 19, and November 26, 1915:

	May 28, 1915.	Aug. 27, 1915.	Oct. 29, 1915.	Nov. 19, 1915.	Nov. 26, 1915.

* Less items in transit between Federal Reserve banks, which were \$7,635,000, \$6,990,000, \$6,332,000, \$66,327,000, and \$14,053,000, respectively, on the dates mentioned.

CONSULATE WANTS CATALOGUES.

[Consul J. S. Armstrong, Jr., Bristol, England, Oct. 25.]

This consulate would be pleased to receive catalogues and price lists from American manufacturers of goods of all kinds. Owing to the present large demand for American products, a complete file of catalogues would be of considerable advantage to be shown to local dealers desiring to be placed in touch with sources of supply in the United States.

EARNINGS OF SPANISH RAILWAY COMPANIES.

(Consul Robertson Honey, Madrid, Oct. 30.)

The latest edition of the *Gaceta de los Caminos de Hierro*, published in Madrid, contrasts the 1915 earnings of the five leading railways of Spain with the earnings of 1914 (January 1 to October 10). The figures are in pesetas, which have been of the average value of about 19.7 cents during the period covered.

	Mileage.	1915	1914
		<i>Pesetas.</i>	<i>Pesetas.</i>
Norte de España.....	2,287	116 014 068	114 383,049
Madrid, Saragossa, Alicante.....	2,277	97 732 082	96 473 350
Andaluces.....	7-3	13,483 217	23 043 824
Madrid, Cáceres, Portugal.....	266	4,847 336	4 749 149
Plasencia-Astorga.....	216	3 156 965	3 191 312
Total.....		245,323,718	241,820,684

The gain in 1915 over 1914 is 3,503,034 pesetas. The remaining railway systems of the country are of less mileage than the lowest of the above and show a loss in 1915 over 1914. Freight and passenger rates are the same as last year; officials of the roads state that passenger traffic has been lighter in 1915 than in 1914, but that the volume of freight has largely increased.

CANADIAN EGG STANDARDS.

(Consul Felix S. S. Johnson, Kingston, Ontario, Nov. 12.)

The Canadian Department of Agriculture at Ottawa has provided standards in three general classes for eggs—"fresh gathered," "storage," and "cracked and dirties."

Four grades are provided in the first class, three in second, and two in the third. In the "fresh-gathered" class are "specials," "extras," No. 1's, and No. 2's. The grade "specials" is omitted from the "storage" class and both specials and extras from the class for "cracked and dirties." "Specials," according to the standards, are eggs of uniform size weighing over 24 ounces to the dozen or over 45 pounds net to the 30-dozen case; absolutely clean, strong, and sound in shell; air cell small (not over three-sixteenths of an inch in depth), white of egg firm and clear, and yolk dimly visible; free from blood clots.

"Extras" are eggs of good size, weighing at least 24 ounces to the dozen or 45 pounds net to the 30-dozen case; clean, sound in shell; air cell less than three-eighths of an inch in depth, with white of egg firm and yolk slightly visible.

"No. 1's" are eggs weighing at least 23 ounces to the dozen or 43 pounds net to the 30-dozen case; clean, sound in shell; air cells less than one-half inch in depth; white of egg reasonably firm, yolk visible but mobile, not stuck to the shell or seriously out of place.

"No. 2's" are eggs clean, sound in shell; may contain weak and watery eggs and eggs with heavy yolks, and all other eggs sound in shell and fit for food.

AMERICAN SALESMEN VISIT ONTARIO.

[Consul Felix S. S. Johnson, Kingston, Canada, Nov. 12.]

It is gratifying to note the increase of American trade at this port and to meet the large number of American salesmen now visiting Kingston.

Wool yarn, formerly altogether imported from Great Britain by the Kingston Knitting Mill, now comes from the United States. Under former conditions it was not possible to sell and compete with England owing to the preferential tariff rates given by Canada to the motherland. That American manufacturers are keen to the opportunities existing in Canada, especially in this consular district, is shown by the large number of commercial inquiries received daily at this consulate. Kingston importers are now making regular trips to New York City for purchases, and the large increase in the Canadian Government's revenue in customs at this port shows that the United States now ranks first in supplying the needs of the local merchants.

DATE GROWING IN THE PUNJAB.

[Consul James Oliver Laing, Karachi, India, Oct. 12.]

Date growing is progressing in the Province of the Punjab in northern India. Dates have been grown here since the beginning of time, but have not been cultivated as well as the dates in the Persian Gulf countries. The Government of the Punjab sent an expert to Busrah, at the head of the Persian Gulf, to get suckers from the date palms there. It is probable that these Busrah trees are the finest date trees in the world. These suckers grew successfully and this year dates were available for the market. These dates were so choice that they sold for 6 annas (\$0.12) a pound. The ordinary country dates can be bought for 2 rupees (\$0.65) for about 80 or 85 pounds. It is the intention of the Government to develop this crop. The demand for the dates far outran the supply.

ASSISTANCE RENDERED CREWS OF DISABLED VESSELS.

On November 24, 1915, the Secretary of Commerce commended John W. St. G. Gibbon and Christian T. Thomasen, keeper and assistant keeper, respectively, at Head of Passes Light Station, La., for assistance rendered to the crew of the gasoline launch *Shirley*, which was disabled in Southwest Pass, La.

On November 27, 1915, the Secretary of Commerce commended Charles E. Corlett, commanding, and August Wanke, engineer, on North Manitou Shoal Light Vessel No. 56, Michigan, for assistance rendered to the motor boat *Why-Not*, which was discovered in the vicinity of Light Vessel No. 56 in a disabled condition.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 806 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Steel wire, corrugated, galvanized and plain iron, No. 19387.—A commercial agent of the Bureau transmits the name of a firm in Argentina which desires to represent American firms for the sale of all kinds of steel wire, corrugated, galvanized and plain iron.

Cement, linseed oil, barbed wire, window glass, etc., No. 19388.—An American consular officer in Brazil reports that a firm in that country desires to establish commercial relations with American manufacturers of Portland cement; oxide of zinc; raw, pale linseed oil; barbed wire; window glass; steel I beams; tinplates; corrugated, galvanized steel sheets; white wall tiles; asbestos tiles; and tin for soldering purposes.

Leather, No. 19389.—A company in the United States writes that a firm in Roumania desires to communicate with American manufacturers of black and orange harness leather; box kip, velour, brown calf, and sterling kid shoe leather; and leather for the manufacture of transmission belting.

General agency, No. 19390.—A man in Cuba writes that he desires to communicate with American firms desiring to establish an exclusive agency in Cuba. No particular line was specified.

Chemical products, No. 19391.—An American consular officer in Italy reports that a firm in his district desires to communicate with American chemical manufacturers with a view to securing a general agency for copper sulphate, caustic soda, and silicate of soda. Reference is given. Quotations for various grades should be f. o. b. New York or c. l. f. destination. Correspondence may be in English.

Shovels, forks, hoes, and cutlasses, No. 19392.—The Bureau is informed by an American consular officer in South America that a firm in his district desires to receive catalogues and prices, f. o. b. New York, from American manufacturers of shovels, forks, spades, hoes, and cutlasses used in the sugar and rice industries.

Shuttle blocks, No. 19393.—A firm in Canada writes the Bureau that it desires to communicate with American manufacturers of "Shuttle blocks," used in the manufacture of brooms.

Leather and shoe findings, No. 19394.—An American consular officer in Paraguay writes that a firm in his district desires to purchase leather and shoe findings. Terms desired are cash against documents at destination. The goods are to be assigned to a bank. Correspondence and catalogues should be in Spanish.

Portable buildings for quarantine station, No. 19395.—An American consular officer in Central America reports a possible market for ready-made, ready-to-set-up, buildings for a new quarantine station. Further information may be had on application to the Bureau or its branch offices.

Fabrics for women's clothing, dry goods, notions, etc., No. 19396.—The commercial attaché of the Department of Commerce in France writes that a man in that country desires to represent American firms manufacturing fabrics for women's clothing, dry goods, notions, slippers, paper and cardboard articles for office use, pharmaceutical products, patent medicines, and chemical products.

Crayons, pencils, furnishings for corsets, rubber sponges, etc., No. 19397.—The commercial attaché of the Department of Commerce in France reports that a man in that country desires to represent American firms manufacturing copying crayons, pencils, furnishings for corsets, rubber sponges, cream separators, knitting machines, thumb tacks, garden and fire hose, and pipes in hard rubber or vulcanite.

Material for underwear, No. 19398.—The commercial attaché of the Department of Commerce in Australia writes that a man in that country desires to receive samples, with full particulars and approximate time required for delivery of material, in the piece, for manufacturing underwear. Fleecy lined underwear material for the body and also sleeve; ribbed, knitted cotton, vest material; and plain, knitted cotton, vest material, with sleeve and neck binding are desired. Samples of the material required may be examined at the Bureau or its branch offices. (Refer to file No. 893.)

INCREASED POSTAGE CHARGE IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Oct. 9.]

The New Zealand Government has imposed a war tax of one-half penny (1 cent) additional on every piece of mail (except newspapers) posted in this country, save in case of mail under the Postal Union rate now paying 5 cents. Ordinary letters to the United States, therefore, must pay $1\frac{1}{2}$ pence (3 cents) per ounce under the new rate, as compared with the former rate of 1 penny (2 cents) per ounce. This measure is supposed to net \$1,508,615.

RESTRICTIONS ON TRAVELERS IN RUSSIAN POLAND.

[Consul Harry G. Seltzer, Breslau, Germany, Nov. 8.]

During the period of reconstruction of civil government and the restoration of trade and commerce in Russian Poland, now under German administration, the Governor General at Warsaw announces in the press that travelers for commercial, economic, and historical purposes will be admitted into this territory only when their presence is absolutely required. Excellent progress has already been made in railroad and postal communication, but there is still a great deal to do. Regular mail service between Poland and countries outside of Germany has not yet been established. Anyone bringing or sending capital or supplies of any kind to the stricken of this territory will find an open door at all times. In all cases, however, tourists and commercial travelers are advised to consult one of the American consulates along this frontier territory before attempting to enter.

The Philippine Agricultural Department has sent 700 cacao and 500 coffee trees to Iloilo for distribution among farmers.

AMERICAN TRADE RESULTS PRODUCED IN SWEDEN.

[Consul Emil Sauer, Goteborg. Oct. 16.]

The Goteborg consulate had more than the usual number of commercial inquiries during the past quarter. Prompt attention was given to them. The consulate has received information of business results in the following instances:

A letter dated September 1, 1915, from a manufacturers' agent in New York City, contains the following paragraph:

I took pleasure in addressing you February 1, relative to my facilities for supplying foreign clients with American products of all sorts. I now wish to offer you my sincere thanks for your kindness in placing my name before interested parties in your consular district, and to advise you that through the efforts of this most efficient service I have been brought in touch with many desirable distributors and consumers, and I have thereby been able to make valuable connections, which I could not otherwise have done.

A letter from a firm of glue manufacturers, dated September 20, 1915, states that the firm sold a trial order of glues to a firm in Goteborg, with which this consulate put them in communication. These manufacturers state: "We appreciate this very much as a trial order and feel confident that it will lead to further business."

A special report was made by this consulate on the market for coal in Sweden in **COMMERCE REPORTS** for June 18, 1915. Coal remained, aside from food products, of chief interest in Sweden's import demands. The United States could sell several hundred thousand tons of coal in Sweden provided tonnage, either steam or sail, could be secured to carry the coal at not more than 40 shillings (\$9.73) per ton. Unfortunately the rate during September and to the present remained at 50 shillings (\$12.17), and Swedish importers are not willing to make large purchases.

Representative of American Firm Sells Cargoes of Coal Here.

This consulate had correspondence last May with a Philadelphia firm regarding the market for coal here. A representative of the company arrived here early in September. This consulate assisted him in getting acquainted with the leading importers of Goteborg, and he has thus far sold three cargoes of American coal. He states that he could sell very large quantities here if he could secure cheaper freight rates, but even with the present high rates his chances for selling several more cargoes are very good. He has also sold coal in Christiania, Stockholm, Copenhagen, and Malmo on this trip.

During the quarter this consulate had correspondence with five other American coal companies, and one of them, located in New York City, sold at least one cargo of coal to Goteborg. Several other cargoes arrived here during the quarter from the United States. It is not known whether or not they were sold in consequence of information furnished by this consulate.

A representative of a New York firm visited Goteborg, called at this consulate, and was given lists of names of firms interested in the various lines of goods he was in a position to sell. He was assisted in getting acquainted with leading business men. He has already sold, for account of the Swedish Government, more than 2,500 tons of lubricating oils, 4,600 tons of food material, and a considerable quantity of asbestos. He also sold, for account of private firms of Goteborg, c. i. f., subject to the approval of the firm he represents, two cargoes of foodstuffs.

BRITISH POTATO HARVEST.

[Consul C. M. Hitch, Nottingham, Nov. 4.]

The potato crops of the Nottingham district have all been harvested, and the yields have been considerably lighter than those of last year, although as a rule the tubers are of an excellent quality. Careful inquiries show that the average yield for the various kinds of potatoes will be fully 2 tons per acre below the production of 12 months ago. It has been a very trying season for the growers; the frosts in June and the long drought which followed, the ravages by disease, and the lack of sufficient sun in July are the principal causes of the reduced yield.

Official statistics just issued by the Board of Agriculture show that in England and Wales 463,400 acres were planted to potatoes this year, compared with 461,620 acres in 1914. In Lincolnshire, which is the premier potato-growing county of England, 82,156 acres were planted, as against 81,777 acres last year.

Leading Varieties—Large Demand Expected.

As heretofore, "King Edwards" have turned out to be the best variety of the year, although in some of the potato-growing districts of England the "British Queen" appears to be the favorite for heavy yields. The "Royal Kidney," which is exported very extensively to Spain and Africa, is a tuber which has been largely grown; the yields of this variety have been heavier than usual, and in some cases up to 9 tons per acre of good, sound potatoes have been secured. "Evergoods" and "Arran Chiefs" have paid well for growing, especially where Scotch seed were planted. Of the newer varieties "Dalhousie" and "Langworthy" are spoken of very highly, especially as to their keeping qualities and productiveness.

The higher prices which now prevail are expected to compensate the growers for the reduced crop. Many merchants have already purchased good lots for seed purposes, while the demand for potatoes is expected to be larger in the cities than during normal times, owing to the increased price of bread and other food supplies.

SOAP BERRY OF ECUADOR.

[Consul General Frederic W. Goding, Guayaquil, Oct. 4.]

The jaboncello, or soap-berry tree (*Sapindus saponaria*), grows in the humid parts of western Ecuador. It attains a height of about 50 feet and has wide-spreading branches and immense quantities of fruit of the size and shape of cherries. The nearly transparent yellowish skin and pulp surrounding the round black seeds are so saponaceous as to be used instead of soap by many people of Ecuador, being equivalent to more than 50 times their weight of that material.

The hard, polished seeds have been used extensively in Spain and England for waistcoat buttons, for they are very durable and seldom break. They are used also as beads.

Although considerable quantities of the berry are utilized locally, tons of them rot on the ground every year, there being as yet little foreign demand for them. Since they contain a large percentage of saponin, they should be of value in the manufacture of soap.

[Specimens of soap berries from Ecuador may be seen at the Bureau of Foreign and Domestic Commerce or its branch offices.]

NIPA-PALM ALCOHOL IN BRITISH NORTH BORNEO.

[Vice Consul John Nimmo Wardrop, Sandakan, Sept. 21.]

The British North Borneo Herald recently contained a lengthy discussion of the possibility of introducing the nipa-alcohol industry into this colony. Interest is added to the article by the fact that its author, Mr. Donald M. Matthews, is an American and the newly appointed Chief Forestry Officer of British North Borneo.

The efforts being made to start the manufacture of nipa-palm sugar and alcohol in the Philippine Islands [see **COMMERCE REPORTS** for Jan. 26, 1915; also the issue for Dec. 4, 1911] have aroused interest in the potentialities of British North Borneo, where, although the area of nipa swamp has never been computed, the total is thought to be greater than that of the Philippines. Dense stands are to be found in Labuk Bay, along the northeast coast from Sandakan Bay to Tambisan Island, and in Sandakan Bay. The area of nipa in these three places alone must be well in excess of 50,000 acres, and all this area is easily available from Sandakan. Two hundred acres of nipa under proper management will yield 500 gallons of alcohol a day during the six or seven months the sap flows. It is therefore apparent, says Mr. Matthews, that the visible supply of palms near Sandakan is more than sufficient for the foundation of a large industry.

Added importance is lent to the feasibility of establishing a nipa industry in British North Borneo by the constantly increasing world demand for motor fuel and the ease with which gasoline motors can be adapted to use alcohol.

IMPORTS AND EXPORTS OF COPPER.

Imports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan, during the week ended November 20, 1915, were as follows: Ore, matte, and regulus (copper contents), 518,133 pounds, valued at \$84,269, of which 303,537 pounds came from Peru, 106,400 pounds from Venezuela, and 106,083 pounds from Canada; the imports of pigs, bars, etc., amounted to 6,342,058 pounds, valued at \$1,034,205, of which \$1,826,698 pounds came from England, 1,699,157 pounds from Peru, 1,578,963 pounds from Canada, and 1,237,240 pounds from Chile.

The exports of domestic copper (pigs, bars, etc.) at the customs districts named during the week amounted to 19,551,362 pounds, valued at \$3,609,790, of which 7,318,141 pounds went to France, 5,977,122 pounds to Italy, and 4,009,809 pounds to England.

Wheat Sampler in Demand in South America.

Special Agent S. S. Brill, who made an investigation of the hardware markets of South America for the Bureau of Foreign and Domestic Commerce, brought back with him a grain or wheat sampler equipped with a black leather sheath, which, he states, meets with a large sale in Uruguay. It retails for \$1.45 United States currency. The specimen sampler may be inspected at the New York office of the Bureau; refer to sample No. 203 under file No. 776.

BONE-GLUE INDUSTRY OF NOTTINGHAMSHIRE.

[Consul C. M. Hitch, Nottingham, England, Nov. 4.]

Nottinghamshire has long been regarded as an important center of the bone-glue industry of Great Britain. It is estimated that about 700 tons of bones come into this district every week from all parts of the United Kingdom and are converted into glues, animal fats, and fertilizers.

As the shipments arrive they are automatically sorted over to extract any piece of metal or rubbish, and the marrowbones are laid to one side for separate treatment, all others going to the grinding mills and thence to the benzine extractors. The fat thus extracted is sold to soap, glycerin, and stearin works. The bones come from the extractors in a perfectly dry state and are then cleaned and polished, after which they go to the glue rooms, where the glue is extracted by various processes. Many different qualities of glues are made. After the glue has been extracted, the bones are dried and finely ground and either in this condition or after chemical treatment, they are sold to agriculturalists as artificial fertilizers with guaranteed analyses. The marrowbones which are treated separately, are sold for the manufacture of buttons, tooth brushes, and piano keys.

The weekly output of this district is approximately 140 tons of glue, 70 tons of animal fat, and 490 tons of fertilizer. The present market price of glue is about \$175 per ton; animal fat, \$150 per ton; and fertilizer, \$25 per ton. The total value of the weekly output at these prices is approximately \$47,250. During normal times, Nottinghamshire bone products are exported in considerable quantities to all parts of the world, but at present local manufacturers are able, owing to the increased demand and excellent prices realized, to market all of their output in this country.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Summers, Maudin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Yamoy, China.....	do.....	do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.....	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Porto Rico, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 10	(a) Lotus Club, 110 West Fifty-seventh Street, New York City.
Chamberlain, George A.....	Laurence Marques, East Africa.....	Dec. 31	
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 403, Customhouse, New York, N. Y.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

RECENT AMERICAN TRADE STATISTICS.

The imports, duties collected, and exports for the week ending November 27, 1915, at the 13 principal customs districts of the United States, handling 91 per cent of total imports and exports, based on transactions in the month of September, 1915, follow:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah).....	\$94,926	\$3,819	\$24,148
Massachusetts (Boston).....	3,138,062	194,705	774,037
New York.....	21,598,928	2,652,066	57,712,535
Philadelphia.....	910,028	146,072	1,373,816
Maryland (Baltimore).....	886,840	87,427	1,910,769
Virginia (Norfolk).....	37,330	12,701	848,096
New Orleans.....	1,280,462	14,410	2,824,882
Galveston.....	38,510	1,569	2,298,977
San Francisco.....	237,276	42,326	717,833
Washington (Seattle).....	2,511,045	19,876	1,974,103
Buffalo.....	785,143	24,213	1,750,965
Chicago.....	464,517	114,371	124,668
Michigan (Detroit).....	764,648	28,090	2,582,968
Total.....	32,937,914	3,342,014	75,300,093

The cotton exported during the week ending November 27, 1915, at the 12 principal cotton districts of the United States follows:

Districts.	Bales.	Districts.	Bales.	Districts.	Bales.
Georgia.....		Philadelphia.....		San Francisco.....	
Massachusetts.....	1,108	South Carolina.....		Washington.....	8,798
Maryland.....	931	Virginia.....			
New York.....	7,861	Galveston.....	29,264	Total.....	68,639
North Carolina.....		New Orleans.....	20,683		

LANCASHIRE COTTON WEAVERS TO RECEIVE WAR BONUS.

[Consul Ross E. Holaday, Manchester, England, Nov. 4.]

The agitation of the Lancashire Weavers' Amalgamation to secure a 5 per cent war bonus for its members met with its reward on November 3, after months of negotiations and after three distinct refusals. The decision affects some 170,000 members of the Weavers' Amalgamation, and 60,000 other workers connected with the cotton trade, such as overlookers, twistors, drawers, cloth lookers, warehousemen, and the odd hands employed in the warehouses in the weaving section.

It is stated by the local newspapers of to-day that the war bonus will be paid for the first time on the first pay day after January 1, 1916, and is to continue in force for 13 weeks after the official signing of peace; and the agreement contains a clause to the effect that when wages have reverted to existing rates a period of 26 weeks must elapse before any further alteration can be initiated by either side. The effect of the granting of the war bonus to the Lancashire operatives will probably be that it will prevent trouble in the cotton trade for some time to come; at least this is the opinion expressed by those most competent to judge the situation here.

SOUTH AFRICAN OSTRICH FEATHERS AND THE DROUGHT.

[Consul E. A. Wakefield, Port Elizabeth, Oct. 20.]

The appearance of feathers on the local market during the last two weeks has borne out in a measure the predictions so freely made concerning the scarcity of the ostrich feather in the near future because of previous neglect of the birds and the present drought.

Such feathers as have been on the market are not up to the average standard that has been maintained here for many years. Many of the feathers are thin, scrawny, and present a poor appearance in comparison with former market supplies.

It remains to be seen whether this is a temporary condition, or whether, as many believe, the supply of ostrich feathers for the next two years at least will not only be much less in quantity but decidedly disappointing in quality.

Such feathers as were supplied on the local market during the last two sales were neither attractive nor creditable. The drought still continues, many thousands of small stock have perished, and unless relief is forthcoming soon not only will the ostrich-feather supply be still further decreased, but the supply of wool, mohair, and skins will be materially affected.

In the Aberdeen district alone it is stated that nearly 400,000 head of small stock has perished. Other sections have suffered, and if present conditions continue much longer many farmers will be ruined.

BUILDING ORDINANCES OF GUAYAQUIL

A recently published pamphlet, in Spanish, containing the building regulations of Guayaquil, Ecuador, has just been received by the Bureau of Foreign and Domestic Commerce and will be loaned upon request. Among the subjects treated in this pamphlet are building permits, sites, construction materials; buildings, and wharves, with general provisions and prohibitions applicable to building, plumbing, lighting, paving, cleaning, and painting. It is interesting to note that houses must be painted once in eight years, and the whole city is to be freshly painted for the centenary celebration in 1920. Buildings and walls, whether public or private, are not to be disfigured by advertisements. Bulletin boards are to be provided in appropriate places, where the advertiser may post his announcements for stated periods at fixed prices.

APPROPRIATIONS FOR NEW ZEALAND RAILWAYS AND ROADS.

[Consul General Alfred A. Winslow, Auckland, Oct. 29.]

The New Zealand Government appropriation for railways and roads for 1915-16 amounts to \$8,516,375, a decrease of \$1,216,625 over the previous year. Of the total appropriation \$1,656,977 is for the extension of the line north of Auckland. The total cost of the 2,927 miles of New Zealand Government railways to the close of 1914 was \$165,461,000. During the year 1913-14 there were 91 miles of new lines added to the system. The revenues from the railway lines for the year amounted to \$19,978,233 against \$19,676,856 for 1912-13.

NOTES FROM ARGENTINA.

[Review of River Plate, Oct. 15.]

New Petroleum Wells.

Recent discoveries of springs of petroleum have been made in the southern territory of Neuquen and in the northern province of Salta, and the Government is taking measures to ascertain the extent of these deposits. The oil wells of Comodoro Rivadavia, discovered eight years ago, and now operated by the State, yield 6,000 to 8,000 tons of oil monthly, and an equal amount is imported from Mexico alone, yet these two sources of supply are far from meeting the demand.

The Live-Stock Census.

A new census of the live stock in the Province of Buenos Aires has just been begun. The results of the National census of live stock, taken last year, have not yet been published. The last previous census was taken in 1908.

Plans for Manufacturers' Exhibits in 1916.

A petition has been presented by a group of American agents to the municipal authorities of Buenos Aires for the temporary cession of a site of land on which to erect a building for the exhibits of the United States manufacturers on the occasion of the centenary celebrations in 1916.

The Locust Invasion.

Large swarms of locusts are damaging the wheat crop in the Province of Cordoba. The provincial government has asked the national authorities to supply the farmers free of charge with quantities of zinc sheeting to protect the grain. Fears are expressed that much damage may be done also to the wheat and linseed crops in Santa Fe and Buenos Aires Provinces, as well as to the maize crop later. From Gallegos come reports of a heavy mortality among the sheep, which prefer to die of hunger rather than eat the pasture which has been polluted by the locusts.

Proposed Regulation of Joint-Stock Companies.

The Ministry of Justice has authorized its inspection department to study the question of a reform of existing legislation governing joint-stock companies, and to make a report on the matter before March 31, 1916. The commission is also instructed to submit for the approval of the ministry, before November 1 of this year, proposed forms of balance sheets, rules for valuation of property and stock, and compilation of balances by joint-stock companies. It is the intention to enforce the use of approved forms of balance sheets from December 31 next.

[Review of River Plate, Oct. 22.]

Extra Session of Congress.

Congress has been called to an extra session, beginning November 20, for the sole purpose of considering the budget law for 1916.

Industrial Census of Mendoza.

The department of commerce and industry of the Ministry of Agriculture has just published a report embodying a census of the industries and trades of the Province of Mendoza. The report shows 6,211 establishments in the Province, with annual sales amounting to \$173,001,500.

NEW STEAMSHIP SERVICE TO CENTRAL AMERICA.

[Commercial Agent E. G. Babbitt, San Francisco, Cal., Nov. 18.]

A new steamship service has been inaugurated between San Francisco and Central American ports by W. R. Grace & Co. The following schedule (subject to change) is announced, and has been confirmed by Mr. H. E. Moore, traffic manager:

Northbound, from Central America:

Melville Dollar (chartered), Acapulco, December 9; Champerico, December 11. *Columbia*, La Union, December 17; Acapulco, December 18; San Jose, December 19; Champerico, December 20; Salina Cruz, December 22.

St. Helens, to call at Salvador and Guatemala ports about 10 days later.

Alvarado, about the middle of January.

Southbound, from San Francisco:

Colusa, early in January, calling at Guatemala and Salvador about January 12, en route to Balboa. Returning, will call at same ports about January 30, and is due back at San Francisco about February 9.

The fortnightly service, it will be noted, is northbound and not southbound, as Grace & Co.'s vessels leave San Francisco fully loaded for the west coast of South America, and make the intermediate calls on the return trip. It is reported that the *Colusa* has just left Santos, Brazil, for San Francisco, with 50,000 bags of coffee, valued at \$750,000—the largest shipment of coffee ever consigned to this port.

NEW ZEALAND SHIPPING RATES FAVOR LONDON.

[Consul General Alfred A. Winslow, Auckland, New Zealand, Oct. 28.]

There is still much complaint on the part of merchants in New Zealand relative to freights between New York and this country. It is claimed that rates are higher between New York and New Zealand ports than between New Zealand ports and London, and that now that the Panama Canal is closed, still another advance is made to and from New York. However, the sky is beginning to clear, for new lines are seeking the trade, but even these are quoting rates in favor of London. It seems probable that this will continue until American lines can enter for this business. Recent rates quoted for New York via London on kauri gum were \$17.03 per ton, against but \$12.16 for London, with a primage of 10 per cent and a war surtax of 25 per cent in each case. Now a new line is quoting a new rate to New York of \$14.60, with a primage of 10 per cent and a war surtax of 25 per cent, making the rate \$2.44 more to New York direct than to London, although New York is much nearer to New Zealand than London and entirely without the war zone.

These matters quite seriously affect trade with the United States, and offer a handicap that should be overcome if possible.

OYSTERS IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Oct. 29.]

Official figures show the oyster catch for the season of 1915 in New Zealand amounted to 9,395 sacks of about 175 pounds each, against 8,068 sacks for the 1914 season. Most of the available oyster beds are found about and north of Auckland, but the Government Fisheries Department has undertaken to transfer rock oysters and large bluff oysters to the sounds and bays further south with the hope that they may be established there, and become a paying industry.

CONSTRUCTION WORK ABROAD.**CANADA.**

[Consul Samuel C. Beat, Calgary, Alberta, Nov. 11.]

Bridge Construction—New School Buildings.

Bridge contractors are looking forward to considerable building next year on account of a large number of washouts this year. It is expected that the Canadian Pacific Railway will let contracts for the construction of a number of bridges to be built in Alberta and British Columbia.

The Separate Board of Education has just adopted plans for the erection of three school buildings in Calgary next year. Work was to have commenced this fall, but delay in the sale of the school bonds postponed action. The buildings will cost approximately \$15,000 each. Bids have not yet been asked for.

HONDURAS.

[Consul E. M. Lawton, Tegucigalpa, Oct. 30.]

Limited Amount of Building.

The small volume of new building and the lack of industries in Honduras do not offer much market for construction material. Public work is also simple in character. It has not been customary to call for bids for erecting Government buildings, one just issued being a new departure; this calls for bids for constructing a building adjoining the Administration of Rents, as an extension to the one recently erected. The materials to be used are brick, stone, cement tiles, wood, Venetian blinds, and six iron balconies.

LIBYA.

[Consul W. Roderick Dorsey, Tripoli, Oct. 9.]

Flour Mill—Former Contracts Retarded.

A flour mill is being hastily installed in an old building at Tripoli by a contractor who has engaged to grind a "type" flour for the local municipality at 1.50 lire per 100 kilos (\$0.13 per 100 pounds). Machinery is partly Italian and partly Swiss, acquired "second hand" in Italy at a cost of about \$12,000.

Inaccessibility of quarries caused an almost complete suspension of road and other improvements requiring stone. To prevent delay on the harbor works the Spanish walls inclosing the old city are being demolished and converted into concrete.

DEVELOPMENT OF COLORED ENAMELS FOR STOVES.

Experiments have been begun by the United States Bureau of Standards, on the development of ground and finishing coats for cast iron. This research is of timely interest, in view of the tendency at present to decorate coal stoves with various colored enamels. An interesting feature of the work is the fact that all the test pieces were sent to the bureau by a large manufacturer of stoves, who, not knowing that the Bureau already had in mind such an investigation, asked that, if possible, a satisfactory enamel be developed.

A good ground coat has already been developed, as well as a white cover coat for cast-iron stove parts. The white coat produced contains as an opacifier, oxide of antimony in place of the more commonly used, but expensive, tin oxide.

LUMBER TRADE'S IMPORTANCE TO BRITISH COLUMBIA.

[Vice Consul G. C. Woodward, Vancouver, Nov. 5.]

British Columbia, with approximately 120,000,000 acres of timberland, containing, roughly speaking, 400,000,000,000 feet of timber, can be expected to depend largely upon this industry for its present and future commercial development. As it is estimated that the annual increment on the timber area of the Province reaches at least 6,000,000,000 feet board measure, of which only about 1,750,000,000 is now cut and used, there is an excellent opportunity for the expansion of its timber industry, with new and increasing markets developing for its products and manufactures, and better transportation facilities secured, enabling the remotely situated and at present inaccessible timber to be reached.

Provincial figures show that at the beginning of this year there were 334 sawmills and 81 shingle mills in the Province, with a yearly capacity of approximately 2,500,000,000 feet of lumber and 1,500,000,000 shingles.

Prior to the completion of the Canadian transcontinental railways the British Columbia mills depended entirely upon their local and export market. As soon as the Canadian Pacific Railway was completed an entirely new outlet was secured in the prairie Provinces for the output of these mills, which increased also with the completion of the Grand Trunk Pacific Railway and the construction of the Canadian Northern Railway as towns sprang up and settlers located along these roads. In recent years the demands of this market amounted to more than 50 per cent of the provincial output.

Increased Demand for Timber from Pacific Coast.

The export demand for timber from the Pacific coast has increased from a total water shipment of 595,000,000 feet in 1895 to 1,693,000,000 feet in 1914, the British Columbia share amounting to 54,000,000 and 41,000,000 feet, respectively. Percentages showing the gradual decrease of the Province's share in this trade were: 1895-1899, 8.8 per cent; 1900-1904, 7; 1905-1909, 4.8; 1910-1914, 3; 1914, 2.4 per cent.

With the cessation of the immigration of settlers to the Prairie Provinces, the demand of this market rapidly decreased, and in consequence the British Columbia mills were left with heavy stocks on hand and a large amount of capital invested in plants which bid fair to produce little or no revenue. In consequence steps have been taken by the Provincial Government for the development of its lumber export trade by sending special agents to various countries, by the placing of exhibits in trade centers, and the distribution of books and pamphlets.

[Various features of the lumber trade of British Columbia were presented in a long dispatch from Vancouver, printed in *COMMERCE REPORTS* for Nov. 1, 1915.]

A Vancouver company recently shipped from its quarry on Nelson Island two granite shafts, each 3 feet by 18 inches, 22 feet long. This quarry furnished the granite used in the construction of the provincial courthouse in Vancouver and the Government buildings in Victoria.

BRISTOL AND WEST AFRICAN TRADE.

[Consul J. S. Armstrong, Jr., Bristol, England, Oct. 22.]

At a meeting of the Bristol Chamber of Commerce on August 20 the subject of the development of direct trade in palm kernels between the West Coast of Africa and this port was under discussion. It was stated that all dealers in this locality in any way interested in the proposition had been consulted and seemed to be unanimously in favor of embarking on this trade, provided some assurances could be obtained from the British Government that steps would be taken to protect them adequately from foreign competition, now cut off, but which would be resumed after the war.

The president of the chamber stated that there is little doubt that the volume of trade of this city would insure sufficient freight to make the inauguration of a direct line profitable at present, but there is a good deal of uncertainty as to what will be the condition when certain foreign crushers again enter the field.

At the request of local seed crushers, who a few days ago held a meeting to discuss this matter, the president of the Chamber of Commerce addressed a letter to the British Colonial Secretary urging the Government to give some protection to the proposed industry. It was pointed out that a certain foreign country which before the war was practically in control of this trade had considerably benefited the industry by imposing a heavy import tax on the oil, but allowing the raw products free entry, and the crushers in that country were able to sell the oil at a high profit for domestic consumption.

It was pointed out that the high margin of profit thus obtained would enable them to outbid the British crushers in buying raw material unless the latter were given similar benefits, and also the foreign crusher would be able to sell for export at prices which the British crushers could not afford to offer.

(A previous report on this subject appeared in **COMMERCE REPORTS** for Sept. 25, 1915.)

REQUIRED MOTOR-VEHICLE EQUIPMENT IN CURAÇAO.

[Consul H. C. von Struve, Curaçao, W. I., Sept. 10.]

In connection with the notice of a trade opportunity, sent from this consulate (see **COMMERCE REPORTS** for July 8, 1915, Opportunity No. 17445), as a result of which a cycle car was imported here, attention has been directed to the requirements of article 12 of the law published in the Official Paper No. 59 of the year 1912.

The requirements are that all motor vehicles to be used on roads must be provided with: An accurately working steering gear; a reverse speed; at least two strong brakes, working independently of each other, under the control of the operator, by which the vehicle may be brought to a standstill at any moment; and at least one horn or siren, the sound of which is distinctly audible at a distance of 100 meters (110 yards).

The car imported had but one brake, and for that reason did not comply with the requirements.

Whale guano is being used extensively by South African farmers. According to the British and South African Export Gazette, it is sold by the Government at \$31.60 per ton f. o. r.

NEW ZEALAND GOVERNMENT CONTROL OF KAURI-GUM TRADE.

[Consul General Alfred A. Winslow, Auckland, Oct. 11.]

The New Zealand Government has passed a law authorizing the Minister for Lands to enter into contracts for the purchase of tools and plant for the extraction and treatment of kauri gum, and to purchase and sell gum on any terms and conditions he thinks fit. The minister may in future insert a condition in kauri gum digging licenses that the holder must give the minister the first opportunity of purchasing all gum obtained under the license, otherwise the minister may cancel the license.

It gives the Government power, by order in council, to set apart any area of Crown land not exceeding 10,000 acres in a kauri-gum district for the purpose of promoting the systematic recovery of kauri gum and other valuable products. This land may be leased by the Land Board to approved persons on condition that it is worked for the extraction of kauri gum and that no lease shall extend over more than 3,000 acres, or be for more than 21 years.

Many of the exporters fear it may seriously interfere with the trade in general, and it is a very important industry giving employment to about 6,000 men.

The exports of kauri gum during the four years ending with 1913 were as shown in the following table given by countries and in tons and values:

	1910		1911		1912		1913	
	Tons.	Value.	Tons.	Value.	Tons.	Value.	Tons.	Value.
United Kingdom and possessions.....	1,305	\$765,532	2,462	\$653,994	2,547	\$585,399	3,532	\$854,311
Germany.....	913	136,340	1,142	165,703	1,053	160,419	833	135,678
United States.....	4,149	1,281,714	3,514	1,018,170	3,894	1,131,782	3,995	1,501,101
All other countries.....	246	49,551	469	87,801	414	74,350	420	51,133
Total.....	8,693	2,263,137	7,587	1,925,708	7,908	1,952,950	8,780	2,672,223

From the above it will be noted that the American market takes the best grades of kauri gum, and this tendency is increasing from year to year.

Where Obtained.

The known kauri-gum fields are all located north of Auckland, New Zealand, and cover about 814,000 acres, of which approximately one-half is known as Crown or Government land. The gum may be found anywhere from the surface to 20 feet down, and often under heavy forests where the standing trees are said to be from 2,000 to 3,000 years old.

Past and Future Supply.

It is stated on good authority that about 350,000 tons of kauri gum have been exported during the past 40 years, valued at \$97,330,000, and it is estimated that there is still an equal amount to be taken from the earth, which means that the supply is good for many years to come, and it is this the Government proposes to regulate. There is talk of imposing an export tax of £1 (\$4.86) per ton.

Prices Increase.

The price of kauri gum is steadily advancing, the average in 1894 having been \$235 per ton, when the quality was much better than it is now, to \$304 for 1913. The heaviest exports were made in 1899 and 1900, when they reached 11,116 and 10,159 tons respectively.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Navy Department supplies, No. 2802.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., for furnishing the following materials. Firms desiring to submit proposals should make application to the Bureau of Supplies and Accounts, giving schedule numbers desired: Schedule 9039, evaporated milk, and sugar in sacks; schedule 9040, rubber bands, wire desk baskets, loose-leaf binders, hand blotters, blank books, cardboard filing boxes, typewriter brushes, paper clips, tracing cloth, No. 4 Underwood revolving duplicators, rubber erasers, steel erasers, paper fasteners, letter files, copy and loose-leaf holders, all kinds of ink, inkstands, drawing instruments, half-ounce bottles of typewriter oil, hand-numbering machines, paper fastening machines, maulage, all kinds of pads, absorbent paper of all kinds, carbon paper, typewriter paper, maulage paste, lead pencils, penholders, pens, Y. & E. perforators, pins, eyelet punches, pen and stamp racks, waste paper receptacles, typewriter ribbons, rulers, drawing scales, mall and express scales, pencil sharpeners, banker's shears, perforating mimeograph silk, chamols skins, common log slates, dating stamps, pencil pads, etc., thumb tacks, shipping tags, 72-yard spools of red tape, cotton sail twine, and paper weights; schedule 9041, electrical indicator system; schedule 9042, naval rolled bar brass, commercial sheet brass, steel angles, machinery steel, and sheet steel; schedule 9043, southern spruce boards; schedule 9044, yellow pine; schedule 9045, brass bedsteads with springs, mattress wire, mirrors, stearine, and beef tallow; schedule 9046, water-tube boiler; schedule 9047, white oak piles and yellow pine piles; schedule 9048, oil-burning range and towing lights; schedule 9049, 51-inch-wide enameled cloth; schedule 9050, ingot copper and slab zinc; schedule 9051, double emery grinder, 21-inch press drill, 36 and 38-inch band saws, 16-inch universal saw, and single surfacer; schedule 9052, laundry machinery; schedule 9053, coaling baskets, floor sweeping brushes, portable fire extinguishers, rubber air hose, cotton rubber-lined fire hose, wrought pipe, flat-back porcelain urinals; schedule 9054, soda ash, dry Venetian red, and aluminum varnish; schedule 9055, stencil-cutting outfits, hacksaw blades, chisels, breast drills, electric portable radial drills, brass grommets, hammer handles, pliers, screws, and gasoline torches; schedule 9056, silica sand and castor oil; schedule 9057, blue shrunk denim, hangers for paper towels, portable platform scales, paper towels, and china ware; and schedule 9058, mechanical steering gear.

Panama Canal supplies, No. 2803.—Sealed proposals will be received at the office of the General Purchasing Officer of The Panama Canal, Washington, D. C., until December 8, 1915, for furnishing, by steamer, free of all charges, on dock at either Colon (Atlantic port), or Port of Ancon. (Balboa, Canal Zone, Pacific port), Isthmus of Panama, the following: Centrifugal pumps, dipper lips, steel and iron castings, spring plates, pig iron, sheet copper, hatchets, hammers, hand saws, hacksaw blades, machetes, rakes, pliers, spirit levels, anvils, vices, steel clamps, chisels, carpenter's braces, pipe tongs, tinners's shears, planes, drills, drill sockets, bits, pipe dies, taps, files, drill sleeves, copper ferrules, gauges, grease cups, valves, cocks, wagon wheels, water-gauge lamps, lamp chimneys, fire hose, Manila rope, coal-tar pitch, rock salt, lime, chamols skins, paper, and poplar lumber. (Circular No. 992.)

Repair work, No. 2804.—Sealed proposals will be received at the office of the United States Engineer, Jacksonville, Fla., until December 31, 1915, for repairing breakwater, Fort Taylor, Key West, Fla. Further information may be had on application to the above-named office.

Construction work, No. 2805.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until December 30, 1915, for the construction complete (including mechanical equipment and approaches) of a two-story and basement stone and brick-faced building for the United States post office at Ridgway, Pa. Drawings and specifications may be obtained from the custodian at Ridgway or at the Washington office.

Panama Canal supplies, No. 2806.—Sealed proposals will be received at the office of the General Purchasing Officer of The Panama Canal, Washington, D. C., until December 13, 1915, for furnishing, by steamer, free of all charges, on dock at either Colon (Atlantic port) or Port of Ancon (Bulbon, Canal Zone, Pacific port), Isthmus of Panama, the following: Motor-driven centrifugal pumps, cast-iron bollards, pinions, steel cable, cold shuts, aluminum pig, stocks and dies, reamers, twist drills, red fiber packing, alcohol, muriatic acid, litharge, Japan drier, lard oil, fish oil, turpentine, red lead, white lead, shellac, varnish, and paints. (Circular No. 933.)

JAPANESE EXPORTATION OF PLAYING CARDS.

[Translation from The Osaka Mainichi for Oct. 26, by Vice Consul and Interpreter E. H. Dooman, Kobe.]

There are many commodities which have been exported from Japan for the first time since the beginning of the war. One of them, the large orders for which have heretofore escaped attention, is playing cards. It is estimated that orders amounting to 500,000 gross have already been received, the price per gross being about 3.50 yen (\$1.75). The total value of the orders exceeds 15,000,000 yen (\$7,500,000). Besides a certain portion being exported to India, these cards are consigned to Europe, the greater part to be used as gifts to soldiers, while the remainder are to be put on the regular market through the English merchants.

The demand in Europe is not concerned with the quality of the cards, it only requires that they be cheap. Accordingly, orders have been collected in Osaka, where a remarkable proficiency has been developed in the art of manufacturing cheaply.

The center of the card-manufacturing industry in Japan is Kioto, where the cards produced are of fairly good quality; the price is about 10 yen (\$5) per gross. While the sale in Europe of this quality is growing, it is nothing like as large as that of the Osaka cards. A demand has arisen for Japanese goods which should last for the duration of the war. The greater number of the cards used are discarded after being used a few times, so orders for large amounts are still expected from such districts. At present the printing establishments all over the city are very much rushed.

The fact that we, who formerly imported cards from Europe and America, have become suppliers to the world is very interesting.

VALUE OF "COMMERCE REPORTS" TO THE EXPORT TRADE.

[Foreign Trade Secretary F. L. Roberts, Cleveland Chamber of Commerce, Nov. 18.]

A former export manager of a prominent motorcycle company of Detroit, Mich., informs the writer that during his three years' connection with the firm he found **COMMERCE REPORTS** of invaluable assistance in building up an export trade. He further states that in his opinion the publication is worth \$25 a year to a manufacturer who is interested in the export trade.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 822 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Machinery, automobiles, bicycles, motor cycles, and photo supplies, No. 19399.—

A commercial organization in the United States transmits an inquiry from a man in Peru who desires to communicate with American manufacturers of machinery for compressing air for use in mines; machinery used in creameries; presses to pack wool in bales; automobiles; bicycles; motor cycles; and photo supplies. Correspondence should be in Spanish.

Cotton, No. 19400.—A business firm in the United States writes that a firm in Spain desires to communicate with producers and exporters of cotton.

Paints, canned goods, galvanized iron, and zinc, etc., No. 19401.—The commercial agent of the Bureau in New York transmits the name of a firm in Africa which desires to get in touch with American manufacturers of paints, canned goods, galvanized iron and zinc, household furnishings, knit goods, cotton piece goods, and hardware with a view to establishing agencies.

Brass tubes, leather for boots, and pegamoid, No. 19402.—A commercial organization in the United States transmits the name of a man in Spain who desires to communicate with American manufacturers of brass tubes for automobile radiators, leather for boots, and pegamoid. Samples of the brass tubes desired may be examined at the Bureau or its branch offices. (Refer to file No. 78.)

Postal cards, No. 19403.—A letter has been received from a man in Canada who desires to communicate with American manufacturers and dealers in Christmas cards.

Hides, honey, and wax, No. 19404.—A commercial organization in the United States transmits an inquiry from a man in Cuba who desires to get in touch with American dealers in hides, bee honey, and wax. Correspondence should be in Spanish.

Leather, glass, mirrors, opals, and brassware, No. 19405.—A firm in the United States writes that a man in Java desires to communicate with American manufacturers and exporters of leather, glass, mirrors, opals, and brassware.

General agency, No. 19406.—A special agent of the Bureau writes that a man in Costa Rica desires to communicate with American firms desiring to establish agencies in that country. No particular line is specified.

Hardware, iron and steel products, rubber goods, etc., No. 19407.—A commercial organization in the United States transmits the name of a man in Mexico who desires to secure the agency of American manufacturers of hardware, iron and steel products, machinery for cotton and woolen mills, wood-working machinery, drugs, paints, factory supplies, rubber goods, and men's wearing apparel. Correspondence should be in Spanish.

Savings bank, No. 19408.—A firm in the United States writes that its correspondent in Spain has transmitted a sample bronze savings bank, stamped "C. O. Burns Company, New York," together with an inquiry for the name and address of the manufacturer, with a view to placing an order for 1,500 to 2,000 of these banks.

Office supplies, etc., No. 19409.—An American consular officer in Russia reports that a man in that country desires to purchase immediately 500 reams of 40 by 51 centimeter carbon paper, 2,000,000 thumb tacks, 500 gross of indelible pencils, 500 gross of drawing pencils No. 2, 100,000 Brounsilver paper post cards for photographs, 100,000 illustrated and colored Brounsilver post cards, 5,000 gross snap fasteners for women's apparel, and 1,000 sets of drawing instruments.

Cotton piece goods, No. 19410.—The Bureau is informed by an American consular officer in South America that a firm in his district desires to get in touch with American exporters of cotton piece goods with a view to establishing agency connections. The firm is also interested in volles, oxfords, zephyrs, and cheap printed shirtings. Prices should be quoted f. o. b. New York. Correspondence may be in English. Samples of the goods desired may be examined at the Bureau or its branch offices. The prices marked on the samples are those formerly paid f. o. b. London or other British ports. (Refer to file No. 68847.)

EXTENSION OF DANISH EMBARGO LIST.

[Telegram from American consulate general, Copenhagen, received Nov. 27, 1915.]

Cotton goods and dried casein have been added to the list of products subject to embargo in Denmark.

ADDITIONS TO FRENCH EMBARGO LIST.

[Telegram from American consulate general, Paris, Nov. 26, 1915.]

A decree of November 22 prohibits the exportation from France of grape residue, walnuts and other nuts, almonds, fruit stones, gum lac, mica sheets or plates, micanite, vaseline, and sacks of all kinds. The above prohibitions are subject to the usual exceptions.

RESULT OF TRADE OPPORTUNITY.

A demand for road machinery in Russia was called to the attention of American manufacturers through a Trade Opportunity published by the Bureau of Foreign and Domestic Commerce in **COMMERCE REPORTS**. The Chamber of Commerce and Commercial Club, of Oakland, Cal., called this opportunity to the attention of a road-machinery company in that State, and the company entered into negotiations with the prospective purchasers in Russia through one of its eastern offices. The result has been the securing of a Russian order by the company, as announced by the Oakland commercial organization to Commercial Agent E. G. Babbitt, of the Bureau, at San Francisco.

Consul Paul H. Foster reports that 30 tons of cedar were ordered from the United States by a lead-pencil manufacturer of Jerez de la Frontera whom he placed in communication with American shippers and that a dealer in automobiles and supplies in that Spanish city sent in two orders for motor-car supplies, two for tires and tubes, and one for auto luncheon cases through having had his attention called to the catalogues of American makers of these wares which were filed in the Jerez consulate.

BRUSHES IN GERMANY.

[Consul Harry G. Seltzer, Breslau, Nov. 5.]

The Union of German Brush Manufacturers has decided upon an advance of 50 per cent in prices for shipments to Austria-Hungary. Advanced prices for domestic consumption will also be fixed within a short time.

Brooms, brushes, paint brushes, and sieves are classified as a separate group in the German statistics of imports and exports. The importance of this trade will be apparent from the following import and export figures: In 1912 Germany imported 1,491 metric tons (1 metric ton = 2,204.6 pounds) of these wares, valued at \$545,258, and exported 2,957 metric tons, valued at \$2,806,020. In 1913, the imports were 1,400 tons, valued at \$622,370, and the exports 3,018 tons, valued at \$2,950,010. For the first half of 1914 (latest available figures), the imports were 674 tons, valued at \$215,152, and the exports 1,511 tons, valued at \$1,618,162.

The exports of brushes to the United States from the Breslau consular district during the last six years are as follows: 1909, \$26,156; 1910, \$33,738; 1911, \$65,311; 1912, \$31,254; 1913, \$23,066; 1914, \$23,052.

Germany imports brushes, brooms, etc., principally from the Netherlands, Austria-Hungary, and France, although small quantities of fine hair brushes have also been credited to the United States.

In the export trade Great Britain was by far the best customer, taking altogether about 50 per cent of these goods. Considerable quantities have also been sold to Italy, Austria-Hungary, Russia, and Argentina. The United States takes approximately 7 per cent of Germany's total exports, of which this district furnishes about 12 per cent.

QUOTING PRICES FOR SOUTH WALES.

[Consul William L. Jenkins, detailed as vice consul at Swansea, Oct. 20.]

While it is yet too early to know fully the results of the Swansea consulate's trade-extension work during the September quarter, some very gratifying responses have already been reported. One local firm, however, in whose behalf a Trade Opportunity was published in *COMMERCE REPORTS* for July 19, and which received numerous letters relating thereto, had the following criticism to offer:

Unfortunately, the majority of the quotations are free-on-rail New York, and most of the prices are in dollars and not in pounds, shillings, and pence. Of course, to firms that lay themselves out for importing goods this would make little difference, but to the general merchant the extra correspondence and arrangement of shipments, etc., would not be profitable. We had no trouble of this kind from the Belgium or German markets.

I called personally upon the manager of this firm, who showed me seven or eight letters that were unsatisfactory in regard to method of quoting. There was one, however, which was well thought out, and in which particular attention had been paid to the points emphasized in the Trade Opportunity, and the manager informed me that he intended giving this firm a trial order at once, being much pleased with the care shown. In most of the reports and Trade Opportunities sent from this consulate emphasis has been laid on the importance of sending quotations in English currency and having them c. i. f. Swansea, instead of f. o. b. New York or elsewhere.

CUBA WANTS DESIGNS FOR "MAINE" MEMORIAL.

[Special Agent Garrard Harris.]

The Cuban Maine Memorial Commission, of which Gen. Emilio Nunez, Secretary of Agriculture of Cuba, is chairman, has called for international designs and bids for the Maine memorial which will be erected by the Government of Cuba. The presidential decree on the subject in part reads:

The plans and bids must be in the hands of the Secretary of Agriculture, president of the commission, before 11 o'clock on the morning of February 1, 1916, and on February 3 the plans will be opened publicly in the order in which they have been received, and will be exposed to the public for 15 days.

The monument will be raised in the Vedado on a triangular piece of ground formed by streets 17, 19, C, and the Calzado de Vedado. The artists may plan the monument in the form and position which they desire, but it is indispensable that the relics of the battleship which were presented by the United States to the Cuban Government—namely, a turret, two cannon, an anchor, and a chain—should be the motif of the monument.

The plans and bids must be original. The total cost, without including that of placing, may not exceed the sum of \$33,000. Two prizes will be given, one of \$1,500 and the other of \$500, for the best two plans, which will become the property of the State.

Admirable Site Chosen.

The Calzado de Vedado is a wide, paved avenue which skirts the sea from the Malecon, opposite Morro Castle, to and through the Vedado, the most beautiful residential section. The plot of ground is not 400 feet from the water, so the monument will look out upon the entrance to the harbor and be seen by all ships approaching and leaving. Thousands of people pass the spot each day, and a more beautiful location for the memorial could not have been selected.

In a few days I will forward a complete set of photographs showing the exact location of the memorial, the surroundings, etc., and photographs of the guns, turret pieces, chain, and anchor being placed on the ground. [Upon their arrival these photographs may be inspected at the Bureau of Foreign and Domestic Commerce, or its branch offices. Refer to file No. 780.] Unofficially, I have gained the impression that a design embracing the names of the men who died will make a favorable impression. These names may be obtained from the Navy Department, at Washington.

ROOF GARDENS IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Oct. 29.]

The first roof garden for Auckland, New Zealand, is to be set apart at the top of a six-story department store now in course of construction. It is to be reached by electric elevators, and tea and rest rooms are to be provided, both for ladies and gentlemen. When the establishment is completed it will be up to date, covering a ground space of about 100 by 100 feet, with all floors occupied by the John Court (Ltd.) department store.

The annual report of the Minister of Mines of British Columbia for 1914 contains a statement from the geologist who examined the oil fields of Flathead Valley, in the southeast corner of the Fernie consular district. The results indicated strong possibilities of oil in paying quantities, Consul Thomas D. Bowman reports. A dispatch published in **COMMERCE REPORTS** for October 16, 1915, announced that the first signs of oil were encountered September 20.

CUBA CHANGES TO A NATIONAL MONEY.

[Special Agent Garrard Harris.]

The transfer of the monetary system of Cuba from the former condition where there was no national coinage to the use of the new money of the Republic has been effected without causing a ripple on the surface of business, and good results are already being noted.

Formerly Spanish, French, United States, and small quantities of other moneys circulated indiscriminately. On nearly every prominent corner in Cuban cities, and especially in Habana, in news, cigar, and lottery-ticket stands were money changers who did a thriving business out of the wide confusion of values. Many abuses and inconveniences arose from this condition of affairs. Banks and business houses had to keep their accounts in three moneys—Spanish, French, and American—and the values of the various coins were constant causes of misunderstandings and a detriment to commerce generally.

Coins Minted in United States.

Cuba arranged for money of its own, the banks cooperating, and the minting has been done in the United States. A presidential decree of September 11 forbade the use of other than Cuban and American money after December 1. It had the effect of immediately waking the people up to the imminence of the change, and there was a rush to unload accumulations of French and Spanish gold and silver. The money changers protested long and loud for more time; they passed resolutions, obtained a good deal of publicity in the papers, and urged that the change should be made more gradually, but to no avail.

The work of converting foreign coins went on steadily. The banks gathered up large quantities of European silver and gold, shipping most of it to the United States to be minted into Cuban money. Heavy shipments of American money and the Cuban coins came back in return. The money changers did a brisk business for a while, until the stock of hoarded centens, louis, francs, and pesos and smaller foreign tokens had come from hiding places and been converted. Then the "cambistas" had to sell their stocks for American and Cuban money—and found their occupation gone.

The Government and municipalities began paying all obligations in national money, banks began paying it out—and the thing was done. There was some complaint at first owing to a shortage of small change on account of delayed shipments. That has been eliminated, and Cuban silver and fractional coins are being received in sufficient quantities from the mint.

What the Cuban Money Is.

The Cuban money consists of gold, silver, and nickel coins. It is estimated that by January 1 there will be more than \$12,000,000 of this money in circulation. It is on an absolute parity with the money of the United States, and as yet there is possibly more American money in trade channels than Cuban. It is forbidden to take or ship the national money out of the country. No bills have been issued. Some factions of the business and political world favor the issuance of bills direct by the National Treasury; others are equally strong for a national bank of issue. This is a matter yet to be determined and upon which there exists a sharp diversity of opinion. Meanwhile American notes are the only ones to be had. The supply is apparently adequate.

The Cuban gold coins are \$20, \$10, and \$5, bearing on one side, in relief, the head of José Martí and on the other the coat of arms of Cuba half encircled by laurel wreaths. On one side the coin bears the inscription "Patria y Libertad" and the date, and on the other, "Republica de Cuba" and the denomination. Each coin is marked with its fineness. The coins are exceedingly artistic and handsome. The \$5 piece has sprung into great favor and is already known colloquially as the "Martí."

The money is upon the same system as that of the United States, and the dollar sign is used to designate it. The peso, or silver dollar, equals 100 centavos. Instead of a 50-centavo piece, there is the "cuarenta," or 40-centavo coin; the "veinte," or 20-centavo; and the silver 10-centavo piece. There are nickel 5-centavo pieces, and a 2-centavo coin and a 1-centavo coin of nickel. The silver currency bears the coat of arms of Cuba on one side and a five-pointed star surrounded by rays on the other.

RESULTS OF TRADE-EXTENSION WORK IN PANAMA.

[Consul General Alban G. Snyder, Panama City, Nov. 8.]

During the quarter ended September 30, 1915, the Panama consulate was directly responsible for the following goods being introduced into Panama:

Corn oil for cooking, a substitute for cottonseed oil, manufactured by a New York company and now handled here by a Panama firm. The local manager of this firm says that while it is too early to make any definite statement as to future results, the progress so far is all that could be expected, taking into consideration the newness of the article and the competition.

A mouth wash, manufactured by a Minneapolis company. The local manager says that the demand is all one could expect considering the short time he has had it in stock.

This office also assisted, directly or indirectly, in securing agencies here for companies in St. Louis, Mo., and Newark, N. J., of which we know definitely, while there is reason to believe that other firms were helped in this direction. Several firms to which names were furnished, and in whose interests persons here were consulted, could have secured agents easily had they been reasonable in the terms demanded.

Consuls Should be Informed as to Results Obtained.

In answering commercial inquiries as to the market here, and the names of probable purchasers of various goods, writers are requested to advise this office of the results of their correspondence. This information is desired as a matter of record, in case they are successful, and to enable us, in case they are not successful, to look into the matter and assist them further, if possible.

Only a very few replies have been received, and these, in every case, were from manufacturers who had not succeeded in interesting parties here in their goods. For this reason it is not possible to give a full statement of results. However, several articles are now carried by local merchants which have been the subject of correspondence between the respective manufacturers and this office during the past quarter. Twenty-four catalogues were received and 68 catalogues and circulars distributed.

SHOE POLISHES IN THE NORTH OF ENGLAND.

[Consul Ross E. Holaday, Manchester, Nov. 4.]

In view of the increasing activity of the American manufacturers of shoe polishes in reaching out for foreign markets, and their desire to learn something of the trade situation in this section, it is thought that the following brief summary may be of interest to those concerned.

It is important to remember that the city of Manchester, with its numerous prosperous suburban villages and manufacturing towns, has an estimated population, within a radius of 25 miles, of over 3,500,000. The Manchester district, therefore, offers a favorable field for the sale of shoe polishes; in fact, it is believed to be the most attractive selling center for these goods outside of the London area.

In looking over the stocks of several local stores, it was noticed that the English makers of shoe polishes have firmly established their goods on the market. The leading concerns are reported to have spent vast sums in advertising, and their specialties are known to users throughout Great Britain.

A London Distributing Agent Advised.

In the Manchester district there are six manufacturing firms turning out shoe polishes, and supplies are also sent by London makers in large quantities. It is considered very doubtful indeed whether American producers could induce any of the dealers or jobbers here to import polishes direct from the United States. The consulate has been reliably informed by a large wholesale house handling shoe polishes that it would be advisable for the American manufacturer to cater for the trade of the North of England through a distributing agent, located for preference in London. Some advertising help may be desirable, and the exporter must be prepared to assist his distributing agent in every possible way.

Stocks should always be kept on hand, thus insuring prompt delivery. A local store which had worked up quite a demand for a certain American polish has been unable to secure a supply of this particular article since June last.

White shoes are worn very little in Manchester, and there is only a limited demand for any special cleaner for them. Tan shoes have a ready sale throughout the consular district; and although at the present time a large majority of the men folk are engaged with the British Army, it is reported that the sale of brown shoe polish has not materially decreased.

Terms, Prices, and Jobbers' Addresses.

The general terms offered by manufacturers to wholesalers are stated to be 20 per cent off list prices, cash in 30 days, less 2½ per cent, or 3½ per cent discount for cash. Retailers might be allowed anything from 10 per cent to 15 per cent and 2½ per cent for cash in 30 days. Credit methods are, however, difficult to advise upon, as they are so often made by special arrangement.

Retail prices paid by the customer for different classes of British-made shoe polishes are: "Cherry Blossom," in tins, 2, 4, 8, and 12 cents each; "Day & Martin's," in bottles, small size 9 cents, large size 14 cents; "Nugget," No. 3 (black) or No. 4 (brown), 9 cents per tin;

"Ronuk," Nos. 2 and 3 (tube), 11 cents each; "Properts," black or brown, 9 cents, in tins and bottles.

[A list of the leading jobbers handling shoe polishes in Manchester may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69132.]

LIGHTHOUSE EMPLOYEES COMMENDED BY SECRETARY.

Secretary of Commerce Redfield commended several employees of the United States Bureau of Lighthouses during November for acts performed by them under circumstances in which lives or property were in danger. Many of those whose acts gained this recognition rendered valuable services during the trying conditions caused by the hurricane of September 28 and 29 which visited the coast of the Gulf of Mexico. Others gave assistance to disabled motor boats or other craft, and three employees assisted in checking a fire. The persons commended and the special acts recognized were:

Rufus A. Brooks, commanding the lighthouse tender *Jessamine*, for his action in towing the derelict schooner *James H. Hargraves* from mid-channel off Point No Point Light Station, Md., to Cornfield Harbor, Md.

Thomas Robinson, John Erikson, and Joseph Edlund, keeper, first assistant keeper, and second assistant keeper, respectively, at Muskegon Pierhead Range Light Station, Mich., for assisting to check a fire which destroyed two cottages and threatened other cottages near Muskegon Pierhead Range Light Station, Mich.

William L. Kenney, commanding *Relief Light Vessel No. 92*, and other members of the light vessel concerned, for assistance rendered, in the vicinity of Columbia River light-vessel station, to two fishermen in a boat who were unable to proceed after their supply of gasoline became exhausted.

John W. St. G. Gibbon and Christian T. Thomassen, keeper and assistant keeper, respectively, at Head of Passes Light Station, La., for assistance rendered to the crew of the gasoline launch *Shirley*, which was disabled in Southwest Pass, La.

Charles E. Corlett, commanding, and August Wanke, engineer, on North Manitou Shoal *Light Vessel No. 56*, Michigan, for assistance rendered to the motor boat *Why-Not*, which was discovered in the vicinity of *Light Vessel No. 56* in a disabled condition.

The following persons for valuable services rendered by them during the hurricane of September 28 and 29:

David H. McCluskey, commanding Southwest Pass *Light Vessel No. 43*, La.

John Christiansen and Sigurd Greve, seamen on Southwest Pass *Light Vessel No. 43*, La.

Epps Danley, keeper, Pascagoula River Range and Pascagoula River Entrance Lights, Miss.

Frederick A. Schreiber, keeper, Lake Borgne Light Station, Miss.

Fergus H. Johnstons, foreman, Eighth Lighthouse District.

Thomas Zettwoch, keeper, West Rigolets Light Station, La.

Caroline Riddle, keeper, New Canal Light Station, La.

Joseph P. Groux, keeper, Chefuncte River Range Light Station, La.

Hugo A. Succow and Joseph W. Sharp, keeper and assistant keeper, respectively, Pass Manchne Light Station, La.

William W. Bayly, Maurice Durabb, and Junie C. Welch, keeper, first assistant keeper, and second assistant keeper, respectively, Chandeaur Light Station, La. Alfred Rodi and Steven Coludrovich, keeper and assistant keeper, respectively, South Pass East Jetty Light Station, La.

Charles W. Heartt, keeper, Cubits Gap Light Station, La.

John W. St. G. Gibbon and Christian T. Thomassen, keeper and assistant keeper, respectively, Head of Passes Light Station, La.

E. Grandison, laborer in charge of Ironton Light, La.

Anna Meyer, laborer in charge of Shingle Point Light, La.

Robert G. Miller, keeper, Barataria Bay Light Station, La.

John C. Gray and John P. Anderson, keeper and assistant keeper, respectively, Timbalier Light Station, La.

John McNamara, William H. Oliver, Frank J. LeBouf, and Eugene F. Burke, keeper, first assistant keeper, second assistant keeper, and third assistant keeper, respectively, Ship Shoal Light Station, La.

THE WRONG KIND OF BAG FOR SHIPPING PHOSPHATES.

[Vice Consul Charles H. Helsler, Cape Town, South Africa, Oct. 15.]

Merchants in the Cape Town consular district who have lately been purchasing American superphosphates complain that the bags in which the phosphates are shipped are of poor quality and entirely unsuited for the purpose. Experience has shown that the bags break easily, being unable to withstand the rough handling to which they necessarily are subjected. Hundreds of bags of superphosphate have been unloaded at this port in a damaged condition, the contents partially or wholly lost, and the importer forced to purchase new bags to enable him to deliver the phosphates to his customers.

Two superphosphate bags were obtained by this office, one being a bag used by an English firm, the other a bag obtained from a recent shipment of superphosphate from the United States. The English bag is strong and in excellent condition; the American bag is useless and almost torn in ribbons. The string used for sewing the top of the English bag is rather heavy and of sufficient strength; the American bag has a light string, which is very easily broken. Many of the American bags also open up at the seams.

Much Rebagging Necessary.

One South African importer states that a recent shipment of nearly 3,000 bags of superphosphate from the United States came to hand with practically 2,000 bags burst and useless. Furthermore, he states that since he began importing this class of goods from America he has found it necessary to expend several hundred dollars in replacing the destroyed bags. This carelessness or oversight on the part of the American exporter is severely injuring his trade in this country.

The survey report on a shipment of 2,800 bags of superphosphates shipped from New York to Cape Town reads as follows:

At the request of —, I proceeded to No. 2 South Arm, Cape Town Docks, where I found the — discharging its cargo. The phosphates were being carefully landed, but as the bags touched the quay many of them burst, and I have no doubt a considerable quantity of the contents will be wasted.

I examined the bags and am of opinion that the damage thereto is caused by the action of the superphosphate on the material, the bags in most cases being quite rotten. At the same time, I may state, I have never seen superphosphate packed in more unsuitable bags than these. The inner bag is only fair quality and should have been heavier, while the outer bag is altogether too thin for the purpose. My firm has imported thousands of bags of phosphates and for years we represented the German Australian Steamship Co., which line carried the bulk of the phosphates arriving in Cape Town; but in all my experience I have never come across a shipment in which the bags were so flimsy. Of 1,935 bags which were rebagged on the quay 1,089 were rotten and 846 bags were burst at the seams, the outer bag being only sewn with cotton; in fact, the quality of the outer bag is not considered good enough for bagging sugar, a packet of which contains only 70 pounds, whereas a bag of phosphates contains 200 pounds. A large quantity of phosphate could not be landed in the original bags and was rebagged on board.

Will Result in Loss of Trade.

If the American manufacturer of superphosphate wishes to maintain and increase his hold on this market he must give strict attention to the bags containing his products; he must see that they are strong and durable and well able to withstand rough handling. South African buyers will undoubtedly curtail their purchases of such products

from America if the unsatisfactory conditions now prevailing are not soon remedied.

[The sample bags forwarded by Vice Consul Heisler may be inspected by those interested at the Bureau of Foreign and Domestic Commerce or its branch offices. Ask for file No. 69123.]

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.....	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.....	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 10	(a)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse New York, N. Y.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

NEW PUBLICATIONS ON MINING.

The Bureau of Mines, Washington, announces the following new monographs, copies of which it will supply on application:

Technical Paper 64. Determination of nitrogen in coal; a comparison of various modifications of the Kjeldahl method with the Dumas method. 25 pp., 5 figs.

Technical Paper 105. Pulmonary disease among miners in the Joplin district, Missouri, and its relation to rock dust in the mines; a preliminary report. 49 pp., 5 pls.

Technical paper 112. The explosibility of acetylene. 15 pp.

Technical paper 116. Miners' wash and change houses, by Joseph H. White. 1915. 27 pp., 3 pls., 3 figs.

Technical Paper 123. Notes on the uses of low-grade fuel in Europe. 37 pp., 4 pls., 4 figs.

CAUSES OF RISE IN PRICE OF SUGAR IN SPAIN.

[Consul Robertson Honey, Madrid, Oct. 29.]

Revista de Economía y Hacienda, published in Madrid, accounts for the recent rise in price of sugar (beet) by showing the following percentages of increase in the cost of raw material over 1914: Sugar-beet seed, 65; Asturian coal, 18.50; coke, 20.69; lubricants, 21.42; material for filtration, 15; sacking, 25.26; cutters, 84.21; accessories and repairs (estimated), 100.

EXPOSITION OF CHINESE PRODUCTS.

[Commercial Attaché Julian H. Arnold, Peking, Oct. 11.]

There is being held in Peking an exposition of Chinese products embracing all of China except the extreme south and southwestern portions. I have visited the exposition on two occasions, first as an honorary guest on the day of opening and then as a sight-seer for the inspection of exhibits. I made notes of the character of the articles displayed, and thinking these may be of interest to the manufacturers of the United States, I give them in the order in which they were listed.

- Silverware, manufactured in Shanghai.
- Cloisonné, made at Peking.
- Silk and silk goods, from Hangchow.
- Lace, cotton thread, and linen, from Chefoo and Swatow.
- Hats, foreign style, felt and straw, from Shantung and Shanghai.
- Traveling cases made of leather, pigskin, and bamboo and cane, from Changsha and Shantung.
- Foreign shoes, made at Shanghai and Changsha.
- Parasols, made in Shanghai and Hunan.
- Bristles, and brushes made therefrom, from North China.
- Foreign leather purses, made at Changsha.
- Military accouterments, made at Tientsin.
- Knives, hair clippers, scissors, choppers, hatchets, bridle bits, door locks, all of modern type, made at Changsha.
- Tooth powders and pastes and foreign medicines put up in foreign packages after the fashion of those in use in foreign countries, made in Shanghai.
- Foreign drums and musical instruments, made at Shanghai.
- Foreign-style collars and buttons, made at Changsha.
- Candles packed in imitation foreign packages, made in various places in China.
- Matches and foreign-style paper, made at Tientsin and Shanghai.
- A large display of toilet soap and washing soap put up in foreign-style packages and made in the shape of foreign goods.
- Disinfectants, drugs, and chemicals, also in imitation foreign packages.
- A goodly assortment of foreign-style inks, also in foreign-type packages, made at Tientsin.
- Bamboo baskets, hair and tooth brushes, hair nets, embroideries, from Shanghai and Hunan.
- Calicos, cotton goods (including socks and handkerchiefs), prints, and woolens in considerable quantities, from various parts of China.
- Foreign-style socks in imitation foreign boxes.
- Foochow lacquer ware.
- Canton carved ivory.
- Changsha bamboo furniture and bamboo wares.
- Cotton towels, imitation foreign style.
- Eyeglasses.
- Glassware, including globes, bottles, drinking glasses, and glass dishes, made at Paoshan, Shantung, and in Shanghai.
- Earthenware tiles.
- Porcelains, including foreign-style porcelain dishes.
- Cereals of all sorts.
- Chinese sauces put up in foreign-style bottles with foreign-style labels.
- Vermicelli, macaroni, put up in foreign style, made in Shantung.
- Wheat flour put up in 50-pound bags in foreign style.
- Cigarettes and cigars in foreign-style boxes with foreign-style labels.
- Tinned fruits, meats, jams, biscuits, and tinned provisions in general, put up in foreign-style tins and labels.
- Wines and liquors also in foreign-style bottles and labels.
- Wax fruit for decorative purposes.
- Foreign-style furniture.
- Wicker furniture.
- Clocks, foreign style, for wall and table.
- Raw cotton.
- Chinese herbs.

Bottled drinks (soda water, sarsaparilla, lemonade, etc.).

Felt shoes, fans, surgical appliances, library apparatus, including botanical, zoological, and natural-history specimens.

Surveying instruments, athletic goods, stationery, hardware, garden tools, stoves, and Chinese carpets and rugs.

A Developing Canning Industry—Other Wares.

Of the above articles and products those which seem to show the greatest promise of development are the tinned provisions. tinned fruits included, for in addition to the varieties that grow elsewhere are those which are peculiar to China, such as lichees, sweet ginger, lungnans, etc. Bamboo shoots and various kinds of fungi are also included in the tinned products. Almond paste, red-rose paste, mandarin fish, hashed pork, salt herring, bacon, beef, duck, cabbage, pigeon eggs, loquat jelly, chicken, and pigs' feet are among those which are placed in foreign-style tins and bearing foreign-style labels. Undoubtedly there is developing in China a large canning industry.

Another line that shows great progress is that of Chinese-made hardware patterned after the foreign types. In the direction of drugs and chemicals, I find a great variety of Chinese-manufactured tooth pastes, perfumes, cosmetics, and soaps, which will undoubtedly begin to increase the importance of this market from year to year. The same is true of inks and stationery.

Foreign-style silk socks of all colors and designs appear in considerable numbers. They are marked from 20 to 25 cents Mexican (approximately 8 to 10 cents United States at present exchange) per pair, and include open-work socks as well as fancy colored ones. Cotton towels manufactured after foreign styles and marked \$1 to \$1.20 Mexican (38 to 46 cents United States) per dozen, with a smaller hand-towel variety. Some of the woolen goods put in imitation foreign packages, consisting of 80 per cent wool and 20 per cent cotton, dark gray, width 7 feet 4 inches, 40 yards per piece, weight 2 pounds per yard, were priced at \$2.70 Mexican (\$1.04 United States).

There was quite an exhibition of foreign-style wines placed in foreign-style bottles with foreign-style labels, and on one the label added: "Makes one greatly satisfied with oneself."

Registration of American Trade-Marks Urged.

China has only recently embarked upon the manufacture of products in imitation of foreign articles and under imitation foreign labels; but undoubtedly there will be a vast increase in this direction as the years go on, and it behooves American manufacturers desirous of securing Far Eastern markets for their products to be very careful to see that their trade-marks are properly registered. Applications for registration can best be made through the United States consulate general at Shanghai and with the American Embassy at Tokyo. The Chinese dealers and consumers place great stress upon the trade-mark or "chop," hence the necessity for guarding against imitations is greater in this country than elsewhere.

Vice Consul H. G. Bretherton, of Aguascalientes, reports that train service out of that Mexican city has of late been irregular because of a lack of coal.

THE TEXTILE INDUSTRIES OF SPAIN.

[Consul General Carl Bailey Hurst, Barcelona, Oct. 19.]

Statistics recently published by the authoritative Spanish bureau of Contribución Industrial y de Comercio for the year 1913 shows that there are 57,439 factories of different kinds in the Peninsula. Of these, 7,350 are devoted to various branches of textile manufacture, 2,087 being classified under wool industry, 1,520 cotton, 770 hemp and linen, and 252 silk; mixtures of silk, linen, hemp, jute, wool, and cotton are produced in 334 factories, while factories for other textiles number 1,238. There are 26 lace and tulle factories.

The Wool Industry.

The wool industry has a total of 340,410 spindles, 219,430 of which are in the Province of Barcelona and of the remainder 25,850 are in the Province of Alicante. There are 775 Jacquard power looms, 563 being in the Province of Barcelona, 65 in the Province of Valencia, and 36 in the Province of Alicante. There are 4,959 other power looms, 2,418 being in the Province of Barcelona, 597 in the Province of Gerona, and 414 in the Province of Alicante.

Forty-seven of the 137 Jacquard hand looms in operation are in the Province of Barcelona. The 1,598 ordinary shuttle looms are rather widely distributed, but the Provinces of Barcelona, Burgos, and Malaga have individually the largest proportion. There are 21 hand looms for the manufacture of Turkish or knotted carpets, 18 being in the Province of Madrid, 2 in Alicante, and 1 in Salamanca. In addition to the foregoing there are 400 fulling mills, 383 milling machines, and 466 other finishing machines.

Hemp, Linen, and Cotton Mills.

The hemp and linen industry has 34,940 spindles, 205 power looms with Jacquard apparatus for weaving all classes of cloth, 1,641 power looms without Jacquard, 112 Jacquard hand looms for weaving fine linens and damasks, and 413 ordinary looms for fine material. There are 986 ordinary looms for weaving coarse linen, sacking, and burlaps, and 168 looms for making netting. Eight factories produce rope and twine of flax, hemp, jute, and similar fibers; 18 factories, silk waste and esparto cordage; 82 factories, flax, hemp, jute, and other cordage; and 10 spinning wheels for making wool or hair yarn destined for tapestries or other uses. The hemp and linen industries are centered in the Province of Barcelona, except the ordinary looms for weaving coarse canvas, sacking, burlaps, and the like, which are principally in the Provinces of Valencia, Granada, and Cordova.

In the cotton industry the official statistics show that there are 1,252,910 spindles, 2,859 power looms with Jacquards, 39,841 power looms without Jacquards for weaving cotton goods of all widths, 151 Jacquard hand looms, and 1,025 ordinary shuttles for making piece goods. There are also 2,199 power looms and 100 hand looms for making cotton velvets or corduroys, 273 tables for cutting filling pile by hand, and 180 cloth rollers. The cotton industry of Spain is centered in the Province of Barcelona, where most of the cotton factories are situated, followed by Gerona, Lerida, and Tarragona, while some are in Coruna and the Balearic Islands.

Silk and Mixed Textiles.

The silk industry has 13,700 spindles, 337 power looms, and 340 hand looms with Jacquards for weaving figured silks, velvets, and damasks, 1,357 power looms and 304 hand looms without Jacquards for weaving plain silk, 2 power looms and 36 hand looms with Jacquards, and 11 ordinary hand looms for weaving tissues of silk and other material, such as gold and silver for church vestments and like uses. Most of the silk spinning is done in the Provinces of Valencia and Murcia; the majority of the looms are in the Province of Barcelona.

Textiles composed of silk, linen, hemp, jute, wool, and cotton mixed are produced on 3,765 power looms and hand looms, with and without Jacquards, chiefly situated in the Provinces of Barcelona and Valencia. There are 3,150 spindles for spinning yarns of agave, esparto, and other material not specified; 328 power looms and hand looms for weaving agave and esparto, 184 being in the Province of Alicante and 97 in Gerona. Fifty-five hand looms are devoted to the manufacture of fine mats of rush or straw, 45 of which are in the Province of Alicante. Looms to the number of 1,249 produce different kinds of ribbons, galloons, badges, fringes, and borders, 719 being in the Province of Barcelona and 303 in the Province of Valencia. Spindles numbering 99,430 are devoted to the making of braids and cords, 59,580 being in the Province of Gerona and 33,990 in the Province of Barcelona. Hand looms for making passementerie, totaling 728, are found chiefly in the Province of Tarragona. There are 62 looms for embroidery, insertion, and edging, and 384 for embroidering white goods, of which 335 are in the Province of Barcelona. There are 17 factories for blond-lace and other laces, 45 power looms for embroidered tulles, imitation lace and embroidery, and plain tulles.

Supplementary Establishments—Textile Exports.

Spain has 184 printing, dyeing, and bleaching establishments for all classes of piece goods and 16 for dyeing new thread and yarns bought by the proprietor in the crude state and sold on his own account; 123 dye works which dye goods for the general public; 204 dye works for factories only; 134 plants for bleaching thread or woven goods.

The various textile factories detailed are supplemented by establishments for finishing, pressing, and dressing material, operating altogether 934 machines, 738 of which are in the Province of Barcelona. There are 253 cording machines not in connection with spinning factories, for utilizing waste silk, cotton, wool, hemp, and other textile material. It should be noted that the number of spindles given is the number in use on the day when the inspector visits any given factory. The number thus counted varies somewhat from the actual number existing in Spain.

During the year 1914 Spain exported woolen blankets valued at \$1,825,186; woolen knitted goods valued at \$1,089,590; woolen cloth valued at \$1,428,523; and other manufactures of wool valued at \$2,008,104. The value of the cotton piece goods exported was \$4,801,640, cotton knitted goods \$2,718,151, and cotton thread \$566,546.

SOUTH AFRICAN TRADE FOR SEVEN MONTHS OF YEAR.

[Consul Edwin N. Gunsaulus, Johannesburg, Union of South Africa, Sept. 23.]

The latest trade returns for the Union of South Africa, as shown by the import and other statistics compiled by the Department of Customs, indicate a gradual return to normal conditions in this country, despite the war. Owing to the uninterrupted progress of the big gold-mining industry on the Rand and in other parts of the Transvaal, Johannesburg and its surrounding territory did not experience that diminution in trade volume suffered in some other sections of South Africa, and whatever depression has existed, owing to restricted imports and exports, now gives signs of an early and almost complete recovery, so far as Johannesburg and the Rand are concerned.

In a recent issue of the Rand (Johannesburg) Daily Mail an interesting review of the conditions, which are of special interest to American manufacturers, was given. The writer says:

Practically all the big firms which control Johannesburg's immense distributing business placed heavy orders at the commencement of the war with British, Italian, and American factories. At first, however, shipping was extremely irregular, and production was thrown into a state of confusion. A year of war has seen the British and French industries reorganized and those of America wonderfully developed. Supplies are now coming forward in much better style from Europe, while American shipping has steadily increased.

Ample Stocks of Foodstuffs, Clothing, etc.

To-day there are ample stocks of foodstuffs, clothing, boots, hardware, and general merchandise in town; but as a general rule prices have gone up. The boot trade has suffered, chiefly owing to the fact that the best leathers came from Germany. Fully nine-tenths of the patent leather came from Germany, and this trade is now being supplied largely by America, although the Americans have not reduced the process to such a fine art as the Germans. The price of British boots has increased by about 22½ per cent, and the price of American boots by about 17½ per cent. The South African factories are helping considerably in the supply of the cheaper lines. In comparatively unimportant lines it has been found impossible to replace the German manufactures. Suede and hile gloves and the special Brussels and Luxemburg manufactures are also unprocureable. But good British, French, Italian, and American substitutes are available, and the actual volume of trade is now almost normal. There will be an abundance of expensive toys. Dolls, for instance, are at a premium, and the French dolls which will be on the market will be more expensive than those formerly imported from Germany. It is expected that the Christmas display will be every bit as good as in former years, but prices will be higher.

There has been little inconvenience to the hardware trade, except in the cutlery line and in small lines which catered to the poorer classes. The increase in prices in hardware lines has been scarcely appreciable, although there has been a 10 per cent advance in England. Strangely enough, business has been more brisk during the past two months in Johannesburg than at any period during the past two years.

Trade Figures Compared With Those of Last Year.

So far as the trade of the Union is concerned, the imports for July and August of the present year surpassed those for the corresponding months of 1914, which were practically normal. The imports for July, 1914, amounted in value to \$14,647,191, while those for July, 1915, reached a total of \$15,266,618. The August imports this year amounted to \$11,847,022, as compared with \$11,509,763 for August of last year. The decrease in the value of the imports into the Union for the first six months of this year, compared with last year's total for the corresponding period, amounted to \$23,538,414.

At the present rate of recovery, however, the succeeding six months should present a much better showing.

Among the increases lately noted in imports are those in cotton manufactures, drugs and chemicals, wheat, flour, and meal, leather and leather goods, oils, and woolen manufactures. In all of these products the imports in July, 1915, exceeded those for July, 1914. In the matter of exports there is also an encouraging increase of late, but the total value of the exports as published is, of course, much smaller than last year, by reason of the absence of gold export returns and the temporary restriction of the diamond and ostrich-feather trade. There have been notable increases in the exports of wool, much of which now finds a market in the United States; fresh and frozen meats, oats, hides and skins, Angora hair, tobacco, and several other products, while the output of gold is larger than ever before.

The total imports into the Union of South Africa for the first seven months of 1915 amounted in value to \$90,857,555, compared with \$114,863,094 for the corresponding period of the preceding year.

A POSSIBLE MARKET FOR BRUSHES.

[Special Agent S. S. Brill.]

During my hardware-market investigations in South America my attention was called to the fact that imported brushes, chiefly of Continental origin, have a large sale there. A round paint or varnish brush of German manufacture, 2 inches in diameter with $3\frac{1}{2}$ -inch bristles, is priced at the equivalent of \$3.06, United States currency, per dozen, f. o. b. Hamburg. A German varnish brush half an inch in diameter and with $2\frac{1}{2}$ -inch bristles costs \$1.75 per dozen at the same port. A horse brush of French make, which has a large sale in Chile and Peru, costs \$1.76 per dozen, f. o. b. Havre.

These prices at Continental ports, however, are no indication of the local quotations, for freight, duties, and other charges often exceed the original cost of the brushes. Taking the horse brush for illustration, the Hamburg price is less than 15 cents each, but when laid down in Lima, Peru, transportation and other expenses have increased the cost to 36 cents each. As it is understood that the freight rates on brushes from the United States are much lower than from Europe at present, it may be worth while for American manufacturers to look into the possibility of extending their trade into the southern republics.

[Samples of the three brushes mentioned are on file in the New York office of the Bureau of Foreign and Domestic Commerce, where they may be inspected upon request. Refer to Samples Nos. 206, 207, and 220 of file No. 694.]

Prosperity in Holland.

According to Consul Frank W. Mahin, well-informed business men in Amsterdam estimate that the national wealth of the Netherlands has increased a billion guildens (\$400,000,000) since the war began—a gain of about \$60 per capita of the population. This estimate is based on the prosperity brought to certain industries and on the increased profits from dealings in certain goods.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

General representation, No. 19411.—A commercial attaché of the Department of Commerce reports that a firm in Brazil desires to represent manufacturers or exporters wishing to extend their trade in that country. Correspondence may be in English or Portuguese.

Mining locomotives, electric-current meters, etc., No. 19412.—A letter to the Bureau states that a business man in the Netherlands desires to be placed in touch with manufacturers of mining locomotives, electric-current meters, furnaces for smelting, hardening, etc., also furnaces fired by liquid fuel, boiler and engine mountings, gauges for all purposes, motor and automobile accessories, and all other articles needed in the mining industry, machine-building mills, etc.

Machinery, No. 19413.—A letter to the Bureau states that a firm in Spain desires to purchase machinery for making metal buttons.

Toys, rubber goods, etc., No. 19414.—An American consular officer in Brazil reports that a man in his district desires to represent manufacturers of toys, rubber goods, and pharmaceutical products and chemicals.

Motor plows, No. 19415.—A report from an American consular officer in England states that a firm desires to obtain catalogues, prices, and full particulars of the various makes of motor-driven plows. The type of plow required is a light, self-contained machine, having a double plowshare and a mounted motor engine. The inquirer also desires particulars regarding light and cheap tractors suitable for drawing plows and other agricultural machinery.

Indelible pencils, No. 19416.—A company in the United Kingdom has requested an American consular officer to furnish names and addresses of firms manufacturing indelible pencils.

Hardwood, No. 19417.—A report from an American consular officer states that a man in Brazil desires to find a market in the United States for hardwood. It is stated that manufacturers of pianos, furniture, etc., might be interested.

Dry goods, leather bags, No. 19418.—A letter to the Bureau from a man in New Zealand states that he desires names and addresses of manufacturers of dry goods, novelties, leather bags, and pocketbooks for men and women.

Agricultural implements, druggists' supplies, etc., No. 19419.—An American consular officer reports that a man in South Africa desires to establish commercial relations with manufacturers of agricultural implements, druggists' supplies, cheap and medium grade furniture, paints, etc. Full particulars and details are desired.

Mouth organs, No. 19420.—A report from an American consular officer in the United Kingdom states that a firm in his district desires to obtain quotations from manufacturers of harmonicas or mouth organs. Catalogues and price lists with discount sheets are requested. Bank references given.

Dental and surgical supplies, No. 19421.—A company in Ireland informs an American consular officer that it desires to be placed in communication with manufacturers of dental and surgical instruments, such as ear, nose, and throat instruments, dental supplies, enameled iron hospital ware, sterilizers, kidney dishes, trays, surgical scissors, hypodermic syringes, etc. Prices and terms are requested immediately.

Picture frames and moldings, No. 19422.—An American consular officer in South Africa reports that a firm wishes to communicate with manufacturing exporters of picture frames and moldings. Full details should accompany the first communication, including prices, discounts, terms, and, if possible, cuts illustrating different frames.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

COMMERCE WORKERS EXPECTED TO BE COURTEOUS.

The Secretary of Commerce deems it a privilege to place before the officers and employees of the Department of Commerce all over the world, through **COMMERCE REPORTS**, the following admirable statement, which he commends to their thoughtful consideration. It is one that has been posted prominently in its stations by a well-known railway company, whose commendable example will, it is hoped, find many imitators.

COURTESY.

This railroad believes in courtesy.

It expects its officers and employees to be courteous in all their dealings with passengers, patrons, and one another. It asks that they, in turn, be treated courteously.

The railroad officer and employee, above all others, should be courteous, because the railroad is a semipublic institution. Those who patronize the railroad expect and should receive courteous and helpful treatment.

Courtesy is catching.

Be courteous always. Courtesy makes the rough places much easier, and helps to smooth away life's little difficulties. Courtesy is a business asset, a gain, and never a loss. Courtesy is one mark of a good railroad man.

"Life is not so short but there is always time for courtesy."—Emerson.

In all dealings with the public every representative of the Department of Commerce is requested to apply the above to himself.

SHIPMENT OF TOBACCO TO NEUTRAL COUNTRIES.

[Telegram from American Embassy, London, Nov. 25, 1915.]

The Foreign Office states that the British Government agrees for the present not to interfere with cargoes of tobacco shipped to neutral consignees in neutral countries, and under these circumstances tobacco of all kinds destined for Holland need no longer be consigned to the Netherlands Oversea Trust.

WOMEN'S MUSLIN UNDERWEAR REPORT.

The following letter from Secretary of Commerce Redfield to the President of the United States has been made public:

NOVEMBER 29, 1915.

MY DEAR MR. PRESIDENT:

I beg respectfully to submit herewith a report on the cost of production of women's muslin underwear, being the first of a series of reports preparing by the Bureau of Foreign and Domestic Commerce concerning the cost of production of different kinds of clothing. It has special interest because of the agitation for a tariff commission based upon the alleged need of some additional means of information on industries and other matters that may be affected by customs duties. All necessary powers for obtaining information on industrial subjects of the kind are now by law vested in the Bureau of Foreign and Domestic Commerce, and work of this character is continuously carried on by that service. In connection with an earlier study into the pottery industry, important factories in Great Britain and in Continental Europe were thrown open to the agents of the Bureau and available information was obtained and published.

The extent to which information respecting the cost of production of manufactures is determined and published depends on the appropriations made available for that purpose. The bureau has a competent, trained staff and can enlarge its operations as far and as fast as funds permit.

Your attention is respectfully directed to the fact that the industry upon which report is now made suffers from the lack of an adequate cost-finding system to determine the actual cost of certain grades of production. Many manufacturers in this line admit that the lack of an accurate and uniform method of cost finding is a drawback which seriously interferes with the prosperity of the industry.

Furthermore, it will appear, as is usually the case, that there is no such thing as a fixed cost of production, but said cost is a variable thing, differing in different factories, so that calculations based upon it in one establishment would be sadly at fault as regards another. Suggestions are made under the headings of "Simplified Cost Accounting," which it is hoped may be useful to the industry in this respect.

May I further note the important statement in the report that "in this branch of the clothing industry as well as in most other branches manufacturers make bitter complaints about unjustifiable cancellations of orders and return of goods." The correction of these unfortunate trade practices would go far to placing the industry on a more stable basis. Nevertheless, as the chapter on capital, profit, and turnover shows, the average manufacturing profit on the capital employed in business was 21 per cent, and 34 out of the 65 establishments studied had a manufacturing profit of more than 20 per cent on their capital.

The thanks of the department are due to the association known as the Cotton Garment Manufacturers of New York for their kind cooperation in obtaining the facts shown in the report.

Yours, very truly,

(Signed)

WILLIAM C. REDFIELD, *Secretary.*

The PRESIDENT,
The White House.

NOVEMBER EXPORTS FROM LONDON TO UNITED STATES.

[Cablegram from American consulate general at London, Nov. 30.]

The total declared exports from London to the United States during November were valued at \$14,574,267, against \$11,645,565 for October. The value of the principal exports during November was: Rubber, \$4,161,539, compared with \$3,000,720 for October; precious stones, \$1,511,390, against \$1,523,038; furs, \$856,759, against \$876,756; art, \$827,403, against \$642,348; wool, \$815,374, against \$884,648; tin, \$719,187, against \$435,398; and hides, \$674,289, against \$725,909.

BRITISH EMBARGO CHANGES.

[Telegram from American Consulate General, London, Nov. 26, 1915.]

The exportation of cotton wadding, cotton wool, and iron ore of all descriptions to all destinations is now prohibited.

The following item, removed from the list of articles under prohibition except to British possessions: Articles used in boot and shoe making, whether by hand or machine, viz, brass rivets, cutlan studs, heel-attaching pins, lasting tacks or rivets (including iron shoe rivets, steel bills, heel tips, heel-tip nails, hobnails of all descriptions, protector studs, and screwing wire). The following items are added to this class: Railway wagons and firearms, unrifled, for sporting purposes (formerly prohibited to certain European countries), and soft soap. The heading in this list, "Surgical bandages and dressings, including butter cloth," is amended by the addition of the following words: "Not including cotton wadding and cotton wool, already prohibited to all destinations."

The list of articles, exportation of which is prohibited to all countries in Europe and on the Mediterranean and Black Seas except allied countries, Spain, and Portugal, has been changed as follows: The item "egg yolk and liquid and albumen" is added; ball clay is added to the item "China clay;" all receptacles made of terneplate are added to the item "terneplates;" and all receptacles made from tinplate are added to the item "tinplate"; cotton wadding and cotton wool are excepted from the embargo to which cotton manufactures and products are subject.

SPANISH ORDERS FOR AMERICAN AUTOMOBILE TIRES.

[Consul Wilbur T. Gracey, Seville, Oct. 29.]

As a result of a note published by the Seville consulate, in Spanish in the *Revista Comercial*, official journal of the Chamber of Commerce of this city, relative to the sale of American-made automobile tires, a representative of a local firm called and was given the address of the American manufacturer who had written to the consulate.

The manager of the Spanish firm states that it has already received one order from the American manufacturer, which has proved satisfactory in price and quality, and has now sent a second order for ninety tires, and made arrangements with the American manufacturer for a continuous supply of outer casings of European sizes, with regular monthly shipments.

The firm states that it expects to do a large and lucrative business in this line, and is well pleased with the results of the efforts of this office.

EXPERIMENTS WITH HOLLOW TILING.

The hollow-tile floor slabs have been erected by the United States Bureau of Standards, to be tested to destruction at the end of 30 days. This is a commercial test for one of the large manufacturers of hollow tile. For the same manufacturer, four hollow-tile walls were tested transversely. They were 5 feet long, 10 feet high, and 8 inches thick.

OYSTER RESEARCH IN BRITISH COLUMBIA.

[Vice Consul R. M. Newcomb, Victoria, B. C., Nov. 11.]

To promote the oyster industry in British Columbia, the Provincial Government, in June, 1915, instituted research work under the direction of Joseph Stafford, of Montreal. To facilitate this work, the cruiser *Faloma* was used, and the coast waters on the mainland of British Columbia, from Vancouver City to Prince Rupert, and all the coast line of Vancouver Island, were explored.

The research party reports that only one species of native oyster has been found in the British Columbia waters—*Ostrea lurida*, of which kind there are several varieties. Oysters have been reported in some localities under the mistaken impression that the shellfish frequently called rock oyster (*anomia macrochisma*), and rock scallop (*hinnites giganteus*), were oysters. Native oysters or their larvae were found in small quantities at Heriot Bay, Malaspina Inlet, Cortes Island, Campbell Island, Gale Creek, Comox, Deep Bay, Nanoose Bay, Departure Bay, Chemainus, and Salt Spring Island. Native oysters were found in much larger quantities in beds which might prove profitable, at Blunden Harbor, Boundary Bay, and Oyster Harbor.

Eastern and Japanese Oysters Planted.

Oyster Harbor contains planted Eastern oysters and a few from Japan. Several small companies are operating there. Eastern oysters have been planted by the Dominion Government in small quantities in many places, and more recently oyster companies have planted car-load lots at a time at Boundary Bay, Oyster Harbor, Horseshoe Bay, and Esquimalt.

To ascertain whether an oyster bed may prove remunerative, the possibility of the extension of the area, the accessibility of the beds, the proximity to a continuous market, and the means of transport must be carefully considered.

FIBER DOORMATS FOR COSTA RICA.

[Consul Samuel T. Lee, San José, Oct. 25.]

American doormats of coconut fiber could probably be sold in San José, and manufacturers or exporters interested in this trade should quote best prices and terms at once to local dealers. [Their names may be had from the Bureau of Foreign and Domestic Commerce or its branch offices by referring to file No. 68623.] This consulate will be pleased to distribute small samples of mats to the leading importers, whose stocks are now exhausted. Samples are useless without prices and terms.

WATER SUPPLY AND SEWAGE SYSTEMS FOR GRECIAN CITIES.

[Consul General Alexander W. Weddell, Athens.]

In connection with the plans for the building of a water supply and sewage system for the cities of Athens and Piraeus, Greece, the opening of bids for which has been postponed from time to time during the past year, it is officially stated that the bids will be examined and an award made on January 2, 1916. [Reports on this subject appeared in Daily Consular and Trade Reports for Dec. 26, 1914, and COMMERCE REPORTS for Apr. 24 and Nov. 10, 1915.]

RED SALMON PROPAGATION IN ALASKA.

Contrary to expectations at the beginning of the spawning season, the Yes Bay (Alaska) hatchery was filled to capacity with eggs of the red salmon, and arrangements were made by the United States Bureau of Fisheries to transfer to the Afognak hatchery from 10,000,000 to 15,000,000 eggs of that species, thus relieving the congested condition at Yes Bay and at the same time partially overcoming a shortage in the take at Afognak.

When spawning operations were undertaken at Yes Bay on September 2 the number of spawning salmon accessible was so small that it was feared the season's take of eggs would be the lightest since the establishment of the station in 1906. The red-salmon work at this station has been gradually declining since the fall of 1912, and during the fiscal year 1915 the total egg collections amounted to only 41,000,000. The unfavorable outlook at the beginning of the present season was therefore regarded with some misgiving, but the conditions changed about the middle of September with the sudden entrance into Yes Bay of ripe fish in plentiful numbers, and on September 28, when collections were discontinued after 27 days of continuous fishing, there were 72,000,000 eggs on hand and an abundance of unstripped fish still in the bag. For want of hatching space these fish were allowed to spawn naturally.

HONOLULU DEVELOPS USE OF MOLASSES AS FUEL.

Additional facts regarding the use of molasses produced in Hawaii, as fuel, are furnished in a letter to the Bureau of Foreign and Domestic Commerce from a company in Honolulu. This letter says in part:

Not only has improvement been made in extraction of sugar from the cane, but equal savings have been effected in reducing the losses in the factory from other sources, such as waste molasses and press cake. Until recently 70 per cent to 80 per cent of the exhausted molasses from the Hawaiian factories was thrown away as useless. Furnaces are now being installed which burn this molasses, the heat going to furnish steam for the factory, and the ash from the molasses, which contains 33.32 per cent potash and 4.60 per cent phosphoric acid, is used as fertilizer. The furnace for burning the molasses and recovering potash is also the invention of a local engineer.

[An article on fuel molasses from Hawaii was published in *Commerce Reports* for July 15, 1915, stating that the product was to be shipped to the Pacific coast, where it would compete with California fuel oil].

SOUTHWEST PASS LIGHT VESSEL LAUNCHED.

The successful launching of *Light Vessel No. 102*, now under construction for the Lighthouse Service by the Pusey & Jones Co., of Wilmington, Del., took place on November 27, 1915. When completed this vessel will be stationed at Southwest Pass, entrance to Mississippi River, La., and will be an all-steel vessel, about 10½ feet in length over all, with a molded beam of 25 feet, and a displacement of about 360 tons at a draft of about 11 feet. The vessel will be fitted with a tubular mast, with lantern for the characteristic light, and provided with internal combustion engines, using kerosene as fuel for the propelling machinery and for driving air compressors for the fog-signal apparatus, pumps, and other auxiliaries.

SIAM COMPANY TO BUILD NEW STEAMERS.

[Vice Consul Carl C. Hansen, Bangkok, Siam, Sept. 27.]

The half-yearly meeting of the Siam Steam Navigation Co. (Ltd.), was held in Bangkok on September 16, 1915. The chairman announced that a contract had been made with a Hongkong company for the building of two new steamers for the coast service. The vessels would be built to British Lloyd's highest class, carry a dead-weight of 1,000 tons, and run $10\frac{1}{2}$ knots. There would be excellent accommodations for 20 first-class and 8 second-class passengers, wide decks, and a very spacious saloon. The boats would be fitted with electric lights and should make a great improvement in the company's fleet. They are expected to be ready in 12 months.

The company now has a fleet of 5 steamers for the trade on the west coast of the Gulf of Siam. These carry passengers and cargo to and from the more important ports of the Malay Peninsula and Singapore. The east coast of the gulf is provided for by 2 steamers, which make weekly trips to the Siamese ports of Chantaboon and Krat. All the steamers are fitted throughout with electric lights and have good accommodations for first-class passengers. The cargoes from Bangkok consist mainly of rice and teakwood, the total shipments amounting to 1,226,269 tons of the former, and 46,921 tons of the latter for the fiscal year ended March 31, 1915.

GASOLINE IN THE PROVINCE OF ONTARIO.

[Consul Felix S. S. Johnson, Kingston, Canada, Nov. 15.]

The price of gasoline per gallon since August has increased 47 per cent. This is attributed to numerous causes. Canada imports all her gasoline from the United States. So keen is the competition at Kingston that gasoline is retailed as low as anywhere in the Province of Ontario. In various parts of the Province there is an appreciable disparity in prices, up to 40 per cent or more. In the Canadian Northwest, the prices are exceedingly high; in Winnipeg, for instance, gasoline retails at 30 cents per gallon. Owing to the Dominion Government regulations, the quality of gasoline salable in Canada is better than in other countries.

The number of cars purchased during the past year is the largest ever recorded at Kingston, and motor boats have also made a new record. As a result, there is an increasing demand for American gasoline at this port, and the outlook for 1916 is encouraging.

The importations of gasoline into Canada from the United States have been: In 1910—2,185,341 gallons, valued at \$211,608; 1911—2,600,099 gallons, \$277,037; 1912—2,310,415 gallons, \$337,547; 1913—4,091,173 gallons, \$432,217; 1914—5,138,909 gallons, \$618,506.

DREDGER FOR CHOSEN ORDERED IN THIS COUNTRY.

The representative of the General Electric Co., for Japan, who has been in this country, has informed Commercial Agent E. G. Babbitt, at the San Francisco branch office of the Bureau of Foreign and Domestic Commerce, that he placed in the United States an order approximating \$150,000 for a dredger to be used in gold mining in Chosen.

A NEW TEXTILE PROCESS DESCRIBED IN LEEDS.

[Consul Homer M. Byington, Leeds, England, Oct. 22.]

The following paper describing a new textile process was read at the Leeds University on October 20 by Mr. J. F. Smith, of Leeds:

Before the present war the lengths of the fibers of crossbred wool from the mutton sheep of New Zealand were too long and too strong for their general use in woolen mills. Only the machines in the worsted trades could treat them advantageously. Thanks to a new invention—Smith and Hall's patent—the longest and strongest wools are now rendered harmless and brought within the scope of all the woolen mills in the world.

The said length and strength, not only strained the delicate card wire of the carding machines, but sometimes tore the cards from the cylinders; in proof whereof, two such accidents have occurred in the wool textile department of the University. Yet, the same wool which caused that mischief behaved in the most satisfactory manner after treatment by the new invention. One eminent firm sent a parcel of wool with fibers 10 to 14 inches in length—an impossible length at a woolen mill. Yet, when reduced to 2½ inches it carded and spun splendidly. Several lots of wool with fibers varying in length from 6 to 12 inches were also reduced to the length of merino wool, after which excellent results were obtained at the University, where they were spun.

This new invention does not displace any existing machinery or processes of manufacture, it is simply a preparation of the wool. No matter how long the fibers, they can be reduced to any desired length, after which they may be blended with other wool, rag-wool, shoddy, or cotton. Woven fabrics therefrom assume the wool character (soft and full in the handle) in place of the hard and wiry touch which comes from the worsted processes. No waste is made by this new process, which improves the carding, spinning, and weaving, besides increasing the output in all three stages of manufacture.

OPENING IN ARABIA FOR JITNEY BUSES.

[Vice Consul Arthur G. Watson, Aden, Arabia, Oct. 22.]

At the present time it is possible for American automobile manufacturers to introduce the so-called "jitney" buses in Aden. Horse-drawn carriages are rapidly being replaced and motor cars are carrying the bulk of the passenger traffic. The introduction of a bus that would carry several passengers at a regular fare of 12 cents for the journey from Steamer Point to Crater (about 5 miles) would wrest the business from the carriages. A bus operating with a medium cost per gallon of gasoline would be desirable, owing to the high price of gasoline—now about 36 cents a gallon.

If catalogues, prices, and discounts are sent to this consulate, I shall endeavor to put them before the proper parties.

STOCK RAISERS LISTED IN BRAZILIAN PUBLICATION.

[Consul General A. L. M. Gottschalk, Rio de Janeiro, Oct. 29.]

The issue of the *Diario Oficial* (Official Gazette) of October 6, 1915, contains, from pages 10,548 to 10,550, the names of cattle raisers in Brazil who registered with the Department of Agriculture during the month of July, this year. In addition to the names, the list also contains the addresses of these stock raisers and the number of cattle each possesses.

[A copy of this publication will be loaned to interested persons on application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69,261.]

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Summers, Macdonald.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.....	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Posarío, Argentina.....	do.....	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys H.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 10	(a) Lotus Club, 110 West Fifty-seventh Street, New York City.
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

RISE IN PRICE OF PAPER MATERIAL IN SPAIN.

(Consul Robertson Honey, Madrid, Oct. 29.)

The latest edition of the Revista de Economía y Hacienda, published in Madrid, accounts for the recent rise in price of paper (all classes) by comparing 1914 prices per metric ton (2,204.6 pounds) of raw material with those of 1915. (British pound worth normally \$4.8665):

	1914			1915			Increase.
	£	s.	d.	£	s.	d.	Per cent.
Esparto and other vegetable fiber.....	3	18	5	4	14	5	20.40
Rags of cotton and other material.....	10	11	2	12	15	0	20.00
Chemical paste.....	8	4	3	9	1	5	10.00
Sawdust.....	2	6	5	2	14	10	13.13
Other materials.....	8	13	5	9	14	0	11.87

MARACAIBO'S COFFEE EXPORTS FOR OCTOBER.

(Consul G. K. Donald, Maracaibo, Venezuela, Nov. 4.)

Exports of coffee from Maracaibo during October, 1915, were: For New York, 34,055 bags; for Genoa, 1,808 bags; for Amsterdam, 12,379 bags; for Marseille, 1,000 bags; total, 49,242 bags, compared with 34,995 bags for October, 1914.

The average October exports for the last 10 years were 39,317 bags. The total receipts from January 1 to October 31, 1915, were 545,516 bags, weighing 62,581,750 pounds, compared with 474,255 bags, weighing 53,507,400 pounds, in the corresponding months last year.

WOOD-PULP INDUSTRY OF TASMANIA.

For a number of years the Tasmanian Government has been considering the development of a wood-pulp and paper industry to take advantage of its forest and water-power resources and to supply the Australian market. Several resident and English engineers and analysts had reported rather favorably on the prospects and certain State-aided, as well as Government-owned, plants were lately in course of promotion. Before appropriating large sums of money and alienating public lands for these projects, the more conservative members of the Government suggested that an independent investigation be made, and Mr. Henry E. Surface, of the United States Forest Service, was invited to Tasmania for this purpose. The results of his investigations are thus discussed by the *Launceston Weekly Courier*:

A great deal of optimism has been dissipated by the report of Mr. Henry E. Surface, consulting engineer in forest products, Madison, Wis. (U. S. A.), on the possibilities of converting Tasmanian forest timbers into pulp for paper making. The point of the expert's decision is that it is not a practicable scheme; in fact, our woods are not as suitable as some of our nonexpert enthusiasts have been proclaiming. Mr. Surface examined myrtle (or beech), swamp gum, blue gum, and stringy bark, but found that their manufacture into pulp for sale would not be a feasible enterprise from the profit standpoint under the present or even under normal conditions. While the manufacture of the woods into pulp and then into paper could yield a profit under very favorable conditions, yet, he stated, he could not consider it a sound industrial venture and surely not an attractive one.

The main difficulty lies in the woods themselves. Their hardness, natural color, and comparatively short fiber confine their possible use to only one class of pulp, "soda pulp," with a limited usefulness for paper making in general. The comparatively small yield of paper-making fibers that might be obtained from these woods means a comparatively high cost of manufacture. The report unfortunately is distinctly against the venture. At this there will be a general disappointment. All the high hopes that have been built up concerning a vast wood-pulp industry in this State will now be laid aside, as this expert report may be said to have obliterated the prospect of any enterprise in this direction. The small samples of good paper that have been made from our woods were like the gold in some of our mines; the gold is there, but it does not pay to take it out.

In certain world markets Tasmanian timbers are much prized for structural and ornamental work.

BELFAST SEEKS NEW SOURCE OF TOILET ARTICLES.

[Consul Hunter Sharp, Belfast, Ireland, Oct. 29.]

There is an excellent opportunity for American manufacturers of toilet articles to extend their trade in this city. When the European supply of various goods in this line was cut off, Japanese manufacturers obtained a portion of the trade here.

Local merchants state that there is a good opening here at the present time for hair-dressing brushes, shoe brushes, whisk brooms, shaving brushes, nailbrushes, toothbrushes, hat brushes, dressing combs, hair curlers, razors, and razor strops.

[Lists of wholesale druggists in Belfast may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 68,961.]

Olive growing is gaining in South Africa.

NOTES FROM CHILE.

[Commercial Attaché V. L. Havens, Santiago, Oct. 18.]

Completion of Port at San Antonio.

In a report appearing in the *Diario Oficial* for October 11, it is stated that the port of San Antonio, 110 kilometers (68 miles) from Santiago, is so far completed that coal can now be unloaded at the rate of 500 tons a day. Coal for the State Railways will be unloaded there starting during October.

Railway Construction.

The Aguas Blancas Railway Co. has secured permission to build a branch line about 30 miles long with a 30-inch gauge, from kilometer 35.5 of the existing line to the nitrate fields called Escapada de los Linces. The manager is H. W. Robinson, of Antofagasta.

William Braden has acquired the right to build a railway, either steam or electric, between the mine Potrerillos (Department of Chañaral) and the State Railway near Pueblo Hundido. The gauge is to be 1 meter (3.28 feet) and the line approximately 110 kilometers in length. The address of William Braden is Calle Teatinos entre Catedral y Compañía, Santiago, Chile.

New Companies Organized.

The Arica Agencies Co. has been organized, with headquarters in Arica, to act as agents and representatives. It is capitalized at \$48,665. Jorje E. Zalles, Arica, is a director.

Several new insurance companies, to insure against fire, marine, and other risks, have lately been organized in Chile, among them La Oceana and La Pacifico, each capitalized at \$166,000 and each with headquarters in Valparaiso. Alfredo Gomez, of Iquique, is a director in both companies. At Antofagasta a company has been organized with a like capital to handle the same lines of insurance; Ircano Devoti, of Antofagasta, is a member of its board of directors.

A nitrate company has been organized, called Compañía Salitrera Perseverancia de Antofagasta, with a capital of about \$466,000 and headquarters in Santiago. The company may be addressed at Santiago. Carlos F. de Castro is a director.

Chilean Production of Nitrate.

Official figures of Chile's production of nitrate during the first three months (July-September) of the current nitrate year place the output at 9,857,282 Spanish quintals (of 101.4 pounds), as compared with 13,408,094 quintals and 15,154,614 quintals in the corresponding periods of 1914-15 and 1913-14, respectively. Exports for the quarter totaled 13,720,479 quintals (against 7,876,625 and 11,980,815 quintals), 6,244,625 quintals of which went to Europe and Egypt (against 4,379,768 and 8,615,977 quintals in the corresponding three months of the two preceding nitrate years, respectively), 6,185,562 to the east coast of the United States (against 2,868,328 and 2,557,808 quintals), and 485,947 quintals to the west coast of the United States (against 238,700 and 242,880 quintals).

TRADE-EXTENSION WORK IN SICILY.

[Consul Joseph Emerson Haven, Catania, Italy.]

Although I had placed advertisements in the leading newspapers of the Catania district calling attention to the fact that there were to be found on file in this consulate catalogues illustrating American lines of manufactures, the few inquiries and visits resulting convinced me that this form of publicity would be of small aid in advancing American interests. I therefore determined to work on individual rather than on general lines, in visiting firms with catalogues and going into details in a manner not possible in ordinary correspondence.

In connection with this movement, I instituted a practice of making one trip a month to Messina, at present the second city of the district, but destined to again be first—if not the largest city in all Sicily—when the work of reconstruction is completed. (It will be remembered that Messina, together with the city of Reggio on the Italian mainland, was completely destroyed by an earthquake in 1908.) There is a steady demand in that section for structural material such as iron and steel, cement, and lumber. With the outbreak of hostilities, European sources of supply were either much restricted or closed completely and an exceptional opportunity has been presented to American firms to enter the local market.

A Trade Opening That Was Lost.

This office reported on a local firm which was desirous of ending all connections with the Continental houses previously represented and taking up the Sicilian representation for electric supplies of an American company. Correspondence was begun with a concern in the United States and a reply was received from the New York office that no Sicilian general agency would be given out by the company. Within a week a second letter was received, but this time from the Chicago office of the same concern, stating that the Sicilian general agency had been given to a firm in another city in Sicily, through which all orders should be placed. Needless to say the cash order that had been prepared by the Catania firm will not be placed. While an isolated case is a small matter in general business, yet the unpleasant impression created must necessarily work against American trade development.

Contrary to the above and as a direct result of a trade opportunity, American shocks are again being imported into this district, the shipments being highly satisfactory in every particular.

C. I. F. Quotations Wanted.

A feature of export business which American firms often neglect is the quotation of prices c. i. f. European ports. This form of quotation is made by all foreign firms and it should be no very difficult matter for American firms with their excellent facilities to adopt the same system. Local importers ask for c. i. f. quotations in order not only to make comparisons with the prices established by competitors but also to form an estimate as to the possibilities of handling the goods with profit locally. Quotations f. o. b. cars in some inland city of the United States are useless, as small importers can not determine American railroad freights, cartage, dock expenses, insurance, etc., and then arrive at the landed cost of the merchandise, nor will they go to the trouble when they can obtain the c. i. f. quotations they desire from any European manufacturer.

BRAZIL'S FIBERS FOR COMMERCIAL USES.

[Consul General Alfred L. M. Gottschalk, Rio de Janeiro, Brazil, Oct. 22.]

For a long time past, but particularly since the conditions in Mexico have practically closed that country to manufacturers in the United States as a source of supply for certain textile fibers, American importers have been interested in the possibility of obtaining this class of products from the Latin-American countries. It is, of course, to be believed that for certain purposes the manila fiber (*Musa textilis*) of the Philippines and the *Agave sisalana* of Mexico will not readily be replaced from other sources for many of the industries in which they are used, particularly in the making of ship's hawsers and cables, but there is no apparent reason why the great tropical and subtropical belt of South America should not furnish sufficient fiber for the twine used in the agricultural machine known to farmers as a "binder," or for many other industrial purposes.

Brazil, among its wealth of tropical products throughout its great territory, counts a large number of useful fiber plants. These are used locally, in the interior, to furnish practically all the rope and twine needed. The State of Espirito Santo alone, at its exposition in 1908, showed 18 varieties of fibers used for twine and cordage, and 12 used for sacking and other textiles.

An equally good, if not better, showing is made by the State of Rio de Janeiro, according to the list prepared during an investigation of the resources of that State. In fact, not only these States but the entire Republic of Brazil seems to produce fibers of commercial usefulness.

Unlimited Quantities in State of Espirito Santo.

The consular agent at Victoria says of fiber production: "There are in the State of Espirito Santo unlimited quantities of various fiber plants, all of which are suitable for the manufacture of rope, twine, cord, bagging, etc. They grow wild everywhere, in forests, on mountains, and in dry sandy and stony places. Till now nobody seems to have taken any interest in a fiber industry, although I believe it would give excellent results.

"As to the idea of a partnership between landowners and American suppliers of machinery, there should be no difficulty whatever; but it would be quite indispensable that the American suppliers not only furnish the machinery, but also send out from the United States a few competent men who thoroughly understand the machinery and are well informed as to the manufacturing processes."

Situation in State of São Paulo.

Consul Maddin Summers at São Paulo reported that in the State of São Paulo there were numerous excellent species of textile fibers, giving material for various uses. At present, the cultivation is not extensive, because it does not give satisfactory returns to planters, who prefer to devote their time to more profitable industry.

Consul Arminius T. Haeberle, at Pernambuco, reports as follows: "No fibers are obtainable in commercial quantities. This consulate has also been informed that landowners (there are no growers of fiber) would not care to grow fibers, as they devote all their attention to raising cotton and sugar, which yield large and sure returns. Furthermore, the labor conditions are considered unfavorable. However, I am continuing to hear the opinions of other landowners, hop-

ing that this consulate may succeed in finding one or more who would be willing to enter into partnership with American shippers of machinery. The landowners seem to be afraid of American markets, saying they may get a fair price to-day and a low price to-morrow. But, as I understand it, a partnership would guarantee a market for them.

"This consulate has studied the possibility of finding suitable fiber. There are one or two rope factories, and one manufacturing bagging. These import the raw material, but there is one factory in the interior of the State that makes rope on a small scale from the 'coroa' plant, producing a very strong fiber. The 'gravata' plant produces a fiber suitable for jute sacks. This plant can be easily cultivated, and is also used to make gravata lace. The 'imbiriba' produces a fiber, not very strong, but very soft, and therefore used to tie parts of scuffolding together.

Concession Granted for Exportation of Coconut Products.

"The coconut fiber has been suggested for heavy ropes, but I am informed this is too expensive. Coconuts, although quite plentiful, are not cultivated. One man is said to have a concession for the exportation of coconuts and coconut products in this and other States."

Consul Robert Frazer, jr., at Bahia, sends the following special report on the subject of fibers in his district:

"The only fibers found, or at least of which any use is made here, are piassava and coroa. There are almost certainly no landowners or growers of the palm in this district who would be likely to enter into a partnership with American suppliers of machinery. The tree is not cultivated or grown in plantations, but its products are gathered in the forests by individuals, and collected from them by middlemen in the small towns in the interior."

In the course of an investigation of the fiber question in Brazil, my attention was called to possibilities in the Northern States of the Republic, notably that of Ceara, which is at present devastated by drought, but in whose very dry climate numerous fiber plants flourish when other vegetation dies.

Brazil's exports of vegetable fibers for the past five years, have been small for a country which manufactures its own rope and cord, matting and hats, etc., in such large quantities, in the provincial districts, and which has the fiber plants growing wild over vast regions of the interior.

[Detailed descriptions of the various fibers to be found in the several States of Brazil are given in a more extended article which will be loaned on application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69065. Samples also have been received from Brazil, and will be loaned by the Bureau or its branch offices under the same file number. A previous article on piassava fiber from the American consul at Bahia was printed in COMMERCE REPORTS for Sept. 11, 1915. Reference was also made in that article to a former report from the same district in Daily Consular and Trade Reports for Apr. 7, 1909.]

[Cablegram from Consul General A. L. M. Gottschalk, Rio de Janeiro.]

American Decorticating Machines for Tests Desired.

Journalistic interest in rope and twine fiber questions has been aroused here. Officials are asking what our consumption is and on what terms we could furnish decorticating machines. Free samples of the best American machinery for official tests are desired here. A personal request has been made by the Minister of Agriculture.

AMERICAN OPPORTUNITY IN GREEK RAILWAY WORK.

[Consul General Alexander W. Weddell, Athens, Greece, Oct. 7.]

The area of old and new Greece today is approximately 44,700 square miles, or slightly larger than the State of Virginia, with a population of about 5,000,000. The broken character of the country, its deeply indented coastline, inducing its inhabitants to engage in seafaring pursuits, and the fact that for many centuries the country has had poor communication with the rest of Europe, have caused the construction of railways to be pursued but slowly.

The earliest construction took place in 1869, and after nearly a half century there are in operation to-day only about 1,367 miles of single-track line, ranging from 0.60 to 1.44 meters in width. Of this mileage about 70 per cent lies in old Greece, and the remainder was acquired as a result of the war with Turkey. The need of additional railway lines is realized by the Government, and there are under consideration to-day plans for the construction of main and branch lines totaling 603 miles. The Junction Line, 56 miles long, is slowly approaching completion.

To Furnish Connecting Line with Annexed Provinces.

The traveler from old Greece must in normal times go to Saloniki if he wishes to continue his voyage by rail; otherwise his only recourse is to take ship at Piræus, Patras, or some other port. The Junction Line is intended to do away with this situation. It will furnish at once a connecting line between old Greece and her lately acquired Provinces, with untold possibilities in the way of economic development of the two sections, as well as a gateway through Servia to the rest of Europe. The outbreak of war has done much to retard the work, while the increase in the cost of material has necessitated large increases in the appropriations for the line.

The new railway passes near the seashore, and at Platý effects a junction with the Monastir Railway, distant from Saloniki about 22 miles. Passengers from Athens to Saloniki will make the trip in 12 hours, as compared with 26 to 40 hours by boat, or by train to Chalcis and thence by steamer. Through cars to Servia and to the rest of Europe will not enter Saloniki, but will be diverted and, over a short connecting line of 2 miles, run onto the main line from Saloniki to Belgrade.

Rails, Ties, and Locomotives Bought in United States.

Stations, warehouses, and water tanks for the new line have been completed; station houses in marshy districts are screened, and it is hoped to drain the smaller marshes. Rails and ties for this line, as well as 20 locomotives for the Saloniki-Athens service, were purchased in the United States. The engines are now being set up at Piræus by American engineers. In order to bear the weight of these great tractors, many improvements in the roadbed of the entire line, beginning at Piræus, must be made, and these improvements have been placed at \$1,500,000. Apart from this expenditure, the entire cost of building and equipping the new 59-mile link is estimated at \$2,500,000, or about \$42,000 per mile.

As soon as the line is ready for operation, two trains with dining and sleeping cars will be run each day. Under normal conditions the trip to Vienna will be made in 40 hours and to Paris in 70

hours. With the gradual improvement of the line a reduction in these hours may be anticipated. But even on the basis set forth the saving to the traveler from Athens to Paris or London will be about 40 hours. In connection with the work necessary to be done to place the line in a position to carry the new heavy engines bought in the United States, a memorandum contributed by an engineer who is familiar with conditions says:

Offers Good Opportunity for Bridge Builders.

There seems to be a first-class opportunity for a responsible firm of bridge builders to take up with the Greek Government the matter of the renewal of many of the bridges now in service on the main line. Inasmuch as the present line was designed and equipped for a two-axle loading of 12 metric tons each, and no changes have been made in the bridges since their original installation, the moment seems propitious to make an attempt to secure the business. The new American locomotives have four driving wheels each, with a maximum load per axle of 15 metric tons; it is understood that until these bridges and the roadbed are strengthened, it will not be possible to make use of these locomotives.

The new line being a part of the through Piraeus-Paris route, it must be made to conform sooner or later to the standards of the international system. Very many of the bridges now in service were designed before the general introduction of steel structures, and they are therefore far below present standards. The present situation renders it impossible for European firms to undertake this work, while the ability of American firms to offer quick delivery and insure rapid installation make their chances of success in competing for this business very favorable.

With regard to the new lines to be built, the far greater portion will be in the new Provinces, the network of railways in old Greece being practically completed. During the Turkish occupation, no railways were constructed in either Crete or Epirus. On the island of Crete, 65 miles of line are contemplated, tapping the richest plains of the country and uniting the principal towns. The line projected in Epirus, running from Santa Quaranta to Kalambaka, will not alone unite these two points, but, passing through Jannina, will form a highway across the Pindus Mountains, between the Adriatic and the Aegean seas. The cost of this line, the length of which will be about 180 miles, will be very great, and for this reason its early construction is not expected.

Statistics of Rubber Trade Association of London.

The monthly statistics of the Rubber Trade Association of London, for the 6 months, April-September, 1915, have been forwarded by Vice Consul Richard Westacott, at London. The tables give figures of imports and exports of all kinds of rubber, by countries, for each of these months. They will be loaned to interested persons on application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69205.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Shears and scissors, No. 19423.—An American consular officer in South Africa reports that a firm in his district desires to receive prices, discounts, terms, and catalogues from American manufacturers and exporters of shears and scissors.

Sugar, No. 19424.—The Bureau is informed by an American consular officer in Greece that a firm in his district desires to receive quotations by cable on A-1 white, granulated, coarse, fine, and cube or domino sugar, in bags of 50 and 100 kilos, in quantities of from 100 to 500 tons. Payments will be made in New York. Quotations should be c. i. f. destination and include 1½ per cent commission for the firm. Correspondence may be in English.

Dried fruits, No. 19425.—An American consular officer in Norway writes that a man in his district desires to receive prices from American exporters of dried fruits, such as apricots, peaches, apples, and prunes. Correspondence may be in English.

Picture-frame moldings, No. 19426.—An American consular officer in the United Kingdom reports that a firm in his district desires to communicate with American manufacturers of picture-frame moldings.

Cascin or lactarene, No. 19427.—The Bureau is informed by an American consular officer in China that there is a possibility of manufacturing cascine or lactarene in his district. The prospective manufacturers wish information regarding prices, specifications of purity demanded, and annual quantity consumed.

Dry goods, shirtings, hosiery, etc., No. 19428.—A South American who has been making his headquarters in New York for some time is anxious to represent American firms in Bolivia and Argentina. He is interested in dry goods, cotton shirtings, linens, hosiery, and similar lines.

Mining machinery, etc., No. 19429.—An American consular officer in the Far East reports that a development company, which holds a mining concession, has decided to purchase American equipment for the operation of a large copper mine. The equipment will consist of a smelter and a small power plant. The engineers who are in charge of the matter are scheduled to arrive in the United States December 27, 1915.

Buttons, No. 19430.—A firm in England writes the Bureau that it desires to receive names and addresses of manufacturers of fresh-water pearl buttons.

Household utensils, etc., No. 19431.—The commercial agent of the Bureau in New York City reports that a man desires to represent American manufacturers of household articles, such as enamel ware, kitchen utensils, etc. Agency connections are desired for Argentina, Chile, and Paraguay. Reference is given.

Coal, No. 19432.—An American consular officer in the East Indies reports a shortage of coal in his district. He submits the names and addresses of a number of purchasers of soft coal.

Iron and steel products, agricultural implements, etc., No. 19433.—The commercial attaché of the Department of Commerce in Chile reports that a business man in that country desires to receive catalogues and full information relative to soft steel bars and sheets; galvanized and black tubes and fittings; cement; metal bars, sheets, tubes, wires, and tin plates; galvanized and black corrugated sheets; fencing wire; mining tool and spring steel; bedstead tubes and ornaments; paints, oils, turpentine, and naphtha; agricultural, mining, and industrial machinery, implements, tools, and sundries; traction plows; zinc sheets; cart pine grease; horseshoe nails; soft steel hoops; machinery belting and rosin; oak staves; and accessories for motor cars and electrical goods. He desires to deal direct with manufacturers and producers. Bank reference is given.

Hides and skins, No. 19434.—An American consular officer in South Africa reports that a firm in his district desires to export all kinds of hides and skins. The principal market desired is for goat and sheep skins.

Rebuilt typewriters, No. 19435.—An American consular officer in England desires to be supplied with a list of several firms which specialize in the rebuilding of typewriters, and the names of firms which deal in such machines.

AMERICAN COMPANY PRODUCES SYNTHETIC CAMPHOR.

The establishment of an American factory for the manufacture of synthetic camphor has been brought to the attention of the Department of Commerce by the officers of the company, who propose to enter a market which has been occupied heretofore by foreign camphor. American consumers have been depending upon importations, which, during the fiscal year ended June, 1915, amounted to 4,899,873 pounds, valued at \$1,421,122. The possibility of developing American manufacture to large proportions is emphasized in communications from the American Camphor Corporation, which is operating a factory in Philadelphia.

The new company calls attention to the fact that it is creating a market for turpentine. "To make enough camphor to supply our home industries" it says, "would take over 10,000 barrels of turpentine, as much as is now in store at Savannah, the largest supply market."

DAMAGE TO PHILIPPINE HEMP CROP.

The Bureau of Insular Affairs, War Department, received the following cablegram from the Governor General of the Philippine Islands, dated December 2:

Referring to damage to abaca, Southern Luzon, from typhoon October 23, fiber division forecasts production of about 160,000 bales for Albay and 80,000 bales for Camarines during 1916, as against about 215,000 and 96,000 bales, respectively, this year; total damage 71,000 bales, 80 per cent of which is of grades fair to coarse brown; shortage will not be felt until February or March.

NEW FREIGHT STEAMER FOR HAVRE SERVICE.

[Consul John Ball Osborne, Havre, France, Nov. 10.]

A new freight steamer called the *Chateau-Latour* is about to be launched at St. Nazaire for a Havre firm. Its principal characteristics are as follows: Length over all, 88 meters (288.7 feet); width, 11 meters (36 feet); displacement, 2,300 tons; horsepower, 1,800.

AMERICAN TRADE RESULTS IN NORWAY.

[Consul Maurice P. Dunlap, Stavanger, Oct. 19.]

Stavanger merchants, during the past quarter, have ordered upward of 30,000 cases of tin plate from American manufacturers, at an estimated value of about \$450,000.

A cigar manufacturer, a large soap and candle factory, and a wool factory have received lists of American exporters in their respective lines from this consulate, and have started negotiations with some of the firms suggested. As a result, the cigar manufacturer has ordered about \$3,000 worth of American tobacco; the soap and candle factory has ordered about \$6,000 worth of caustic soda and tallow and will place orders for quantities of oil fat; and the wool factory was interested in the replies received, and wired regarding an order for worsted yarn, but received no response.

An enterprising agent for a number of American office appliances here made connections with an adding-machine company through a commercial magazine shown him at this consulate. He has now interested a bank in a machine for figuring interest and discounts, and the bank has ordered one of the machines. This same agent established connections with an American dealer in rubber-covered cable, in the same way. A shipment of cable and lamp cord, worth about \$4,000, will soon leave the United States for its Norwegian purchaser.

PHILIPPINE SUGAR-MILL CONTRACT NOT YET AWARDED.

Officials of the Philippine Government, in response to inquiries, have informed the Bureau of Insular Affairs of the War Department that the contract for the sugar central to be erected with Government funds at Isabela, Occidental Negros, will not be awarded until about May, 1916. Cable advices received by the Bureau state that the specifications were issued in November, 1915, that bids will be received up to April 15, 1916, and that the contract will be awarded about one month after the latter date.

It was incorrectly reported from Manila that the contract for this sugar mill had already been awarded, and that the time between the selection of the site and the closing of bids was too short for American machinery makers to submit their bids. It is now announced that copies of the specifications, which follow closely those issued last August, will be forwarded to the Bureau of Insular Affairs for distribution to manufacturers.

FREE ADMISSION OF CORN INTO SPAIN.

[Telegram from American consulate general, Barcelona, Nov. 29, 1915.]

A royal decree published November 26, 1915, suspends the duty on corn (except that for the manufacture of alcohol) imported into Spain after that date, such exemption to continue until the price of corn in Spanish markets (now 23 pesetas per 100 kilos) is reduced to 20 pesetas per 100 kilos and until further notice. The transportation tax, which is levied on most products imported into and exported from Spain, has also been temporarily removed. (Peseta, \$0.193; kilo, 2.2046 pounds.)

AMERICAN BEET SUGAR MAKES NEW RECORD.

Preliminary returns from practically all operating sugar factories in the United States indicate a production of 866,200 short tons of sugar during the current campaign. The area harvested amounted to 624,000 acres, and the beets, 6,462,000 tons. This is the largest acreage and tonnage of beets ever harvested in the United States, and the sugar production exceeds the highest preceding crop, that of 1913, by nearly 133,000 tons.

Imported sugar, however, has been coming in smaller quantities. During the nine months ended September 30, 1915, imports were about 227,000 tons less than during the corresponding nine months of 1914. Approximately one-half of the sugar consumed in the United States is of foreign origin; one-fourth comes from American island possessions, and one-fourth from the beet and cane sugar industries of the United States proper. During the year ended June 30, 1915, about 2,546,000 tons were imported from foreign countries, 1,098,000 came from Hawaii, Porto Rico, and the Philippine Islands, and about 969,000 tons were produced within the United States, making a total of 4,613,000. Exports, which are usually quite small, amounted to 275,000 tons, leaving a net supply of 4,348,000 tons, not counting stocks at the beginning of the season. In 1910-1914 the yearly consumption of sugar in this country averaged nearly 83 pounds per capita.

A preliminary estimate has been made of the beet-sugar campaign of 1915 and comparison made with 1914. The beets were grown and harvested within the calendar years mentioned, but in both years sugar making in some factories continued after December 31. The acreage and production of beets, as in former reports, are credited to the respective States in which the sugar was made. The figures are:

State.	Area harvested.		Beets used for sugar.		Sugar production.	
	1915, preliminary.	1914, final.	1915, preliminary.	1914, final.	1915, preliminary.	1914, final.
	<i>Acres.</i>	<i>Acres.</i>	<i>Short tons.</i>	<i>Short tons.</i>	<i>Short tons.</i>	<i>Short tons.</i>

Total for United States.	624,000	483,400	6,462,000	5,288,500	866,200	722,054

Total value of the beet crop to producers: In 1915, about \$35,800,000; in 1914, \$30,433,000.

KELP BEDS IN BRITISH COLUMBIA.

[Consul General John G. Foster, Ottawa, Canada, Nov. 26.]

The kelp beds of British Columbia are said to be capable of furnishing annually 235,000 tons of potash, which, figured at \$50 per ton, would amount to \$11,750,000. The iodine obtained, at the rate of \$3,875 per ton, would amount to \$3,680,000. The total calculated value of these two by-products of kelp (at prewar prices) would thus amount to \$15,000,000 per annum.

THE VINTAGE OF 1915 IN HUNGARY.

[Vice Consul Louis G. Dreyfus, jr., Budapest, Nov. 5.]

The official report on the condition of the vineyards and the results of the vintage for the period ending October 21, 1915, contains the following information concerning this year's wine crop in Hungary:

Budapest district: As a result of continued rains, harvesting is at a standstill. Contracts for new wine have been closed at \$0.61 to \$0.69 per gallon.

Szekszarder district: The vintage is at an end and in general can be considered rather below normal in quantity, averaging only 60 to 74 gallons per acre. In quality the wine promises better than in the preceding year. The price of the new wine in this district is \$0.69 to \$0.76 per gallon.

Pecser district: The vintage, which is already terminated, has been light in many places. The quality of the wine is good. Sales of new wine have been made at \$0.76 per gallon.

Tapolcaer district: The continued downpour has retarded the vintage, which turned out weak and mediocre. The price of the new wine varies from \$0.53 to \$0.80 per gallon.

Exceptional Yield in Certain Mountain Vineyards.

Soproner district: The vintage will probably last until the end of October. In general the result is good. The greater part of the red wine has been sold as mash at \$0.46 to \$0.61 per gallon.

Pozsonyer district: In the mountain vineyards the vintage has yielded from 278 to 556 gallons per acre; in exceptional cases up to 2,500 gallons. In the valleys the yield was only 90 to 180 gallons per acre. The price of the new wine varies between \$0.38 and \$0.61 per gallon.

Balassgyarmater district: The result of the vintage, which is for the most part terminated, varies between 60 and 600 gallons per acre, while the prices of the new wine range from \$0.46 to \$0.76 per gallon.

Egerer district: The crop in the mountain vineyards was average; in the valleys and sandy soils, weak or even poor. The new wine sells for \$0.53 to \$0.65 per gallon.

Miskolcer district: In a scarcely average vintage the new wine brings from \$0.53 to \$0.65 per gallon.

Tarcaler district: The rain has caused great damage. Vineyards damaged by frost and hail have produced only from 134 to 150 gallons per acre. However, in many places from 400 to 600 gallons per acre were obtained. New wine was sold for \$1.23 to \$1.32 per gallon.

Beregszaszer district: The quantity of the crop is average; the quality rather good. Only in Szabolcs County is the yield weak.

Szatmarer district: The vintage is in progress. The sugar content of the new wine is anywhere from 14 to 26 per cent. The yield is abundant.

Dry Weather Improves Meneser Vintage.

Bihardioszeger district: The yield averages 148 gallons per acre. The price of the new wine is between \$0.46 and \$0.61 per gallon.

Meneser district: The recent dry weather has greatly improved the quality of the vintage. The yield per acre has been from 298 to 370 gallons.

Fehertemplomer district: There is a steady demand for new wine at from \$0.69 to \$0.76. The yield is favorable.

Dicoszentmartoner district: The climatic conditions have been favorable for the vintage, and the yield was from 370 to 556 gallons per acre.

Marosvasarhelyer district: The crop is average. The yield per acre is from 185 to 221 gallons, and the new wine is bringing between \$0.61 and \$0.76 per gallon.

SUGAR CROP IN AUSTRIA-HUNGARY.

[Consul Charles L. Hoover, Prague, Bohemia, Nov. 9.]

One of the Prague banks has just completed an investigation of the condition of the sugar-beet industry throughout Austria-Hungary and has made public the following comparative data:

District.	Number of fac.ories.		Beet crop.		Sugar yield.	
	1914-15	1915-16	1914-15	1915-16	1914-15	1915-16
			<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>	<i>Tons.</i>
Bohemia	108	104	4,170,200	2,988,400	720,124	484,300
Moravia	57	56	2,701,300	1,923,400	449,213	288,650
Hungary and Bosnia	31	30	3,147,000	1,793,300	432,978	240,850
Total	196	188	10,000,500	6,705,100	1,602,315	1,013,800

In Bohemia two factories were closed because the territory from which they formerly drew their supplies of beets could be served equally well by neighboring factories belonging to the same company. Two other factories burned down.

From present appearances the average production per acre will be about the same as last year in spite of the unfavorable weather that existed up to the 1st of July. Only about 3 per cent of the plantings were lost as a result of the drought, the greater part of the decline in area planted having been due to the increase in the acreage planted to grain. The price of beets fluctuated between 31 and 34 crowns per metric ton of 2,204.6 pounds; the price last year was 22 to 24 crowns. [The normal exchange rate for the Austro-Hungarian crown is \$0.203.]

MARKET FOR QUILLS IN ENGLAND.

[Consul Homer M. Byington, Leeds, Nov. 8.]

The Smallholder, an English periodical, in the issue of October 30, 1915, gives the following prices paid for quills: Large goose quills, per hundredweight of 112 pounds, \$12.17 to \$14.60; small goose quills, \$7.30 to \$9.73; large turkey quills, \$12.17 to \$14.60; large duck quills, \$6.09 to \$7.30.

It appears that the quills used for commercial purposes have hitherto come largely from Austria and Germany. Present supplies are reported to be inadequate, and The Smallholder calls upon British poultrymen to meet the requirements, stating that the quills should be tied in half-pound bundles with all the barrel ends pointing the same way.

ALUMINUM AND ENAMEL WARE MARKET IN WESTERN GREECE.

[Vice Consul William A. Birgfeld, Patras, Oct. 28.]

The local market for enameled metal ware and aluminum goods had until the beginning of the present war satisfied its needs in European markets, drawing principally from Austria, Germany, France, and England, in the order named. The classes of goods are the usual household articles, such as kitchen utensils, washing basins, pots, cutlery (aluminum), etc. Trade in enamel ware is fairly well developed, whereas aluminum ware is still a comparatively new article, but is gaining rapidly as it becomes better known.

Imports—Duty—Terms.

Three grades of each kind of ware are used in Greece. England sends only the first quality of enameled ware, France only the second, and Germany and Austria the second and third. Of aluminum ware, Germany, France, and Austria sent all three grades. Terms of credit were usually three to six months, against promissory notes issued on delivery. Since the commencement of the war exports from Germany and Austria to this country have practically stopped. Merchants have chiefly been engaged in selling off their old stocks and obtaining limited supplies from France and England.

It is the opinion of the writer that, as imports from the latter countries are greatly hampered, it would be the proper time for American exporters to enter the field.

The duty is as follows: Enameled ware, \$0.099 per pound; aluminum ware, \$0.198 per pound.

Light-weight wares would be more satisfactory for this market, since they would have to pay less duty. At present credits have been greatly restricted by French and English exporters. Payments are mostly effected cash against documents at destination, and are handled through local banks. American exporters must, however, bear in mind that as soon as conditions are again normal European exporters will resume the credits, and if Americans wish to hold the ground gained, they must be prepared to follow. Any possible risks that might be involved in the granting of credits would be greatly diminished if exporters handled their orders through responsible commission agents here, who in many instances personally guarantee the reliability of their clients.

[A list of dealers in enameled and aluminum ware and a list of import agents at Patras may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices.]

PROPOSED CANADIAN CUSTOMS OFFICER AT NEW YORK.

[Consul O. Gaylord Marsh, detailed as vice consul at Ottawa, Canada, Nov. 27.]

The Vancouver, Victoria, and New Westminster Boards of Trade and representatives of Vancouver financial institutions are reported to have indorsed a proposal urging the Government of the Dominion of Canada to station a Canadian customs official at New York for the purpose of facilitating the shipment of British Columbia products via the Panama Canal to New York City and thence in bond by rail or by water to eastern Canadian points. It is also suggested that this plan would make possible the shipment of eastern Canadian products to the West via the same route.

NEW ZEALAND WHEAT MAKES BETTER SHOWING.

[Consul General Alfred A. Winslow, Auckland, Oct. 27.]

The supply found when a census was taken of the actual quantity of wheat thrashed makes a much more favorable showing for the 1914-15 wheat crop of New Zealand than did the estimates given out last March by the Dominion Government [see **COMMERCE REPORTS** for June 7, 1915]. The New Zealand Herald recently published the following official explanation of the discrepancy:

As a result of inquiries it is found that the previously published area under wheat for the 1914-15 season was understated to the extent of about 40,000 acres, due partly to the nonfurnishing of returns and partly to increased sowings of wheat after the returns were sent in. The latest information puts a very different complexion on the position, as the following comparison with recent years will clearly show:

Year.	Acres.	Yield per acre.	Total yield.
		<i>Bushels.</i>	<i>Bushels.</i>
1910-11.....	322,167	25.73	8,280,221
1911-12.....	215,598	33.69	7,281,139
1912-13.....	180,869	27.28	5,179,626
1913-14.....	166,774	31.37	5,231,700
1914-15.....	229,000	28.94	6,644,336

This will leave quite a surplus for next season, which may be seriously needed if the lack of rain in the wheat belt continues much longer. To date the rainfall in the wheat belt of the South Island has been scarcely 50 per cent of normal and the sowing season is well advanced.

USE OF PRESSBOARD IN LIVERPOOL.

[Consul Horace Lee Washington, Liverpool, England, Oct. 25.]

The Liverpool consulate has received an inquiry from manufacturers of pressboards, used for insulating purposes in the manufacture of armature coils, etc. A representative of the consulate interviewed several Liverpool firms, and a sample of press paper which had been received was exhibited to them. It appears, however, that the amount of press paper used here in the electrical trade for insulating purposes is very small, and it is suggested that better results would be obtained by approaching an importer of the article. One firm, situated in London, has been mentioned as that of a large dealer in press papers, from whom the electrical trade in Liverpool largely receives its supplies. A Liverpool firm expresses a desire to receive further particulars as to prices, etc.

[The names and addresses of the London and Liverpool firms may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 68926.]

TONNAGE DUES AT HAVRE.

[Consul John Ball Osborne, Havre, France, Nov. 10.]

The total amount of tonnage dues collected in the port of Havre in the first 10 months of 1915 was \$125,813, as compared with \$213,766 in the corresponding period of 1914.

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he received in stock during the week ended November 27 the following new United States Government publications, which he will sell at the nominal prices affixed:

Information Concerning Some of the Principal Navies of the World—a series of tables compiled to answer popular inquiry. Office of Naval Intelligence, 1915, reprint.—Epitome of the world's naval situation, covering relative orders of warship tonnage, warship tonnage of the principal naval powers, active personnel, vessels built, vessels building, types, expenditures, air craft, etc. Price, paper, 10 cents.

Ephemeris of the Sun and Polaris, and Tables of Azimuths of Polaris, for the year 1916, issued by the General Land Office as a supplement to the Manual of Surveying Instructions for the survey of public land of the United States, containing Greenwich tables for the sun and polaris, azimuths of polaris, etc. Price, paper, 5 cents.

A Teacher's Professional Library, Classified List of One Hundred Titles, Education Bureau Bulletin 8, 1909, reprint.—List of 100 useful books for teachers, including encyclopedias, history, theory of education, principles and practice of teaching, etc. Price, paper, 5 cents.

School Administration in the Smaller Cities, Education Bureau Bulletin 44, 1915.—Covering the constitution of the school board, embracing size, how to elect, length of term, qualifications, etc., officers, finance, school superintendent, principals, supervisors, teachers, health inspectors, etc. Price, paper, 25 cents.

Teak in Siam and Indo-China, Special Agents' Series 108.—Covering properties and uses of teak and general situation of the teak industry and markets in Siam and Indo-China, including transportation, grades, etc. Price, paper, 5 cents.

The Interpretation of Topographic Maps, Geological Survey Professional Paper 60.—Covers the features of topographic, geologic maps, and various groups thereof, containing maps and illustrations, both colored and photographic. Price, paper, \$2.75.

The Geology and Ore Deposits of the Coeur d'Alene District, Idaho, Geological Survey Professional Paper 62.—Gives description of location and area of the district, general geology, economic geology, description of the lead-silver, coal deposits, etc. Price, paper, 85 cents.

Terms Used in Forestry and Logging, Forest Service Bulletin 61.—Terms used in forestry and lumbering, alphabetically arranged. Price, paper, 5 cents.

The Dog as a Carrier of Parasites and Disease, Agriculture Department Bulletin 260.—Covering rabies, hydatid, cysticercus (measles), tapeworms, roundworms, fleas, ticks, and other parasites and diseases disseminated by the dog. Price, paper, 5 cents.

The Handling and Marketing of the Arizona-Egyptian Cotton of the Salt River Valley, Agriculture Department Bulletin 311.—Covering clean picking and storage of seed, ginning, sampling, baling and covering, compression, tagging, marking, etc. Price, paper, 5 cents.

The Persian Walnut Industry of the United States, Plant Industry Bulletin 254, reprint.—The Persian walnut is commonly known as

the English walnut, and the work gives a description of the tree, distribution, climatic conditions, varieties, propagation, pruning, cultivation of the orchard, pests, etc. Price, paper, 20 cents.

Soil Conservation, Farmers' Bulletin 406.—Work by W. J. Spillman on care of the soil, including disposal of land by the Government, importance of soil food, types of farming, effect of legumes, etc. Price, paper, 5 cents.

The Home Production of Onion Seed and Sets, Farmers' Bulletin 434, reprint.—Practical work on the cultivation of the onion for home use, including selection and care of seed, care of bulbs, cultivation, preparation of the soil, fertilizers, etc. Price, paper, 5 cents.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D.C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.	903 Gootrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D.C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 10	(a) Lotus Club, 110 West Fifty-seventh Street, New York City.
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 400, Customhouse, New York, N. Y.

*The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

MOLYBDENUM AND TUNGSTEN DEPOSITS IN CHILE.

[Consul Thomas W. Voetter, Antofagasta, Nov. 8.]

Newspaper reports of recent date state that at the mining community of Campanany, in the Province of Tacna, Chile, there exist considerable deposits of molybdenum and wolfram, in addition to copper sulphides. While the mines have not been developed, samples of the ores have been sent to Europe for the purpose of finding a market for the minerals. The address of the president of the mining community is Sr. Jorge Romussi, Iquique, Chile.

Newspaper reports also state that a good vein of wolfram has been discovered in the property of the Cia. Estañifera del Llallagua, at Llallagua, Bolivia. The principal office of this company is at Santiago, Chile.

The foregoing information is forwarded for the benefit of American manufacturers of tool steels who may be interested in learning of possible sources of supply of these metals.

DIRECT TRADE IN MADAGASCAR GEMS.

[Consul James G. Carter, Tamatave.]

The Governor General of Madagascar and Dependencies, whose cooperation for the development of trade relations between Madagascar and the United States I am endeavoring to enlist, appears to be anxious that American importers become interested in local precious stones and rough gem material, which, heretofore, have been purchased principally by Continental concerns. It is understood that American firms have, to some extent, bought Madagascar pink beryl, or "morganite,"* and other stones of local origin on the European market; but the desire is to create, if possible, some direct business in this line between the United States and Madagascar. The Governor General has, therefore, voluntarily supplied samples of certain of the local gems and a schedule of approximate prices for cut and rough stones.

[The stones comprise 1 pink beryl, 2 cordierites, 1 amethyst, 1 spessartite, 2 blue beryls, 1 white beryl, 2 yellow beryls, 1 rubellite, and 3 pink and 3 blue beryls in the rough. These and the schedule of prices may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices. A list of firms and individuals interested in precious-stone mining in Madagascar will be furnished upon application; refer to file No. 60558.]

MADAGASCAR, THE LAND OF BERYLS.

Mere mention of Madagascar has long conjured up visions of fabulous deposits of precious stones, for legends concerning its great mineral wealth have been inseparable from its history ever since the island was opened up to the world, but little that was authoritative has ever been published. In 1912 the Smithsonian Institution at Washington translated by permission and incorporated in its Report for that year an interesting review of Madagascar's gem resources as revealed by an account of the explorations of A. Lacroix, of l'Institute de France.

M. Lacroix used the primitive Madagascar filanzenne (a seat hung between two poles carried by stalwart natives) in his journeyings, and was thus able to get away from the beaten highways and into the little-known interior of the island. He found that all the deposits of precious (or, more properly, semiprecious) stones occur in a great rectangle 125 miles from north to south and 40 miles from east to west. The principal centers are to the northwest of Antsirabe, the outskirts of Miandrarivo (Ampangabe in particular); to the west of Antsirabe, the region situated to the west (Anjanaboana) and to the south of Betafo (Tongafeno, Antsongombato, Zamalaza,

* Regarding morganite, the New York press contained the following interesting item: "A newly discovered gem of brilliant rose color was christened morganite by the New York Academy of Science. It was named for J. Pierpont Morgan, on the suggestion of Dr. George F. Kunz, chairman of the geological section of the academy. Dr. Kunz thought that Mr. Morgan had earned the honor by the encouragement which he has given art and science in America and Europe. Morganite, Dr. Kunz said, is a species of beryl. 'It was discovered in its perfection in the present year and differs from other beryls in that it fluoresces an intense cherry red when exposed to Roentgen rays. It is found in magnificent gems weighing from 1 to 100 carats each and is of a beautiful brilliant rose color of wonderful freedom from flaws. It is the purest pink gem that has been found in large gems, rivaling pink tourmaline and pink topaz, and is found principally in the mountainous region of Mount Bity, an island off the coast of Madagascar.'"

etc.); to the south of Antsirabe, the valley of the Sahatany River and its vicinity; Sahaniivotry, to the east of Mount Bity, then more to the south on the other side of the Manandona, a series of beds situated to the northwest and to the west of Ambositra; and then still farther south, the region of Ikalamavony.

The Island's Long List of Gems.

The valley of the Sahantany River may be taken as an example. M. Lacroix stated that here he found beryls of great size, some measuring 3 feet, but he explains that only portions of these huge crystals were transparent. Their colors ranged from the wanted blues and greens (aquamarines) to yellow and rose (morganite), and there were also colorless varieties. The stones most highly esteemed are those of a sky-blue shade from Ampangabe and a special dark blue, with a black tint, from Tongafeno, Fefena, and vicinity. The Sahantany transparent tourmalines are beautiful gems, running all the possible gamut of colors from pigeon-blood and reds more or less tinged with violet to the most delicate rose, some greens and blues, some browns with now and then a smoky tint, some golden yellows, and one of dazzling gold. The mineral deposits rich in rubies and sapphires lie north of Ankaratra.

M. Lacroix found spodumene (a mineral of the pyroxene group, and almost everywhere else opaque) in limpid form, of a beautiful rose color with a tinge of lilac, rivaling the kunzite of California, and deposits of spessartite of an orange color peculiar to Madagascar, and danburite. Apatite, rhodizite, microcline, albite, lepidolite, corundums (in the form of transparent sapphires, in addition to the opaque crystals used only as abrasives), garnets with a range of color from dark red to a pretty rose, chrysobel, spinel, zircons, and topaz are other stones in Madagascar's long list of gems. Kornerupine, a magnesium aluminum silicate resembling the aquamarine and the green andalusite but of far greater brilliancy when cut, was also found; until this discovery Greenland had the only known deposit of this mineral.

The opal, too, is found in Madagascar, but is not yet quarried. Specimens from the south of Faratsiho recall the fire opal, but with a tint more brown than red.

AMERICAN GEM OUTPUT AND TRADE.

Mining of precious stones in the United States has been a variable industry since its beginning. Most of the gem minerals have been sporadically mined or found during the course of mining for other minerals and only a few varieties have been systematically mined for periods of years at a time. Among those minerals which have been most persistently produced, and in some quantity at different times, are sapphire, turquoise, tourmaline, spodumene, and chrysoprse. A few other gems such as beryl, garnet, quartz, agate, amazon stone, rose quartz, and variscite have been produced somewhat regularly, but generally in small quantity.

George F. Kunz, summarizing the production and the localities of the different gem minerals in 1882, mentions the following:

Occasional diamonds had been found in several States. Sapphire was known to occur along Missouri River near Helena. Mont., and

both ruby and sapphire at the Jenks corundum mine in Macon county, N. C. Topaz had been found in Maine and Colorado. Emerald and hiddenite had been discovered 16 years before in Alexander county, N. C. Aquamarine and other beryl were obtained from several of the Eastern States. Garnets, called "Arizona ruby," were being collected each year by the Navajo Indians in some quantity. Tourmaline had been mined for many years at Mount Mica, near Paris, Me., and was known to occur at other localities and also in Connecticut. Quartz and rock crystal were obtained from numerous scattered localities, especially fine small crystals coming from Herkimer county, N. Y., and Hot Springs, Ark. Rose quartz was found at several places in New England. Gold quartz from several Western States was made into jewelry. Amethyst had been found in Maine, Pennsylvania, Virginia, and Colorado. Agate was known to occur in many States, and the Wyoming and Montana moss agates were used in large quantities. Jasper and petrified wood were found in many States and used in small quantities. Peridot was gathered by the Navajo Indians of Arizona. Turquoise was known in New Mexico, Arizona, and Nevada. The feldspar gems, labradorite, amazon stone, sunstone, and moonstone were used in small quantities. The amazon stone came from the Pikes Peak region, Colorado. The Lake Superior gem stones, thomsonite and chlorastrolite, were collected for the tourist trade. Numerous lesser gems were known to occur in the United States, but were only sparingly used, such as phenacite, hyacinth garnet, iolite, rutilated quartz, novaculite, rutile, prehnite, obsidian, diopside, chrysoprase, rhodonite, malachite, chialiolite, catlinite, and others.

New Gem Minerals—Production.

Among new gem minerals may be mentioned californite (massive compact vesuvianite) and benitoite, both found in California. Californite has been found in several counties and a quantity has been sold at different times. Benitoite is a barium titanösilicate. It is a new mineral discovered in San Benito County in 1906. Only one deposit, now exhausted, has been found. Benitoite is a blue mineral resembling sapphire in color but much softer.

Below is given a table of the production during certain years since 1883 of gems and precious stones as recorded in Mineral Resources of the United States for 1914 (published by the U. S. Geological Survey), from which volume the foregoing facts relating to gem deposits were also taken:

Gems and ornamental stones.	1883	1890	1900	1910	1913	1914
Agate, moss agate, chalcedony, onyx, etc.	\$4,500	\$2,000	\$2,268	\$8,895	\$8,312
Amethyst	2,250	500	389	255
Beryl, aquamarine, blue, pink, golden, etc.	500	11,000	5,545	1,615	2,386
Californite	8,000	152	1,425
Chrysoprase	\$200	100	9,000	75
Copier ore gems, chrysocola, malachite, azurite, etc.	2,000	200	550	2,350	1,280
Diamond	150	1,400	6,315	705
Feldspar, amazon stone, sunstone, moonstone, oligoclase	4,200	500	270	2,510	1,265	440
Garnet, almandine, pyrope, rhodolite, grossularite, hyacinth, topasolite	6,000	2,308	21,500	2,100	4,265	1,700
Gold quartz	115,000	9,000	2,000	1,000	300	1,050
Jasper	2,500	475	5,275	4,700
Opal	270	15,130	1,114
Peridot	500	875	100

Gems Whose Output Exceeds \$10,000.

The gems and ornamental stones whose production exceeded \$10,000 in any one of the 32 years under review included agate, the output of which in 1894 was valued at \$12,500; beryl, which in 1900 reached a total of \$11,000; catlinite and pipestone, which in the years 1883 to 1886 amounted to \$10,000 annually; and californite, with an output valued at \$25,000 in 1907 and \$18,000 in 1909. Other gems of this category and their output were: Chrysoprase—1906, \$32,470; 1907, \$46,500; 1908, \$38,225; 1909, \$84,800; and 1911, \$13,550; garnet—1900, \$21,500; 1901, \$22,100; 1908, \$13,100; opal—1892, \$10,000; 1912, \$10,925; 1913, \$15,130; peridot—1905, \$10,000; spodumene, etc.—1904, \$10,000; 1906, \$14,000; 1907, \$14,500; 1909, \$15,150; 1910, \$33,000; 1912, \$18,000.

In the periods 1883–1888 and 1892–1896 the output of gold quartz was \$10,000 a year or more; in 1884 and 1885 it reached the record figures of \$140,000. With the single exception of 1894, the production of crystal quartz from 1883 to 1905, both inclusive, exceeded \$10,000 yearly, 1884 holding the record with \$25,100. The record year for sapphires was 1913, when the yield was valued at \$238,635, but from 1891 down to and including 1914 the output exceeded \$10,000 in value each year, save 1895. The 1909 production of turquoise and matrix was the highest during the period under review, being \$179,273, with an output above \$10,000 since 1889, except in 1913. From 1901 to 1912, both inclusive, the output of tourmaline in the United States ranged from \$15,000 to \$133,192, reaching the latter figure in 1909. Petrified wood, which is included in "Other gems and ornamental stones" in the above table, was valued at \$10,500 in 1884, \$36,000 in 1887, \$16,000 in 1888, \$53,175 in 1889, \$11,000 in 1892, and \$21,250 in 1893.

Imports of Precious and Semiprecious Stones.

The domestic production forms only a very small part of the gems used annually in the United States, the importations having reached a value of \$49,529,845 in 1912–13, whereas the record output of American gems and semiprecious stones within the past 32 years was but \$534,280. However, owing to the war in Europe—from which continent most of the diamonds and pearls are purchased—the value of the imports in the fiscal year ended June 30, 1915, was less than

half that for the preceding year and less than one-third that for 1912-13, as the following summary discloses:

Precious and semiprecious stones, and imitations of.	1912-13	1913-14	1914-15
Diamonds:			
Uncut.....(free.....)	\$12,339,553	\$4,268,065	
.....(dut.....)		\$3,151,831	\$3,358,190
Cut, but not set.....(dut.....)	27,213,047	17,795,099	8,462,117
Pearls, and parts of, not strung or set.....(dut.....)	6,806,673	4,263,833	1,644,751
.....(free.....)	79,158	\$23,085	
Other precious stones, uncut.....(dut.....)		\$14,640	60,578
Other precious and semiprecious stones, cut, but not set.....(dut.....)	2,771,950	2,565,819	773,862
Imitation precious stones.....(dut.....)	1,310,454	1,192,807	845,008
Total	49,520,845	33,375,181	15,134,496

^a July 1, 1913, to Oct. 3, 1913, inclusive.

^b Beginning Oct. 4, 1913.

Synthetic jewels (which are included with the imports of imitation precious stones in the foregoing table) are finding increased use in the industries. Watchmakers have adopted them for jeweled bearings and they are employed in the manufacture of electrical and optical apparatus, compasses, and similar instruments.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Subsistence stores, No. 2807.—Sealed proposals will be received at the General Depot of the Quartermaster Corps, 115 East Ontario Street, Chicago, Ill., until December 8, 1915, for furnishing and delivering on or before January 7, 1916, the following: 22,800 pounds of lard; 2,016 cuns of bacon; and 3,000 pounds of sugar-cured ham.

Panama Canal supplies, No. 2808.—Sealed proposals will be received at the office of the General Purchasing Officer of The Panama Canal, Washington, D. C., until December 15, 1915, for furnishing, by steamer, free of all charges, on dock at either Colon (Atlantic port) or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama, the following: Steel shapes, grommets, rivets and burrs, portable forges, garbage cans, garbage-can covers, water coolers, marine clocks, marine lights, towels, leather fillets, asbestos cement, rubber bands, paper drinking cups, level books, and paper. (Circular No. 904.

Mixed sulphuric and nitric acid, No. 2809.—Sealed proposals will be received at Picatinny Arsenal, Dover, N. J., until December 20, 1915, for furnishing and delivering 1,800,000 pounds (more or less) mixed sulphuric and nitric acid, of "standard" composition, as per paragraph 2 of the "Specifications for Mixed Sulphuric and Nitric Acid," revision of June 3, 1912, a copy of which may be had on application to the arsenal.

Lard, No. 2810.—Sealed proposals will be received at the General Depot of The Quartermaster Corps, 115 East Ontario Street, Chicago, Ill., until December 13, 1915, for furnishing and delivering, on or before December 27, 1915, 20,000 pounds of lard. Proposals will be received for delivery of the lard to the Depot Quartermaster, Kansas City, Mo., or to the Depot Quartermaster, Omaha, Nebr.

Elevators, No. 2811.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until December 23, 1915, for the installation, complete, of an electric passenger elevator in each of the following buildings: The United States post office and courthouse at Pendleton, Oreg., the United States post office and courthouse at Brattle-

boro, Vt., and the United States post office and courthouse at Ardmore, Okla., in accordance with drawings and specifications, copies of which may be had on application to the Washington office.

Hardware, No. 2812.—Sealed proposals will be received at the office of the Superintendent of Prisons, Department of Justice, Washington, D. C., until December 30, 1915, for furnishing and delivering at the United States Penitentiary, Atlanta, Ga., finishing hardware for the bath, laundry, and tailor-shop building, in accordance with specifications. Copies of the specifications, together with further information, may be had on application to the Washington office.

Construction work, No. 2813.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until January 10, 1916, for the construction of a two-story and basement stone and brick faced building for the United States post office at Titusville, Pa. Drawings and specifications may be obtained from the custodian of the site or at the Washington office.

Power house, No. 2814.—Sealed proposals will be received at the office of the United States Engineer, Wheeling District, Wheeling, W. Va., until January 6, 1916, for building a fireproof power house at Dam No. 14, Ohio River. Further information may be had on application to the above-named office.

Construction work, No. 2815.—Sealed proposals will be received at the Office of the Supervising Architect, Treasury Department, Washington, D. C., until December 27, 1915, for enlarging drafting room, and new skylight in the United States post office at Olympia, Wash., in accordance with drawings Nos. 76 and 77 and the specifications, copies of which may be had on application to the custodian of the Olympia Building, or at the Washington, D. C., office.

Navy Department supplies, No. 2816.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., for supplying the following articles. Firms interested should make application to the Bureau of Supplies and Accounts, giving schedule numbers desired: Schedule 9059, kapok fiber, grown in Java, Guam, the Philippines or islands adjacent, and No. 1 Madoura kapok fiber; schedule 9060, filling on site for hangers; schedule 9061, electrically driven 72-inch planer; schedule 9062, twist drills; schedule 9063, North Carolina pine and yellow pine; schedule 9064, 600-pound crucibles, yellow-pine drawers, metal file units, and single conductor cable; and schedule 9065, bleached and shrunk cotton drill, gymnasium shoes, and Turkish cotton bath towels.

GIVES CREDIT TO "COMMERCE REPORTS."

A manufacturing company in Cleveland, Ohio, reports that it has built up a very satisfactory export trade through the information contained in **COMMERCE REPORTS**. The secretary of the company recently called upon F. L. Roberts, foreign trade secretary of the Cleveland Chamber of Commerce, to obtain information in regard to foreign markets for dress fasteners. He stated at the same time the extent of the assistance that had been received by his company through the Bureau of Foreign and Domestic Commerce. He very highly commended the Bureau's work in promoting the export trade of American manufacturers.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

- Wood knobs and coppered wire**, No. 19436.—The commercial attaché of the Department of Commerce in England writes that a firm in that country desires to be placed in direct communication with manufacturers of wood knobs and steel coppered wire. The wire should be 13-gauge standard, and the knots are to be drilled to a depth of one-fourth inch, so that the wire will slide in easily without any play. Samples of the articles may be examined at the Bureau or its branch offices. (Refer to file No. 914.)
- Wool and mohair**, No. 19437.—An American consular officer in South Africa reports that a firm in his district desires to find a market for wool and mohair. The firm has an office in New York City.
- Gocart and baby-carriage wheels and fittings**, No. 19438.—A manufacturer and dealer in perambulators in the United Kingdom has informed an American consular officer that he wishes to be placed in communication with American manufacturers of wheels and fittings suitable for gocarts and baby carriages.
- General agency**, No. 19439.—An American consular officer in Argentina reports that he has received a letter from a business man who desires to act as manager or general representative of American manufacturers or exporters who may care to place their goods in South American markets. It is stated that the man has had extensive commercial experience in Argentina and is familiar with American business methods. He has had experience in the sale of office devices, cash registers, adding machines, etc. References are offered.
- Machinery, etc.**, No. 19440.—An American consular officer in England writes that a firm in his district is desirous of being placed in immediate connection with American manufacturers of machinery and equipment for a plant for the low-temperature distillation of peat. Catalogues and full information should be sent. Bank reference is given.
- Sewing machines and agricultural implements**, No. 19441.—The Department of Commerce is in receipt of a letter from a business man in Russia who desires to receive names and addresses of American manufacturers of sewing machines and agricultural implements. He also writes that he is in a position to represent American manufacturers of other lines.
- Brushes, cutlery, cheap jewelry, etc.**, No. 19442.—An American consular officer in Great Britain writes that a firm in his district wishes to represent American manufacturers of brushes, fancy leather goods, hardware, cutlery, cheap jewelry, etc. It is stated that the firm has large warerooms, and employs a number of traveling salesmen. Reference is given.
- Paving**, No. 19443.—The Imperial Trade Correspondent at Dunedin reports that tenders are invited by the Dunedin city council for the laying of 48,000 square yards (more or less) of street paving in that city. The paving is to consist of either jarrah wood blocks, rock asphalt, or Trinidad asphalt, and tenders are invited for each or any of the several materials. Copies of the specifications and conditions and form of tender, together with drawings, may be obtained from the town clerk, town hall, Dunedin, New Zealand, on payment of \$9.73, which amount will be refunded upon the receipt of a bona fide tender. Tenders will be received at the office of the town clerk, Dunedin, until February 9, 1915.
- Hosiery, underwear, etc.**, No. 19444.—An American consular officer in the Netherlands reports that an agent in that country wishes to act as representative of American manufacturers of hosiery, tricot underwear, and corsets. He wishes to work on a commission basis, but if necessary he will buy on his own account.
- Cattle**, No. 19445.—An American consular officer in Colombia transmits the names and addresses of a number of firms which desire to receive catalogues and full information relative to shorthorn Durham bulls (either full or half blood) for breeding purposes. Owing to similarity of climate the bulls should preferably be from the southern part of the United States. Correspondence should be in Spanish.

BRITISH PROHIBITION ON IMPORTATION OF MACHINE TOOLS.

[Telegram from American Embassy, London, Dec. 2, 1915.]

A royal proclamation, published November 30, 1915, prohibits, after December 21, the importation into the United Kingdom of all machine tools and parts thereof, except small tools. A further exception is made in favor of machine tools and parts thereof imported under the license of the Board of Trade and subject to the provisions and conditions of such license.

TOBACCO EXTRACT FOR NEUTRAL COUNTRIES.

In connection with the cablegram from the American Embassy in London with regard to tobacco shipments (published in *COMMERCE REPORTS* for Dec. 3, 1915), it is further announced by cable from the embassy that, according to the British Foreign Office, tobacco extract, as well as tobacco of all kinds, will not be interfered with by the British Government when shipped to neutral consignees in neutral countries.

CLOSE SEASON FOR LOBSTERS IN BAY OF FUNDY.

[Consul Henry S. Culver, St. John, New Brunswick, Canada, Nov. 20.]

The fisheries regulations in regard to lobster fishing along the New Brunswick coast, extending from the mouth of the St. Croix River to Chignecto Bay, in the Bay of Fundy, have been amended. Along the Charlotte County coast the close season will be from June 16 to November 14, and along the St. John County coast from June 1 to November 14. Along the Charlotte County coast no lobsters may be taken at any season of the year whose carapace is less than 4½ inches, and along the St. John County coast the prohibition extends to all lobsters under 9 inches in length, measured from head to tail, exclusive of claws and feelers.

ESTABLISHMENT OF A NEW FOOD FISH.

The United States Bureau of Fisheries ended its fishing operations, in connection with the campaign to establish the tilefish in the markets, on November 10, when one schooner was on the grounds under private initiative and several others were outfitting for the fishery. With the end of the month there were eight vessels actively engaged, and they had landed in New York 10 fares, aggregating 156,500 pounds of tilefish. In the last two days of the month six schooners landed 106,500 pounds.

Five of the vessels belong to the fleet formerly fishing out of New York, and three are from Boston, but all are landing their catch at the former city, and most of them would normally be idle at this period of the year. The exploitation and development of this fishery therefore provides for the economic use of an expensive plant at a time when otherwise it would be unproductive and the lucrative employment of labor which under previously existing conditions often would be idle.

In addition to the industrial results, a new and excellent animal food has been placed within reach of the consumer, and the presentation of this phase of the subject will be continued as the supply of tilefish becomes more nearly equal to the demand already created.

[Other reports on the recent developments in the use of tilefish appeared in *COMMERCE REPORTS* for Oct. 25 and 29 and Nov. 2, 1915.]

MACHINERY FOR MANUFACTURING CORN PRODUCTS, ETC.

[Consul Edwin N. Gussaulus, Johannesburg, South Africa.]

The secretary of a manufacturers' association in British South Africa desires to obtain information from the United States on the following two points, with a view to considering the establishment, in this Province, of an industry for the utilization of maize in some of the forms in which it is prepared by concerns in the United States: (1) A list of the various products of maize manufacturers in the United States, such as maize oil and oil cake, forms of maize meal, hominy, biscuits and cakes, starch, glucose, dextrine, alcohol, sirup, etc., and others of which little or nothing is known here. (2) A statement of the various machines required in the preparation of these various commodities, details of their application, cost, and a list of manufacturers from whom such machinery may be obtained.

[The name and address of the inquirer may be obtained from the Bureau of Foreign and Domestic Commerce or one of its branch offices. Refer to file

FOREIGN TRADE OF ITALY.

[Consul General David F. Wilber, Genoa, Nov. 10.]

The combined value of the exports and imports of Italy for the first nine months of 1915, according to Italian official statistics, was \$779,897,480. The exports reached a total of \$331,570,095, an increase of \$10,414,001 over the corresponding period of 1914. The imports amounted to \$448,327,385, a decline of \$15,133,955 from those for the same period in 1914.

NARRAGANSETT BAY AND EAST RIVER WIRE-DRAW WORK.

N. H. Heck, of the United States Coast and Geodetic Survey, has made a preliminary report on his wire-draw work in the Eastern Passage, Narragansett Bay, accompanied by a section of a chart showing the position of shoals found and buoys located. Several shoal spots (small rocks), depths less than charted, and extensions of shoals were found in the area examined. A pinnacle rock with 28 feet of water over it was found about one-half mile northeast of Fiske Rock; this is surrounded by depths of 7 fathoms. To the south of Halfway Rock, depths of 27 and 33 feet, respectively, were found where greater depth is charted. Several reported dangers were sought for but not found in the positions indicated. The unfinished area from Coasters Harbor Island to Goat Island was examined. North of Bull's Point a pinnacle with 33 feet of water was found where 10 fathoms was indicated on the chart. Numerous other items for the correction of the charts were reported.

The wire-draw work in East River by the party under J. H. Hawley, which has been completed, was attended by unusual difficulties. Delays due to strong currents and congested traffic, which ordinarily do not seriously affect wire-draw work, were so excessive that other lost time due to the usual causes, such as failure of equipment, incidental work, and clearing fishing gear, became comparatively insignificant. The peculiar conditions encountered in this locality made it necessary to take up and set out the draw from four to six times each day, and required frequent changes in the length of the draw.

TRADE EXTENSION IN ITALY.

[Consul F. T. F. Dumont, Florence, Oct. 13.]

This consulate is in receipt of the following letter from the president of the Florence Chamber of Commerce:

"We are informed that many articles of American manufacture are imported into Italy by way of other European countries. We wish to establish direct relations with American manufacturers whose European agencies are or have been located elsewhere, and request you to furnish us with a list of their names and American addresses."

American manufacturers whose general European sales agencies are or have been located elsewhere and who are not represented in this market should communicate at once in the French or Italian language with the Florence Chamber of Commerce.

COLOMBIAN CATTLE INDUSTRY.

[Consul Isaac A. Manning, Barranquilla, Nov. 8.]

A number of people recently visited Colombia looking for Colombian cattle for export, and it is reported that contracts have been entered into for the exportation of some 40,000 head during the coming year.

This consulate is informed that at least 80,000 to 100,000 head of cattle might be available for export during that period, running from 850 pounds on the hoof up to 950 pounds.

One large American packing house has also had its representative here studying the packing-house situation, and it is reported that a canning plant may be established in this city or Cartagena.

AMERICAN TRAINING FOR FOREIGN STUDENTS.

As the first step in the plan to educate and train foreign students in the United States, described in *COMMERCE REPORTS* for November 19, the Bureau of Foreign and Domestic Commerce has completed arrangements for putting South American technical graduates in touch with training-course positions in American manufacturing plants.

To determine the attitude of American manufacturers on the subject a letter was addressed to 14 of the largest concerns in the country. In this letter the manufacturers were asked for their opinion of the plan as a whole, and also for a statement of what practical help could be given. Of these 14 firms 9 replied at once that they are in a position to give training courses for South American technical graduates. A synopsis of the replies received follows:

A mining and smelting company offers to take three men at once at a salary of \$50 a month to start. Increases in pay will depend upon the individual.

An automobile concern is ready to take 8 or 10 men for its students' course and pay them 34 cents an hour eight hours a day six days a week. Applicants must be technical graduates.

A Chicago firm will take two South Americans and pay them \$75 a month to start, further increases to depend upon their ability to get along. This company replied under the impression that Chile alone was under consideration.

Another Chicago firm offers to take three or four students for training and pay them \$15 a week the first year and \$18 the second.

One manufacturing company admits South American graduates of technical schools and universities into its student engineering courses, and arranges to have applications for admission indorsed by resident agents of the company in South America or by important customers.

One of the greatest manufacturers in the world states that he will take as many students as business from time to time warrants.

A Pennsylvania concern states that it already has a student course and has had several South Americans enrolled. This company is giving further attention to the Secretary's letter.

A New York firm writes that it has been successful with its student course and is always glad to hear from technical-school graduates wishing positions in the students' corps.

One well-known company offers to help in any way it can.

Two other concerns are much interested in the plan, but wish to go into the matter further before reaching a decision.

The result of this canvass seemed to indicate that the plan was a sound one so far as the training of technical graduates was concerned, and steps were immediately taken to put it into operation. Arrangements have been completed to have the American commercial attachés in South America deal directly with applicants in their districts. These officials are furnished with lists of manufacturers willing to receive students. In some cases it is desirable to have the officials act as intermediaries and conduct the negotiations between the students and manufacturers. Some manufacturers, however, prefer to deal with the applicant directly, and in such cases the attaché merely puts the two interested parties in touch with each other.

Advantages of the Plan.

The advantages of bringing South American technical graduates to this country for further training are obvious. Some of the students will eventually return to their own countries as representatives of American manufacturers. They will be well-equipped native

representatives familiar with conditions in their own countries and naturally loyal to the firms with which they have studied and worked. They will be a powerful factor in overcoming the prejudice against American products that undoubtedly exists in certain quarters. Even if they later enter business for themselves or engage in entirely different lines, their influence will continue to make itself felt.

The Bureau of Foreign and Domestic Commerce is so well satisfied with the results of the preliminary canvass that it now extends the invitation to cooperate to all American concerns interested in foreign trade. Firms wishing to take one or more Latin-American graduates for training are requested to write to the Bureau at Washington. They will be placed in touch with applicants at once.

Training for Other Classes of Students.

The placing of technical graduates is only the first step in the plan, however. It is no less desirable that South Americans be trained in the offices of commercial houses. There are two classes of applicants for such offices. One desires to put in all its time on such training. The other wishes to work part time in commercial offices to pay its way through American schools of one kind or another. One Boston exporting house has expressed a desire to employ a student from Buenos Aires for part-time work in its office, the pay to be sufficient to enable the young man to study at some school or university.

It is also intended to extend the plan to accommodate young men who wish to work at anything to pay their way through American schools. Such students may never engage in similar work after returning to their homes, but their attitude toward American institutions will be favorably affected by their experiences in this country, and their influence will have its value in the strengthening of friendly relations between the United States and the South American Republics.

Plans of the Chilean Committee.

Since the preliminary canvass was finished, the Bureau of Foreign and Domestic Commerce has had the good fortune to get into communication with Señor Eduardo Carrasco, chief of the commercial section of the Foreign Relations Department of Chile, who has been commissioned by his Government to make studies of our commercial situation, our transportation facilities, and our methods of doing business. Señor Carrasco was one of the organizers of the committee for the foreign education of Chilean youths mentioned in **COMMERCE REPORTS** for November 19, and he intends while in this country to establish committees in some of the more important American cities, such as New York, San Francisco, St. Louis, Boston, Philadelphia, and Chicago. These committees will help the young men selected and sent by the committee in Chile to find positions in the universities, factories, or commercial houses. There will be no limit to the membership of the committees, and they will be authorized to proceed in any desired and convenient way.

Señor Carrasco is to visit Washington in the near future, and during his stay a plan will be considered for coordinating the work of the Chilean committees, in Chile as well as in this country, with that of the Bureau of Foreign and Domestic Commerce.

BUREAU TAKES OVER PRIVATE BRANCH IN ARGENTINA.

The Buenos Aires branch of the Chicago Association of Commerce has been taken over by the American commercial attaché in behalf of the Bureau of Foreign and Domestic Commerce. The branch was opened originally to advertise Illinois products and to establish direct trade relations for firms in the Chicago district. A special representative, using the Buenos Aires office as his headquarters, traveled all over South America in the interests of the association.

However, in view of the fact that the Bureau of Foreign and Domestic Commerce is now maintaining commercial attachés at Buenos Aires and three other South American cities, the association came to the conclusion that this pioneer service could be discontinued. The association feels that the attachés are in a position to carry on the work established by it, and that the interests of Chicago business men will be adequately looked after by these new representatives of the Department of Commerce.

In accepting the offer of the association of commerce to turn over its branch to the United States Government, Edward Ewing Pratt, chief of the Bureau of Foreign and Domestic Commerce, in a letter to the association, paid the following tribute to the work of the association and incidentally pointed out the chief function of the new commercial-attaché service:

While the work of the Association of Commerce was undertaken primarily in the interests of Chicago business men, other export interests of the country have benefited directly or indirectly. You do not, I know, expect the attaché to give the direct and individual aid to the Chicago business men that has been rendered by your association. Your action proves the broadness of your view. You realize that the object of the attaché service is the larger commerce of the country as a whole, in which the Chicago business men will benefit along with others. Your feeling that the work started by your organization can now be successfully continued by the commercial attachés is in itself an excellent testimony of the need and efficiency of our service.

Your association has succeeded in great measure in informing the South American buyer as to the ability of our exporters and manufacturers to supply his needs. Ultimate success depends upon the continuance of the connections already made and the establishment of new relations. Herein the commercial attaché will find his chief function in trade promotion. He stands as an adviser, as an aid, to the South American buyer and our exporters. His work is to see and in some cases to create opportunities for mutual trade development. It rests with the individual to make effective use of the opportunities thus offered.

INCOME-TAX PAYERS IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Oct. 29.]

There are 13,967 persons in New Zealand who pay an income tax classified as follows: 10,101 pay income tax on amounts under £700 (£=\$4.86), 715 on amounts between £700 and £800, 535 between £800 and £900, 372 between £900 and £1,000, 704 between £1,000 and £1,500, 573 between £1,500 and £2,000, 463 between £2,000 and £3,000, 147 between £3,000 and £4,000, 80 between £4,000 and £5,000, 88 between £5,000 and £7,000, 52 between £7,000 and £10,000, and 137 who pay tax on amounts over £10,000.

Of the 13,967 income-tax payers, 363 pay less than 5 shillings (\$1.20), while only 1,406 pay over £50 (243) a year.

AMERICAN PURCHASES FROM CEYLON.

[Consul Walter A. Leonard, Colombo, Oct. 23.]

The total value of exports from Ceylon to the United States as declared at the American consulate at Colombo during the third quarter of 1915 exceeded any previous corresponding period in the history of the consulate. The exports were valued at \$6,225,861, nearly two-thirds of which consisted of raw rubber.

The total value of exports to the United States during the first nine months of the calendar year 1915 amounted to \$12,063,126, compared with \$10,984,472 and \$12,780,737 for the entire years of 1914 and 1913, respectively.

For the period from January 1 to September 30, 1915, the exports from Ceylon to the United States consisted of the following articles, with their respective quantities and values:

Article.	Quantity.	Value.
Rubber	14,349,187 lbs.	\$7,691,999
Tea	8,722,530 do.	1,813,874
Plumbago	7,720 tons	949,533
Coconut oil	11,602 4/8 lbs.	876,063
Coconut, desiccated	3,154,929 do.	222,143
All others		509,513
Total		12,063,126

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expira- tion of venue.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D.C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.	803 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argen- tina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 10	(a)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Com- merce, Room 409 Customhouse, New York, N. Y.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

Consul General William W. Handley, of Callao-Lima, reports that the customs revenues collected at the eight maritime ports of Peru during September amounted to \$276,062, as compared with \$217,991 during the corresponding month of 1914.

NEW ZEALAND BUYING MORE AMERICAN GOODS.

[Consul General Alfred A. Winslow, Auckland, Oct. 28.]

Trade conditions in New Zealand continue favorable, with a foreign trade balance of \$45,382,657 in favor of this country for the 11 months ended August 31, 1915. The bank balances at the end of September, 1915, were \$28,255,016, a record surplus for this country. The savings banks also show an increase of deposits, and conditions in general are good for the importer, notwithstanding the fact that the New Zealander is inclined to be conservative and to economize somewhat at this time. He is in position to pay for everything he needs. In reviewing the present conditions, the New Zealand Herald of October 22 says:

Forward booking is the feature of the wholesale trade this week. Soft-goods houses are already delivering, and they report a good turnover. The trouble in drapery is undoubtedly the difficulty in getting supplies. Orders are plentiful but stocks are low. This is only in some departments, but there is a decided shortage in calicos, tweeds, serges, hosiery, and gloves. Floor coverings are difficult to obtain, while in heavy goods, like blankets, there is a shortage in both local and imported. To some extent the case is being met by buying from Japan and America, so that in the aggregate a heavy importation is taking place.

Of late, more of the imports have come from the United States, and this is the time to push for still more, as complaints are common that it is impossible to get orders filled from Continental sources.

[Articles giving many details of the trade of New Zealand during the past year were published in **COMMERCE REPORTS** for September 17 and October 27, 1915.]

INDUSTRIAL DEVELOPMENT OF MANCHURIA.

Manchurian industrial development is almost entirely in the hands of the Russians in the north and the Japanese in the south. Practically all of the large enterprises in south Manchuria at present are conducted by the South Manchuria Railway Co. as adjuncts to the railway. Being unable advantageously to float a loan in Europe in 1914, the company's scheme of constantly enlarging its undertakings was curtailed. This indirectly affected the prosperity of the communities within the zone of its activities. It is believed that the Japanese, provided the necessary capital is forthcoming, will undertake additional industrial and agricultural enterprises in south Manchuria. Important stipulations with regard to the establishment of industries in this region were embodied in the treaties between Japan and China signed at Peking on May 25, 1915.

The exploitation under modern methods of the mineral wealth of Manchuria has been confined almost entirely to coal mining under Japanese supervision. Apart from these Japanese activities, nothing was done during last year toward mineral development. By the treaties above mentioned the Japanese have several additional valuable mining privileges. Manchuria is sufficiently rich in minerals to call for development, as gold, silver, copper, lead, coal, and iron are known to exist. It is believed that American capital seeking investment in mining enterprises in Manchuria would find its prospects of success enhanced by cooperation with Russians in the north and Japanese in the south.

ACTIVE WORK FOR AMERICAN COMMERCE AT TRIPOLI.

[Consul W. Roderick Dorsey, Tripoli, Libya, Oct. 7.]

During July, August, and September, the Tripoli consulate supplied several merchants with lists of names of manufacturers and exporters in various cities of the United States. Cereals, flour, coffee, cotton-seed oil, shoes, hardware, beer, coal, and druggists' sundries were sought. Three definite trade opportunities were reported to the Bureau of Foreign and Domestic Commerce; two have been heard from with many letters and catalogues. However, lack of c. i. f. prices, coupled with the invariable demand for cash against documents, American port, quashed orders. Replies to communications dispatched to addresses supplied presented the same deterrents, and in one or two instances referred importers seeking direct business to agents in Italy.

Endeavors to bring a leading sponge merchant and a manufacturer of oil motors and air compressors together, reached the point where an agency arrangement is possible. The interest of the manufacturer was drawn to this market by the consulate's report "Sponge Fishing in Italian North Africa," printed in *COMMERCE REPORTS* No. 61, of March 15, 1915.

Following the publication of a Trade Opportunity sent forward in the preceding quarter, a trial order for saddles was placed with a Baltimore concern. An importer of camp furniture, with house in Genoa, who formerly purchased beds, etc., through the Milan agent of an American manufacturer, will in future, as a result of negotiations started through a Trade Opportunity, published in the June quarter, place all orders direct by means of his Genoa office. A misunderstanding between a manufacturer and a merchant was straightened out and settlement obtained (July 1, 1915).

As nearly all of Tripoli's business with the United States is done through Italy, the cooperation of American chambers of commerce there was sought and obtained, for the purpose of keeping this consulate posted, as far as possible, as to the names of jobbers stocking with or otherwise representing American wares.

IMMIGRATION INTO CHILE.

[Consul L. J. Keena, Valparaiso.]

The small number of immigrants arriving in Chile is illustrated by the following recently published statistics: From 1905 to the end of 1914 the number arriving totaled 25,544. The numbers, by years, follow: 1905, 203; 1906, 1,442; 1907, 8,462; 1908, 5,484; 1909, 3,098; 1910, 2,561; 1911, 863; 1912, 1,839; 1913, 1,142; and 1914, 360.

A sample of the sacks made of a combination of strips of paper and vegetable fiber, used to ship ores from Antofagasta, Chile, which were mentioned in *COMMERCE REPORTS* for November 5, 1915, has been received from Consul Thomas W. Voetter, and will be loaned to interested persons upon application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67,661.

NOTES FROM CHILE.

[Extracts from South Pacific Mail for Oct. 28, transmitted by Consul General L. J. Keena, Valparaíso.]

Traiguén-to-Púa Railway Bid Accepted.

The tenders for the construction of the projected railway from Traiguén to Púa have been opened in the Ministry of Industry and Public Works, and the estimate of Señor Juan Bertoglio (who was one of four bidders) accepted. [Brief mention of this railway project was made in COMMERCE REPORTS for May 27, 1915.]

Production of Sugar in Chile—Port of San Antonio.

For some time past the establishment of a sugar industry has been occupying the attention of the Government, and in a report presented to the Sociedad de Fomento Fabril Señor Prado asserts that the condition of soil and climate in the Provinces of Llanquihue and Chiloe are exceptionally adapted for the growing of the sugar beet. In the north, between Tacna and the River Sama, the soil is suitable for the cultivation of the sugar cane, but nothing yet can be done there on a productive scale until the region is properly irrigated.

The port of San Antonio is situated 43 miles south of Valparaíso, and when the port works under construction are completed it will prove a help to Valparaíso, though on account of the limited amount of cargo which can be handled it will be many years before it can compete with the latter port. San Antonio will provide an outlet for the rich agricultural products of the Central Valley and, being only 70 miles by rail from Santiago, that is, 47 miles nearer than Valparaíso, will prove of great advantage, especially in regard to heavy cargo, as the difference in the maximum gradient of the lines is 1.3 per cent in favor of the railway from San Antonio. This difference should materially affect the freights. The imports of San Antonio will consist principally of coal, iron and steel, cement, and other rough goods, and the exports of timber, cereals, and agricultural produce.

Budget for 1916.

!sixrorts5.tsshrdluetaincmfwpy

The budget presented to Congress on July 14 last showed an expenditure of \$196,215,040 Chilean currency and \$72,776,725 gold, and after deducting the special funds authorized for payment of port works at Valparaíso and San Antonio, Santiago waterworks, and naval acquisitions, an expenditure remained of \$184,215,040 currency and \$47,343,612 gold. This sum, however, has now been reduced to \$171,300,000 currency and \$46,857,000 gold, distributed among the ministries as follows:

Ministry.	Chilean currency.*	Chilean gold.*	Ministry.	Chilean currency.*	Chilean gold.*
Interior	\$38,000,000	\$470,000	Navy	\$17,000,000	\$5,000,000
Foreign Affairs	3,000,000	1,000,000	Industry	20,000,000	80,000
Justice	10,750,000	Railways	2,750,000	2,000
Instruction	\$1,000,000	200,000	Total	171,300,000	46,857,000
Treasury	15,600,000	40,000,000			
Army	\$3,200,000	125,000			

* According to the United States Treasury statement dated Oct. 1, 1915, the value of the Chilean paper peso is about \$0.14; that of the gold peso, \$0.365.

The income is calculated at \$122,300,000 currency and \$74,500,000 gold, thus showing a credit balance of \$757,400 currency over the expenditure—the first for many years.

In order to meet the estimated deficit of \$25,000,000 currency in this year's (1915) budget, the Government has asked Congress to authorize the raising of a loan of \$30,000,000 for a period of five years, the interest not to exceed 8 per cent.

LUMBER MARKET IN BERMUDA.

[Consul Carl E. Loop, Hamilton, Nov. 25.]

The colony of Bermuda imported 887,972 feet of lumber in 1914, valued at \$25,744, while in the preceding year (1913) the colony imported 1,739,050 feet, valued at \$37,725. In an interview with a local lumber merchant the following detailed estimates of the annual lumber trade of Bermuda were suggested:

About 1,000,000 to 2,000,000 feet of pitch pine, 100,000 to 200,000 feet of spruce, 50,000 to 100,000 feet of white pine, and 25,000 to 50,000 feet of cypress are imported into the colony each year, all of which are used for building purposes. The lumber, in the order named, sells in Bermuda for the following approximate figures: \$50; \$40 to \$45; \$60 to \$70; and \$80 per 1,000 feet.

Practically all the spruce comes from New Brunswick, Canada, where it is bought, according to size, at \$15 to \$20 per 1,000 feet. The white pine imported is a silver variety, grown in Idaho, and is purchased at about \$40 per 1,000 feet f. o. b. New York. The pitch pine comes from the Southern States, chiefly from Florida and Mississippi, and is bought at \$22.50 to \$23 per 1,000 feet. Cypress comes from Louisiana and costs, on an average, \$40 to \$45 per 1,000 feet.

The names of the leading lumber dealers of Bermuda may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices.

REMARKABLE FALL OF HAIL AT TRIPOLI.

[Consul W. Roderick Dorsey, Tripoli, Libya, Oct. 9.]

In the early hours of October 8 this city was visited by a storm of unusual severity, which reached its height about 1.30 o'clock. There was a deluge, and the wind blowing from the northwest with hurricane velocity hurled hailstones of rare size with extreme rapidity and force.

The gardens of the oasis were harshly treated. Bare stalks mark the positions of former flourishing tobacco fields and patches of tender alfalfa are beaten to pulp. The sturdier pepper and henna plants stood up better, but their yield will be seriously affected. By reason of their tough, spreading leaves the fruit of the palm suffered still less. Many dates were beaten down, but, being at the harvesting stage, the riper portion can be gathered and used. The citrus trees seem to have been badly damaged.

Seeking to profit unduly by the breakage inflicted by the hail, merchants having glass in stock immediately advanced prices. The governor promptly requisitioned all in the city, placed it in the hands of a commission charged with locating stocks and regulating prices, and established penalties for those who concealed holding or disregarded the requests of the commission. Meanwhile orders were cabled to Italy for additional supplies.

COST OF FOODSTUFFS IN WESTERN GREECE.

[Consul A. B. Cooke, Patras, Nov. 10.]

The prices of staple foodstuffs held comparatively firm on the markets of the Patras district during the first six months of 1915, showing little effect on account of the European war. With the beginning of August, however, prices began to show a general unsteadiness; and from that time up to date have steadily risen for most of the articles of food.

The early steadiness of the market and its later unrest may be attributed to the fact that the district was fairly well supplied with many of the commodities imported during the first months, large stocks having been brought in against anticipated closing of the usual foreign markets. These stocks began to be exhausted with the coming of summer, and new stocks had to be brought from other markets at heavy freight rates. The prices in some of the domestic commodities are due to shortage of supplies; in others the increase is to be attributed rather to sympathetic than economic causes.

Comparative Prices of Foodstuffs.

The following table gives the prices current on the retail market of Patras for December, 1914, and November, 1915. Prices are given in cents per pound, except as otherwise indicated.

Articles.	Decem- ber, 1914.	Novem- ber, 1915.	Articles.	Decem- ber, 1914.	Novem- ber, 1915.
	Cents.	Cents.		Cents.	Cents.
Bread (wheat), poor	4½	5	Olive oil	91	15
Beef, ordinary	17	15	Coffee, ground	37½	57½
Mutton, ordinary	50	18	Sugar	8½	11
Pork, ordinary	17	17	Rice, ordinary	9	9½
Bacon, breakfast	27	(a)	Apples, cooking	5½	7
Ham, imported	60	(a)	Potatoes, poor	3	3
Fish, fresh	22	24	Onions	1½	1½
Codfish, salt	11	12½	Salt, table	3	2½
Cheese:			Milk:		
In brine	14 to 18	16 to 20	Poor	16	20
Head	22 to 34	20 to 33	Condensed	20	20
Imported	41	40	Eggs	35	35
Butter:			Turkeys, dressed	19	20½
Poor	48	55	Chickens, medium	35	40
Imported	66	66	Ducks	40	45
Goat's	40	44			

* None offered.

INCREASED SALES OF MARGARINE IN LEEDS.

[Consul Homer W. Byington, Leeds, England, Nov. 17.]

The increase to 2/- (48 cents) per pound in the retail price of butter resulted in such a general substitution of margarine (12 cents, 20 cents, and 24 cents per pound) that the retail price of butter was soon reduced to 36 and 38 cents per pound. In the meantime the substitution of margarine has proved so generally satisfactory that local dealers report that only a small proportion of their customers have returned to butter at the prices quoted above, and their margarine sales continue to exceed their sales of butter.

[See report "Margarine Replacing Butter in Leeds," **COMMERCE REPORTS** for Oct. 20, 1915.]

INCREASED ACTIVITY IN BARCELONA COTTON MARKET.

[Consul General Carl Bailey Hurst, Barcelona, Spain, Oct. 25.]

The increased activity of the Barcelona cotton market, in the campaign year 1914-15, may be inferred from the fact that 495,532 bales of cotton were entered at this port, compared with 391,066 in 1913-14, an increase of more than 100,000 bales. During the season of 1912-13 only 366,473 bales were imported.

Much difficulty has been encountered, within recent months, in securing exact statistics, owing to the many hindrances to which the importation of raw cotton has been subjected. The figures given by the cotton brokers of Barcelona are as nearly correct as it is possible to compute them at the present time, although they may not be in exact accordance with certain weekly statements hitherto made public. The campaign season has been calculated for this year up to July 31, instead of August 31 as previously. For the purpose of comparison, the amount of 9,848 bales, imported during August, 1914, has been included in the number given for the season of 1914-15, and consequently this number appears in the totals given for both seasons.

The countries of origin, and number of bales imported at Barcelona, during the past three seasons were:

Countries.	1914-15	1913-14	1912-13
	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>
United States	426,566	276,365	289,611
Egypt	10,490	20,004	20,012
India	46,891	73,471	35,186
Levant	912	13,377	19,626
Various	1,664	7,849	2,058
Total	495,532	391,066	366,473

In contrast to lessened imports from other countries, American cotton shows an increase of 150,201 bales during the present campaign year, compared with the preceding year, and 136,955 bales more than in 1912-13. While the falling off in shipments from Egypt is insignificant, those from India decreased by 26,580 bales, considerably in excess, however, of the amount of Indian cotton purchased by Spain in 1912-13.

Galveston Leads in Shipments of American Cotton.

Of the American cotton entered at Barcelona during the past three campaign years, that from Galveston leads, with 263,438 bales this season, an advance of 113,838 bales over last season's shipments. The shipments by ports were:

Ports.	1914-15	1913-14	1912-13
	<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>
Galveston	263,438	149,600	171,816
Savannah	75,920	55,945	47,212
New Orleans	53,592	30,741	48,344
Charleston	14,700	6,100	4,200
New York	6,197	17,303	5,862
Wilmington	600	6,356
Pensacola	65	50	1,000
Indirect	12,224	3,470	11,177
Total	426,566	276,365	289,611

UNSATISFACTORY RESPONSES TO TRADE OPPORTUNITIES.

[Consul F. T. F. Dumont, Florence, Italy.]

From April 8 to August 30, 1915, the Florence consulate forwarded eight trade opportunities. Two of these were construction-work reports in which the names and addresses of successful contractors were given. A trial order for sewing machines was placed as the result of correspondence following the publication of the first of the remaining six, but the success attending the other five was not encouraging.

Take, for example, the one based on a request from a sanitary engineer who wished to get in touch with manufacturers of cold-storage and refrigerating plants and machinery. This Trade Opportunity was developed in connection with a report which had been specially asked for by American manufacturers, and these same manufacturers had an exceptional opportunity to enter the Italian market through this engineer, yet no replies whatever were received. Since most of the information contained in the report referred to was obtained from this engineer, it is needless to say that he was considerably surprised.

A Matter of Screw Sockets.

The opportunity to furnish electric-lamp screw sockets, at the rate of 60,000 per month, contract to run for a term of years, cash f. o. b. port of shipment, sample socket furnished as model of the goods wanted, brought the following responses:

"We are advised by our consular service that you are in the market for electrical supplies and are sending catalogue under separate cover. If you can advise us what material you are interested in, we shall be glad to quote you."

Also: "We understand that you are on the market for a large number of screw bases for lamp sockets. We are manufacturers of all kinds of miniature lighting devices and we would be glad to give you figures on any of our products. We are sending you catalogues under separate cover of our specialties."

A printed card was received from a firm of customhouse brokers offering to buy goods on commission.

It is evident that the concerns answering this Trade Opportunity either read it carelessly or failed to examine the sample base forwarded by this office. In the meantime a French house secured an order for 200,000 bases.

Italian Language and Metric Units Wanted.

As to the other Opportunities, no replies were received, or the prices quoted were too high, or negotiations have not yet reached a definite stage.

In practically every Trade Opportunity from this office a reply in either Italian or French is requested, with weights and measures in the metric system. Twenty-two such Opportunities have been transmitted during the last year; this office has seen but one reply in any language other than English.

TULLE MANUFACTURE IN SWITZERLAND.

As the starting of a new branch of industry is always interesting, says the Textile Mercury (Manchester, England), so the recent introduction of tulle manufacture into Switzerland is worthy of note. That the establishment has not been without difficulty is shown by the failure of the first experiment, which was made in Wattenwil five years ago—a failure due to the restrictions imposed by the Swiss factory regulations, under which night work was forbidden. This ordinance interposed a great obstacle to the manufacture, inasmuch as (so it is contended) the longer the machine or loom stands idle the more prejudicial it is to the quality of the products, which requires the warmth generated by continuous working of the loom.

With the institution of a new ordinance permitting both day and night work a new undertaking was launched on a modest scale at Munchwilen. This manufactory has 20 looms running, and uses up to 240's yarn, though when the need arises it can go up to 300's. The manufactory employs over 100 persons, and a skilled weaver can earn from 80 to 90 francs [\$15.44 to \$17.37] per fortnight. Thus this manufactory at Munchwilen (Thurgau) has the credit attached to pioneer undertakings, while the more recent establishment of a firm like that of the Swiss Tulle Co. (Glarus), with a share capital which has just been raised to 1,000,000 francs [\$193,000], testifies to the fact that a new path has been opened up.

FOREIGN TITLES FOR AMERICAN MOVING-PICTURE FILMS.

[Commercial Agent E. C. Porter, New York.]

In a recent interview with a person connected with the moving-picture industry in Porto Rico and Cuba, he stated that American films are not used to any degree in those countries, although the industry has developed rapidly. That American firms are not giving special attention to the needs and tastes of the people; that it has been difficult to secure Spanish titles for films; and that only one American company has made a specialty of using Spanish titles for films shown in Porto Rico and Cuba.

PRODUCTION OF DUTCH RUBBER COMPANIES.

[Consul Frank W. Mahin, Amsterdam, Nov. 4.]

According to the Amsterdam press, the reports of six Dutch rubber companies show large increases in production this year over 1914. The total output in the first 10 months of 1915 was 818,213 pounds, as compared with 530,944 pounds in the calendar year 1914. The returns for each month, in most of the reports, show an increase for 1915 over 1914.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Cars, No. 19446.—A business man in Brazil informs an American consular officer that he is in the market for sugar-cane cars of from 5 to 10 tons, gauge 75 centimeters in one case and 1 meter in another. Correspondence may be in English.

Motor car, No. 19447.—An American consular officer in Brazil writes that a man in his district is in the market for a gasoline motor car to be used on a track having a gauge of 60 centimeters.

Aluminum foil, No. 19448.—A business man in Denmark has informed an American consular officer that he wishes to purchase for his own account aluminum foil. Samples and detailed information as to color, thickness, etc., should be sent at once. Reference is given. Correspondence may be in English.

Haberdashery, hosiery, etc., No. 19449.—An American consular officer in France reports that a merchant in his district desires to represent American exporters or manufacturers of haberdashery, underwear of all kinds, hosiery, etc. Catalogues and full information should be sent at once. Correspondence may be in English. Reference is given.

Window glass, No. 19450.—A firm of wholesale glass dealers in Uruguay has informed an American consular officer that it wishes to import window glass from the United States. Correspondence is preferred in Spanish, and measurements should be in the metric system.

Machine tools, No. 19451.—An American consular officer in Brazil reports that a business man in his district is in the market for machine tools used in shops in connection with sugar factories. High-priced modern manufacturing tools are not wanted.

Cotton yarn, No. 19452.—A business man in South Africa has informed an American consular officer that he desires to receive prices and full information relative to cotton yarns used in the manufacture of medium and low-grade hosiery and underwear for women and children. Information relative to packing and shipping charges is desired.

Yarns, No. 19453.—An American consular officer in Denmark reports that a firm in his district is anxious to purchase yarns, threads, etc., of wool, cotton, and linen. The firm also wishes to secure an exclusive agency in this line for the whole of Scandinavia and, if possible, Finland and Russia. Reference is given.

Coil seat springs, No. 19454.—A firm of wholesale merchants in the United Kingdom informs an American consular officer that it wishes to receive quotations on gross lots of coil seat springs for furniture and upholstery in the following standard sizes: 4 by 12, 5 by 12, 6 by 12, 7 by 8, 8 by 8, 8 by 9, 8 by 10, 7 by 10, and 7 by 9.

Manganese peroxide, No. 19455.—An American consular officer in Russia reports that a firm in his district wishes the services of an agent to represent it in the United States. The firm wishes to dispose of large quantities of manganese peroxide.

Machinery, No. 19456.—A business man in Brazil informs an American consular officer that he wishes to receive catalogues, prices, etc., relative to machinery for sugar mills. It is stated that the machines wanted should not exceed an output of 1,000 bags of 75 kilos.

Paints, oils, and colors, No. 19457.—A report from an American consular officer in India states that a firm is in the market for paints, oils, and colors. The firm also exports casein and shellac, and would be glad to correspond with manufacturers of these articles. Bank references are given.

Essential oils, No. 19458.—An American consular officer in Italy reports that a firm wishes to communicate with American importers of essential oils, such as lemon, orange, and bergamot, with a view to establishing commercial relations.

SHIPPERS' EXPORT DECLARATIONS AND EXPORT PROCEDURE.

TREASURY DEPARTMENT,

Washington, D. C., December 4, 1915.

To collectors of customs and others concerned:

In order to give shippers and others concerned further time in which to familiarize themselves with the provisions of T. D. 35708, relative to shippers' declarations and export procedure, and to provide themselves with the necessary blank forms, the date upon which said circular becomes effective is changed from January 1 to February 1, 1916.

(Signed) W. G. McADOO,
Secretary of the Treasury.
(Signed) WILLIAM C. REDFIELD,
Secretary of Commerce.

CONDITION OF EGYPTIAN COTTON CROP.

[Consul Arthur Garreis, Alexandria, Nov. 4.]

According to the Bulletin of the Egyptian Ministry of Agriculture for October, 1915, the weather is favorable for the cotton crop though cold and damp, especially at night, with a certain amount of morning fogs. The water supply is ample. The pink boll worm continues its ravages and practically all the bolls remaining in Lower Egypt are now attacked. In Upper Egypt attacks from both species of boll worm continue, especially in Fayum. Specially satisfactory results of the second picking were obtained in some Upper Egypt Provinces. In Lower Egypt, however, this picking gave only cotton of inferior quality. The gathering of the crop in Upper Egypt is nearly finished. The law for the destruction of remaining bolls on cotton is being rigorously enforced with a view to the more complete reduction of the infesting boll worms.

From arrivals of new crop cotton in Alexandria, it appears that the 1915-16 crop will be inferior in quality. In a résumé of the cotton situation the Alexandria General Produce Association says: "Information received allows us to give an estimate of a crop of 4½ millions cantars (950,000 bales of 500 pounds each), including last season's cotton that still remains in the interior."

CUBA PROSPEROUS AND BUSINESS OUTLOOK GOOD.

[Special Agent Garrard Harris.]

Conditions in Cuba are very favorable for the opening of new lines of business. The effects of the recent years of low prices for sugar are rapidly disappearing as a result of the profitable prices prevailing during the European war. There has been a widespread liquidation of old indebtedness. Banks have been liberal with advances, and money has been easier to obtain from private sources. Optimism prevails in nearly all lines.

The grinding season of 1914-15 has just closed, and the accepted figures are that the crop consisted of 2,582,845 tons, valued at \$204,000,000, or more than \$68 per capita for every man, woman, and child on the island. The prospects are good for the new grinding season, which begins in December. The cane crop is well grown and a large yield is anticipated, some of the experts even going as far as to predict a 3,000,000-ton crop. It will undoubtedly be somewhat larger than that of 1914-15. The good prices have stimulated an increase in acreage to some extent. Less fertilizer has been used on the crop maturing, it is stated, than heretofore, owing to difficulty in obtaining the proper constituents, and this will tend to make the profits somewhat larger where this has been the case.

Until the end of April, 1915, sugar was quoted at so many reales (Spanish) per arroba (25 pounds), but since the first of May, the quotations have been in centavos, or cents, per pound, and will continue to be so quoted.

Many of the centrals and ingenios have taken advantage of the good prices, and easily obtained money to replace antiquated machinery with more modern equipment, thus being able to effect economies in production and at the same time increase output. Owners of these up-to-date mills feel sure that even when there is a return to low prices, after the European war, operations will still be profitable.

Big Orders for Machinery from United States.

The quantity of new sugar machinery already imported or contracted for is something tremendous, and all of it coming from the United States. Great efforts are being made to get installations complete for the season, which begins next month, and manufacturers in the States are rushing the work as rapidly as possible. Indications are that more equipment will be purchased during the coming year, the newer mills forcing the older ones, in self-defense, to bring their equipment up to modern standards. Rumors of new organizations to go into sugar making may be heard.

The tobacco growers have suffered considerably from the war. Germany was a large customer, taking \$1,109,506 worth in 1914. That market is practically eliminated, as also is Austria-Hungary. England has cut down importations. But the depression in tobacco is confined to certain areas and does not play a very important part in the general business situation. Exportations to South America and to Spain have increased.

The tourist season has opened up very favorably at Habana and the winter race meet is expected to bring a largely augmented crowd of winter visitors. Taken altogether, business conditions in the island are good and the time is opportune for the opening of new lines and pushing established ones.

MAKING AN EXPORT POLICY.

"Let me urge first and at all times that we be businesslike in our methods of getting foreign trade. Let me urge that we use the same sane, commonsense business methods which have been so successful in domestic trade." This was the keynote of the address on "The Making of an Export Policy," by Dr. Edward Ewing Pratt, Chief of the Bureau of Foreign and Domestic Commerce, delivered December 7 before the International Trade Conference held in New York under the auspices of the National Association of Manufacturers. He repeatedly urged sanity and businesslike methods in developing export trade.

After touching on the markets open to the exporter, Dr. Pratt took up the more technical problems that must be studied before an actual entry is made into foreign fields. "The problems which I want to raise with you here to-day," he said, "are all of them problems which you have settled with reference to your domestic business. They now present themselves in connection with export trade from a different angle. To these decisions you must apply your usual and ordinary business tests. They are quite ample."

If it is decided to embark in the export business, a decision must be made as to the executive direction of the export department of the business and as to the selection of possible markets. The speaker urged that no less an officer than the vice president should be put in charge of the export department, or if the business was too small for a separate department the executive head of the firm should give his personal attention to the foreign business. The selection of markets is also of primary importance. "If you can make that decision without personal investigation, well and good; if you can not, then go and see for yourself."

The subject of selling policies was dealt with at length by Dr. Pratt, who took up one after another the many technical questions with which the exporters and manufacturers are confronted when they come to decide just what methods they want to adopt in selling to foreign markets. The advantages and disadvantages of selling direct, selling through a manufacturer's agent, and dealing through an export commission house were taken up in turn.

A word of warning was extended to manufacturers who may be planning to dump goods in foreign markets at prices lower than charged in the domestic market. "If you have decided to dump a surplus product in foreign markets at prices lower than those which you charge in domestic markets, have you fully taken into consideration the fact that you have made the definite decision that you are not going into foreign trade?" asked the speaker.

Dr. Pratt maintained that if the manufacturer intended to do business direct he must be prepared to finance his shipments at 90 days' sight or longer. "If you want your money in advance or in cash, you must do business through a middleman," he explained. If the manufacturer intends to deal direct and extend the usual credits, he must also collect some of this information at first hand. And he must be prepared to run the usual credit risks.

NO SCARCITY OF STITCHING WIRE IN SCOTLAND.

[Consul J. N. McCunn, Glasgow, Nov. 10.]

There is no present scarcity of stapling wires and boxmaker's and bookbinder's wires in Glasgow. The chief source of supply is the town of Cleckheaton, near Birmingham, England. From interviews with several of the leading consumers it appears that the principal gauges used are 19 to 23 flat and round steel wire. Of course there is a very much smaller gauge used for binding time tables, diaries, and smaller classes of work. Wires are usually supplied in reels or spools and the average number of stitches on, say, No. 23 reel is 30,000 and the weight is estimated at about 8 pounds.

One of the leading printing and bookbinding firms in Glasgow states that for some time past it has been using iron wire in place of steel wire. The firm explains that its chief work is done on American wire stitching machines, and that it is thoroughly satisfied with the results.

Current Prices.

The market prices for the current month on several of the principal sizes of best round mild-steel stitching machine wire are:

Gauge.	Price per pound for—		Price per 112 pounds for 12 spools and over.
	1 to 5 spools.	6 to 11 spools.	
17/21	Ed. 15	\$0.11½	\$10.94
22	.15½	.12	11.12
23	.16	.12½	11.40
24	.17	.13	11.98
25	.18	.13½	12.52
26	.19	.14½	13.01
27	.21	.16	14.53
28	.22	.16½	15.74
29	.23	.17½	16.36
30	.24	.18	16.96

Spools charged at 15 cents each and credited when returned in good condition carriage paid. Hundredweight lots delivered carriage paid.

Bookbinders Buy Direct.

American exporters desirous of getting into this market should quote a price delivered here. Other manufacturers of wire follow this course, and most of them have agents on the spot who carry stocks and call on consumers regularly. Bookbinders always buy direct from manufacturers or through their representatives, and only the smaller printers take any interest in jobbers.

[Samples of the iron wire used by one of the leading Glasgow bookbinding firms may be inspected at the Bureau of Foreign and Domestic Commerce or its branches. A list of the principal users of stitching wire in the Scotch metropolis may be obtained from the same offices. Refer to file No. 69234.]

A list of the automobiles authorized to use the highways of the municipality of Cienfuegos, Cuba, with the names and addresses of their owners, has been forwarded by Consul Richard M. Bartleman and may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69,082. According to the latest statistics—those for 1914—the estimated population of the municipality was 81,502, and that of the city of Cienfuegos 34,546.

BELFAST OPENING FOR AMERICAN GLASSWARE.

[Consul Hunter Sharp, Belfast, Ireland, Oct. 22.]

There is a good demand here for plate and sheet glass, bottles used in the mineral water trade, table glass, and pressed glass, but the only way by which American manufacturers can hope to obtain a share in the trade of this market is by close study of its requirements. Some particulars of patterns and prices of glass articles which were formerly imported into Belfast from European countries are here given:

Plain glass jug (tankard shape)—to hold 1 pint, \$8.76 per gross; 1½ pints, \$10.22; 2 pints, \$10.95. These are packed in cases of 10 dozen to 12½ dozen.

Molded wine glass, 5 inch—\$1.82 per gross, in cases of 50 dozen.

Molded wine glass, with fern (sand blast), 5 inch—\$2.25 per gross, in cases of 50 dozen.

Tumbler, plain blown (light)—to hold ¼ quart, \$1.82 per gross, in 50-dozen cases; ½ pint, \$2.43 per gross, in 25-dozen cases; ¾ pint, \$3.16 per gross, in 15-dozen cases.

Tumbler, molded (heavy)—to hold ¼ quart, \$1.82 per gross, in 50-dozen cases; ½ pint, \$2.31 per gross, in 25-dozen cases; ¾ pint, \$3.65 per gross, in 15-dozen cases.

Tumbler, molded (heavy bottom)—to hold ¼ quart, \$2.43 per gross, in 50-dozen cases; ½ pint, \$3.04 per gross, in 25-dozen cases; ¾ pint, \$4.01 per gross, in 15-dozen cases.

Tumbler, flanged or bell shape (heavy bottom)—to hold ¼ quart, \$2.55 per gross, in 50-dozen cases; ½ pint, \$3.40 per gross, in 25-dozen cases; ¾ pint, \$4.01 per gross, in 15-dozen cases; up to \$4.38 per gross.

Carafe, plain (thin)—\$7.30 per gross, in cases of 10 dozen to 12½ dozen.

Carafe, key-and-circle pattern—\$10.22 to \$10.95 per gross, in cases of 10 dozen to 12½ dozen.

Thin tumbler, blown, key-and-circle pattern—to hold ½ pint, \$3.40 per gross, in cases of 25 dozen.

Popular Bottle Used in Production of Aerated Water.

A popular bottle used here for aerated water is a container for ginger ale holding 10 ounces and weighing from 16 to 17 ounces, with an approximate cost of from \$3.28 to \$3.41 per gross, delivered in Belfast. It is claimed by local manufacturers of mineral and aerated waters that American bottles are no stronger than those now being handled in this market, yet they are a much better color (clearer glass), and if American manufacturers could deliver bottles in Belfast at about the prices here reported, preference would be given to the American wares. Prices should be quoted for delivery in Belfast in all cases.

[For general local trade conditions interested persons are referred to the report from Belfast published in *COMMERCE REPORTS* for Nov. 29, 1915. Lists of the principal local firms handling glassware may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 68,960.]

Samples of rice from Sao Paulo, Brazil, accompanying a report from Consul Maddin Summers, telling of the short rice crop in that State, which was published in *COMMERCE REPORTS* for September 28, 1915, have been received, and will be loaned to interested persons on application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65,838.

COMMERCIAL NOTES FROM JAPAN.

[Press excerpts transmitted by Consul General George H. Scidmore, Yokohama, Nov. 2.]

Establishment of Sino-Japanese Bank.

Some time ago the Government invited Japanese bankers and publicists to submit their views on the proposed establishment of a Sino-Japanese bank. It is now stated that the authorities have finished drafting regulations for the proposed undertaking, which will be introduced in the next session of the diet. It is proposed, according to the "Yorodzu" (Tokyo), to establish the head office in Shanghai and branches in the principal cities of China, with a capital of 20,000,000 yen (\$9,960,000), which is to be raised from among both Japanese and Chinese. The new bank will be invested with the right of issuing paper currency and granted a subsidy by the Japanese Government when its profits are not sufficient to enable it to pay a 7 per cent dividend.

Increased Bank Deposits.

Before the outbreak of war the maximum amount of idle money in the hands of the Tokyo Associated Banks used to be about 50,000,000 yen (\$24,900,000), and the minimum 20,000,000 yen (\$9,960,000). Since the war it has been steadily increasing. On September 25 it amounted to 77,000,000 yen (\$33,346,000), and on October 23, 1915, it jumped to 83,000,000 yen (\$41,334,000), a figure unprecedentedly high, as compared with the 51,000,000 yen (\$25,398,000) recorded for the corresponding day of last year.

Shipbuilding Operations.

The Osaka "Asahi" says that in the various shipbuilding yards in Japan 65 steamers, of some 269,450 tons, are now under construction for Japanese and foreign firms. Eight vessels, representing 53,000 tons, have been built since the beginning of the year or are nearing completion, while the majority of the remainder are expected to be completed next year. Since the outbreak of the present war, the importation of steamers from abroad has been impossible, and because of this all the shipbuilding yards are unprecedentedly active.

The following shows the number and the total tonnage of foreign steamers imported into this country during the past five years: 1910, 20 of 40,268 tons; 1911, 49 of 129,454 tons; 1912, 39 of 84,968 tons; 1913, 72 of 205,200 tons; and 1914, 38 of 97,123 tons.

Extending Wool Top Producing Plants.

In view of the situation in the woolen market some of the Japanese woolen millers are inaugurating or increasing their top-producing plants. The Nippon Woolen Co., for instance, has decided to extend its tops mill, which was originally designed to turn over between 150,000 pounds and 200,000 pounds for the company's weaving department, and to produce between 250,000 pounds and 300,000 pounds in the future, with a view not only to increasing the supply to the company's weaving mill, but to meeting the requirements of other companies which have no top-producing mill of their own. An order has been placed with a certain French machine shop through its Osaka agent for the machinery to be installed in the new mill, which is planned to be in full operation by April of next year.

The Osaka Muslin Co., too, is reported to have decided to inaugurate the manufacture of tops in the near future as side work. Machines are reported to have been ordered from France.

Increased Demand for Glass Bottles.

With the progress of the war in Europe the demand for glass bottles manufactured in Japan is fast increasing in India, Australia, and other countries in the South Pacific. From Great Britain and the United States many orders are forthcoming. The demand is especially acute in Australia, and it is reported that very large orders have recently been received from that country. The manufacturers in Tokyo, Osaka, and other cities are now devoting their energies entirely to the filling of orders from abroad.

Shipments of Bean Oil for United States.

According to the Osaka "Asahi," the shipments of bean-oil from Japan to England and the United States are considerable. Since the latter part of November orders for 20,000 cases have been received from New York, and it is expected that further orders will be forthcoming from that quarter. From Dairen upward of 84,000 cases have recently been shipped to New York on the steamer *Lincoln*. Hitherto the oil has been forwarded exclusively to England, whence it is reshipped to the United States.

WORK OF COAST AND GEODETIC SURVEY IN ALASKA.

Wire-drag party No. 3 of the United States Coast and Geodetic Survey, working in Alaska under the direction of J. A. Daniels, closed work in the northern part of Clarence Strait on October 12. Remarkably fine weather was experienced throughout the season and good progress was made. A total of 338 square miles of area was covered by this party, 125 square miles in Revillagigedo Channel, between Twin Island and Lord Rocks, and 214 square miles in Clarence Strait, from Guard Island to Snow Passage. This is a larger area than has heretofore been covered by a single drag party in one season. Several important dangers were found, two of which had been marked with buoys by the Bureau of Lighthouses before the party left Alaska. Between Ketchikan and Snow Passage there are now five rocks marked by buoys that have been found with the drag in the past two seasons. In addition to the wire-drag work, triangulation and topography were made a part of the regular work of the party.

Wire-drag party No. 4, under L. O. Colbert, also included triangulation and shore-line revision in its program of work. The area covered with the drag extends from the southern entrance to Shakan Bay, around Point Baker to Point Colpoys. A small gap in Snow Passage now separates the limits of the areas dragged by parties Nos. 3 and 4.

The work in the vicinity of Port Baker was difficult, owing to adverse currents. Tidal swirls in varying directions swept the launches off their courses, and the equipment was endangered by grounding on shoals previously found. The area dragged by party No. 4 was 170 square miles.

AMERICAN INTERESTS AFFECTED BY CUBAN DECREE.

[Special Agent Garrard Harris.]

The very considerable American interests in the island of Cuba, and the Isle of Pines, as a part of that Republic, are affected by the latest Cuban presidential decree on the subject of the conversion of contracts, which heretofore by their terms were payable in Spanish or French gold. The decree applies to all classes of contracts, whether for land payments, services, or deliveries of merchandise.

This recent and probably the final decree looking to readjustment of the financial system of Cuba is important in another particular, in that it is a virtual recession from the first decree of September 11, modified supplementally a few days later, in which the rate at which the Spanish and French gold coins of \$5.30 value might be converted to the new Cuban money was given. The first decree, of September 11, fixed the conversion rate at \$5 (Cuban and United States currency, now the only legal tender in the Republic). The modification of a few days later put the conversion rate at \$4.82, at which it has stood, and at which the great bulk of foreign gold in commercial circulation has been exchanged.

This last decree of November 22 on the conversion of contracts very plainly departs from the former pronouncement and allows the rate to be agreed upon by the parties to the contract, for there are several allusions to the "agreements regarding the conversion of foreign currency into legal circulating medium" and "the conversion of money agreed upon" and "the rate of exchange," which leaves the contracting parties free, manifestly, to make their own rate of conversion and exchange such as may be expedient or mutually agreeable and satisfactory to themselves. The new agreements are relieved of registration costs and tax fees.

Chief Provisions of the Decree, as Affecting Contracts.

In all contracts which are registered as public documents the agreements regarding the conversion of foreign currency into legal circulating medium can be made by deed before the various authorities. * * * In the document it is necessary to state that both interested parties appeared (giving details of names and character in which they appear, etc.), followed by a clear reference to the original deed or contract, date, official authorizing the same; and if made before a public notary, the number of the document; limiting themselves in the substantial part to the amount involved in foreign currency and the rate of exchange, and amount to be paid in legal circulating medium; referring also to the volume, page, and number of the registered property inscription or document, as the case may be.

The conversion of money agreed upon in these documents, when they contain no other stipulations affecting the original document, will be exempt from the payment of realty taxes, or taxes on the transfer of property, and the document need not be presented to the liquidating tax office.

With the authorized copies of these documents, must be presented, in the property or mercantile register, the original deed or contract, and the contents will be noted by such register in the entry subsequent to the deed affected by the same. These agreements go into effect with

reference to third parties from and after the date of registration. The decree was effective November 22, 1915.

[Articles on Cuban currency changes were published in *COMMERCE REPORTS* for Oct. 6, May 21, May 5, and Mar. 11, 1915. A copy in English of the currency law has been on file in the Bureau of Foreign and Domestic Commerce since last February, and will be loaned to those interested on request.]

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D.C.
Maynard, Lester.....	Amoy, China.....	do.....	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.....	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willis R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D.C.
Messersmith, George B.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Dec. 10	(a)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street New York City.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, New York, Detroit, Chicago, Minneapolis, Seattle, and Tacoma, concluding at the latter place Dec. 10, 1915. He will confer with business men at these places who are interested in trade in China.

PETROLEUM IN COLOMBIA.

[Consul Isaac A. Manning, Barranquilla, Nov. 8.]

The petroleum deposits of Colombia continue to attract attention from capitalists; and, while the only active exploration work is being done by the Standard Oil Co. in the Sinu region, numerous other syndicates, principally from the United States, have recently sent investigators into this country.

Petroleum seepage, heretofore unrecorded, have been found in all the Departments bordering on the Magdalena River as far south as Girardot, where the railway connects the steamboat traffic of the river with Bogota. In the Magdalena Basin some optional contracts have been taken, which, if made operative, will call for the commencement of active boring operations on the lands during the next eighteen months. In most of these cases the names of the principals have been reserved.

The Colombian Congress has had under consideration several legislative bills governing petroleum exploration, but so far nothing has been done with any of them. As Congress will probably adjourn on November 18, it is thought unlikely that any important legislation will be adopted regulating this industry.

TRADE DEVELOPMENT IN SIBERIA.

[From report of special Canadian trade commissioner, published in *Weekly Bulletin of Canadian Department of Trade and Commerce*, Oct. 4, 1915.]

For purposes of trade development Siberia falls into two divisions: Western and eastern Siberia. In the western division, stretching from the Urals to a line drawn through Irkutsk, the local trade conditions and their controlling influences may be assimilated to those operating in European Russia. In eastern Siberia, including the Trans-Baikal Province, however, special geographical and economic factors tend to make this remote region one apart, and the trade must therefore be dealt with by itself.

Siberia as a whole may be said to be peculiarly dependent upon foreign-trade exchanges for its prosperity. The population of the country, now 13,000,000, is being constantly recruited by migration from European Russia, the net migration for the fifteen years from 1898 to 1912 having been no less than 2,750,000. It is a fact, moreover, that the producing and consuming power of this population is relatively much higher than that of any similar proportion of the Russian people in the rest of the Empire.

One of the most important factors in the development of Siberia is its transportation facilities. The whole hydrographic system that supplements the Transsiberian Railroad is bisected by that railroad, and for thousands of miles, north and south of the line, supplies the most splendid means of cheap access to vast areas during the greater portion of the year. These facilities are being continually increased by the construction of new railways and by river-improvement works, which aim to connect the whole river system of the country for practical transportation purposes.

During the last 10 years the home trade of Siberia has grown from \$30,900,000 to \$77,250,000 annually. Trade expansion is shown by the business of the fairs and markets, the carrying trade returns of the chief centers of distribution, the growth in the number of banks, forwarding houses, insurance offices, etc., and the extraordinary activity of the building trade. There is everywhere an increasing tendency toward intensive and advanced methods of exploitation of the chief products of Siberia. The growth of butter and egg exports has been phenomenal, when one considers the problems of transportation. Bacon, a more recent article of export, is rapidly becoming a trade of first-class importance. The census figures of 1910 give the number of factories of all kinds as 14,160, with an output valued at \$38,625,000, an increase of 75 per cent in the number and of 150 per cent in production over the figures for 1900. [The Russian returns class as factories all small industries employing labor.] The chief increase in these establishments has been in connection with flour mills, sawmills, breweries, etc. Practically the entire equipment of these and similar undertakings was imported.

Trade Methods—Credit—Business Centers.

Moscow merchants control fully 50 per cent of the trade of western Siberia. These firms have branches in the principal centers, but the purchases for their stores are made in Moscow. The growth of the country and the establishment of strong local independent firms, however, are gradually bringing about a change and direct buying must ultimately become a general practice. Most of the foreign

firms doing business in Russia pay little attention to the Siberian market; they are content to place their representation in the hands of a single firm in European Russia, with the result that their interests suffer. The practice of the agent is to appoint a subagent for Siberia, and the fact that both intermediaries are looking for a substantial profit increases the cost of the goods and thus restricts sales. By trade grouping and by sending out at regular intervals competent travelers speaking the language and carrying a full line of samples to the chief centers, German firms have been able to build up a direct trade on a satisfactory basis. Financial strength to carry on trade is a greater necessity in western Siberia than in European Russia, and trade grouping by outside firms wishing to enter that market is of first importance. While the profits are great, expenses also are high, and it is a wise policy to share them in testing a new market. Local agents urge that responsible representatives of grouped industries should visit the country and get into touch with local conditions.

The granting of extended credit has been an important factor in obtaining business, for there is little liquid capital in a country during the early stages of colonization and agricultural development. In practice, therefore, the foreign exporter must be prepared to carry on business with his own capital. The western Siberian market is safe, however, if care is exercised in granting credit. Except in the case of agricultural, mining, and general machinery, the average credit of 6 to 9 months from date of delivery of goods—which generally takes 3 months from remoter countries—might have to be faced, although it was stated that a modification of these terms might be arranged. It is useless to think of opening up business under other conditions; the cost of credit can be realized in the prices. Trial orders must not be ignored, but must receive, with the larger orders, the closest attention. Bank discounts are as follows: On prime bills, 3 months, 6½ per cent; 6 months, 7 to 7½ per cent; 9 months, 9 to 10 per cent.

The most advantageously placed business centers in western Siberia are Omsk, Tomsk, Tobolsk, Novonikolaievsk, Kransoyarsk, and Irkutsk. The first and the last three are situated at points where the Transsiberian Railway crosses the principal rivers of the country, which provide cheap transportation over vast areas during the greater portion of the year. Omsk and Novonikolaievsk are of special importance as distributing centers for agricultural machinery, etc., and the Government maintains at those points agricultural experiment stations and official testing grounds for agricultural machinery and implements.

Credit Associations and Their Effect in Agricultural-Machinery Trade.

Among the factors facilitating trade in western Siberia must be considered the spirit of affiliation inherent in the Russian peasant class, which has given birth to an important cooperative movement. Credit associations, consisting of groups of peasants to whom Government aid is given in the shape of credit on the joint responsibility of the group, exist in large numbers and are multiplying as the newer districts are opened up and settled. There are 300 official agricultural machinery and implement depots in Siberia, which advance farm equipment to poor settlers at low prices and on easy terms of

payment. The dairying interest in western Siberia is represented by a union comprising 530 societies, with 120,000 members, who deal only through the societies. The societies are bound by their statutes to the sale of dairy appliances only.

In the agricultural-machinery business the effect of the facilities offered by these aids has been the withdrawal of many wholesalers from business. While this is perhaps regrettable in a sense, it has its compensations for the manufacturer, who, by selling to the credit associations, is on safer ground. His rate of profit, it is true, will be diminished, but in view of the probability of a larger turnover, the aggregate profits should be greater, as the consumption of agricultural machinery must inevitably increase. The shorter credit demanded by these associations enables the manufacturer to work with a smaller capital. They possess the local knowledge that enables them to sell to the right people, and, most important of all, they possess the means of securing a relatively quicker liquidation of debts and of enforcing payment in doubtful cases by tactful pressure through their members. Their losses from bad debts are said to be practically nil. The wholesaler, on the other hand, has still the best class of farmers with whom to trade, and, in practice, prices do not fall below a figure offering a reasonable profit. It was stated that this has been demonstrated in the business transacted by the official agricultural depots, which are finding by experience that the cost of administration and the minimum losses through bad debts will not permit them to sell at the low prices originally fixed. Their competition, therefore, has not been the ruinous one predicted at the outset. The credit associations by their statutes are limiting their dealings to a small number of articles, and the general merchant is thus relieved of a portion of his business that caused him anxieties and losses not commensurate with the accrued profits.

Sales of Agricultural-Machinery Depots.

Particulars of the operations of the cooperative and credit associations are not available, but those of the official agricultural machinery depots, furnished by the directors of the Colonization Department at Omsk, show the following sales in recent years: 1910, \$2,560,000; 1911, \$3,502,000; 1912, \$4,347,000; 1913, \$3,760,000. Of the debts contracted between 1897 and 1907 only 2½ per cent remained unpaid at the close of 1913. There are between 250 and 300 of these depots in operation in Siberia, which at the end of 1913 had machinery in stock valued at over \$2,500,000. The sales are generally made on the basis of payment of half of the value of the article acquired during the first year, the remainder being paid off in installments according to the ability of the settler, which is governed by the result of the harvest.

The character and value of the chief classes of machinery, implements, etc., sold by the official Siberian depots in 1913 were as follows:

Articles.	Number.	Value.	Articles.	Number.	Value.

* Pounds.

A visit was paid to the farm-machinery testing grounds on the Irtysh River, near Omsk, where excellent experimental work is carried out. Of special interest were the arrangements for testing the various kinds of farm machinery and implements under the direction of the Colonization Department. Foreign agricultural implements and machinery are admitted on equal terms with those of Russian manufacture and are carefully and impartially tested. The relative efficiency and suitability for their respective purposes under Siberian climate and soil conditions are also determined and made public. Specimens of the most suitable machines of all kinds are on view for the visiting farmers, information is supplied, and demonstrations are given if necessary.

Agricultural Machines and Implements Wanted.

Siberia, being practically without manufacturing industries, presents a large and growing market for almost all kinds of manufactured articles, of which agricultural machinery and implements stand easily at the head. In complicated machines, such as self-binders, reapers, mowers, and rakes, the International Harvester Co.'s Moscow works dominate the position; further supplies are obtained from the United States and Canada, which arrive via the Baltic port. Plows are now mainly of Russian manufacture, roughly but strongly finished, all patterned after the Sack or Eckert (German) types. The walking plow is used almost entirely, combined with a sower, which drops the seed into the open furrow, the next following share covering it. Two and three furrow plows of this description sell for \$17 to \$21; four to seven furrow, with seeder, \$20 to \$44. The shortage of plows in western Siberia is already considerable. Disk drills and disk harrows have become popular. The large Anglo-Russian factory at Ekaterinoslaf manufactures a good disk drill, which suits the soil conditions of Siberia. The disks are fitted at small intervals, four instead of the usual six inches; they are also adjustable, a point in which the Russian disk drill is considered superior to the imported article. Potato diggers are also in demand; they should be lighter than the ordinary American pattern and should be provided with a more stable delivery table. In regard to cultivators, any improve-

ment in construction that would render the teeth less liable to be clogged by weeds would insure good sales. Small thrashing machines, with horse gears, are used in great numbers, and the supply is generally short. They are being successfully imported from Great Britain in competition with the local make. The price at the factory for the 4-horsepower size is \$62; 6-horsepower, \$72; 8-horsepower, \$82.

Tractors—Flour-mill Machinery—Farm Wagons.

Oil tractors are preferred in western Siberia, as the prevalence of alkaline water is against the steam-driven engine. Lightness is a desirable feature; the heavy engines with their narrow wheels pack the soil and prevent growth of vegetation. Tractors of the "caterpillar" type have been introduced. A few sets of these for plowing have been disposed of among the larger landowners, and the prospects for increased business are good. The country, however, is still relatively poor, and the general use of expensive farm machinery must be a matter of slow growth.

Flour-mill machinery (roller process) to grind 1,000 to 3,000 poods (18 to 54 short tons) of grain in 24 hours is in increased demand, as well as oil engines of the Diesel type, of 50 to 80 horsepower, required to operate them. Extra heavy flywheels are preferred. The rapid rise of the dairying industry in western Siberia is responsible for a large demand for separators, which have hitherto been supplied by Germany and Sweden.

Farm wagons built of ash, with oak hubs, in three sizes, are needed in large numbers, the actual source of supply in the Caucasus and Northern Russia being unable to meet the present requirements. Prices range from \$39 to \$41 each, delivered at Omsk, but these prices are exceptional and are not likely to be maintained in normal times.

Hardware and Tools—Sewing Machines.

Stocks of hardware and tools, which are almost exclusively of German origin, are being rapidly depleted. In one typical store, with a business of \$1,550,000 a year, the following articles were noted as being urgently required: Common cutlery, skates, razors, barber's hair clippers, pumps (hand pumps especially), screw-cutting lathes, stocks and dies, bolts and nuts, pulleys, valves and fittings for radiators, electric-light fittings, lamps, bell pushes and fans, meters, dynamos, leather belting, common oil burners, clothes wringers, drills and tools, files, frame saws, handsaws, drilling machines, common shovels and locomotive shovels, freezing machines, scythes, hay forks, enameled ironware, tools of every class, and builders' hardware.

Siberia offers a promising market for sewing machines. Outside of those made in Russia by a well-known American company, the greater number sold are of German origin, and supplies of the latter are now exhausted. The machines are bought on the basis of extended monthly payments. The following are the normal prices of these machines, delivered, duty paid, at Omsk: Long shuttle, \$9.12; ring shuttle, \$12.36; central spool, \$13; vibrating, \$10.09. All machines are to be made with covers, or, if without, they are \$1.03 cheaper. The terms are nine months' acceptance from the date of shipment, duty and freight to be paid by the purchaser.

STEAMSHIP CONNECTION WITH DUTCH EAST INDIES.

[Consul B. S. Bairden, Batavia, Java, Oct. 18.]

The Java Pacific Steamship Line will dispatch its first steamer, probably from Batavia as first port, about December 15, 1915, such steamer being the *Arakan* of the Rotterdam Lloyd Steamship Co. About January 15, 1916, the steamer *Bawean* of the Maatschappij Nederland will follow.

These steamers will be cargo boats, but the steamers leaving probably in February and March, 1916 (the dates of sailing from Batavia are not yet fixed), will be the two steamers of the Java-China Line (the *Tjondari* and the *Tjikembang*), which have limited first-class passenger accommodations.

At first the Java Pacific Line will run four boats of about 9,000 tons deadweight capacity and the ports of call after leaving Java will probably be Macassar, Manila, Hongkong, Moji, San Francisco, and perhaps Puget Sound.

The agents in Batavia state that this line will not receive a subsidy from the Netherlands Government.

Freight and passenger schedules will be furnished this consulate as soon as they are published.

The Koninklijke Paketvaart Maatschappij (the Royal Packet Co.) has a steamship service from Java ports to Bangkok; such service, however, is very irregular.

The agents for the Dutch regular steamship service between Java and New York are issuing through bills of lading for Bangkok, with transshipment at Batavia or other Java ports. Some 60 tons of such American cargo has been received recently from New York and will go forward to Bangkok at the end of this month. Rates of freight on goods from New York to Bangkok via Java can not be quoted, as such rates are liable to change.

CONDITION OF EGYPTIAN ONION CROP.

[Consul Arthur Garrois, Alexandria, Nov. 4.]

The bulletin of November 1, 1915, of the Egyptian Ministry of Agriculture reports as follows in regard to the present condition of the onion crop during October, 1915: The weather is favorable and the water supply ample. Transplanting has commenced in Beni Suef and Minia. Elsewhere, weeding, hoeing, and manuring are in progress. A larger area than last year is being sown this season on the sandy lands of the banks and islands on the Nile.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

- Hosiery, underclothing, etc., No. 19459.**—A manufacturers' agent in South Africa informs an American consular officer that he is desirous of handling hosiery, underclothing for women and children, and piece goods. Interested firms must be prepared to give sole-agency rights for South Africa on a commission basis. Correspondence may be in English. References furnished.
- Corset tapes and steels, No. 19460.**—An American consular officer in England reports that a firm in his district desires to purchase large quantities of white and gray corset tapes, and coil steels varying in lengths from 7 to 14½ inches, and from 8 to 14 inches. Steels should be guaranteed rust proof. Samples of the tape and steels have been forwarded, and may be inspected at the Bureau or its branch offices. (Refer to File No. 69166.) Bank references given.
- Paper, No. 19461.**—A report from an American consular officer in India states that inquiry has been made for quotations on white paper used in the manufacture of playing cards, and also chromo paper used in preparing labels. Samples of the paper desired may be examined at the Bureau or its branch offices. (Refer to File No. 69294.)
- Cotton goods and burlap sacks, No. 19462.**—A firm in South Africa informs an American consular officer that it desires to correspond with textile manufacturers for the purpose of buying unbleached cottons in widths of 24, 28, 30, 32, 34, and 36 inches; and white shirtings and indigo drills in the same widths. The firm is also interested in burlap sacks, using from 25,000 to 30,000 annually. Samples of the cotton goods may be examined at the bureau or its branch offices. (Refer to file No. 68920.) It is requested that samples and full information be sent with the first letter. Correspondence should be in French, Spanish, or Portuguese. Bank references furnished.
- Automobiles, No. 19463.**—The commercial agent in charge of the bureau's branch office in Chicago reports that a firm in the West Indies desires to communicate with manufacturers of light automobiles.
- Sulphate of copper, No. 19464.**—An American consular officer in Portugal reports that there is a demand for immediate delivery of sulphate of copper amounting to about 12,000,000 pounds, percentage of mineral to be about 98 per cent. Prices and terms on 100 tons should be quoted by cable.
- Motion-picture films, No. 19465.**—A report from an American consular officer states there is a demand in Italy for positive and negative films for cinematograph purposes. It is stated that firms are unable to produce motion pictures for want of films, and 1,000,000 feet would be a minimum requirement. Correspondence may be in English.
- Chemicals and tanning materials, No. 19466.**—A report from an American consular officer in Greece states that a commission agent is desirous of being placed in communication with firms manufacturing chemicals and materials for tanning leather. Correspondence must be in French or modern Greek.
- Mica, No. 19467.**—A commercial agent of the Bureau reports that a firm in Turkey is anxious to purchase mica in polygonal, irregular leaves and also mica splitting for the making of mica-nite and powdered mica.
- Fire apparatus, No. 19468.**—An American consular officer in Costa Rica reports that there is a possible market in his district for fire apparatus. It is suggested that catalogues and full information be sent.
- General representation, No. 19469.**—A firm of commission agents in Brazil informs an American consular officer that it wishes to act as representative in that country for firms desiring to enter that market. Bank references given.
- Knitting machine needles, No. 19470.**—An American consular officer in the United Kingdom reports that a firm in his district is desirous of purchasing knitting machine needles. The report states that the inquirer's first order would be for 100,000 needle if information is satisfactory. Samples of the needles desired may be inspected at the Bureau or its branch offices. (Refer to file No. 69362.)

CHANGE IN NETHERLANDS EMBARGO LIST.

[Telegram from American consul general, Rotterdam, received Dec. 4, 1915.]

The embargo has been raised on walnut trees less than 3 meters (about 10 feet) in height.

VISITS OF FOREIGN-TRADE REPRESENTATIVES.

Several important foreign connections for American manufacturers have been made as a result of recent visits to Philadelphia, it is reported by the cooperative branch office of the Bureau of Foreign and Domestic Commerce in that city.

A business man from Adelaide, Australia, informed the representative of the Bureau that he had made connections with no less than 12 manufacturers to represent them in Australia. A New Zealand business man made connections with several concerns, one of which was a large manufacturer of shoe leather, and another a manufacturer of animal and poultry food. Three Chinese delegates to the Panama Exposition also made connections with the leather manufacturer already mentioned, and probably also with a manufacturer of carpets, on a visit to Philadelphia.

CANADA'S WHEAT YIELD FOR YEAR ESTIMATED.

[Extract from Monetary Times, Nov. 26, forwarded by Vice Consul Horace M. Sanford, Ottawa, Canada.]

According to an official estimate of the wheat yield in Canada this year, out of a total yield of 336,258,000 bushels there will be an exportable surplus of 228,132,000 bushels. The average loss in cleaning, and allowance of 10 per cent for grain not of merchantable quality, is estimated at 33,625,000 bushels. The total amount retained for seeding next year's crop, say 14,000,000 acres, at 1.75 bushels per acre, is placed at 24,500,000 bushels. The amount required for food, averaging 6.25 bushels per head, is estimated at 50,000,000 bushels. The quantity of wheat and wheat flour estimated as available for export is 85,558,000 bushels in excess of the previous high record of 1913-14 and represents nearly 68 per cent of the total production of 1915.

AUSTRALIA HAS LARGE SURPLUS WHEAT CROP.

[Consul General J. I. Brittain, Sydney, Oct. 27.]

The problem of obtaining vessels to carry the Australian wheat crop to Europe is a serious one. The crop in 1914 was so short, in consequence of the excessive drought, that it was found necessary to import large quantities from the United States and Canada, but this year's surplus crop, available for export, is estimated at 100,000,000 bushels, to move which would require about 900 vessels of about 3,000 tons each. The present price asked for tonnage where vessels are available is 90s. (\$21.89) a ton, or about three times the usual freight rates.

In consequence of the distance from Australia to Europe it is pointed out that vessels can make practically three voyages from the United States or Canada to Europe while making one from Australia. In past years sailing vessels have been employed to a large extent in moving the Australian wheat crop, but in consequence of the dangers likely to be encountered the proposition is not so attractive as ordinarily. Farmers have been advised to hold their wheat, instead of rushing it to Sydney, where it might overtax the storage capacity available.

JAPAN'S LOOFAH CROP DECREASED; CHILLI CROP LARGER.

[Extract from Japan Chronicle, Oct. 26, forwarded by Consul George N. West, Kobe.]

It was at first expected that this year's loofah crop (snake-gourds) would amount to about 100,000 bales, but the unfavorable weather experienced toward the end of August has decreased the yield to half the quantity. The result has been an upward tendency of the market. The present quotation is more than 100 per cent above that reported at the beginning of August. Stocks on the market are scarce, while only about 15,000 bales remain at the producing center, according to the Asahi. The market is naturally very strong.

It is expected that this year's "Takanotsume" chillies will be much more abundant than last year, amounting to between 500 and 600 tons. Forward contracts for export have been made at about \$10 per 100 kin (kin=1½ pounds) to the quantity of about 200 tons so far. Lately purchasers started operations in Sanuki and other producing centers, with the result that farmers have begun to put up their prices. The Kobe market was immediately affected, and quotations now stand at \$20, while about \$13 was quoted only a few days ago.

JAPANESE SPINNING COMPANIES AMALGAMATED.

[Extract from Japan Chronicle, Oct. 26, forwarded by Consul George N. West, Kobe.]

Negotiations for the amalgamation of the Amagasaki and the Nippon Spinning Co. have arrived at a final stage. Business operations of the Nippon Co. will be taken over from December 1 by the Amagasaki Co., but the legal amalgamation of the two companies will be registered as from February 1 of next year. The amalgamated company will be the largest of its kind in Japan except the Kanegafuchi Spinning Co.

AMERICAN TRADE FOR ONE WEEK.

The imports, duties collected, and exports for the week ending December 4, 1915, at the 13 principal customs districts of the United States, handling 91 per cent of total imports and exports, based on transactions in the month of September, 1915, follow:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah).....	\$49,598	\$1,067	\$1,199,592
Massachusetts (Boston).....	2,082,848	158,880	3,284,631
New York.....	23,868,403	3,114,778	63,713,187
Philadelphia.....	1,539,335	261,475	1,214,500
Maryland (Baltimore).....	20,053	59,002	2,377,051
Virginia (Norfolk).....	41,363	25,543	874,801
New Orleans.....	1,103,181	10,210	4,175,603
Galveston.....	34,745	1,492	5,575,789
San Francisco.....	2,063,641	93,736	388,181
Washington (Seattle).....	2,630,427	18,421	3,062,091
Buffalo.....	766,671	25,629	1,062,656
Chicago.....	514,756	144,897	64,063
Michigan (Detroit).....	679,329	49,262	3,269,844
Total.....	35,614,956	3,974,992	10,541,451

The cotton exported during the week ending December 4, 1915, at the 12 principal customs districts of the United States follows:

Districts.	Bales.	Districts.	Bales.	Districts.	Bales.
Georgia.....	15,389	Philadelphia.....		San Francisco.....	109
Massachusetts.....	622	South Carolina.....		Washington.....	4,258
Maryland.....	2,101	Virginia.....		Total.....	114,109
New York.....	11,996	Galveston.....	60,764		
North Carolina.....		New Orleans.....	18,405		

CALAIS EXPORTS TO UNITED STATES.

[Consul James B. Milner, Calais, France, Nov. 18.]

Exports from Calais to the United States, as certified at the American consulate, amounted to \$844,707 for the quarter ended September 30, 1915. Laces made up a considerable portion of this total, the chief item being cotton laces. The articles and amounts were:

Articles.	Value.	Articles.	Value.	Articles.	Value.
Embroideries:		Linen suitings.....		Nettings:	
Silk and cotton.....	\$1,278	Nets:	\$196	(cotton.....	\$73
Silk and tinsel.....	3,980	cotton.....	879	Silk.....	125
Laces:		(cotton and silk.....	261	Veilings, silk.....	2,413
Cotton.....	706,465	Silk.....	5,360	Total.....	\$44,707
Silk.....	506,819	Tinsel.....	209		
Silk and cotton.....	18,521				
Tinsel.....	15,328				

SALE OF DANISH VESSELS FORBIDDEN.

[Consul General E. D. Winslow, Copenhagen, Oct. 8.]

The Danish Government has made public a ruling that no Danish tonnage registered and entitled to fly the Danish flag will hereafter be allowed to be sold, transferred, or set over to any citizen or corporation of a foreign power. Vessels holding Danish registration must continue to fly the Danish flag and no transfers will be permitted.

SCARCITY OF FURS IN THE LONDON MARKET.

[Consul Clarence Carrigan, London, England, Nov. 9.]

Interesting figures are published to illustrate the present scarcity of furs in this market, and the corresponding advance in prices. It is stated that the shortage of labor and other conditions caused by the war have advanced prices in general from 40 to 50 per cent.

Figures given by one London concern, showing how their sales have fallen, are: Of musquash, 6,700,000 skins were sold in January, March, and June of 1914, while in three months of the present year only 2,500,000 were sold. The supply of American opossum fell from 1,051,000 to 262,000; mink from 125,000 to 20,000; red fox from 67,000 to 24,000. The number of skunk skins sold dropped from nearly 1,000,000 to 263,000; gray fox from 44,000 to 4,000, and otter from 10,000 to 2,000. The sales of badger dropped from 14,000 to 3,000. In 1914, 275,000 ermine skins were sold, the figures dropping in 1915 to 67,000. There has been a drop of 50 per cent in the demand for squirrel, and a fall of as much as 80 per cent in the demand for chinchilla. The sale of moleskins totals this year some 700,000, while in 1914 it was well over 1,000,000.

London dealers in general seem to expect the present high prices to go even higher. Only four kinds of furs have shown an increase over the sales of 1914. These are opossum, wombat, and red fox, coming from Australia, and marten, of Japanese origin. Prices of American opossum are said to have shown at the autumn sales an increase of 75 per cent over those of last March. Raccoon has increased in price at the same rate. Skunk is in strong demand at an advance in price of 60 per cent, while red fox has advanced 40 per cent in value.

The scarcity of furs and the high prices, as outlined, are largely the result of the fact that so many of the trappers and hunters in the producing countries have left their ordinary occupations.

[Previous articles on the London fur market were published in **COMMERCE REPORTS** for May 8, May 29, and November 11, 1915.]

AMERICAN DEMAND FOR JAPANESE MATCHES.

[Japan Gazette, Oct. 29.]

The president of a match-manufacturing company in Kobe, who has just returned from a tour of inspection in the United States, says that since the outbreak of the war there has arisen a demand for Japanese matches on the American market. This is because the import of matches from Sweden and other European countries to the United States has been suspended on account of the war. Americans prefer matches of good quality and do not care so much about the price. The Japanese manufacturers in Osaka have recently forwarded to the United States a quantity of matches of the best quality, these differing radically from those used in Japan or shipped to India and other places in the South Pacific. This accounts for the increasing orders from America. The annual imports of matches from Sweden to the United States has in recent years amounted to over 1,000,000 yen (\$490,000).

AMERICAN SHOE POLISH POPULAR IN STAVANGER.

[Consul Maurice P. Dunlap, Stavanger, Norway, Nov. 5.]

Although a few years ago the only shoe polishes on the market in Stavanger were English, German, and Scandinavian, an American brand is now probably as popular as any foreign make. It sells for about 7 cents a small tin and 11 cents a large tin, in sizes corresponding to 5 and 10 cent sizes in America. One dealer who sells many kinds of polish says that he has known the American make for only about a year, but that now he recommends it to buyers and finds a good demand for it.

Most of the shoe polish used in this district is of Norwegian manufacture and of a cheap quality, selling to consumers for 3 cents, being a small-sized box. That there is a market for a better quality of goods at a higher price is proved by the successful introduction of the American brand. American shoes have made great advances here even over those of Norwegian manufacture, and it would seem logical that American shoe polish should follow the American shoe.

As there are only about 150,000 people in this district it would seem that shoe-polish manufacturers interested in this market could reach it more satisfactorily through an agent covering a larger territory as the whole of Norway, or Scandinavia. Such an agent would probably do better if located at Christiania, the capital.

Merchants dealing in this class of goods usually expect three months' credit or pay "cash on arrival." English is generally understood. There is a duty on shoe polish amounting to a little less than 2 cents a pound (including container).

[The names of certain Stavanger firms that might be interested in American shoe polish may be obtained from the Bureau of Foreign and Domestic Commerce or one of its branch offices. Refer to file No. 69496.]

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D.C.
Maynard, Lester.....	Amoy, China.....	do.....	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.....	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D.C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(c)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

HEATING AND COOKING STOVES IN AUSTRALIA.

[Commercial Attaché William C. Downs, Melbourne.]

The market in Australia for iron heating stoves is practically nil. The island continent of Australia lies between 10° 41' and 39° 8' of south latitude, which in the northern hemisphere would correspond to the northern boundary of Costa Rica, in Central America, and Washington, D. C. Over one-third of the country is within the Tropics, and in no part is very cold weather to be expected. What heating is required is furnished by open grates burning coal or wood or, especially in the country districts, by kerosene stoves of the familiar types made in the United States. In the cities where gas and electricity are available gas logs and electric stoves are largely used.

Cooking Stoves in Use.

For cooking stoves the market has been held by a type of cast-iron stove introduced many years ago by well-known British firms, their respective styles being known as the "Beaconlight" and the "Dover." They are commonly sold in three sizes, as follows:

Kind.	Stove.			Oven.			Weight.
	Width.	Height.	Depth.	Width.	Height.	Depth.	
	<i>Inches.</i>	<i>Inches.</i>	<i>Inches.</i>	<i>Inches.</i>	<i>Inches.</i>	<i>Inches.</i>	<i>Pounds.</i>
"Beaconlight";							
No. 7.....	29	23	27	15	8½	13	271
No. 8.....	32	24	30	18	9½	18	328
No. 9.....	37	25	35	19½	11½	19	398
"Dover";							
No. 6.....	26	28	17	12	8	12	184
No. 7.....	29	23½	19	14	8½	14	180
No. 8.....	32	24	21	16	9	16	216

The stoves are adapted to burn coal and wood. The wholesale price in England for the No. 6 "Dover" is about 20 shillings (\$1.86).

There are also local manufacturers in Perth, Adelaide, Hobart, and Sydney who make stoves copied from the above styles in competition with the British makers.

Importation and Production of Stoves.

It is impossible to determine what is the value of stoves imported into Australia, as in the government statistics this item is grouped under the general heading "Manufactures of metal, not elsewhere included." The Commonwealth production of stoves and ovens is stated to have been about \$1,265,000 for the calendar year 1913, but this total also includes gas stoves and register grates. The largest local manufacturer testified before the Interstate Commission that the local makers meet about 10 per cent of the total Commonwealth consumption.

It is evident from the above that the importation into Australia of cooking stoves is of large volume, and is likely to continue for some time to come, although with the development of the iron and steel industry in Australia it may be expected that the local production will increase, especially in articles of which the principal component is cast iron.

It is the opinion of hardware merchants that it is almost impossible to replace the British styles mentioned. Similar styles at competitive prices might find a market.

Iron cooking stoves are handled by the wholesale hardware houses. Gas stoves by the gas companies and by the hardware dealers.

PARCEL-POST CONVENTION WITH ARGENTINA.

The text of the parcel-post convention between the United States and the Argentine Republic, which went into effect October 15, has been printed by the United States Government with the 14 articles of the convention in Spanish and English in parallel columns. It is provided that exchanges of mail under this arrangement shall, until otherwise mutually agreed upon, be effected through the exchange post offices at New York on the part of the United States and at Buenos Aires on the part of Argentina, under such regulations relative to the details of the exchange as may be mutually determined to be essential to the security and expedition of the mails and the protection of the customs revenues.

Forms which are included in the publication give blanks for "certificates of mailing," to be received by the sender from the post office where the parcel is mailed, for customs declarations, and for the descriptive lists of packages sent in each dispatch of a parcel-post mail.

It is provided that the Postmaster General of the United States and the director general of posts and telegraphs of the Argentine Republic may, by agreement, except, on account of insecurity in the conveyance or for other causes, certain post offices in either country from receiving or dispatching parcels of merchandise.

STEEL MANUFACTURING IN AUSTRALIA.

[New South Wales Industrial Gazette, September, 1915, transmitted by Commercial Attaché William C. Downs, Melbourne.]

Up to the end of August the output of the steel works of the Broken Hill Proprietary Co. (Ltd.), at Port Waratah, was reported as 36,214 tons of pig iron, from which were produced 17,134 tons of billets and blooms, and 11,574 tons of rails. Existing contracts for steel rails included the following, for the Government: Federal, 47,000 tons; Victorian, 3,300 tons; New South Wales, 54,000 tons; and South Australia, 2,000 tons, making a total of 106,300 tons.

Some 400 tons of steel for shell making were being tested at the end of the month, and it was reported that orders had been placed for plant in extension of the works to increase their capacity from 125,000 to 170,000 tons of steel per annum. The projected additions include two open-hearth furnaces, with extension of the coke-making and other plant, and involve an estimated expenditure of £300,000 (\$1,460,000). A new company, viz, the Broken Hill Munitions Proprietary Co. (Ltd.), was reported to have been formed during August, with a capital of £100,000 (\$486,650), for the purpose of manufacturing high-explosive shells, etc., and a plant to the value of £20,000 (\$97,300) was reported to have been ordered from the United States.

FLOUR TRADE OF SWATOW.

[Consul George C. Hanson, Swatow, China, Oct. 19.]

American flour, which comprised practically all the foreign flour imported into Swatow, arrives from Hongkong, while native flour, the product of the mills at Shanghai, comes direct from that port. The American flour is better in quality and color than is the native variety and has always been preferred locally, even if it is a little higher in price than the Shanghai article.

The highest point reached by the imports of the American variety was 20,194 tons in 1912, and the lowest point touched was 11 tons in the first half of 1915. The lowest point touched by the imports of native flour was 415 tons in 1911, and the highest point reached for six months was 7,293 tons in the first half of 1915.

Purchases of Native and Foreign Flour.

In 1908 the imports of American flour were 13,634 tons, while those of native flour were only 588 tons. As small as the amount of the latter was it was more than six times the amount imported in any previous year. The year 1909 witnessed a drop to 3,445 tons of American flour imported and a jump to 7,669 tons of native flour imported. This was mainly due to the very low exchange ruling throughout that year. The total amount of flour imported into China was the lowest figure since 1898, while the amount of native flour distributed coastwise from Shanghai during the year was twice the quantity so distributed in 1908.

Shanghai contributed 7,114 tons of flour in 1910, and the United States 5,084 tons. In 1911, 14,415 tons of American flour were imported, while only 415 tons of the native variety reached this market. The reasons for the decline of native flour imports were the shortage of native wheat on account of floods in the Yangtze River Valley and the low price of rice, for the China rice crop was excellent that year. American flour filled in the gap caused by the scarcity of native flour. Favorable exchange in 1912 pushed imports of American flour at Swatow to 20,194 tons, while only 733 tons of native flour were bought. In 1913 good rice crops caused imports of the American article to fall to 16,566 tons. Imports of native flour amounted to 817 tons.

During the last half of 1914 the price of American flour rose. The result was a further decrease to 14,446 tons in imports of American flour and an increase to 5,854 tons in arrivals of native flour during that year. During the first six months of 1915, only 11 tons of American flour were imported into Swatow, while imports of the native article amounted to 7,293 tons. The figures for the last half of 1915 will probably show a similar amount, if not more, of native flour imported and a total absence of arrivals of American flour.

Prices—Dealers.

Local Chinese dealers report that before the outbreak of the war, American flour was selling at \$2.47 to \$2.55, Mexican, per sack, according to grade, and there were no stocks of native flour held in Swatow. At present there are no stocks of American flour on hand and native flour is selling at prices ranging from \$2.56 to \$2.70, Mexican, per

sack, according to grade. The war has not only caused the disappearance of American flour from this market, but has increased the sale of native flour and has caused its price to rise above the price commanded by American flour before the war broke out. [The United States Treasury Circular, Values of Foreign Coins, gives the value of the Mexican dollar in China during the quarter ended July 1, 1914, as \$0.458 and during the quarter ended October 1, 1915, as \$0.3841.]

Twenty or more local Chinese firms and one foreign (Japanese) firm sell flour in this market. One month's credit is usually given to them by Hongkong and Shanghai merchants.

The present condition of affairs will probably exist until the war ends. Until that happens, it will be useless to expect American flour to regain its commanding position in this market.

[Two samples of Chinese (Shanghai mill) flour sold in the Swatow market may be seen at the Bureau of Foreign and Domestic Commerce or its branch offices.]

ACTIVITY OF AUSTRALIAN STEEL WORKS.

[Consul General J. I. Brittain, Sydney, Oct. 27.]

Recent publications indicate that during the four weeks ended September 22, 1915, the Newcastle (New South Wales) iron and steel works produced 9,968 tons of pig iron, which is about the present capacity of the furnaces.

At the open-hearth furnaces 7,495 tons of ingot steel were produced. Australian bricks which have been used in some places in the roof were not satisfactory, and work was retarded while these unsuitable bricks were being replaced. The foundations for four additional open-hearth furnaces were commenced and an additional soaking pit to handle the increased output is being built.

A pig-iron mixer of 600 tons capacity has been ordered which will greatly facilitate the production of steel. The output of the open-hearth furnaces has been handled at the blooming mill and converted into billets for the market and blooms for the rail mill; 5,757 tons of blooms and billets of various sizes were produced.

The rail mill is working satisfactorily and up to the present has produced 13,665 tons of rails.

In order to meet the demand for lighter structural shapes and rails, an additional rail mill has been ordered from America, known as an 18-inch mill. This will relieve the large mill and leave it to handle only the heavier class of work.

The Newcastle steel mills were opened last July, and practically all the machinery for it was purchased in the United States.

Samples of dyeing materials produced in Ecuador, which were described in an article published in *COMMERCE REPORTS* for October 18, 1915, have been received from Consul General Frederic W. Goding at Guayaquil, and may be inspected by interested persons at the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 66634. The samples are of orchilla and achiote or annatto.

TECHNICAL PROGRESS IN RUSSIAN SUGAR INDUSTRY.

[Consul General John H. Snodgrass, Moscow.]

Returns have come in for the Russian sugar industry in connection with the inquiry conducted by the Journal of Finance. [The progress of other Russian industries was discussed in **COMMERCE REPORTS** for Sept. 3, 1915.]

Being under the influence of two factors diametrically opposed to each other—the systematic increase in the cost of raw material and the systematic decrease in the maximum prices on one side and the fixed limits of production on the other—the sugar industry was obliged to introduce the greatest possible technical development. Nearly all replies received to the inquiry mention continuous improvement in the equipment of the factories, improved methods of production, careful control of the results obtained under varying conditions, strict economy in the consumption of fuel and working power, etc. It is stated that Russia takes the first place in the world in technical development. Attention is also called to the fact that certain improved methods of production owe their origin to Russian inventors, such as the new method of saturation of Kovalsky and Kosalovsky, the new method of continuous saturation of the Tros-tianetz factory, and the new method of working with three products according to the Bogatko system.

Unsatisfactory Conditions—Up-to-date Equipment.

On the other hand, there are unsatisfactory conditions to be noted. For instance, drying the residue, by which it is converted into valuable food for cattle, is practiced only in 9 of the 293 concerns. The prevailing method is to place the residue in ditches lined with stones, where it ferments and loses a considerable part of its properties. The reasons why the residue is not dried are the high cost of drying appliances, the comparatively low level of the agricultural and educational standards, and the scarcity of ways of communication. The last two reasons are the cause of another important defect in the Russian sugar industry—the comparatively low content of sugar in the beet and the unsatisfactory quantity of the crop.

The production of sugar requires careful and constant scientific observation, and this accounts for the comparatively high level of technical conditions in this industry. The machinery and apparatus used in this branch of industry are very costly, and require considerable time for their amortization. Nevertheless, all sugar factories have introduced up-to-date equipment, which proves that they were obliged to incur these expenses.

Technical Progress in Factory A.

The technical progress achieved in this industry is shown by the following instances:

Factory A has introduced new methods of continuous and automatic saturation, the working of the sirup with barite, a new method of working with three products, and payment for labor according to quantity, with a premium for extra labor. The same factory has introduced hydraulic transporters, lifts, automatic unloading of yellow sugar (silos for white sugar and mechanical transportation to

them, electric conveyance of bags, iron reservoirs for the residue instead of ditches lined with stones, mechanical lathes for the repair workshops, etc.

The further progress noted consists in the increase in the power of motors, increased pressure in the steam boilers, increased speed in the mechanism, the removal of the waste left in the filter presses by pumping, instead of in cars drawn by horses.

These improvements, made for the purpose of a more complete extraction of sugar, the improvement of its quality, and economy in energy required, have given the following results:

Items.	1908	1913
Consumption of beets per day:		
Per workman.....pounds..	4,370	5,164
Per horsepower.....do....	3,051	4,370
Total production of sugar during season.....short tons..	20,881	15,117
Total quantity of beets consumed.....do....	16,322	10,329
Consumption of fuel (coal and coke) per 100 pounds of sugar.....pounds..	83	66
Wholesale prices of sugar:		
For domestic market.....per 100 pounds..	\$5.63-\$6.02	\$5.00-\$5.76
For foreign markets.....do....	4.46-4.63	5.35
Price of beets at factory.....do....	0.21	0.24

The year 1913 was not wholly satisfactory, as a considerable quantity of beets could not be harvested on account of the early frost. The crop, consequently, was much below the average. Nevertheless, comparatively satisfactory results were obtained, owing to the technical progress in manufacture.

Improvements at Factory B.

Sugar Factory B, instead of 10 filter presses with a heating surface of 205 square feet, has erected 4 filter presses, each of which has 581 square feet of heating surface. For heating sirup a rapid-current rechauffeur has been installed. The refuse of filters is removed by means of a screw device instead of by carts, the sugar is dried and conveyed to storehouses by the pneumatic apparatus of Chanikovsky, and continuous saturation is effected by the system of Dombrovsky. There have been added two mechanical filters for the juice and the sirup, a new Fairburn steam boiler, etc. The results show the following figures:

Items.	1908	1913	Items.	1908	1913
Daily consumption of beets:			Consumption of fuel per 100 pounds of beets.....pounds..	8.55	7.04
Per workman.....pounds..	3,936	4,888	Wholesale price of sugar at works, per 100 pounds.....	\$5.35	\$5.65
Per horsepower.....do....	3,250	3,654			
Total.....short tons..	628	693			
Total production of sugar.....do....	6,594	6,662			

During the five years beets rose in price by 2 to 2.5 kopecks per pood (\$0.029 to \$0.036 per 100 pounds).

Progress at Factory C.

Still greater success is achieved when there is a sufficient quantity of beets and full-time work, as is shown by Factory C, the equipment of which did not stand on a very high level. This factory possesses 2 new vacuum apparatuses, 1 mixer, 1 new centrifugal apparatus, 2

reducing valves, and a number of minor improvements in the method of work. Its report of progress is as follows:

Items.	1908	1913	Items.	1908	1913
Daily consumption of beets:			Cost—Continued.		
Per workman.....pounds..	2,420	3,322	Total manufacturing expenses per 100 pounds of beets	\$0.372	\$0.361
Per horsepower.....do	2,528	3,452	Consumption of fuel per 100 pounds of beets:		
Total consumption of beets, short tons.....	19,028	40,408	Firewood.....pounds..	2.7	1.1
Cost:			Coal.....do	9.6	8.2
100 pounds of beets.....	\$0.163	\$0.294			
Labor on 100 pounds of beets..	.837	.719			

Factories D and E.

In technical progress, the sugar-refining works have not remained behind the sugar works. Here also is noted the tendency toward reequipment, economy in fuel and working power, with the same success. As an illustration there are given below some figures showing the operation of a sugar-producing and sugar-refining factory (factory D) and that of a sugar-refining factory (factory E). Factory D has erected three new water-pipe boilers and has introduced a device for softening the water and two heaters for the diffusion of juices. This firm has increased the number of Passburg drying devices, presses, and crushers of new construction. The following table shows the development of factory D:

Items.	1908	1913	Items.	1908	1913
Daily production of sugar:			Total consumption of fuel, short tons.....	21,906	21,947
Total.....short tons..	72	117	Cost per 100 pounds:		
Per workman.....pounds..	263	294	Beets.....	\$0.22	\$0.24
Total production of refined sugar, short tons.....	20,800	32,100	Refined sugar (net).....	6.97	6.92

Factory E installed mixers of the Fourovich system for dissolving white and yellow sugar, drying apparatus of the Passburg system, economiser, superheater of the Bari system, etc. Its progress is shown by the following figures:

Items.	1908	1913
Daily average production of sugar:		
Per workman.....pounds..	200	235
Per horsepower.....do	181	175
Total production of refined sugar.....short tons..	18,050	31,546
Coal consumption per 100 pounds refined sugar.....pounds..	35	20
Price of refined sugar.....per 100 pounds..	\$7.63	\$7.13

The decrease in the price of refined sugar amounted to 6.5 per cent; at the same time the raw material increased in price very considerably. Labor prices increased by almost 50 per cent, fuel by 40 per cent, bags by 30 per cent, taxes by 135 per cent.

General Conclusions as to Conditions in Sugar Industry.

The above figures give a characteristic proof of the progress achieved and the situation of the industry. From the numerous communications received, the following general conclusion may be drawn. In view of the continuous increase of the prices of raw material and the constant reduction of the maximum sugar prices, the

sugar industry can base its existence only on its organization and the technical progress of manufacturing methods. But technical progress has its limits, which will soon be reached. Therefore it is necessary to devise radical measures that will give a sounder basis to the industry. The rise in the price of beets is due partly to the fact that some estates have passed to the hands of peasants who prefer raising cereals to planting beets and partly to the insufficient development of ways of communication and the difficulties encountered by manufacturers wishing to construct their own railways which would enable them to extend the territory of beet plantations. It is thought that the only way out of this situation would be a considerable increase in production, but under the present circumstances sugar is expensive, and the demand for it, though rising, remains at a comparatively low level.

Labor is required only during the season, and therefore a constant labor class can not be maintained. There is a scarcity of specialists also, as well as of educated and trustworthy workmen. For the sugar industry, as well as for the other industries, the Government believes it is necessary to establish special schools, and to raise the general educational standard of the population.

EXPORT OF RICE FROM JAPAN.

[Japan Gazette, Oct. 29.]

Hitherto Japanese rice has been largely shipped to the United States and Hawaii. This year the shipments to England have been considerable, partly because the price on the Japanese markets is unusually low and partly because the Japanese authorities have taken measures with a view to the export of the cereal. The shipments from Yokohama and Kobe during the first eight months of 1915 amounted to 1,213,701 piculs (1 picul=133½ pounds), valued at 7,416,028 yen (\$3,708,122). The figures, compared with the corresponding period of last year, showed an increase of 737,970 piculs in quantity and 4,294,679 yen (\$2,138,750) in value. During September the shipments from Kobe were 70,909 piculs, valued at 439,374 yen (\$218,808), while those from Yokohama were 1,050 piculs, valued at 7,765 yen (\$3,867). Kobe leads Yokohama in exports. The following table shows the shipments during the first eight months of the year:

Country.	Pounds.	Value.	Country.	Pounds.	Value.
Great Britain	49,521,600	\$1,100,272	Russia	355,733	80,658
United States	51,375,086	1,158,438	China	287,733	6,371
Canada	11,750,800	251,768	Kwantung Province	462,400	10,923
Australia	544,400	11,697	Other countries	16,720,000	363,524
Hawaii	34,152,400	788,086			

High Price for a Dutch Vessel.

Consul Frank W. Mahin reports from Amsterdam that the price paid for the steamer *Potsdam*, of the Holland-Amerika Line, which was sold recently to a Swedish steamship company, was more than the original cost of the vessel 15 years ago. The reported price is 4,500,000 crowns (\$1,206,000).

CHILE MAY ADD SUGAR RAISING TO ITS ACTIVITIES.

[Consul General L. J. Keena, Valparaiso, Oct. 19.]

Chile is not a producer of unrefined sugars, but for its supply is dependent, primarily, on Peru. The greater part of the imports of refined sugar has been received heretofore from Germany. The proportions of this trade held by the various countries in the last year before the war (1913), measured in metric tons of 2,204.62 pounds, were:

Countries.	Unrefined.	Refined.	White (Rosa Emilia).
	<i>Metric tons.</i>	<i>Metric tons.</i>	<i>Metric tons.</i>
Great Britain.....	84	48
Germany.....	1,965	9,384	600
United States.....	118	2
Ecuador.....	274
Panama.....	715
Peru.....	74,547	91	334
France.....	50
Belgium.....	7
Italy.....	12
Spain.....	47
Total.....	77,693	9,611	MAN

The importations in the first six months of 1915 have been: Refined sugar, 4,125 metric tons; white sugar, 68 tons; unrefined sugar, 38,590 tons. These statistics have not yet been divided as to countries of origin.

Changes in Import Duties on Sugar.

Under the law of October 19, 1914, No. 2622, the import duties on sugar were changed to read as follows: Impure sugar, 0.5 peso per 100 kilos (\$0.088 U. S. currency per 100 pounds); granulated sugar of first extraction, 1 peso per 100 kilos (\$0.165 U. S. currency per 100 pounds); refined sugar, 6 pesos per 100 kilos (\$0.99 U. S. currency per 100 pounds); white sugar (Rosa Emilia), 8 pesos per 100 kilos (\$0.496 U. S. currency per 100 pounds).

The retail market price of white granulated sugar in Valparaiso, just before the outbreak of the war, was, approximately, \$0.05 U. S. currency per pound. The September, 1915, price was, approximately, \$0.076 U. S. currency.

The high price at which sugar is ordinarily sold in Chile, and particularly the increased prices prevailing the past year, has given rise to considerable speculation as to whether it would not be possible and profitable to grow some form of sugar-producing plant in Chile. The Provinces of Tacna and Arica and Easter Island are said to contain large tracts of land capable of producing sugar cane equal to that grown in Peru. Recent experiments have demonstrated that the soil and climatic conditions at Llanquihue and Chiloe are favorable for the cultivation of sugar beets yielding 17 per cent and more of sugar. There is also a disposition to experiment with the extraction of sugar from Chilean corn, which is estimated as capable of producing up to 12 per cent of saccharine, which might be handled in the same manner as in the United States to prevent the conversion of the saccharine into glucose.

Sugar Industry Now Comprises Several Refineries.

These, however, are merely projects as yet. The sugar industry of the country at present consists of some 10 refineries.

One of the leading refineries, situated at Viña del Mar, has renewed its machinery during 1913-14 and now has a capacity of 125 tons of refined sugar per day. The company has its own railroad siding, rolling stock, and switch engines, and practically its own wharf and floating equipment. The warehouse capacity is 50,000 cases of sugar. Automatic dryers have been installed recently in the bag department, by which 2,000 bags can be handled per day. All of the machinery of the refinery is operated by electricity, generated by 8 motors of 1,308 kilowatts capacity. The company also supplies the public and private electric lighting current for the district in which its plant is situated.

Another refinery, situated at Penco, near Concepcion, has its own floating equipment, discharging wharves, etc., branch railway line and rolling stock; operates a box factory, and has constructed a large number of houses for its employees. The material for boxes is taken from the company's timber lands near Valdivia. The refinery is equipped with modern machinery and has a capacity of 100 tons of refined sugar per day.

[Lists of sugar importers and sugar refineries in Chile may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 68982.]

EXPORTS OF EGGS FROM EGYPT.

[Egyptian Gazette, Nov. 2; transmitted by Consul Arthur Garrels, Alexandria.]

In 1900, when the first customs returns of the Egyptian trade in eggs were made up, they showed exports of 13,232,000 eggs, valued at \$53,068. During 1914 exports amounted to 150,972,000 eggs, valued at \$1,119,377. Of the 1914 shipments, Great Britain (including possessions in the Mediterranean) took 118,487,000 eggs; France, 23,021,000; Austria-Hungary, 6,375,000; Spain, 1,260,000; Netherlands, 936,000; Tripoli, 465,000; Italy, 285,000; Greece, 143,000. The season for exporting eggs begins in November and continues until the end of the following April. Upper Egypt furnishes 70 per cent, Fayum and Middle Egypt 10 per cent, and Lower Egypt 20 per cent of the total supply. The general market for eggs in Egypt is Gabbari, Alexandria.

The average price of Egyptian eggs in the Alexandria market during the season 1913-14 was \$10.63 per 1,000; during last season the average price was \$9.14 per 1,000.

The cases in which eggs are exported are made in Egypt, but have occasionally been imported from Switzerland via Marseille. They measure 8 cubic feet and contain 1,440 eggs, which are packed with wood wool (fine wood shavings). The export duty on eggs is 1 per cent ad valorem, and marine insurance, including war risk, to England, is now 35 per cent. The freight to England for eggs in cases is \$12.17 per ton of 40 cubic feet (\$2.43 per case), and the freight to Marseille \$1.54.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

- Glassware**, No. 19471.—A report from an American consular officer in South Africa states that a number of inquiries have been received for names of manufacturers of glassware for table and other household purposes. It is suggested that catalogues, prices, and full information be sent.
- Paper and cardboard**, No. 19472.—An American consular officer in Italy reports that a business man in his district desires to communicate with manufacturers of paper. The quality of paper and cardboard required is the same as used in the United States. Terms cash. Shipment should be f. o. b. Naples. Correspondence in Italian preferred.
- Trusses**, No. 19473.—A report from an American consular officer in France states that a merchant desires to obtain the exclusive agency for trusses in France, Switzerland, and Belgium. If required, inquirer is willing to buy on his own account, provided an exclusive-sales agreement is effected.
- Household utensils, etc.**, No. 19474.—A company in Russia informs an American consular officer that it desires to establish commercial relations with manufacturers of household utensils, such as knives, forks, spoons, metal tea and coffee pots, washing and meat-cutting machines, sewing machines, typewriters, cameras, gramophones, and office supplies.
- Soda-water bottles**, No. 19475.—An American consular officer reports that a merchant in Bermuda wishes immediate quotations on 100 dozen soda-water bottles with glass stoppers and pressed caps. If possible, it is requested that samples be forwarded with quotations.
- Theater chairs, paints, hardware, etc.**, No. 19476.—Managers of a new theater and coliseum in the Azores desire catalogues, prices, discounts, and other information regarding theater chairs, paints, hardware, and electric lighting fixtures to equip a theater with a seating capacity of 3,000. Prompt replies are requested, as the building is nearly completed. Correspondence may be in English.
- Mica**, No. 19477.—A report from an American consular officer in South Africa gives name and address of an owner of a mica mine who is desirous of corresponding with persons interested in financing such a proposition. The claims run east and west and are 4,500 feet by 600 feet. The five shafts are 6 feet by 4 feet inside of the timbers. It is stated that a large number of trenches are open exposing from 5 to 7 inches of mica.
- Sweep pumps**, No. 19478.—An American consular officer in Persia reports that an inquirer desires names and addresses of manufacturers of sweep pumps to be used in pumping water from subterranean aqueducts. The pumps should be capable of raising water from a depth of 90 feet to a height of 60 feet above ground. Terms, cash. Correspondence may be in English.
- Tombstones and marble**, No. 19479.—A firm in Italy informs an American consular officer that it desires to secure agencies for the sale of tombstones and other works in marble. Correspondence may be in English, French, or Italian. References furnished.
- Hardware**, No. 19480.—A young business man in Brazil desires to extend his business, and requests an American consular officer to place him in communication with manufacturers of hardware.
- Small machine tools**, No. 19481.—An American consular officer in France reports that a man in his district desires to be placed in communication with manufacturers of small machine tools. Price lists should accompany catalogues. Correspondence should be in French, if possible.
- Knitting machines**, No. 19482.—A report from an American consular officer in South Africa states that he has a request for information concerning knitting machinery to be used in the manufacture of hosiery and underwear for women and children. Prices of hand and power knitting machines, capacity of each, approximate cost of operation, and all other information is requested. A cable code should be mentioned. If a satisfactory reply is received, the order will be cabled.

FREE ADMISSION OF WHEAT IN SPAIN.

[Cablegram from American consulate general, Barcelona, received Dec. 7, 1915.]

Owing to the shortage in the wheat supply, the Spanish Government has authorized by royal decree the free admission of 200,000 metric tons of wheat, such shipments to be exempt from transportation tax as well as import duty. Furthermore, the Government is to advance funds to Spanish millers for the purchase of the above quantity of wheat.

[For previous notice regarding customs treatment of wheat in Spain see COMMERCE REPORTS for Nov. 8, 1915.]

EMBARGO ON LOGWOOD IN JAMAICA.

The State Department, Washington, is in receipt of information by cable to the effect that the exportation of logwood from Jamaica has been prohibited, except to the United Kingdom. [Further information on the subject has been requested and will appear in COMMERCE REPORTS when received.]

JAPANESE TOYS IN CANADA.

[Consul Thomas D. Bowman, Fernie, Dec. 2.]

Almost all of the toys purchased by Fernie dealers this year for the Christmas trade are of Japanese manufacture. Formerly German-made toys held the preference in this market. The Japanese manufacturers are now turning out imitations of the German products which sell even more cheaply than the German toys did.

Fernie does not offer a large market for toys, but Fernie dealers are dependent upon the available stocks of the Canadian jobbing houses.

American Packing Complimented.

A Chicago company making stapling wire has sent to the Bureau of Foreign and Domestic Commerce a letter received from one of its foreign customers in which special praise is bestowed upon the firm's method of packing its goods. The letter adds: "We find it difficult to impress upon some of our other American friends the necessity of special care in packing for export shipment."

OCTOBER EXPORTS OF BREADSTUFFS, OILS, ETC.

The following statistics, compiled by the Bureau of Foreign and Domestic Commerce, Department of Commerce, represent the exports of domestic breadstuffs, cottonseed oil, food animals, meat and dairy products, cotton, and mineral oils from the principal customs districts of the United States during October, 1914 and 1915, and 10 months ending October:

Items.	October.		Ten months ending October.

COLOMBIA PLANS NEW ROAD CONSTRUCTION.

[Consul Isaac A. Manning, Barranquilla, Nov. 11.]

While also preparing for the construction of a railway connecting San Jose de Cucuta with the Magdalena River at Tamalameque, the Government of Colombia, by law No. 20 of 1915, has declared of urgent public utility the construction of a cart road from Cucuta via Ocana, corregimiento de los Angeles and Agua Chica to Gainarra (or Puerto Nacional) on the Magdalena, and with a branch leading to Loma de Corredor.

LATEST FOREIGN-MONEY DECREE IN CUBA.

[Special Agent Garrard Harris, supplementing reports published Dec. 2 and 7, 1915.]

The latest presidential decree in regard to the monetary situation in Cuba is dated November 24, and is substantially as follows:

1. From December 1, 1915, current accounts in Spanish and French gold will be closed and considered in a state of conversion, or liquidation, and new accounts will be opened in the legal currency (Cuban or American), returning the deposits in Spanish or French gold to those who so desire.

2. Until June 1, 1916, the Spanish and French gold coin will be legal tender for deposits or mercantile transactions made previous to December 1, 1915, at the rate of \$5.30 for each centen, and \$4.24 for each lous, or payment will be made in legal currency, gold, at the rate of \$4.82 for a centen or \$3.86 for a lous, at the option of the debtor. After June 1, 1916, the decree of September 11, 1915, will go into force.

3. It is agreed that the substitution of Spanish and French gold, which may be delivered by banking institutions through the Banco Nacional de Cuba in the form and name which may be arranged with same, may be effected at the rate of \$4.82 official currency for a centen and \$3.86 for a lous. To this effect the prohibition of imports of such foreign coin is effective and ratified.

4. The prohibition of the circulation of foreign silver and gold coins after December 1, 1915, is also ratified, with the exception of those of the United States. All pending transactions in Spanish silver will be payable in legal currency at the rate of the quotation of same on November 30.

5. This arrangement also extends to common-law obligations contracted on the specific basis of payment in Spanish or French gold coin.

BIG PRICE PAID FOR SHIP CHARTER, OREGON TO FRANCE.

The Pacific coast sales agent for several large shipbuilding and foundry companies reports to the Bureau of Foreign and Domestic Commerce that the new steamer *Pacific*, which was built in San Francisco, and which last month made a successful trial in San Francisco Bay, has been chartered by a prominent exporting firm in Portland, Oreg., at the record figure of \$31.50 per ton for delivery from either Portland or Puget Sound to France.

The *Pacific* is a 9,000-ton carrier, and will draw in freight charges for her trip from Portland to France \$283,500. The voyage will take 90 days by way of the Straits of Magellan, giving a gross income per day of \$3,150. The price is more than the vessel's owners asked originally. The steamship agents in San Francisco had offers from at least seven different exporting firms, the correspondent of the Bureau states, and this accounted for the increase in charges.

The conditions disclosed are cited by the sales agent as emphasizing the need of tonnage on the Pacific coast for shipments both to the Atlantic coast of the United States and to Europe.

Samples of large and medium canary seed which are to be found on the market at Seville, Spain, and which represent a class of products mentioned by Consul Gracey, at Seville, in COMMERCE REPORTS for October 30, 1915, as offering the possibility of export to the United States, have been received by the Bureau of Foreign and Domestic Commerce. They may be inspected by interested persons on application to the Bureau or its branch offices. Refer to file No. 67178.

CHARACTER OF IMPORTED RICE SHOWN.

To give those connected with the rice industry in the United States knowledge of the quantity, quality, and condition of the rice imported, the United States Department of Agriculture will shortly publish Bulletin 323—"Importance and character of the milled rice imported into the United States."

The bulletin points out that it has been necessary to augment the American crop, which is insufficient to supply domestic demands, by importing large quantities from abroad. As a result, the competition between home-grown rice and certain grades of foreign rice has become of importance to the rice-producing, milling, and handling interests of Louisiana, Texas, Arkansas, South Carolina, and California. The bulletin gives statistics of the importation of uncleaned and completely milled rice for 1912, 1913, and 1914. These show that practically \$5,000,000 worth of rice was imported during the fiscal year ended June 30, 1914, an increase of 60 per cent over the importation of the year before and double the amount imported in 1912.

The bulletin then gives in detail a description of the rice types and the results of mechanical and chemical analyses of samples. The data from the mechanical tests cover weights of grains, percentage of damaged rice, the number of paddy grains, and the percentages of whole grains, half grains, and smaller pieces found in Japan, Chinese, Java, Siam, and Patna rice.

The bulletin is technical in character. It can be obtained free from the department as long as the supply for distribution lasts.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D.C.
Mynard, Lester.....	Amoy, China.....	do.	Do.
Crace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Ar.entina.....	do.	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D.C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Leves, Del.
Robertson, W. Henry.....	Buenos Aires, Ar.entina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(a) Lotus Club, 110 West Fifty-seventh Street, New York City.
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

POSITIONS FOR YOUNG PORTO RICANS SOUGHT.

The Chief of the Bureau of Labor of Porto Rico has suggested, in a communication to the United States Bureau of Foreign and Domestic Commerce, the possibility of employment of young Porto Ricans in the foreign trade of this country. He says that as American manufacturers are making special efforts to obtain markets for their goods in Spanish-American countries, there should be openings in those houses for young men with a thorough knowledge of both English and Spanish, and equipped by their training to render satisfactory service.

The Porto Rican Bureau of Labor has prepared a circular letter to be sent to interested merchants in the United States, and is seeking a list of the names and addresses of such merchants. The letter from the Chief of the Bureau of Labor is:

GOVERNMENT OF PORTO RICO,
DEPARTMENT OF LABOR, CHARITIES, AND CORRECTIONS,
BUREAU OF LABOR,
San Juan, November 8, 1915.

SIR: For the last two years the bureau of labor of Porto Rico has been conducting a free employment agency. Many applicants have been enrolled, among them persons qualified as stenographers, salesmen, translators, etc., who speak both English and Spanish. It is, however, extremely difficult to find positions for applicants of this class, due to the fact that Porto Rico is an agricultural country and that very few industries in need of men trained for clerical work exist on the island. This condition is becoming more and more pressing every year. The number of our industries offering work of this nature is increasing very slowly, while, on the other hand, our schools are graduating larger and larger numbers of young men trained in the excellent business courses provided.

In view of these facts the bureau of labor is anxious to get into communication with business houses in the United States having dealings with Central and South America in order, if possible, to obtain positions for these young men. It has seemed to us that, at the present time, when American manufacturers are making special efforts to obtain markets for their goods in Spanish-American countries, there should be openings in those houses for young men with a thorough knowledge of both English and Spanish and equipped by their training in our high schools and private schools of commerce to render very satisfactory services.

It is to be noted that these young men are, by their association here, familiar with the business courtesy and methods as well as with the personal characteristics prevailing in Spanish-American countries. Porto Rico is Spanish-American in these respects, and the qualifications of these young men should be of real help to American manufacturers in adapting themselves to the peculiar requirements of Spanish-American people.

To that effect we have prepared a circular letter to be sent to merchants in the United States, offering them the services of our free employment agency, but it having been impossible to obtain an efficient list of such merchants with their addresses, we depend on the courtesy of the Department of Commerce to obtain it, hereby respectfully requesting that you kindly have this bureau of labor furnished with such list as soon as you deem it convenient.

Thanking you in anticipation of your courteous attention, I remain, sir,
Most respectfully,

F. C. ROBERTS,
Chief Bureau of Labor.

RAILWAY SURVEY IN COLOMBIA.

[Consul Isaac A. Manning, Barranquilla, Nov. 8.]

The technical commission of engineers in charge of the preliminary survey of the route of the railway from Cucuta to the Magdalena River, in Colombia, have begun work on the line between Ocaña and Tamalameque. It is thought the survey will be finished by the end of July.

THE INDUSTRIES OF PEKING.

[Commercial Attaché Julean H. Arnold, Peking, China.]

While Peking is not a commercial city in the same sense as are the treaty ports of China, it nevertheless is an important consuming and distributing center. It has, moreover, numerous distinctive industries, and these were made the subject of a series of articles recently published in the Peking Daily News. The following interesting items are from that source:

Ice, Liquors, and Noodles.

Ice is a hot-weather necessity, although not in the same sense as food and clothing. In Peking, where the native restaurants reach their highest development, ice is consumed in enormous quantities. There is no artificial-ice plant; all ice is stored from the previous winter. The ice vaults are located near Ti-ar Men around the large pond known as Shih Sah Hai. The owners of these vaults almost monopolize the whole industry and have become wealthy in consequence. The ice is cut into cubes and stored in midwinter, the sale being opened in March. Most of the large restaurants and fresh-food wholesale houses contract for huge quantities each year, as it is the only way to avoid the high prices usually prevailing in midsummer.

There are in all 18 distilleries in Peking. They enjoyed prosperity until 1900, when the unfavorable money market forced nine of them to close. These nine are not disorganized; the other going concerns contribute enough to keep them in condition, so that whenever favorable circumstances return, they can easily be restarted. In spite of their efforts to control the trade, however, an influential independent merchant successfully started in business recently, and was the first one to contract for the sale of liquor after the establishment of the Government monopoly.

The great staple foods of China are rice for the south and wheat for the north. Peking is somewhat different from the rest of northern cities in respect of the proportion of southern residents. In spite of this fact, however, the great bulk of the native population still consumes large quantities of wheat in the form of bread and noodles, the latter being considered more of a delicacy. In former days noodles were all handmade, but the processes were not all that could be desired from a sanitary standpoint. Factories have now been established (of which Yang-Whei is the most prominent) for the manufacture of noodles on a large scale. The machinery used is, with the exception of a few modifications, similar to that for the manufacture of vermicelli. The noodles are graded into four classes according to the fineness of the threads. The higher the grade, the finer the thread. It is generally believed that the fineness aids both cooking and digestion. Another important improvement is the elimination of soda, which is declared to be detrimental to the human system by modern physicians. Noodles are put up in packages retailing at 10 cents Mexican [less than 4 cents U. S.] each and may be stored away for months without deteriorating.

Soap, Artificial Flowers, and Picture Mounting.

There are several native factories in Peking engaged in the manufacture of soap, each employing about a dozen men. Yu-Hua is one of the best known. They are not what may be called up-to-date factories and do not attempt to turn out high-grade products, using only raw material found in the local market. The fat is bought from the butcher shops, while the alkali is obtained from the Province of Hupeh. The method of marketing is also rather haphazard. Street runners are employed in place of regular sales agencies, and the goods reach the consumer through the many small stands and shops by the roadside. The soap is soft and very poor in quality, but its exceedingly low price gives it a fairly good market. A case containing 100 cakes is sold for only a little over \$1 (approximately 38 cents U.S.). Cheap price suits the Chinese common people very well, but it is to be hoped that the quality will be somewhat improved without materially affecting the cost of manufacture.

The artificial flower of Peking is noted for its excellent workmanship. It was at one time extensively used for personal adornment and household decoration. The fashion, however, has greatly changed, and very few ladies can be seen wearing such decorations nowadays. The trade, however, has found other

outlets; a good deal is exported to the vicinity of Kalgan, etc. It is hoped that a much bigger export trade can be built up in this way, as the article has intrinsic merits.

All those who are familiar with the Chinese paintings and scrolls of various kinds can not fail to note their peculiar and elaborate mountings. This work is all done by hand and requires no little skill, as well as a certain amount of artistic taste in the choice of colors, etc. This gives rise to a special industry, and Peking mounters enjoyed special prosperity on account of the large number of officials who had artistic hobbies. After the Boxer rising of 1900 the business showed a steady decline, and the years between the first and second revolution witnessed the lowest ebb for works of this nature. During the last couple of years, however, the mounting jobbers have been kept fairly busy, indicating an approaching revival of trade.

The Textile Industry.

The textile industry of Peking was started over a dozen years ago, the Fu-Wu Co. being the earliest establishment. It proved to be a very prosperous business and scores of manufacturers went in. None of them, however, had adequate capital to run their undertakings on a large scale, and the machinery employed is mostly of crude make. Consequently, the products are somewhat inferior to those of the Tientsin factories using modern steel machinery. There is also a difference in the coloring and dyeing processes, which makes the Peking products less attractive on the market. On the other hand, the factories have to pay a higher price for the yarns for buying in smaller lots. As a result of all these factors local products supply only a very small portion of the market demands. The Shu-Chuan Industrial factory is the only one that competes successfully with the imported stuff at present.

The Sing-Yung towel factory is one of the best examples of the recent attempts of the Peking Chinese at towel manufacture. The factory is situated in the Sing Fong Market, occupying 16 rooms. About 30 regular workmen are employed to attend to a set of wooden machines. The working hours are from 6 a. m. to 10 p. m., the workmen being allowed to take shifts. The daily production amounts to 30 or 40 dozen of assorted huckabacks and large bath towels. The selling price ranges from \$0.70 to \$2.40 (\$0.27 to \$0.91 U. S.) per dozen, according to the size and grade. The two cheap grades correspond very closely to the Japanese make in price, but excel the latter in quality, while the higher grades of bath towels are the only products of the kind found in the market here. The factory is under the able management of Mr. Meng, who has extended the sales as far as Kalgan and way into Shansi and Kansu. The demand has become very large and the number of smaller manufacturers has been constantly increasing.

The knit-goods industry is well adapted to the home and small establishments. A small machine can be had for as low as \$20 (\$7.60 U. S.) and skill in operation can easily be acquired. In Peking a number of poor families are already making this a means of living. Several manufacturers are also to be found employing from 30 to 50 workers.

TROUT PLANTING BY BUREAU OF FISHERIES.

A report from the supervisor of the Carson National Forest, in New Mexico, gives the results of various shipments of trout fry made to that forest by the United States Bureau of Fisheries. On August 6, 2,000 rainbow trout allotted for the Pueblo Lake were placed in South Fork Lake, as Pueblo Lake was not properly screened to prevent the fish leaving the lake. On August 15, 6 cans were planted in Vallecitos Creek, 4 in Upper Tulas Creek, and 3 in the canyon of Tulas Creek. On September 15, 12 cans of native trout were planted in Beaver Creek above the falls and 1 can in San Antone River near Ranger station. All of the plantings were a thorough success.

The Bureau is particularly interested in the stocking of the waters of the national forests, parks, and reservations. Much work along this line has been done and much more is in contemplation.

CUBAN MARKET FOR FANCY BISCUIT.

[Special Agent Garrard Harris.]

The United States has not yet been able to overcome the lead of the United Kingdom in Cuba's trade in fancy biscuit, cakes, and the like. In 1913, the last normal year, Cuba's imports of these articles, mainly tinned, totaled 564,283 pounds, valued at \$85,378; and of this amount the United Kingdom furnished 428,762 pounds, valued at \$68,848. The United States sent 91,739 pounds, valued at \$9,993; France shipped in 41,605 pounds of the value of \$5,947; and Belgium, Spain, and Germany furnished insignificant quantities.

In the calendar year 1914 the effect of the war on European trade was noticed, for the United States shipped in 108,155 pounds, valued at \$11,657, an increase of 16,416 pounds in quantity and \$1,664 in value. Belgium and Germany do not appear in the official import records, France fell to \$2,736, and receipts from the United Kingdom fell to 339,197 pounds, valued at \$53,995. The figures for 1915 will likely show a larger gain for the United States, although no difficulty is experienced in getting goods from England and there has been no curtailment of the regular terms given in the past. The English goods are handled through the Boston representative of the bakers, who also represents a celebrated English pickling and preserving house and who makes periodical trips to Cuba. Very little of the trade is handled through jobbers.

English Varieties in Favor.

It is a field that American bakers can very well afford to watch and cultivate, for with increasing prosperity in Cuba the demand for these fancy biscuit will undoubtedly grow. In common crackers, however, the United States leads, shipping in 1913 224,375 pounds, valued at \$14,807, to England's 1,610 pounds, of the value of \$126; and in 1914, 242,199 pounds, valued at \$15,471, to England's 2,035 pounds, valued at \$259. The Cuban duty is \$1.56 per 100 kilos (220.46 pounds) on common crackers, and \$3.64 per 100 kilos on the fine or fancy biscuit imported from the United States, which are admitted at a reduction of 20 per cent of the general rates.

The English goods are usually in 1-pound tins, hermetically sealed, and in an attractive package. Sales are made in nearly every instance direct to retailers, and only a very small portion is jobbed. The number of grocers carrying fancy biscuit is large, and the wide distribution of the goods in the small corner "tiendas" is somewhat remarkable. The English goods are sold as a rule on 90 days' time. The almost invariable American terms are 30 days from date of invoice. This amounts practically to cash, as it takes some time for the goods to arrive and be passed through the customs. Some instances have been known where the American manufacturers have given as long as 60 days, but these are exceptional and the 30-day rule is the standard. Dealers state that if terms equal to the English were given there would be an incentive to push the American goods, but as it is their interest lies manifestly in the direction of the manufacturers extending the longest credits.

Grocers report that the English 1-pound tins of "sponge rusk" retailing at 40 to 45 cents is the prime favorite. Dealers with a preponderating native trade give the following English brands, in

1-pound tins, as having the largest sale (the figures represent retail prices in cents per pound): Dinner biscuit, 40; sponge rusk, 40; Italian macaroons, 75; breakfast biscuit, 40; cream crackers, 40; "ice creams," two flavors—vanilla 40, chocolate 60; puff sandwich, lemon flavor, 40; arrowroot crackers, 40; combination, 40; rich mixed, 40; Petit Buerre, 40; Royal Sovereign (filled with apricot jam), 50; Coronation, 40; milk, 40.

American Products—Local Factories.

The gingersnaps, vanilla wafers, etc., from the United States, put up in the pasteboard cartons protected by an alleged air-tight covering of waxed paper, are declared to be unsatisfactory. It is claimed that air and moisture in some way penetrate, and in two to three weeks after the goods are put on the shelves they begin to deteriorate, taking on a musty smell and taste and losing their crispness and freshness.

There is practically only one brand of American fancy biscuit on the market. Some of the goods of this concern are packed in 1-pound tins and some of the fancier confections in small tins that retail as low as 15 cents. The biscuit packed in tins are declared by grocers to be in every way the equal of the English product and thoroughly satisfactory and the exterior of the American packages is decidedly more attractive than that of the British. The consensus of opinion appears to be that if more liberal terms were granted there would be an immediate large increase in importations of the American goods and they would take a rapid start toward a more widespread popular favor.

There are two factories in Habana making fancy biscuit, that of Vilaplana B. Calvo being the largest. It is equipped with modern machinery and appliances in every way and turns out a remarkably fine product, which is in great favor locally. The output is shipped all over the island of Cuba, and some exportations are made to South America. Chocolate of a superior quality is made in all forms, the raw material coming mainly from Venezuela. The other factory is that of Maestro y Martinique. It turns out fancy biscuit, cakes, and the like, manufactures some chocolate, and also makes a specialty of guava jelly and pastes of native fruit.

INDIAN POSTAL AND TELEGRAPH DEPARTMENT.

[Indian Trade Journal, Oct. 22.]

The following is a summary of the annual report on the posts and telegraphs of India for 1914-15 just issued:

During the year the enormous total of 1,000,000,000 articles were dispatched by post, including 24,000,000 registered articles. Stamps to the value of nearly \$9,733,000 were sold for postal purposes. Thirty million money orders of the total value of \$180,000,000 were issued. Three million insured articles, valued at \$238,500,000, were handled. Twenty-one thousand pounds of quinine were sold to the public. Savings banks accounts totaled \$48,664,000. The post office also realized for the Government \$243,345,000 of customs duty and paid pensions to Indian soldiers amounting to \$1,217,000. During the same period 16,000,000 telegrams were transmitted and the telegraph system was extended by 2,000 miles.

THE RAILWAY TO THE MURMAN COAST OF RUSSIA.

[London Times Russian Supplement, Oct. 30.]

Take the map of the north of European Russia and you will see almost in the very middle only a black strip timidly making its way from the center to the shores of the White Sea. It is the narrow-gauge Vologda-Archangel Railway, built in 1897-98. Somewhat to the right-hand side of it stands out from the Ural Railway system another line resting almost upon the very point of the bend of the northern Dvina at the hamlet Kotlas. This is the Perm-Kotlas Railway, designed to convey freight from the Urals to Archangel.

Such are the two routes, if we do not reckon the River Sukhopa and the northern Dvina, navigable five months in the year, which, up to now, have united the northern region of Russia with the center of the Empire and serve as channels of culture and well-being. But apparently they have hitherto conscientiously fulfilled the task imposed upon them, since, had there not been the present war, the question of a new route to the north and concern for the greater freight-carrying capacity of the already existing routes would not have been so swiftly decided in the affirmative. But the war has completely changed the customary physiognomy of the Russian north; Archangel has again been transformed, after many decades, into a "window of Europe," and inasmuch as this window proved not sufficiently wide, the old project of constructing a railway to the Far North has come to the fore.

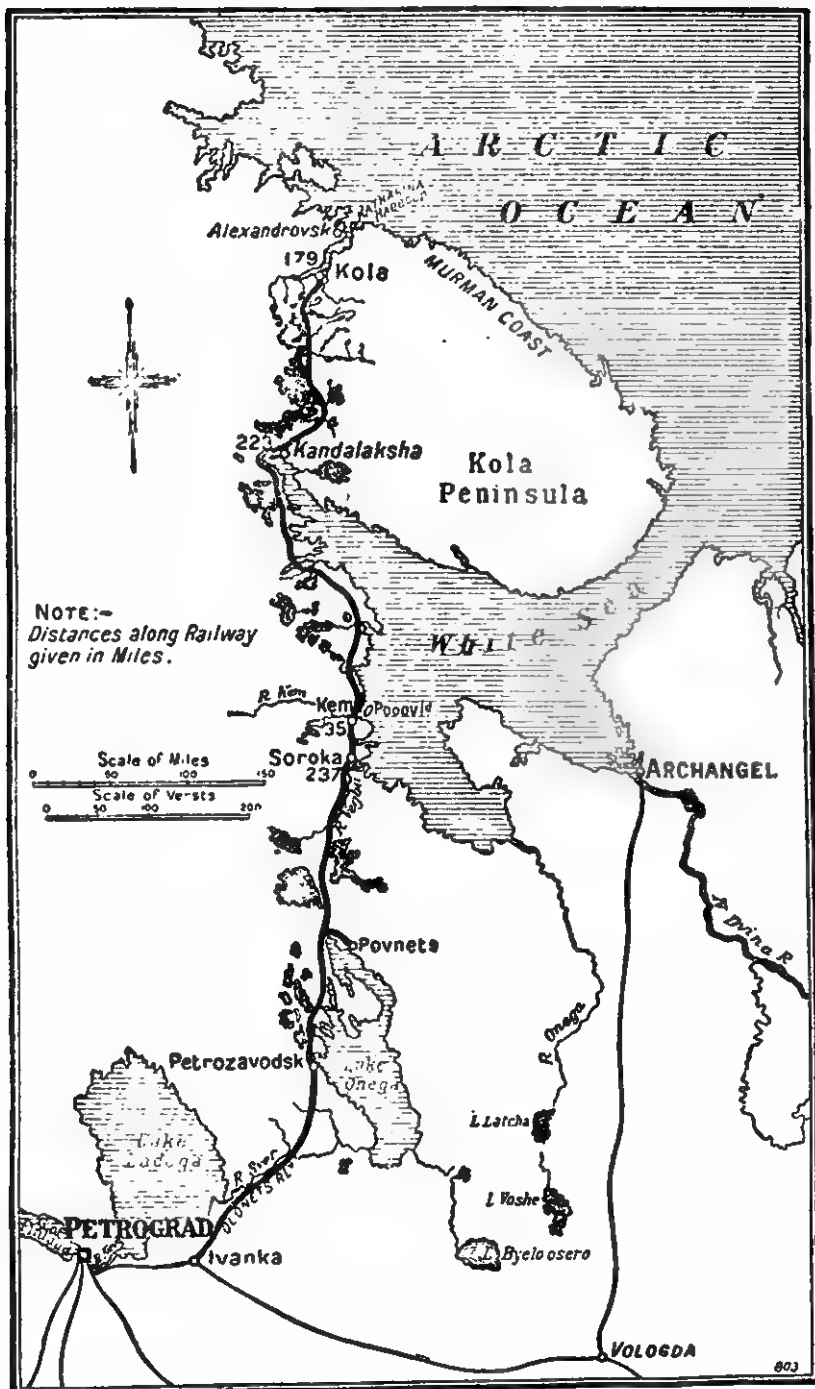

Towns of the Russian Far North.

Amid the swamps and virgin forests, on the other side of the Arctic Circle, immersed for 6 months of the year in absolute darkness, lies a small gulf. It is called Catherine Harbor. It is almost on the frontiers of Norway. But the waters of the bay never freeze; such is the beneficent influence of the Gulf Stream.

It was on this small point formed by Catherine Harbor that the gaze of Russian engineers was bent when it was required to find a northern outlet to the open sea. They had heard about this outlet long before, since 16 years ago Russia appreciated the worth and distinction of this distant region, and as far back as 1899, somewhat north of the small town of Kola, a fairly large settlement of "Pomors," as the local fishermen and hunters are called, founded the new commercial town of Alexandrovsk. But in several years, interest in this region cooled, and the idea of uniting it by rail with the remaining part of the Empire was abandoned. Alexandrovsk, having no chance to develop, declined, and soon became an even less important point than the neighboring Kola, a settlement of fishermen and fur hunters. In 1910, Alexandrovsk numbered 384 inhabitants.

Course of the New Railway.

Petrozavodsk, on Lake Onega, the capital of the Government of Olonets, was marked out as the objective of a new railway from the south to the north, and thither from the direction of Petrograd is now advancing a new railway (the Olonets Railway), the construction of which will be completed by the end of the year. From Petrozavodsk the rails are being laid direct northward, at first to the northern terminus of Lake Onega, then between two big lakes. It

Map showing the railway now being constructed from Petrograd to Kola.

reaches the shores of the White Sea at Soroka Bay (237 miles from Petrozavodsk), and, swerving a little to the northwest, reaches the most important administrative and industrial center of all this district, the town of Kem (35 miles north of Soroka), in the midst of Onega Bay, or, as it is there called, Lip (Guba). Here ends the first section of the new railway. The second is being laid between an entire archipelago of small lakes, amid swamps, marshes, and virgin fir forests, to Kandalaksha (223 miles from Kem), a big settlement of fishermen situated between the sea and the extensive Lake Imandra, along both banks of the swiftly flowing Neva.

From Kandalaksha the new route has to intersect the spacious Kola Peninsula, the northern shore of which, called the Murman coast, is on the Arctic Ocean. This is the third section, and because the new railway must touch the Murman coast at the small town of Kola (179 miles from Kandalaksha) it is called the Murman Railway.

The town of Kola is for the time being the terminal point of the new railway. The ice-free character of Catherine Harbor, in the depths of which it is situated, and the ample depth at this spot of both the bay itself and the mouth of the Kola River, afford an opportunity of converting this remote point into a spacious emporium whither will hereafter be dispatched the bulk of freight intended for central Russia, which the Archangel Railway is not able to carry with sufficient rapidity.

Character of the Country—Inhabitants.

The Kola Peninsula is entirely desert except for the coastal strip and two or three postal tracks. It contains enormous fir forests, swamps, sandy ridges, and granite cliffs and rocks of colossal dimensions. Settlers state that there are incalculable riches in deposits of petroleum, coal, copper, tin, iron, and other metals, but they live poorly, sheltered in wretched huts, for in the bush agriculture brings nothing and the sole earnings come from cutting and rafting lumber. Even hunting (the squirrel, marten, fox, ermine, bear, etc.) yields little, in the absence of markets and means of communication.

Considerably more affluent are the maritime inhabitants, who engage chiefly in fishing for codfish and turbot along the Murman coast from the Norwegian frontier to St. Nicholas Cape, and in bays of the White Sea (Onega and Kandalaksha) catch a great many salmon and herring. There also the inhabitants engage in sea hunting, so that in general, notwithstanding that both fishing and sea hunting are primitively organized and the hunters badly equipped, the coast dwellers not only make ends meet, but put by for the winter several hundreds, and sometimes even thousands, of rubles. But living in these remote localities is not cheap, inasmuch as, with the exception of fish and game, everything is brought from Norway or from central Russia, chiefly in summer. It may be added that the coast dwellers and their wives, these distant descendants of the ancient Novgorodians who colonized this region, love to live on a fairly large scale and do not stint themselves for pleasure. In many houses of the coast dwellers are phonographs, and in their villages, cinematographs. Nor do they stint themselves on dress. The wives of the coast dwellers even now wear silk sarafans (a kind of national dress) and small headdresses embroidered with gold and silver, and always covered with silk kerchiefs.

Such is the locality that the building of the Murman Railway is to animate; such are the conditions in which people live there, conditions that the railway will revolutionize.

Difficulties of Construction.

There have been endless difficulties in building the railroad—difficulties of a purely external character, which neither human knowledge nor energy could subdue. Thus, when they began to lay the rails in several sections the men abandoned work because they were literally eaten alive by mosquitoes, and especially midges (*mesh-ka*). These midges infested the region in clouds and interfered with work day and night. In another part of the selected route a firm roadbed could not be found earlier than the end of June; everything was flooded with water. In several sections of 200 versts (133 miles) more than half of the road had to be built on piles; cofferdams had to be lowered and filled with earth. Water would ooze somewhere, permeate the perpetually vibrating and porous ground, and several days afterwards would come to the surface in an entirely different place, and everything would have to be done over again. But no less difficulty was offered by the granite cliffs and rocks encountered on the way, among which grew gigantic trees.

Surmounting difficulties of this kind, engineers and laborers, up to their knees in water or floundering in sand, in the liquid mud of the swamps, stumbling over rocks, stones, and the huge roots and trunks of dead giant trees, are slowly laying from both directions, north and south, the road that will at last give Russia an outlet to the open sea.

[The development of Kola and the building of the railway have been discussed in *Commerce Reports* in connection with the following articles: "Existing and proposed Russian Arctic ports," Mar. 19, 1915; "Rapid progress of the port of Archangel," Oct. 18, 1915; "Further improvements at Archangel," Nov. 1, 1915.]

AMERICAN IMPORTS AND EXPORTS OF COPPER.

The imports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan during the week ended November 27, 1915, were as follows: Ore matte and regulus (copper contents), 3,280,789 pounds, valued at \$378,566, of which Peru furnished 2,842,540 pounds, valued at \$323,943; pigs, ingots, etc., 1,649,210 pounds, valued at \$287,015.

The exports of copper in pigs, bars, etc., from the customs districts named during the week amounted to 6,370,971 pounds, valued at \$1,168,633. The principal countries of destination follow:

REPORT ON AMERICAN COTTON GINNING.

According to preliminary report prepared by the United States Bureau of Census, Department of Commerce, the number of bales (counting round as half bales and excluding linters) of cotton ginned from the growth of 1915 prior to December 1, 1915, and comparative statistics to the corresponding date in 1914 and 1913; crops of 1914 and 1913; and the per cent of the crop of each year ginned prior to December 1, follow:

State.	Ginned prior to Dec. 1—			Crop.		Per cent of crop ginned prior to Dec. 1—	
	1915	1914	1913	1914	1913	1914	1913
United States.....	9,711,453	11,073,396	12,088,412	15,905,840	13,982,811	82.2	86.5
Alabama.....	940,043	1,431,556	1,365,240	1,731,751	1,483,669	83.1	92.0
Arkansas.....	65,104	840,205	789,137	999,237	1,038,293	84.1	76.1
Florida.....	50,30	72,962	58,485	90,648	66,700	80.5	87.7
Georgia.....	1,768,346	2,285,024	2,066,109	2,713,094	2,341,237	83.9	88.1
Louisiana.....	319,843	382,013	342,313	452,261	431,805	84.5	78.4
Mississippi.....	802,010	987,031	957,803	1,217,883	1,251,641	81.0	76.4
North Carolina.....	612,117	674,340	672,319	970,479	1,537,995	69.5	74.3
Oklahoma.....	445,680	1,018,716	764,295	1,232,638	842,460	82.7	90.7
South Carolina.....	1,032,435	1,230,168	1,160,725	1,560,195	1,418,704	78.8	81.8
Tennessee.....	238,824	291,183	304,467	372,068	366,786	78.3	83.0
Texas.....	2,777,581	3,746,578	3,572,105	4,390,200	3,773,024	85.3	94.7
All other.....	69,011	104,460	88,453	165,386	120,198	63.2	72.0

The statistics in this report include 93,361 round bales for 1915, 39,682 bales for 1914, and 86,878 for 1913. The number of sea-island bales included is 77,161 for 1915, 63,024 for 1914, and 61,049 for 1913. The distribution of the sea-island cotton for 1915, by States, is: Florida, 24,910; Georgia, 48,877; and South Carolina, 3,374.

The statistics of this report for 1915 are subject to slight corrections when checked against the individual returns of the ginners being transmitted by mail. The corrected statistics of the quantity of cotton ginned this season prior to November 14 are 8,774,336 bales.

MEXICAN HYDROELECTRIC PLANT COMPLETED.

[Consul Marion Letcher, Chihuahua, Nov. 18.]

The power plant of the Cia. Agricola y de Fuerza Eléctrica at La Boquilla, near Santa Rosalia, Chihuahua, has now been completed and the current made available for use at Parral in the operation of the cyanide ore treatment plant of a mining company. The current was turned on through the transformer station at Parral on September 28. At present only 1,000 horsepower is being used.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

- Telephone apparatus**, No. 19483.—A new telephone company is being formed in South America, and it is suggested that manufacturers of telephone apparatus suitable for long-distance work might be interested. Correspondence should be in Spanish.
- Accordions**, No. 19484.—An American consular officer in Madagascar reports that a merchant desires quotations on cheap grades of accordions. Correspondence should be in French and prices quoted c. i. f. port of destination.
- Chemicals**, No. 19485.—A letter to the Bureau from a commercial agent states that a man in Norway desires to establish commercial relations with manufacturers of chemicals.
- Hosiery**, No. 19486.—A commercial attaché of the Department of Commerce reports that a man in Chile wishes to receive catalogues, including prices and discounts, on cotton hosiery for women. He proposes to buy as a starter from 500 to 1,000 dozen for cash.
- Velvets and lastings**, No. 19487.—A report from an American consular officer in India states that a company desires quotations from manufacturers of velvets and lastings. Further information may be obtained from the Bureau or its branch offices.
- Silk goods, etc.**, No. 19488.—A company in Italy informs an American consular officer that it desires to be placed in communication with manufacturers of silk, silk and cotton, and cotton goods used in the manufacture of wearing apparel for women and children.
- Machinery**, No. 19489.—An American consular officer in the United Kingdom reports that a firm in his district desires to purchase a motor-driven corset eyeletting machine. The machine must be capable of taking a corset 20 inches long, and should have a ready adjustment for corsets of lesser lengths. Prices, discounts, terms, and packing charges should be stated.
- Railway supplies**, No. 19490.—A report from an American consular officer in South Africa states that a Government official is interested in obtaining catalogues and full information relating to railway cars and locomotives. Freight as well as passenger cars are wanted, the former to have from 10 to 12 tons capacity and to be open and closed for use as cattle cars. The passenger coaches to be of three different kinds, for first, second, and third class passengers. Correspondence should be in French.
- Electric-driven engines**, No. 19491.—A company in India informs an American consular officer that it desires to be placed in communication with manufacturers of small engines capable of being driven by electricity. The engines to be of simple construction and capable of developing 5 horsepower.
- Electric fixtures**, No. 19492.—A report from an American consular officer in Russia states that inquiries have been received for names and addresses of manufacturers of electric fixtures and appliances of all kinds, such as buttons, switches, fuses, lamp holders, and electric meters. Catalogues, samples, and conditions of sale are requested. Prices should be quoted c. i. f. Russian ports in Russian equivalents.
- Crewel needles, crochet hooks, etc.**, No. 19493.—A manager of an art needlework store in Nova Scotia desires to correspond with manufacturers of crewel needles, crochet hooks, steel knitting needles, and ordinary sewing needles. Duty on needles imported from the United States is 30 per cent plus the war tariff of 7½ per cent.
- Ship chandler**, No. 19494.—An American consular officer in Brazil reports that a ship chandler, speaking English and Portuguese, offers his services to American vessels touching Brazilian ports.
- Violet dye**, No. 19495.—The Bureau is in receipt of a letter stating that a man in Ecuador desires to know if there is a market in this country for "orchilla," a plant from which archil is obtained and from which a violet dye is produced.

SWEDEN PROHIBITS SALE OF VESSELS.

[Cablegram from American consulate general at Christiania, Dec. 6.]

The Swedish Government has prohibited the sale of Norwegian vessels to any foreign country. Law may be waived in special cases.

COTTON TRADE OF HAVRE.

[Consul John Ball Osborne, Havre, France, Nov. 10.]

From August 1 to November 5 there were imported into Havre 183,300 bales of American cotton, 3,036 bales of Indian, and 6,096 bales of other kinds, a total of 142,432 bales. During the same period deliveries amounted to 182,310 bales, consisting of 169,053 bales of American cotton, 9,070 bales of Indian, and 4,187 bales of other kinds. On November 4 cotton stocks in Havre totaled 226,157 bales, 190,625 bales of which were American, 28,596 bales Indian, and 6,936 bales miscellaneous cotton.

ELECTRICAL PLANT FOR STATION IN MANCHURIA.

[Consul Charles K. Moser, Harbin, China, Nov. 4.]

The Novosti Zhizni of October 21 states that a British firm has made arrangements for establishing an electrical plant at Station Handaohedzu, on the line of the Chinese Eastern Railway, about 170 miles east of Harbin. It is stated that the capacity of the plant will be sufficient to provide several thousand subscribers with electricity and to light the streets of the village. It is thought that the plant will begin furnishing power within a few weeks.

Government Regulation of Swiss Milk Supply.

In order to insure a sufficient domestic supply of milk at moderate prices the Swiss Department of Public Economy has been authorized by the Federal Council to place the manufacturers of milk products in that Republic under the obligation of reserving a certain quantity of milk for Swiss consumption. The department referred to also intends, reports Vice Consul Reginald H. Williams, of St. Gall, to examine into the advisability of fixing a maximum price for butter.

ENFORCEMENT OF LAW AMONG OYSTER DREDGERS.

Secretary of Commerce Redfield has made public a report from A. Lincoln Dryden, commanding the motor boat *Dixie*, of the United States Bureau of Navigation, on the enforcement of law among oyster dredgers. The report is:

In compliance with the Bureau request, I beg to report concerning the recent operations of the *Dixie* among the "oyster dredgers" of Maryland and Virginia, in Chesapeake Bay and tributaries. On November 24 the *Dixie* arrived in the Potomac River, having come from Norfolk and vicinity, where she has been cruising for several weeks among the "oyster tonging" and fishing craft of that section. The United States commissioner at Baltimore had requested that the schooners *Sydney R. Riggins* and *Catherine E. Shores*, documented at Crisfield, be apprehended and that their masters be cited before him for hearings in connection with wages alleged to be due and unpaid to certain seamen.

All efforts to locate said vessels in the Potomac were unavailing, and on Monday, the 29th, the *Dixie* sailed for Honga River and Hooper Island on the eastern shore of Maryland. It was ascertained that the vessels sought by us were not in this section, but were dredging for oysters in the Choptank River, between Black Walnut Cove and Cambridge. Before leaving Hooper Island, I learned from the clerk of the court at Cambridge, over the telephone, the numbers of the county dredging licenses which had been issued to the vessels in question, the said numbers being required by law to be shown on the sails when under way. Accordingly, on the 30th ultimo, after waiting a half day for the prevailing high winds to moderate, the *Dixie* proceeded to the Choptank River and anchored in the Black Walnut Cove for the night. As the oyster boats came to harbor at sunset, the numbers observed on the sails of the schooner *Sydney R. Riggins* at once disclosed her. When she had come to anchor I boarded her and took up with her master and managing owner, Capt. Ira Todd, Hollands Island, Md., the complaint made by a former seaman on his vessel.

When Capt. Todd was informed that he must appear before the United States commissioner at Baltimore or pay the amount alleged to be due, \$15.75, as authorized by the said commissioner, he demanded time for consideration, but finally came on board the *Dixie* and made settlement. On the same evening all of the ship crew of this vessel left her, alleging unsuitable food, the master making no protest or attempt to detain them, after conferring with me about the matter. My action in this case has been reported and the money paid to the United States marshal, Baltimore.

Failing to locate the schooner *Catherine E. Shores* near the mouth of the Choptank River, and learning that she was dredging for oysters farther up the same river, the *Dixie* proceeded in that direction, passing more than 150 vessels, close at hand, and reaching Cambridge about noon. Information was gathered there that the said schooner was likely to be in harbor at Oxford, Md., for the night. Accordingly, the *Dixie* proceeded to Oxford, about sunset, and cast anchor within a few hundred feet of the *Catherine E. Shores*, and service was made as directed by the United States marshal at Baltimore. In this case the master appeared in Baltimore to answer the complaint of seaman John Keefe, who alleged wages to be due and unpaid him, and that he was induced to go on board the said schooner while under the influence of liquor. This case, I have learned, has been postponed under bond for a short time.

In this connection, I may say also that the cook on board the schooner *Catherine E. Shores* seemed to be in great fear of the master, Joseph Lewis, Hooper Island, lest harm should be done him by the said master. He almost prayed to be taken off the said schooner. This situation was taken up with the master, Capt. Lewis, and he was told plainly that if he had acted or threatened, as had been alleged, he should not attempt to detain his cook on board, and that under the circumstances the right of the complainant to go ashore seemed reasonable, and that we would enforce this right. Capt. Lewis quickly assented to our proposition and paid the man the wages due him to that date, when we took him on board the *Dixie* and landed him in Annapolis in the afternoon of Friday, 3d instant, when he took the train for his home in New Jersey.

From November 24th until the 3d instant, the *Dixie* was busy as above indicated; her visits to many harbors and her appearance among the "oyster fleet," in different sections, have served to put on notice the master of dredging vessels as to the firm purpose of the Department of Commerce to enforce the law intended for the protection of seamen.

NEW LINE TO WEST COAST OF SOUTH AMERICA.

[Consul General William W. Handley, Callao-Lima, Peru, Nov. 11.]

A letter received from the general manager of the Pacific Steam Navigation Co., at Callao, Peru, states that the directors of that company have decided to establish a service of rapid steamers between New York and the West Coast ports of South America as soon as the European war is over. This service should greatly facilitate the trade between Peru and the Atlantic seaports. The ships are of considerable size, the largest on this coast, having first-class passenger accommodations. Traveling from New York to these countries will hereafter probably be made with more comfort and take less time than heretofore, as the ships will make the voyage direct, without transferring at the Canal Zone.

This long-established shipping company has for many years maintained a passenger and freight service between the United Kingdom and the west-coast ports of South America via the Straits of Magellan. The general manager says in his letter:

I have pleasure in advising you that the directors of my company have decided to establish a service of rapid steamers between the west-coast ports and New York. This service will be commenced as soon as the present war is over. I shall be obliged if you will kindly mention this in your next report to Washington, so that the information may be made known in the United States by means of COMMERCE REPORTS. It is hoped that this new service will greatly facilitate trade between the United States of America and the South American Republics, besides being of great advantage to travelers.

RAILWAY NOTES OF NORTHERN RUSSIA.

[Commercial Attaché Henry D. Baker, Petrograd, Nov. 15.]

Trains are now running over the new broad-gauge substitute for the narrow-gauge railway between Vologda and Archangel, about half the distance from Vologda, or about 200 miles to a town called Nyandoma. It is expected that the entire broad-gauge line will be complete to Archangel not later than January 1, 1916. Already a great increase in efficiency has resulted, as the narrow-gauge trains have to go only half the distance, and so can make double the number of trips in the same time. The loading from broad-gauge to narrow and vice versa now takes place at Nyandoma instead of Vologda.

The steamer *Czar*, of the Russian-American Line, recently arrived at Kola, in northern Lapland, with about 500 workmen from the United States and Canada to rush work on the Kola railway. A large cargo of rails, locomotives, platform cars, switches, and other equipment from the United States was also unloaded at Kola for this railway, which, it is anticipated, will be running trains, at least for Government purposes, early in January.

IMPROVED CONDITIONS IN PUERTO PLATA DISTRICT.

[Consul Frank Anderson Henry, Puerto Plata, Dominican Republic, Nov. 16.]

Commercial conditions in the Puerto Plata district are beginning to show slight improvement. The excellent prices that have prevailed in the New York market for cocoa have brought considerable prosperity, and should these prices continue business should show great improvement next year, especially in the region which has its outlet at the port of Sanchez. Business is still dull in Puerto Plata, due primarily to the condition of the Dominican Central Railway, which connects the port with the interior.

REPORTS ON AGRICULTURAL CONDITIONS IN INDIA.

Copies of several agricultural reports from India and a copy of the Indian Trade Journal of Calcutta for October 15, 1915, have been received from Consul Carl F. Deichman at Bombay, and may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices (refer to file No. 69668). The Trade Journal, in the issue forwarded, has a general crop forecast for indigo. The various other reports offered are:

- Final forecast of the jute crop of Assam.
- First forecast of the winter rice crop of Assam.
- Preliminary forecast of the autumn rice crop of Assam.
- First forecast of rice crop of United Provinces of Agra and Oudh.
- Sowings report of the ground-nut crop of the Madras Presidency.
- Sowings report of the rice crop of the Madras Presidency.
- Second sowings report of the gingelly crop of the Madras Presidency.
- Second sowings report of the cotton crop of the Madras Presidency.
- First forecast of the indigo crop of the United Provinces of Agra and Oudh.
- First forecast of the indigo crop of the Punjab.
- Second forecast of the cotton crop of Assam.
- Second forecast of the til crop of the United Provinces of Agra and Oudh.
- Second forecast of the cotton crop of the Punjab.
- Second forecast of the sugar-cane crop of the United Provinces of Agra and Oudh.
- Second memorandum on the sesamum crop in the Bombay Presidency, including Sind and Native States.
- Second memorandum on the sugar-cane crop in the Bombay Presidency, including Sind and Native States.
- Second memorandum on the ground-nut crop of the Bombay Presidency, including Native States.

AMERICAN AND SWEDISH ICE-CREAM FREEZERS IN RUSSIA.

[Commercial Attaché Henry D. Baker, Petrograd, Nov. 9.]

There is a big sale of Swedish ice-cream freezers in Russia with capacities of 1½ to 5 quarts, the most popular being the 3-quart size, which now costs retail 9.50 rubles (\$4.90 at the normal exchange rate of \$0.515 to the ruble), which is about 20 per cent higher than in normal times. While it is possible to obtain American ice-cream freezers in Russia, their prices are about 50 per cent higher than Swedish freezers of similar capacity, though they are apparently of the same quality, material, and construction. Very few Russian dealers, therefore, keep them in stock. Ice-cream freezers are sold mostly in shops specializing in general household goods, and also in a few hardware shops.

A popular feature of the Swedish ice-cream freezers is that each one of them contains a small booklet printed in Russian giving receipts for making all kinds of ice creams, sherbet, frozen fruits, etc. Exact instructions also are given in the use of the ice-cream freezers. Various kinds of ice creams and ices constitute an extremely important part of Russian diet, especially in the summer, and there is a large sale of such ice preparations at the cafes.

[A Swedish 3-quart ice-cream freezer has been forwarded from Petrograd, which on its arrival will be shown at the New York office of the Bureau of Foreign and Domestic Commerce in connection with the hardware exhibit that is being assembled.]

FINANCING CUBAN CREDITS.

[Special Agent Garrard Harris.]

In order to hold, after the return of normal conditions, a substantial part of the increased business that has fallen to their share as a result of the present war, American exporters must be prepared to offer terms at least approximating those heretofore granted by Europeans.

The matter of arranging the financing of the credit is very simple. Drafts at 60 to 90 days sight on the Cuban importer are forwarded with the shipping documents through the shipper's bank and will be presented to the Cuban buyer by the correspondent of the forwarding bank. The Cuban accepts the draft and gets the documents entitling him to the goods. The bank holding the accepted draft may then return the acceptance to its correspondent in the United States, and the owner of the draft can use it as collateral or sell it at prevailing discount rates (under the Federal reserve banking act an accepted draft of the sort becomes a negotiable instrument), or if the shipper prefers, the Cuban correspondent bank will retain the draft for collection and remittance of the payment it calls for in due course, or it is possible that a loan may be negotiated with the Cuban bank with the accepted draft as collateral.

The above embraces the customary procedure of Europeans, and handling paper of the sort is one of the well-recognized activities of foreign banks. Until the Federal Reserve Act passed American banks were not, as a rule, familiar with paper of the sort, and it had not the status now given it. All Cuban transactions are in dollars, the Cuban currency and that of the United States circulating interchangeably and on exact parity.

GUAYAQUIL A MARKET FOR READY-MADE DRESSES.

[Consul Frederic W. Goding, Guayaquil, Ecuador, Nov. 6.]

There is a dearth of competent dressmakers in Guayaquil, and these few state that apprentices manifest very little interest in learning the trade. Owing to this circumstance they are planning to establish business relations with reliable houses in the United States which are in position to supply samples regularly and to fill orders for ready-made dresses selected from their catalogues.

A number of Guayaquil ladies, who are supplied with frocks from Paris and New York, would be glad to receive catalogues regularly, as the only ones now obtainable must be purchased, for \$1 to \$2 each, from street vendors. The catalogues are sent to the street vendors by American firms under a wrong impression that those requesting them are possible purchasers. [The addresses of the ladies referred to may be obtained, upon application, from the Bureau of Foreign and Domestic Commerce or its branch offices. Ask for file No. 69515.]

A substantial mail-order trade in ready-made dresses can be developed here with practically no expense to the exporter. American firms desiring such business may send half a dozen catalogues (preferably in Spanish) regularly to the Guayaquil consulate, which will place them in the proper hands.

INCREASE IN PRICE OF FOODSTUFFS IN MADRID.

[Consul Robertson Honey, Madrid, Spain, Nov. 5.]

For some time past the press of Madrid has had its attention called to the slow but continuous rise in price of foodstuffs and household supplies. El Liberal, one of the leading dailies of Madrid, compared in a recent issue the prices in October, 1915, with those in October, 1914. Quotations are from the open markets of La Cebada and Los Mostenses, in Madrid, which supply the retailers of the city. Retailers add 10 to 15 per cent (more in some instances) to the following, and it is that increased figure that the consumer pays:

Artículo.	1914	1915	Artículo.	1914	1915
	Pesetas.	Pesetas.		Pesetas.	Pesetas.
Mutton.....per kilo.....	1.60	2.40	Lobsters.....each.....	4.25	5.00
Sausage.....per dozen.....	3.75	4.70	Merluza (fish).....per kilo.....	1.85	2.00
Ham.....per kilo.....	3.50	4.50	Sardines (fresh fish).....do.....	.85	1.10
Veal.....do.....	2.10	3.00	Pescadilla (fresh fish).....do.....	1.25	2.00
Beef.....do.....	1.40	2.00	Potatoes.....do.....	.16	.25
Rabbits.....per pair.....	2.40	3.40	Tomatoes.....do.....	.14	.25
Clams.....per kilo.....	1.08	1.50	Peas, beans, etc.....do.....	.20	.35
Crabs.....do.....	1.98	2.00	Eggs.....per hundred.....	12.50	14.00

One kilo equals 2.2 pounds; the value of the peseta, in which the above are quoted, is about 19.3 cents. In addition to the above, notable advances have taken place in the prices of wood alcohol, sugar, coal, bread, and footwear. Coal has advanced 0.80 to 1 peseta over the price in 1914 for a sack of 100 pounds, delivered, at retail. The retail price of coal, delivered, is nearly \$15.50 per short ton.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brasil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.....	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.....	963 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtan, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(9)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh street, New York City.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
Canine, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. R.....	Cornwall, Canada.....	Jan. 5	2807 Eleventh Street, NW., Washington, D. C.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

RATES FOR WAR-RISK INSURANCE.

The Bureau of War-Risk Insurance of the United States Treasury Department has issued, under date of December 6, 1915, a schedule of rates. The rates from any ports in the United States to any ports in the world (other than those named in the special list), or vice versa, are as follows:

Cargo, freight, and advances:

1. Between ports of the United States or its possessions, or between nonbelligerent ports in the Western Hemisphere, or between the west coast of the United States and Japan or China, 5 cents per \$100.
2. Between United States ports and belligerent ports in the Western Hemisphere, 15 cents per \$100.
3. Between United States ports and nonbelligerent ports other than above not north of Havre in Europe nor east of Sicily in the Mediterranean, $\frac{1}{4}$ per cent.
4. To all other ports, $\frac{3}{4}$ per cent.

Vessel (voyage risks):

By voyage, meaning from port of loading to not more than two ports of discharge.

1. Between ports in the United States and its possession and nonbelligerent ports in the Western Hemisphere, one-eighth per cent.
2. Between United States and belligerent ports in the Western Hemisphere or between ports on the west coast of the United States and China and Japan, one-fourth per cent.
3. To other nonbelligerent ports not north of Havre, in Europe, nor east of Sicily in the Mediterranean, one-half per cent.
4. Other ports, three-fourths per cent.

Vessel (time):

Time policies to be issued for a period of 90 days only; rate $1\frac{1}{2}$ per cent.

If warranted to use only ports in the Western Hemisphere, three-fourths per cent.

If warranted to use only nonbelligerent ports in the Western Hemisphere, three-eighths per cent.

All rates are subject to change without notice and effective from the date thereof.

REVISED ESTIMATE OF DENIA RAISIN CROP.

[Consul Claude I. Dawson, Valencia, Spain, Nov. 8.]

The previous estimate of the 1915 Denia raisin crop of 10,000 metric tons (see COMMERCE REPORTS for Nov. 18, 1915) must be revised in view of more definite information published during the past week, according to which the yield will not surpass 6,000 tons and may be nearer 5,000. From the growers' standpoint the season is now closed, since practically all unmarketed fruit is in the hands of traders, who now await favorable opportunities for a turnover at a reasonable profit above the high prices paid for their holdings.

The crop has greatly fluctuated during the past decade and better results may be looked for next season. It is true the vines were greatly affected by cryptogamic diseases; but there are many indications that farmers are already treating the vines and otherwise preparing for a healthy start next year.

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he has received in stock during the week ended December 4 the following new United States Government publications, which he will sell at the nominal prices affixed:

Practical Tree Surgery. Yearbook Separate 622—Practical work on the modern art of preserving trees by means of concrete fillings, etc.—Covering the principles involved and the general theory of tree growth. Price, paper, 10 cents.

Tests of the Absorptive and Permeable Properties of Portland Cement Mortars and Concretes, together with Tests of Damp-Proofing and Waterproofing Compounds and Materials. Standard Bureau Technologic Paper 3.—Covers purpose of tests, equipment, description of methods, and information relative to damp-proofing and waterproofing compounds, with statistical tables. Price, paper, 20 cents.

Tests of Structural Timbers. Forest Service Bulletin 108.—Gives purposes of the tests and methods of tests and results, with grading of timber according to their mechanical properties. Price, paper, 20 cents.

Information Concerning the Milch Goats. Animal Industry Bulletin 68.—Covers present situation, diseases, breeding, uses of goats, milk, etc. Price, paper, 15 cents.

Trade Directory of Central America and the West India. Miscellaneous Series 22, Bureau of Foreign and Domestic Commerce.—List of the merchants, tradesmen, manufacturing institutions in South America, arranged alphabetically by countries and industries. Price, cloth, 60 cents.

The Women's Muslin-Underwear Industry. Report on the Cost of Production of Women's Muslin Underwear in the United States, Miscellaneous Series 29, Bureau of Foreign and Domestic Commerce.—Covers women's clothing industry, scope of investigation, capital, profits, manufacturing and selling, machinery, processes, working conditions, etc. Price, paper, 20 cents.

Dyestuffs for American Textile and Other Industries. Special Agents Series 96.—An article by Thomas H. Norton, covering dyestuff situation in the United States, American supply, the German industry, processes of manufacture, etc. Price, paper, 10 cents.

Commercial Organizations in the United Kingdom, with a Description of British Manufacturers' and Employers' Organizations. Special Agents Series 102.—Descriptions of the British chambers of commerce and the manufacturers' and employers' organizations. Price, paper, 5 cents.

Banking Opportunities in South America. Special Agents Series 106, Report of William H. Lough.—Covering the situation in South America, embracing probable lines of development, banking situation in the various countries, earnings, profits, etc. Price, paper, 20 cents.

Mathematics in the Elementary Schools of the United States. International Commission on the Teaching of Mathematics. The American Report, Committees I and II, Education Bureau Bulletin 13, 1911.—Covers teaching of mathematics in general, elementary schools, methods employed in teaching, grades, preparation, teachers, etc. Price, paper, 15 cents.

The Status of Rural Education in the United States. Education Bureau Bulletin 8, 1913.—Embraces urban and rural school data, the one-teacher school, essentials for efficiency, supervision, organization, etc. Price, paper, 15 cents.

Saving Fuel in Heating a House. Mines Bureau Technical Paper 97.—Practical article on the economical use of fuel for domestic purposes, covering uses of wood, anthracite and bituminous coal, peat, coke, oil, gas, and electricity, directions for proper management of fireplaces, stoves, steam and hot water apparatus, etc. Price, paper, 5 cents.

Composition of the Natural Gas Used in Twenty-five Cities, with a Discussion of the Properties of Natural Gas. Mines Bureau Technical Paper 109.—Covers the method used in consumption of natural gas, with results attained, comments on the samples, etc. Price, paper, 5 cents.

Uses of Commercial Woods of the United States.—Beech, Birches, and Maples. Agriculture Department Bulletin 12, covering supply, early uses, agricultural implements, furniture, lumber, preservative treatment, etc., of beech, birches, and maples. Price, paper, 10 cents.

Highway Bonds: A Compilation of Data and Analysis of Economic Features Affecting Construction and Maintenance of Highways Financed by Bond Issues, and the Theory of Highway Bond Calculations. Agriculture Department Bulletin 136.—Embraces county highways, market roads, cost of highway construction and maintenance, bond issues, etc. Price, paper, 25 cents.

Shortleaf Pine: Its Economic Importance and Forest Management. Agriculture Department Bulletin 308.—Covers adaptability for forest management, present supply, yield, values, etc. Price, paper, 15 cents.

Honeybees: Wintering, Yields, Imports and Exports of Honey. Agriculture Department Bulletin 325.—Covers wintering, honey yields for the season of 1914, etc., with statistical tables. Price, paper 5 cents.

Hints to Poultry Raisers. Farmers' Bulletin 523.—Covers selection of a breed, incubation, breeding, poultry houses, feed, egg production, diseases, and marketing. Price, paper, 5 cents.

SOUTH MANCHURIA AND EAST MONGOLIA FINANCE.

[Extract from Manchuria Daily News, Oct. 27, forwarded by Consul A. A. Williamson, Dairen.]

The nature of the new financing organization for South Manchuria and Eastern Mongolia, reported by newspapers at home as the Government plan, is:

The new bank shall be capitalized at 10,000,000 yen (\$4,980,000) with its head office in South Manchuria. The loans advanced by the special loan service of the Yokohama Specie Bank shall be restored to the Central Treasury as they are repaid, and may be transferred to the charge of the new bank. The deposit section of the Finance Office shall underwrite the debentures of the new bank to the maximum amount of 15,000,000 yen (\$7,470,000) bearing interest of not more than 5 per cent per annum.

The new bank shall advance long-term loans on the security of real estate in addition to general banking business. It is authorized to issue debentures up to 10 times the paid-up capital.

The rates of interest on the loans of the new bank shall be made subject to the approval of the Government semiannually.

COFFEE CROP OF SALVADOR.

[Vice Consul Lynn W. Franklin, San Salvador, Nov. 13.]

Preparations are now being made to harvest the 1915-16 coffee crop of Salvador, which it is believed will reach a total of 75,000,000 pounds; 60,000,000 pounds will probably be exported. This is considered to be a very good crop and compares favorably with the crop of the preceding year, which was 77,007,300 pounds and which was produced by the following departments: Santa Ana, 12,888,000; Ahuachapán, 8,137,400; Sonsonate, 5,573,400; La Libertad, 14,174,400; San Salvador, 2,480,100; Chalatenango, 88,700; Cuscatlan, 489,000; La Paz, 8,788,600; San Vicente, 753,000; Cabañas, 286,300; San Miguel, 4,861,700; Usulután, 18,071,000; Morazan, 404,700; and La Unión, 11,000.

There are approximately 211,000 acres planted in coffee trees in Salvador.

NEED OF AMERICAN SHIPS IN CHINA TRADE.

[Consul General George E. Anderson, Hongkong, Oct. 8.]

Announcement has been made by the Toyo Kisen Kaisha, the chief competitor in the trans-Pacific service of the Pacific Mail Steamship Co., which has just given up its trans-Pacific service and sold its ships and other property in Pacific ports, that it is preparing, and to some extent is already prepared, to maintain the schedule of weekly sailings on which the ships of the Toyo Kisen Kaisha and Pacific Mail steamships have been sailing by joint arrangement for the past 10 years and more.

For the time being several smaller-sized and indifferent Japanese ships have been secured, and the first of the new ships, the *Dairen Maru*, with a displacement of 8,000 tons, is announced to sail from Hongkong on November 1. The president of the Toyo Kisen Kaisha, on his return to Japan from the United States within the past fortnight, announced that he had attempted to buy the ships of the Pacific Mail Steamship Co., but had succeeded in purchasing the *Persia* only, though he still had hopes of buying the *China*. He also had hopes of purchasing a 10,000-ton vessel now under construction in the United States. In the meanwhile, his company is endeavoring to secure other vessels of proper size and equipment for trans-Pacific passenger and freight service, and in case ships already built can not be had, the company will immediately lay down new vessels for the trade.

How Commerce is Affected.

While the vessels thus placed in service will relieve to some extent the actual impasse which has arisen by the withdrawal of the Pacific Mail Co.'s service, the tonnage still available is inadequate to the demands of the trade, while passenger accommodations are so inadequate that accommodations on all vessels in trans-Pacific service at present, and those in prospective service, have been engaged for months ahead, and the accommodations available are altogether inadequate.

There is an even more serious phase to the situation from an American standpoint, however, which many American business men so far have not appreciated. The need is not only that of adequate tonnage and passenger accommodations for the shipment of goods and the transport of mails and passengers across the Pacific, but there is actual and pressing demand for American and other neutral ships, as differentiated from Japanese, British, or other nonneutral ships in the present war, and American manufacturers are losing a vast amount of trade in China, not only prospective but actual, and trade they already have had in the past, in not having American ships to carry their goods.

The situation is well illustrated in the matter of cotton piece goods for the trade in China, concerning which there has already been considerable discussion, and which represent so great a part in China's import trade. As reported heretofore, a large portion of the \$75,000,000 (gold) worth of cotton piece goods imported into China each year are imported by the firms under their own "chops" or trade-marks.

Restrictions on Trade.

For many years a combination between British manufacturers of cotton piece goods and German import and distributing houses in China has been one of the bulwarks of British and German trade in China, and has represented one of the strongest obstacles to the extension of American trade in such lines. By the terms of the British proclamation against trading with the enemy, however, British manufacturers can no longer furnish such goods to German or other enemy traders in China, Siam, or other countries in which extraterritorial jurisdiction prevails.

In the ordinary course of things these German houses would turn to the United States or other neutral countries for such supplies, and the United States has an exceptional opportunity to introduce American cotton goods into various Chinese markets through these firms. However, by the terms of the proclamation against trading with the enemy, British vessels and Japanese vessels are prohibited from carrying enemy goods, so that cotton goods manufactured in the United States for German firms in China can not be carried by such vessels.

What is true of cotton piece goods is true of all other lines of trade in which German houses are concerned. Not only does this rule apply to cotton goods and steel and iron products and all the lines of import trade in which American manufacturers have an opportunity otherwise to extend their markets during the present war and the present state of things in the manufacturing centers of Europe, but they can not ship American goods to German houses in China, even where such German firms have handled such American goods for years.

Lack of Neutral Vessels to Carry American Goods.

Most of the more important agencies of American firms trading in China, where such American manufacturers have not been represented by their own branch houses, have been with German firms. The chief lines of American locomotives and other railway equipment and material have been handled by German firms. American typewriters in many of the ports have been handled by German firms. American electrical goods, American food products, American cotton goods of standard grades, in short, nearly all lines of export of American goods to China have been more or less handled by German houses. All this trade is now difficult, if not impossible, as a result of the lack of neutral vessels on the Pacific which can carry American goods to German firms. Of course, if Germany controlled the Pacific, the same state of things would exist as to the supply of American manufactures to British, French, Russian, and other traders among the belligerents.

The point is that to secure the delivery of American goods to traders of any of the belligerents in China against the will of their enemies, requires vessels under the American or other neutral flag. In other words, so long as there are no American ships on the Pacific to carry American goods, the large trade of German and Austrian firms in China, which still remains large in spite of the restrictions due to the war, and would be immensely larger were transportation of goods to them available, is shut to American manufacturers. The American manufacturer and wage earner are directly and positively hurt by the lack of American ships on the Pacific at this time. There

has been more or less indirect injury to American trade in various parts of the world by reason of a lack of American ships at all times, but at present, and under war conditions, the injury is direct and positive, and immensely important.

The Japanese Service.

By the terms of subsidy arrangements between the Japanese Government and the Japanese companies, Japanese interests, of course, must first be taken care of at all times. The service, in short, is that of a Japanese company and primarily for Japanese purposes and ends.

There is marked interest in the new Dutch line from Java to the United States by way of Hongkong and other Oriental ports, and there is still talk of renewed service of British ships of various lines. The entire shipping situation as regards trans-Pacific services, however, is in an uncertain state and a highly unsatisfactory condition, and it is unlikely that there will be any substantial change from present conditions until it is better understood what may be expected in the way of service from American sources in the near future.

Recent articles in **COMMERCE REPORTS** have recorded successful efforts in behalf of neutral shipping on the Pacific, with the benefits coming partly to American commerce. The Java-Pacific Line will inaugurate a service between Batavia, Java, and San Francisco with a sailing from Batavia on December 15. Steamers will stop at various ports, including Manila and Hongkong. The successive stages in the arrangements made for this service were mentioned in **COMMERCE REPORTS** for October 11, November 5, 10, and 13. The new line will link Java and other islands of the rich Netherlands Indian Archipelago with San Francisco for closer trade relations, as well as supply facilities at the other ports mentioned. The service is made possible through the cooperation of three large Netherlands steamship companies which have been operating out to Java and the Orient—the *Nederland Steamship Co.*, and the *Java-China-Japan Line of Amsterdam*, and the *Rotterdam Lloyd*, of Rotterdam.

Arrangements for the organization of the *Pacific & Eastern Steamship Co. (Inc.)* to operate under the American flag between China, the Philippines, and the Pacific and Atlantic coasts of the United States was mentioned in **COMMERCE REPORTS** for October 30, 1915. In the issues of October 22 and November 19 were reports of the formation of the *China Mail Steamship Co.* for traffic between San Francisco and China. This company is financed by Chinese in the United States.

Jute bags to the value of \$400, cabots (cotton drills) worth \$2,400, fancy groceries \$300, hosiery \$650, lumber \$51,650, tarred paper \$100, refrigerators \$100, rice \$44,200, shooks \$45,000, staves \$59,260, sugar \$15,950, wheat \$2,400,000, and wire \$5,476, or a total of \$2,625,486 worth of American merchandise, was imported by firms in the Patras consular district during the September quarter as the result of the trade-extension efforts of Consul A. B. Cooke, of that Greek port.

CROP REPORT OF IRELAND.

[Consul Wesley Frost, Cork (Queenstown), Oct. 23.]

The Irish hay crop in 1915, according to recently expressed official opinion, was decidedly superior to the crop of 1914, and the general impression here is that the 1915 crop was really exceptionally full. The dry weather in June was counteracted by abundant rains in July, and while the quality in many regions suffered by the moist weather at harvesting, the quantity was all that could be desired.

The abundant hay crop is said to have encouraged the fattening of cattle in Ireland, and more than the usual number of fat cattle have been shipped to England, to which country the shipments are almost always preponderantly composed of thin cattle for English fattening. This Irish fattening has called for stock foods to supplement the forage, and prices of oil cake, maize, and mill offals are consequently very stiff.

The present prices of farmers' hay in Cork range from \$14.25 to \$21 per ton. The total area under hay in Ireland in 1915 was 2,526,627 acres, an increase of 8,201 acres over 1914. Of this area 532,486 acres were first-crop hay from seed, 407,255 acres were second and third crop hay, and 1,586,886 acres were meadow hay.

SPAIN'S 1915 SUMMER CROPS.

[Consul Robertson Honey, Madrid, Nov. 4.]

The "Informacion Financiera," published in Madrid, contrasts in a recent issue the report of the Spanish Government as to summer crops of 1915 compared with those of 1914. The following are the figures, the metric ton of 2,204 pounds being the unit:

Crop.	1914	1915	Crop.	1914	1915
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
Corn (field).....	385,146.5	321,673.6	Peas.....	12,719.9	11,422.5
Rice.....	123,791.0	117,715.3	Beans.....	96,978.2	98,433.3
Miller.....	1,773.8	281.0	Lon illa.....	4,788.4	6,544.4
Click peas.....	37,611.0	52,449.7	Peanuts.....	10,123.8	6,275.0
Pulse.....	73,487.8	81,416.5			

The falling off in crops of field corn, millet, and peanuts is marked.

AMERICAN PAPER MONEY PREFERRED TO GOLD IN ITALY.

[Consul General David F. Wilber, Genoa, Nov. 4.]

Attention is directed to the fact that American paper money in exchange for Italian paper lire in Italy brings about 8 per cent more than American gold. Americans coming to Italy will, therefore, find it to their advantage to bring paper money in preference to gold coin, and in addition will be able to take such money out of Italy, which can not be done with gold coin on account of the law forbidding the exportation or carrying of gold out of the country, which is rigorously enforced.

Bank drafts enjoy a still higher rate than American paper money. A sight draft on a New York bank in dollars sells at the highest rate.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Navy Department supplies, No. 2817.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., for furnishing the following materials. Firms desiring to submit proposals should make application to the Bureau of Supplies and Accounts, giving schedule numbers desired: Schedule 9066, muriatic, nitric, and sulphuric acids, calcium carbide, paint drier, and petrolatum; schedule 9067, redwood and 1 and 1½ inch seasoned spruce; schedule 9068, brass screws, steel nuts, 1½-inch-wide elastic webbing, oak-tanned rigging leather, ½-inch oak-tanned pump leather, and bells for motor boats; schedule 9069, muriatic acid and calcium carbide; schedule 9070, soft sheet steel, round rivert-rod steel, and medium bar steel; schedule 9071, loofa fiber sponges, rolled naval brass nuts, and steel nuts; schedule 9072, 12,000 cones of sewing cotton, 36-inch calfskin heads for bass drums, and B-flat clarinet reeds; schedule 9077, telephone wire; schedule 9078, telephone cable, bell wire, rat-tail wire for aerials, and single conductor wire; schedule 9079, beech, birch, and maple (mixed), red or yellow birch, firs, and seconds maple, white maple firs, red oak, white oak, New England country white pine, and New England spruce; schedule 9080, white pine and green dock shores juniper poles; schedule 9081, white ash, white pine, white Idaho pine, juniper poles, New England spruce, sawn spruce, southern spruce, and spruce sticks for spars; schedule 9082, furnishing and installing 6-ton platform scale; schedule 9083, monel metal fuel tanks, and nitrate sodium; schedule 9084, power pipe threading and cutting-off machine; schedule 9085, machines for use in rope walk; schedule 9086, controllers for boat cranes; schedule 9087, double cylinder winches; schedule 9088, angle steel and ribbed floor steel plates; schedule 9089, mattress covers; schedule 9090, tinned lard; schedule 9091, marine glue; schedule 9092, automatic steam towing machine; schedule 9093, electrical supplies; schedule 9094, barometers; schedule 9095, medium steel plates; schedule 9096, phosphor bronze wire; schedule 9097, local turret fire-control panels; schedule 9098, mustard and macaroni; schedule 9099, round carbon steel and pure sperm oil; schedule 9100, calcium carbide, putty in oil, 4 by 24 inch safety trends, 40-inch-wide burlap, hydraulic leather, lenses for deck lights, ½-pound hanks of flax twine, and standard-weight wrought pipe; schedule 9101, gauge-testing outfits; schedule 9102, 4-conductor telephone cable, double conductor wire, single conductor wire, and twin conductor wire; schedule 9103, rough brass angle, check, cross, gate, and globe valves; schedule 9104, bar brass and Nos. 1, 2, and 4 pig iron; schedule 9105 North Carolina pine pitch and dry Venetian red; schedule 9106, malleable-iron pipe fittings, malleable-iron unions, upholstery leather, 14-foot ash oars, and lignum vitae logs; schedule 9107, boat anchors, galvanized-iron or steel buckets, padlocks, and brass screws; and schedule 9108, Turkish toweling, steel bolts and nuts, brass screws, composition pipe fittings, and composition unions.

Coal, No. 2818.—Sealed proposals will be received at the office of the United States engineer customhouse, St. Louis, Mo., until December 20, 1915, for furnishing 30,000 tons of coal. Further information may be had on application to the above-named office.

Repairs, No. 2819.—Sealed proposals will be received by the commanding officer, Coast and Geodetic Survey steamer *Bache*, Norfolk, Va., until December 13, 1915, for repairs to the steamer *Bache*. Blank proposals and information may be had on application to the above-named officer.

Construction work, No. 2820.—Sealed proposals will be received at the office of the Commissioner of Fisheries, Washington, D. C., until January 11, 1916, for the construction of a single-screw, wood, steam-propelled fishery vessel, delivered at the fisheries station, Boothby Harbor, Me. The vessel is to be similar in type to the best modern menhaden fishery vessel, about 108 feet in length over all, 22 feet beam, and 11 feet long. Blank proposals and particulars may be obtained on application to the above office.

Furnishing brass castings, No. 2821.—Sealed proposals will be received by the lighthouse inspector, Tompkinsville, N. Y., until December 18, 1915, for furnishing and delivering to general lighthouse depot, Tompkinsville, N. Y., approximately 5,000 pounds of brass castings, from January 2, 1916, to June 30, 1916, for store account. Further information may be had on application to the above office.

Installing metal shelving, etc., No. 2822.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until January 8, 1916, for installing metal shelving, portable steel racks, steel boxes, metal storage racks, steel angles and plates, and galvanized-wire partitions at the naval torpedo station, Newport, R. I. Plans and specifications may be had on application to the above-named bureau.

PROMOTION OF MADE-IN-CANADA GOODS.

[Consul O. Gaylord Marsh, detailed as vice consul, Ottawa, Canada, Nov. 18.]

The Canadian Department of Trade and Commerce has inaugurated a new system for the benefit of people desiring to purchase made-in-Canada goods. A notice which is being given publicity in the Canadian press reads:

The department is frequently in receipt of inquiries as to whether certain goods are manufactured in Canada and, if so, by whom. In this connection the catalogues of manufacturers are found of value, enabling the inquirers to be directed to the proper sources of supply. Manufacturers are therefore requested to forward their catalogues, together with discount sheets and price lists, to the Department of Trade and Commerce, Ottawa, where they will be indexed and filed for purposes of reference. Trade commissioners also find these catalogues of value in connection with their work, and manufacturers should make a point of keeping the various officers of the Canadian Commercial Intelligence Service supplied with their latest catalogues.

Canada maintains a corps of trade commissioners and commercial agents in the leading countries of the world, except the United States, and except, at present, the countries at war with Great Britain. It is the duty of these officials to promote Canadian foreign trade. The British consular corps also cooperate in the extension of Canada's trade. The Department of Trade and Commerce, with the trade commissioners, commercial agents, and British consuls, constitute what is known as the Canadian Commercial Intelligence Service.

RESPONSIBILITY FOR DAMAGE TO FREIGHT.

[Consul General Frederick M. Ryder, Winnipeg, Canada, Nov. 20.]

According to a recent order of the board of railway commissioners railway companies west of Port Arthur may be held responsible for damages to consignments of perishable freight to the extent of half the freight charges on the shipment if negligence of the railway or its employees is responsible for the damage. In the past such shipments have always been forwarded at "owner's risk." The same order also requires that the railways accept less than a carload of perishable freight in heated cars on any days of the week that are scheduled.

This order affects Winnipeg and other western shippers to such an extent that the transportation committee of the Manufacturers' Association held a meeting November 18 and protested against the ruling of the commission. The shippers held that the railway commission should not interfere with a service which had been so satisfactory for years past without obtaining their views upon the matter generally, and this protest was upheld by the association at their meeting later.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

- Wire nails**, No. 19496.—An American consular officer in India reports that a firm in his district desires to equip a plant for making wire nails. Prices and full information are requested.
- Roofing, wire nails, etc.**, No. 19497.—A report from an American consular officer in Greece states that a company desires prepared roofing of weather-resisting qualities in rolls of about 108 square feet, wire nails, and liquid cement for attaching the roofing. The company requests samples and quotations f. o. b. New York. The firm states it is willing to pay cash against documents in New York. Correspondence may be in French or English.
- Wearing apparel, etc.**, No. 19498.—A firm in Russia informs an American consular officer that it desires to receive samples, catalogues, and price lists from manufacturers of socks, stockings, and underwear made of cotton, wool, and silk for women and children, combs, shoe polish, and novelties. Correspondence may be in Russian, French, or English. Cable address and bank references given.
- Equipment wanted for coffee plant**, No. 19499.—The bureau is in receipt of a letter stating that a firm in France desires quotations, f. o. b. New York, terms, and full information in regard to equipment for a coffee plant. Roasters, crushers, sieves, bolters, and automatic packing machines are the principal items needed.
- Paper**, No. 19500.—A firm of commission agents in Greece desires to communicate with firms interested in exporting all kinds of paper, especially that used for printing newspapers; ordinary and fine writing; wove; foolscap; letter; and envelope paper. The paper wanted for newspapers must be of reddish color and have water mark of 2 parallel lines across the whole sheet; size about 81 by 115 centimeters. Quotations c. l. f. Patras, including war-risk insurance and commission of 4 per cent, are desired. A sample of the news paper may be examined at the Bureau or its branch offices. (Refer to file No. 69525.) It is requested that samples accompany quotations. Bank references are given.
- Fireless cookers**, No. 19501.—A manufacturer's agent informs an American consular officer that he desires catalogues and full information from manufacturers of fireless cookers. Correspondence may be in English.
- Jute sacks**, No. 19502.—A report from an American consular officer in Russia states that a business man in his district desires to communicate with manufacturers of flaxen and jute sacks, size 65 by 110 centimeters, and weighing from 455 to 525 kilograms per thousand. Correspondence may be in English.
- Waterworks equipment**, No. 19503.—An American consular officer reports that a municipality in Canada contemplates improving and extending its waterworks system, and desires quotations, c. l. f., port of destination, on 2 steel steam boilers, about 150 horsepower each; 1 large steam pump capable of pumping about a million and a quarter gallons of water a day; about 3 miles of cast-iron water pipe, 6 to 8 inches; about a dozen hydrants, and fittings for 2½-inch hose.
- Household articles, etc.**, No. 19504.—An American consular officer in South Africa reports that a young man in his district desires to establish a house-to-house canvassing business, and requests quotations on household articles and clothing for women and children. Discounts, terms, packing, shipping charges, and all necessary details are requested.
- Umbrella parts**, No. 19505.—A firm in Norway requests an American consular officer to place it in touch with manufacturers of umbrella parts, such as crowns, runners, ribs, etc.
- Optical goods, clocks, etc.**, No. 19506.—A report from an American consular officer in France states that a firm in his district would like to be placed in communication with manufacturers of optical goods, clocks, sewing machines, and electrical supplies, with a view to becoming their agent. Correspondence should be in French.

INCREASE IN SUEZ CANAL TOLLS.

[Cablegram from American Embassy at Paris, dated Dec. 9.]

Suez Canal Co. informs embassy that canal tolls will be raised 50 centimes (9.6 cents) after April 1, 1916, making rate for laden ship 6 francs 75 centimes (\$1.30) and for ships in ballast 4 francs 25 centimes (82 cents) per ton.

NORWAY PROHIBITS SALE OF VESSELS.

[Cablegram from American consulate general at Christiania, Dec. 6.]

The Norwegian Government has prohibited the sale of Norwegian vessels to any foreign country. Law may be waived in special cases. [This is in correction of cablegram published in COMMERCE REPORTS for Dec. 10.]

DISCOVERY OF PLATINUM IN SPAIN.

[Consul Robertson Honey, Madrid, Nov. 4.]

The recently published rumor that platinum has been discovered in Spain was confirmed this week by Prof. Orueta in person. The latter is a Spanish mining engineer and was designated by the Instituto Geológico (Geological Society) to examine the Ronda Mountain Range for possible mineral deposits. He has made an address before the Instituto de Ingenieros de España (Society of Civil Engineers of Spain) in Madrid, in which he sets forth his labors and their results. He states that he has discovered platinum deposits of greater extent and richness than those of the Ural Mountains in Russia, which furnish about 90 per cent of the world's supply. The present market value of platinum is about \$46.25 per ounce.

As is known, Spain possesses the largest and richest mercury mines in the world; these are under lease to a British company, which exploits them.

OPERATION OF SWISS FEDERAL PURCHASING TRUST.

[American Minister P. A. Stovall, Berne.]

As stated in **COMMERCE REPORTS** for November 22, 1915, the Swiss Importation Trust (*Société Suisse de Surveillance*) began operations on November 18. Mr. H. Grobet-Roussy, who was chosen by the Federal Council as director of the society, left for Holland in October for the purpose of investigating the organization and policy of the Netherlands Oversea Trust. The head offices of the S. S. S., as the new body is known, will be in Berne, the address being *Parlaments-Gebäude, Zimmer No. 5*.

The trust, as indicated in **COMMERCE REPORTS** for November 2, 1915, will exercise no control over the importation of metals. This is to be in the hands of a separate syndicate. It has been decided to take as the basis for this syndicate one of the already formed organizations of engineers or metal workers in Switzerland. This syndicate will operate under the general supervision of the Swiss Society of Surveillance, and shipments of metal and metal products will be consigned to the Swiss Society of Surveillance. It is expected that the statistics of imports of metal, raw and refined, into Switzerland for the calendar years 1911, 1912, and 1913 will be taken as a basis for the amount of metal of each description to which the Swiss Society of Surveillance will accord entry into Switzerland. During the continuance of hostilities the same proportional amount of metal imports will be permitted as the average in similar periods of the years mentioned.

AUSTRALIAN REFERENDUM PROPOSAL ABANDONED.

[Commercial Attaché William C. Downs, Melbourne, Nov. 5.]

The referendum to the people for the adoption of the proposed amendments to the Commonwealth constitution was to have taken place on December 11, but by agreement among the premiers of the respective States and the premier of the Commonwealth, the referendum proposal has been abandoned. For this concession on the part of the Federal Government the States have agreed to surrender to the Federal Government the additional powers asked in the proposed amendments for the period of the war and one year thereafter, the respective State premiers undertaking to secure the passage of the necessary legislation and the Commonwealth premier undertaking to secure the passage of the legislation necessary for the withdrawal of the referendum.

PROPOSED LEGISLATION IN QUEENSLAND.

A bill has been introduced in the Queensland (Australia) Parliament, and has reached the upper house, providing that under certain conditions the Government shall have the authority to acquire the meat works of Queensland. There is also pending in the Queensland Parliament a workers' compensation bill. Copies of these measures have been forwarded by Commercial Attaché William C. Downs, at Melbourne, and may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 924.

PRODUCTION OF TANNING EXTRACTS IN VENEZUELA.

[Consul Homer Brett, La Guaira, Nov. 10.]

Caracas newspapers announce that a concession has been granted to a resident of that city for the establishment of the industry of producing tanning materials. A long list of plants rich in tannic acid that grow abundantly in Venezuela is published, among them being *divi divi*, or the fruits of the *Caesalpinia coriaria*, of which 6,000 to 8,000 tons are exported annually; mangrove (*Rizophora mangle*), of which 1,000 to 4,000 tons are exported; and balatá (*Mimusops globosa*). Other plants listed are urape (*Bauhinia multinervia*), *Astرونium fraxinifolium*, *A. graveolens*, *A. concinnum*, Rosa del monte (*Brownea grandiceps*), alcornoque (*Bowdichia virgilioides*), jacque (*Prosopis cumanaensis*), *Pterocarpus draco*, algarrobo (*Hymenaea courbaril*), and numerous ebonies, acacias, and mimosas.

As Venezuela is a large producer of hides and skins, the hope is expressed that, with the manufacture of tanning materials increased and cheapened, the leather industry may develop to large proportions. It is possible that capital for this new enterprise can not be found in the country, in which case the promoter would probably be willing to transfer his concession.

[The name of the concessionaire may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69246.]

RAPID GROWTH OF CUBAN PROSPERITY.

[Special Agent Garrard Harris.]

Figures just given out by the Bureau of Information of the Cuban Department of Commerce reveal an astonishing increase in business and prosperity in Cuba in the fiscal year ending June 30, 1915. Exports amounted to \$219,447,322, or \$88 per capita, an increase of \$22 per capita in one year. Strange to relate, imports fell off appreciably, the total being \$8,000,000 less than in the year before, leaving a balance of trade in Cuba's favor in the neighborhood of \$91,000,000—a gratifying result as all will admit, for a Republic with little over two and a half million population. It figures out \$36.40 per capita, which is a per capita increase of \$5 for the fiscal year and illustrates the all-pervading prosperity of Cuba at this time.

The falling off in imports was not confined to any one line; it was a general, individual, and commercial retrenchment in the early part of the year. The necessity for this has seemingly vanished, and buying is brisk in all lines. One more year of good sugar prices—which now appears likely—will put Cuba in magnificent shape. The crop this year is worth \$205,000,000 in round numbers. The time is opportune to extend all lines in Cuba and press sales.

Result of Trade Opportunities.

Consul James Oliver Laing reports that as a result of Foreign Trade Opportunity No. 17821, published in COMMERCE REPORTS on August 9, 1915, an electrical engineer of Karachi has placed an order for electric fans for a hotel in that Indian metropolis. He also states that orders for agricultural implements have been placed in the United States.

AUSTRALIAN STATES COMBINE TO MARKET WHEAT.

[Commercial Attaché William C. Downs, Melbourne, Nov. 5.]

Following the action of the Commonwealth government, when it took into its own hands the chartering of tonnage for the shipment of the available surplus of wheat for export from Australia, the question arose as to how the tonnage should be apportioned among the different exporting States in such a manner that one State should not have an advantage over another in marketing its wheat. This problem seems to have been solved by an agreement arrived at among the premiers of the different Australian States, at their conference in Melbourne on November 4, under which the various States practically form a joint company to pool their interests in the wheat crop.

The full details of the scheme have not yet been announced, but it may be stated that the individual States will pass legislation which will permit them to take over the whole business of exporting the harvest and selling it on the London market. They will operate through existing wheat firms, which will buy and sell the grain for the account of the Government. The transactions are to be financed through the Associated Australian Banks, which will guarantee payment to the farmer of the price accepted by him.

Any losses or profits on the transactions are for the account of the associated Governments, and will be apportioned among the respective States on the basis of the wheat purchased and sold by each at the conclusion of the arrangement. It is also probable that provision will be made for the issue of negotiable scrip on the wheat purchases made by the respective Governments.

Under this plan of shipping it is expected that competition between the different States will be avoided, and that the question of allotment of freight to one State in preference to another will be settled as the interest will be pooled. The harvesting of wheat in Australia begins in December.

[An article on the surplus wheat crop in Australia was published in *COMMERCE REPORTS* for Dec. 8, 1915. Other articles on the wheat crop were published in the issues of Oct. 20 and Oct. 23.]

TRADE-LETTER FILE AT CONSULATE GENERAL.

[Consul General Alexander W. Weddell, Athens, Greece, Nov. 13.]

Since the outbreak of the European war the Athens consulate general has, in order to stimulate the work of American trade extension, kept in a conspicuous position in its reading room a special file containing all letters received from American firms expressing a desire to extend their business relations in the consular district.

This file is brought to the attention of local business men seeking American connections, and copies or translations of letters relating to their particular interests are given them, together with whatever further information the staff of this office may be able to supply, in order to leave nothing undone to attract their attention and interest.

As soon as it becomes evident that such an interest has been aroused this office writes to the American exporter in question, giving him the name and address of the interested person, and is thus often successful in establishing business relations profitable to both parties concerned.

ADDITIONS TO LIST OF RADIO STATIONS.

Several new land and ship stations, established for radio purposes in various parts of the United States, are mentioned by the United States Bureau of Navigation in its December issue of the Radio Service Bulletin.

There are three additional land stations, each located at a fort and operated and controlled by the United States Signal Corps of the War Department. The locations are at Fort Constitution, N. H.; Fort Dade, Fla.; and Fort Moultrie, S. C. Each uses the United States Army system, has a wave length of 825, is used exclusively for Government business, and has no regular hours.

There are eight new ship stations, as follows: *Alaska*, Kilbourne & Clarke system (240); wave lengths, 300, 450, 500, and 600; operated and controlled by the Alaska Steamship Co., owner of vessel. *Edna*, controlled by Sudden & Christensen, owner of vessel. *Galatea*, Marconi system; wave lengths, 300 and 600; operated and controlled by Marconi Co.; E. L. Ford, owner of vessel. *Mackinaw*, Halcun system (240); wave lengths, 300 and 600; North and South American and transoceanic service; operated and controlled by George and James Flood, owners of vessel. *Nerada*, wave lengths, 300 and 600; Goodrich Transit Co., owner of vessel. *North America*, composite system; wave lengths, 300 and 600; North and South American and transoceanic service; operated and controlled by the Merritt & Chapman Derrick & Wrecking Co., owner of the vessel. *Orleanian*, Marconi system; wave lengths, 300 and 600; R. Lawrence Smith (Inc.), owner of vessel. *Pacific*, wave lengths, 300 and 600. The *Alaska*, *Mackinaw*, and *North America* are designated as for the general public.

There are five additions to the list of special land stations. These are: Lexington, Ky., controlled by Otto Holstein (Company A, Signal Corps, Kentucky National Guard), wave lengths, 500 and 1,800; Marion, Ohio, controlled by Keith Henney, wave lengths, 200 and 425; New Braunfels, Tex., controlled by Arthur E. Mollenhauer, wave lengths, 200 and 450; San Jose, Cal., controlled by Charles D. Herrold, wave lengths, 300 and 600, variable; Wayne, Nebr., controlled by U. S. Conn, president of State Normal School, wave lengths, 300 and 425.

EXCHANGE RATE HANDICAPS AMERICAN TRADE.

[Consul Paul H. Foster, Jerez de la Frontera, Spain, Nov. 10.]

On current quotations the local banks sell exchange on Paris, London, and New York at the following rates: Paris, 100 francs at 90.35 pesetas; London, pound sterling at 25 pesetas; New York, dollar at 5.42 pesetas. Therefore, if the Spanish merchant purchases merchandise to the value of \$100 in each of the three countries (assuming original cost and freight to be equal), when he purchases exchange to settle these three invoices, his merchandise will have cost him as follows: France, 468 pesetas; England, 482 pesetas; United States 542 pesetas. Under abnormal conditions and in commodities the supply of which is temporarily hampered business is possible under these rates, but it is not tenable except for the period of the abnormal conditions and is a handicap in the case of readily obtainable commodities.

TRADE AT THE NIZHNI NOVGOROD FAIR.

[London Times Russian Supplement, Oct. 30.]

This year's Nizhni Novgorod Fair may be epitomized in the statement that directly or indirectly, owing to the war, it is being conducted with a shortage of all manufactured goods in face of an increased demand, both of which factors have rendered it peculiarly brisk and animated. Generally speaking, intensive work undertaken for the commissariat by mills and factories has depleted supplies for the ordinary domestic market to such an extent that in many cases the biggest commercial firms have not been able to send to the fair more than 50 to 60 per cent of their last year's consignments.

The demand for commodities on the part of the Provinces, especially the regions favored with good harvests, and for raw material on the part of the handicraftsmen (*kustars*) and artisans who are filling large orders for the army, even if it has not risen as compared with last year, has in any case exceeded the supply, thanks to which prices have strengthened and gone up nearly all round. The comparatively increased demand is also partly attributed to the higher purchasing power of the people as the result of the discontinuation of the State sale of liquor.

Cotton, Flax, and Wool.

Not anticipating a big demand, the mills and factories were working at low pressure till the middle of May, but when the harvest prospects proved to be especially favorable the provincial merchants suddenly deluged the Moscow firms with cash orders. The demand for cotton textiles grew daily; and since stocks on hand were small, they were speedily exhausted, with the result that several of the larger houses, finding themselves sold out before the fair, were not even represented there.

Flax and woolen goods are similarly affected. The flax-spinning mills have been working almost exclusively for the commissariat and placing on the market only such supplies as have been left over after filling Government orders. Prices have risen 5 to 15 per cent, and the coarsest assortments are offered without the smallest discount.

The Russian wool market has been most seriously affected by the war. As is known, the industry depends chiefly upon the foreign market for its raw material, so that the cessation of import deprived Russian manufacturers of over a million poods (16,000 tons) of merino and mixed wool, which constitutes 50 per cent of the manufacture of this raw material in Russia. The occupied portions of Poland are also large productive regions for the finer grades of wool, and the loss of this source of supply has further increased the shortage. Thus some of the latest transactions in Rostof wool were effected at 70 rubles per pood (about \$1 per pound) instead of 38 to 42 rubles (\$0.54 to \$0.60 per pound) as in normal times.

Leather and Shoes.

Under ordinary conditions the Fair is the principal purveyor of leather and leather goods not only for the mills and factories of Russia but also for the foreign market. This year, however, the consignments of these goods were less than 25 per cent of the usual figures.

Owing to the stoppage of foreign trade the Russian hide market has begun to experience a shortage of tannin and heavy sole leather ordinarily obtained from the United States with the result that the private market is sorely inconvenienced and prices are rising. Lately, the Moscow warehouses have been replenishing their stocks, while provincial tanners, curriers, etc., have made deliveries to the Fair; but, even so, it is impossible to depend upon large supplies, while such is the demand that provincial dealers and manufacturers have forestalled future deliveries of half manufactures, manufactures, and raw material. In this connection it should be noted that Siberia, as a rule the principal purveyor of pelts for the Fair, can not furnish its usual quota as the result of transport difficulties and is compelled to dispose of its output to local factories and hand workers at reduced prices.

Drugs and Jewelry.

Since the Russian drug trade is almost entirely dependent upon foreign supplies, which constituted as much as 70 per cent of the Fair's consignments, the cessation of international trade has proved tantamount to the interruption, if not the liquidation, of this branch for a considerable period, until the country can develop its own production.

The market for jewelry and trinkets, likewise largely fed by foreign imports, has also been obliged to shrink to the limits of home production. The Nizhni Novgorod Fair, however, has been losing importance in the jewelry trade for several years as the result of the development of the system of commercial traveling.

When the fair opened this year on July 28, 1,308 firms had arrived, but the number had increased to 1,488 by August 14, whereas last year the corresponding figures were 2,025 and 2,178.

[A report on the fur trade at the Nizhni Fair was published in *COMMERCE REPORTS* for Nov. 5, 1915.]

OFFERS ESTIMATE OF FRENCH WINE PRODUCTION.

[Vice Consul John J. Ernster, Lyon, Nov. 15.]

The Wine Growers' Gazette has just published an estimate of the French vintage of 1915. For the whole of France, the Gazette estimates the production of wine in 1915 at 21,500,000 hectoliters (568,000,000 gallons) as against 59,000,000 hectoliters (1,558,606,000 gallons) in 1914. There is no official confirmation of the year's figures. The Gazette reviews the general conditions that affected the wine crop in 1915. It says:

"The characteristics of the year 1915 were considerable mildew and uneven production, and while entirely deficient as regards the output, yet it is superior in quality as compared with former years. In spite of the irregular weather and the numerous plant diseases, the quality is good everywhere and even superior in the well-cared-for vineyards, and its alcoholic strength averages higher, by several degrees, than that of the 1914 wines. There is very little wine of a feeble alcoholic percentage."

[A previous article on the French production of wine for the present year was published in *COMMERCE REPORTS* for Nov. 9, 1915.]

COAL CONSUMPTION IN PERNAMBUCO.

[Consul A. T. Haeberle, Pernambuco, Brazil, Nov. 2.]

Since August, 1914, the consumption of coal in this district has been reduced notwithstanding the fact that about 15 months ago a very heavy consumer of coal entered the field when the Pernambuco Tramways & Power Co. substituted the present electric system for the long-used mule car system. This company owns and operates the gas company's plant also, and so are large importers of coal. Much more coal will be imported when the tramway company installs the proposed electric light plant. At present the trolley wires are extensively tapped to supply much of the downtown street and store lighting. Incidentally additional power will be required for running the elevators in the many new business blocks building or proposed.

The powerhouses of the tramway company being new and modern, that company is able to use in its fireboxes fine American coal, from which they are obtaining good results. However, in most of the grates in Brazil it is possible to use only the larger-sized screened coal that is imported from Wales.

Cutting Down Coal Consumption.

High freight and insurance rates are responsible for the tendency to cut down, save, and substitute whenever possible. It is understood, for instance, that one company is at present using about 33 per cent wood in the powerhouses and finding it so satisfactory will likely use more in the future. The numerous interurban railroads are now employing wood in place of coal. Cotton and other factories are beginning to consume wood wherever possible. The sugar mills use "bagaco" (the dried pulp left after the sugar is extracted from the cane) and wood.

The smaller number of vessels touching this port since the war has played an important part in the reduced coal consumption. The shutting down of the extensive dock-improvement work and of other municipal construction work should also be noted. This being a tropical climate, no coal or other fuel is required for domestic heating purposes, and for cooking, charcoal is used almost exclusively. There is no water power to be developed in this section, so that all power is generated from steam plants.

Range of Prices—Discharging Equipment.

Since August, 1914, Welsh coal has varied from \$12.50 to \$18.50 per ton delivered in bunkers, while American coal varied from \$10.25 to about \$11.50 c. i. f., to which should be added the high handling costs, i. e., stevedoring, lighterage, etc. The present price of Welsh coal is about \$16.80, delivered in bunkers, and of American coal, \$10.50 c. i. f. The prices are, of course, constantly fluctuating.

There have been no dock improvements during the last year; cargoes are discharged, as formerly, by means of lighters.

Coal Imports.

From April 28, 1914, to March 23, 1915; not one American vessel touched this port. On March 24, however, an American schooner loaded with coal arrived from Norfolk. To date 14 American schooners carrying coal from the United States have arrived in Pernam-

buco, and mail sent from the United States in the care of this consulate indicates that three or four more schooners are en route.

This consulate has not been able to obtain authoritative information regarding the imports of coal into this port, but it is hoped that statistics will be received in the near future.

[For previous reports on the Brazilian coal situation see COMMERCE REPORTS for Apr. 24, May 4, June 23, and July 24, 1915.]

SWATOW MARKET FOR AMERICAN THREAD.

[Consul George C. Hanson, Swatow, China, Oct. 20.]

The imports into Swatow of thread on spools, in number of gross, for the years 1908 to 1915 (this year, 9 months) were: 1908, 29,610; 1909, 35,538; 1910, 38,402; 1911, 32,170; 1912, 42,698; 1913, 48,124; 1914, 74,635; 1915 (9 months), 26,550.

The demand for foreign thread has been constantly increasing (except in 1911). The results of the war are shown in the comparatively small import for the nine months of 1915. Now that the demand exceeds the supply there is a good opportunity for American thread manufacturers to enter this market.

British spool cotton thread has practically monopolized this market heretofore. The thread is of assorted colors, blue, black, and white predominating, and comes in 100-yard and 500-yard spools. It arrives in Swatow in assorted lots, carefully packed in tin-lined cases, 50 gross of 100-yard spools or 30 gross of 500-yard spools in each case. For instance, one case might contain: Spools of 100 yards—15 gross of No. 8 thread; 5 gross No. 10; 2 gross No. 20; 5 gross No. 24; 5 gross No. 30; 5 gross No. 36; 3 gross No. 40; 5 gross No. 50; 5 gross No. 60.

Another might contain: Spools of 500 yards—5 gross of No. 8 thread; 2 gross No. 40; 20 gross No. 50; 3 gross No. 60.

Each of the spools sold here bears a trade-mark or "chop," such as the picture of a "barrel," a "rake," or a "peacock." As it is not the habit of the ordinary Chinese to specify by the English name the spool of thread he wishes to buy, he asks for "barrel thread," "rake thread," or "peacock thread." This may seem of slight importance, but once a "chop" is well established by virtue of its quality and price, it is very difficult for a competitor to oust the thread bearing the popular "chop."

A Swatow firm has expressed a desire to communicate with American thread manufacturers in regard to representing them here.

[The name of the firm which desires to handle American thread in Swatow may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69077. Samples of thread commonly sold in the Swatow market have been forwarded and will be offered later by the Bureau under the same file number.]

Agricultural Engineers in Spain.

Consul Percival Gassett, at Malaga, has submitted a list containing the names and addresses of 63 agricultural engineers. This list covers all Spain. It may be obtained upon application to the Bureau of Foreign and Domestic Commerce or its branch offices by referring to file No. 69722.

JAMAICA'S INTEREST IN AMERICAN GOODS.

[Consul J. C. Monaghan, Kingston, Nov. 2.]

The signs of the times favor reviving trade in Jamaica. On all sides it is possible to note this tendency. There are preparations which, when put into effect, will mean another line of ships between Jamaica and the ports of our Southern States, especially New Orleans, Galveston, and perhaps Mobile. There are no cotton, woolen, silk, jute, or linen mills in Jamaica. All the articles the island needs are imported from various parts of Europe.

One of Jamaica's biggest buyers and sellers of dry goods said to-day: "I am ordering American goods in crêpes, ratines, and silks, because half of the designs are new, are very attractive, and take the market. The expense is less to us to get our goods from the United States than all the way from England, and we are getting them more quickly. We have three or four times received goods from America, and sold them while still waiting for our English order to be filled.

"For these islands and for South and Central America nothing is too good. Even if the price seems to be high, the goods will be bought, provided they make up in cut, style, material, and finish. Anyone who hopes to palm off inferior articles will never succeed."

Travelers in the islands of the Gulf and Caribbean Sea and in South and Central America are being told to-day what was told to the travelers of 10, 15, 20, and 25 years ago—that a wide-open market awaits live, energetic young men, men who have the right lines, know how to present them, and are able to speak Spanish wherever Spanish is spoken and to speak Portuguese in Brazil. They can not fail to find at first a fair market, and in a short time a very profitable market and pleasant relations.

Before the war England, Germany, and even France and Italy, led here in lines in which the United States might have built up a more than fair trade.

A few days ago an enterprising young merchant stated at this consulate that he was seeking to establish trade between this island and Central and South America. He was urged to seek opportunities for trade between the United States and this island. Speaking of this trade, he said:

"The customer entering a store to buy a suit of clothes will, if American and other clothing is put before him, select the American nine out of ten times, because of style, cut, fit, finish, and price. This is an everyday experience with strangers coming into our shops. It is the same with an American-made shirt. It will give satisfaction because of its fit."

The views of this merchant pointed to the islands of the Caribbean Sea and the Gulf as points to begin to build up a preliminary trade in Central and South America. A vast quantity of the goods used here are of the kinds wanted as far south as Buenos Aires.

It is a significant fact that certain kinds of trade are in the hands of the Chinese and they are said to be increasing in numbers and in the extension of trade. A small trial consignment of American-made clothes, sent to Buenos Aires, was quickly sold, but shippers in the United States and South American merchants were unable to arrive at a mutually satisfactory basis upon which to work. Ameri-

cans are now trying to enter the market, and with such rivals as England, Germany, France, Spain, and Italy trying to stay in, it will be well worth while to meet the merchants of these parts more than half way. A good way to work is along the line of as large orders as one can get and as long credits as are consistent with sound business. As it is winter in some of these countries when it is summer in the United States, winter goods can be sent and sold rather than packed or stored away.

NOTTINGHAM LACE AND HOSIERY TRADE.

[Consul C. M. Hiltch, Nottingham, England, Nov. 18.]

There has been a considerable change in the condition of the Nottingham lace market during the past month, particularly in the Levers section. The depressed condition that prevailed during the summer months has given way to one of decided activity. Large numbers of Levers machines that have been idle for several months are now running on full time. The opening of the fall and winter trade in the United States has created a brisk demand for independent beam torchons, imitation Barmen torchons, and valenciennes. Orders for considerable quantities of these goods are being placed and their execution will keep the manufacturers fully occupied for some time. One manufacturer, who has been in the lace business for many years, declared that he had never before done such a large volume of business, and many others are having a similar experience.

A number of orders have been placed for flouncings and pleatings, but there appears to be little demand at this time for allover. Despite the increased cost of material and the shortage of labor, a steady trade is being done by the curtain manufacturers.

While there has been a slight abatement of the activity that prevailed in the net trade during the summer, large consignments of net are still in demand, particularly of the silk nets and cording embroideries on silk nets. The hosiery manufacturers are running on full time, and experience some difficulty in filling orders promptly.

CHILDREN'S COURT TO BE ESTABLISHED IN SPAIN.

[Consul Robertson Honey, Madrid, Nov. 9.]

By royal decree, recently promulgated, the minister of justice was directed to draw and submit to Parliament a bill creating a children's court in appropriate parts of Spain. The bill, submitted to-day, is modeled, in a general way, on English statutes.

The court will be presided over by a judge, who will be assisted by one or more lay judges, and will have jurisdiction over delinquent children under 15 years of age. It will also have jurisdiction in case of vagrancy and begging on the part of these children. It will have authority to deprive either the mother or father, or both, of parental authority, and to punish either parent, or both, in cases where the parent instigates the offense or does not send the child to school. It will also have jurisdiction to punish masters for violations of the apprenticeship laws.

The bill is a decided innovation in Spanish jurisprudence.

CONSULAR TRADE-EXTENSION WORK IN COSTA RICA.

[Consul Samuel T. Lee, San José, Oct. 25.]

During the quarter ended September 30, the San José consulate answered 215 commercial inquiries, furnishing trade information and classified lists of local importers. That this and earlier trade-extension work on the part of this office is bearing fruit is evidenced by the many new lines of American goods that are now to be found on the San José market.

American window glass is being sold in this market, which formerly obtained most of its supply from European countries. The leading local importer placed a \$1,500 order with a New York house during the past quarter, and this has since been filled most satisfactorily. Prices quoted were better than those of European makers and the packing was excellent.

Bags, Iron Products, and Clay Pipes.

This consulate has cooperated with importers in their endeavor to induce Costa Rican coffee shippers to use cotton sacks of American origin in place of jute sacks formerly purchased elsewhere. Two of the leading distributors are having success along this line, and it is possible that a permanent trade in these bags will be established.

American galvanized malleable iron pipe for small waterworks systems is now in use. Until recently, with few exceptions, only such accessories as nipples and elbows came from the United States.

Bar iron is now coming from the United States, likewise open iron sugar kettles, and importers are satisfied with terms, prices, and quality.

Clay pipes for sewers and drains are now supplied from the United States. Present prices seem to be satisfactory.

Wall Paper, Oil, Glue, and Other Wares.

While wall paper is now purchased from the United States, merchants agree that prices are not satisfactory and that there will probably be a return to former sources of supply as soon as possible.

Linseed oil is now being supplied from the United States, and American glue is being imported in increasing quantity.

Other American wares introduced into the San José market within the past three months as a direct result of the efforts of this consulate include a new adding machine (placed with an active agent), dress hooks and eyes, toilet paper, rubber heels, slippers, toilet soap, hats, saddlery findings, neckties, new lines of underwear, hosiery, and more brands of American shirts and collars.

SULPHUROUS ACID IN DUTCH EAST INDIES.

[Consul Bradstreet S. Ralston, Batavia, Java, Oct. 27.]

In order to meet the urgent requirements of the various ice factories in the Dutch East Indies, the Bataafsche Petroleum Maatschappij at their works in Balikpapan, East Borneo, have increased their output of sulphurous acid and now manufacture about 4 tons of this article per month. The demand is so great, however, that it is feared that the Bataafsche concern will not be able to manufacture a sufficient amount to satisfy it.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of tour.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(a) Lotus Club, 110 West Fifty-seventh Street, New York City.
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.	Dec. 31	
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, O. R.....	Cornwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washington, D. C.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

SPANISH WINE PRODUCTION.

[Consul Paul H. Foster, Jerez de la Frontera, Nov. 10.]

The following figures, furnished by the Spanish Department of Agriculture, give the area of grapes and the production of wine for 1914 and the estimate for 1915:

Items.	1914	1915
Area.....	acres.....	
Grapes.....	3,066,874	3,169,119
Raw wine.....	pounds.....	
	6,171,222,040	3,945,321,774
	American gallons.....	
	427,109,261	267,141,021

SOME SPANISH GRAPES DECLARED IMMUNE TO DISEASE.

[Consul Robertson Honey, Madrid, Nov. 6.]

Although there were 100,000 more acres of vineyards in Spain during 1915 than in 1914, the crop was 505,014 tons smaller than in 1914. The decrease has been found to be due to the plant diseases of mildew and oidium, as it is called in the Spanish language. There was a very severe blight of mildew in Spain in 1880, and it was noticed then, and again this year, according to *El Economista*, published in Madrid, that the types of grape known in Spain as vidallo and artaguiton are immune to the disease.

POSTAL SCALES AND NEW POSTAL RATES IN ENGLAND.

[Consul Augustus E. Ingram, Bradford, Nov. 18.]

Owing to the recent increase in the domestic rates of postage, a large demand for postal scales has sprung up in England, which local manufacturers can not at present supply. American manufacturers might with advantage, therefore, send catalogues and price lists to wholesale hardware dealers and stationers throughout the country, and also to the American consulates. Scales preferably should not show, as is frequently the case with American scales, the cost in cents on all classes of mail matter, as that information would only be misleading; the weight in ounces and pounds would be sufficient.

The inland postal rates, which apply to all correspondence posted within the United Kingdom and addressed to places in the United Kingdom (including the Isle of Man and the Channel Islands) were from November 1, 1915, fixed as follows: Letters—not exceeding 1 ounce in weight, 1d. (2 cents); exceeding 1 ounce but not exceeding 2 ounces in weight, 2d. (4 cents), for every additional 2 ounces or fraction of 2 ounces, $\frac{1}{2}$ d. (1 cent); books—not exceeding 2 ounces in weight, $\frac{1}{2}$ d. (1 cent), every additional 2 ounces or fraction of 2 ounces, $\frac{1}{2}$ d. (1 cent). No packet will be transmissible at the book rate of postage that exceeds 5 pounds in weight, 2 feet in length, and 1 foot in width or depth.

The newspaper rate is as follows: For every copy not exceeding 6 ounces in weight, $\frac{1}{2}$ d. (1 cent), with a further $\frac{1}{2}$ d. for every additional 6 ounces or fraction of 6 ounces. No packet will be admissible at the newspaper rate of postage that exceeds 2 pounds in weight.

For samples the rates are as follows: Not exceeding 4 ounces, 1d. (2 cents); between 4 and 6 ounces, $1\frac{1}{2}$ d. (3 cents); between 6 and 8 ounces, 2d. (4 cents). No packet will be transmissible at this rate that exceeds 8 ounces in weight, 12 inches in length, 8 inches in width, or 4 inches in depth.

The following parcel rates are in force: Not exceeding 1 pound, 4d. (8 cents); not exceeding 2 pounds, 5d. (10 cents); not exceeding 3 pounds, 6d. (12 cents); not exceeding 5 pounds, 7d. (14 cents); not exceeding 7 pounds, 8d. (16 cents); not exceeding 8 pounds, 9d. (18 cents); not exceeding 9 pounds, 10d. (20 cents); not exceeding 10 pounds, 11d. (22 cents); not exceeding 11 pounds, 1s. (24 cents).

LIGHTHOUSE EMPLOYEES COMMENDED BY SECRETARY.

Secretary of Commerce Redfield has recently commended employees of the United States Bureau of Lighthouses for assistance rendered to others under circumstances in which personal bravery was displayed. The persons commended and the special acts recognized were:

Charles S. Grenell, keeper of Chicago Pierhead Range Light Station, Ill., for the rescue from drowning of a man who had fallen from the pier at Chicago, Ill.

Andrew Shaw, jr., keeper of Presque Isle Light Station, Pa., for assistance rendered the crew of the tugboat *Henry E. Gillen*, of Ashtabula, Ohio, which stranded in the vicinity of Presque Isle Light Station, Pa.

A collection of 10,960 bottles, containing specimens of the ocean bottom secured by vessels of the United States Coast and Geodetic Survey on the Atlantic, Gulf, and Pacific coasts has recently been transferred to the Smithsonian Institution.

AMERICAN GLASS SHIPMENTS POORLY PACKED.

[Consul General J. I. Brittain, Sydney, Australia, Oct. 16.]

A complaint has been made through the Sydney consulate regarding the condition of a large consignment of wired window glass which was received by a Sydney firm from New York. The consignment consisted of 30 large cases of glass, which arrived in a very bad condition. The firm that received the shipment here claims that 40 to 50 per cent of the glass was broken, and attributes its condition entirely to careless packing. Several cases were opened for examination. There was a vacant space of about 4 inches between the ends of the glass and the boxes. There was also considerable space between the sheets of glass and the sides of the boxes. Not half enough straw was used in filling the spaces between the ends and sides of the glass and the boxes. The quality of the straw was very poor, instead of being clean, bright, elastic straw, such as British manufacturers use in packing glass. A considerable portion of it was broken and dirty and not much better than chaff.

Nineteen large sheets of glass were packed together, without a dividing partition such as is always placed in the center of large boxes of glass from European manufacturers. Notwithstanding the poor quality and insufficient quantity of straw used in packing, there was no paper or straw separating the sheets of glass, as in shipments by British manufacturers. The battens on the sides of the boxes are not sufficient, and there are no battens across the tops and bottoms to prevent their being split in the middle. The boxes should be made of well-selected timber, at least 1 inch in thickness.

American Glass Superior, but Delivered Under Handicap.

I understand that the glass in the shipment mentioned is superior to that of European manufacturers, but, unless methods of packing similar to those adopted by European manufacturers are followed, American manufacturers will lose an exceedingly promising market. It is stated that a sheet of such glass is seldom broken coming from Europe.

This is not an idle complaint, as Australians are anxious and ready to continue business relations with United States manufacturers. Some months ago I called attention to the careless packing of American plate and sheet glass, but I am glad to say that recent consignments arrived here in a satisfactory condition. I was shown a consignment of American cathedral glass which was very carefully packed. Between the sheets of glass were sheets of corrugated paper.

In addition to the precautions mentioned in packing the glass, every case of British glass has several labels on the sides, with large letters printed in red, reading: "Glass, not to be laid flat"; also the word "glass" printed in large letters on various parts of the box.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

- Machinery**, No. 19507.—A commercial attaché of the Department of Commerce reports that a new cement mill is about to be constructed in Chile, and quotations for machinery are desired. The installation will probably be made with two ball mills, each of these to have a capacity of 100,000 barrels production per year, although provision will be made in the building for the introduction of a third ball mill. Correspondence in French or Spanish preferred.
- Piano parts**, No. 19508.—A letter to the Bureau from a man in Argentina requests the names and addresses of manufacturers of piano parts, together with catalogues and full information. Correspondence must be in Spanish.
- Hardware, earthenware, etc.**, No. 19509.—An American consular officer in Africa reports that there is a demand for catalogues on the following articles: Hardware; locks; hinges; earthenware; furniture, such as iron beds and chairs; trunks; office supplies; matches; soap, common and toilet; leaf tobacco and cigarettes in tins; and light motor cars. A list of principal West African traders may be obtained from the Bureau of Foreign and Domestic Commerce. It is suggested that, if possible, the catalogues should be in French, and if not, letters accompanying the catalogues should be in French.
- Wood pulp**, No. 19510.—A special agent of the Bureau reports that a company in Chile desires quotations and samples of wood pulp from American manufacturers. The kinds desired are unbleached sulphite pulp, soda pulp, and ground wood, both white and brown, and the quantity from 300 to 500 tons. Samples of the pulp wanted may be examined at the Bureau or its branch offices. (Refer to File No. 782.)
- Imitation stained glass**, No. 19511.—A letter to the Bureau states that a company in England desires names and addresses of manufacturers of imitation stained glass, samples of which may be inspected at the Bureau or its branch offices. (Refer to File No. 79.)
- Electrical supplies, etc.**, No. 19512.—An American consular officer reports that a firm in France desires to be placed in communication with manufacturers of electrical supplies, and lamp shades made of metal and porcelain. It is stated that purchases will be made on cash basis. Correspondence should be in French.
- Condensed milk**, No. 19513.—A report from an American consular officer in India states that a retail company in his district desires to import condensed milk. Quotations and full information should be sent.
- Colored pencils**, No. 19514.—An American consular officer in the United Kingdom reports that requests have been received for quotations on violet copying pencils and blue leads.
- Glass for miners' lamps**, No. 19515.—A firm in England informs an American consular officer that it would be glad to receive c. l. f. quotations on glasses for miners' safety lamps, standard size, as follows: 2½ inches long by 2¼ inches in diameter and three-sixteenths inch thick. The glass should stand heating up to 212° F. and plunging into water at 45°.
- Cold-storage plant**, No. 19516.—A report from an American consular officer in Africa states that a business man, who is engaged in supplying meats, fish, vegetables, etc., desires to purchase a small cold-storage plant to install in a room 20 by 25 by 10 feet. It is suggested that catalogues be sent to the consulate.
- Hardware and kitchen utensils**, No. 19517.—A firm in France is desirous of being placed in communication with manufacturers of hardware and kitchen utensils made of aluminum and enamel. Correspondence should be in French.
- Shoe laces, cotton yarns, etc.**, No. 19518.—A commercial agent in charge of the bureau's branch office in New York reports that a firm in Norway is interested in establishing commercial relations with manufacturers of round laces for leather boots, cotton yarns for textile mills, wash rags, and wash cloths. Bank references given.

BRITISH PROHIBITION ON IMPORTATION OF MACHINE TOOLS.

[Cablegram from Commercial Attaché, London, Dec. 11.]

The British importer of machine tools must obtain a license from the board of trade, which, in cooperation with the war munitions board, restricts the disposition and exportation of such articles and regulates profits. [A previous notice on this subject was published in *COMMERCE REPORTS* for Dec. 6, 1915. Upon receipt of a detailed report by mail further information will be published.]

CIRCULAR TO THE HEMP TRADE.

The Bureau of Insular Affairs, War Department, is in receipt of a cablegram from the Governor General of the Philippine Islands advising that, during the month of November, Philippine Government fiber inspectors inspected and stamped 89,211 bales abaca and 3,417 bales maguey, as follows: Abaca: A, 246; B, 785; C, 1,924; D, 3,459; E, 8,550; S-1, 1,775; S-2, 2,073; S-3, 755; F, 10,881; G, 3,420; H, 2,241; I, 13,948; J, 14,112; K, 4,163; L, 14,503; M, 5,082; strings, etc., 1,294. Maguey: One, 351; two, 2,206; three, 792; D, 68.

NEW DANISH MARINE INSURANCE COMPANY LAUNCHED.

[Consul General E. D. Winslow, Copenhagen, Nov. 1.]

A new marine insurance company has been started in Copenhagen, and begins business at once. The capital is \$4,000,000. War risks will be accepted. The name of the company is "Baltica." The founders of Baltica are all Danish and only Danish funds have been subscribed. Many marine risks on Danish bottoms have in the past been underwritten in foreign companies, and this new company will keep premiums at home.

CONSULAR WORK IN THE CANARY ISLANDS.

[Consul George K. Stiles, Tenerife.]

The trade activities of the Tenerife consulate during the September quarter fell under four headings—(a) American merchandise newly introduced; (b) American merchandise ordered direct for the first time; (c) agencies placed with local firms; and (d) special work.

In the first division came pianos, rubber goods, and drugs (aside from certain patent medicines). The pianos are manufactured in Chicago, and the effort to introduce this high-class merchandise covered an extended period. An attempt made in the previous quarter failed, and it was not until a personal interview was had with the local dealer and slightly better terms were secured from the Chicago firm that the agency negotiations were brought to a successful close. The rubber goods referred to were manufactured by an Ohio firm, which sent, unsolicited, a lot of expensive samples to this consulate. Notice of the appointment of a local agent was received in a letter dated September 10.

Correspondence with a wholesale druggist of Las Palmas, Grand Canary, explaining the advantages of the American markets, brought an unexpected order direct to the consulate. The order, which contained a list of 30 different products, was returned, with a list of American firms, and the wholesaler has since reported that the order has been placed in the United States.

Direct Orders—Other Consular Activities.

American pins and canned goods were ordered direct for the first time in the past quarter. These articles had previously been bought through Spain or England. Through the distribution by this consulate of circulars forwarded by various American firms, together with copies of the American Grocer, a trial order for American canned goods was placed with a New York commission house. There is little doubt of the market here once the superiority of American canned goods is actually demonstrated.

As a result of cooperation between consulate and salesman, the traveling representative of a Boston shoe manufacturer booked \$3,000 worth of orders in two days. Negotiations for the Tenerife agency for the Ocean Transportation Co., of New York, were carried on through this consulate and by a liberal use of the cable were successfully arranged in a week. The sale of an American vacuum cleaner to the city of Tenerife was held up through inability to agree on terms until this consulate hit upon a solution satisfactory to both buyer and seller.

It is thought worth while to mention here the action of this office in connection with a letter sent by the Merchants' Association of New York, in which the offer was made to furnish any information desired concerning business men of New York, as well as those interested in articles exported from the Tenerife district. These two questions being constantly asked by firms in this district, a translation was made of the merchants' association's letter and published in the leading journals in each of the islands. A like offer by the Chicago Association of Commerce was also published in this district. Similar action by trade bodies in all important commercial centers would help the Consular Service to put exporters to the United States in touch with American buyers in just the right way.

HABANA A FLYLESS TOWN.

[Special Agent Garrard Harris.]

The visitor from the United States can not fail to be impressed with the absence of flies in Habana. A fly is a real rarity—so is a mosquito—and screens are not at all a necessity. The absence of these pests is simply the result of municipal cleanliness and care.

Illustrating the general understanding of the necessity to watch out for breeding sources, Mounted Officer Pedro Sierra reported November 30 to the chief of sanitation that he had observed a plant in the Vedado (residential district) that apparently was a source of flies. The plant has a fruit resembling a fig, in which, Sierra asserts, larvæ are to be found. He conducted some experiments himself, becoming convinced that the plant afforded a breeding place for the pests; then he so reported. If the experiments of the Department of Sanitation confirm him, undoubtedly an order will be issued for the destruction of all such plants in and around Habana; and, incidentally, Officer Sierra will be rewarded.

There is no need for "fly-swatting campaigns" around the clean capital of Cuba. The sanitarians make flies an impossibility and confirm absolutely the doctrine that municipal cleanliness will prevent the appearance of flies altogether.

HIGH FREIGHT RATES TO SOUTH AMERICA.

With a tariff preference of 20 per cent in their favor, American cement manufacturers are not doing well in the Brazilian markets in competition with European exporters, who have been given an advantage in freight rates that more than offsets the preferential tariff. The freight rate from England to Pernambuco, for example, is \$9 per ton, while the rate from New York is \$12.

According to statistics furnished by the Bureau of Foreign and Domestic Commerce, the imports of cement into Brazil have grown to important proportions in recent years. In 1913 the total imports for the country were valued at more than \$7,000,000, and this was an increase of approximately \$2,000,000 in a year's time. Of the 1913 imports, \$3,000,000 worth came from Germany, \$2,000,000 worth from England, \$900,000 worth from Belgium, and \$750,000 worth from the United States, other countries furnishing smaller amounts.

GROWING USE OF COTTONSEED MEAL IN ONTARIO.

[Consul Felix S. S. Johnson, Kingston, Ontario, Canada, Dec. 2.]

The following rules as to the use of cottonseed meal are being followed by the farmers of Ontario Province: 1. Hay, 10 pounds; cornstalks; wheat bran, 3 pounds; corn meal, 2 pounds; cottonseed meal, 2 pounds. 2. Corn silage, 30 pounds; hay, ad lib.; oats, 4 pounds; linseed meal, 2 pounds; cottonseed meal, 1 pound. 3. Hay, 20 pounds, cottonseed meal, 4 pounds; wheat bran, 2 pounds.

Cottonseed meal is gradually being substituted for the more expensive cattle foods, especially now when the cost of other feedstuffs has more than trebled and cottonseed meal has maintained a standard price.

GENERAL OPEN-MARKET OPERATIONS BY BANKS.

The United States Federal Reserve Board has issued Circular No. 20 and Regulation T, Series of 1915, relating to general open-market operations by banks. The board refers to several classes of transactions which have already been provided for in the circulars and regulations heretofore issued, and continues:

There remain still to be dealt with the purchase and sale of "cable transfers" and bills of exchange, both domestic and foreign, of the kinds and maturities by the Federal reserve act made eligible for rediscount, and bankers' acceptances payable in foreign countries and in foreign currencies. The present circular and regulation is intended to cover these items. The board wishes particularly to call attention to the purpose of the open-market section of the Federal reserve act. It enables the Federal reserve banks to exert a steadying influence upon prevailing rates of interest by the use of their purchasing power whenever conditions make such influence desirable, and when, owing to the lack of applications for rediscounts, they are unable to influence rates through the latter means. It also affords to the Federal reserve banks the opportunity of purchasing, in the open market, paper with a view to providing for their expenses and dividends. The board is of the opinion that the Federal reserve banks should, when occasion warrants, stand ready to engage in open-market transactions, as buyers or sellers, to the extent that it is necessary to carry out the purposes of the act.

The Federal Reserve Board does not wish to be understood as encouraging expansion of credits at times and under conditions when there should be contraction, but rather as holding the view that the Federal reserve banks, taking cognizance of the conditions in their respective districts, should avail themselves of the powers granted by the act as explained in our letter of October 8, 1915, just as they have done in connection with other open-market powers conferred upon them.

The board states that open-market transactions, as contemplated under the Federal reserve act, are all those transactions authorized by section 14 of the act which involve dealings with persons or institutions, whether or not members of the Federal reserve system, and which do not require the indorsement of a member bank. The regulation makes the provision:

In order to carry on open-market transactions in cable transfers and foreign bills of exchange (including foreign bankers' acceptances)—that is, payments to be made in or bills payable in foreign countries—it will be necessary for Federal reserve banks to open accounts with correspondents or establish agencies in foreign countries. Such bills of exchange and foreign acceptances must comply with the applicable requirements of sections 13 and 14. As the law prescribes that these connections are to be established only with the consent of the Federal Reserve Board, Federal reserve banks will be required to communicate with the Federal Reserve Board whenever they are ready to enter these foreign fields.

The Federal Reserve Board realizes that in dealing in foreign exchange the Federal reserve banks must necessarily have wide discretion in determining the rates at which they will buy or sell. It is not necessary that the bills shall have been actually accepted at the time of purchase. The Federal Reserve Board, however, will require that unaccepted "long bills," payable in foreign countries, when purchased, unless secured by documents, shall bear one satisfactory indorsement other than those of the drawer or acceptor, preferably that of a banker. Federal reserve banks should exercise due caution in dealing in foreign bills, and boards of directors should fix a limit within which the acceptances or bills of a single firm may be taken.

A full definition of a domestic bill of exchange is given, together with the statement of conditions under which it is eligible for purchase by a Federal reserve bank, and then the regulation makes this provision:

Before purchasing domestic bills of exchange, the Federal reserve bank must secure statements concerning the condition and standing of the drawer of the

paper, and, if possible, also of the acceptor of the bill, sufficient to satisfy the bank as to the nature and quality of the paper to be purchased.

No Federal reserve bank will be permitted to purchase bills of any one drawer, or issued upon any one maker to an amount to exceed in the aggregate a percentage of its capital, to be fixed from time to time by the Federal Reserve Board, except when secured by approved warehouse receipts, bills of lading, or other such documents covering readily marketable goods. The aggregate amount drawn on any one acceptor, purchased by Federal reserve banks, shall not exceed a reasonable percentage of the stated net worth of the parties whose names appear upon the paper.

Federal reserve banks desiring to engage in open-market transactions in domestic bills of exchange are required to communicate to the Federal Reserve Board the rate they desire to establish, for review and determination.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(e) Lotus Club, 110 West Fifty-seventh Street, New York City.
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.	Dec. 31	
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 400, Customhouse, New York, N. Y.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. B.....	Cornwall, Canada.....	Jan. 5	2007 Eleventh Street NW., Washington, D. C.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1910. He will confer with business men at these places who are interested in trade in China.

CUBA CONTRACTS FOR NEWSPAPER SPACE.

[Special Agent Garrard Harris.]

President Menocal has authorized Gen. Emilio Nuñez, Secretary of Agriculture, Commerce, and Labor, to expend a certain sum in advertising the Island of Cuba and its attractions in the United States. A contract has been signed with a Philadelphia newspaper for display advertising of an attractive character and reading matter, to run every Sunday for two and a half months, beginning in December. No further contracts are contemplated at this time. Special efforts are being made to bring the desirability of Cuba as a winter resort before the public of the United States. The tourists' season has already opened with somewhat increased numbers visitors.

FOREIGN TARIFFS.

CANADA.

[Vice Consul O. Gaylord Marsh, Nov. 30.]

Customs Treatment of Gifts.

For the information of those desiring to send Christmas and other gifts to Canada it should be stated that such articles entering Canada are in general dutiable at the same rates as are similar articles imported for commercial purposes. An important exception affecting objects of slight value is, however, to be noted in the Canadian tariff (No. 690*), which provides for the free admission of the following articles: "Casual donations from abroad sent by friends and not being advertising matter, tobacco, articles containing spirits, or merchandise for sale—when the duty otherwise payable thereon does not exceed 50 cents in any one case—under regulations by the minister of customs."

There is no way of prepaying the import duty on articles sent to foreign countries except by arrangement with an express company, which, it is understood, will undertake the payment of customhouse charges on parcels forwarded to foreign destinations by express.

CUBA.

[Commercial Agent Garrard Harris, Nov. 20.]

Proposed Tariff Revision.

The President of Cuba, in his recent message to the Cuban Congress, submitting the proposed budget law for 1916-17, made reference to a number of projects which, if enacted, will considerably affect commercial relations between Cuba and the United States. A revision of the Cuban customs tariff is suggested, with the substitution of ad valorem rates of duty for the specific duties at present applicable to many products imported into Cuba, the tendency of such revision to be an increase in the rates on articles of luxury and a reduction in the duties on food products, low-priced clothing, etc. Another proposal is the imposition of export duties on sugar, the amount of such imposts to vary according to crop conditions, market price, etc. The levying of an export on raw mineral products has also been recommended and is of importance, in view of the fact that practically the entire amount exported, consisting chiefly of iron ore and copper ore, is marketed in the United States.

[Under the reciprocity treaty with Cuba, in force December 27, 1903, products from the United States are entitled to reductions ranging from 20 to 40 per cent of the duty of the rates applicable to products from other countries, and such reductions will not be affected by any revision of the Cuban tariff while the treaty remains in effect.]

[A copy of the commercial agent's report, which contains references to a number of other features of the proposed budget law, will be loaned by the Bureau of Foreign and Domestic Commerce.]

TURKEY.

[Consul General Gabriel Ble Ravndal, Sept. 22.]

Proposed Tariff Revision.

A special committee has been organized to consider the revision of the Turkish customs tariff, the intention being to substitute specific

duties of a protective character for the ad valorem rate of 30 per cent now applicable to practically all articles imported into Turkey. It is expected that the new tariff, now in preparation, will be put into effect upon the conclusion of peace by vote of the Turkish Parliament or, provisionally, by imperial decree.

[For previous notices regarding recent tariff changes in Turkey, see Foreign Tariff Notes No. 15, p. 48, and No. 17, p. 127.]

THE 1914 CENSUS OF MANUFACTURES.

The United States Census Bureau is rapidly making public the results of its recent census of the manufacturing industries of the country relating to the calendar year 1914. The canvass began in January, 1915, and was completed soon after the 1st of August. Already 199 press summaries have been prepared. Of these, 153 relate to the manufactures of individual cities; 3 to the manufactures of individual States—Delaware, North Dakota, and Wyoming; 43 to steam laundries in individual States—all except California, Massachusetts, New York, Pennsylvania, and Washington; and 1 to the manufacture of automobiles in the United States as a whole.

Each of the city and State summaries contains one or two statistical tables, showing number of establishments, persons engaged, horsepower, capital, salaries and wages, cost of materials, value of products, and value added by manufacture. Comparative figures for 1909 and percentages of increase are also given. The tables in the city summaries cover all industries combined, and those in the summaries for the three States named cover all industries combined except steam laundries.

Anyone desiring these preliminary statistics for any city or State for which they have been issued, or for the automobile industry, may obtain them by addressing his inquiry to the Director of the Census, Washington, D. C.

REPORT ON AMERICAN COTTON INDUSTRY.

The United States Census Bureau has just issued Bulletin 131—Cotton Production and Distribution, Season of 1914-15. This bulletin, which contains 102 quarto pages, gives detailed statistics of production for the crop year 1914, of consumption for the cotton year ended July 31, 1915, and of imports and exports for the fiscal year ended June 30, 1915. The statistics also show, for each cotton-manufacturing State and for the United States as a whole, average prices of cotton and cotton seed for each year from 1910 to 1914, inclusive; number of ginneries, gins, and saws and kind of power used; number of spindles; and quantity and cost of cotton seed crushed and quantity and value of crude products manufactured. In addition, the world's production and consumption of cotton are shown. Comparative figures are given for earlier years. Anyone desiring a copy of this bulletin may obtain it by addressing the Director of the Census, Washington, D. C.

[A statement of the chief features of the publication, with some of the important facts brought out, was given in *COMMERCE REPORTS* for Nov. 26, 1915.]

IMPORTANT NEW MEXICAN OIL DECREE.

[Vice Consul Thomas H. Bevan, Tampico, Nov. 23.]

A decree of vital importance to all persons interested in Mexican oil companies was issued by the First Chief of the Constitutionalist Army on November 15. Under its stipulations only those companies or persons engaged in the oil industry in Mexico that file certain data in the Department of Petroleum, Division of Mines and Petroleum, within two months of its issuance shall have any legal existence in the Republic. A translation of the decree follows:

This Department, in order to comply with the decree issued in Vera Cruz on the 8th of January of the present year by the First Chief of the Constitutionalist Army, charged with the executive power of the Nation, and taking into account—

That it is absolutely necessary to favor the public interests, which are frequently deceived by companies or individuals who claim to be proprietors of lands in the development of petroleum and its kindred substances, in many instances the existence of such companies being imaginary or not uniting the indispensable conditions to guarantee the people who buy oil shares;

That similar companies of good faith, dedicated to the same purposes, suffer grave prejudices in their interests because of the lack of confidence infused into the public, not knowing the status of companies or individuals who propose the sale of oil shares or stock;

That it being necessary that the Government remedy these evil indications, and in order to apply all of the remedies which are at its command in order to give due impulse to an industry of such national importance, has decreed the following:

Information That Must be Filed.

First. Within the term of two months, counted from the date of this order, all companies or persons engaged in the oil industry shall register in the office of this department, and present a declaration in duplicate, on simple paper, containing the following data:

- (a) The name of the company or persons interested in oil matters.
- (b) The headquarters and offices or branch offices in other parts of the Republic.
- (c) The capital invested.
- (d) If an incorporated company, furnish the following:
 - I. Under what laws the company is organized.
 - II. Who are the organizers of the company.
 - III. Who are the directors and the board of management at the present time.
- (e) Properties:
 - I. Number of lots, their location, designating the hacienda, municipality, Canton, District, and State.
 - II. Area occupied; date of acquisition.
 - III. Place where the contract was recorded and the person who made the sale.
- (f) Leases:
 - I. Enumeration of the lots.
 - II. Their location, citing the hacienda, municipality, Canton, District, and State.
 - III. Area of the land.
 - IV. Owner of the land.
 - V. Duration of the contract.
 - VI. Conditions of the lease.
 - VII. Date of the lease and place where it was recorded.
- (g) Camps:
 - I. Their name and location.
 - II. Number of proposed wells.
 - III. Number of wells in course of drilling.
 - IV. Number of producing wells.
 - V. Depth of each well.
 - VI. Production of each well.

(h) Pipe lines:

- I. Location and description of the installations.
- II. Length and diameter of the pipes.
- III. Their daily capacity for conveyance.
- IV. Location, name, and number of pumping stations.
- V. Number of tanks for the storage of oil, their location, capacity, and the material of which they are constructed.

Forfeiture of Rights.

Second. The persons or companies failing to present said declaration for the registration in this department within the time indicated will not be recognized as having any legal existence, nor will they be granted the respective permission for the exploration and exploitation of petroleum, in conformity with the decree of January 8, of this year, already mentioned.

There are now over 250 companies organized in the Tampico district, but only a very small percentage of this number are operating. The others have acquired leases and have representatives scattered over the United States selling stock in order to raise money to commence drilling operations. Many of these companies have no representatives at all in Tampico, and for their benefit this decree should be given as much publicity as possible.

MILKING MACHINES IN CANADA.

[Consul O. Gaylor Marsh, detailed as vice consul at Ottawa, Nov. 22.]

On account of the difficulty encountered by Canadian dairy farmers in obtaining and training dairy laborers and on account of the growing demand for clean milk throughout the Dominion, the question of the use of mechanical milkers is receiving increased attention. While dairying is a very prominent industry of Canada, in the use of milking machines the Dominion has fallen far behind some other portions of the British Empire, particularly England, Scotland, Australia, and New Zealand.

As a result of the above conditions the Experiment Farm System, headed by the Central Experiment Farm at Ottawa, has been conducting experiments with a view to determining, and probably publishing reports on, the machines which combine the greatest number of the desirable qualities of simplicity, cheapness, durability, ease in cleaning, minimum requirement of manual labor, minimum cost of operation, minimum power for operation, and freedom from injury to animals. This may lead to their increased use in Canada, and it would therefore seem advisable for American manufacturers to take steps to make the merits of their machines known in order to be in a favorable position to claim an appropriate share of any new trade that may develop.

FRANCE SENDS TRADE COMMISSIONER TO VENEZUELA.

[Consul Homer Brett, La Guaira, Nov. 20.]

With the object of beginning an active campaign for advertising French products, the Government of that country has sent Mr. J. Dubaut on a special mission to Venezuela. The commissioner is well known in Venezuela, is an engineer who at various times has made explorations in the interior of the country, and has published accounts of his experiences. He is said to have several practical schemes under consideration, all of which involve the investment of French capital in Venezuela.

COMMERCE THROUGH THE SAULT STE. MARIE CANALS.

The following tables show the quantity of each of the principal commodities and the number of passengers carried through the United States and the Canadian Sault Ste. Marie (Soo) Canals during November and for the season, until November 30, 1914 and 1915:

[From a report of the United States engineer in charge of the United States canal at Sault Ste. Marie, Mich.]

RESTRICTIONS ON BRITISH VESSELS.

The American consulate general at London has transmitted a copy of a proclamation appearing in the London Gazette of November 9, 1915, restricting the movements of British vessels. The order provides that after December 1, 1915, no British steamer registered in the United Kingdom of gross tonnage exceeding 500 tons shall carry any cargo from one foreign port to another, whether or not such vessel calls at an intermediate British port, unless the owner or charterer of the ship has been granted exemption by license, such license to be granted by a committee appointed by the president of the board of trade. A foreign port is defined to mean any port outside the United Kingdom and British dominions.

[A copy of the proclamation will be loaned upon application to the Bureau of Foreign and Domestic Commerce.]

INVAR METAL PRODUCED IN THE UNITED STATES.

Invar metal, an alloy of nickel and steel, valuable for many purposes on account of its extremely low coefficient of expansion, which is only about one twenty-fifth that of steel, hitherto has not been manufactured commercially in this country. Tapes of this metal for use in base measurement have been obtained from England as required. This has been the cause of some delay and inconvenience. The United States Coast and Geodetic Survey is informed that a manufacturer in the United States is now prepared to furnish this metal in any quantities desired. The name of the manufacturer may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices.

District Offices of the Bureau of Foreign and Domestic Commerce.

Cooperative district offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

VARIETIES OF PEACHES IN CONSTANTINOPLE DISTRICT.

[Consul General G. Ble Ravndal, Constantinople, Turkey, Oct. 6.]

Peach growing in the region about Constantinople is confined to the Bosphorus orchards and certain districts on the Marmora Sea, especially Brusa, with its abundantly watered, low hinterland. The requisite mild climate prevails throughout the year in these sections.

The Brusa peach is an early fruit, very juicy, and rich in flavor. Its weight averages 7 ounces. It is called here "etli," which means fleshy, and possesses the distinctive feature that the meat of the fruit firmly adheres to the kernel, so that the peach can not be parted in two with a little pressure of the fingers, as is the case with other varieties. It is the best peach produced in this district. The season is now over, and neither peaches nor kernels of this variety can be obtained in Constantinople.

The Bosphorus peaches may be divided into two kinds—the "yaz-sheftelissi," or summer peach, and the "sari-papa," or yellow peach. The summer peach, as its name implies, is an early-season variety which, if properly cultivated, weighs up to 6 ounces. The predominant color is dark red, shading into pale yellow-green. The most succulent peaches are obtained during the first three years. Older trees yield more fruit, but it is harder, drier, and less tasty. In the peach itself the central part in contact with the kernel is blood red in the case of old fruit, and yellow-pink, light red speckled in the case of younger fruit.

Yield of Healthy Tree Estimated by Peach Orchardists.

According to the local growers' observations, a healthy tree will yield between 140 and 290 pounds of summer peaches. These are not attacked by worms and other parasites as readily as the sari-papa, a winter variety, the kernels of which are very often split open and worm eaten. This variety is usually softer than the summer peach, less juicy, and more mealy. The predominant color is yellow, with red. It is exceptionally aromatic, and has a flavor similar to apricots. The full-grown peach weighs from 3 to 5 ounces.

According to the native growers, peaches dry if the weather is too cold. They grow best on black earth, and in order to become full-grown require abundant water and frequent care. Local cultivators plant, early in November, a number of full-grown selected peaches or their kernels in a small space of about 4 square feet. The offshoots appear in March. They are left for a year, during which the surrounding earth is frequently dug and watered. Then the young nurslings are transplanted and scattered over the field, where, for another year, they require constant attention. The following year the first fruit is yielded.

The trunk of the tree, as a rule, reaches between the second and third year a diameter equal to that of the full-grown fruit it bears. Generally the trees are cut when between 6 and 8 years old, a stage at which the fruit they bear is no longer palatable. Grafted peaches can not be used for seed purposes.

Lists of importers of fresh fruit, and of provisions and groceries, in Bahia, Brazil, have been received by the Bureau of Foreign and Domestic Commerce from Special Agent W. Fischer, and may be obtained from the Bureau or its branch offices. (Refer to file No. 789.)

CONNECTING EUROPEAN AND ASIATIC RUSSIA BY SEA.

[London Times Russian Supplement, Oct. 30.]

The Russian Hydrographic Expedition, under Capt. B. A. Vilkit-sky, succeeded on September 16, 1915, in reaching Archangel by sea from Vladivostok. It is claimed that the expedition has demonstrated the navigability for merchantmen of the eastern part of the Arctic Ocean, which, from Bering Sea to the mouth of the Lena, had previously been but little explored; and it is further to the credit of the Russian navigators that they are the first to complete the westward passage of the most difficult route from the Lena to the mouth of the Yenisei.

Another important task carried out by the expedition is the verification of the working of the ~~wireless~~ system established on the northern coast of Asia and of the principal transmission station at Mara-Salc. Both Dr. Nansen and Mr. S. V. Vostrotnin have pointed out the necessity and value of this system for navigation of the northern route. In this connection it is worthy of special note that the expedition in great measure owes its success to its employment of wireless, thanks to which it was generally able to keep in touch with the mainland.

Utility of the Route.

Without in any way seeking to detract from the magnificent performance of Capt. Vilkit-sky and his gallant coadjutors, the well-known Russian artist Borisov, in the *Novoe Vremya*, administers a well-deserved rebuke to those over-enthusiastic persons who, on the strength of this successful cruise, have been at special pains to declare that it proves the utility of the northern passage for commercial and naval purposes. Though available for vessels engaged in the fur trade, for scientific expeditions, and for sportsmen, the writer confidently asserts that centuries may pass and this route will still remain closed to commercial navigation. These strictures of M. Borisov do not refer to the Kara Sea and Yenesei route, the practical character of which for commercial purposes has been entirely demonstrated.

Successful Kara Sea Expedition.

The steamers *Haugastoel* (3,100 tons) and *Eden* (2,000 tons) of the Siberian Steamship, Manufacturing & Trading Co. (Ltd.) started from Tromso on September 7 for the Ob and Yenesei Rivers, respectively, where they received cargoes of butter, hemp, flax, etc., which were landed at Grimsby. The *Haugastoel* reached Tromso on the return voyage 19 days after it set out; the *Eden* took 5 days more. This was the fourth annual expedition to the Kara Sea, and the first that included the visit to the Ob. As this river has a much larger fleet than the Yenisei, it is possible to tap the richest district of central Siberia. Preparations are being made for sending out a very large expedition next year, when it will be possible to relieve Siberia of its large surplus stock of grain, butter, hides, hemp, flax, and linseed. The steamers will leave England in July and return in September.

A Lisbon firm has placed orders for \$45,000 worth of American leather as the result of a Trade Opportunity transmitted by Consul General W. L. Lowrie, of that Portuguese city.

SHIPPING FACILITIES BETWEEN UNITED STATES AND CERTAIN COUNTRIES.

The following table shows the steamship companies in service between the United States and South America, Denmark, Netherlands, Norway, Sweden, and Vladivostok, the port of sailing and the port of destination, and other information:

UNITED STATES TO SOUTH AMERICA.

Line.	Port of sailing.	Ports of destination.	Average sailing time.	Approximate tonnage.	Refrigerating facilities.	Number of sailings.
Lamport & Holt Line.	New York	Bahia, Rio de Janeiro, Santos, Montevideo, Buenos Aires.	22 to 24 days to Buenos Aires.	67,000	5 vessels, 50,500 tons.	Biweekly.
Do.	do	Buenos Aires.	24 days.	7,000	None	Monthly.
Norton Line.	do	Montevideo, Buenos Aires, Rosario.	24 days to Montevideo.	Varies.	do	Triweekly.
Barber Line.	do	Montevideo, Buenos Aires, La Plata, Santa Fe.	25 days to Montevideo.	14,000	1 steamer, 6,000 tons.	Two a month.
Houston Line.	do	Montevideo, Buenos Aires, La Plata, Rosario.	23 days to Montevideo.	64,000	None	Do.
Prince Line.	do	Rio de Janeiro, Santos, Montevideo, La Plata, Buenos Aires, Rosario.	22 days to Rio de Janeiro.	30,000	do	Do.
Do.	New Orleans.	Rio de Janeiro, Santos, and other Brazilian ports.	do	do	do	Occasionally.
Funch Eyde & Co.	New York	Rio de Janeiro, Santos, Rio Grande del Sul, San Francisco do Sul.	22 days to Rio de Janeiro.	62,000	None	Triweekly.
Royal Dutch West India Mail Line.	do	Curacao, Puerto Cabello, La Guaira, Cumana, Carupano.	13 days to Curacao.	38,000	do	Biweekly.
Booth Line (including Iquitos Steamship Co.)	do	Para, and other Brazilian ports.	27 days to Para.	52,000	do	Three a month.
Do.	do	Peru.	do	do	do	Biweekly.
American & Rio Plate Line.	do	Montevideo, Buenos Aires, Rosario, La Plata.	27 days to Montevideo.	10,000	None	Biweekly.
Lloyd Brasileiro Line.	do	Pernambuco, Rio de Janeiro, Santos.	18 days to Pernambuco.	55,500	3 vessels, 21,000 tons.	Three a month.
Do.	do	Pernambuco.	16 days to Pernambuco.	do	do	do
New York & South America Line.	do	Pernambuco, Rio de Janeiro, Santos.	11 days to Callao.	5,000	None	Occasionally.
Quebec Steamship Co.	do	Peru, Chile (Colombia occasionally).	do	28,000	do	Triweekly.
Merchants Line.	do	Demerara.	17 days to Demerara.	16,000	1 vessel, 6,000 tons.	Every 10 days.
Do.	do	Bahia Blanca, Fort Madryn.	30 days to Bahia Blanca.	76,000	None	Once 6 to 8 weeks.
Do.	do	Guayaquil and west coast ports.	12 to 13 days to Guayaquil.	do	do	Two a month.
Do.	Seattle.	West coast ports.	do	do	do	do
West Coast Line.	New York	Chile and Peru.	14 days to Callao.	(6)	do	One or two a month.
Red "D" Line.	do	Curacao, La Guaira, Puerto Cabello.	8 days to Curacao.	8,300	None (only for ship's use).	No schedule.
Caribbean & Southern Line.	New Orleans.	Montevideo, Buenos Aires, La Plata.	31 days to Montevideo.	6,000	None	Monthly.
Do.	Mobile.	Demerara.	do	do	do	Do.
United States & Brazil Steamship.	New York	Bahia, Rio de Janeiro, Santos (Bahia once a month only).	17 days to Bahia.	2,500	1 vessel, 8,000 tons.	Semi-monthly.

Munson Line.....	Mobile (occasionally Pensacola).	Montevideo, Buenos Aires, Rosario.	30 days to Montevideo.	55,000	None.	Monthly.
United Fruit Co.....	New York	Cartagena, Puerto Colombia, Santa Marta.	9 days to Cartagena.	18,000	All refrigerated.	Weekly.
Commercial South American Line.....	do	Pernambuco, Rio de Janeiro, Santos, and other Brazilian ports.	32 days to Rio de Janeiro.	10,000	None.	Monthly.
Pan American Argentine Steamship Co.	New Orleans	Montevideo, Buenos Aires, Rosario.				Do.

UNITED STATES TO DENMARK, NETHERLANDS, NORWAY, AND SWEDEN.

Northern Transport Line.	New York	Göteborg, Copenhagen.	15 days to Göteborg.	15,000	None	Three a month.
Wilson Line	do	Copenhagen, Göteborg, Christiania (transshipment at Hull to own boats).	17 days to Copenhagen.	175,000	All	Weekly.
Swedish-America-Maximo Line.	do	Göteborg.	17 days to Göteborg.	dVaries.	None	Do.
Do.	Boston, Philadelphia, Galveston, Newport News, New Orleans.					Monthly.
Sweden-Norway Line.	New York	Göteborg.	19 days to Göteborg.	22,000	Limited.	Do.
Norwegian-America Line.	do	Christiania, Bergen, Stavanger, Christiansund.	14 days to Bergen.	50,000	Limited (passenger).	Weekly.
Scandinavian-American Line.	do	Christiania, Copenhagen.	10 to 11 days to Christiania.	dVaries.	None	Four or five a month.
Do.	Boston, Philadelphia, Baltimore.					Monthly.
Holland-America Line.	New York	Rotterdam	8 to 9 days to Rotterdam.	dVaries.	None	Nine a month.
Do.	Boston, Philadelphia, Baltimore, Newport News, Savannah.					Monthly.

UNITED STATES TO VLADIVOSTOK.

Nippon Yusen Kaisha.	New York		64 days via Cape Good Hope.	30,000	None.	Three in two months.
Frank Waterhouse & Co.	Seattle.		25 days.	72,000	do	Four a month.
Joint service: Barber Line, American & Oriental Line, American & Manchurian, American & Asiatic S. S. Co., Indra Line (Ltd.).	New York		70 to 75 days via Cape Good Hope, 20 via Panama Canal.	75,000	do	Every two weeks.

* Steamers are chartered and number and tonnage varies constantly. Steamer despatched in October, 7,900 tonnage.
 * Redefault, now chartering a boat. * One boat. * Constant change in number and size of chartered vessels.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

- Pharmaceutical products*, No. 19519.—A firm in France informs an American consular officer that it desires to be placed in communication with manufacturers of pharmaceutical products with a view to purchasing 551 pounds of iodide of sodium and 2,204 pounds of iodine.
- Catalogues*, No. 19520.—An American consular officer in Siberia reports that there is a demand for catalogues in the Russian language, if possible. Prices should be in rubles and c. i. f. Vladivostok.
- Hardware, etc.*, No. 19521.—A letter to the bureau from a company in Russia states that it is desirous of communicating with manufacturers of hardware and materials for building wagons. It is requested that catalogues, prices, and discounts be forwarded.
- Oxygen bottles, aluminum, etc.*, No. 19522.—The bureau is in receipt of a letter from a commission agent in Norway who desires to correspond with manufacturers of steel oxygen bottles, aluminum, wire metals, glassware, hardware, hosiery, etc. More detailed information may be obtained from the bureau or its branch offices.
- Chemicals*, No. 19523.—A company in England informs an American consular officer that it desires quotations on the following chemicals for shipment to India: Tannic acid, chrome alum, calcium chloride, sulphate of alumina, and numerous others. Full information in regard to this opportunity may be obtained from the bureau or its branch offices. Bank references and cable address are given. (Refer to File No. 69449.)
- General representation*, No. 19524.—An American consular officer in Canada reports that a man in his district desires to correspond with manufacturers of iron and steel products, with a view to representing them.
- Telephonic plant*, No. 19525.—A report from an American consular officer in Ecuador states that a new telephone system is to be installed in one of the large cities of that country. Specifications and full information may be obtained from the bureau or its branch offices. (Refer to File No. 69511.)
- Coffin fittings*, No. 19526.—A firm dealing in funeral supplies informs an American consular officer in England that it desires to communicate with manufacturers of coffin fittings, with a view to securing brass, electrobrass, and nickel-silver fittings for coffins.
- Jute*, No. 19527.—A letter to the Bureau from Porto Rico states that a firm desires to correspond with manufacturers of jute which is spun and ready for weaving. Sample of the material wanted may be inspected at the Bureau and its branch offices. (Refer to File No. 80.)
- Chemicals, hosiery, etc.*, No. 19528.—The Bureau is in receipt of a letter from India stating that a company desires to establish commercial relations with manufacturers of chemicals, such as Glauber's salt, Epsom salt, etc., cotton and woolen hosiery for women and children, silk goods, and stationery.
- Diamonds and carbons*, No. 19529.—A letter to the Bureau from a firm in England states that it can supply diamonds and carbons (black diamonds) for any industrial or mechanical purpose. It is stated that these goods are used in the following trades: Drilling diamonds and precious stones, by glaziers, emery-wheel works, artesian-well boring, and for dental purposes, etc. Bank references given.
- Sugar machinery and machine tools*, No. 19530.—Supplementing Foreign Trade Opportunity No. 19451, an American consular officer in Brazil forwards full information and details in regard to same, which may be obtained at the Bureau or its branch offices.
- Hosiery*, No. 19531.—An American consular officer in France reports that a general importer and exporter desires to establish commercial relations with manufacturers of hosiery for women and children. The inquirer states that purchases will be made on a cash basis. Correspondence may be in English.

SPAIN'S REVENUE FROM SALES OF TOBACCO.

[Consul Robertson Honey, Madrid, Nov. 15.]

The *Economia Nacional*, published in Madrid, states that Spain, during the first ten months of 1915, has collected as internal revenue tax on sales of tobacco the sum of 178,970,000 pesetas (\$34,541,210), which is about 4,000,000 pesetas less than for the first ten months of 1914. During the month of October, 1915, the tax amounted to 18,396,316 pesetas, as against 18,046,734 pesetas in October, 1914—an increase of 349,582 pesetas.

LABOR-SAVING MACHINERY IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Nov. 5.]

New Zealand conditions have produced a demand for labor-saving machinery. The *Wellington Post*, a leading daily, says:

There is always the alternative of milking by machinery, which is now well past the stage of experimenting. Consequently new machines are being installed everywhere, and thus it is hoped to cope with the situation. Other labor-saving devices are also becoming more popular, and it may be that the war will cause quite a revolution in the methods adopted by the man of the land.

It is clear that there will be a greater demand for harvesting machinery in New Zealand this season than ever before, for the crop outlook is good.

RECEIPTS OF FISH AT NEW ENGLAND PORTS.

The United States Bureau of Fisheries reports that the fishing fleet landing fish at Boston and Gloucester, Mass., and Portland, Me., in November, 1915, included 240 steam and sail vessels. These vessels during the month landed 357 trips at Boston, aggregating 6,067,274 pounds of fish, valued at \$228,892; at Gloucester, 453 trips, aggregating 5,625,438 pounds, valued at \$133,096; and at Portland, 124 trips, amounting to 731,834 pounds, valued at \$27,902. The total for the three ports during the month was 934 trips, aggregating 12,424,546 pounds of fish, having a value to the fishermen of \$389,890.

SEASON'S INCREASE OF AIDS TO NAVIGATION IN ALASKA.

During the past summer season, up to the close of November, 1915, 30 new lighted aids and 16 unlighted aids, 46 in all, were established in Alaskan waters. These are located at the following points:

Flashing acetylene lights (24): Lewis Reef, Tongass Narrows; Narrow Point and Middle Point, Clarence Strait; Point Alexander, Wrangell Strait; Marmion Island and Sheep Creek, Gastineau Channel; Clear Point, Barlow Islands, Naked Island, Little Island, and Low Point, Lynn Canal; Kingsmill Point, Point Augusta, Hawk Inlet Entrance, and Hawk Inlet East Shoal, Chatham Strait; Otstoa Island and McClellan Rock, Peril Strait; Grey Cliff, Anchor Point, East Forelands, East Chugach, Flat Island, and Race Point, Cook Inlet; and Point Romanoff, Norton Sound (changed from oil).

Electric light (1): Sitka Harbor.

Float Light (1): Blunt Point Reef, Wrangell Strait.

Lens lantern, oil (1): Tenakee, Chatham Strait.

Post lights (3): Beck Island, Clarence Strait; Rose Inlet, Tlevak Strait; and Akutan Harbor, Aleutian Islands.

Beacons (4): Fish Creek Dolphin, Tongass Narrows; False Point Retreat, Lynn Canal; Deep Bay Entrance, Peril Strait; and Priest Rock, Unalaska Bay.

Buoys (12): 8 nuns, 3 cans, and 1 spar.

Five more lights will probably be established during this season.

Good progress was also made in the construction of the new light and fog-signal station at Cape St. Elias on Kayak Island. The illuminating and fog-signal apparatus have been on exhibition at the Panama-Pacific International Exposition at San Francisco, and will soon be dismantled and taken to Alaska for installation next season. The construction party, with the exception of a few men as watchmen and caretakers, left the cape on October 7, having completed during the season all reinforced concrete work in the tower, fog signal, storage building, and dwelling, except the first-floor slab of dwelling and a portion of the floor in the oil room. With favorable weather and labor conditions the station will probably be placed in commission during the season of 1916.

WELSH PURCHASES OF MUSICAL INSTRUMENTS.

[Vice Consul Hamilton C. Claiborne, Swansea, Nov. 23.]

There is a large demand in Swansea for cheap and medium grades of accordions, violins, mandolins, and flutes. The Welsh are naturally a musical people, and despite war-time economies their demand for musical instruments is still pronounced.

Accordions of the variety formerly imported from Germany, at prices ranging from \$2.25 to \$12 each, are very difficult to obtain, and are in great demand. Many kinds are bought. The larger sizes, with expansive keyboards, are the most favored. Violins costing \$2.50 to \$15 are also needed, and there is a general shortage of bows and strings. Local dealers report that mandolins and flutes are required for the South Wales trade.

[Lists of the principal Swansea firms selling musical instruments may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69839.]

MOTOR-TRUCK MARKET IN CUBA ATTRACTIVE.

[Special Agent Garrard Harris.]

There is a considerable present and future market in Cuba for motor trucks of every description. While the sale of pleasure cars has been large [see *COMMERCE REPORTS* for Nov. 19, 1915] and the market for them still presents good features, the use of motor trucks, delivery wagons, and the like has not kept a corresponding pace. At this time, when the island has just realized on a sugar crop of more than \$200,000,000 and the mills are grinding on a new crop that promises to exceed it in volume and in price, optimism prevails on all sides and prosperity is apparent generally, and the work of introducing new motor vehicles should meet with fewer difficulties than ordinarily.

The cost of feed for draft animals is high, practically all the grain and hay being imported. The arguments of lower cost of upkeep and greater delivery capacity in favor of power vehicles should appeal strongly to wholesale houses, importing concerns, breweries, factories, and stores and establishments making a specialty of prompt delivery, and it is likely that many sugar estates could use trucks to advantage. Moreover, there seems a fine prospect of developing a trade in motor busses. The streets of Habana are all well paved, and the rural roads throughout the island are good and are being extended.

Attempts to sell by mail are usually futile, and correspondence in English and catalogues in the same language a waste of time. Competent Spanish-speaking salesmen should be sent out, or arrangements should be made with Cuban firms to act as local representatives.

[A list of Habana automobile dealers and agents may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices by referring to file No. 802.]

CUBA TO DEVELOP DOMESTIC POULTRY INDUSTRY.

[Special Agent Garrard Harris.]

A really modern chicken ranch is now being established by President Menocal. It is his intention to experiment, find the best adapted chickens for Cuba, and then distribute eggs of fine birds of this variety at absolute cost, in order to help his people get started on raising more food for home consumption. Cuba now imports more than 6,000,000 dozen eggs annually.

[Photographs of a modern chicken ranch, "El Chico," owned and operated by President Mario G. Menocal, of Cuba, and located at El Cano, about 10 miles from Habana, may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 799.]

CHARTS SHOWING CHILE EXCHANGE FLUCTUATIONS.

In the report of Mr. W. H. Lough on "Banking opportunities in South America" there appears a chart showing graphically the fluctuations in London-Chile exchange during the last 10 years. Several reprints of this chart have been obtained as separates and a limited number will be distributed free on request.

FANCY POULTRY, SUPPLIES, AND EGGS FOR CUBA.

[Special Agent Garrard Harris.]

The island of Cuba is a considerable consumer of eggs and does not supply nearly enough for local needs, although the climate and land are in many ways ideal for poultry raising and the production of eggs on a commercial scale.

In 1913 there were imported 6,951,083 dozen eggs, valued at \$1,124,281 and paying duties that aggregated \$192,013; in 1914 there were 5,494,897 dozen eggs imported, valued at \$1,213,409 and producing a revenue of \$170,920 for the Cuban Government. Of this great quantity of eggs, in 1913, all came from the United States but 6,110 dozen, valued at \$2,383, which were imported from Mexico. In 1914 the Mexican importation rose to 64,674 dozen, valued at \$22,200. It is stated that the Mexican eggs can be purchased more cheaply than the American and are not storage stock. All but 150,000 dozen in 1913 and 98,921 dozen in 1914 were entered at Habana. Guantanamo and Santiago were the other two ports receiving shipments; Matanzas received only 34 dozen in two years.

The eggs imported are mainly "storage stock" and sell for 30 to 48 cents a dozen. Fresh or "yard" eggs are very scarce and are readily taken at 5 cents each, or 60 cents per dozen, and the supply is never adequate.

A "Live-at-Home" Propaganda—Poultry Raisers' Association.

The fact that Cuba annually spends vast sums for foodstuffs [in 1914 foodstuffs, including meats, fish, cereals, fruits, vegetables, milk products, oils, and beverages, formed \$46,867,795 of Cuba's total imports valued at \$119,001,410] has caused a "live-at-home" propaganda to be started, which is now much in favor in the public press. The first evidences that the movement is taking definite shape are seen in a considerable interest now displayed as regards poultry raising to supply the home market. In 1914 there were imported 4,324 fowls from the United States, mainly for breeding purposes, but in 1914 interest seems to have waned and the total importation was only two birds valued at \$15. In the early part of 1915 interest revived and has become more widespread.

There is a poultry raisers' association in Cuba, of which Señor D. Noguer, Calle Mercaderes No. 11, Cuarto No. 7, Habana, is the secretary and treasurer. [Mention of the organization of this society was made in Daily Consular and Trade Reports for Nov. 11, 1912.] Señor Noguer is the owner of a poultry farm at Puerta Blanca, Guanabacoa, where he has over 2,000 hens, mainly white Leghorns, obtained from dealers in the United States. The Cuban Experiment Station (Estacion Experimental Agronomica, Santiago de las Vegas, Cuba), under the direction of Mr. J. T. Crawley, is also experimenting with various breeds, and has brought a considerable number of fine chickens from the United States, particularly 400 white Leghorns, 150 Rhode Island Reds, and 100 Langshans.

Experiments Undertaken by President of the Republic.

President Menocal in May last bought a 210-acre ranch near the little town of El Cano, 10 miles from Habana, and has fitted it up as a model poultry farm. He, too, is experimenting with various

breeds of chickens, among them being white and buff Leghorns, Rhode Island Reds, buff Orpingtons, black Game, a very thrifty Spanish chicken called "Prats," Langshans, and others. The farm which is in charge of a poultry expert, is also stocked with many fancy varieties of chickens, pheasants, and the like.

President Menocal has primarily the patriotic intention of ascertaining which is the best all-around chicken for the use of the ordinary Cuban family; the best layer and the one most productive of flesh. This determined, he plans to distribute eggs of the variety so selected throughout the island at actual cost of production, in order to help establish a good strain of chickens and to encourage the people to raise more poultry and eggs at home. The consensus of opinion of chicken men at this time appears to be that the Rhode Island Red is perhaps the best all-around fowl, with buff Orpingtons as second choice. The Leghorns are not considered, as they are strictly a laying fowl and do not readily become broody, and hens that set are necessary to the country raisers of chickens who have neither the money to buy incubators nor the ability to operate them.

During the week of November 15-20 President Menocal received 700 white Leghorns from two New York State dealers. The fowls cost him on an average \$2.25 each in New York, and when transportation, duty, and handling had been paid the average cost was about \$3 each. Out of one shipment 69 per cent of the fowls were suffering from bad colds; some of them were very sick. The other shipment contained a large percentage of sick and droopy chickens also.

Should Offer Opportunity for Sale of Supplies.

Interest in poultry raising in Cuba is on the increase, and apparently the Republic offers a fine field for exploitation by poultry dealers of the United States. Literature in Spanish, nicely illustrated, should be used. There is no benefit whatever in sending catalogues or letters in English. It is a waste of time, postage, and material. Along with this opportunity for the sale of birds, which will become increasingly large, is that for the sale of combination and prepared poultry feeds, small grain, poultry remedies, incubators, brooders, and supplies of every kind from leg tags to crushed oyster shells.

The poultry business is new to Cuba, and there is no well-defined business of handling either the fowls or the supplies. [A list of Habana dealers who carry a partial line of supplies may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices by referring to file No. 777. Further information may also be had relative to the poultry raisers' association.]

Aside from supplying fine eggs for hatching, there is a very considerable future in the poultry-raising business in Cuba to furnish eggs and chickens for the local markets. The Cubans, in common with most tropical peoples, prefer to eat eggs and chickens rather than meat, and there will not be for many years a glutted market or a material decrease in prevailing prices for either eggs or poultry. A pullet ("pollita") for eating purposes brings 70 to 80 cents, and a grown hen 90 cents to \$1. Turkeys and ducks are also expensive food, and share with the chickens the opportunity for profitable returns.

OIL-BEARING SEEDS IN INDIA.

(Consul Lucien Memminger, Madras, Oct. 22.)

The second and more complete Government returns of the sowings of sesame (gingeli), in Madras Presidency, show a large increase over the area reported at the corresponding period of last year. Sowing rains were favorable throughout the whole of the north of the Presidency, except in Cuddapah. Moreover, especially in the Circars, there has been a tendency to substitute sesame this year for groundnut. Vizagapatam, Bellary, Anantapur, and Madura all report considerably larger areas than they did last year. The condition of the crop is almost universally reported as fair to good. In parts of Chingleput and South Arcot it is described as poor. The total area sown with sesame in 1915-16, till October 1, 1915, was 845,500 acres, of which 296,400 acres were early sowings and 549,100 acres were late sowings. The total represents an increase of 298,800 acres over the area sown with sesame in 1914-15 up to October 1, 1914, but a decrease of 16,500 acres from the average area during the last 5 years. On an average of the 5 years ended 1913-14, the area under sesame in the Madras Presidency has represented 16.6 per cent of the total area under sesame in British India.

Probable Decrease in Peanut Sowings.

On an average of the five years ended 1913-14, the area under peanuts in the Madras Presidency has represented 71.1 per cent of the total area under peanuts in British India.

According to the returns received by the Madras Government, the area sown with peanuts is put at 1,277,800 acres, as compared with 1,276,400 acres at this time last year. The final accounts for last year show, however, that the area under this crop in the Deccan and Central tracts had extended much more widely than was reported to be the case at sowing time. As compared with last year there is a general fall, which is most marked in the Circars and the Deccan, i. e., in the tracts where early sowings take place. By the latter end of July the price of peanuts had risen considerably; but it had fallen steadily during the first months of the year and, although rising in May, was still low. This affected all places where early sowings are the rule. In the Carnatic the decrease in area was about 12½ per cent. The average area sown in the last five years was 1,240,200 acres. The final accounts for 1915-16 will probably show that, as compared with the preceding year, there was a fall of about 25 per cent.

Oil-Pressing Industry at Madras.

The Director of Industries at Madras, in a report to the Madras Government published at the end of August, made the following statements:

My last report covered the period up to September. It will be remembered that the Government sanctioned the purchase of several seed-crushing plants to deal with the peanut problem, and at the time of my last report one of these plants had been bought and was in operation. The second has since been purchased and erected at Cuddalore. The third has not yet been bought, as no further machinery of this kind is on the market. Two similar machines were, however, purchased some time back by private individuals and these are affording facilities for crushing in the Coimbatore district. The purchase of a large oil mill was also sanctioned. This plant has been shipped in part.

As regards the peanut crop generally, the price before the outbreak of war was somewhat over 40 rupees per candy (about \$0.026 per pound). For several

years previous the demand had been so great that prices had risen steadily. The market rate in 1914 was greatly in excess of the cultivation costs, which may be estimated at 16 rupees per candy (\$0.01 per pound). On the outbreak of war prices began to fall, and with the temporary closure of the Marseille market the demand shrank tremendously.

The Director of Industries here recites various developments which resulted in the cessation of sales altogether, followed by an improvement in conditions at Marseille effected by negotiations between the British and French Governments allowing the shipment of 18,000 tons of poonac (oil cake) to Great Britain and other neutral countries. The report continues:

At the present moment the ruling price for nuts in Marseille is very little below what it was before the war. There has been a corresponding recovery in prices in India, and nuts now stand at about 28 rupees per candy (\$0.018 per pound). This figure is substantially below what it was last year, but it is not to be hoped that it will materially improve, for the reason that the difference between the two figures is accounted for almost entirely by the change in freights and exchange.

In these circumstances I consider that the pennut question need not further engage the attention of the Government, and, furthermore, I propose to abandon what I have termed "protective" measures and shall not purchase the third expeller originally contemplated. The large oil mill under order will, however, be proceeded with, as this is a progressive rather than a protective measure, and the change in the situation has not affected this scheme at all.

RAILROAD RATES TO PAN AMERICAN CONGRESS.

Members of, or visitors to the Second Pan American Scientific Congress, to be held in Washington from December 27, 1915, to January 8, 1916, may obtain a reduced round-trip rate to the congress over the following railroads included in the Trunk Line Association, at a rate of 2 cents a mile in each direction: The Baltimore & Ohio; Buffalo, Rochester and Pittsburgh; Central Railroad of New Jersey; Chesapeake & Ohio; New York Central Lines; New York, Ontario & Western; Pennsylvania; Delaware & Hudson; Delaware, Lackawanna & Western; Erie; Lehigh Valley; Philadelphia & Reading; Pittsburgh & Lake Erie; Western Maryland; and West Shore.

A special form of ticket will be on sale in the principal cities touched by these systems, December 25, 26, and 27, and must be used on the going trip within these dates. The return tickets must be used to return to the starting point not later than midnight, January 12. No such ticket will be sold for less than \$1, and visitors to any of the other political, economic, and scientific meetings and conventions to be held in Washington at the same time may secure the same rate. Similar reduced rates may be offered by railroads serving other territories, and further information may be obtained by addressing the office of the Secretary General, John Barrett, Washington, D. C.

Opening of Russian Railway.

The British consul at Batum reports that the Kakhethian Railway, which was opened to limited traffic in January last, is now open to traffic of every description, having been officially declared incorporated in the Russian railway system.

TWO EXAMPLES OF FAULTY PACKING.

[Consul Samuel T. Lee, San José, Costa Rica, Oct. 25.]

The United States is now practically the only source of supply for electrical goods, but there is constant complaint regarding improper packing. Standard cases for domestic trade are used for export cargoes, and there appears to be no attempt or desire toward reducing tare when shipping to countries where gross-weight duties are imposed.

A leading American manufacturer last month shipped an electrical compensator and switch to a prominent dealer in San José. The contents weighed net 138 pounds, the gross weight of case was 250 pounds, and the volume of the package was three times greater than necessary. The dealer referred to incloses a printed slip with each order, and has repeatedly written letters on the subject to the offending exporter, but without results. The slip reads:

Important.—You must bear in mind that in Costa Rica all custom duties are very high and are charged by gross weight, the cases paying the same duty as the goods inclosed, so that the packing must be made very light, reducing the tare to the minimum, in order to avoid overcharges of duties and freights. If these instructions are followed the cost of the goods in the place of destination will be reduced in a considerable proportion, which permits us to sell at lower prices and more rapidly, thus procuring you more orders and increase of business. At same time, any excess of cubic measure must be avoided, for the reasons above stated.

A Matter of Paste Paints.

American paints and varnishes already mixed are making an impression, but the manufacturers of the United States seem to have failed utterly in the line of ground-in-oil paste paints. White-lead paste paints have heretofore been bought mostly from Europe, and the San José consulate has repeatedly tried to obtain a share of this trade for America. Special reports on the paint trade and many direct replies have explained in detail just what is needed. The American lead paste for mixing by the painter contains too much liquid for this market.

In filling a recent Costa Rican order a prominent American manufacturer shipped the ground-in-oil white-lead paste in drums with a snap or clamp cover—a style of container that does not withstand rough handling even when the drum is packed in a wooden case. Wire handles or bails were left on the drums and the whole shipment was packed in a heavy standard case. This useless tare weight caused an extra payment of \$18 gold on a shipment worth \$85.

This paste paint should be prepared with less liquid and then packed in drums with heads securely riveted to the steel drum. These drums should each be marked to customer and shipped loose, without being packed in the heavy case. The steel drum gives ample protection if the heads are attached as described, and the wire handles need not be supplied. Until these directions are followed Europe will continue to supply most of the ground-in-oil paint paste used in San José.

Figures submitted by Consul John Ball Osborne, of Havre, show that on November 4 there was 1,855,564 bags and 4,103 casks of coffee in the bonded warehouses of that French port. Of this stock, 1,188,706 bags were Santos and 423,851 bags other Brazilian coffee.

SOUTH AMERICAN VIEWS OF OUR EXPORT PRACTICES.

[Consul A. T. Haeblerle, Pernambuco, Brazil, Nov. 1.]

As a result of interviews with business men of this city relative to American exports, it is possible to point out specific instances where our exporters have not given satisfaction, or where unfortunate misunderstandings have arisen. Unfortunately, many exporters do not pay sufficient attention to details, to a study of the market, the tariff, style of correspondence, or matters which, as anyone familiar with business conditions in Brazil will readily understand, cause dissatisfaction in some cases and annoyance in others. Trivial mistakes at home often become the source of delays, fines, and great inconveniences in this country.

Many of our firms engaged in foreign trade, and knowing all its intricacies, have to suffer for the sins of others who either commit errors through their inexperience or merely take foreign orders as a "side issue," and, therefore, do not care whether they give satisfaction or not. These careless firms, or those which unintentionally commit indiscretions, cause all the trade, with a few exceptions, to pass through the hands of a few firms in New York, and make entrance into this market almost impossible for manufacturers and exporters who are for the first time launching into foreign trade, but who do so after having equipped themselves with managers who know how to deal with the South American importer. Such firms, although a credit to our export trade, are not given a fair chance, because the merchants in Pernambuco are afraid to deal with unknown firms, and refer to such experiences with American firms as I have mentioned.

Erroneous Opinions Regarding American Export Trade.

There are many concerns in this city that are trying to establish business relations with American firms, but have had some erroneous opinions about our export trade. A well-known merchant of this city remarked: "I have seen a great many letters from American firms that wanted to do business with merchants of this city, but I never considered them." When asked why, he said: "Because your good firms have enough business to attend to at home. Only those that can't sell their products at home want to find foreign markets." This statement shows the prejudices we have to overcome. The cooperation of business organizations in endeavors to inspire greater confidence among the merchants of this consular district in our manufacturers and exporters is requested. They are urged to uphold this consulate in a practical way, if only in the form of a resolution, to start with, that their members will give careful attention to orders received from Pernambuco. This would be made known among the merchants of this city.

To Give Clear Idea of Pernambuco's Demands.

One of the reasons for conducting a series of interviews with the business men of this city is to give our exporters as clear a picture as possible of what the importers of Pernambuco want and require, so that our exporters may be in a better position to know whether or not it will pay them to write to firms in this city. One of the importers of cotton goods says that some time ago he desired to purchase cotton goods in the United States and asked for the weight of the material.

Without this knowledge no cotton goods can be sold in Pernambuco. The manufacturer replied that he had shown him the samples of the goods and refused to give him the weight. If our exporters of cotton goods learn what is required, it will help to eliminate useless correspondence of firms that do not wish to, or feel they dare not, meet the conditions of export trade.

The same principle applies to credit terms. If our exporters are once convinced that the merchants of Pernambuco will not, because they can not, agree to cash against documents in the United States before the delivery of goods, or even cash against documents in Pernambuco, it will mean the elimination of correspondence that leads to nothing. Would it not be possible for manufacturers who are not willing to give credit, but who demand cash and thus lose the trade, to make arrangements with some experienced commission house, or export house, and inform the foreign customer that such an arrangement has been made for him? That would constitute a basis for further negotiations.

Opinions Expressed Regarding American Exporters.

It is the expressed opinion of many of the importers of this city that "the exporters of the United States know little about the export business." Sometimes the statement is made outright, sometimes it is implied in relating their experiences with American firms. The interviews with merchants showed a startling number of complaints. They also revealed the discouraging fact that during the past six months virtually no business has resulted from the large number of trade inquiries received at this consulate and from the reports on trade opportunities transmitted by this consulate.

Last April a representative of a cement company visited this city and sold cement on 90 days' credit. A certain merchant gave him a fair trial order—several hundred barrels, I believe. Instead of the cement, the firm received a letter from the company stating that the terms were cash against documents in New York, but that in this case the company would make an exception and send the cement upon payment of freight and other expenses in New York and cash upon arrival in Pernambuco. The local merchant then ordered English cement. Another firm had a similar experience. A third house ordered cement at the same time (April or May) and has heard nothing from the company since—neither cement nor even a communication.

Uncertainty as to Whether or Not Orders Are Being Filled.

A firm ordered supplies from the United States. The goods arrived, but no draft. The firm wrote several letters, but received no reply. It then registered a letter to find out if the company was still in existence. The latter had been given other orders, and it is not known whether or not they are being attended to. Another firm sent for a catalogue from the United States. After studying the catalogue prices it asked for discount prices of certain articles it had decided to purchase. The discount prices were promised, but never received.

"If we have to pay cash," local merchants say in discussing the question of credit, "we will buy only what we have to, and hope to do business with Europe again after the close of the war. We have a good reason for this. We must do business on credit. Here in Pernambuco

most of our business is with the interior and we have to sell to our customers on credit. Another reason is the excessive customs charges, that would surprise some of the American manufacturers. Then comes the value of the stock itself, so that to pay cash really means working with three capitals—one for the customers, one for the customhouse, and one for the American exporter. One of the principal exporting firms of New York, one that does give long credits, lost the insignificant sum of about £25, which was gladly overlooked in view of the large business done here."

Practices Which Interfere with Growth of Trade.

Carelessness in the use of the cable, causing expense that should be unnecessary, misunderstandings due to wrong translations of orders, sending three invoices in one envelope, sending as advertising matter duplicates of packages in which the goods are put up, and the shipping of styles of hardware that are not wanted by the people are among the things cited by merchants as interfering with the growth of trade with the United States.

A leading hardware dealer stated that among the articles formerly purchased in Europe but now imported from the United States were glass, tin sheets, galvanized iron, and tools. Another dealer gives a list of articles, principally hardware, which have been imported from the various countries. These are:

From the United States: Tools, such as drill braces and drills, files, screws, saws, trunk material, leather, locks, fancy metal sheets, resin, oilcloth, arms, and ammunition.

Imported from England: Equestrian supplies, superior tools from certain manufacturers, tin sheets, zinc sheets, copper sheets, iron beds, and brass valves.

Imported from Germany: Light hardware, locks, bolts, pliers, hinges, hammers, hatchets, vise pins, sickles, anvils, furnaces, hoops, keys, scissors, compasses, chisels, saws, planes, numbered plates, lettered plates, mills, presses, shovels, spades, rakes, knives, punches, nipping tools, squares, iron and brass rings, chains, corkscrews, grindstones, rat traps, night candles, bells, hooks, chafing dishes, lanterns, candlesticks, lamps, strainers, egg beaters, molds, squeezers, meters, measuring tapes, spoons, glasses, basins, trays, salvers, stoves, bathtubs, buckles, spurs, stirrups, bridles, pomatum, thread, straw, gum, pencils, brushes, pipes, springs, knobs, padlocks, razors, pocket-knives, cages, strings, oilcloth, valves, filters, articles of nicked brass, enameled ware, paints, etc.

Imported from Portugal: Locks, sickles, hatchets, and axes.

One of the large cotton firms was interviewed. "Is there a demand for American cotton?" was asked. "Yes; but not for cheap cotton goods, as they are manufactured in the country."

GROWING CUBAN INTEREST IN HOG RAISING.

[Special Agent Garrard Harris.]

Cuba consumes upward of \$10,000,000 worth of pork and pork products per annum, and as yet there has been no sustained effort to raise pork for the local demand or to establish a packing-house industry, although the country is in many respects ideal for raising hogs. There is an abundance of water, forage all the year, an equable climate, and, in addition, the widespread distribution of the royal palm tree insures a great quantity of the seeds, called "palmiche," which fall at all seasons of the year and are greatly relished by swine. The palmiche gives the meat a nutty flavor that is very fine indeed, and pork raised on this food is held in great esteem. The animals thrive on it amazingly.

In addition to the palmiche there are other foods growing wild—the guava, which hogs relish, and yuca roots, and many other tubers and roots. Mango trees are distributed over the island, and in season the ripe mangoes that fall are a considerable factor in the food supply. Sugar cane is eaten with avidity and is found to be remarkably satisfactory for putting flesh on hogs. Cow peas, peanuts, sweet potatoes, soya beans, and the like as special forage and grazing crops grow with little attention. Good land suitable for hog raising may be had for \$2.50 to \$10 per acre, becoming more expensive as the location is nearer the cities.

Breed—Improvement Efforts.

The native hog in Cuba is very much like the famed "razorback" of the southern pine woods—mostly head, legs, snout, and ears, swift of foot, but very hardy and thrifty, and does well without any care whatever. There is as yet practically no effort to raise hogs commercially except in small herds which range the woods in charge of a herdsman and his dogs. The meat of these semiwild hogs is in considerable demand on account of its flavor from the palmiche seeds, but the supply is not dependable, and no attempt is made to put it up as hams, bacon, ribs, or sides. This fresh pork sells at 8½ cents a pound the year around, and is scarce at times.

There has of late grown up in Cuba a sentiment in favor of producing more foodstuffs, and hog raising is receiving considerable attention. The Cuban Agricultural Experiment Station at Santiago de las Vegas is experimenting with various breeds and is in touch with the more progressive element which intends to devote attention to the growing of better pork. Cholera is known to some extent, but the most prevalent disease with which Cuban hogs are afflicted is called "pintadillo," and is supposed to be a mild sort of cholera. The Cuban Experiment Station is now seeking in the United States a competent chemist to make cholera serum and to study the diseases of native hogs.

Swine Imports—American Enterprise.

In 1913 Cuba imported 10,225 hogs, valued at \$127,328; in 1914, 9,816, valued at \$130,996. The United States furnished the entire number. Duroc-Jerseys, Berkshires, and Poland Chinas appear to be the favorites, and a cross between these and the native hogs makes

a thrifty animal which, if not ideal in shape from the packing-house standpoint, carries considerable meat and is a great improvement on the native wild hog.

Some capitalists of the United States are now projecting a hog ranch and packing house on 20,000 acres of land in Pinar del Rio Province, about 60 miles from Habana. It is proposed to commence with a capital of \$250,000.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D.C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.	908 Goodrich Avenue, St. Paul, Minn.
Pock, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D.C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(a)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. R.....	Cornwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washington, D. C.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

FOREIGNERS MAY MINE PLATINUM IN SPAIN.

[Consul Robertson Honey, Madrid, Nov. 17.]

Señor D. Domingo Orueta, who recently discovered in Spain very rich deposits of platinum, chromium, and nickel, has relinquished his claims to the Spanish Government. By royal decree, published to-day in the Gaceta de Madrid, official organ of the Spanish Government, the territorial limits of the mines are defined. Concessions to exploit the mines are obtainable from the Spanish Government, and these concessions are granted to foreigners as well as to Spanish subjects. Applications for such concession should be made to Señor Ministro de Fomento, Madrid, Spain. The deposits of platinum are said to be the richest in the world.

[A statement regarding the discovery of platinum in Spain was published in COMMERCE REPORTS for Dec. 11, 1915.]

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Construction work, No. 2823.—Sealed proposals will be received at the Supervising Architect's office, Treasury Department, Washington, D. C., until January 17, 1916, for the construction complete of the United States post office at Hackensack, N. J. Drawings and specifications may be obtained from the custodian of the site at Hackensack or at the Treasury Department.

Sale of disused houses, No. 2824.—Sealed proposals will be received by the Lighthouse Inspector at Boston, Mass., for the purchase of a disused dwelling and fuel house on lighthouse reservation, Spectacle Island, Boston Harbor. Further information may be had on application to the above office.

Subsistence stores, No. 2825.—Sealed proposals will be received at the offices of the Depot Quartermaster, Kansas City, Mo.; Omaha, Nebr.; and General Depot of the Quartermaster Corps, 115-123 East Ontario Street, Chicago, Ill., until December 20, 1915, for furnishing about 80,000 pounds of bacon.

Submarines, No. 2826.—Sealed proposals for constructing two seagoing fleet submarines Nos. 60 and 61 will be received at the Navy Department until February 16, 1916. A circular of requirements for said vessels and plans and specifications for their construction are now ready for distribution to prospective bidders. Forms of proposals and contract will be ready January 15, 1916.

Remodeling work, No. 2827.—Sealed proposals for remodeling building No. 52, Navy aeronautic station at Pensacola, Fla., will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until January 8, 1916. Plans and specifications may be obtained on application to the Bureau of Yards and Docks or to the commandant of the naval station named.

Construction work, No. 2828.—Sealed proposals will be received at the Supervising Architect's office, Treasury Department, Washington, D. C., until January 18, 1916, for the construction complete, including mechanical equipment (except lighting fixtures) and approaches, for the United States post office at Anoka, Minn., and until January 19, 1916, for the United States post office at Hornell, N. Y. Plans and specifications may be obtained from the custodian at either site or at the Treasury Department.

Medical supplies, No. 2829.—Sealed proposals will be received at the Medical Supply Depot, United States Army, 21 M Street NE., Washington, D. C., until January 10, 1916, for 29 items of medical supplies. Items 1, 3, 6, 8, 9, 14, 15, 17, 18, 19, and 22 may be examined at Medical Supply Depot, 543 Greenwich Street, New York, as well as at the above address, but items 4, 5, and 10 can only be examined at the Washington depot. Specifications will be furnished upon application.

Construction work, No. 2830.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until January 21, 1916, for the construction complete of the United States post office at Waterloo, N. Y., and until January 24, 1916, for the construction complete (including mechanical equipment and approaches) of the United States post office at Ashland, Ky. Specifications and plans may be obtained from the custodian at each site or from the Treasury Department.

Panama Canal supplies, No. 2831.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until December 22, 1915, for furnishing, by steamer, free of all charges, on dock at either Colon (Atlantic port) or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama, the following: Steel angles and I beams, steel boiler tubes, steel cable, copper wire, steel locomotive pilots, manganese-steel car wheels, metallic lifeboats, cast-iron pipe, pipe

fittings, valves, cocks, wash-tray plugs, closet chain pulls, suction-hose strainers, lead bends, force cups, floor drains, brass ferrules, shower heads, pipe hangers, flush pipe, twist drills, water gauges, condulets, electric switches, Manila tags, pencils, and hypochlorite of lime. (Circular No. 995.)

Panama Canal supplies, No. 2832.—Sealed proposals will be received at the office of the General Purchasing Officer of The Panama Canal, Washington, D. C., until December 29, 1915, for furnishing, by steamer, free of all charges, on dock at either Colon (Atlantic port) or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama, the following: Bronze letters and numerals, structural bronze work, cutting-off machine, lathe, bolts, rivets, nuts, washers, lag screws, lead sleeves, cable terminals, electric cable, and wire. (Circular No. 996.)

SWANSEA MARKET FOR CLOCKS AND STATUETTES.

[Vice Consul Hamilton C. Clalborne, Swansea, Wales, Nov. 17.]

Owing to the closing of Continental sources of supply, Swansea dealers are experiencing great difficulty in securing stocks of bronze and marble clocks such as are known by the trade name of "Made-line." The more popular varieties have marble or bronze cases with plain or convex ivory dials and gilt centers and with one to four pillars on each side supporting sloping or fancy tops. The wholesale prices in England of these clocks range from \$2.25 for the plain 1-day variety, 5½ inches in height, to \$40 for the fancy French 14-day gong or chime clock of marble and bronze.

There is also a large local demand for bronze and composition statuettes and figures commonly used for niches, mantels, and to match fancy clocks. The bases are usually in imitation onyx, ebony, or marble, and the statuettes are from 6 to 25 inches in height. The prevailing wholesale prices range from \$2.50 to \$40. The figures most often seen represent historical or allegorical subjects.

The South Wales trade can best be served by c. i. f. quotations to Swansea, expressed in English currency, or through the medium of commission houses or agencies in London or the large English distributing centers. Direct communication from New York to Swansea is afforded by the Bristol City Line.

[A list of the Swansea firms selling clocks and statuettes may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69363.]

AMERICAN TEXTILES FOR SINGAPORE MARKET.

Commercial Agent R. M. Odell, who has recently been in Singapore investigating the markets for American cotton goods, reports that the representative of an American firm which acts as general representatives of American manufacturers in foreign fields has recently placed an order for \$3,000 worth of cotton goods, and states he believes additional business can be done. He has opened an office in Singapore and this is expected to be a factor in increasing materially the importation of American textiles. Mr. Odell is reporting fully on the situation and the information he sends will be published shortly after it is received by this Bureau.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

High-speed steel, No. 19544.—An American consular officer in Switzerland reports that a company in his district, which is engaged in the manufacture of elevators and wheels of various kinds, requests cable quotations on high-speed steel "acier rapid." The telegraphic reply should be in French or German.

Forwarding agents, No. 19545.—A letter to the Bureau from a company in Switzerland states that it undertakes every kind of work connected with the warehouse business, such as distributing to the various purchasers, separating, mixing of all goods according to instructions, packing, labeling, etc., and requests that this information be given publicity for the benefit of American exporters.

Well-drilling machinery, etc., No. 19546.—A report from an American consular officer states that a company has been formed in an insular possession to exploit oil fields. As soon as \$25,000 has been raised from the sale of stock the company will purchase a well-boring outfit and proceed to exploit the property. It is stated that gasoline in that vicinity retails from 40 to 50 cents per gallon, and the discovery of oil would be of great commercial and economic value.

Fish oils, etc., No. 19547.—A business man in France informs an American consular officer that he desires to represent American exporters of fish oil, sultin, and sultine for use in the glove industry. Correspondence should be in French.

Prepared cattle foods, No. 19548.—An American consular officer in Spain reports that there is a possible market in that country for prepared cattle foods. The most effectual method of introducing the foods would be to send samples. An analysis of the samples should accompany price list, and the letters should be written in Spanish.

Fern cotton, No. 19549.—A firm in Honduras informs an American consular officer that it is seeking a market for fern cotton, which is obtainable in small quantities in that country. The product is a silky, brittle fiber, and may be used for stuffing purposes. Samples of the fern cotton may be examined at the Bureau or its branch offices. (Refer to file No. 65624.) Correspondence may be in English.

Bottles and hides, No. 19550.—The Bureau is in receipt of a letter stating that a business man in Ecuador desires names and addresses of manufacturers of bottles and tanners of hides. Quotations are asked on 1,000 black and white bottles, size $\frac{1}{2}$ liter, together with catalogues and other necessary information. Correspondence should be in Spanish.

Tin-lined packing cases, No. 19551.—A letter to the bureau from a commercial organization states that it has an inquiry for names of manufacturers making tin-lined packing cases.

Food products, notions, etc., No. 19552.—An American consular officer in Paraguay reports that a firm in his district wishes to establish commercial relations with exporters of food products, notions, wire, cooking utensils, cast iron, and revolver ammunition.

Steel magnets, No. 19553.—A firm in Switzerland informs an American consular officer that it urgently requests quotations from manufacturers of steel magnets for electric-current regulators.

Lupines, No. 19554.—An American consular officer in Spain reports that a business man desires to find a market for lupines, samples of which may be inspected at the bureau or its branch offices. (Refer to File No. 65519.) Prices at present are 19 pesetas per 100 kilos, sack included, f. o. b. Spanish port. The price is liable to variations of from 50 centimos to 1 peseta, according to the market. (Note.—1 gold peseta equals \$0.193.)

Machinery, No. 19555.—A report from an American consular officer in Mexico states that there is a possibility of establishing a light and power plant in his district, and quotations are requested from manufacturers of pumps, engines, and dynamos. Correspondence should be in Spanish.

EMBARGO ON LOGWOOD IN BRITISH HONDURAS.

[Telegram from American consul, Belize, Dec. 12.]

The exportation of logwood is prohibited except to the United Kingdom. [Reference to the embargo on logwood in Jamaica was made in COMMERCE REPORTS for Dec. 9, 1915.]

IMPROVEMENT IN THE LUMBER EXPORT FACILITIES.

[Commercial Agent W. B. Henderson, Seattle, Dec. 9.]

There has lately been a material improvement in lumber shipping facilities from the Pacific Northwest ports. The firm of Charles R. McCormick & Co. has completed a vessel with a capacity of 2,000,000 feet to put in the trade between this coast and European ports. To-day I was informed that another vessel of practically the same capacity had been ordered. These vessels will be four-mast and have semi-Deisel auxiliaries.

It is reported that a bill will be introduced at the next meeting of the British Columbia Parliament providing for a bond issue by the Provincial Government to be used in building 30 four-mast semi-Deisel auxiliary schooners. These schooners will have approximately 2,235 tons dead-weight capacity, or 1,800 tons gross registry. This is equivalent to about 1,300 tons net registry. Their capacity for carrying lumber will be about 2,000,000 feet each. These schooners are to be turned over to lumber manufacturers of British Columbia, who are to assume the bonds and pay for the schooners as bonds fall due. They are to be operated in the lumber trade of the entire Pacific coast. In anticipation of this Mr. J. G. Wood, of British Columbia, has been appointed by the British Columbia Government to open offices in London for the sale of Canadian lumber.

It is reported that these vessels will take about 200,000,000 feet of lumber annually, whereas the present exportation is only about 60,000,000 feet. Keels of six or eight of these vessels are to be laid in British Columbia by April 1, and the remainder to be built as the demand increases.

SPECIAL STEAMER SERVICE TO BERMUDA.

[Consul Carl R. Loop, Hamilton, Bermuda, British West Indies, Nov. 26.]

After several months of negotiations, the Bermuda Government has entered into a contract with the Quebec Steamship Co. for special steamer service during January, February, March, April, and May of the coming year. The contract provides for the running of the *Bermudian*, which has been constantly on the New York-Bermuda route, and of the *Evangeline*, which has been chartered by the company for this special service.

The *Bermudian* (5,530 tons gross) accommodates 346 first-class and 12 second-class passengers and will be put on a weekly schedule beginning January 5, 1916. The *Evangeline* (4,360 gross tons) can accommodate about 350 first-class and 50 second-class passengers. This boat will leave New York on its initial trip on December 24, 1915, and will be continued during the months indicated on a 9 or 10 day schedule. The Government has bound itself to pay for this service the sum of \$5,760 per month and not to grant any subsidy to any other company or steamship for the New York-Bermuda service during the term of the contract.

Until the success of the negotiations was assured there was considerable doubt as to whether the two largest hotels in Bermuda, the Hamilton and the Princess, would open during the tourist season, but these two hostelries have now announced through the local press that they will open, the Princess on December 13 and the Hamilton on or about January 1. Owing to unusual circumstances connected with the war, the number of tourists visiting Bermuda in 1914 was less than in the preceding year (14,773, as against 21,595), but with the facilities which the Government has been able to arrange it is anticipated that the forthcoming season will be much better than the last.

SPANISH MAIL TO THE UNITED STATES.

[Consul General Carl Balley Hurst, Barcelona, Nov. 13.]

By a recent decision the Spanish postal authorities have ordered that for the present all mail matter for points in the United States is to be carried by boats of the Spanish lines, Compañía Trasatlántica Española and Pinillos Izquierdo y Compañía. All mail for the United States received at post offices in Spain will be forwarded to the central post office at Madrid and thence sent to Cadiz or Coruna to be taken by the first available boat of the companies mentioned. As there is only one direct sailing a month for the United States by either of the lines mentioned, it has been arranged that mail destined for the United States be shipped by other boats of these lines to the first port in Porto Rico or Cuba, where there may be good connections with the United States. No mail will be sent for the moment via France as heretofore, unless it is clearly stated on the envelope to be so forwarded.

The scheduled monthly sailings to carry mail by the new routes are as follows: The 10th of each month, Compañía Pinillos Izquierdo y Compañía, from Cadiz to Porto Rico; the 15th, Compañía Trasatlántica Española, from Cadiz to Porto Rico; 21st, Compañía Trasatlántica Española, from Coruna to Habana; 25th, Compañía Pinillos Izquierdo y Compañía, from Cadiz to Porto Rico; and the 30th, Compañía Trasatlántica Española, from Cadiz to New York.

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he has received in stock during the week ended December 11 the following new United States Government publications, which he will sell at the nominal prices affixed:

Customs Regulations of the United States. prescribed for the Instruction and Guidance of Customs Officers, edition of 1915, published by the Division of Customs, Treasury Department.—Covers regulations and requirements for importation of goods into the United States, embracing the amount of customs, methods of collecting, making out invoices and other papers, appraisements, general duties of customs officers, etc. Price, cloth, \$1.

Education for the Home, Part 4. List of References on Education for the Home, Cities, and Towns, Teaching Household Arts. Education Bureau Bulletin 39, 1914.—Contains a list of books relating to the subject, including bulletins published by various colleges and schools, and a list of cities and towns teaching household arts. Price, paper, 10 cents.

The Water Requirement of Plant, Part 1. Investigations in the Great Plains in 1910 and 1911. Plant Industry Bulletin 284.—Includes the water requirements of crops in pot culture, wheat, sorghum, barley, legumes, etc., including climatic conditions. Price, paper, 15 cents.

Woodman's Handbook. Forest Service Bulletin 36.—Comprehensive work on log, timber, and board measurements, including the various standard rules such as Scribner's, Doyle's, Spaulding's, etc., with instructions for log scaling and measurement of standing timber, etc. Price, paper, 25 cents.

Effects of Atmospheres Deficient in Oxygen on Small Animals and on Men. Mines Bureau Technical Paper 122.—Study of the effect of bad air, covering experiments on mice, canary birds, experiments by members of the Bureau of Mines. Price, paper, 5 cents.

Essential Factors in the Formation of Producer Gas. Mines Bureau Bulletin 7.—Covers experimental investigations, discussions on the physical-chemical principles, temperatures, yield, commercial practice, etc. Price, paper, 10 cents.

Government Coal Purchases under Specifications, with Analyses for the Fiscal Year 1909-10. Mines Bureau Bulletin 41.—Covers value of coal as fuel, definite specifications for coal purchases, results of analyses, apparatus used, etc. Price, paper, 15 cents.

Land Drainage by Means of Pumps. Agriculture Department Bulletin 304.—Covers drainage reclamation, drainage in northern Europe, experiences in United States, pumping systems, including construction of levees, maintenance of plants, etc. Price, paper, 15 cents.

Importance and Character of the Milled Rice Imported into the United States. Agriculture Department Bulletin 323.—Covering quantity and value of rice imported, description of rice types, analyses, etc. Price, paper, 5 cents.

Asparagus Culture. Farmers' Bulletin 61.—Embraces history, botany, varieties, seed, preparation of soil, planting, cultivation, manuring, marketing, canning, diseases, and insect enemies. Price, paper, 5 cents.

Production of Clean Milk. Farmers' Bulletin 602.—Practical work on the hygienic production of milk for general use. Price, paper, 5 cents.

CHILE HOPES TO INCREASE TRADE WITH BOLIVIA.

[Commercial Attaché V. L. Havens, American Embassy, Santiago, Nov. 5.]

The Mercurio of to-day, referring to work in the interest of Chilean industry in Bolivia, says in part: "The Chilean Chamber of Industry named Oscar Hurtado (Aguirre) to go to La Paz, and establish an exposition of Chilean products and an office of information. It is stated that Chile has sold but \$500,000 per year to Bolivia, which imports \$16,000,000 per year, and that the present conflict makes it impossible for Bolivia to purchase where it has bought before, while Chile is equipped to sell a great deal more than it has ever done. It is also thought that Chile could develop the drug and pharmaceutical business if it could secure the Bolivian trade."

STANDARD FOR IMPORTED MILK.

Milk or cream imported into the United States from Canada must comply with the requirements demanded of dairymen by the Dominion of Canada authorities, as well as the requirements of the United States food and drugs act. Dairy products which do not come up to these requirements are stopped at the international border and, in order to minimize the loss that this causes to shippers or importers, the United States Department of Agriculture and the Canadian health officials are cooperating in the effort to secure the production and shipment of sanitary milk.

Under this arrangement all dairies from which milk is shipped into the United States must attain a well-balanced dairy score of 50 on the basis of a possible 100 points. Secondly, the product itself must meet the standards required of milk produced in the United States.

To secure the passing score of 50, according to the Canadian requirements, every dairy must satisfy the inspectors on certain important points. The milch cows must be housed and milked in a room which does not contain other animals or, if this is impossible, must be separated from any other animals in the building by a tight, solid partition. The stable must be kept clean, and it is desirable that whitewash be applied twice a year. There must also be sufficient light, 4 square feet of glass for every cow being desirable, although in some cases somewhat less may be acceptable. The milk utensils must be thoroughly washed twice a day. They must be made of metal, not galvanized, and all joints and seams well flushed with solder. The milk must be removed from the stable as soon as it is drawn from the cow and must be handled thereafter in a clean place. A well-lighted and well-ventilated milk room which is used for nothing but the handling and storing of milk is the only satisfactory equipment for this purpose. This room should not be closer than 20 feet to the stock barns, pig pens, or manure pile; and, on the other hand, it must not be so far from the barn that there will be a tendency on the part of the milkmen to wait until several pails of milk have been secured before carrying them to the milk house. All milk utensils, including the separator, if one is used, must be kept in this house. It is also desirable that there should be a cooling tank in the same building. The dairyman's object should be to see how cool he can keep his milk—not how little he can cool it. Manure must not, of course, be piled up in the neighborhood of the milk house or close to the barn.

A farm which meets these conditions will receive a score of at least 50 points. It then remains for the dairyman to see that he and his assistants handle the milk in such a way that the bacteriological count is as low as possible. Milk, when it comes from a healthy cow, is practically free from bacteria. In this condition it will keep for a long time without spoiling. If, on the other hand, pure milk is drawn into dirty pails, if any form of dirt is permitted to get into it in other ways, or if it is not properly cooled, it will soon contain millions of bacteria. In this condition it is unfit for human consumption. No matter how good a plant the dairyman has, therefore, it is essential that he use it properly and carefully. In particular,

it is most important that the milk be properly cooled. A farmer who has been careful to produce a clean article is wasting his labor if he fails to store it in such a way that it will remain sanitary.

The observance of these precautions will save producers and dealers much loss and inconvenience in bringing milk over the international border. The food and drugs act provides that all food and drug products offered for importation into this country which are adulterated or misbranded within the meaning of the act, or otherwise dangerous to the health of the people of the United States, or of a kind forbidden to be sold or restricted in sale in the country from which exported, shall be refused admission to this country. It is therefore necessary that all foods and drugs imported into this country comply with the requirements both of this country and of the country from which they are imported. In the case of milk from Canada, it may be said that the milk which meets all the requirements of the Canadian authorities will also meet the requirements of the United States.

EXTENSIONS IN POSTAL SERVICE OF SPAIN.

[Consul General Carl Bailey Hurst, Barcelona, Nov. 10.]

The Spanish postal authorities announce that a money-order service, both by post and telegraph, has been established between Honduras and Spain, limiting the amount of each order to 1,000 pesetas gold (\$193). Beginning December 1, 1915, also, money orders, telegraphic and postal, are accepted for Holland at all the post offices of Spain, limiting the amount, as in the case of Honduras, to 1,000 pesetas.

For several years a need has been felt in Spain for a parcel-post service such as is in operation in other European countries. The steamship lines connecting Spain with South and Central America seem adapted to make such a service comparatively easy, and the Spanish Government has recently concluded negotiations with Argentina, Bolivia, Chile, Paraguay, and Peru for the interchange of postal parcels. The new service will utilize the vessels of the Spanish Compañía Transatlántica, which has a monthly sailing for Argentina from Barcelona.

Packages may be sent weighing up to 5 kilos (11.02 pounds) to Argentina, Chile, and Peru, and weighing up to 3 kilos (6.61 pounds) to Bolivia and Paraguay.

This new service is recognized as so advantageous to the commerce between Spain and the countries referred to that it is hoped a similar arrangement may be made with other Latin-American nations. Attention is called to the fact that there are steamship lines plying between Spanish ports and those of Honduras and Nicaragua, passing relatively near to Puerto Barrios, in Guatemala, which would facilitate connections with those points, and through them with Salvador. It is likewise desired to extend this direct service to Venezuela and Colombia through Spanish vessels that touch at ports in these countries. At present postal parcels from Spain for Venezuela and Colombia are forwarded by the French mail.

[Previous articles on the parcel-post service in Spain were published in *COMMERCE REPORTS* for July 29 and Oct. 22, 1915.]

AMERICAN TRADE FOR ONE WEEK.

The imports, duties collected, and exports for the week ending December 11, 1915, at 13 principal customs districts of the United States follow:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah).....	\$3,806	\$1,014	\$133,176
Massachusetts (Boston).....	3,999,835	184,618	960,400
New York.....	23,937,014	3,213,533	70,371,424
Philadelphia.....	1,163,318	116,401	6,96,041
Maryland (Baltimore).....	400,654	10,483	1,158,685
Virginia (Norfolk).....	16,902	1,935	1,444,712
New Orleans.....	619,176	11,629	3,735,728
Galveston.....	211,470	35,939	4,003,926
San Francisco.....	1,262,394	105,400	1,691,191
Washington (Seattle).....	4,416,355	16,270	2,873,692
Buffalo.....	675,342	30,145	1,710,401
Chicago.....	586,063	136,496	
Michigan (Detroit).....	784,684	54,488	3,345,054
Total.....	38,057,733	4,039,706	98,408,134

The above figures show a favorable balance on merchandise transactions for the week ending December 11 in the 13 customs districts of \$60,350,401. The 13 districts cited handled about 91 per cent of the import and export business of the country, based on the transactions in September, 1915.

Cotton exported during the week ending December 11 amounted to 98,581 bales, making the total since August 1, 1915, approximately 1,985,552 bales.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	do.
Grace, William J.....	Aden, Arabia.....	Dec. 15	Association of the Bar of the City of New York, New York City.
Dawson, William.....	Rosario, Argentina.....	do.	903 Goodrich Avenue, St. Paul, Minn.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Department of State, Washington, D. C.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Branch office, Bureau of Foreign and Domestic Commerce, New York, N. Y.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(a)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 400, Customhouse, New York, N. Y.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. R.....	Cornwall, Canada.....	Jan. 5	3607 Eleventh Street NW., Washington, D. C.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

CENSUS BUREAU COTTON REPORT.

According to a preliminary report issued by the United States Bureau of Census, the cotton consumed, cotton on hand, and active cotton spindles in the United States for the month of November, 1915 and 1914, with statistics of cotton consumed for the four months ending with November, are given below. (The statistics of cotton in this report are given in running bales, counting round as half bales, except foreign cotton, which is in equivalent 500-pound bales.)

Locality.	Year.	Cotton consumed (bales) during—		Cotton on hand November 30.		Cotton spindles active during November (number).
		November.	4 months ending Nov. 30.	In consuming establishments (bales).	In public storage and at compresses (bales).	
United States	1915	514,534	1,977,874	1,613,110	4,982,472	31,497,435
	1914	420,703	1,671,149	1,032,102	4,998,414	30,425,797
Cotton-growing States	1915	285,435	1,080,679	953,547	4,619,324	12,801,204
	1914	231,465	503,271	559,135	4,867,316	12,334,265
All other States	1915	229,099	897,195	659,563	303,148	18,696,231
	1914	184,241	765,878	502,967	131,098	18,091,532

^a Includes of foreign cotton 26,880 bales consumed, 83,830 bales on hand in consuming establishments and 24,012 bales in public storage.

Linters not included above were 78,261 bales consumed during November in 1915 and 27,282 bales in 1914, 151,697 bales on hand in consuming establishments on November 30, 1915, and 78,343 bales in 1914, and 116,787 bales in public storage and at compresses in 1915, and 56,770 bales in 1914. Linters consumed during four months ending November 30 amounted to 271,467 bales in 1915, and 110,428 bales in 1914.

Imports and Exports of Cotton and Linters.

The imports of foreign cotton and the exports of domestic cotton and linters during November and four months ending November, 1914 and 1915, follow:

Country of production.	Imports of foreign cotton (500-pound bales) during—				Country to which exported.	Exports of domestic cotton and linters (running bales) during—			
	November—		4 months ending Nov. 30—			November—		4 months ending Nov. 30—	
	1915	1914	1915	1914		1915	1914	1915	1914
Total ..	21,169	13,454	79,682	68,006	Total ..	527,625	760,929	1,866,904	1,405,049
Egypt	15,858	7,360	52,236	27,065	United Kingdom ..	158,725	333,700	714,710	623,115
Peru	643	981	1,603	2,338	Germany ..	None.	1 0.0	None.	1,052
China	243	1,333	7,952	5,554	France	108,774	42,200	317,245	64,597
All other countries ..	4,425	3,777	18,011	33,029	Italy	96,657	117,338	405,266	183,769
					All other countries ..	163,469	266,541	429,773	532,516

^a Figures include 14,894 bales of linters exported during November in 1915 and 7,267 bales in 1914 and 40,734 bales for four months ending Nov. 30 in 1915, and 14,064 bales in 1914. The distribution for November, 1915, is as follows: United Kingdom, 33; Germany, none; France, 13,011; Italy, none; and all other countries, 1,844.

COTTON GOODS MARKET OF SWATOW.

[Consul George C. Hanson, Swatow, China, Oct. 13.]

There appears to be no good reason why American cotton goods should not compete with British cotton goods in this market. In spite of the efforts made by Japanese manufacturers to increase their sales here British goods still predominate. Cotton goods constitute one of the principal imports into Swatow, amounting, roughly, to \$4,900,000 in value in 1914. During the last seven years imports of plain gray shirtings have generally declined, except for a reaction that occurred in 1914. Imports of plain white shirtings also showed the same tendency until 1913 and 1914, when increases occurred. Imports of jeans increased, while T cloth arrivals have decreased.

The decreases above mentioned are attributable to past unsettled conditions in China, to the increasing imports of native cotton goods from Shanghai mills, and to the increasing local output, a number of mills containing hand looms having been established here in recent years. It will be a long time, however, before the Chinese can dispense with the better quality foreign article, and a part, at least, of the annual \$4,900,000 worth of foreign cotton goods imported into Swatow should be of American manufacture.

Samples of Gray Cotton Goods.

There are being sent under separate cover to the Bureau samples of gray, white, and fancy cotton cloth commonly sold in this market. [The samples referred to may be seen at the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file Nos. 69073 and 69074.]

Gray goods are carefully wrapped in oiled cloth. Sample A, plain gray, comes in 10-pound pieces, each $38\frac{1}{2}$ or 39 yards long by 38 inches wide, 50 pieces to the bale. Sample B, plain gray, comes in 10-pound pieces, each 39 yards long by 38 inches wide, 50 pieces to the bale. Sample C, plain gray, comes in 8-pound pieces, each 24 yards long by 36 inches wide, 60 pieces to the bale. Sample D, plain gray, comes in $8\frac{1}{2}$ -pound pieces, each 39 yards long by 38 inches wide, 60 pieces to the bale. Sample E, plain gray, comes in 7-pound pieces, each 24 yards long by 30 inches wide, 70 pieces to the bale. Sample F, plain gray, comes in $8\frac{1}{2}$ -pound pieces, each 39 yards long by 38 inches wide, 60 pieces to the bale.

White Goods and Fancies.

Samples A 1 and A 2, plain white, each piece 40 yards long by 36 inches wide, are packed in tin or zinc-lined cases, each containing 50 pieces. Sample A 3, plain white, each piece 41 yards long by 36 inches wide, is packed in tin-lined cases, each containing 50 pieces. Sample A 4, plain white, each piece 40 yards long by 36 inches wide, is packed in tin-lined cases, each containing 50 pieces. Each piece sold in the market is marked with the trade name or "chop" of the manufacturer or importer.

Samples O illustrate types of fancy cotton goods that are popular in this market. These are mostly packed in cases of 20, 30, 40, or 60 pieces to the case. The pieces are 20, 30, 40, or 60 yards long and 24, 28, 30, 48, 54, or 56 inches wide.

Canvas, Italian, Drill, Japanese Cotton Cloth.

Sample W, American canvas, called United States Army duck, comes in weights of 6, 7, 8, 10, and 12 ounces; each piece is 55 yards

long. There is a big demand for this material in the manufacture of canvas shoes. It is sometimes dyed black and yellow. The imports were 63,893 yards for 1913, 27,686 yards for 1914, 53,707 yards for the first 9 months in 1915. Sample X, commonly called cotton italian, fast black, comes in pieces, each 31 inches wide by 40 yards long, 50 pieces to the case, which is wood and tin lined. This sells at 36 to 37 cents Mexican per yard. About 50 cases per annum are sold in Swatow. Sample Y, called drill, comes in pieces, each 32 inches wide by 45 yards long, 50 pieces to the case, which is wood and tin lined. Sample Z, Japanese machine-made cotton cloth, ordinarily has a big sale in this market. It sells in competition with the cloth made by local Chinese on hand looms in their homes.

Destination and Uses of Foreign Cloth—Imports.

Much of the gray cloth imported into Swatow is forwarded into the interior, where it is dyed. The gray samples transmitted are British and find their way into Swatow through Hongkong and, sometimes, Shanghai. This cloth is used for clothing among the poorer classes of Chinese. The white cloth also enters via Hongkong, and much of it is sent into the interior to be dyed. It is used for making clothing for the better classes of Chinese. Some of it is reexported to Chinese in the South Seas. The fancies are in demand for making clothing for the urban better-class Chinese. This class of goods is imported from various countries.

The terms of credit allowed are three months.

The following table shows the imports at Swatow during the last six years of various kinds of foreign and Chinese piece goods:

Piece goods.	1908	1909	1910	1911	1912	1913	1914
FOREIGN.							
Shirts, plain:

Chinese Cotton Goods—Successful Native Firm.

Chinese cotton goods vary in the size and weight of piece and are very cheap, a piece 22 inches by 11½ yards selling at Swatow for \$2.75 Mexican. [The latest quarterly statement (Oct. 1, 1915) of the United States Treasury on the values of foreign coins gives the value of the Mexican dollar in China as \$0.3841.]

It is used by the poorer classes of Chinese for clothing for everyday wear. Much is made locally on wooden hand looms, which cost at Swatow \$6 Mexican each, and some is imported from north China ports. Chinese weaves are inferior to the foreign article in quality. Business is done on a three-months' credit basis.

It has recently been reported that a local Chinese firm, acting as the agent of a Hongkong British firm, has been successfully competing with the principal local British firm in selling British piece goods.

The Chinese firm has done exceedingly well, after only a year's trial, but it has of late experienced inconvenience because of delay in the delivery of piece goods.

VALUE OF PERMANENT MARKET IN PARAGUAY.

[Consul Samuel Hamilton Wiley, Asuncion, Oct. 31.]

Letters have been received at various times by the Asuncion consulate, from companies, commercial associations, and persons, stating a desire to enter the Paraguay market with their goods, and giving as an important reason the fact that the European war has left them with a large surplus of goods on hand. Points which may be of some interest to persons or companies having that object in view should be called to their attention.

Paraguay, under existing financial and commercial conditions, does not offer an attractive temporary market for the disposal of surplus goods. The value of merchandise imported during 1914 was far below normal, and available figures for 1915 show the value of importations for the present year to be far below 1914. The purchasing power of importers here, and the demand for goods within the Republic, have for the time being diminished greatly. This is due to the war and to internal matters.

The general buying public in Paraguay is accustomed to few imported luxuries, and is able to live to a great extent on the products of the country, when necessity requires it. Thus the value of importations will not increase materially until conditions improve. Even if conditions here were favorable to a large importation of merchandise, the greater part of the surplus goods on hand in the United States is unsuited to the needs and tastes of this market.

Factor in Predominance of European Goods.

European manufacturers and exporters have long since realized that this market differed from their own markets. Action on this knowledge, by manufacturing goods suited to the market, has been one of the principal factors in the predominance of European goods here. A study of the peculiar needs and tastes of the buying public here is necessary before goods can be sold in any considerable quantity.

The total value of merchandise imported into Paraguay is not large, while the expense and difficulties in introducing goods are as great as in any market in Latin America. Goods from the United States will never be sold in Paraguay in any considerable quantity by means of catalogues and letters. It must be borne in mind that these catalogues and letters, often in English or poor Spanish, are competing as salesmen with trained commercial travelers, experienced in the demands and business methods of this country, who are cultivating personal relations with the importers here.

The value of Paraguay as a market for American goods is as a permanent market. Prices of goods offered by European exporters must be studied and met. A personal relationship must be established between importers here and manufacturers and exporters in the United States, such as exists between importers here and exporters in Europe. Practically every importing house here has some firm in Europe which acts as its representative in Europe, buying and selling goods and extending credit. Such relationships must be established by American exporters.

DAIRY PRODUCTS IN STAVANGER DISTRICT.

[Consul Maurice P. Dunlap, Stavanger, Norway, Oct. 21.]

At a Norwegian agricultural school called the Stavanger Amt's Landbruksskole, an institution partly supported by the local government of Stavanger district, milch cows are kept for experiment and profit, under very favorable conditions. Not only are the climatic conditions good in this locality, but the cows on this school's farm are given special care. Its milk production, therefore, probably represents as good results as are obtained in this section.

The expense of keeping cattle at the Stavanger Landbruksskole naturally comes higher than similar costs to the ordinary farmer of the district. Each cow averages about 2,610 quarts a year, and this milk, calculated at an average price of \$0.0307 per quart, is worth \$80.13. Part of this is represented by butter worth a little over \$0.26 per pound, and part by skimmed milk (some of which is used for the calves) at a little less than \$0.01 a quart.

Feed and Other Expenses—Care of Cattle.

The feed is the greatest item of expense and one to which special attention is given to secure good results. The average amount of feed consumed by a full-grown milch cow during a normal year is here given, together with the average costs: Hay, 2,995 pounds, \$18.24; straw, 931 pounds, \$2.84; turnips, 5,696 pounds, \$6.24; green fodder, 6,162 pounds, \$7.50; ensilage, 1,736 pounds, \$2.11; mixed "strong feeds," 948 pounds, \$15.02; liquid molasses, 150 pounds, \$1.28; pasture for 45.6 days, \$3.67; total cost, \$56.91.

In this district cottonseed meal is the most generally used of the "strong," or protein, feeds, but rye bran, dried-herring meal, and soya-bean meal are also utilized.

Each day during the winter, when the feeding is most expensive, a cow on the school's farm, giving 10½ quarts of milk, consumes about 13 pounds of hay, 2 pounds of straw, 44 pounds of turnips, and 3 pounds of protein feed, the total value of which comes to \$0.18. The quantities may vary somewhat, according to the year; 2 pounds less of hay may be given with 2 pounds more of straw and more protein feed. The average cow weighs 770 pounds.

The care given the cows at the Landbruksskole differs from that ordinarily given cattle in this district. The average time a cow is out in pasture every year is only 45.6 days. This is from the first half of August until the end of September (the summers here are very late), and the cattle are out only from 9 a. m. until 4.30 p. m. Meanwhile they also get hay and protein feed. Farmers usually keep cows out much longer here; some from the 1st of June until October. The maintenance of these is naturally less and does not come to more than \$0.05 to \$0.07 a day for each cow during the summer months.

Other expenses for the care of the cows at the Landbruksskole's farm are estimated at \$13.20 per cow for a normal year. These expenses include care of the barn, medicine, interest, etc. Total expenses are thus reckoned at about \$70.11. As the milk from each cow is worth \$80.13, we find the gain per annum on each cow about \$10.

This management of cattle yields two other items of profit that do not appear in the above figures, namely, the value of the manure and the sale of animals for slaughtering and breeding purposes. The

cows are tested for tuberculosis, which is not always the case at other farms and dairies, as there is no Government regulation compelling it.

The pupils receive scientific and practical training in the management of this branch of farming. There are about 30 pupils—young men ranging in age from 16 to 25.

Receipts and Expenditures.

During the year ended June 30, 1914, the cattle on the school farm included 3 bulls, 26 to 32 cows, and a few heifers and young calves. During that year the total net profit from dairy products, manure, and animals sold was \$460.79. A leaf from the manager's account book gives details of the various receipts and expenditures:

Items.	Value.	Items.	Value.
CREDIT.		DEBIT—continued.	
Dairy products and cattle sold.....	\$1,800.20	Light and fire.....	\$6.70
Manure for garden and field.....	394.98	Horse labor.....	10.94
Value of cattle, June 30, 1914.....	2,300.78	Repairs, freight, medicine, etc.....	289.34
Inventory and stock.....	213.81	Protein feed and molasses.....	309.02
Total.....	4,718.77	Hay, straw, ensilage, green fodder, pasturage, leaves.....	1,045.10
DEBIT.		Turnips, kohlrabi, beets, etc.....	110.28
Value of cattle, July 1, 1913.....	2,026.08	Profit.....	460.79
Inventory and stock.....	213.41	Total.....	4,718.77
Part of stableman's salary.....	79.71		

* Stableman is paid separately for other farm duties.

Dairy Products of Stavanger District.

The cool even climate of Stavanger would seem particularly favorable for the production of good milk, butter, and cheese. The district lies in the southwestern part of Norway, where the climate is so tempered by the Gulf Stream that along the coast the mean temperature for January is only about 34° Fahrenheit and for July about 55°. Although Stavanger includes only one thirty-fifth of Norway's area and one-eighteenth of the total population, the district produces one-eighth of Norway's total milk supply, namely, about 39,000,000 quarts per annum.

In 1914 about 12,000,000 quarts of Stavanger's total milk production were used to make 1,000,000 pounds of butter. About 9,000,000 quarts were consumed directly, some being shipped to localities outside the district. About 1,200,000 quarts were used to make "dry milk." [Evaporating factories for manufacturing dry milk were described in Daily Consular and Trade Reports for June 11, 1914.] The amount has been greater in previous years; the manufacture of this product seems to prove less and less profitable.

Cheese production varies greatly. In 1914 about 17,000,000 quarts of milk were used to make about 3,500,000 pounds of cheese, while in 1913 only about 10,000,000 quarts were used to make cheese. Cheese is a very popular article of food here and many varieties are made, some being imitations of foreign makes (as Dutch and Swiss) and others peculiarly Norwegian. One variety much used and considered a Norwegian specialty is a goat's-milk cheese of a light-brown color. It has a delicate flavor and an attractive appearance. A certain amount of this cheese is shipped regularly from this district to the United States. During the first quarter of 1915, 30,629 pounds of cheese, principally goat's cheese, was shipped to the United States,

15,783 pounds during the second quarter, and 8,402 pounds during the third quarter. The present falling off is due to the greatly increased demand for all food products in Norway.

There are 36 dairies in this district, employing 160 people. The ordinary farmer usually gets about \$0.03 a quart for his milk from these dairies, and the consumer now pays \$0.05.

REVIVAL OF PROJECT FOR PORT ON ZACATE ISLAND.

[Consul E. M. Lawton, Tegucigalpa, Honduras.]

The project of a port on Zacate Grande Island, which has been under discussion for a long time, has been revived during the present year. This work in Fonseca Bay would probably have been started the past year had it not been for the retrenchment made necessary by the war. The projected improvement, as considered by President Bertrand, involved an expenditure eventually of 3,000,000 to 4,000,000 pesos (\$1,200,000 to \$1,600,000).

Certain firms at Amapala have made large profits in handling shipments. It is believed that the establishment of a port on Zacate Grande will eliminate 75 per cent of these charges, even if no pier is built. The plan is to connect the island with the mainland and build a road (preferably a tram line) to connect with the present road to Tegucigalpa, near Pespire, a distance of about 25 miles. The further plan of the President calls for the erection of necessary buildings, barracks, customhouse, and a small town on the island. The port would be the logical terminus for the long-contemplated trans-Isthmian railroad from Puerto Cortés. On Zacate Island is all the rock necessary to make and anchor the fill to the mainland, which would be about 800 feet long. There is no wash, and the proposed port is more protected than is the roadstead at Amapala.

CHILEAN COMMERCIAL DELEGATE TO UNITED STATES.

[Consul General L. J. Keena, Valparaíso, Nov. 12.]

A Valparaíso newspaper states that Señor Don José A. del Campo T., appointed Chilean consul in Mobile, has been given a special mission as a commercial delegate to the United States and to the Central American Republics. The newspaper further reports that Señor del Campo will open a permanent exhibition of Chilean products, particularly wines, in Chicago and New York; that the samples will be well displayed and fully classified, catalogued, and priced.

Similar exhibitions may be undertaken for a short period in other cities of the United States and in the Central American Republics. He will also make a study of the various industries in the United States which might be successfully developed in Chile.

It was reported that Señor del Campo expected to sail for the United States immediately.

District Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative district offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

GUM-TRAGACANTH INDUSTRY IN PERSIA.

[Vice Consul Ralph H. Bader, Teheran, Oct. 25.]

The various species of *Astragalus*, known in Persia as "kevin," from which gum tragacanth is obtained, grow on the mountain ranges which surround the Persian plain. The bushes producing the gum grow to a height of 2 feet. In the spring when the sap rises a part of the branches are cut away, thereby allowing the sap to flow out, which coagulates within a few hours on the surface of the stalk.

The price of gum tragacanth has increased 5 to 10 per cent since the outbreak of hostilities in Europe. The present prices per pound for the different grades of gum are as follows: First grade, 75 cents; second grade, 40 cents; third grade, 28 cents; fourth grade, 20 cents; and fifth grade, 12 cents.

Where the Gum is Shipped.

The principal Persian markets for gum tragacanth are Hamadan, Shiraz, Kerman, and Kermanshah. From 150 to 200 tons are exported annually from Hamadan alone. Before August 1, 1914, half of this amount was shipped to Russia and the other half to America and Great Britain; but since that date the amount shipped to Russia has been reduced to one-fifth, the other four-fifths going to America and Great Britain.

The following table shows the principal countries of destination during the fiscal years given (year ended March 20):

Country.	1911-12	1912-13	1913-14
Austria-Hungary.....	\$4,995	\$4,401	\$5,631
Belgium.....	51,927	8,611	12,282
France.....	10,167	14,751	10,996
Germany.....	103,371	51,402	46,826
Great Britain.....	432,200	334,131	363,759

ANTIMONY MINES IN HONDURAS.

[Consul Walter F. Boyle, Puerto Cortes, Nov. 30.]

Because of the advance in value of antimony incidental to the war in Europe, the profitable exportation of antimony ore or stibnite assaying about 70 per cent has become possible from a mine said to be rich, but hitherto undeveloped, because of unfavorable transportation conditions, and recently several small shipments of ore have been made from this port to New York. This ore is mined in the vicinity of the interior village of Voro and has to be transported six days by pack mule to the Sulaco River, thence two days by canoe down the river to Pimienta, where rail connection is made for Puerto Cortes. The mining and shipping of this ore under such difficult transportation conditions is along the line with the claim that has often been made—that the interior of this district was rich in minerals and only needed railroads for the development of the same.

[The name of the mine owner may be had from the Bureau of Foreign and Domestic Commerce or one of its branch offices. Refer to file No. 69907.]

PROPOSED IMPROVEMENT OF PORT OF ROTTERDAM.

[Consul General Soren Listoe, Rotterdam, Netherlands, Oct. 25.]

According to a bill that has just reached the second chamber in the Netherlands, it is proposed first to deepen the channel of the New Waterway from Rotterdam to the North Sea to 38 feet, and later to 41 feet at ordinary high tide.

It is pointed out in the explanatory memorandum that the works carried out in recent years have made a continuous channel for the entire length of the waterway at least 328 feet wide and 31.2 feet deep at ordinary high tide (26.2 feet at ordinary low tide), and have also considerably improved the mouth of the waterway. Thus ships with a draft of 30.8 feet can at present pass through the waterway in both directions at ordinary high tide.

The work of deepening will require the dredging of 10,464,000 cubic yards, the cost being estimated at \$1,005,000. Expenditures for improvements in the part called "Zuiden" are estimated at \$201,000; for altering the course of the river near Maassluis, at \$402,000; and for other expenditures, at \$402,000. The total cost will therefore be \$2,010,000.

Negotiations with the municipal authorities of Rotterdam are still pending. The bill contains the stipulation that the work will not be undertaken before Rotterdam has agreed to pay one-third of the expenses.

FRUIT GROWING IN FERNIE DISTRICT.

[Consul Thomas D. Bowman, Fernie, British Columbia, Canada, Dec. 6.]

Fruit and vegetables are beginning to assume some importance as a product of the Fernie consular district. This industry is confined to the Arrow Lake region, in the vicinity of Nelson. During the 1915 season 31 carloads of fruit were shipped from this region. About 10 carloads of apples and 10 carloads of potatoes are still in storage, ready for the market. This makes a total marketable production of 51 carloads for the season, besides several carloads shipped to jam factories of which there are no available records.

There was a short fruit crop in British Columbia this year. In spite of this fact the growers of this district encountered difficulty in marketing their crops. Three carloads of apples were shipped to England and the remainder was sold in Canada.

LIST OF CENSUS PUBLICATIONS PREPARED.

The United States Census Bureau has for free distribution a "Circular of Information Concerning Census Publications" (Circular No. 2), which gives a list of all Census publications from 1790 to the present time, classified according to subjects, with brief descriptions of their contents. A separate list shows, in chronological order, the various decennial and "intercensal" publications of the Census Bureau, and describes the relationships of the Thirteenth Census reports and bulletins to one another. Anyone desiring a copy of this 91-page pamphlet may obtain it by addressing the Director of the Census, Washington, D. C.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Sewage elevating apparatus, No. 19532.—An American consular office reports that bids will be opened January 31, 1916, for providing the sewer system in one of the large cities in Chile with an elevator. Further information may be obtained from the Bureau or its branch offices.

General representation, No. 19533.—A letter to the Bureau states that a firm of commission agents in Canada desires to represent manufacturers or exporters. No particular line is specified.

Enamel ware, lamps, etc., No. 19534.—The Bureau is in receipt of a letter from an American who desires to represent manufacturers of enamel ware, lamps, picture molding, stationery, and white-enamelled rice bowls in the Straits Settlements. The inquirer states that he has lived in the Straits Settlements for nearly 10 years. References furnished.

Mica and wolfram, No. 19535.—A letter to the Bureau from Argentina states that an owner of two mines, one of mica and the other of wolfram, desires to find a market for these two minerals. It is stated that from 10,000 to 15,000 kilos of wolfram, and from 2,000 to 3,000 kilos of mica are taken out monthly, but it is possible to increase this output, if necessary. Specimens of the minerals are being forwarded, and when they arrive may be inspected at the Bureau or its branch offices.

Toys, Jewelry, etc., No. 19536.—The Bureau is informed that a business man in Spain desires to correspond with manufacturers of toys; jewelry; art metal goods; hair ornaments, with gold or gilt finish; crystal or fine glass; and novelties. Correspondence in Spanish preferred.

Men's collars, No. 19537.—An American consular officer in Spain reports that a leading haberdashery desires catalogues, samples, prices, and discounts on men's collars of the various styles, such as standing, winged, turned-down and unstarched. It is stated that the samples should be plainly marked "Samples, without commercial value," to obviate the payment of import duty. The terms asked for are: One-third of invoice to accompany order, one-third on arrival of goods, and balance 90 days thereafter.

Indigo, No. 19538.—A report from an American consular officer in India states that an exporting firm in his district desires to find a market in the United States for indigo. Cable address given.

Photographic supplies, No. 19539.—An American consular officer in Spain reports that there is still a shortage in that country of photographic supplies, detailed information of which was published in *COMMERCE REPORTS* for August 5. A list of Spanish firms handling photographic goods may be had from the Bureau of Foreign and Domestic Commerce or its branch offices.

Machinery, No. 19540.—A commercial attaché of the Department of Commerce informs the bureau that a firm of manufacturers' agents in France desires names and addresses of manufacturers of machinery for making tin boxes. Catalogues, price lists, and full information should be sent as soon as possible.

Brass hinges, No. 19541.—A report from a commercial attaché of the Department of Commerce states that he has an inquiry for names of manufacturers of brass hinges, 1 millimeter in gauge, 20 millimeters wide, and 3 meters in length.

Cash registers, agricultural implements, etc., No. 19542.—A report from an American consular officer in Russia states that a company in his district desires to communicate with manufacturers of cash registers, agricultural machines, typewriters, and drugs, with a view to becoming selling agent for same. Dimensions, weights, currency, and correspondence should be given in Russian, and prices quoted c. i. f. Russian port.

Bacon and butter, No. 19543.—An American consular officer in Spain reports that a firm wishes to communicate with American exporters of bacon and butter. Correspondence should be in Spanish.

HORTICULTURAL CROPS IN SOUTHERN FRANCE.

[Consul General A. Gautin, Marseille, Nov. 22.]

It has been officially estimated that at the beginning of November the horticultural crop conditions in southern France were approximately as follows: Olives, 40 per cent normal; market garden products, 65 per cent; walnuts and chestnuts, 75 per cent; apples and pears, 60 per cent; flowers, 50 per cent. The olive fly has caused considerable damage to the olive crop, which has not yet been gathered to any extent. The floral culture has suffered from the scarcity of competent labor and decreased demand.

USE OF AMERICAN SALT PORK IN DENMARK.

[Consul General E. D. Winslow, Copenhagen, Nov. 18.]

About 25,000 pounds of American salted pork are being consumed daily in the city of Copenhagen. The pork must be sold at not over \$0.19028 per pound. Permission will be granted at the close of this month, it is thought, allowing Danish packers to smoke and cure American salted meats. A maximum price will also be established for these cured meats of about \$0.21708 per pound. There is no duty to be paid on these imported provisions, but the high freight charges from American seaports are a great drawback to a more extended movement.

NEW ZEALAND REVENUES AND EXPENDITURES.

[Consul General Alfred A. Winslow, Auckland, Nov. 5.]

The estimated revenues of the New Zealand Government for 1915-16 as fixed by the revenue and tax laws in force at the beginning of the year have been placed at \$56,822,490, against \$60,556,414 for 1914-15. This deficiency has been more than provided for in special war taxes, principally on internal taxes, such as increased postage, bank-check tax, increased income and land tax, etc., and a 1 per cent surtax on all imports. It is estimated that these will bring the receipts up to about \$65,697,750, and a Government loan is to be placed for \$9,733,000 to cover internal improvements and construction work. It is proposed to continue public works this year as usual if labor is available.

SUBSIDY URGED FOR SPANISH LINE TO NEW YORK.

[Consul General Carl Bailey Hurst, Barcelona, Spain, Nov. 12.]

The official statistics of the Spanish Navy and merchant marine show that on January 1, 1915, there were in Spain 217 sailing vessels and 640 steamers, with a total tonnage of 904,000, divided into 30,000 for sailing vessels and 874,000 for steamers. The total tonnage shows an advance over 1914 of 28,000 tons.

The principal shipowners of Spain are the *Compañía Trasatlántica* of Barcelona, which has a fleet of 22 vessels, with a tonnage of 102,000; *Pinillos y Compañía* of Cadiz, 11 vessels, with a tonnage of 55,000; *Soto y Aznar*, 30 vessels, exclusively for freight, with a tonnage of 86,000; and the *Vasco-Andaluza* of Ibarra y Compañía, of Seville, which has 29 steamers engaged in the coasting trade. Two of the steamers belonging to the *Compañía Trasatlántica* are of 10,000 tons each, and two of those belonging to *Pinillos y Compañía* are of slightly over 8,000 tons each.

The Spanish press calls attention to the fact that existing conditions are highly favorable to the development of the Spanish merchant marine, and the action of the Spanish Chamber of Commerce of New York in soliciting a subvention from the Spanish Government to facilitate the establishment of a line of steamers between Vigo, Spain, and New York, is approved. Should the present condition of the Spanish treasury not warrant the granting of such a subvention, it is proposed that the Spanish Government guarantee interest of 5 per cent on the capital that may be devoted to the enterprise, in order to give the movement a certain moral support and overcome any lack of confidence on the part of capitalists considering investment in the new line.

STREET RAILWAY AND POWER PLANT FOR HARBIN.

[Consul C. K. Moser, Harbin, China, Nov. 5.]

It is reported that a company of Chinese and Russian capitalists has been organized under the name of "Energia" which plans to undertake the construction of an electric street railway and power plant for Harbin. The company has sent a statement to the municipal council which it asks the council to present before the general assembly of delegates for its consideration. The statement proposes that a joint stock company be organized and that the municipality be permitted to participate in the company on the condition that a proper franchise be granted and that a special committee appointed by the delegates for the purpose will draw up satisfactory arrangements for the terms and working of the company. It is stated that the company has purchased two special street railway engines of 6 horsepower each, with corresponding voltage, and that the machines are on their way to Harbin.

Sugar Crop of Japan.

The Board of Trade Journal (London) states that the new sugar crop of Japan is estimated at 4,900,000 piculs (about 5,883,333 hundredweight of 112 pounds) of centrifugal sugar and 500,000 piculs (about 595,238 hundredweight) of brown sugar.

THE WOOL CLIP IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Nov. 5.]

The wool clip of 1915 in New Zealand promises an average yield if it can be clipped in time. There is a shortage of sheep shearers and the price of shearing has advanced from \$4.86 per 100 head (the official scale rate) to \$5.46, offered by many of the owners of herds of sheep in order to get the work done in season. The sheep industry is prospering in this Dominion and the yield of wool is estimated at 575,000 bales for 1915 against 560,000 bales for 1914, and the export of frozen mutton and lamb has exceeded any previous year.

Wool Shipments to United States—Home Consumption.

Now that the embargo on the exportation of wool to the United States has been conditionally removed, arrangements are under way to make extensive shipments as soon as this season's clip is ready, which should be by the end of November, when better prices are expected to prevail, especially for the better grades. In reviewing the situation and outlook a leading daily of this city said, in part:

High prices for wool are likely to rule during the forthcoming season. There is expected to be the same healthy demand from Great Britain for the commodity. The New Zealand manufacturers with Defense Department orders to fill in addition to ordinary business will require at least as much as they did last year, and the export of wool to America is to be permitted, which will bring American wool buyers again into the market. The Americans were not allowed to operate at least season's sales of crossbred wools.

The New Zealand woolen mills are expected to consume about 20,000 bales, against 14,000 for last year, leaving 553,000 bales for export. Quite a large portion of the home consumption will be put into uniform material. Some of the woolen mills are working overtime, and more will do so if efficient operators can be found.

It seems clear that this will have a decidedly favorable influence over business relations with the United States. The outlook is brightening, and with six months more of energetic push on the part of American interests for this trade nearly normal conditions may be expected, with American imports well in advance of any previous record for New Zealand. In this connection I would warn American exporters against shipping anything to New Zealand below grades ordered, for it seriously affects business in general, not only for the present, but for the future.

STOCKS OF COTTON IN RUSSIA.

[Board of Trade Journal, London, Nov. 25.]

The Torgovo Promyshlennaya Gazette (Petrograd) of October 26 publishes an article to the effect that the committee attending to the question of stocks of raw cotton in Russia instituted a comprehensive inquiry on this subject on September 7. The result of the inquiry, which was recently concluded, shows that, according to replies received from spinners controlling 7,878,043 spindles, the cotton in stock at works or held by works in European Russia and in Central Asia, as well as cotton in transit, amounts to 502,167 bales of 500 pounds. In addition to the foregoing figures, it was estimated, according to replies received from 33 firms, that the total quantity of cotton held by cotton dealers and brokers, banks, and other intermediaries amounted to 148,728 bales.

TRADE OF PERU IN 1914.

[Board of Trade Journal, London, Nov. 25.]

The Boletín de las Aduanas del Perú (Callao) of September 4 publishes a review of the foreign trade of Peru in 1914, from which the following particulars are extracted:

The value of the total foreign trade of Peru in 1914 amounted to \$66,163,571, as compared with \$74,100,044 in 1913, a decrease of 10.7 per cent. This retrograde movement was due to the European war and was chiefly apparent in the import trade, which fell off 20.7 per cent. The fact that only a small decrease was shown in the value of the total exports (about 4 per cent) may be ascribed to the high prices paid for certain of the principal products of the country. The following table shows the shares of the principal countries in the import and export trade of Peru in 1913 and 1914:

Countries.	Imports into Peru.		Exports from Peru.	
	1913	1914	1913	1914
United States	\$8,541,934	\$7,643,928	\$14,761,355	\$14,827,700
United Kingdom	7,779,616	6,514,063	16,559,939	15,833,398
Germany	5,138,502	3,148,640	2,969,538	1,600,042
Belgium	1,869,412	1,336,321	1,214,177	267,394
Italy	1,238,393	981,242	7,567	40,857
France	1,365,014	759,047	1,568,880	743,889
Chile	1,036,939	436,126	5,854,959	6,230,534
Other countries	2,660,823	2,675,754	1,532,870	2,875,885
Total	29,631,033	23,496,121	44,469,011	42,068,450

Import Trade, by Articles.

The principal items contributing to the import trade were as follows in 1913 and 1914:

Articles.	1913	1914	Articles.	1913	1914
Fertilizers	\$390,583	\$90,896	Hemp and cotton thread..	\$234,690	\$188,896
Oils, industrial	745,514	604,297	Wood, furniture and cabi- net	1,521,871	1,526,126
Rice	546,313	404,661	Agricultural machinery	703,263	652,461
Boots and shoes	309,315	270,490	Industrial machinery	426,634	277,940
Coal	1,466,379	1,355,929	Foundry plant	1,046,631	728,261
Railway and tramway car- riages	846,111	252,220	Paper, plain and printed	143,674	429,260
Cement	390,385	214,664	Rails and railway material	632,787	762,450
Pharmaceutical specialties	346,946	281,809	Sacks, empty	450,964	428,778
Cotton, woolen, and silk goods	3,234,281	2,824,809	Hats	302,064	223,917
Iron in sheets and bars	547,802	363,343	Wheat	1,247,376	1,031,717
			Wines	276,617	164,980

Principal Exports and Their Values.

During the first seven months of 1914 the Peruvian export trade showed notable increases, and had it not been for the European war the year would have marked a record. The following table gives the values of the principal exports from Peru during the years 1913 and 1914:

Articles.	1913	1914	Articles.	1913	1914
Hides and skins	\$990,338	\$928,519	Petroleum and its products	\$4,430,108	\$4,324,722
Wool	2,515,460	2,470,182	Gold	821,572	30,888
Rice	380,692	305,443	Silver	2,836,376	2,753,055
Sugar	6,874,739	12,852,193	Copper	8,188,791	6,960,647
Cotton and cotton seed	7,615,313	7,370,358	Lead	251,072	187,126
Gums	3,970,207	2,179,180	Straw hats	877,629	266,986

IMPORTS AND EXPORTS OF COPPER.

The imports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan, during the week ended December 4, 1915, were as follows:

Countries.	Ore, matte and regulus (copper contents).		Pigs, ingots, bars, plates, and old, etc.	
	Pounds.		Pounds.	
Canada.....	437,015	\$41,010	104,951	\$17,624
Chile.....	1,062,900	85,032		
Peru.....	247,973	39,578		
Total.....	1,777,883	165,620	104,951	17,624

The domestic exports of pigs, bars, etc., from the same customs districts amounted to 20,332,169 pounds, valued at \$3,802,107. The principal countries of destination follow:

Countries.	Pigs, ingots, bars, plates, and old, etc.		Countries.	Pigs, ingots, bars, plates, and old, etc.		Countries.	Pigs, ingots, bars, plates, and old, etc.	
	Pounds.	Value.		Pounds.	Value.		Pounds.	Value.

AGRICULTURAL RETURNS FOR SCOTLAND.

[Consul Rufus Fleming, Edinburgh, Nov. 22.]

The Board of Agriculture has issued a preliminary statement showing the estimated total yield of wheat, barley, oats, beans, and hay in Scotland in 1915 compared with 1914. The figures follow:

Crops.	1914	1915	Crops.	1914	1915
	<i>Bushels.</i>	<i>Bushels.</i>		<i>Tons.*</i>	<i>Tons.*</i>
Wheat.....	2,560,816	2,969,283	Hay:		
Barley.....	7,343,406	5,025,280	From rotation grass..	629,150	643,027
Oats.....	36,920,500	39,081,424	From permanent		
Beans.....	235,424	195,352	grass.....	154,856	147,006

COMMERCE OF THE PORT OF SANTOS.

[Consul Charles L. Latham, Santos, Brazil.]

The value of the imports into the port of Santos, Brazil, from foreign countries for the first nine months of 1915, according to the data collected by the Secretary of Agriculture of the State of Sao Paulo, was \$27,077,266, compared with \$33,111,704 for the same period in 1914.

Although there was a large decrease for the 1915 period the imports from the United States increased in value by nearly \$1,000,000, and the imports from Argentina show a considerable increase. The import trade by countries into the port for the first nine months of 1914 and 1915 follows:

Countries.	Jan.-Sept., 1914.	Jan.-Sept., 1915.	Countries.	Jan.-Sept., 1914.	Jan.-Sept., 1915.
Germany	\$4,764,495	\$766,554	Great Britain.....	\$5,634,138	\$4,963,391
Argentina.....	3,990,704	6,047,064	Italy.....	3,568,257	3,130,911
Austria-Hungary.....	400,529	49,478	Portugal.....	1,470,504	1,066,630
Belgium.....	1,280,481	48,516	Other countries.....	3,497,391	3,642,593
United States.....	5,206,130	6,503,435	Total	\$3,111,704	\$27,077,266
France.....	2,168,775	1,118,685			

Principal Articles of Import.

Some of the principal articles and their value imported into the port for the nine months are given below:

Articles.	Jan.-Sept., 1914.	Jan.-Sept., 1915.	Articles.	Jan.-Sept., 1914.	Jan.-Sept., 1915.
Cotton in bales and manufactured articles.....	\$1,554,043	\$1,109,929	Spun jute and hemp for sacking.....	\$347,424	\$264,890
Steel in bars and in manufactured articles.....	3,145,064	1,917,296	Raw jute and hemp.....	644,184	1,378,181
Industrial machinery.....	404,778	207,833	Coal.....	1,727,456	1,017,290

Various machinery and machinery parts.....	2,919,239	1,019,926	Rice.....	30,351	605,216
Chemical products and pharmaceutical specialties.....	835,688	1,011,452	Dried codfish.....	562,290	1,836,911
Skin and leather prepared for manufacture.....	675,208	842,672	Wine, fine and common.....	2,439,487	2,316,730
			Various foodstuffs.....	2,165,697	43,539
			Paper and metal money.....		

Increased Export Trade.

In contrast to the decreased import value there was an increase of \$7,500,000 in the exports of the port during the first nine months of 1915 compared with the same period in 1914. The United States was far in the lead in the value of purchases, as shown by the following table of exports by countries:

Countries.	Jan.-Sept., 1914.	Jan.-Sept., 1915.	Countries.	Jan.-Sept., 1914.	Jan.-Sept., 1915.
Germany.....	\$7,348,449	Spain.....	\$695,630	\$597,619

Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Com- merce, Room 409, Customhouse, New York, N. Y.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. R.....	Cornwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washing- ton, D. C.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

INDIGO CROP OF BRITISH INDIA.

[Board of Trade Journal, London, Nov. 25.]

The Gazette of India (Simla) of October 16 publishes a first forecast of the 1915-16 indigo crop in British India, based upon reports received from the six Provinces that contain practically the whole area under indigo in British India.

The total area is estimated at 258,100 acres, as compared with 116,500 acres in the previous crop year. The season has, on the whole, been successful except in Bihar and Orissa, and in the Punjab. Estimates of yield are not ordinarily given at this stage, but provisional estimates have been made in the special circumstances of this year, and the total yield is placed at 38,500 hundredweight of 112 pounds. The final forecast for the 1914-15 season estimated the indigo yield for that season at 24,900 hundredweight.

RUSSIAN FERTILIZER INDUSTRY.

[Board of Trade Journal, London, Nov. 25.]

The following information regarding the artificial-fertilizer industry in Russia is extracted from an article that appeared in the Russian press.

Chemical fertilizers are comparatively little used in Russia, owing partly to the primitive and unintensive methods of cultivation, and partly to the difficulty of obtaining an adequate supply of manure. Artificial manure stands at a price that renders it inaccessible to a large number of farmers.

The principal kind of chemical fertilizer in use in Russia is phosphates, which are imported in considerable quantities from western Europe. Although there are in Russia various phosphate deposits, they have been little exploited, and the bulk of the quantity used has been imported. Factories producing phosphates hardly exist in the interior of Russia, and until this state of affairs is changed the present high prices for imported fertilizers must continue to be paid. Nevertheless, experiments in the use of such fertilizers have proved so satisfactory that recently their use has considerably developed.

Of the total supply about 79 per cent has come from abroad and the remainder from Russian manufacturers. The greater part of the fertilizers manufactured in Russia came from factories in Poland, which in consequence of the war were obliged to decrease their output.

Importance of Alkali Production in Russia.

The alkaline salts that were imported from Germany to the extent of over 1,607,000 hundredweight might to some degree be replaced by ashes, which at present are unused. Alkaline salts are produced only by some small factories that make potash from sunflower seeds and tobacco, exclusively for export. The importance of alkali for many industries, which in the past have depended upon imports of this material from Germany, renders the question of the production of this article in Russia worthy of the most serious consideration. Experiments made by the Moscow Agricultural Institute have shown the possibility of producing alkaline salts of high percentage from the products of the Crimean salt industry. There are also deposits in the districts of Iletzkaya Zashchita and the borders of the White Sea, containing a mineral yielding alkali and phosphorus, which have not yet been touched. Further progress has been made with the exploitation of alkaline deposits near Kalusha in Russian Galicia.

Phosphate Manures—Fostering the Industry.

Phosphate manures are of first-rate importance for Russia, and out of the total quantity of artificial manures (13,000,000 hundredweight) used during the last year, about 11,000,000 hundredweight were of this kind. Of these about 6,000,000 hundredweight were superphosphates, and about 5,000,000 hundredweight basic slag. The home production of basic slag is centered in three factories in Sartin, Taganrog, and Kertch, with an annual output of 1,250,000 hundredweight; that of superphosphates (7 factories) has reached a little over 2,000,000 hundredweight. This backwardness of the industry is explained by the expense of the installation of factory plants, due to the high tariff on machinery, apparatus, acid-resisting bricks, and sacks. Another circumstance limiting the development of the in-

dustry is the distribution of the factories, which are all either in Poland or near the sea, working on foreign raw material from Africa, America, Sweden, and Spain. Since 1908 a geological survey carried out by the Moscow Agricultural Institute has revealed the existence of phosphate deposits in the surveyed districts to an estimated amount of nearly 291,000,000 tons. The Ministry of Agriculture has also attempted to foster the development of the superphosphate industry in the central and eastern regions and to interest the chemical factories along the Volga in its possibilities.

BIRTH REGISTRATION IN THE UNITED STATES.

Director Sam. L. Rogers, of the Bureau of the Census, Department of Commerce, has recently inaugurated the collection annually of birth statistics within an area comprising the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, Michigan, and Minnesota, and the District of Columbia. This area, although it represents barely 10 per cent of the territorial extent of continental United States, has a population of approximately 31,150,000, or about 31 per cent of the total for the country.

The collection of both birth and death statistics was authorized by the permanent census act, approved March 6, 1902. This act, however, provided that the statistics should be obtained only from the registration records of such States and municipalities as in the judgment of the Director of the Census possessed records affording satisfactory data in the necessary detail. Ever since the passage of this act the Census Bureau has made annual collections of mortality statistics from a steadily increasing area, which now contains about two-thirds of the total population of the United States, but until recently very few of the States have maintained reliable birth-registration systems.

In this respect the United States has lagged far behind a number of the leading foreign countries, in some of which—such as England, France, Germany, Norway, and Sweden—adequate birth-registration systems have been in operation for many years. A beginning has now been made in this country, however, and the statistics will relate to an area having a population of such size and heterogeneity as to render them of great value and significance.

The data now being gathered will show birth rates for the population as a whole and for the white and colored races. Separate figures will also be given for urban and rural localities.

POPULATION OF GUAYAS PROVINCE, ECUADOR.

[Consul General Frederic W. Goding, Guayaquil, Nov. 16.]

The civil registry office in Guayaquil has furnished the following figures on the population in several parishes of the Province of Guayas: Guayaquil, 105,000; Sanborondon, 5,000; Victoria, 2,000; Taura, 2,000; Pascuales, 300; Naranjal, 4,000; Balao, 1,000; Jesus Maria, 500; Puna, 600; Morro, 1,000; Chongon, 400; Posorja, 600; Duran, 1,000; Playas, 400; a total of 123,800. A census of other parishes is being taken and figures will be transmitted when available.

American exporters should observe that in the immediate vicinity of Guayaquil there are more than 123,800 people whose necessities must be supplied largely from the exterior.

MINERAL OUTPUT OF INDIA.

[Board of Trade Journal, London, Nov. 25.]

According to the report of the chief inspector of mines in India for 1914, the output of coal in that country last year was 15,727,631 tons, an increase of 241,313 tons over the output of 1913. This is the smallest increase since 1910. In the early part of the year the output was reduced by the effects of the previous year's floods, but the main cause of the small increase was undoubtedly the war. Of the total output, 15,075,587 tons were mined in Bihar and Bengal. There has recently been a great advance in the use of electricity in the coal mines of Bihar and Bengal for haulage, pumping, ventilation, etc. Over 135 motors, generating 4,500 horsepower, are now installed.

The output of manganese was 555,672 tons, a decrease from the figures for 1913 of 81,719 tons, but an increase over the figures for the two or three years preceding. In 1914 the gold yield of the preceding year was nearly doubled, being 19,873 ounces, compared with 11,019 ounces in 1913. Copper production amounted to 4,400 tons, as compared with 3,639 tons in 1913. There was again an increase in the production of wolfram, which was 31,526 hundredweight, as compared with 27,520 hundredweight in 1913. An output of 9,280 hundredweight of bauxite was reported last year from the Jabalpur district in the Central Provinces, the mine having been unworked from 1910 to 1913. For the first time a yield of 16 pounds of pitchblende and 200 hundredweight of triplite are shown, both from a mine in the district of Gaya (Dihur and Orissa). From quarries in the Amherst district 125,348 tons of granite were taken. There were increases in the production of iron, slate, clay, fuller's earth, limestone, galena, and samarskite, and decreases in salt, chromite, corundum, magnesite, tin, and steatite.

The report of the chief inspector of mines is not a complete statistical review of mineral production in India. There must be a considerable output from quarries that are under 20 feet deep, which are outside the scope of the Indian mines act of 1901.

[A report on the output of mica in India in 1914 was published in **COMMERCE REPORTS** for Oct. 1915.]

DEMAND FOR NEW ZEALAND CHEESE.

[Consul General Alfred A. Winslow, Auckland, Nov. 5.]

Great Britain has placed an order in New Zealand for cheese for the use of the Army to the value of \$4,866,500, which is about one-fifth of the estimated production of cheese in this Dominion for this season. It is expected this will keep the wholesale price of cheese about 15 cents per pound for several months and thus give the industry a boom.

The New Zealand Government has arranged to take over one-fifth of the product of each of the factories in the country at a fixed price at the time of delivery. The price at present is 14 cents per pound.

The value of cheese exported for the 12 months ended September 30, 1915, amounted to \$12,279,002, while the value of the butter exported for the same period was \$11,608,101. Less butter is being produced this season, since it has been more profitable to produce cheese, for it is more easily prepared for export. Consequently it is estimated that the output of the cheese factories of this country will reach a value of at least \$24,332,500, which means much to a country with a population of less than 1,200,000 people.

BANKING CAPITAL IN COLOMBIA.

(Consul Isaac A. Manning, Barranquilla, Nov. 11.)

The Bogotá Chamber of Commerce, in its study of the necessity of organizing or establishing new banks in Colombia with foreign capital, reports the following banks in the Republic with their paid-up capital:

Banks.	Amount.	Banks.	Amount.
Bogotá:		Cartagena:	
Banco de Colombia.....	\$500 000	Banco de Bolívar.....	\$500,000
Banco de Bogotá.....	700 000	Barranquilla:	
Banco Central.....	2,300 000	Banco Comercial.....	200,000
Banco Hipotecario.....	600 000	Cali:	
Medellín:		Banco Comercial.....	160,000
Banco de Sucre.....	1,000 000	Pasto:	
Banco Alemán Antioqueño.....	200 000	Banco del Sur.....	500,000
Banco Republicano.....	200 000	Popayán:	
Manizales:		Banco de Popayán.....	20,000
Banco de Manizales.....	140,000	Banco del Estado.....	20,000
Banco de Caldas.....	200 000		
Tunja:			
Banco de Boyacá.....	40,000		

This list shows a capitalization of \$7,830,000, which the chamber considers inadequate for the proper banking business of the country. This does not include, however, many strong banks and private banking concerns, such as the Credito Mercantil and V. Dugand & Son. in Barranquilla, and El Banco Union, of Cartagena. It is probable, however, that the entire actual banking capital of Colombia (outside of commission houses doing a banking or exchange business in connection with their commission business) will not exceed \$10,000,000 or \$11,000,000, or about \$2 per capita of the population.

TIN ORE FOR SMELTING IN UNITED STATES.

(Consul Thomas W. Voetter, Antofagasta, Chile, Nov. 3.)

Until the present year the tin ore produced in Bolivia has been shipped to Europe for smelting or has been treated in Bolivia. An arrangement has recently been made by which the tin ore produced by some of the mining companies of Bolivia will be shipped to the United States to be treated in the smelter being erected for that purpose by the American Smelting and Refining Co., at Perth Amboy, N. J.

The largest part of this ore will be from the mines of the Cia. Estañífera de Llallagua, located at Llallagua, on the eastern cordillera of Bolivia. About 600 to 700 tons of concentrates, bearing 60 to 70 per cent of tin, will be shipped monthly. Shipments will probably be made via the Chilean port of Arica and will begin in December of this year. Other tin ore which will go to the United States will be from the mines of the Cia. Minera de Oruro, near the city of that name. The ores of Oruro are primarily silver ores. After the silver has been taken out a small quantity of tin remains in the tailings. These are reworked, with the result that a 60 per cent tin concentrate is available for shipment. Some tin ore from near La Paz will also be shipped to the United States.

Besides the ores which will go to the new smelter at Perth Amboy, it is rumored that purchases have been made for one or more detinning plants in the United States, in which some experiments have been carried on with a view to utilizing tin ore in addition to the material usually refined in such plants for the recovery of tin.

AMERICAN TRADE RESULTS IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Oct. 12.]

Work done at the Auckland consulate general, as indicated by accounts of actual business results and prospective business, promises a big increase in American imports to New Zealand for the balance of 1915.

A trade opportunity published in **COMMERCE REPORTS** June 16, 1915, showing a demand for dehydrated onions, brought the following note from interested persons in Auckland:

Several of the firms addressed sent us samples, and we have selected what we think is the one best suited to our needs, and have made a tentative offer for a supply, provided the goods can be packed in accordance with requirements.

A trade opportunity published June 15, 1915, on the market for textiles brought the following in reply to my inquiry:

Replying to your esteemed inquiry of the 22d ultimo, I have pleasure in reporting that, as a result of our interview and your kind assistance, a number of useful replies have been received to our correspondence and, although no definite arrangement has been made or business yet resulted, I have requested several firms to at once forward samples to order from. I shall be obliged if you will continue your efforts to bring us into communication with suitable American manufacturers, particularly of hosiery and woollen goods.

Put into Touch with American Manufacturers.

Through letters of introduction given to a business man by consul general J. I. Brittain last January and his cablegram of February 3, this business man formed satisfactory connections, as shown by a note received here, which states:

On arrival at New York I presented a letter of introduction, so kindly given by your Mr. Brittain. The office communicated with the New York Merchants' Association, who took the matter in hand, and within a very short space of time was in communication with the principal manufacturers of the States. Before leaving I placed orders for glass with two companies, and at repeated intervals we have been passing orders along. At the present time we have had from America, glass to the value of £6,592 (\$32,080), with several orders yet incomplete.

A cablegram to the department on June 25 and two other Trade Opportunities have not yet brought definite results, but may later, as shown by a letter from the director of the New Zealand Home Builders (Ltd.), who received quite a number of catalogues and price lists through the article which appeared in **COMMERCE REPORTS**, but stated personally that in most instances prices were too high, especially for galvanized corrugated iron and sheets, builders' hardware, etc.

There is a demand here for more American lumber, if the field is well worked.

The manager of a mail-order house has the following to say regarding the way he was treated by the heads of the large mail-order houses, while visiting the United States, on presenting letters of introduction from consul general J. I. Brittain, before he left for Sydney:

The managers of these great institutions themselves spent, in many cases, more than a whole day personally giving me the most intimate information about their business, and, not content with this, they invited me to their homes, entertained me at dinner, and ran me over the cities in their autos. It would be impossible to travel in any country and receive better treatment at the hands of business men than was extended to me by those of your Republic. Incidentally I purchased three motor cars on behalf of members of our family, besides conferring with our New York buying house on general business. This war has, of course, considerably increased our business with America, as a great many Continental lines, especially in hardware, are now being purchased by us

from your country. I wish you to accept my sincere thanks for the valuable help extended to me by your service here and especially for the manner in which it was done.

Letters of Introduction Bring Results.

Letters introducing another business man to several persons in the United States brought good results, as indicated by the following extract from a letter he wrote:

I delivered your letter to the commissioner at Chicago, who immediately brought me in touch with two hosiery companies. I was able to make satisfactory arrangements.

I made the acquaintance of your Mr. Porter at New York, and had a most interesting chat concerning the New Zealand and Australian markets. Since my return I have found that business is so good and the demand for American goods so great that I was obliged to form a limited company, with headquarters at Sydney, and put on a good selling force to cope with the increased business. Consequently I am now in a position to control further representation from American manufacturers, and we would now be pleased to receive any correspondence accordingly.

As a result of a call at this consulate general relative to the manufacture of envelopes, I have to report that a trial order was placed with an American envelope company to the value of \$800, and this firm feels quite sure much more will follow along this line. Later I sent in a Trade Opportunity for the firm, covering several lines it desired to handle, and I feel sure it will bring good results. The following extract is from a letter sent by a New York man:

I now wish to offer you my sincere thanks for your kindness in placing my name before interested parties in your consular district, and to advise you that through the efforts of this most efficient service I have been brought in touch with many desirable distributors and consumers, and I have thereby been able to make valuable connections, which I could not otherwise have done.

Since posting my last letter the world conditions have been changing rapidly, and more of the world's merchants and manufacturers are daily finding it necessary to purchase American supplies, and I shall thoroughly appreciate your giving my name to any other parties whom you think I can serve in a purchasing capacity.

Besides the above there were many who called at this consulate general during the quarter to consult the trade journals on file in the reading room and to inquire relative to trade conditions and openings at home. This class of work is on the increase, and some days takes up much of the time of the office force, but with good results.

ADVERTISING PRICES IN AMERICAN PERIODICALS.

[Consul Milton B. Kirk, Orillia, Canada, Nov. 22.]

Practically all important American periodicals, newspapers, and trade journals are read in Canada. It has been noted that as a general rule American advertisers give one price for their merchandise, which is the sale price in the United States. Purchasers who wish to buy these advertised American goods in Canada are disappointed when they find that these advertised goods can not be bought, usually, at the price advertised in the American periodicals, etc. Therefore, if the Canadian sale price could be mentioned close to the American sale price or a note made that the articles advertised would cost more in Canada, people who desire to buy the articles here would make provision for paying the advanced price. Many purchasers refuse to buy an article that they see advertised for 10 cents, if when reaching the stores they find that the article will cost them 15 cents. They are very likely to pass over the advertised article and buy something "just as good" at 10 cents.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Navy Department supplies, No. 2833.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., for supplying the following. Firms desiring to submit proposals should make application to the Bureau of Supplies and Accounts, giving schedule numbers desired: Schedule 0100, amorphous graphite and flake lubricating graphite; schedule 0110, 30 by 72 inch platform trucks; schedule 0111, engine bodies, steering engines, shafts (main) and cranks, and valve groups and bodies; schedule 0112, war head attachment boxes, pressed sheet-steel bulk-heads, cold-rolled copper containers, tin containers, galvanized-iron tanks, drawn-brass cups, screwdrivers, and taper square-end wrenches; schedule 0113, high resistance telephone receivers; schedule 0114, windlass; schedule 0115, 15 K. W. generating sets; schedule 0116, excavating, hauling, and spreading earth; schedule 0117, lathe; schedule 0118, 1 K. W. radio transmitting set; schedule 0119, khaki cotton duck leggings, and low shoes; schedule 0120, 100-pound wheat flour export bags; schedule 0121, sounding tubes; schedule 0122, pure sperm oil; schedule 0123, 108 square foot rolls of 2-ply ready roofing; schedule 0124, single and duplex rubber-covered wire and weatherproof wire; schedule 0125, spun cotton, unbleached cotton thread, and cotton furniture covering; schedule 0126, alcohol, red lead in paste form, and petrolatum; schedule 0127, compressed sheet cork, window glass, lead pipe, pure rolled silver anodes, and terneplate roofing tin; schedule 0128, Louisiana 1½-inch red cypress, and sawn yellow pine; schedule 0129, worm-gear chain blocks, direct differential blocks, miscellaneous machinists' files, 30-inch wide brass gauze, flathead copper cut nails, sheet garnet paper, hammock rings, brass machine screws, brass and iron wood screws, and flat-head copper cut tacks; schedule 0130, carbide of silicon fire sand; schedule 0131, interior communication cable, telephone cable, plain double conductor wire, plain single conductor wire, glass water gauges for boilers, and twin conductor wire; schedule 0132, chain iron; schedule 0133, medium bar steel, class B boiler plate steel, medium steel channels, cold-rolled machinery steel, medium, and classes An and B bar steel, class B billet and slab steel, medium hull plate steel, medium rivet steel, sheet steel, corrugated sheet steel, and class An slab steel; schedule 0134, medium steel for grate bars, and class B boiler plate steel; schedule 0135, single conductor cable, slide outlet current taps, and double conductor telephone wire; schedule 0136, night binoculars, deck clocks and keys for same, circular and straight line diving engines, objective lenses for spyglasses, sextant mirrors, stadimeter mirrors, psychrometers and 50 pairs of thermometers for same, and 18-inch Sigsbee (parallel) rulers; schedule 0137, 20 by 40 inch binders' board, condensers, tanks, valves, etc., outfits, and medium bar steel; schedule 0138, lathe arbors, etc., machinists' clamps, file brushes, emery wheel dressers, hand drills, etc., and steel measuring tapes; schedule 0139, fire-control telephones; and schedule 0140, taps, dies, etc.

Medical supplies, No. 2834.—Sealed proposals will be received at the Medical Supply Depot, 543 Greenwich Street, New York City, until December 20, 1915, for furnishing medical supplies, such as medicines, basins, beds, cribs, ice breakers, dressing buckets, medicine cabinets, hospital chairs, uterine dilator, forceps, needle holders, harvest straw hats, hand-power potato masher, scissors, syringes, instrument stands, etc., rubber bulbs, double boilers, collanders, pudding dishes, jelly moulds, etc., frying pans, etc., muffin rings, cake turners, etc. Proposals will also be received at the same address until December 22, 1915, for furnishing glass demijohns, packing boxes, quart bottles, sawdust bags, tin-foil caps, corks of various kinds, sealing wax, etc.

Clearing site, No. 2835.—Sealed proposals will be received until January 5, 1916, at the office of the custodian, United States Post Office and Customhouse, Newport, R. I., for clearing the site for the new post office and customhouse at Newport. In accordance with specifications, etc., copies of which may be had on application to the custodian.

Electric light, telephone, and clock installations, No. 2836.—Sealed proposals will be received at the Office of the Superintendent of Prisons, Department of Justice, Washington, D. C., until January 4, 1916, for furnishing and delivering at the United States Penitentiary, Atlanta, Ga., material required for electric light, telephone, and clock installations for west main cell wing, in accordance with specifications, copies of which, together with further information, may be had on application to the Washington office.

BISCUITS, PRESERVES, AND CANDIES IN SOUTH CHINA.

[Consul General George E. Anderson, Hongkong, British China, Oct. 12.]

The development of the biscuit and cracker manufacturing industry in Hongkong promises to be rapid in the near future. As noted in a report published in *COMMERCE REPORTS* for July 31, 1915, biscuits manufactured in Hongkong and Shanghai have recently come to compete seriously with imported biscuits and cakes, most of which heretofore have come from England but a considerable portion of which came from the United States. Subsequently it was found that the Shanghai product was not able to hold its own with the output of Hongkong factories. The Hongkong goods heretofore have been manufactured almost entirely by hand. The proprietor of the largest factory, however [whose name may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69550], is leaving for the United States to buy a complete outfit of American biscuit-manufacturing machinery and intends to install a modern biscuit-manufacturing plant complete in all details. Local biscuits are now being packed in a similar manner to the biscuits imported from England. American biscuits, especially soda crackers, have been popular in the south China field in the past and for a time there were prospects of a good trade being built up. The fact that a number of shipments of such goods spoiled because they were unsuited to the hot climate has interfered seriously with the extension of the trade.

American jams, jellies, preserves, and similar sugar goods, and American pickles of all sorts came to have a large share of the south China trade before the opening of the war. Since the war they practically dominate the market. The goods imported are usually of the higher class, the chief obstacle to a further development of the trade being their high price.

American confectionery also holds the trade in high-class goods, though the old-time English trade in cheap chocolate and similar confectionery is still maintained. The advantage in proper packing of such goods is still with the British and Continental manufacturers, although great improvement in American methods is to be noted and some American goods come in condition beyond criticism. While most of the confectionery imported comes from the Pacific coast, a considerable quantity of high-class goods from the Eastern States is also sold.

Consul Charles L. Latham, of Santos, reports that during October 1,625,243 bags (weighing 60 kilos, or 132.38 pounds, each) of coffee were exported from that Brazilian port, as contrasted with 1,015,725 bags in September and 1,125,295 in August.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Shoe laces, No. 19556.—A commercial agent of the bureau's branch office in Chicago submits a letter from a business man in Egypt requesting samples of shoe laces of all kinds, together with lowest prices and conditions of sale. It is stated that the inquirer is ready to pay cash for purchases and would like to become a representative for manufacturers of this article.

Glass and paints, No. 19557.—A commercial attaché of the Department of Commerce reports that a firm in Peru desires to establish commercial relations with manufacturers of glass and paints. The inquirer would prefer to act as agent, but in case this is not practicable he will consider carrying a stock of a reasonable quantity of above-named articles. Correspondence may be in French, Spanish, or English, and prices in American currency.

Presses for roofing tiles, No. 19558.—An American consular officer in Australia reports that a company in his district wishes to communicate with manufacturers of presses for the production of concrete or cement roofing tiles. Catalogues, prices, and terms should be sent as soon as possible.

Gasoline, lubricating oils, etc., No. 19559.—A representative of a large mercantile house informs an American consular officer in Chile that he desires to secure an agency for his district and surrounding territory of a standard brand of gasoline, lubricating oils, and kerosene. Literature, prices, and samples are requested. Correspondence should be in Spanish.

Wool grease, etc., No. 19560.—A report from an American consular officer in Italy states that a business man desires to be placed in touch with manufacturers desiring agents in Italy for all kinds of wool grease and wool pitch. Bank references are given. Correspondence may be in English.

Soap, No. 19561.—The Bureau is in receipt of a letter from a company in Cuba requesting the names and addresses of manufacturers of soap that can be used in hard water. The inquirer states that the only available water is too hard for common soap used for bathing purposes.

Copper and brass, No. 19562.—A Portuguese firm informs an American consular officer that it is anxious to get in touch with exporters of copper and brass in sheets, tubes, and bars. Quotations should be c. i. f. port of destination and correspondence in Portuguese or French.

Chemical products, No. 19563.—A firm in Italy informs an American consular officer that it desires to represent manufacturers of chemical products. References are given. Correspondence should be in Italian or French.

Railroad cross-ties and lumber, No. 19564.—A commission firm in Portugal is in the market for oak railway ties 2.70 to 2.75 meters long, 13 to 14 centimeters high, and 23 to 25 centimeters wide, and 3,000 cubic meters of white-oak planks 3.50 meters by 30 centimeters by 20 centimeters, and 1,000 cubic meters pine boards 4 meters by 25 centimeters by 25 to 30 centimeters.

Buckles, pad plates, etc., No. 19565.—A representative of a harness and saddlery firm in Chile is anxious to receive literature in Spanish, samples, terms, and prices of all kinds of metal accessories required in his business, such as buckles, pad plates, rings, bars, trimmings, etc., and also samples of fine leather for trimmings.

Mercerized cotton yarn, No. 19566.—A commercial agent of the Bureau reports that a firm in the Far East desires to get in touch with American manufacturers or exporters of mercerized cotton yarn, numbers 100/2, 60/2, and 60/2 in bleached and all the principal colors, particularly yellow, pink, red, green, and violet. The yarn is put up in skeins, with 2 pounds to the bundle, and packed in cases containing 100 to 200 pounds. The firm is prepared to pay cash in New York when the yarn is shipped. Correspondence may be in English, and samples and prices (c. i. f. port of destination, if possible) should be sent with the first communication.

Cotton duck, hosiery, etc., No. 19567.—A letter to the Bureau from a business man in Argentina states that he wishes to represent American firms manufacturing cotton duck; hosiery for men, women, and children; handkerchiefs; and cotton, silk, linen, and wool materials by the yard.

FRENCH CROPS FOR 1915.

[Cablegram from American Consul General A. M. Thackara, Paris, dated Dec. 13.]

The French Minister of Agriculture publishes the following crop estimates: Potatoes, 9,057,092 metric tons against 11,992,713 tons in 1914; sugar beets, 1,508,233 tons against 3,751,066 tons; distillery beets, 654,033 tons against 2,309,480 tons; fodder beets, 14,322,555 tons against 21,792,825 tons; tobacco, 15,491 tons against 24,173 tons; hops, 2,433 tons against 3,191 tons; forage hay grass, etc., 41,241,344 tons against 44,498,777 tons.

[Estimates of the cereal crops were published in COMMERCE REPORTS for Oct. 5, 1915.]

CHANGES IN BRITISH EMBARGO LIST.

[Cablegram from American consul general, London, Dec. 14.]

The exportation of magnesite, caustic or lightly calcined, and dead burnt magnesite has been prohibited to all destinations, and the exportation of beeswax to all destinations except British possessions. The item "Coal, all kinds, and coke made in gas works, not including coal allowed by the customs to be shipped as bunker coal in list of goods," included in the list of products prohibited to all destinations except British possessions, has been altered to read, "Coal, all kinds, and coke, but not including coal allowed to be shipped as bunker coal." The exportation of silica bricks and of all articles wholly or principally of copper or its alloys not formerly under embargo is now prohibited to all countries in Europe except France, Russia, Italy, Spain, and Portugal.

Consular Trade-Extension Work in Spain.

In July over 32,000 metric tons of wheat were bought from the United States by Barcelona merchants. In June, July, and August 85,147 tons of American coal were imported—in marked contrast to the 33,717 tons imported during the whole of 1914. Knitting-machine needles have been purchased in large quantities, as well as American haberdashery, electric supplies, chemicals, petroleum, ice-making machinery, cotton, and motor trucks. These are among the known results of recent trade-extension work by Consul General Carl Bailey Hurst, who is stationed in that Spanish commercial center.

ABLE SEAMEN ON FOREIGN VESSELS.

A circular from Secretary of Commerce Redfield, in relation to able seamen on foreign vessels departing from ports of the United States on or after March 4, 1916, has been issued by the United States Bureau of Navigation and the United States Steamboat-Inspection Service. The requirements of the law are explained to collectors of customs, supervising and local inspectors of the Steamboat-Inspection Service, and others concerned. This circular, numbered 268, says:

Section 13 of the seamen's act of March 4, 1915, will apply to all foreign vessels of 100 tons gross and upward (except those navigating rivers exclusively and the smaller inland lakes, and except fishing or whaling vessels or yachts) which depart from any port of the United States on or after March 4, 1916.

2. The section provides that 40 per centum in the first year after that date, 45 per centum in the second year, 50 per centum in the third year, 55 per centum in the fourth year, and thereafter 65 per centum of the vessel's deck crew, exclusive of licensed officers and apprentices, shall be of a rating not less than able seaman.

3. An able seaman, to conform to the requirements of the section, must have the following qualifications:

(a) He must be 19 years of age or upward.

(b) He must have had at least three years service on deck at sea or on the Great Lakes on a vessel or vessels of 100 tons gross or upward, including decked fishing vessels (not including vessels navigating rivers exclusively and smaller inland lakes, and not including whaling vessels or yachts or fishing vessels, unless the fishing vessels are decked fishing vessels). Service on deck in foreign naval vessels or foreign vessels similar to vessels of the United States Coast Guard may be included.

(c) He must have been found competent upon examination as to eyesight, hearing, and physical condition under rules prescribed by the Department of Commerce. The rules so prescribed are set forth in Form 983, Steamboat-Inspection Service, File S. This examination in the case of able seamen on foreign vessels may be conducted by the proper authorities of the country of which the seamen are citizens or subjects.

(d) Section 13 also provides for a special class of able seamen who may compose not more than one-fourth of the number of able seamen required on a vessel. Able seamen may qualify for this special class after having served on deck twelve months at sea or on the Great Lakes, but in addition to the examination mentioned in paragraph (c) they must have been found competent upon examination as to knowledge of the duties of seamanship under rules prescribed by the Department of Commerce. The rules so prescribed are set forth in Commerce Department Circular No. 264, second edition, Steamboat-Inspection Service. This examination in the case of able seamen on foreign vessels may be conducted by the proper authorities of the country of which the seamen are citizens or subjects.

4. Section 13 does not require that able seamen on foreign vessels shall be furnished with certificates as such. The section, however, does provide that a collector of customs may, upon his own motion, and shall, upon the sworn information of any reputable citizen of the United States, setting forth that this section is not being complied with, cause a muster of the crew of any vessel to be made to determine the fact, and no clearance shall be given to any vessel failing to comply with the provisions of this section.

Accordingly, it may facilitate the dispatch of foreign vessels from American ports if the necessary proportion of the deck crews are so certificated, thus preventing the delay necessary to ascertain by inquiry and examination whether in fact the necessary number of the deck crew are able seamen within the intent of the section.

5. Certificates issued to able seamen by competent authorities of the countries of which the seamen are citizens or subjects will be accepted by Collectors of Customs as evidence that the able seamen so certificated comply with the requirements of section 13 of the Seamen's Act. These certificates should certify that the able seaman is of the prescribed age, has had the prescribed sea service, and has passed the examination as to eyesight, hearing, and physical condition, and, for the special class of short-term service men, has also passed the examination as to knowledge of the duties of seamanship.

6. This circular does not apply to able seamen on foreign vessels on the Great Lakes, who will be covered by another circular to be issued before the opening of navigation on the Great Lakes in the spring.

WILLIAM C. REDFIELD,
Secretary.

AMERICAN LUMBER FOR AUSTRALIA.

The present depression in the American lumber industry has greatly increased the interest in the export trade and its possible development. For this reason the Bureau of Foreign and Domestic Commerce has been sending out experts to study the possibilities of the most promising markets. The latest bulletin based on these investigations is "Australasian Markets for American Lumber," written by Franklin H. Smith, who has been studying the lumber situation in the Far East and in Australia and New Zealand for a year or more.

Australia is particularly interesting to American lumbermen, because the island continent depends almost wholly on foreign supplies of soft, easily worked woods. The native timber is tough, difficult to season, and very hard to work. In normal times the total imports of timber are valued at \$13,000,000, and of this quantity the United States furnishes about \$7,000,000 worth, or more than half. American exports, however, consist mostly of undressed timber, and Mr. Smith's report is concerned largely with the prospects of increasing our sales of dressed timber, which has heretofore come mainly from the Baltic regions. Since the war started Australians have not had steady intercourse with the Scandinavian countries and there have been increased sales of our dressed products. American flooring especially has had an opportunity to prove its undoubtedly good qualities.

A very interesting suggestion by Mr. Smith is that a serious attempt be made to popularize the American bungalow style of dwelling in Australia, and in that way broaden the field for American lumber. No type of house could be better adapted for the suburban sections of the larger cities, yet thousands of brick or stone houses have been put up and roofed with unsightly corrugated iron.

There are many other suggestions in the bulletin, as well as chapters on such important matters as tariffs, native timber resources, foreign trade, the principal lumber markets, and the lumber trade of New Zealand. The booklet is issued as Special Agents Series No. 109, and is sold at the nominal price of 5 cents by the Superintendent of Documents, Government Printing Office, Washington. Mr. Smith's other bulletins cover the lumber trade in the Philippines, Japan, China, and Indo-China, and there is one relating to the teak industry of Siam and Indo-China.

REGULATIONS FOR EXAMINING SIRUP IN SWEDEN.

The Bureau of Foreign and Domestic Commerce has received from the Swedish Legation at Washington a copy in English of the Swedish regulations for the examination of sirup which were adopted on March 17, 1915. The pamphlet may be seen at the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69984.

LARGE CITIES GET BULK OF STEAM-LAUNDRY BUSINESS.

The preliminary statements from the United States Bureau of the Census, relating to the figures for steam laundries in the several States for 1914, show a strong tendency, throughout the country, for laundries located in the large communities to do the bulk of the business. Figures along this line which have been published are:

More than one-half of the laundry business in Alabama is in the city of Birmingham, whose 10 establishments have 58.1 per cent of the total capital, pay out 54.2 per cent of the total for services, and receive 55.5 per cent of the total amount received for work done, while employing 49.2 per cent of the total number of wage earners.

The greater part of the laundry business in Colorado is in the city of Denver, whose 39 establishments have 60.4 per cent of the total capital, pay out 61.8 per cent of the total for services, and receive 59.9 per cent of the total amount received for work done, while employing 60.2 per cent of the total number of wage earners.

More than one-half of the laundry business of Georgia is in the city of Atlanta, whose 13 establishments have 48.4 per cent of the total capital, pay out 56.1 per cent of the total for services, and receive 55.9 per cent of the total amount received for work done, while employing 51.6 per cent of the total number of wage earners.

The greater part of the laundry business in Illinois is in the city of Chicago, whose 219 establishments have 63.8 per cent of the total capital, pay out 71.4 per cent of the total for services, and receive 69.2 per cent of the total amount received for work done, while employing 66.6 per cent of the total number of wage earners.

The greater part of the laundry business in Maryland is in the city of Baltimore, whose 25 establishments have 71 per cent of the total capital, pay out 74.9 per cent of the total for services, and receive 73.2 per cent of the total amount received for work done, while employing 74.4 per cent of the total number of wage earners.

Practically one-half of the laundry business in Michigan is in the city of Detroit, whose 46 establishments have 45.3 per cent of the total capital, pay out 55 per cent of the total for services, and receive 51.3 per cent of the total amount received for work done, while employing 48 per cent of the total number of wage earners.

Almost one-half of the laundry business in Nebraska is in the city of Omaha, whose 19 establishments have 43.9 per cent of the total capital, pay out 51.9 per cent of the total for services, and receive 47.8 per cent of the total amount received for work done, while employing 46.3 per cent of the total number of wage earners.

Considerably more than one-half of the laundry business in Oregon is in the city of Portland, whose 31 establishments have 69.1 per cent of the total capital, pay out 71.9 per cent of the total for services, and receive 69.4 per cent of the total amount received for work done, while employing 67.9 per cent of the total number of wage earners.

The greater part of the laundry business in Rhode Island is in the city of Providence, whose 27 establishments have 73.5 per cent of the total capital, pay out 68.6 per cent of the total for services, and receive 67.9 per cent of the total amount received for work done, while employing 65 per cent of the total number of wage earners.

Figures from Delaware show that of the total of \$253,264 invested in steam laundries in that State, in 1914, the city of Wilmington was represented by \$236,664.

Increases or decreases in the number of steam laundries in various States during the five-year period, from 1909 to 1914, were: Alabama, 38 to 41; Arizona, 13 to 17; Arkansas, 45 to 53; Colorado, 99 to 95; Connecticut, 95 to 127; Delaware, 15 to 12; Florida, 28 to 45; Georgia, 42 to 43; Idaho, 24 to 36; Illinois, 448 to 458; Indiana, 163 to 174; Iowa, 181 to 176; Kansas, 138 to 150; Maryland, 41 to 54; Michigan, 219 to 234; Minnesota, 158 to 188; Mississippi, 30 to 27; Missouri, 171 to 177; Nebraska, 76 to 74; Nevada, 5 to 12; New Hampshire, 61 to 74; New Mexico, 8 to 15; North Carolina, 43 to 59; North Dakota, 34 to 30; Ohio, 253 to 296; Oregon, 58 to 78; Rhode Island, 53 to 66; South Carolina, 24 to 23.

TRADE OF PARAGUAY FOR SIX MONTHS.

[Consul Samuel H. Willey, Asuncion Oct. 31.]

Statistics just made available give the value of the imports into Paraguay for the first six months of 1915 as \$933,119, compared with \$3,261,158 for the same period in 1914. The value of the exports was \$2,299,457 against \$2,370,683 for the first half of 1914. The total value of the imports by countries of origin and the value of exports by countries of destination follow:

Imports from—	Value.	Exports to—	Value.
Argentina	\$359,105	Argentina	\$1,453,170
France	23,729	Denmark	45,722
Germany	115,554	Great Britain	56,639
Great Britain	264,936	Holland	176,047
Italy	72,009	Spain	41,788
Spain	45,125	United States	107,372
United States	79,003	Uruguay	335,926
All other countries	38,595	All other countries	82,783
Total	933,119	Total	2,299,457

Articles of Export.

The principal articles exported and the quantity were as follows:

Articles.	Quantity.	Articles.	Quantity.
Animal products:		Agricultural products—Continued.	
Live catillo.....head.....	11,617	Oranges.....number.....	64,418,560
Conserved beef.....pounds.....	643,581	Bananas.....bunches.....	40,569
Conserved tongues.....do.....	27,730	Timber and forest products:	
Jerked beef.....do.....	1,153,215	Extract of quebracho.....pounds.....	14,301,520
Tallow.....do.....	562,186	Oil of peligrain.....do.....	33,265
Hides.....do.....	5,280,270		
Agricultural products:			
Tobacco.....pounds.....	5,356,690		
Yerba maté.....do.....	4,633,764		

IDEAL HOME EXHIBITION IN SYDNEY.

[Consul General J. I. Brittain, Sydney, Australia. See also COMMERCE REPORTS for Nov. 18, 1915.]

The leading exhibits at the "Ideal Home Exhibition" held at the Sydney town hall in October were bathtubs with automatic heating devices, electrical goods, gas cooking stoves, vacuum cleaners, oscillating beds, furniture, floor coverings, pianos, potted plants, exhibits of wall boards shown in various colors, glass lamps and shades demonstrating the semi-indirect system of lighting, clothes wringers, washing machines, churns, electric motors, lamps, toasters, irons, sewing machines, refrigerators, dish-washing machines, aluminum goods, patent roofing, etc.

The leading demonstrated American lines were various electrical exhibits, gas cooking stoves, oscillating wall boards, sanitary goods, vacuum cleaners, fireless cookers, and electric light demonstrating the semi-indirect system of lighting. It is doubted whether there has been a similar exhibition in Sydney where American products were so numerously displayed. If American manufacturers place their lines with live firms who can exhibit the goods and unostentatiously pass out descriptive reading matter, the American trade would undoubtedly increase.

CONSTRUCTION WORK ABROAD.**CANADA.**

[Consul Samuel C. Reat, Calgary, Alberta, Nov. 11.]

Dam and Power Plant for Company to Serve Edmonton.

The Edmonton Power Co. (Ltd.) is planning to build a solid concrete dam, 1,500 feet long and 100 feet high, on the Saskatchewan River, above Rocky Rapids, making an artificial lake about 60 square miles in area. Electricity will then be generated in a power plant below the dam and brought to Edmonton on a steel-tower transmission line. At Edmonton this electricity will be "stepped down" in the company's substation and will be sold in bulk to the city to deliver to the various departments and consumers as at present. The company is to be granted no franchise within the city and will have nothing whatever to do with the civic departments or private consumers.

This development will cost approximately \$6,000,000, not including an electric railway, which, as a separate scheme, will be built from Edmonton to the proposed power site. The railway will develop and make tributary to Edmonton a rich mixed farming, timber, and pulp-wood district.

The building of the electric railway and complete power development will take at least four years, and, in order to enable the city to establish a rate schedule immediately, based on known power costs for 30 years, and thus secure customers now available in the city, as well as new industries, the company agrees to take over and operate the present city steam plant, selling the city power at rates considerably lower than the city has produced.

Practically all of the public utilities in Edmonton are owned and managed by the city, and this private undertaking is receiving the support of a number of citizens who believe that municipal ownership has not been profitably demonstrated in Edmonton.

[Articles on municipal ownership in both Edmonton and Calgary have been published recently in *COMMERCE REPORTS*. Developments since the incorporation of the city of Edmonton in 1901 were shown in electric light and power systems, waterworks, power plant, street railway, and telephone systems in the issue of October 9, 1915. The article on Calgary was published November 16, 1915, and gave the results for several years past in the management of the waterworks, electric light and power plant, and street railway.]

CUBA.

[Consul P. Merrill Griffith, Santiago de Cuba, Nov. 15.]

Cuban Railroad to Have New Equipment and be Extended.

It has been reported that the Cuban Railroad Co. has just purchased the Camaguey and Nuevitas Railway. The road which connects the two cities is 73 kilometers (45.36 miles) long, and traverses one of the richest sections of the island. Its equipment is said to be antiquated and is to be changed to the most modern type and the road extended to Santa Cruz immediately. This will make an additional line crossing Cuba from north to south.

The sugar and cattle industries along the entire route are very important, and the improvement and extension of the railway will greatly augment the importance of both Camaguey, as an inland trade center, and Nuevitas, a port through which practically all of the products intended for foreign export will have to pass.

NORWAY.

[Consul Maurice P. Dunlap, Stavanger, Nov. 12.]

New Dry Docks and Shipyards.

Larger accommodations for building and repairing vessels are under process of construction at Stavanger, Norway, two new dry docks, each combined with a shipyard, being planned. Both should be in full running order within two years. Both are badly needed, as Norway has inadequate facilities of this kind and is compelled to have all its large-sized vessels built in England and repaired in British or other foreign docks.

One of the new dry docks will be the largest in Norway. It will be located, along with the new shipyard, on the island of Buoi, which lies in the harbor a short distance from the town of Stavanger. The new project will cover an area of over 80,000 square yards. The dry dock will be run through a rocky peninsula and will have outlet to a good harbor on both sides. The dock will be 530 feet long and 80 feet deep, with 22½ feet of water over the sill. A ship of 8,000 tons can be accommodated or the dock will be able to take two smaller ships at once, which will be separated by a movable pontoon. Eventually the dock will be enlarged to take vessels of 12,000 tons, in particular the *Stavangerfjord*. This boat, which will be Norway's largest ship, is being built in Scotland and should be ready for use by 1917.

The part of the peninsula beyond the dry dock will be made into two quays, 350 and 250 feet long, respectively, which will meet in a point. These will be used for fitting out newly built ships as soon as they can go in the water. An electric crane of 50-ton lifting power will run along these quays on rails lying 6 yards apart. The crane will also run along the dry dock and will have arms reaching across this dock to the other side. On this other side, on the main part of the island, will be located the shipbuilding yards, where there will be three (and eventually four) berths constructed, each suitable for building a ship up to 14,000 tons. There will also be two slips, accommodating up to 2,000 and 800 tons dead weight, respectively, where smaller vessels will be repaired, while the dry dock will be used more particularly for larger ones.

Beyond the berths will be a material quay 300 feet long. A network of rails will spread over the whole area to carry material to the shipbuilding sheds (which will cover an area of over 5,000 square yards), the slips, and the dry dock. Electric cranes will be used everywhere. It is calculated that 1,800 horsepower will be needed.

When docks and yards are in running order they should give employment to about 1,500 men. As there might be a lack of so much skilled labor, a school for 50 boys will be established near the workshop, where young men from the country can learn the trade. The company has increased its capital to over \$1,000,000, all of which is subscribed.

In connection with this project the municipality has purchased 175,000 square yards of property on the island of Buoi, which it proposes to improve. Streets are to be laid out and plats for homes sold at reasonable rates to the workmen. Water supply, gas, etc., have also been arranged for, and a small electric ferry will be maintained to carry workmen and material between the island and the mainland.

The concern that is interested in dry-dock construction has had two small dry docks—the only ones in Stavanger—but, with the company's capital increased to \$225,000, one of the old dry docks is being enlarged and one filled up. Work has also been started on a shipyard with three berths, each of which will be suited for the construction of a 10,000-ton ship. The dry dock, when enlarged, will be 350 feet long, 50 feet broad, and 14½ feet deep. It will accommodate a ship of 6,000 tons. New pump works are to be installed consisting of two electric pumps that together can draw out about 260 gallons of water per second. With a fair-sized ship lying inside the new dock can be pumped out in about 1½ hours' time.

The new quay will run around three sides of a small bay and will measure about 975 feet in length.

[The names of the two dry-dock concerns may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69661.]

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expira- tion of venue.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Peck, Willis R.....	Tsingtau, China.....	Jan. 31	Do.
Macersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Com- merce, Room 400, Customhouse, New York, N. Y.
Robertson, W. Henry.....	Buenos Aires, Argen- tina.....	Dec. 31	Do.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(c)
Chamberlain, George A.....	Lou souo Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. R.....	Corwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washing- ton, D. C.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

WOOL SALES IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Nov. 15.]

Record prices were reached at the first New Zealand wool sale for the season, which was held at Christchurch on November 11. There were 5,548 bales offered of the different classes and grades, with South-down ewe and half-bred wools at the head at 20 pence (40 cents) per pound in several cases, Corriedale hoggets at 19½ pence (38½ cents). Little wool brought less than 15 pence (30 cents). The advance over last year's prices ranged from 4 cents for the lower grades to 7 cents for some of the better classes.

Much of this wool was purchased by American firms. The next sale is to be held at Auckland on November 25, when it is expected a much larger quantity of wool will be offered and that American buyers will be active.

RATES ON COAL FROM GREAT BRITAIN TO SPAIN.

[Consul Robertson Honey, Madrid, Nov. 15.]

The Revista de Economía y Hacienda, published in Madrid, quotes freight rates on coal from Great Britain to Spain and compares them with rates of 1914. The quotations are in British shillings and pence, equivalent, respectively, to 24.33 cents and 2 cents each. The rates from the various British ports to Spanish destinations are:

	1914	1915		1914	1915

FEWER VESSELS IN NEWFOUNDLAND SEALING FLEET.

[Consul James S. Benedict, St. John's, Dec. 6.]

At present there seems to be only eight available steamers to prosecute the Newfoundland seal fishery the coming spring. Five have recently been sold to the Russian Government, and their loss to the sealing fleet will be severely felt. It is reported that the *Stephano* and the *Florizel*, of the Red Cross Line, will not, as heretofore, be employed in the seal fishery on account of the large amount of freight offering. Inquiries have been made from abroad about the *Erik* and the *Diana*, with a view to purchasing, and it is said that if the owners can obtain the price asked the vessels will be sold. It now looks as though there would not be a single steel ship engaged in this industry.

TRAFFIC ON AMUR RAILROAD.

[Consul John K. Caldwell, Vladivostok, Asiatic Russia, Nov. 17.]

The management of the temporary exploitation of the Western Amur Railroad has informed the Habarofsk Chamber of Commerce that, beginning November 14, two freight-passenger trains will run between the stations Bochkarevo and Burea pristan, and between Burea (left shore) and Vladimirovka pristan, with interruptions at the Burea and Amur Rivers. During the winter, when the rivers are frozen, uninterrupted communication will be established, as the cars will cross over the ice. Through traffic is expected to open over the Burea River bridge in April, 1916, and over the Amur River bridge in October, 1916. Vladimirovka station is situated on the Amur River opposite Kabarofsk.

ARGENTINE MARKET FOR SUGAR MACHINERY.

[Consul William Dawson, Jr., Rosario.]

The production of raw sugar in Argentina varied during the 5-year period 1908-1912 from 127,322 to 180,092 metric tons (metric ton=2,204.6 pounds). The Province of Tucuman produces from 80 to 85 per cent of the total output, the remainder coming chiefly from Jujuy. In 1913, owing to favorable weather conditions, the Province of Tucuman alone produced 221,000 metric tons of raw sugar from 2,606,567 tons of cane. [An exhaustive review of the Tucuman sugar industry appeared in Daily Consular and Trade Reports for Sept. 21, 1914.]

According to the last industrial census (1910), Argentina had 37 raw-sugar factories ("ingenios"), with a total capital of \$31,597,430. These factories employed 38,591 persons (8,335 in factories and 30,256 in the fields), and required 34,650 horsepower (all steam) to operate their machinery. These figures are old and undoubtedly fall far short of representing the present condition of the industry.

The Province of Tucuman has at the present time 30 "ingenios," 26 to 28 of which are usually in operation during the sugar season. The total capital invested in the 30 "ingenios" of the Province of Tucuman is estimated variously at 100,000,000 to 250,000,000 paper pesos (\$42,460,000 to \$106,150,000). A conservative estimate would appear to be about \$60,000,000. This includes factories, machinery, implements, live stock, and plantations owned by "ingenios" but not those of independent planters. The largest Tucuman "ingenio" has a crushing capacity of about 2,500 tons of cane per day, and a number of factories have a daily (24-hour) capacity of 1,500 tons of cane.

It is obvious that an industry of this magnitude concentrated in a small district (the Province of Tucuman has an area of 10,422 square miles) must present an active and important market for materials and supplies of all kinds used in cultivating cane and extracting sugar. For the purposes of this report three large "ingenios" located to the north of Tucuman, in the Provinces of Salta and Jujuy, may be considered as belonging to the Tucuman sugar district, since these factories purchase their machinery and supplies through Tucuman.

The total market represented by the Tucuman sugar industry, including machinery of all kinds, supplies, and agricultural implements, is estimated by a representative of a combine operating a number of large "ingenios" at 7,000,000 to 8,000,000 paper pesos annually (approximately \$3,000,000 to \$3,400,000). This includes freight to Tucuman and cost of installation in case of machinery. On the other hand a machinery expert considers these figures too high and states that average annual purchases of sugar machinery alone do not exceed 2,000,000 paper pesos (\$850,000) f. o. b. port of shipment. It is estimated, however, that the cost of machinery completely installed is about double the export price, so that when all other supplies as well as agricultural implements are taken into consideration the first figures do not appear greatly excessive.

Machinery at Present in Use.

Up to a comparatively recent date French and English sugar machinery had the best sale in Tucuman. The French influence has always been strong in the Province and Frenchmen have played an

important part in the development of the sugar industry. English capital has also been well represented. Technical and other managing employees, particularly of the important factories, are largely French, German, Swiss, and English. The machines most commonly found at present in factories are those of Cail and Fives-Lille (French); Fawcett, Preston & Co., Mirrlees Watson Co., John McNeil & Co., Watson, Laidlaw & Co. (British); and Breitfeld, Danek Engineering Co. (Austrian). Krupp (Germany) has also sold some machinery, as have other German factories. Some American equipment has been purchased. None of the numerous factory managers and specialists interviewed knew of any instance in which Dutch or Belgian sugar machinery, strictly speaking, has been introduced at Tucuman.

Of the four large factories visited, varying in capacity from 1,200 to 2,500 tons of cane a day, all had either Fawcett-Preston or Fives-Lille mills. The Krajewsky crusher is used almost universally. It appears that while Fawcett, Preston & Co. have in the past done a big business, new orders are being placed chiefly with French and Austrian factories. Defecation tanks are, as a rule, furnished by sugar-mill manufacturers, but are also made in Argentina. Triple and quadruple effect vacuum pans are used. Here again French and Austrian establishments receive the preference at present, although English manufacturers are also doing a good business. The same is true of crystallizers. Watson-Laidlaw centrifugals are used almost exclusively. Kestner evaporators are being introduced. In the vast majority of instances a great variety of machinery of all makes and ages will be found assembled in the same factory. Only one instance was cited of an entire plant which was installed at one time, and in this case machinery was purchased from different concerns.

In general it may be said that French and Austrian machinery is now finding the best market, while English (including Scotch) equipment, of which there is still a great deal in use, has lost ground. This applies to sugar machinery, strictly speaking. There is, of course, a great variety of general machinery, such as cranes, pumps, and engines in all factories. Practically all producing countries are represented. Some of the machines which find most general acceptance are Sulzer (Swiss) engines, American cranes, and Babcock boilers.

Sales Methods and Terms.

One of the leading, if not the prime, factor in marketing sugar machinery in Argentina is the local agent. In one or two instances European manufacturers have agents at Buenos Aires, with sub-agents at Tucuman. While general machinery (engines, boilers, cranes, agricultural implements, etc.) for which there is a market in other parts of the Republic can be sold advantageously on such a basis, it is generally conceded that sugar machinery should be handled by an expert located at Tucuman and that the intervention of a Buenos Aires house only tends to increase the cost of selling. There are a considerable number of mechanical engineers at Tucuman who represent European factories and incidentally act as consulting engineers for "ingenios."

The following example will best illustrate the part played by the local agent: Some four years ago a European firm which had up to that time sold little or no sugar machinery in Tucuman sent out an

engineer who is admittedly the best sugar-machinery expert in the Province. This agent furnishes any sort of information and advice desired to factories which purchase machinery from him, is exceedingly active, and is reported to have secured for his firm half the machinery orders placed in Tucuman last season. Factories have in many instances no very able technical men and are largely guided by the advice of experts who are at the same time agents for European machinery manufacturers. As already stated, highly paid employees and factory engineers are largely foreigners, and will naturally be more or less inclined to consider favorably machinery made in their native countries, with which they are probably most familiar.

Terms of sale represent another important factor. It should be remembered that even the largest "ingenios" have little ready capital. As a rule they have to carry cane planters from one crop to another, which further reduces supply of ready money. The question of terms is in most instances an important one. French and Austrian factories have the reputation of giving good terms. While there is no universal rule, terms of one-third with order, one-third against documents, and a note for the remainder due on July 31 of the "campaign" following erection of machinery are said to be acceptable to the factories. Some firms give up to 18 months' time for final payment of balance. In such cases the factory is likely to charge 6 per cent interest, which is more than the money would bring in Europe. English factories are less inclined than their competitors to give liberal terms.

Market for American Machinery.

American sugar machinery is little known in Tucuman. The writer was told by a gentleman representing European manufacturers that American machinery had been tried, but that, owing to inferior construction, it gave poor results, and is now completely discredited. This was corroborated to a certain extent by the manager of one of the large "ingenios," who had not, however, had any personal experience with American machinery. On the other hand, several equally well informed persons stated that so far as they knew practically no American sugar machinery had been used in Tucuman. At any rate, very little American equipment has been introduced in the Argentine sugar industry under its own name, and its reputation is—in certain quarters, at least—rather unfavorable. How far this may be due to a natural desire to keep out competition on the part of rival factories is hard to determine.

An American, exceptionally well placed to judge of the possibility of selling American sugar machinery in Tucuman, believes that it would find a market, provided it were properly introduced. Machinery can be sold in only one way. An expert, who speaks the language and who is given a good salary and an ample expense allowance, should be sent down to study the market thoroughly. He could probably secure employment in different mills for a short period, and thus familiarize himself with local requirements. With the necessary experience in the local field, coupled with a good knowledge of American machinery, an expert could undoubtedly suggest machines which could be used to advantage. Any factory or syndicate trying to work the Tucuman market would undoubtedly have to go to considerable initial expense—a representative should have at least 1,000 paper

pesos (\$425) a month—and might have to wait a year and perhaps longer for results. The American mentioned above believes that American machinery can be sold in this way, and, so far as a layman can judge, the writer is inclined to share this opinion after due study and wide discussion with persons familiar with conditions in Tucuman.

Possible Opening for American Capital—Light Equipment.

Another way in which American sugar machinery could be introduced into Tucuman might be found in the investment of American capital in the sugar industry. As already stated, few "ingenios" have a large supply of ready capital, and mills can always be found which are eager to secure the cooperation of foreign investors. Some of the large cane planters and landholders of the Province might also be induced to enter into an agreement with an American manufacturer by which the latter would erect the plant and the former furnish the land and cane. Such investments should, of course, be made only after due study and investigation of conditions in the Tucuman industry.

At the present time the independent planter depends on the "ingenio" for his market, and in abundant years he is apt to have more or less difficulty in selling his cane at a remunerative price. The opinion was heard in Tucuman that some of the independent planters might eventually install light equipment such as is understood to be in use on Cuban plantations, which would permit them to mill their cane themselves in case "ingenio" prices made it advisable. On the other hand, a leading authority on the Tucuman industry considers this impracticable on account of the high cost of production.

Miscellaneous Machinery, Cane Chains, and Belting.

While American sugar machinery is not sold in Tucuman at present, factories have more or less general equipment of American manufacture. One of the most popular American products is the gyratory crane for hoisting and lowering cane. Formerly cane was unloaded from carts and railway cars and placed on conductors by hand. Cranes, driven in case of main cranes of large factories by steam and in others by mules or oxen, are now universally used. Countless cranes are to be found scattered over the Province, at factories, railway stations, and sidings.

Cane chains with patent locks, of which every factory takes car-load lots, were before the expiration of the patent supplied exclusively by the United States. Germany is said to be getting the main trade at present. A Tucuman dealer states that American chains cost 5 gold pesos (\$4.83) c. i. f. Buenos Aires each, whereas German manufacturers deliver chains at Buenos Aires for 2.85 gold pesos (\$2.75) (including lock in both cases).

Belting used by "ingenios" is at present chiefly of English, German, and French make. The demand for belting is estimated at \$4,000 per year for each of the principal "ingenios." A local dealer recently took an agency for American belting, and believes that, provided good terms are offered, American belting can be sold. In his opinion the best opening would be either for a very superior or for a very cheap belting.

RULES GOVERN BANKERS' DOMESTIC ACCEPTANCES.

The Federal Reserve Board has decided that bankers' domestic acceptances, as defined and restricted by a new regulation, constitute a very useful class of paper, and has issued regulation, to cover the purchase, in the open market, of certain domestic acceptances authorized by certain State laws.

In Regulation R, series of 1915, relating to the discount of bankers' acceptances, the board provided for the purchase in the open market of bankers' acceptances based on the importation or exportation of goods. The board further states that it has not felt justified, when admitting State banks and trust companies into the Federal Reserve System, in stipulating that such domestic acceptances should not be continued under reasonable limitations as a part of their business.

Inasmuch as the making of these domestic acceptances has been recognized by the board as the exercise of a legitimate banking function when authorized by law, it is thought that they are of the character to make desirable investments for Federal reserve banks. The board has, therefore, issued the new regulation, not only embodying the authority given in Regulation R, series of 1915, to purchase bankers' acceptances based on the importation or exportation of goods, but also authorizing the purchase of bankers' domestic acceptances within the limits prescribed in the regulation, which provides:

The Federal Reserve Board has determined that, until further notice, to be eligible for purchase under section 14 at the rates to be established for the purchase of bankers' domestic and foreign acceptances:

(a) Acceptances must have been made by a bank or trust company, or by some firm, person, company, or corporation engaged in the business of accepting or discounting. Such acceptances will hereafter be referred to as "bankers' acceptances";

(b) A banker's acceptance must be drawn by a purchaser or seller or other person, firm, company, or corporation directly connected with the importation or exportation of the goods involved in the transaction in which the acceptance originated, or by a "banker." The bill must not be renewed after the goods have been surrendered to the purchaser or consignee, except for such reasonable period as may have been agreed upon at the time of the opening of the credit as a condition incidental to the importation or exportation involved, provided that the bill must not contain or be subject to any condition whereby the holder thereof is obligated to renew the same at maturity;

(c) A banker's foreign acceptance must bear on its face or be accompanied by evidence in form satisfactory to a Federal reserve bank that it originated in, or is based upon, a transaction or transactions involving the importation or exportation of goods. Such evidence may consist of a certificate on or accompanying the acceptance to the following effect: "This acceptance is based upon a transaction involving the importation or exportation of goods. Reference No. —, Name of acceptor —."

(d) A banker's domestic acceptance must be based on a transaction covering the shipment of goods, such transaction to be evidenced at the time of acceptance by accompanying shipping documents, or must be secured by a warehouse receipt covering readily marketable staples and issued by a warehouse independent of the borrower; or by the pledge of goods actually sold;

(e) A banker's domestic acceptance must bear on its face or be accompanied by evidence in form satisfactory to the Federal reserve bank that it is based on a transaction or is secured by a receipt or pledge of the character defined in (d) hereof. Such evidence may consist of a certificate in general form similar to that suggested in (c) hereof;

(f) Banker's acceptances, other than those of member banks, whether foreign or domestic, shall be eligible only after the acceptors shall have agreed in writing to furnish to the Federal reserve banks of their respective districts, upon request,

information concerning the nature of the transactions against which acceptances (certified or bearing evidence under (c) and (e) hereof) have been made;

(g) The aggregate of bills, domestic and foreign, of any one drawer, drawn on and accepted by any bank or trust company and purchased or discounted by a Federal reserve bank, shall at no time exceed 10 per cent of the unimpaired capital and surplus of such bank or trust company, but this restriction shall not apply to the purchase or discount of bills drawn in good faith against actually existing values; that is, bills the acceptor of which is secured by a lien on or by a transfer of title to the goods to be transported, or by other adequate security, such as a warehouse receipt, or the pledge of goods actually sold;

(h) The aggregate of bills, domestic and foreign, of any one drawer, drawn on and accepted by any firm, person, company, or corporation (other than a bank or trust company) engaged in the business of discounting or accepting, and purchased or discounted by a Federal reserve bank, shall at no time exceed a sum equal to a definite percentage of the paid-in capital of such Federal reserve bank, such percentage to be fixed from time to time by the Federal Reserve Board; but this restriction shall not apply to the purchase or discount of bills drawn in good faith against actually existing values; that is, bills the acceptor of which is secured by a lien on or by a transfer of title to the goods to be transported or by other adequate security, such as a warehouse receipt, or the pledge of goods actually sold.

(i) The aggregate of bankers' acceptances, domestic and foreign, made by any one firm, person, company, or corporation (other than a bank or trust company) engaged in the business of discounting or accepting, purchased or discounted by a Federal reserve bank, shall at no time exceed a sum equal to a definite percentage of the paid-in capital of such Federal reserve bank; such percentage to be fixed from time to time by the Federal Reserve Board.

No Federal reserve bank shall purchase a domestic or foreign acceptance of a "banker" other than a member bank which does not bear the indorsement of a member bank, unless there is furnished a satisfactory statement of the financial condition of the acceptor in form to be approved by the Federal Reserve Board.

Federal reserve banks should bear in mind that preference should be given wherever possible to acceptances indorsed by a member bank, discounted under section 13, not only because of the additional protection that such indorsement affords, but also because of the reason that acceptances discounted under section 13 may be used as collateral security for the issue of Federal reserve notes.

Action previously taken by the Federal Reserve Board in relation to domestic bills of exchange was the subject of an article published in **COMMERCE REPORTS** for July 26, 1915.

CANADIAN NEWSPRINT AND PULP EXPORTS.

[Extract from Financial Times of Nov. 20, forwarded by Consul O. Gaylord Marsh, detailed as vice consul, Ottawa.]

The latest Government returns emphasize the growing trade Canada is doing in newsprint and pulp export. The new figures secured this week were for the month of August. With a total of \$1,564,510 for the month, the Dominion's newsprint exports have reached a new high mark for a single month's business.

The bigger business with the United States, which, of course, is Canada's best pulp and paper customer, reached the proportions of \$1,320,504 during August. For the five months of the Dominion's fiscal year newsprint exports to the United States alone aggregated \$5,909,618, compared with \$4,630,597 in the corresponding period of a year ago.

The export trade in newsprint for the five months reached a grand total of \$6,663,289, compared with \$5,321,419 a year ago. The amount of business contrasts with eight months' trade in 1913, totaling \$6,918,177, and eight months in 1912 amounting to \$3,110,458.

England is becoming a bigger buyer of our newsprint. A year ago England imported only \$7,646 worth of the Canadian product; this year \$28,582. The colonies are maintaining their previous business.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Machines, baskets, etc., No. 19568.—An American consular officer reports that a company in Chile desires to secure a machine to be operated by electric power for sewing brooms. It also wishes to communicate with exporters of coconut fiber doormats, and all kinds of baskets, except grocers' baskets and those made of wire.

Metal buttons, No. 19569.—A commercial attaché of the Department of Commerce reports that a firm in Peru desires quotations on single-piece metal pants buttons, with four holes and sharply depressed in the center; size to be from 14 to 18 millimeters, and in various colors. Values may be expressed in American currency but correspondence should be in Spanish.

Pharmaceutical products, manicuring articles, etc., No. 19570.—An American consular officer in China reports that a company in his district wishes to be placed in touch with manufacturers of pharmaceutical products, manicuring articles, sponges, optical goods, photographic supplies, etc. Catalogues and samples are desired with prices and discounts f. o. b. Pacific ports. Payment will be made on sight or 30 days draft. References given.

Sewing machines, cooking stoves, etc., No. 19571.—A letter to the Bureau from a firm in India requests that it be placed in communication with manufacturers of sewing machines, cooking stoves, steel cash boxes with bottom lock attachment, childrens' tricycles, ice-cream freezers, etc.

Machinery, No. 19572.—A report from an American consular officer in Portugal states that a commission house desires quotations, by cable, on flour-mill machinery with a capacity of 400,000 pounds daily.

Portland cement, lumber, etc., No. 19573.—A commercial attaché of the Department of Commerce reports that a firm in Peru wishes to be placed in communication with American exporters of Portland cement, building lumber, blasting powder, caustic soda, glass for windows and interior construction, etc. Correspondence may be in English or Spanish, although the latter is preferred.

Men's underwear, No. 19574.—A commercial agent of the Bureau of Foreign and Domestic Commerce reports that a firm in the Orient desires to be placed in touch with manufacturers of men's bleached undershirts, with long or short sleeves, in gray or white, in prices ranging from \$2.25 to \$4.50 per dozen, sizes 28, 30, and 32, packed 30 dozen in a case. The firm is prepared to pay cash on day of shipment. Samples and prices (c. l. f. port of destination, if possible) should be forwarded with the first communication, and a code word given for each quality. Correspondence may be in English. A sample of the undershirt desired may be examined at the Bureau or its branch offices. (Refer to File No. 798.)

Textiles and general merchandise, No. 19575.—An American consular officer in Paraguay reports that a company desires to communicate with manufacturers of textiles and general merchandise.

Paper bags, No. 19576.—A letter to the Bureau from a commercial organization states that a firm in Greece is desirous of communicating with manufacturers of paper bags, samples of which may be examined at the Bureau or its branch offices. (Refer to file No. 81.)

Pharmaceutical products, No. 19577.—A report from an American consular officer in Italy states that a business man in his district wishes to be placed in communication with manufacturers of pharmaceutical products. Bank references are given. Correspondence should be in Italian, French, or Spanish.

Wheat, rice, etc., No. 19578.—The Bureau is in receipt of a letter stating that a company in Greece desires to represent American firms exporting wheat, rice, kerosene, chemical products, and drugs. Lowest quotations should be submitted. Prices should be made c. l. f. destination, and terms of payment should be sent.

Hides and oil of petitgrain, No. 19579.—A report from an American consular officer in Paraguay states that a general exporting company wishes to be placed in communication with American importers of hides and oil of petitgrain. It is stated, however, that only firms already familiar with articles from Paraguay need answer.

PURCHASE OF CEREALS IN PORTUGAL.

[Vice Consul in Charge Ramon J. Janer, Lisbon, Nov. 24.]

The Portuguese Government has set aside in the Ministry of Fomento the sum of 1,000,000 escudos (about \$670,000) for the purchase of cereals authorized by decree of September 14, 1915.

ESTIMATED PRODUCTION OF ABACA HEMP.

The Bureau of Insular Affairs, War Department, is in receipt of the following cablegram from the Governor General of the Philippine Islands in response to the bureau's cable inquiry as to the estimated production of abaca (coarse and coarse brown) for the first quarter of 1916:

Fiber Division estimates production abaca January-March about 265,000 bales, of which 65,000 will be coarse and coarse brown; these estimates are subject to modification, as on December 6 another typhoon struck Sorsogon, Albay, and Camarines, damaging crops including abaca; details of such damage not now available.

CONSIDER STANDARDS FOR BAKING POWDER.

A hearing on baking powder and its ingredients will be held by the joint committee on definitions and standards at the Bureau of Chemistry, Washington, D. C., at 10 a. m., on January 14, 1916. At this hearing the trade and all interested parties will be given an opportunity to present to the committee their views as to what should constitute a proper definition or standard for baking powder.

The joint committee on definitions and standards is composed of representatives of the United States Department of Agriculture, the Association of American Dairy, Food, and Drug Officials, and the Association of Official Agricultural Chemists. This committee recommends standards and definitions for food and drug products for the guidance of Federal and State officials in the enforcement of food and drug laws.

EXPORT DECLARATION PROCEDURE AMENDED.

A revised draft of the regulations entitled "Shippers' Export Declarations and Export Procedure" (Treasury Decision 35708 of Sept. 15, 1915), was approved jointly by the Secretary of the Treasury and the Secretary of Commerce on December 14, 1915, and issued as Treasury Decision 35969.

The new order makes clear certain doubtful points in the first order and meets some well-founded objections against specific provisions. The principal modifications are as follows:

Instead of January 1, 1916, the new regulations are made effective on February 1, 1916.

No oath is required on declarations for export by vessel if total value of shipment does not exceed \$100.

It is specifically provided that the declarations may be executed by an authorized agent of the shipper.

In case of shipment from an interior point for export on a through bill of lading, if it is not practicable to prepare the declaration in time to accompany the goods, it may be transmitted to the seaboard with the shipping papers.

The car manifest required for exportations by railway may be a copy of the waybill, bill of lading, or other shipping paper, or of the manifest prepared for the foreign customs.

No declaration will be required for goods shipped under any form of customs bond for exportation from or in transit through the United States, the statistics in such cases being obtained from the customs papers covering the shipment.

When the goods are sold, the selling price should be stated as the value, otherwise the market value at the time of exportation in the port of the United States from which shipped.

On application the Bureau of Foreign and Domestic Commerce will supply up to 10 copies for distribution to shippers. Additional copies, if desired, may be obtained from the Superintendent of Documents, Washington, D. C., at the rate of 5 cents a copy.

NEW PASSPORT REGULATIONS.

The following executive order has been issued by President Wilson:

All persons leaving the United States for foreign countries should be provided with passports of the Governments of which they are citizens. These documents are rendered necessary because the regulations of all European countries and of several other foreign countries require passports or other documents of identification of all persons who enter their boundaries. The Secretary of State, in cooperation with the Secretary of the Treasury, will make arrangements for the inspection of passports of all persons, American or foreign, leaving this country, and the fact that these passports have been seen will be stamped thereon.

All applications to the Secretary of State for passports from American citizens must be made in duplicate, and must be accompanied with three copies of the photograph of the applicant. Each applicant for a passport must inform the Department of State at what point he intends to depart, on what date, and by what ship if he sails from an American port.

Applications shall be made in the manner heretofore prescribed by the rules governing the granting and issuing of passports, but the Secretary of State may designate an agent or agents to take applications, and wherever his agent is stationed applications shall be made only before him.

This order will become effective as soon as the Secretary of State and Secretary of the Treasury have made the arrangements necessary for that purpose.

WOODROW WILSON.

THE WHITE HOUSE, December 15, 1915.

COTTON SEED CRUSHED AND LINTERS OBTAINED.

The following preliminary table, prepared by the Bureau of Census, Department of Commerce, gives the quantity of cotton seed crushed and linters obtained to December 1 from the crops of 1914 and 1915, together with the total quantities from the crops of 1913 and 1914:

State.	To Dec. 1.				Total for crop.			
	Cotton seed crushed, crop of—		Linters obtained, crop of—		Cotton seed crushed, crop of—		Linters obtained, crop of—	
	1915	1914	1915	1914	1914	1915	1914	1913
United States.	Tons. 1,981,140	Tons. 2,473,931	Bales. 381,927	Bales. 341,142	Tons. 5,779,665	Tons. 4,767,802	Bales. 832,401	Bales. 631,153

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	...do....	Do.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Do.
Messersmith, George S.....	Port Erie, Canada.....	Jan. 1	Lewes, Del.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Do.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(a)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 116 West Fifty-seventh Street, New York City.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. R.....	Cornwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washington, D. C.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

Consul General Frederic W. Goding, of Guayaquil, reports that a postal money-order convention has been signed between Ecuador and Germany.

FOREIGN COMMERCE OF UNITED STATES FOR OCTOBER.

The usual monthly statement of the foreign trade of the United States, compiled by the Bureau of Foreign and Domestic Commerce, Department of Commerce, is given below. The table gives the imports and exports by great groups during October, 1915, and the 10 months ended October, 1915:

Groups.	Month of October—		10 months ended October—	
	1915	1914	1915	1914
IMPORTS.				
Crude materials for use in manufacturing.....	\$60,859,195	\$43,956,244	\$555,999,665	\$525,590,593
Foodstuffs in crude condition and food animals.....	28,189,543	21,420,035	197,419,571	196,902,094
Foodstuffs partly or wholly manufactured.....	14,248,574	18,274,948	238,381,729	226,635,040
Manufactures for further use in manufacturing.....	20,705,956	20,949,585	211,183,593	238,414,193
Manufactures ready for consumption.....	23,950,275	32,254,282	238,128,522	346,766,530
Miscellaneous.....	1,219,180	1,219,416	10,703,535	13,830,735
Total imports.....	149,172,729	138,080,520	1,451,267,515	1,549,152,386
EXPORTS.				
Crude materials for use in manufacturing.....	56,441,543	33,359,059	475,205,079	391,039,368
Foodstuffs in crude condition and food animals.....	30,441,246	26,224,327	352,192,657	188,765,195
Foodstuffs partly or wholly manufactured.....	53,682,011	37,411,533	308,334,777	324,957,512
Manufactures for further use in manufacturing.....	41,505,708	28,571,130	369,613,198	300,659,639
Manufactures ready for consumption.....	128,700,344	63,589,172	1,004,418,317	519,544,574
Miscellaneous.....	11,063,189	2,344,165	107,334,353	7,697,730
Total domestic exports.....	321,814,041	190,339,576	2,612,068,366	1,630,495,316
Foreign merchandise exported.....	6,216,240	4,381,794	48,427,243	31,707,944
Total exports.....	328,030,281	194,721,370	2,660,515,609	1,662,203,260

The increase in the exports for October, 1915, in the item "Miscellaneous," to a total of \$11,063,189 arises from the exportation of horses in that month to the value of \$8,845,952; of mules to the value of \$1,824,237; and of seeds valued at \$374,174.

TOURIST CHANGES AFFECT BERMUDA'S DAIRY INDUSTRY.

[Consul Carl R. Loop, Hamilton, Bermuda, Dec. 1.]

Bermuda, with a population of 20,000, two-thirds of which is colored, and a tourist population in the winter months of perhaps 3,000 to 4,000, supports three small dairies. Each of these dairies owns from 30 to 40 cows and operates a cream separator of about 12 quarts milk capacity. Neither cheese nor butter is produced for the market by these dairies. The separators are of American manufacture. Bottled cream sells at retail for \$1 per quart and milk at 14 cents per quart.

One serious difficulty faced by the dairies is the matter of disposing of milk and cream during the summer months, when the large hotels are closed, owing to the absence of tourists. Several small separators, not more than a dozen perhaps, are used in private homes throughout the colony.

The American commercial attaché at The Hague, Erwin W. Thompson, states that it is reported that an import trust has been organized in Goteborg, Sweden, for the special purpose of importing cotton for domestic consumption.

IMPORT AND EXPORT TRADE OF SWANSEA.

[Consul William L. Jenkins, detailed as vice-consul at Swansea, Wales.]

The total export trade of Swansea, as given by the statistics furnished by the Swansea Harbor Trust, amounted to 4,300,759 long tons (of 2,240 pounds each) for the first 10 months of 1915, as compared with 4,314,015 and 5,166,706 tons for the corresponding periods in 1914 and 1913, respectively. The decrease in the exports for the 1915 period from that of 1914 is due principally to the falling off in the shipments of tin, terne, and black plates, the decrease in this one class alone being 32,167 tons. Galvanized sheets showed a decrease of 22,709 tons from the 1914 period and 34,403 tons from the 1913 period. Shipments of patent fuel amounted to 636,051 tons, as against 666,750 and 802,127 tons in 1914 and 1913, respectively. The only items of importance showing an increase over the previous periods are coal and coke, and alkali, superphosphate, and arsenic. The figures for coal and coke are 3,211,575 tons, which is an increase of 66,094 tons over 1914, but a decrease of 590,852 tons from 1913. Shipments of alkali, superphosphate, etc., were 24,882 tons in the 1915 period, an increase of 6,978 tons over 1914 and 4,755 tons over the 1913 period.

The total imports into Swansea for the first 10 months of 1915 were 711,544 tons, as against 877,073 and 916,885 tons in 1914 and 1913, respectively. Imports of iron, steel, pig iron, and castings fell from 108,762 tons in 1913 and 100,802 tons in 1914 to 67,680 tons in 1915; steel bars and billets from 38,321 and 21,202 tons to 3,965 tons; deals, battens, and boards from 54,823 and 41,784 tons to 23,335 tons; tar and pitch from 55,053 and 49,403 tons to 28,551 tons; copper, silver, lead, and tin, with their ores and alloys, from 52,115 and 44,589 tons to 34,586 tons; bricks, slates, cement, etc., from 30,214 and 37,470 tons to 23,125 tons. The imports of pitwood amounted to 85,153 tons, an increase of 866 tons over 1914, but a decrease of 35,919 tons from 1913. Imports of iron ore for 1915 showed an increase over both 1914 and 1913, the respective figures being 77,825, 75,248, and 59,895 tons. Grain also showed similar advances, the amounts being 78,641, 75,386, and 74,051 tons for the 1915, 1914, and 1913 periods, respectively. There were 57,095 tons of sulphur ore, pyrites, salt, and chemicals imported during the first 10 months of 1915, as against 55,583 tons in 1914 and 52,644 tons in 1913.

PORT LIMON TO DEVELOP BALSA-WOOD EXPORTATION.

[Consul Chester Donaldson, Port Limon, Costa Rica, Nov. 27.]

The exportation of balsa wood from the Port Limon district is still barely in its infancy, but it has now passed the experimental stage and is considered one of the coming industries of this coast. The forests abounding throughout the district are well supplied with this timber, which up to the present time has never been disturbed, except for the few small shipments recently made by two firms of this city. Balsa wood is valued at about \$35 per 1,000 feet, ready for shipment, at Port Limon.

[The names of exporters of balsa wood from Port Limon may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 70006.]

AMERICAN CROP ESTIMATES.

The December estimates of the Crop Reporting Board of the Bureau of Crop Estimates of the acreage, production, and value (based on prices paid to farmers on December 1) of important farm crops of the United States in 1915 and 1914, with the average for the five years 1909-1913, based on the reports of the correspondents and agents of the Bureau, are as follows:

Crop.	Acreage.	Production.		Farm value Dec. 1.	
		Per acre.	Total.	Per bushel.	Total.
Corn:	<i>Acres.</i>	<i>Bushels.</i>	<i>Bushels.</i>		
1915.....	100,311,000	28.2	3,064,535,000	30.575	\$1,755,900,000
1914.....	103,483,000	25.8	2,672,804,000	26.444	1,722,670,000
Average 1909-1913.....	104,229,000	26.0	2,708,334,000	26.444	1,527,900,000
Winter wheat:

AUSTRIAN STEAMSHIP REGULATIONS DRAFTED.

[Consul General Albert Halstead, Vienna, Oct. 14.]

New rules and regulations for Austria affecting steamship lines, steamship construction, and crews were being drafted, and the draft was practically completed when the present war began. The purpose was to make the regulations conform to the provisions of the London, 1913, maritime convention which were to become operative in the present calendar year.

The Austrian steamships in process of construction were planned to conform to the provisions for boilers and their survey lifeboats and other life-saving appliances, wireless telegraphy, fire appliances, accommodations for steerage passengers, etc., while as rapidly as possible vessels already built were being altered to meet the requirements of that convention. It is expected that as soon as the war is ended the provisions for safety at sea adopted at London will be made operative after such preliminaries as are necessary.

There is no examination, nor are there any qualifications as to efficiency for seamen. This is provided for in the London convention, and will go into effect after the war. There are no Austrian Government regulations as to the hours of labor on steamships. An understanding among the steamship companies provides that in port deck hands shall work from 6 to 6, while engine-room hands, which include firemen, coal trimmers, and greasers, shall work from 7 to 5. The hours of engineers who rank as officers depend upon the regulations of the company that employs them. At sea the hours for able seamen or deck hands are four on and four off, while engine hands, including firemen, coal trimmers, and greasers, have four hours on and eight off. Engineers work during the usual hours of officers. In the coasting trade and generally on the Mediterranean, on Austrian vessels, the hours for engine hands are four on and four off. Wages are paid semimonthly.

[A copy, in the German language, of the Austrian ordinance mentioned and a copy of the instructions for carrying it into effect, also in German, have been received and may be inspected by interested persons on application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69598.]

SCOTCH DEMAND FOR MOTOR-TILLAGE IMPLEMENTS.

[Consul Rufus Fleming, Edinburgh, Nov. 23.]

The interest felt by farmers in the development of motor tillage and the use of motor tractors for reaping, thrashing, and road hauling was shown by the large attendance of leading landowners and tenants from many parts of Scotland at the exhibition tests of machines near Stirling, on October 5 and 6, under the auspices of the Highland and Agricultural Society, and later in the same month at Inverness.

Railway delays and other unfortunate circumstances prevented the trials being carried through under ideal conditions, but the farmers were very favorably impressed, especially with the work done on a farm near Inverness, by machines plowing two furrows, three furrows, and four furrows, and adapted to all-round service as tractors. The Inverness trial was merely a demonstration, not an official test. Therefore no report was made on it.

The American machines seemed to be preferred for general purposes, and sales have been made of tractors ranging in value from \$1,125 to \$2,808, with the prospect of a steadily increasing trade. Several American motor plows and tractors have now come into this market. It is advisable that manufacturers should carefully consider local conditions and requirements. It is probable that the introduction of these motor machines will be gradual and attended with some difficulties.

Facts to be Considered by American Manufacturers.

There are two facts bearing on the use of motor tillage implements which our manufacturers who are looking toward this market should keep in view:

1. Owing to the wet climate, much of the land is tile drained, and this tiling, while generally from 2 to 3 feet underground, may be interfered with in not a few places by the very heavy type of motor plow or tractor.

2. The Scotch farmer uses only the type of plow that throws the furrow on edge or slightly more than half over. He will not have the design of plow that turns the ground completely over; and, in order to be salable here, a motor plow must be adapted by American makers to the Scottish method of tillage.

The use of motor implements has been rendered necessary in some sections of the country by the scarcity of men and horses. As an indication of the demand on the part of small farmers for such implements, it is noteworthy that in several counties committees of farmers have passed resolutions urging the Board of Agriculture for Scotland to endeavor to obtain for them the use of motor plows and other mechanical implements on cooperative lines.

It is thought that when motor implements shall have been adopted by the more progressive farmers the trade will expand indefinitely and the agricultural community will never go back to the old conditions. The farm tractor has so many labor-saving uses that it has become a necessity.

[Copies of the publication of the Highland and Agricultural Society of Scotland relating to the exhibition trial of motor tillage implements at King's Park farm, Stirling, in October, 1915, may be inspected on application to the Bureau of Foreign and Domestic Commerce or its branch offices. Lists of Edinburgh dealers in motor machinery for farms may also be obtained from the Bureau or its branch offices. Refer in either case to File No. 69545.]

AMERICAN TRADE METHODS IN NORWAY.

[Vice Consul Haakon E. Dahr, jr., Christiania, Oct. 7.]

Importers and local agents complain that American firms often change their representatives in Norway. The result is that Norwegian import agents and importers do not know how long they will be in possession of agencies or in connection with their respective American exporters. Importers and agents state that such treatment would never happen from Germany or England, except for very good reason.

This consulate has repeatedly informed exporters and manufacturers in the United States, in replying to their inquiries, that only one agent or one dealer should be addressed at a time. The city of Christiania—the population of which is 251,000—is a comparatively small city, where all these dealers and agents have some knowledge of one another. They inform one another that they have been addressed by such and such a firm, and the result is that such goods will not be handled and the exporter, perhaps, not answered.

All the local agents belong to an organization, the object of which is to see that no one acts dishonestly or unfairly. The agent or dealer whose actions are unsatisfactory to the organization is expelled and practically put on the blacklist. All adhere to the rule that no two agents must represent the same American exporter at the same time.

A prominent business man, member of a well-known automobile firm in this city which represents a certain American motor car, stated that a man of this city left for the United States a month ago to secure the sole agency of said car in Norway, after the firm in question had had the trouble of introducing the car for three or four years, and he further stated that his firm gradually had worked this special motor car successfully on the Norwegian market. Said firm is of good financial standing and of excellent repute.

If American exporters thus change their representative without any reason, importers in this country do not know when they will be ruined, as their whole business sometimes depends on one American agency.

Nearly all goods for Norway are now supplied from the United States; they were previously bought in England, Germany, France, and Italy. After the war has ended purchases will continue to be made from the United States, provided American exporters and manufacturers handle their goods and their representatives in Norway in the right way.

CANADIAN RESTRICTION ON SHAPE OF TRUNKS.

[Consul General Frederick M. Ryder, Winnipeg, Manitoba, Nov. 20.]

Considerable evidence on the subject of restricting the shape of baggage containers was submitted to the railway commission, which finally ruled that all trunks must be rectangular in shape, and that where the sides are too bulging trunks will not be accepted for transportation.

The limit of \$100 as liability for damage to baggage was upheld by the commission. This ruling applies also to the \$50 limit on children's baggage.

TRADE OF THE SUDAN.

[Indian Trade Journal, Oct. 22.]

The report of the director of the Commercial Intelligence Branch of the Central Economic Board, Khartum, recently issued, shows that the value of the imports into the Sudan in 1914, inclusive of Government stores, amounted to \$9,349,507, as compared with \$10,428,623 in 1913. In the first quarter of the current year the value of the import trade was \$1,694,960, as compared with \$2,565,956 during January-March, 1914.

At the beginning of 1914 the price of durra (sorghum), the principal food grain of the country, is said to have reached unprecedented prices. In order to tide the people over to the next harvest the Government imported durra from India. The quantity imported was 11,000 tons, and another 16,000 tons were imported by merchants on their own account. "The importation of the durra," says the report, "not only eked out the diminishing food supply but the prices at which it was possible to sell it largely prevented the exploitation of helpless people by local speculators. Prices remained high, but they were kept within limits which were reasonable, considering the circumstances. Most of the Indian durra was issued by the Government on loan at cost price on easy terms of repayment."

Imports of Principal Articles.

The following table shows the values of the imports of some of the principal articles in the years 1913 and 1914 and in the first quarter of each of the years 1914 and 1915:

Articles.	1913	1914	Jan.-Mar.	
			1914	1915
Durra and corn.....	\$287,648	\$1,058,776	\$227,061	\$1,908
Rice.....	123,817	147,326	24,325	2,477
Wheat flour.....	425,928	505,928	139,345	61,006
Sugar.....	1,279,001	1,181,753	340,020	261,646
Coffee.....	333,875	263,235	36,109	29,732
Tea.....	193,341	180,429	53,543	22,304
Tobacco, tobacco*, cigars, and cigarettes.....	233,619	216,899	59,123	56,573
Coal.....	534,027	379,765	125,681	49,596
Soap.....	141,033	121,094	37,275	29,727
Cotton fabrics.....	2,489,374	1,696,546	645,811	471,713
Machinery (electrical, agricultural, etc.) and parts.....	100,776	233,927	106,019	13,890
Empty sacks.....	147,376	69,681	35,288	58,716

* Mixture of tobacco and other ingredients, which is smoked in water pipes.

Principal Exports—General Situation Promising.

The value of the exports during the year 1914 amounted to \$5,043,145, as against \$5,858,374 in 1913. In spite of the war, exports increased, every effort being made to get produce out of the country while opportunity offered.

Ivory was the principal export affected immediately by the war. Exports in 1914 amounted to 203,617 pounds, as compared with 276,645 pounds in 1913. During the first three months of this year exports amounted to 15,373 pounds, as compared with 60,975 pounds in the first quarter of 1914. The exports of senna leaves and pods from the Sudan in 1914 were 681,815 pounds, valued at \$29,371, as compared with 1,785,189 pounds, valued at \$47,685, in 1913.

The values of some of the principal articles exported in 1913 and 1914 and in the first quarter of each of the years 1914 and 1915 are shown in the following table:

Articles.	1913	1914	Jan.-Mar.--	
			1914	1915
Cattle.....	\$369,064	\$493,648	\$198,061	\$135,176
Sheep and goats.....	479,763	474,974	160,430	160,323
Hides, untanned.....	112,804	242,002	70,275	101,223
Skins, untanned.....	157,711	189,945	78,618	111,635
Ivory.....	559,726	418,203	116,497	30,147
Durra.....	107,342	21,893	13,351	218,940
Cotton seed.....	104,282	61,832	10,404	158
Sesame.....	518,713	501,450	171,715	119,937
Dates.....	157,543	145,186	40,172	20,100
Gum.....	1,787,033	1,556,645	419,354	196,860
Cotton, ginned.....	751,880	487,157	164,434	38,976
Gold.....	216,513	326,846	60,760	80,177

The report states that the country has emerged not unsuccessfully from a time of great economic strain, during which agriculture has been more or less at a standstill in some of the most productive districts of the Sudan and many of the people have been in great want. Trade, however, has maintained a fair level, and substantial progress has been made toward recovery, owing to the excellent harvest reaped in 1914.

SOUTH AFRICA SEEKS TRADE WITH UNITED STATES.

[Consul General George H. Murphy, Cape Town, Oct. 18.]

The American consulate general at Cape Town has been informed by Mr. C. du P. Chiappini, Trades Commissioner of the Union Government at London, that, believing trade will be readjusted along new lines to a considerable extent after the restoration of peace, he thinks it probable that he will visit the United States in the near future. He also states that he believes the United States will in the future participate more extensively than heretofore in the trade of South Africa, both as a purchaser and as a seller.

Mr. Chiappini referred to the present lack of sufficient direct means of communication between the two countries, and said he was preparing a memorandum for submission to Parliament. He is anxious to increase the shipments of wool, mohair, and other South African products to the United States. In view of the fact that fruits ripen in the southern hemisphere during the fruitless months of northern latitudes, he believes a good trade can be built up for the exchange of oranges, apples, pears, plums, grapes, etc., if cold storage can be provided on fast vessels, with reasonable freight rates.

Would Preserve Trade Balance as Far as Possible.

Mr. Chiappini considers it good policy for any country to buy where it sells, thus providing cargoes in both directions and stimulating mutual good will, by preserving the trade balance as far as possible. The cargo products which South Africa has to offer the United States are comparatively few in number, consisting chiefly of wool, mohair, hides and skins, ostrich feathers, wattle bark, fresh fruit, and a few other articles.

It is suggested that, if Mr. Chiappini visits the United States, he should be given a sympathetic hearing and all possible assistance.

[Articles on American trade extension in South Africa were published in **COMMERCE REPORTS** for Sept. 2 and Nov. 15, 1915.]

ELEVATOR IN VANCOUVER AND CANADA'S GRAIN CROPS.

[Consul General R. E. Mansfield, Vancouver, British Columbia, Nov. 26.]

The Dominion Government has in course of construction in Vancouver a grain elevator with a capacity of 1,250,000 bushels. The plant, which is one of a series of elevators erected by the Government for storing and handling the grain products of the Prairie Provinces, is nearing completion and will be ready in the early part of next year.

The elevator is divided into two sections, the main structure being 126 feet long, 62 feet wide, and 200 feet high; the second section adjoining the principal building consists of 52 circular bins of solid concrete construction, rising to a height of 100 feet, and covering a space of 332 by 100 feet; between these bins are an equal number of inter-spaces, which can also be used for storing grain. The sheds into which trains will be run for unloading the grain are 152 by 92 feet.

The elevator, which is being constructed at a cost of \$250,000, is not as large as some of the Government elevators in Canada, there being one at Fort William with a capacity of 11,000,000 bushels. The elevator at Vancouver is designated as a terminal elevator, to be used for the temporary storage and transfer of grain while in transit from the wheat-producing district to the export markets.

How the Grain is Handled.

The grain will be unloaded from the cars into great hoppers under the main building; from there it will be conveyed to the top of the main building, where it will be weighed, inspected, classified, and distributed to the various storage tanks. There are also cleaners for grain that requires such treatment. After being classified and stored according to grade it will be conveyed from the storage tanks to the bagging department or to the holds of ships, which will anchor at the Government dock adjoining the elevator.

The Vancouver plant is one of the most modern and complete of the Government elevators in Canada, but not as large as some of those installed in the wheat-producing Provinces adjacent to the Great Lakes. The total Government elevator capacity of the Dominion is 152,000,000 bushels, divided into districts as follows: Eastern Canada, 30,000,000 bushels; Fort William district, 42,000,000 bushels; west of the Great Lakes, 80,000,000 bushels.

The Government terminal elevator in Vancouver is established to provide facilities for storing and handling grain from the western Provinces to be carried by water from the Pacific to the Atlantic coast, to Europe by way of the Panama Canal, and to the Orient. Water transportation via the canal is cheaper than by rail across the continent, and it is estimated that a considerable percentage of the grain grown in the Dominion west of the Great Lakes will pass through Vancouver, greatly increasing the tonnage and the importance of the principal Pacific port of the Dominion.

Estimated Yield of Grain for 1915.

The estimated yield of Canada's wheat crop for 1915 is considerably over 300,000,000 bushels from 12,986,400 acres, representing an

average yield per acre of 23.1 bushels. The total oat crop of the Dominion for 1915 is estimated at 488,000,000 bushels from 11,365,000 acres, an average yield of 42.94 bushels. Barley is placed at 51,655,000 bushels from 1,509,350 acres, an average per acre of 34.22 bushels; rye, 2,385,700 bushels from 112,300 acres, or 21.24 bushels per acre; flaxseed 12,199,600 bushels from 1,009,600 acres, or 12.08 bushels to the acre.

Of the total grain production of the Dominion there are credited to British Columbia, which is not an agricultural but a mineral and timber-producing district, 494,600 bushels of wheat from 16,000 acres, an average yield per acre of 30.91 bushels. Of the total estimated wheat yield of the Dominion, amounting to 308,839,800 bushels, there is credited to the prairie Provinces of Manitoba, Saskatchewan, and Alberta, 275,772,200 bushels. It is estimated that 175,000,000 bushels will be exported and a considerable percentage of the exports will pass through Vancouver and be transported on ships sailing from this port.

Wheat Shipments Via the Canal an Experiment.

If ships can be secured to carry the grain and other conditions are favorable, grain from the Prairie Provinces will pass through the new Dominion Government grain elevator at Vancouver some time in January.

It is announced by the Canadian Government authorities that much depends upon the first shipments through this port by way of the Panama Canal to prove whether grain can be successfully shipped from Vancouver in bulk. The moisture content of the best Canadian grain is 12.5 to 13 per cent, or about the same as that of Argentine grain which has crossed the equatorial zone in shipments without serious damage. Wheat from the United States has also crossed through the equator without spoiling, the moisture content being in some cases 11 per cent. These shipments, however, crossed the equator in sacks, and it remains to be seen whether wheat can be transported through the Panama Canal in bulk without being damaged.

Two factors will determine whether the Vancouver elevator will handle wheat next year for transport via Panama. These are whether there will be available tonnage and whether it can be carried by the Panama to Europe as economically as by the Atlantic route.

It is estimated that the railway transportation facilities are not sufficient to handle successfully and promptly the grain produced in the Prairie Provinces this year, and Vancouver is looked upon as the natural economic outlet for this important product of western Canada.

Report of South Australian Railways Commissioner.

American Commercial Attaché William C. Downs, of Melbourne, Australia, has transmitted to the Bureau of Foreign and Domestic Commerce a copy of the annual report of the South Australian Railways Commissioner for the year 1914-15. This may be examined at the Bureau or at one of its district offices.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Construction work, No. 2837.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until January 26, 1916, for the construction complete (including mechanical equipment and approaches) of the United States post office at Shelby, N. C. Drawings and specifications may be obtained from the custodian of the site at Shelby or at the Washington office.

Lock gates, No. 2838.—Sealed proposals will be received at the office of the United States engineer, Wheeling district, Wheeling, W. Va., until January 14, 1916, for furnishing and erecting steel lock gates for Dam No. 14, Ohio River. Further information may be had on application to the above-named office.

Lamp standards, No. 2839.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until January 5, 1916, for supplying bronze lamp standards for the United States customhouse at San Francisco, Cal., and the United States post office at Stamford, Conn., and for other buildings under the control of the Treasury Department, in accordance with specifications and drawings, copies of which may be had on application to the Washington office.

Lighthouse property, No. 2840.—Sealed proposals will be received at the office of the lighthouse inspector, San Francisco, Cal., until January 25, 1916, for purchase of condemned lighthouse property at Goat Island Lighthouse Depot, consisting of machinery, buoys, pipe fittings, old brass, rope, sacks, junk, etc. Further information may be had on application to the above-named office.

Construction work, No. 2841.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until January 27, 1916, for the construction complete (including mechanical equipment and approaches) of the United States post office at Ellensburg, Wash. Drawings and specifications may be obtained from the custodian of the site at Ellensburg or at the Washington office.

Medical supplies, No. 2842.—Sealed proposals will be received at the Field Medical Supply Depot, United States Army, 21 M Street NE., Washington, D. C., until January 4, 1915, for furnishing and delivering 2,000 gross compressed gauze bandages, 30,000 packages of sterilized absorbent cotton, 50,000 first-aid packets; 5,000 rolls of sterilized absorbent gauze, 100,000 packages of sublimated gauze, and 10,000 spools of adhesive plaster.

Glass chimneys, etc., No. 2843.—Sealed proposals will be received at the office of the Lighthouse Inspector, Tompkinsville, N. Y., for the purchase of the following unserviceable public property: Glass chimneys, marine boilers, pumps, hoisting engines, and iron junk. Further information may be had on application to the above-mentioned office.

Turkeys, No. 2844.—Sealed proposals will be received at the office of the quartermaster, United States Army, 308 Gumbel Building, Kansas City, Mo., until December 20, 1915, for delivery, on or before December 23, 1915, 2,366 pounds of turkey.

Engine and boiler, No. 2845.—Sealed proposals will be received by the lighthouse inspector at Portland, Oreg., for the purchase of one Erie City, No. 6, 25-horsepower horizontal return tubular portable boiler and one horizontal steam engine, etc. Specifications, etc., may be had on application to the above-named official.

Water coolers, No. 2846.—Sealed proposals will be received at the medical supply depot, United States Army, 543 Greenwich Street, New York City, until December 24, 1915, for furnishing 132 water coolers, iron tank, porcelain lined, wood jacket, 6 gallons, marked "Medical Department, U. S. A.," boxed separately.

Medical books, No. 2847.—Sealed proposals will be received at the medical supply depot, United States Army, 543 Greenwich Street, New York City, until December 24, 1915, for furnishing 20 copies of La Garde's "Gunshot Injuries"; 14 copies of Harvard's "Military Hygiene"; 20 copies of Potter's "Materia Medica, Therapeutics, and Pharmacy"; 20 copies of Greene's "Medical Diagnosis"; 20 copies of Straub's "Medical Service in Campaign"; 20 copies of Hughes's "Practice of Medicine"; 20 copies of Bennie's "Surgery"; 20 copies of Stewart's "Surgery"; and 20 copies of Harrison & Munson's "Troop Leading."

SOUTH AFRICA'S PURCHASES OF COTTON GOODS.

[Consul General George H. Murphy, Cape Town, Oct. 29.]

South Africa's imports of cotton manufactures during the six months ended September 30 were nearly 21 per cent greater than in the corresponding period of 1914, every month but April contributing to this increase. The chief articles imported were:

Cotton manufactures.	April.	May.	June.	July.	August.	September.	Total.
Piece goods:							
1914.....	\$704,226	\$630,797	\$483,320	\$719,051	\$704,460	\$522,232	\$3,746,746
1915.....	467,531	682,440	708,631	940,796	874,267	1,143,983	4,826,956

1915.....	835,772	1,319,863	1,328,511	1,673,147	1,491,736	1,884,678	8,533,709

MACHINERY CATALOGUES FROM ITALY.

Consul Jay White, at Naples, has forwarded to the Bureau of Foreign and Domestic Commerce catalogues of dealers at Naples in general machinery, olive presses, etc., fire engines, pumps, agricultural implements, mill machinery, macaroni machinery, and brick-making machinery. The dealers issuing the catalogues submitted them with the statement that present retail prices are about 15 per cent higher than those stated in the catalogues and that wholesale prices are about 20 per cent lower than retail prices. The catalogues may be seen at the Bureau of Foreign and Domestic Commerce or its district offices. Refer to file No. 69452.

District Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 403 Third National Bank Building; Atlanta, 531 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative district offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its district offices. Request for each opportunity should be on a separate sheet and the file number given.

Toys, No. 19580.—A letter to the Bureau from a business man in Canada states that he desires to represent manufacturers of toys.

General representation, No. 19581.—The Bureau is in receipt of a letter from a firm in Brazil which desires to act as agent for American manufacturers or exporters. No particular line of goods is mentioned.

Capital and investment, No. 19582.—An American consular officer reports that a company in Chile is anxious to secure American capital for the development of an irrigation scheme. It is stated that the company owns 31,000 acres of land and desires \$1,500,000 for this project, for which excellent terms can be made.

Dry goods, cereals, etc., No. 19583.—The Bureau is in receipt of a letter from a firm in Porto Rico desiring to represent manufacturers of dry goods (cotton), cereals, rice, and beans.

Chinaware, stationery, etc., No. 19584.—A report from an American consular officer in India states that a business man in his district desires to be placed in communication with manufacturers of chinaware, stationery, pictures, and perfumery.

Dress goods, leather goods, etc., No. 19585.—An American consular officer in Denmark reports that an importing agent desires to represent manufacturers of dress goods, principally blue and black chevrons and serges; cotton velvets and velveteens; leather goods, such as glazed kids; ribbons, silks, linen and silk thread; buttons and tarpaulin cloth and cotton bags. Bank references are given.

Cotton prints, No. 19586.—A retail merchant in Venezuela informs an American consular officer that he desires to receive samples and prices of cotton prints, such as retail from 5 to 10 cents per yard. Correspondence should be in Spanish.

Metal hollow ware, No. 19587.—A report from an American consular officer in Greece states that a company of retail merchants desires to communicate with firms interested in the exportation of metal hollow ware of all kinds for household use. The articles chiefly in demand are saucepans, meat dishes, shallow and deep; stewpans, with and without covers; dinner pails, ladles, soap dishes, buckets, washbasins, etc. Prices should be quoted c. i. f. Patras, if possible, and correspondence may be in English.

Codfish, No. 19588.—An American consular officer reports that a firm in Brazil desires to import codfish from the United States. Correspondence must be in Portuguese and quotations c. i. f. port of destination.

Hospital equipment, No. 19589.—A Government official informs an American consular officer that he desires to receive catalogues and prices from manufacturers of hospital beds and equipment. Prices should be quoted c. i. f. port of destination in rubles, if possible. Correspondence should be in Russian.

Perfumery, photographic materials, thread, etc., No. 19590.—A report from an American consular officer states that a commission merchant in the Canary Islands desires to purchase perfumery, photographic materials, silk and cotton thread, varnishes, paints, and candles. The inquirer states that he is willing to pay cash against documents at port of destination. References are given. Correspondence should be in Spanish.

Household and agricultural hardware, etc., No. 19591.—An American consular officer in France reports that a commission merchant is desirous of making connections, on a purely commission basis, with manufacturers of household and agricultural hardware and lighting and heating apparatus.

Hosiery, No. 19592.—A business man in Canada informs an American consular officer that he desires to be placed in communication with exporters of women's cashmere hosiery, to be handled on a commission basis. It is stated that the present rate of duty on cashmere hosiery to Canada is 42½ per cent.

RECORD-BREAKING CUBAN SUGAR CROP.

[Special Agent Garrard Harris, Cuba, Dec. 11.]

Grinding has commenced on the sugar crop of 1915-16, with 188 centrals as against 176 of last season, 12 fine, large, new modern mills having been gotten ready. The machinery for these came from the United States. The condition of the cane is declared to be the best in years. Prevailing cool weather has ripened it properly and added a higher saccharine content than usual.

Estimates of experts whose figures are always accepted as the best obtainable forecast show that the crop now under way will be a record one. What it means to the prosperity of the island and to trade generally can easily be foreseen when the crop of 1914-15 was valued at approximately \$205,000,000 and had the effect of electrifying all avenues of business and putting Cuban industry and trade in the best position it has yet held. If prevailing or approximate prices prevail—as there now seems to be no reason they will not—the effect of the present crop will be tremendous. The experts estimate the crop now under way at 3,175,000 tons, which ought, at average prices for the crop just completed, to bring \$250,000,000, an increase of \$45,000,000 over last year. Showing the rapid increase in value of the Cuban sugar the following figures tell how prosperity has come to the island: Crop of 1910-11, \$84,000,000; of 1911-12, \$121,467,749; of 1912-13, \$115,394,602; of 1913-14, \$130,424,397; of 1914-15, \$205,000,000. The United States has been selling Cuba 83.14 per cent of the goods purchased, and the percentage will run greater this year.

DANISH TRADE EXTENSION IN RUSSIA.

[Russian-American Journal of Commerce, December.]

That the Danes are eager to increase their trade with Russia can be seen from the Danish Calendar for Exports, just published. The calendar has been published with the help of the Danish Department of Commerce and 6,000 copies of it have been sent to Russia to be distributed free of charge among the leading commercial and industrial circles.

BUREAU OF CHEMISTRY EXTENDS RESEARCH.

Work for increasing the production of foods, including new uses for farm and sea products, the utilization of wastes, and the development of methods for preventing spoilage in perishable products, has been greatly extended during the fiscal year ended June 30, 1915, according to the report of the Chief Chemist of the United States Department of Agriculture, which has just been published. The research work directed toward conserving the food supply, by developing new uses for products and preventing waste or spoilage, has been separated from that directed toward the detection of adulteration, with resultant increased activity and efficiency in both lines of work. It is intended, the report states, to give special attention to the development of research relating to the application of chemistry to agriculture.

Eliminating Waste and Inefficient Production.

A laboratory was established to study the decomposition and fermentation of food products with the object of lessening the great waste that occurs from these causes. Studies are under way relating to spoilage in cheese, butter, cereals, and forage and feeding stuffs. Investigations looking to better methods for handling, packing, storing, and shipping fish, poultry, and eggs were continued throughout the year.

The enormous losses due to the breakage of eggs in transit have been reduced by the adoption on the part of the shippers of methods developed by these studies for bracing eggs in cases, bracing cases in cars, and bracing, buffing, and shifting cars. Experiments were commenced to determine the best methods of feeding poultry for increase in weight and quality. The sardine investigations were continued and resulted in a further improvement of the quality of the pack. Methods for utilizing waste in the sardine industry were recommended, and in cooperation with the Bureau of Animal Industry the feeding value of fish meal was determined.

Improvement of Methods of Making Cane Sirup.

Important progress was made in investigations for the improvement of the methods of manufacture of cane sirup, in order to obtain a uniformly bright sirup that will not ferment. The work to improve methods of manufacture of candy, jams, preserves, jellies, and marmalades was continued. Experiments in drying potatoes on a commercial scale for stock feed were begun during the year. Other work on potatoes included methods for the manufacture of potato starch, glucose, and dextrin. This work is designed to utilize cull potatoes which are not suitable for food purposes and to provide an outlet for the surplus supply in years of overproduction. Investigations for a similar purpose were continued in connection with citrus fruits by giving attention to developing methods for manufacturing citric acid, lemon oil, orange juice, orange vinegar, and other by-products from oranges and lemons.

Cooperation with State officials has been particularly effective in advancing the work on standards. A joint committee on definitions and standards, representing the Federal officials and the State organizations that are interested in food-law enforcement, has been formed. During the past year standards for a number of food products have been formulated and adopted.

WORK OF THE BUREAU OF ANIMAL INDUSTRY.

The annual report of the Bureau of Animal Industry, of the Department of Agriculture, which has just been published, states that satisfactory progress was made during the year in the work of eradicating a number of animal diseases. In addition to stamping out the foot-and-mouth disease, much was done in the South toward the elimination of the cattle tick, and in the West the eradication of scabies of sheep and cattle has been brought nearer to completion.

In the territory already freed of cattle ticks which, including the area freed since the beginning of the current fiscal year, is now more than one-third of that formerly quarantined, work is being done for the building up of the beef cattle and dairy industries. Effective co-operation, it is said, has come from transportation companies, commercial clubs, bankers, and other business men who were farsighted enough to realize that the eradication of the cattle tick and the subsequent development of the live-stock industry mean an increase of business for all interests concerned. The work of eradication is being done in cooperation with State authorities, and is being pushed forward as rapidly as possible with the means at hand.

During the fiscal year ended June 30, 1914, nearly 10,000 square miles in the State of Utah were released from quarantine on account of sheep scabies. Nearly 4,000,000 sheep were dipped in this quarantined area during the fiscal year, in cooperation with State officials. A total of 74,200 square miles was also released from quarantine on account of cattle scabies. Progress is reported in the eradication of dourine in horses and in the treatment of anthrax.

Not Yet Ready for Country-Wide Hog-Cholera Campaign.

Hog-cholera work has been continued, the report says, and now consists of investigations into the possibilities of county control, educational work designed to secure the aid of the farmers, and the enforcement of the virus-serum-toxin law. The results show, the report says, that losses from hog cholera can be reduced to a minimum and the industry of hog raising increased in any given area. At the present time, however, a country-wide campaign for the eradication of hog cholera is regarded as ill advised. As a preliminary to such a campaign, the various States should have more effective laws for dealing with diseases of live stock and more effective legislation for the enforcement of the laws.

In connection with the problems of production, the report calls attention to the value of the boys' and girls' pig clubs and poultry clubs. The pig clubs now have 9,000 members and the poultry clubs nearly 4,000. Improvement in the quality of market milk is noticeable as a result of the efforts of the department and various other agencies. Furthermore, by means of cow-testing associations, the milk yield of many dairy herds is being increased and the cost reduced. The report calls attention to the increasing extent of the meat-inspection service, more than 58,000,000 animals having been slaughtered under Federal inspection during the fiscal year ended June 30, 1915. Over seven and a half billion pounds of meat and meat-food products were prepared under Federal inspection.

According to the New Zealand Trade Review, the estimated population of New Zealand on September 30, 1915, was 1,164,745. Google

LARGE INCREASE IN AMERICAN SHIPBUILDING.

The following tables, made public by Secretary of Commerce Redfield, are supplementary to the detailed statistics in the annual report of the Commissioner of Navigation for the fiscal year ended June 30, 1915, and bring down to December 1 the figures of the United States merchant marine and of the vessels being constructed or under contract to be built in American shipyards, aggregating 761,511 gross tons.

Following is a brief summary of numbers of the larger ocean steamers which make up the great bulk of the 761,511 gross tons, classed as to size:

Construction periods.	10,000 gross tons or over.	7,000 to 10,000	5,000 to 7,000	4,000 to 5,000	3,000 to 4,000	Total.
Building or under contract on July 1, 1915..	8	5	19	4	10	46
Ordered between July 1 and Dec. 1, 1915....	5	15	17	6	11	54
Total.....	13	20	36	10	21	100

These same vessels, of 3,000 tons or more, grouped according to the class of traffic for which they are designed, with the number and gross tonnage in each class, are:

Classes of vessels.	Building or under contract on July 1, 1915.		Contracted for between July 1 and Dec. 1, 1915.		Total.	
	No.	Gross tons.	No.	Gross tons.	No.	Gross tons.
Coasters.....	6	26,475	5	25,610	11	51,085
Bulk oil.....	19	165,660	15	195,330	34	360,990
General freight.....	19	93,774	15	72,474	34	166,248
Passenger and freight.....	2	9,800	4	30,228	6	40,028
Total.....	46	282,718	39	323,642	85	606,360

* Four of 3,500 gross tons each for Norwegian owners; two of 5,000 gross tons each for foreign owners.

Record of Merchant Construction and Contracts.

The shipbuilding companies that are included in the record of merchant construction and contracts, both on July 1 and since July 1, are as follows:

Companies.	On July 1.		Since July 1.		Total.	
	No.	Gross tons.	No.	Gross tons.	No.	Gross tons.
New York Shipbuilding Co., Camden, N. J.....	13	89,000	9	25,610	22	114,610
Fox River Shipbuilding Corporation, Quincy, Mass.....	5	25,000	3	17,000	8	42,000

Statement of United States merchant marine as at Dec. 1, 1915.

	Vessels.	Gross tons.
Documented tonnage, June 30, 1915.....	26,701	8,389,429
Net increase, July 1 to Nov. 30, 1915.....	187	53,829
Total, Dec. 1, 1915.....	26,888	8,441,258

The above net increase is brought about as follows:

	Vessels.	Gross tons.
Built in the United States and officially numbered.....	206	84,382
American registry authorized under the act of Aug. 18, 1914.....	23	60,354
Total, Dec. 1, 1915.....	459	144,736
Deduct—lost, abandoned, sold aliens, etc.....	272	10,107
Net increase, Dec. 1, 1915.....	187	53,829

Foreign-built vessels admitted to American registry under the act of Aug. 18, 1914.

	Vessels.	Gross tons.
During the fiscal year ended June 30, 1915.....	148	523,379
July 1 to Nov. 30, 1915.....	23	60,354
Total Dec. 1, 1915.....	171	583,733

* Included in this total are 6 yachts of 2,681 gross tons.

Vessels transferred to other flags since the act of Aug. 18, 1914.

	Vessels.	Gross tons.
Aug. 18, 1914 to June 30, 1915.....	66	13,017
July 1 to Nov. 30, 1915.....	26	24,124
Total, Dec. 1, 1915.....	92	37,201

* Included in this total are 3 vessels of 9,311 gross tons, admitted to American registry under the act of Aug. 18, 1914, and subsequently transferred as follows: Steamer *Oceans*, 7,796 gross tons, to Spanish flag, Sept. 22, 1915; schooner-barge *Turpan*, 869 gross tons to Cuban flag, Nov. 23, 1915; schooner-barge *Panuco*, 646 gross tons, to Cuban flag, Nov. 22, 1915.

STATISTICS OF CITIES OF THE UNITED STATES.

The commission form of government is in effect in 81 of the 204 cities in the United States of over 30,000 inhabitants. Civil-service regulations are applied to the appointment of policemen in 122 such cities, including all those of more than 300,000 inhabitants. Police-women are employed in 26 cities. Municipal prohibition prevails in 15 cities, State prohibition in 17, and county and parish prohibition in 3. In 15 cities certain saloons are licensed to sell malt liquors only. These are a few of the significant and interesting facts which will be brought out in a report under the title of "General Statistics of Cities, 1915," to be issued in the near future by the United States Bureau of the Census.

The largest city now operating under the commission form of government is New Orleans, whose population is estimated at about 365,000; but Buffalo, with a population of about 460,000, has recently voted to inaugurate this system on January 1, 1916. Next in order are Washington, D. C., with nearly 350,000 inhabitants, Portland, Oreg., with about 260,000, and Denver, with about 250,000.

In these cities the commissions range in size from three to seven members. Those in St. Paul and Omaha have seven members each; those in San Diego, Cal., and Fort Worth, Tex., six each; and that in Huntington, W. Va., four. All the other commissions are composed of either three or five members, the great majority having five. The salaries paid municipal commissioners range from \$500 a year in Jackson, Mich., and Springfield, Ohio, to \$7,000 a year in Birmingham, Ala., and their terms of office vary from 1 to 4 years.

"City Manager" Has Charge of Administrative Work.

Dayton, Ohio, has a commission of five members, which decides matters of general policy, and a "city manager," appointed by the commission, who looks after the administrative work. The presiding officer of the commission receives \$1,800 per annum, the other members \$1,200 and the city manager \$12,500.

The larger cities still cling to the older form of government by mayor and council. In all, 123 cities of over 30,000, including all having more than 400,000 inhabitants, are governed in this manner. The mayors' salaries range from \$100 per annum in Flint, Mich., to \$15,000 in New York City, and their terms of office from 1 to 4 years.

A total of 51,045 police officials, patrolmen, detectives, and civilian employees are engaged in the work of maintaining peace and order in the 204 cities. Of this total, 5,586 are officers, exclusive of detectives, 34,320 are patrolmen, 3,303 are detectives, and 3,015 are civilian employees. Of the patrolmen, 31,294 are unmounted and 1,804 are mounted on horses, 708 on motorcycles, and 514 on bicycles. Park policemen number 248, and policemen detailed at municipal buildings and courts, 390.

New York has 526 mounted policemen, Philadelphia 435, and Chicago 186. No other city has as many as 100. In New York City 135 of the mounted police ride bicycles, but Chicago and Philadelphia rely entirely upon the horse and the motorcycle. Washington, D. C., has 61 bicycle policemen—far more than any other city except New York, and its total number of mounted policemen, 101, is

greater than that of any other city except New York, Chicago, and Philadelphia.

The highest paid patrolmen are those of San Francisco, who are ungraded and receive \$1,464 per annum; and the lowest paid—disregarding those in the lower grades in a few cities—are in Williamsport, Pa., where patrolmen are ungraded and receive \$756 per annum.

Terms of Service Necessary to Attain Highest Grade.

The longest term of service necessary to attain the highest grade is found in Savannah, Ga. In this city the patrolman serves five years at \$900, five at \$960, and five more at \$1,020, and thereafter receives \$1,080. In Terre Haute, Ind., and Charleston, S. C., the maximum rates of pay—\$1,080 and \$1,020, respectively—are reached after 10 years of service.

Among cities of 100,000 or more, the longest term of service necessary to attain the highest grade is found in Washington, D. C., where, after three years of service at \$900 and five more at \$1,080, the patrolman finally receives \$1,200 per annum.

Of police women, Chicago has 21; Baltimore, Los Angeles, and Seattle, 5 each; Pittsburgh, 4; San Francisco, Portland, Oreg., and St. Paul, 3 each; and Dayton, Ohio, Topeka, Kans., and Minneapolis, Minn., 2 each. Fifteen other cities have 1 each. Their pay ranges from \$625 per annum in Dayton to \$1,200 in San Francisco.

State, Municipal, and County Prohibition.

Prohibition by State law prevails in 17 cities of 30,000 and over—4 each in Georgia and Tennessee, 3 in Kansas, 2 each in Oklahoma and West Virginia, and 1 each in Maine and North Carolina. Municipal prohibition is in effect in 15 cities—8 in Massachusetts, 2 each in Illinois and California, and 1 each in Pennsylvania, Iowa, and Washington. County prohibition has closed the saloons in 2 Michigan cities and parish prohibition has closed them in 1 Louisiana city. There are thus 35 cities in which total prohibition prevails. In addition, there are 8—4 in Ohio, 2 in Colorado, and 1 each in Pennsylvania and Illinois—in which partial prohibition is in effect through the operation of what is known as the "district" system, under which certain districts or sections of the city may, by popular vote, abolish their saloons, while other sections retain them.

The largest city which has adopted prohibition independently of State or county action in the matter is Cambridge, Mass., whose population is estimated at between 110,000 and 111,000. The largest city in which the saloons have been closed by State enactment is Atlanta, Ga., with approximately 180,000 inhabitants.

Of the 204 cities of over 30,000, 155 have municipally owned water-supply systems, the total estimated value of which is \$1,071,000,000. Municipal ownership in this field has been in force in Philadelphia, which built its plant in 1801 and has operated it continuously since that time, for a longer period than in any other city.

The bulk of the water supply for most cities comes, of course, from lakes and streams, but there are 3,634 wells in operation in 47 cities. Of these, 1,367 are in New York City alone.

Five processes of purification are employed, namely, sedimentation, coagulation, slow sand filtration, mechanical filtration, and chemical sterilization.

UNITED STATES SHIPPING FORMALINE TO JAPAN.

[Consul General George H. Scidmore, Yokohama, Japan, Nov. 19.]

The United States did not begin to export formaline to Japan until early in 1915. A resident American merchant states that the goods which now come from the United States are satisfactory when packed in glass carboys, but when packed in wooden barrels the formaline arrives discolored and does not pass the required test. It is then either rejected or disposed of at a greatly reduced figure. The fact that shipments of formaline in glass carboys must be stored on deck involves an expensive risk, and as a result the business does not prove attractive to many shippers.

Formaline which arrived in Japan from markets other than American during 1912, 1913, and 1914, was packed in aluminum jugs, these jugs being protected by a wicker wrapper. When thus packed it always reached Japan in a satisfactory condition.

The greater part of the formaline imported is used in the silk industry of Japan as a disinfectant. The import duty is 5.10 yen per 100 kin, or \$1.92 per 100 pounds. The amounts and value of the imports of formaline during 1912, 1913, and 1914 were:

Places of origin.	1914		1913		1912

RULES FOR ITALIAN WHEAT AND BREAD.

[Consul General David F. Wilber, Genoa, Oct. 2.]

A decree was issued at Rome August 23, 1915, providing for the production of a uniform kind of flour, and making regulations as to its sale in lead-sealed sacks with proper labeling. There is also a prohibition of the removal of certain elements from flour or the adding to it of other commercial or inferior values. The decree was, in part:

Mills are prohibited from producing flour from wheat intended for bread making in which less than 80 per cent of the wheat is used. It is also prohibited to take from flour normal elements and add to it other commercial values and inferior foodstuffs. It is prohibited to keep, sell, or deliver wheat flour intended for the production of bread, unless it is put into lead-sealed sacks. Each sack shall bear the following indications: Name of the operating mill, quality of flour, and limit of sifting, or a declaration that the flour was not sifted. For such indications, operating mills shall make use of labels, lead or otherwise, firmly attached to the sack.

Officials and agents indicated in article 4 of the ministerial decree of March 7, 1915, shall be charged with the enforcement of the law relative to the regulations regarding the production and commerce in flour and bread, and shall provide for haling offenders before the judicial authority.

KARACHI TO USE SMALL ENGINES EXTENSIVELY.

[Consul James Oliver Lalag, Karachi, India, Oct. 11.]

A firm in Karachi desires to be placed in communication with American manufacturers of small engines capable of being driven by electricity. The firm will import about 15 of these engines for its first order. They must be capable of developing about 5 horsepower and should be as simple as possible in construction. If the first order proves successful, the firm is ready to push the engines upcountry, and the successful American house or houses will find a steady market here.

In India the lower and middle classes do not, as a rule, leave their homes or the districts where they were born. It thus happens that members of enormous "families" live close to one another. A "family" consists of everyone of a group even remotely related, such as fourth or fifth cousins. Very often there is a kind of pooling of interests among the members of such a group.

Family Groups Buy Machines for Grinding.

The food is largely "chapatties," a kind of flat cake made of roughly ground wheat, millet, chick peas, or rice. The members of a group often "chip in" and buy a machine to grind the meal (called "atta" locally). Sometimes this small mill is run by an oil engine, or by one that can be stoked with wood or coal, and sometimes, when the mill is small, it is run by hand. The mills look very much like the coffee-grinding mill in an American grocery store, but are usually larger.

Recently electricity has made great strides in India, and the natives are learning to use it. The local electrical works recently advertised to furnish not only electricity for lighting, but also power for mechanical purposes. The firm mentioned in this report sees a future for small engines run by power furnished by the electrical works, and wants to get in "on the ground floor." Several of these small engines are already in use here for the purpose mentioned, but as these machines are not kept in stock here the supply must come from abroad.

American manufacturers are urged to try to come to an understanding with this firm, as it will mean steady, continuing business. The firm is one of the largest in northwest India. It has placed a credit of \$50,000 in Detroit, Mich., for the purchase of American goods, and is now in daily consultation with the consulate over an electrical proposition involving another \$50,000.

American Trade Journals Produce Business.

The head of the firm is kept supplied with various American trade journals, and last week the house ordered a large bill of goods from advertisements in these papers, comprising many small articles such as are sold here in general stores—candlesticks, small metal pitchers, small night lamps to be used in babies' rooms, and other similar articles.

American manufacturers should not delay, as they did when several firms were advised of the prospective market here for electrical goods some time ago. They went to sleep, and now an English firm is wiring the town and supplying all the bulbs and other fixtures.

[The name of the firm mentioned in this dispatch may be obtained of the Bureau of Foreign and Domestic Commerce or its branch offices by referring to Trade Opportunity No. 19491.]

AMERICAN PRODUCTION OF SODIUM AND SODIUM PEROXIDE.

[Commercial Agent Thomas H. Norton.]

The production of sodium and sodium peroxide is now attracting considerable attention. The latter is now manufactured exclusively from metallic sodium; it serves also as the starting point for the manufacture of sodium cyanide. The American production of sodium has been somewhat limited. The output has been used chiefly for the manufacture of peroxide. At present, there is an enormous demand for both sodium peroxide and sodium cyanide, the former for use chiefly in bleaching operations, the latter for use in metallurgy. Prior to the current war the bleaching and metallurgical interests of this country were largely dependent upon European sources for both salts.

The works at Niagara Falls, currently engaged in the manufacture of metallic sodium, are unable to meet more than a fraction of the present demand for this metal from manufacturers of sodium peroxide and from manufacturers of cyanide.

In view of the urgent necessities of a large group of American manufacturers, and of a multitude of manufacturing interests dependent upon the use of the bleaching agent, as well as upon the use of cyanides in the extraction of gold, it would appear as if the time is ripe for the establishment, upon a much larger scale than heretofore has been the case, of American production of sodium.

It is worthy of note in this connection that the mechanical equipment for the Castner process of the electrolytic manufacture of sodium from sodium hydrate (caustic soda) is exceedingly simple. The question naturally arises whether the many interests dependent upon these two vital salts may not find it advantageous to unite and organize without delay for the manufacture of metallic sodium. It would take but a few weeks for the firms now so well equipped for the construction of electrolytic devices to put up the necessary plant. The electrical equipment is of a standard character, and is probably kept constantly in stock.

It might also be noted that the full complement of electric power at Niagara Falls, guaranteed under the treaty of 1910, for use on the American side of the Falls, has not yet attained its maximum limit. The Castner patents expired a few years since. The American output of caustic soda is now quite abundant. The available power at the Falls would be fully able to meet any additional demand in connection with the enlargement of the sodium industry.

The Darling process for the manufacture of metallic sodium has been utilized to some extent at Philadelphia. It is based upon the use of fused sodium nitrate as electrolyte. The mechanical equipment needed for the electrolytic decomposition of sodium nitrate is quite as simple as that employed in the Castner process.

It is also worthy of note at the present moment, when manufacturers of dyestuffs and of high explosives, as well as a multitude of other chemicals, are struggling with the increasing shortage in the supply of nitric acid, that the acid mentioned is the only by-product resultant from the decomposition of sodium nitrate when exposed to the action of the electric current.

The prompt installation of the necessary plant for transforming Chile saltpeter (sodium nitrate) into metallic sodium, and into nitric

acid, might be advantageously taken up under existing circumstances with great benefit to a large variety of consumers of both products. Very full details, with plans of the mechanical equipment, are to be found in Thorpe's Dictionary of Applied Chemistry, Vol. V, page 1, and in other standard authorities.

ALFALFA STARTED IN CUBA.

[Special Agent Garrard Harris.]

The successful demonstration by President Mario Menocal of the adaptability of alfalfa for Cuba is regarded as one of considerable importance for his country. It also opens up large possibilities of new lines of business with the island Republic, such, for instance, as mowers, hay rakes, baling outfits, machinery for the mixing of feeds, of which alfalfa forms a component. Additionally, it will give decided impetus to the raising of fine stock in Cuba.

The alfalfa at President Menocal's ranch "El Chico," situate about 10 miles from Habana, was planted in May last, and up to the middle of November there had been four cuttings. There is over an acre in the demonstration plot. It is well grown, has a fine color, and is as thrifty as any to be found in the United States. The soil of Cuba, owing to the coral formation, has a high content of lime, and this is indispensable to the plant. The experiment station has made several attempts to get a stand of alfalfa, but owing to some deficiency in the inoculating chemicals the bacteria did not "take" and the plants did not grow. With this fine healthy plot of it available, with soil from the president's ranch, there will be no difficulty in extending the area in the useful alfalfa; and, as planters seem greatly interested, it is fair to assume that the next few years will see many large fields of it in Cuba.

PAINTS AND VARNISHES IN COSTA RICA.

[Consul Chester Donaldson, Port Limon, Nov. 25.]

The total importation of paints, varnishes, and enamels at Port Limon, Costa Rica, is valued at \$40,000 per annum, about 50 per cent of which is from England, 40 per cent from the United States, and 10 per cent from Germany and other countries. [A list of the principal importers of paints, varnishes, and enamels has been furnished by Consul Chester Donaldson and may be obtained from the Bureau of Foreign and Domestic Commerce or its district offices. Refer to File No. 70004.]

The duty on paints (without color) is 0.20 colon per kilo, equivalent, including the surtax of 5 per cent of the duty on imports at Port Limon, to \$1.43 per 100 pounds. (1 kilo=2.2046 pounds; 1 colon=46.5 cents.)

ANOTHER VESSEL FOR CARIBBEAN TRADE.

[Special Agent Garrard Harris.]

The Caribbean & Southern Steamship Co. (formerly Seeborg Line), operating out of New York, Mobile, and New Orleans and specializing somewhat on the territory as its name indicates, has just purchased the Eudorean steamship *Constitution*, of 5,600 tons, which vessel will be used in the rapidly growing business of the line.

MAIL-ORDER TRADE IN BRITISH COLUMBIA.

[Consul Thomas D. Bowman, Fernie, Canada, Nov. 24.]

Under normal conditions the Fernie consular district appears to offer a fair field for development by American mail-order houses. This district is located in the heart of the Rocky Mountains and most of the settlements follow the lines of railroads through the narrow passes and valleys. Lumbering and mining are the chief industries. There are no large towns, the largest being Nelson, with a population locally estimated at 7,000.

It is not practicable for the stores in these small towns to carry as large and varied an assortment of stock in many lines (especially those in which the styles are continually changing) as the large stores in the cities and the mail-order houses. The nearest large city that can offer this district superior advantages in shopping is Calgary, Alberta, which is over 200 miles from Fernie. Consequently mail-order houses do a thriving business in Fernie, and as similar conditions obtain through most of the district, it is safe to assume that the same thing is true of other towns. A firm of Winnipeg, Manitoba, appears to get the bulk of this trade.

American Share of Trade.

American dealers have had a share of the trade in this district, although the present war surtax, which increases the duty on all American goods $7\frac{1}{2}$ per cent, making the total duty range as high as $42\frac{1}{2}$ per cent in some lines, is discouraging. But as preference for American goods has never been based upon cheapness alone, it may still be worth while for American firms to seek Canadian mail-order trade, as some are doing.

Among the classes of merchandise that are still being bought directly in the United States by local consumers who must pay the present heavy duties are shoes and women's clothing, including fancy trimmings and kindred lines. American goods have a good reputation here for "up-to-dateness" and style, and in any line of merchandise where advanced styles are an important factor the American goods will command attention. It is particularly in such lines that the consumer finds the local store inadequate and for this reason resorts to the mail-order catalogue.

Separate Catalogues for Different Kinds of Articles.

The following suggestions are the result of investigation into the practice of certain firms, complaints of local patrons of mail-order houses in general, and of American houses in particular.

American catalogues generally compare favorably with those of Canadian houses. Good illustrations and accurate descriptions are important. A poor picture gives a corresponding impression of the goods. Inaccurate or inadequate descriptions are bad for the trade. One handicap is the duty of \$0.15 per pound on mail-order catalogues imported by mail from the United States into Canada. For this reason it has been found practicable to issue several small catalogues, each covering a single line. One who desires to buy shoes only, for example, can receive a small shoe catalogue, and not have to pay duty upon a large catalogue containing also many other things in which he has no interest. It is not meant, however, that shoes

should necessarily be confined to one catalogue. It has been suggested that the mail-order houses of the United States send out an advance card or letter with a list of their various catalogues, giving the amount of duty upon each, if they so desire. Then the customers might select the catalogues that interest them. This applies, of course, to those firms doing a general merchandise trade. Houses handling only limited lines, like jewelry or women's clothing, generally do not need large catalogues. Another suggestion is that American firms might offer to credit the customer with the amount of the duty on their catalogues upon the first order received. However, it is believed that the consumers would not object to paying a small duty upon light catalogues if they were interested. [The name of a person of good standing who is prepared to furnish mailing lists upon request may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69417.]

Need of Accuracy in Correspondence and in Filling Orders.

At its best trading by mail has its disadvantages, the loss of time being one of them in this district. A person in Fernie recently asked a large mail-order house in the United States to send samples of goods for making riding breeches. He received in reply two books containing samples of every kind of cloth except those from which riding breeches are ordinarily made. In one of the books was a notice that the American firm carried a large line of corduroys, khaki, and fustian fabrics especially for making up riding breeches, samples of which would be sent upon request. The man had planned a hunting trip, and did not have time to wait another two weeks for samples. The American dealer lost his trade and disappointed him.

It is sometimes necessary to make inquiries regarding articles in a catalogue because of inadequate descriptions. It takes fully five days for a letter to pass between Fernie and New York. Allowing two or three days in which to fill an order, it may be seen that it takes almost half a month to get goods. The dealer should therefore exercise great care to answer inquiries and fill orders promptly and completely in order to obviate the necessity of further correspondence. Complaints have been heard that American firms do not always fill orders accurately, but sometimes substitute colors or send wrong sizes.

Parcel Post—Ports and Subports of Entry.

The parcel post offers a most convenient form of delivery to Canada for small articles. The merchandise is appraised at the nearest customhouse and the consignee is notified of the amount of duty. He may then remit the duty by mail and the goods will be forwarded to his post office by customs officers. However, most of the larger towns of this district have customs offices. The consignee need only go to the customs office, pay the duty, and receive the goods.

The following towns of British Columbia have customs offices: Fernie, Newgate, Natal, Flathead, Cranbrook, Kingsgate, Nelson, Juanita, Kaslo, Grand Forks, Cascade, Laurier, Greenwood, Phoenix, Midway, Revelstoke, and Golden. Goods may be consigned to any person at the above ports or subports, direct from the United States. Shippers should familiarize themselves with the requirements of the Canadian customs authorities regarding invoices.

CHEMICAL FERTILIZERS IN CUBA.

[Special Agent Garrard Harrie.]

The market for fertilizers in Cuba is a comparatively recent one. Their employment, however, has given such markedly good results that they are now firmly established. The more progressive growers who have used chemical fertilizers have obtained such increased yields that the other planters are being compelled, in self-defense, to adopt the same methods. It is inevitable that the marketing of fertilizers for both cane and tobacco will expand greatly and will furnish an important branch of trade in this island Republic.

A plant has been established near Habana for making sulphuric and hydrochloric acid, and a plant is in process of erection near Matanzas for the manufacture of complete fertilizer, the raw material being imported. Both plants were erected by American capital. In addition, German fertilizer plants and potash agencies maintain a propaganda, as does the Chilean nitrate sales department. There are agencies of several of the American packing interests on the island selling fertilizer.

The feature of the fertilizer trade that is considered a drawback is that sales are made on 12 months' time to the sugar planters and 9 months' to tobacco growers, direct, and without interest. This direct selling makes it necessary to maintain a branch office, and sales force and collection agency on the island to push sales, look after maturing paper, and the like. Notwithstanding this the fertilizer business is considered to have a great future ahead of it in Cuba. In 1913 Cuba imported 21,700 metric tons (metric ton = 2,204.6 pounds) of chemical fertilizers, value \$806,185, of which the United States supplied 16,220 tons, value \$613,697. In 1914 the imports dropped to 10,304 tons, valued at \$268,759, and the share of the United States to 3,153 tons, value \$78,349.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Peck, Willis R.....	Tsingtau, China.....	Jan. 31	Do.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Do.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(a)
Chamberlain, George A.....	Lourenço Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. R.....	Cornwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washington, D. C.
Donald, George K.....	Maracaibo, Venezuela.....	Feb. 17	153 Church Street, Mobile, Ala.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

SECOND FORECAST OF INDIAN COTTON CROP.¹

[Consul General James A. Smith, Calcutta, Oct. 30.]

The Department of Statistics has just published the second forecast of India's cotton crop for the season 1915-16, based on reports furnished by Provinces which comprise the entire cotton crop of India. The forecast relates generally to sowings made up to October 1.

The total area so far reported this year amounts to 16,253,000 acres as against 22,152,000 acres (revised figure) on this date last year, a decrease of 27 per cent.

The decrease is most noticeable in Ajmermerwara (58 per cent), Rajputana (44 per cent), Bombay, the Punjab, and the United Provinces (40 per cent each), Sind (28 per cent), Central India (22 per cent), Hyderabad (20 per cent), and the Central Provinces and Berar (13 per cent). Madras alone shows an increase of 6 per cent.

As stated in the first forecast issued in August last, the decrease in the area sown this year is attributed chiefly to the low prices of cotton obtained last year, and in some Provinces also to the vagaries of the monsoon. The present condition of the crop is reported to be on the whole fair to good, except in the Punjab, the Northwest Frontier Province, the United Provinces, Rajputana, and Burma. In these Provinces the unirrigated crop has suffered severely from want of rain.

The detailed figures of the second forecast for the Provinces and States are given in the statement below:

Provinces and States.	1915-16	1914-15	1913-14
	<i>Acres.</i>	<i>Acres.</i>	<i>Acres.</i>
Bombay and Baroda.....	3,917,000	4,727,000	6,004,000
Central Provinces and Berar.....	4,091,000	4,727,000	4,654,000
Madras.....	1,285,000	1,509,000	896,000
Punjab.....	1,090,000	1,821,000	1,980,000
United Provinces.....	850,000	1,408,000	1,341,000
Sind.....	200,000	223,000	291,000
Burma.....	220,000	287,000	252,000
Bihar and Orissa.....	68,000	71,000	84,000
Bengal.....	86,000	90,000	85,000
Northwest Frontier Province.....	51,000	58,000	59,000
Ajmer-Merwara.....	18,000	43,000	43,000
Assam.....	32,000	32,000	35,000
Hyderabad.....	2,888,000	3,617,000	3,439,000
Central India.....	1,117,000	1,435,000	1,368,000
Rajputana.....	237,000	421,000	414,000
Mysore.....	70,000	84,000	48,000
Total.....	16,253,000	22,152,000	20,643,000

¹ Including native States.

CORRECT ADDRESSES OF CONSULAR OFFICES.

[Consul General P. S. Helntzleman, Mukden, China, Nov. 18.]

It is suggested that American manufacturers and exporters who send circular letters and catalogues to consular offices consult the latest revised consular list before mailing. The Mukden consulate general is still receiving letters and catalogues from various American manufacturers and exporters addressed to the consulate at Newchwang, China, which office has been discontinued for almost one year. The sender loses the postage as well as the stationery and printed matter.

¹ Figures of the first forecast of the Indian cotton crop were published in **COMMERCE REPORTS** for Oct. 27, 1915.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its district offices. Request for each opportunity should be on a separate sheet and the file number given.

Pig iron, iron bars, etc., No. 19593.—The Bureau of Foreign and Domestic Commerce is informed that a neutral European country desires names and addresses of manufacturers of pig iron, iron bars, and plates. Offers may be submitted through the representative of the foreign government in Washington, D. C.

Cotton goods, white drills, No. 19594.—A commercial agent of the Bureau reports that a firm in the Far East desires to be placed in touch with manufacturers or exporters of the following lines of cotton goods: White drills, 28 inches wide, 3 and 5 leaf twill construction, with 2.50 to 4 yards per pound; khaki drills, 28 to 29 inches wide, 4-leaf twill construction, 6 to 8 ounces per yard; white or bleached shirtings, 36 inches wide, 72/72 to 88/88 picks per inch (finished), soft and medium finish; prints, 28 inches wide, costing 5 to 7 cents per yard f. o. b. New York; black, 5-harness sateens, 28 to 30 inches wide, costing 6 to 10 cents per yard f. o. b. New York; black and other colored velvet, 22 to 23 inches wide, costing 15 to 30 cents per yard f. o. b. New York; ginghams, madras, chambrays, and fancy shirtings 28 to 29 inches wide, costing 5 to 8 cents per yard f. o. b. New York. The firm is prepared to pay cash in New York on the day of shipment. Correspondence may be in English, and samples and prices, with a code word to designate each sample, should be sent in the first communication.

Galvanized steel cables, etc., No. 19595.—A commercial organization informs the Bureau that a business man in Spain desires to correspond with manufacturers of galvanized steel cables, manilla cables, and ropes for fishing nets.

Undercar, cutlery, etc., No. 19596.—An American consular officer in South Africa reports that a man in his district desires to establish commercial relations with manufacturers of underwear for women and children; cheap cutlery, light hardware, and cotton goods. The inquirer desires the sole agency for these articles in South Africa. Correspondence, catalogues, prices, and discount lists may be in English. References are given.

Drugs and druggists' sundries, No. 19597.—A report from an American consular officer states that a retail establishment in China desires to communicate with manufacturers of drugs and druggists' sundries. Catalogues, samples, prices, and discounts f. o. b. Pacific ports are desired. Terms, sight draft or 30 or 90 day draft. Bank references are given.

Railroad materials, supplies, etc., No. 19598.—The Bureau is in receipt of a letter from a commercial organization stating that a business man in Spanish North Africa desires catalogues and price lists from American manufacturers of railroad material and supplies. It is stated that the inquirer has customers holding a contract for the construction of a railroad line, French gauge, 1.446 meters, and need 80-horsepower engines, passenger and freight cars, etc. Quotations, f. o. b. New York or Cadiz, are also requested for gasoline, kerosene, and refined and crude oil.

Chemical products, No. 19599.—An American consular officer in Spain reports that a firm desires to be placed in communication with manufacturers of chemical products. Correspondence should be in Spanish.

Wire for making bed and chair springs, No. 19600.—A report from an American consular officer states that a manufacturer of beds and chairs in France desires to purchase wire in 10 to 20 ton lots, for cash, to be used in the making of bed and chair springs. Samples of the wire may be examined at the Bureau or its branch offices. (Refer to file No. 69835.) Correspondence may be in English.

Advertising articles, No. 19601.—A letter from a commercial organization states that a company in Argentina desires to represent an American firm manufacturing advertising articles.

Refrigerating machinery, No. 19602.—An American consular officer in Spain reports that a company has been formed for the erection of a cold-storage plant for refrigerating meats and alimentary products. Manufacturers of machinery for such a plant are requested to send catalogues and price lists. Correspondence should be in Spanish.

COMMERCE REPORTS

DAILY CONSULAR AND TRADE REPORTS
ISSUED DAILY BY THE BUREAU OF FOREIGN AND DOMESTIC COMMERCE

AMERICAN IMPORTER IN CANTON.

[Vice Consul F. B. Josselyn, Canton, China.]

As indicative of what might be done to increase the sales of American goods, provided they are pushed by an American firm, there is given below a statement of the sales since August 1, 1915, of an American importer who established himself in Canton at that date; the values are in gold: Provisions, \$2,023; tin plate, metal goods, nails, etc., \$8,640; playing cards, \$435; cash registers (2), \$300; surgical instruments, \$190; petrolatum, \$746; carborundum (carbide of silicon), \$1,678; optical goods, \$170; total, \$14,182.

These goods are all American, and while some of the provisions had, previous to the establishment of this firm, found their way on this market through Chinese dealers, yet it is fair to assume that the net gain to American import trade through the establishment of this one firm is considerable.

PROPOSED COINAGE OF SILVER IN URUGUAY.

[Diario Oficial, Oct. 29.]

The President of Uruguay has recommended to Congress the passage of a bill providing for the coinage of 5,000,000 pesos (\$5,170,000) in silver pieces of one peso (\$1.034) and one-half peso (\$0.517). Old coins of these denominations are to be retired and recoinced. This amount is equivalent to 3.80 pesos (\$3.929) per inhabitant, and it is estimated that it will be sufficient for a number of years. The profits realized from the coinage—should the bill pass—are to be used for the improvement of roads and construction of public buildings.

HARBOR EXTENSION AT MACASSAR, DUTCH EAST INDIES.

[Far Eastern Review, October.]

Shipping and commercial circles in Macassar have received word from the harbor board that the Government has sanctioned the construction of the boat harbor planned some time ago, as well as a northern extension of 1,247 feet to the 2,559 feet long sea wharf now in course of completion for sea-going vessels. As a result of the above, 1916 will see Macassar with the old 1,673-foot pier, the new boat harbor, and a wharf measuring 3,806 feet in length for large vessels.

DOMINICAN TOBACCO CROP FOR 1915.

[Consul Frank Anderson Henry, Puerto Plata, Nov. 16.]

As had been anticipated, the tobacco crop for 1915 was small, amounting to 60,000 to 70,000 seroons (6,900,000 to 8,050,000 pounds), having a net weight of about 115 pounds each, against a yield of 150,000 to 200,000 seroons (17,250,000 to 23,000,000 pounds) in normal years. The farmers received from \$2 to \$2.50 per seroon, but the price during the last few months has steadily risen, and recent purchases by foreign buyers have been as high as \$4 to \$4.50. Lack of transportation facilities has increased the difficulty of marketing the tobacco crop. Much of the 1914 crop and the greater part of this year's still remain in the country. Before the outbreak of the European war the crop was shipped direct to German ports. This market being closed, considerable amounts have been sent to the Netherlands, and a number of shipments have been made to New York in transit to other European countries.

While it is too early to make any accurate forecast concerning next year's yield, it is known that planting has been heavy. Should favorable weather conditions continue during the next few months, the 1916 crop should be a large one, perhaps as much as 200,000 seroons (23,000,000 pounds).

[A full report on Dominican tobacco was published in **COMMERCE REPORTS** for July 10, 1915.]

NEW SOUTH WALES TRADE COMMISSIONER.

Three official documents of the Government of New South Wales, Australia, have been received from the American commercial attaché, William C. Downs, at Melbourne. These are: "Consolidated revenue fund," estimate of expenditure for 1915-16; "Public works fund," estimate of expenditure for 1915-16; "Closer settlement fund," estimate of expenditure for 1915-16. Under the consolidated revenue fund is an item of special interest to the United States. This is the amount of £6,250 (\$30,416) for expenses of representation of the Government of New South Wales on the west coast of the United States and Canada. This is for the maintenance of the trade commissioner's office in San Francisco and for occasional visits to Vancouver. This allowance is to cover the representation of a single State of the Commonwealth of Australia in one State of the United States.

Copies of these three documents may be inspected at the Bureau of Foreign and Domestic Commerce or its district offices. Refer to file No. 966.

RUBBER EXPORTS FROM STRAITS SETTLEMENTS.

[London and China Telegraph, Nov. 20.]

Exports of Pará rubber from January 1 to September 30, 1915 (excluding all foreign transshipments) were as follows: From Singapore, 59,539,158 pounds, against 28,968,720 pounds in the corresponding period of 1914; from Malacca, 6,159,464 pounds, against 3,579,164 pounds; from Penang, 21,338,264 pounds, against 15,948,133 pounds; from Port Swettenham (Oct. 21), 24,988,802 pounds, against 24,840,136 pounds in the corresponding period of 1914.

REPORT ON COTTON GINNING.

According to a preliminary report prepared by the United States Bureau of Census, the number of bales (counting round as half bales and excluding linters) of cotton ginned from the growth of 1915 prior to December 13, 1915, and comparative statistics to the corresponding date in 1914 and 1913, crops of 1914 and 1913, and the per cent of the crop of each year ginned prior to December 13 follow:

State.	Ginned prior to Dec. 13.			Crop.		Per cent of crop ginned prior to Dec. 13.	
	1915	1914	1913	1914	1913	1914	1913

The statistics in this report include 100,940 round bales for 1915; 42,796 bales for 1914; and 91,686 for 1913. The number of sea-island bales included is 83,810 for 1915; 71,401 for 1914; and 69,520 for 1913. The distribution of the sea-island cotton for 1915, by States, is: Florida, 26,719; Georgia, 52,908; and South Carolina, 4,183.

The statistics of this report for 1915 are subject to slight corrections when checked against the individual returns of the ginner being transmitted by mail. The corrected statistics of the quantity of cotton ginned this season prior to December 1 are 9,705,877 bales.

Cotton consumed during the month of November, 1915, amounted to 514,534 bales. Cotton on hand in consuming establishments on November 30 was 1,613,110 bales, and in public storage and at compresses 4,982,472 bales. The number of active consuming cotton spindles for the month was 31,497,435. Domestic cotton exported during November, 1915, was 527,625 running bales, and foreign cotton imported, 21,169 equivalent 500-pound bales.

GOVERNMENT AID TO SILK CULTURE IN COLOMBIA.

[Diario Oficial, Oct. 8.]

An appropriation of \$10,000 annually has just been made by the Government of Colombia for the encouragement of silk culture in that country. The money is to be distributed among the various departments, where it will be used in establishing and maintaining schools of sericulture, in planting and cultivating mulberry trees, in raising silkworms, and in prizes for the best results from silk growers. Experiments are to be made with native plants to ascertain whether they can be used in place of mulberry trees for the worms. A part of the appropriation is to be used, also, in the purchase of silk-spinning machinery, which is to be exempt from import duty for 10 years. Manufacturing efforts will be limited to the spinning of the cocoons and preparing the silk for exportation as raw material.

DECREASE IN DEATH RATE OF UNITED STATES.

A preliminary statement just made public by the United States Bureau of the Census shows a death rate of 13.6—the lowest on record—per 1,000 estimated population of the registration area of the United States in 1914.

Unfortunately the mortality statistics do not cover the entire United States, since not all communities have adequate death-registration systems. Those States and cities in which the registration of deaths is approximately complete constitute what is known as the registration area. This area comprises 25 States (in one of which, North Carolina, registration is restricted to municipalities which had 1,000 population or over in 1900), the District of Columbia, and 32 cities in nonregistration States, and contained two-thirds (66.8 per cent) of the total estimated population of the United States in 1914. This represents a very gratifying increase as compared with 1900, when the registration area contained only about two-fifths (40.5 per cent) of the total population of the country. Figures for Kansas are included for the first time in the statistics for 1914.

There is a widespread and increasing interest throughout the country, especially in the South, in respect to vital statistics. The "model law" for the registration of births and deaths was put into operation in South Carolina on January 1, 1915, and during the present year this law was enacted in the States of Florida and Illinois. The Bureau of the Census is actively cooperating with officials in other States in order that the entire country may be included at the earliest possible date in the registration area for deaths.

The death rate for 1914 is 16 per cent lower than the average for the five-year period 1901-1905. When due allowance is made for the addition of many new States to the registration area between 1905 and 1914, and the comparison is confined to the registration States as they existed during the period 1901-1905, there still is shown a decided decrease, amounting to 9.4 per cent.

Among the States for which death rates for 1901-1905 are given, the greatest proportional decrease between that period and 1914 is shown for Rhode Island—17.4 per cent. Next in order are New York, with a decrease of 14 per cent; New Jersey, 11.8 per cent; Massachusetts, 11.4 per cent; Vermont, 7.4 per cent; Connecticut, 3.8 per cent; Indiana, 2.3 per cent; Maine, 1.9 per cent; New Hampshire, 1.8 per cent. Michigan alone showed a slight increase—eight-tenths of 1 per cent.

Among the cities of 100,000 or over the tendency is toward a still greater reduction in mortality. The following cities show a decrease of 20 per cent or more from the five-year period 1901-1905 to 1914: Jersey City, 28.5 per cent; New York City, 25.8 per cent; San Francisco, 23.6 per cent; Denver, 23.3 per cent; Newark, N. J., 22.5 per cent; Pittsburgh, 21.9 per cent; Atlanta, 21.8 per cent; Los Angeles, 21.3 per cent; Lowell, Mass., 21.3 per cent; and Paterson, N. J., 20.1 per cent.

The American commercial attaché at The Hague, Erwin W. Thompson, reports that a bill is said to be in course of preparation for the next Norwegian Parliament for organizing a Department of Commerce. Heretofore there has been no special department for industrial affairs.

THE COCOON CROP OF FRANCE.

[Vice Consul John J. Ernster, Lyon, Nov. 13.]

The 1914 crop of cocoons in France was nearly 15 per cent larger than that of 1913, according to figures just published by the Ministry of Agriculture, but fell 26 per cent below the average for the preceding decade. The official statistics by Departments are:

Departments.	No. of silk growers.	Ounces of eggs produced.	Pounds of fresh cocoons produced.	Departments.	No. of silk growers.	Ounces of eggs produced.	Pounds of fresh cocoons produced.

Returns for 1915 indicate a crop of but 3,808,820 pounds, distributed among the various Departments as follows: Ain, 5,770; Basses-Alpes, 91,180; Hautes-Alpes, 21,510; Maritimes-Alpes, 12,780; Ardèche, 1,168,770; Aude, 760; Aveyron, 680; Bouches-du-Rhône, 64,000; Corse, 59,850; Drôme, 332,300; Gard, 1,229,710; Hérault, 79,030; Isère, 64,640; Loire, 230; Lozère, 95,310; Pyrénées-Orientales, 14,570; Rhône, nil; Savoie, 6,660; Tarn, 920; Tarn-et-Garonne, 280; Var, 330,970; and Vaucluse, 228,900 pounds.

RECORD CATCH OF COD ON NEWFOUNDLAND BANKS.

[Consul John J. C. Watson, St. Pierre, Miquelon, Dec. 7.]

The fishing season of 1915, which ended last month, was remarkable for the fact that in proportion to the number of vessels employed the catch was the greatest ever made by the French fleet on the Newfoundland Banks. The fleet, numbering 11 steam trawlers and 25 sailing vessels, caught 192,119 quintals, or 23,294,428 pounds, of cod. An idea of the increased catch per vessel is shown by a comparison with the 1914 season, when the catch was 182,639 quintals, which is equal to 22,144,978 pounds, and the fleet numbered 22 steam trawlers and 251 sailing vessels. The cod were so plentiful that the owners of the trawlers decided to continue fishing during the winter, which had never been done before. Orders were received from the French Government the latter part of November for the trawlers to return to France, so they had to abandon this plan. It is thought here that a larger fleet of trawlers will be sent out from France next season.

Fishing with steam trawlers on the Newfoundland Banks has proved profitable, especially so this season, when cod brought higher prices, owing to the scarcity of seamen. It would seem to be well worth while, therefore, for American shipowners to enter this field next spring. The average price for green cod this season was 6.1 cents per pound.

SHODDY INDUSTRY IN UNITED KINGDOM.

[Vice Consul Hamilton C. Clalborne, Bradford, England, Oct. 28.]

The manufacture of shoddy is assuming an increasing importance in the west of Yorkshire. The townships of Dewsbury, Batley, and the adjacent textile communities are devoted almost exclusively to this industry. Rags of every description and size are reduced again to fiber and respun into excellent yarn for weaving. Often fibers too short to be spun alone are strengthened with an admixture of new wool to obtain the necessary weaving qualities. There is no unused residual, even the unwoven ends, fine as dust, being consolidated by the cohesive power of oil and, commercially known as flocks, are employed for stuffing upholstery and mattresses.

The Yorkshire spinner is said to be able to spin anything that has two ends, and with the advent of scientific processes and improved machinery, it seems likely that this contention is justified.

The Yorkshire rag market is in many aspects one of the most interesting phases of the textile industry. Rags of all fibers, colors, and sizes are assembled from nearly every nation of the world, thoroughly cleansed, reduced to fiber, and alone or with an intermixture of new yarn, made into excellent clothing material, blankets, rugs, and a variety of other articles. Such cloths return again and again as rags to be remade into new fabrics.

Shoddy and Mungo Distinguished—Kinds of Rags.

An interesting article on the manufacture of rag wool appeared in the Yorkshire Observer for October 28, 1915, which may be summarized as follows:

Shoddy and mungo, as the two chief products of rags are called, differ chiefly in length of staple. Shoddy is pulled from longer and coarser wools, while mungo comes from finer and harder-spun fabrics that naturally have a shorter fiber length. Fabrics made exclusively from shoddy or mungo are readily detected by their lack of strength when torn and by the shortness of the wool, but in mixtures of new wool and remanufactured stuff the blend is recognized only by an expert. Some of the best woollens, notably the vicunas, are improved by the addition of a little mungo. Dyeing and carbonizing dispose of any germs that the rags may have harbored.

Passing from the marine-store dealer, who is the first handler of rags in quantity, they are sorted by the manufacturer of rag wool into the following classes: Merinos (very fine wool dress goods), skirtings, flannels, heavy cloth, serge, linsey (other materials), tailors' new clippings, cotton (linings, etc.), and rubbish (textiles not fit for pulling). These kinds of rags are then sorted into minor classes. As light-colored rags fetch a higher price than dark ones, owing to the ease with which they take other colors, cloths of all kinds are graded into different shades. Cheviots are sorted into gray, drab, brown, and black, while fine cloth is divided into drab, blue, green, scarlet, and black. Flannels are sorted for quality into fine, medium, and coarse, and for colors into red, white, and dirty white. In some cases the dirty whites are washed, whereby they lose considerably in weight but fetch higher prices. Stockings are classified as all-wool, wool, and cotton (angola), and felt stockings and slippers. The all-

wool stockings are fine, medium, or coarse and gray, black, or brown; the angolas are picked out for carbonizing.

Extract Merino—Removal of Cotton—Making Rag Wool.

After being carbonized the rags are dyed, mixed with a proportion of wool to match, and scribbled. At this stage the mixture resembles carded wool, and forms the material known as "extract merino," which is in extensive demand in Russia and Germany for the face weft of president cloths. In the United Kingdom the material enters into the composition of fancy tweeds, flannels, etc., and by reason of its fine quality and excellent spinning properties it makes handsome fabrics. Wool rags of good quality that do not require carbonizing have all the cotton carefully picked out of the seams and are brushed or scraped if they show dirt. Linsey cloth is rags of wool containing some cotton and carbonizing is necessary to obtain really clean wool, which is not injured if the dry-gas process is used. Loss of weight, however, may vary from 5 to 60 per cent, according to the amount of cotton present.

Such rags as require neither carbonizing nor dyeing are blended for conversion into rag wool. When rags of a specified price and color have been obtained they are spread on the floor in a stack, the different layers of which (about 8 inches thick) are softened with boiling water, followed by almost boiling oil. The stack is allowed to stand some little time (about 24 hours), when it heats up and steams and the whole pile is softened with oil and water vapor. The rags are then placed singly on the lattice that feeds the rag machine. They pass between rollers that present them to the teeth of a large, rapidly revolving cylinder called the swift. The teeth fray off the fiber while the rag is still held by the rollers. When pulling hard-felted cloths to make mungo the swift runs at the rate of 700 to 800 revolutions per minute, the feed rollers moving slowly about one-fourth of 1 inch from the swift. For shoddy pulling the teeth of the swift are set coarser than for mungo and the swift revolves at about half the speed.

Willy and Carding Engine—Utilization of Rubbish.

The fibers of the rags are not opened out sufficiently after being torn up by the rag machine. To complete the process the long, thready material is passed first through a willy and then through a carding engine. The willy has a spiked cylinder, with teeth traveling at 900 feet per second, and tears and opens out the material presented to it by a pair of toothed nippers. If the fragments are not small enough, they are caught by a series of spiked rollers and returned again to the feed board. On leaving the willy the material is in the form of short threads, which, for conversion into shoddy or mungo, must be passed through a carding engine. The swifts of this machine are covered with fine card wire. The teeth in the willy run about 4 to the square inch, while in the carder they run about 300 to 400 to the square inch. A large carding engine is worth about \$2,500.

The fine short fibers from rag pulling that are not long enough to spin into a thread are curled up into balls for the flocks used in cheap upholstery. The machine for this purpose consists of a cylinder of concentric wire grates, which by revolving rolls the flocks into tiny balls, while a fan at the top draws away the dust. The best flocks

are scoured and of a light shade. The medium qualities are supposed to be washed and disinfected, but the lowest grade are practically similar to the rags from which they came, except that they contain less dust.

Old and New Methods of Carbonizing.

The old wet process of carbonizing is still followed to some extent. It consists in steeping the rags in a reservoir of dilute sulphuric acid until thoroughly impregnated, then removing superfluous acid and spreading out the rags in a drying room heated by a current of hot air. As the rags dry the acid in them becomes more concentrated and begins to attack the cotton, and when perfectly dry (which is highly essential) the cotton will be found crisp and friable and readily beaten out in the form of dust. This system undoubtedly weakens the wool fibers, but it also gets rid of any silk that may be present, which is not touched by the dry gas process.

The machine for dry carbonizing consists of a revolving cylinder 5 feet in diameter and 14 feet long, housed in a chamber heated to over 220° F. by means of furnace gases passing from the retort in which the acid is vaporized. This cylinder revolves about twice per minute and holds about 5 hundredweight of rags for one charge. The hydrochloric-acid gas fumes are produced by allowing hydrochloric acid to drip into a red-hot iron retort, which converts it into the dry gas. This gas passes through the hollow shaft of the rag cylinder into the cylinder itself and among the rags as they are kept tumbling about inside. The gaseous fumes enter the machine for about two hours until the rags are thoroughly permeated, after which another hour's running is allowed to give the gas further time to act upon the cotton. After the rags have been taken out and cooled they are shaken vigorously in a cylindrical cage somewhat similar to a flock-curling machine, and the cotton fibers, made brittle by the gas, fall away in the form of dust.

Dyeing Methods—Production and Exports of Rag Wool.

The old system of rag dyeing, which is still extensively followed, was to boil the rags in large circular wood vats, holding about a ton of rags at a time, and having a perforated false bottom below which was the open steam pipe for boiling. In this primitive style the circulation of the dye liquor among the rags was kept up by stirring and lifting up the rags from the bottom by means of a long pole. The improved dyeing apparatus comprises three wooden vats, two raised upon a wooden platform in which the dyeing is done and one underneath, between the two, serving as a reservoir for the dye. From this central tank the liquor is raised by a circulating pump and the pipe is fitted with a swiveled curved end, so that it can readily be turned from one tank to the other. While dyeing is taking place in one tank the other is being charged with rags. The liquor is in continuous circulation through the dye vessels, each of which is furnished with valves and delivery cocks so that the rags can be rinsed in the tank in which they are dyed. Drying the rags after dyeing is done in a revolving cage similar to the one used for carbonizing.

Carbonized rags take up dyes very quickly, and if blended with uncarbonized material will come out a darker shade from the same bath, but grinding and carding pull the whole blend up to one shade.

It is conservatively estimated that over 120,000,000 pounds of rag wool are pulled in this country (the United Kingdom), of which 25,000,000 pounds are exported to Austria, Russia, Germany, the United States, Sweden, Norway, and Canada.

EXPORTS OF SHODDY AND MUNGO.

The following table shows the exports of shoddy and mungo from the United Kingdom to the principal countries of destination during the last five years:

Countries.	1910	1911	1912	1913	1914
	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>
Germany	3,702,300	3,024,200	2,913,200	2,678,300	1,984,200
Portugal	1,259,000	1,231,700	1,189,100	1,264,000	1,171,200
Russia	885,400	1,008,600	1,301,000	1,594,600	1,048,700
Sweden	1,413,900	1,533,700	1,907,300	2,025,200	932,000
Denmark (including Faroe Islands).....	851,800	862,600	1,058,100	1,130,300	618,000
Norway	561,000	801,100	502,700	1,033,100	536,100
Netherlands	551,000	557,000	809,500	939,300	519,400
France	702,900	494,000	672,700	770,200	574,600
Belgium	366,300	387,600	476,200	660,400	579,000
Canada	300,200	359,400	386,500	503,000	149,500
Other countries.....	712,500	1,079,900	1,923,500	107,000	287,000
Total	11,966,600	11,420,900	13,442,500	13,456,400	8,667,900

The shoddy and mungo exports from the United Kingdom during the first ten months of 1915 amounted to 3,575,400 pounds, as compared with 8,601,800 pounds during the corresponding period of 1914 and 11,681,500 pounds during the first ten months of 1913.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expira- tion of vacan.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Peck, Willis R.....	Tsingtau, China.....	Jan. 31	Do.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Do.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(e)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, O. R.....	Cornwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washington, D. C.
Donald, George K.....	Maracaibo, Venezuela.....	Feb. 17	153 Church Street, Mobile, Ala.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

CROP RETURNS AND CONDITIONS IN CANADA.

[Consul General Frederick M. Ryder, Winnipeg, Manitoba, Nov. 23.]

The following returns are taken from a report just issued from the Canadian Census and Statistics Office, giving quality, price, and acreage of the root and fodder crops in the Dominion for 1915, the acreage and condition (on Oct. 31) of fall wheat sown for 1916, and the progress of fall plowing.

Root and fodder crops, consisting of potatoes, turnips, mangolds, etc., hay and clover, alfalfa, fodder corn, and sugar beets, occupied this year a total area of about 8,977,000 acres, as compared with 9,067,000 acres in 1914. Their estimated value (subject to revision) was \$230,379,000, as compared with \$226,227,000 last year. The decrease in area was principally in respect to hay and clover, and the increase in total value was due to the larger yield of the same crops. Hay and clover yielded 10,953,000 tons from 7,875,000 acres, or 1.39 tons per acre, as compared with 10,259,000 tons from 7,997,000 acres, or 1.28 tons per acre, last year. The yield of alfalfa was 261,955 tons from 92,665 acres, or 2.83 tons per acre; of fodder corn, 3,429,800 tons from 343,400 acres, or 10 tons per acre; and of turnips and other roots, 64,281,000 bushels from 172,700 acres, or 372 bushels per acre.

Potato Crop.

The conditions governing the production of potatoes this year were as bad as they were good last year. The total estimated yield was 62,604,000 bushels from 478,600 acres, an average yield per acre of only 131 bushels. Last year the corresponding figures were 85,672,000 bushels, 475,900 acres, and 180 bushels. Not since the average of 119 bushels in 1910 had the rate per acre been so low; it was 27 bushels below the average of 158 bushels for the five years 1910-1914. In Ontario, where the record yield of over 167 bushels per acre was obtained last year, the average yield per acre this year was not more than 92.6 bushels, the lowest yield on record for the Province. In other Provinces the potato yield was also poor, except in Alberta and British Columbia. In the former Province the total yield was 5,155,000 bushels from 27,300 acres, an average of 188.8 bushels per acre; and in the latter the yield was 3,956,000 bushels from 16,000 acres, an average of 247 bushels. In both Provinces the yield per acre was larger than in any other year since 1911, when the respective yields were 211.6 and 252 bushels. For all Canada the quality was 84 per cent of the standard, as compared with 90 per cent last year; but in Ontario the quality was down to 66 per cent, as compared with 101 per cent last year. In Prince Edward Island the quality was 81, in Nova Scotia 76, and in New Brunswick 88 per cent. In Alberta the quality was good with 91 per cent and in British Columbia it was 84 per cent. The average price per bushel to the grower worked out to 57 cents for Canada, 76 cents for Ontario, and 33 cents for Alberta. Potatoes are generally reported as affected with rot and blight, especially in Ontario, and the indications are that the keeping qualities this year will be poor.

Acreage of Fall Wheat—Fall Plowing.

The area sown to fall wheat for next year's harvest is estimated at 1,100,800 acres, as compared with 1,294,000 acres sown in 1914. The decrease is principally in Ontario, and is due to the heavy rains of

August, which prevented the working of the soil in time for seeding. The area sown to fall wheat in Ontario is estimated at 820,600 acres, as compared with 1,043,000 acres sown in 1914. In Alberta there is an increase from 230,000 acres in 1914 to 260,500 acres in 1915. In Manitoba there is a decrease from 10,900 to 9,400 acres; in Saskatchewan there is no change from the estimated area of 4,100 acres; and in British Columbia there is a small increase of 200 acres, making 6,200 acres sown to this crop. As regards condition on October 31, the figures are 88 or 89 per cent of the standard for Canada and for Ontario and Alberta. In Manitoba the condition is 69, in Saskatchewan 93, and in British Columbia 95 per cent. For Ontario and Alberta the percentage showing the condition of the crop is smaller than in either of the two preceding years, when the condition on October 31 was rated at over 90 per cent of the standard.

For all Canada about 53 per cent of the area intended for next year's crops is reported as plowed by October 31, as compared with 71 per cent last year and 54 per cent in 1913. In the northwest the percentages are as follows: Manitoba, 36 against 92; Saskatchewan, 27 against 77; Alberta, 34 against 56.

SHORTAGE OF MATCHES REPORTED IN FRANCE.

[Office of Commercial Attaché, Paris, Nov. 13.]

A discussion in *Le Temps*, in which the difficulty of maintaining a supply of matches in France is taken up, is of interest to American manufacturers. The conditions described suggest the possibility of increasing the exportation of matches from the United States to France. The newspaper says in part:

For several months the Government has been selling to our taxpayers some matches of American manufacture which have given full satisfaction to the public—excellent matches with long stems, and matches that lighted surely and without difficulty. Also, some American matches that had shorter stems and black heads were placed on sale. But now both of these kinds have become exhausted, and little by little we have had to return to the matches of former times, which gave but poor satisfaction and of which it has been said that they would light only in the inspiration of poets and musicians.

Mr. Ricaud, director general of the French State factories, said: "We find ourselves in a most precarious situation as to the manufacture of matches. We continue to make them as best we are able. It is true that this home manufacture has been largely reduced from that of normal times, but it has not been wholly interrupted. It is the matchwood that we mostly lack. So far, we have hardly been able to respond to half of the needs of the country, and we have looked to several foreign countries, particularly the United States, Sweden, Italy, Switzerland, Indo-China, and even Japan.

AUSTRALIAN DEMAND FOR AMERICAN GLASS GROWS.

[Consul General J. I. Brittain, Sydney, Nov. 8.]

American manufacturers of plate, sheet, and wired glass have entered this market since the outbreak of war and are doing considerable business. The glass has proved very satisfactory, some qualities being pronounced better than the glass manufactured in Europe. The only complaints made are those concerning defective packing, as mentioned in *COMMERCE REPORTS* for December 11, 1915.

DAIREN SOYA-BEAN MARKET BECOMES ANIMATED.

[Consul A. A. Williamson, Dairen, Manchuria, Oct. 29.]

The local market for soya beans and products has become somewhat animated, after a long period of stagnation on account of the European war, and the consequent lack of shipping facilities to Europe, the dullness of the manure market in Japan, and other influences, among which high freights may be reckoned. New beans are now coming down to Dairen in small quantities, but the real out-flow will not begin until the advent of winter causes the roads in the interior to freeze.

The direct cause of the present animation is the arrival of orders for a large quantity of bean cake from Formosa, for the sugar plantations there. On the 23d, 17,000 pieces were bought at \$0.57 each, while on the following Monday 38,000 cakes were bought at an advance to \$0.59 each.

According to the wharf-office statistics, Formosa took 1,521,000 pieces last year, or 46,115 tons. Four years ago a trial was made with bean-cake fertilizer, when 600,000 cakes were bought. Since then the demand has grown to two and a half times that amount. The heaviest buying for this market is done in November and December; that bought later is generally only to supply deficiencies. Last season's purchases were shipped to Keelung and Takao, the latter taking slightly more than the former, but not all of this goes directly from Dairen, a portion being transshipped in Japan.

Estimate of Winter's Purchases for Formosan Market.

It is estimated that this winter's purchases for the Formosan market will reach 2,000,000 pieces, as the sugar business is prospering, and it is said that Java sugar will have to pay a new tax, which will give Formosan sugar just so much more advantage in Japanese markets. This condition of affairs is in marked contrast to that in Japan, where the big crop of rice has caused so much loss through the resulting fall in prices.

Last week the buying of bean oil for the United States began suddenly, on the arrival of a ship for New York. This ship will go via Suez. This commodity has kept up in price fairly well, the greatest difficulty being to get hold space for it. The demand from the United States is expected to keep up fairly well, the oil being used, local exporters understand, as a substitute for cottonseed oil. It often goes indirectly, via Japanese ports.

The South Manchuria Railway has slightly altered its schedules, allowing for more freight trains, in anticipation of a busy season. It has also overhauled its yards, so that freight may be better handled and stored. Reclamation work is now going on that will allow additional go-downs to be erected, and several new shifting engines are being built at the company's Shahokou works. All this preparation is the result of last winter's experience, when the congestion was so great that goods were stored over 2½ miles of land. At one time there were 311,710 tons of beans, cake, kaoliang, etc., stored in the open, for the most part, and covered with tarpaulins or in osier bins. The extra large crop—some 20 to 30 per cent larger than the average—and the state of the Russian railway between Harbin and Vladivostok, together with a severe winter, when work on the wharves was

frequently impossible, accounted for last year's congestion. This year the crops are not so large, but the company is determined not to be caught again.

MUTUAL-BENEFIT INSURANCE IN ITALIAN SCHOOLS.

[Consul William F. Kelley, Rome, Nov. 15.]

In many of the elementary schools of Rome, and of some other cities in Italy, a system of mutual-benefit insurance has been established among the pupils. The underlying idea is that the pupils forming the society shall pay small weekly contributions to the general fund and in return shall receive certain payments in case of sickness, accident, or death, and at the same time lay the foundation for old-age benefits. While the plan is still in its infancy, so far as Rome is concerned, it has been adopted in many of the public schools of the city, and this system of insurance appears to be growing rapidly.

It is intended to encourage the pupils to continue the insurance even after they leave school, and until they have reached the age when they may join an adult society. In addition to the immediate economic benefit that a pupil derives in case of sickness or accident, the habit of providence is developed in the child during his most impressionable years, and the parents, who in reality pay the premiums, have their attention called regularly to the question of provision for the future.

This plan was so favorably received by the Italian Government that a law has been passed authorizing the establishment of the system in the State schools and subjecting the management to State supervision. The working of the law is extremely simple. It permits the societies for mutual aid, constituted among the pupils and ex-pupils of elementary and private schools, to request the recognition of the State, provided that among the aims of the society is that of assuring an old-age pension through the National Providential Funds for Sickness and Old Age (*Cassa Nazionale di Previdenza per l'Invalidità e la Vecchiaia*).

Members of Societies Recorded in Special List.

This national institute is authorized by the law to enter the names of the members of the societies in a special list, together with the amount of their payments and their proportional share of the accumulations of the society. The age limit for pupils, members of these societies, is from six to twelve years. After the age of twelve the pupils who have conformed to the regulations governing the funds may be transferred to the workmen's lists of the national fund, while those who have not the qualifications for the workmen's lists are inscribed in the National Popular Pension Insurance.

No figures are available showing the actual amount of the insurance of this class in Rome or in Italy, but recent reports state that the system is spreading rapidly, and that it is in operation in the majority of the public schools in this city. It is also reported that the pupils themselves are showing great interest in the movement, and it is hoped that the small State subvention which is at present given by the Italian Government (a maximum of \$10,000 per annum for all Italy) will prove to be a valuable educational measure and an incentive to further effort by the children.

ESTIMATES OF TIMBER AREAS IN PROVINCES OF CANADA.

[Consul Henry S. Culver, St. John, N. B., Nov. 26.]

According to estimates made by the Forestry Branch of the Department of the Interior, the total area of land covered by timber in Canada is between 500,000,000 and 600,000,000 acres, of which 200,000,000 to 300,000,000 acres are covered by timber of commercial size.

Distributed by Provinces, the estimated acreages of commercial timber are: Nova Scotia, 5,000,000; New Brunswick, 9,000,000; Quebec, 100,000,000; Ontario, 70,000,000; Northwest Provinces (Manitoba, Saskatchewan, and Alberta), 11,000,000; British Columbia, 30,000,000. These figures make an aggregate of 225,000,000 acres for the Dominion of Canada.

The principal forest trees, in the order of their commercial importance, in Canada are: Ontario and Quebec—White spruce, white pine, balsam fir, hemlock, birch, red pine, cedar, tamarack, maple, basswood, jack pine, elm, ash, oak, poplar and beech; Northwest Provinces and Rocky Mountains—White spruce, aspen, balsam poplar, jack pine, black spruce, tamarack, white birch, lodgepole pine, alpine fir, and alpine larch; British Columbia—Douglas fir, western cedar, western hemlock, Sitka spruce, Engelman spruce, alpine fir, bull pine, western larch, and lodgepole pine.

Estimated Values of Canadian Forest Products.

The values of the various classes of timber produced by the Provinces of Canada in 1914, with the total value of forest products, for the Dominion are:

Variety of timber.	Value.	Variety of timber.	Value.
Lumber, lath, and shingles.....	\$67,500,000	Logs exported.....	\$850,000
Firewood.....	60,500,000	Tanning material.....	22,000
Pulpwood.....	15,500,000	Round mining timbers.....	500,000
Posts and rails.....	9,500,000	Miscellaneous exports.....	300,000
Cross-ties.....	9,000,000	Miscellaneous products.....	10,000,000
Square timber exported.....	400,000		
Cooperage.....	1,600,000	Total.....	176,672,000
Poles.....	700,000		

Spruce is the most important wood in Canada for the production of lumber and pulp. Maple is used for firewood, as well as for furniture, cars, agricultural implements, hardwood flooring, and distillation. Cedar is the most important wood in Canada for poles, fence posts and rails, railway sleepers, and shingles. White pine and Douglas fir are important lumber species. Beech, poplar, and jack pine are used in largest quantities for firewood. Red pine, hemlock, and tamarack are lumber woods of less importance. Balsam fir is an important pulp wood. Yellow pine grows in the interior of British Columbia, and covers a large area in the dry belt. Elm is an important cooperage wood, together with oak, ash, and basswood.

Results of Foreign-Trade Opportunities.

The American consulate at Lisbon, Portugal, reports that as a result of Foreign Trade Opportunity No. 14954, which was published in **COMMERCE REPORTS** December 28, 1914, the firm has advised that an additional order has been placed for boot and shoe leather amounting to \$80,000. The firm further states that it has recently purchased \$20,000 worth of chemical products in the United States.

LIGHTHOUSE EMPLOYEES COMMENDED BY SECRETARY.

Secretary of Commerce Redfield, during the past week, commended several employees of the United States Bureau of Lighthouses for assistance rendered to vessels that were in distress. The persons commended and the special acts recognized were:

Levi B. Clark, keeper of Cuttyhunk Light Station, Mass., for assistance rendered the schooner *Childe Harold*, of New Haven, Conn., which was aground on Sow and Pigs Reef, Mass.

William J. Tate, keeper of North Landing River, etc., Lights, N. C., for assistance rendered the tugboat *Adelaide*, which grounded near Long Point, N. C.

Hans P. Score, keeper of Slip Point Light Station, Wash., for assistance rendered by him to the launch *Bunch*, which had broken down in the vicinity of Slip Point Light Station.

William G. Rollinson, keeper of Hatteras Inlet Light Station, N. C., for assistance rendered to two fishing boats which were in distress in the vicinity of Hatteras Inlet Light Station.

Frank G. Sommer and Archie Hetu, keeper and first assistant keeper of Detour Light Station, Mich., for assistance rendered the tug *Gazzelle*, which was in distress off Detour Light Station.

NOTES FROM CHILE.

[Diario Oficial, Nov. 4.]

Plans for Modernization of Santiago—Concession to Goat Farm.

A commission has been named to make an exhaustive study of plans for the modernization of Santiago, with ample provision for the future growth of the city. This commission, which includes the mayor and other municipal officials of Santiago, will submit detailed plans to the Government for adoption.

The Government has granted the use of a tract of land for five years for the raising of breeds of goats not now known in this country.

[South American Journal, Nov. 27.]

Fuel Oil for Locomotives—Good Crop Prospects.

The railways in the north of Chile have been ordered by the Government to make trials of petroleum as fuel on their locomotives.

The wheat crop in the south of Chile promises to be most satisfactory, recent rains having been of great benefit.

District Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative district offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

The American commercial attaché at The Hague, Erwin W. Thompson, reports that Dutch consumers of soda recently held a meeting in Amsterdam to consider new sources of supply. Soap and glass factories, which have heretofore imported caustic soda and soda ash principally from Belgium and Germany, now find these sources nearly exhausted. The meeting reported that not more than six weeks' supply was visible. The annual consumption of soda in the Netherlands is about 50,000 tons.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its district offices.]

Stencils, No. 19603.—An American consular officer in Denmark reports that a firm in that country desires to purchase American-made stencils, novelty work, etc. Correspondence may be in English.

Asbestos fabric machinery, No. 19604.—The bureau is informed by an American consular officer in South Africa that a man desires to receive catalogues and full information from American manufacturers of machinery for fiberizing, spinning, and weaving asbestos for fabrics made from this product with a view to installing machinery for the manufacture of such fabric. Correspondence may be in English.

Electrical goods and hardware, No. 19605.—A firm in the United States writes that a firm in Spain desires to obtain exclusive agencies for American electrical goods and hardware. References will be given.

Stump-pulling machinery and gates for pasture fields, No. 19606.—A firm in the United States desires to receive catalogues with prices for export, f. o. b. New York, from American manufacturers of stump-pulling machinery and gates for pasture fields which can be opened from a buggy without alighting.

Zirconium, No. 19607.—The bureau is in receipt of a letter from a firm in Brazil which desires to communicate with firms interested in developing a mine containing approximately 50,000 tons of zirconium. An analysis sent in by the firm may be examined at the bureau or its district offices. Refer to file No. 19607.

Representative for meat packer, No. 19608.—An American consular officer in Denmark reports that a business man in his district desires to represent some large meat packer. Correspondence may be in English.

Electric passenger elevators, electric installations, etc., No. 19609.—A commercial organization in the United States writes that the manager of a large firm in Peru desires to communicate with manufacturers of electric passenger elevators; electric installations for cities; electric material, such as copper wire and insulators for installations. Catalogues, quotations, terms, etc., are desired.

Mill supplies, No. 19610.—A report from an American consular officer in India states that a general merchant desires to be placed in touch with manufacturers of mill supplies used in cotton, spinning, weaving, and sizing mills.

Slate materials, No. 19611.—A business man in Denmark informs an American consular officer that he is desirous of corresponding with firms operating their own quarries, and which manufacture and sell all grades of slate. Correspondence may be in English.

Whiskies, No. 19612.—An American consular officer reports that a man in Chile wishes to represent, on a commission basis, an exporter of American whiskies, and requests that prices, methods of packing, as well as rate of commission be sent. The inquirer intends to sell to the wholesale trade. Bank references are furnished.

Flour and petroleum, etc., No. 19613.—A report from a commercial agent of the Bureau states that a firm in China desires to communicate with exporters of flour and petroleum, and it also wishes to establish commercial relations with American firms dealing in rice and tin.

Porcelain forms for gloves, etc., No. 19614.—A commercial attaché of the Department of Commerce reports that a manufacturer in Australia desires quotations for porcelain forms used in the manufacture of rubber gloves, and glass forms for nursing-bottle nipples. The sizes of gloves manufactured are 6, 6½, 7, 7½, 8, and 8½. The same manufacturer desires quotations on glass tubing 1½ inches to 1¾ inches outside diameter, in 4-foot lengths. Terms, cash against documents at port of destination.

FRENCH TRADE FOR ELEVEN MONTHS.

[Cablegram from American Consul General A. M. Thackara, Paris, dated Dec. 20.]

The total French foreign trade except gold, silver, etc., for the 11 months ended November, 1915, was valued at \$1,917,030,979, against \$2,045,510,886 in 1914. The imports were \$1,389,853,795, against \$1,157,095,023; and exports \$527,177,184, against \$888,415,863. The imports of food products were valued at \$441,032,398, against \$311,975,043 in the 1914 period; industrial materials \$543,557,287, against \$649,231,542; manufactures, \$402,264,110, against \$195,888,438. The exports of food products were valued at \$94,987,845, against \$111,286,116 for the 1914 period; industrial materials, \$112,905,965, against \$241,706,059; manufactures, \$289,156,460, against \$471,230,151; postal packages, \$30,126,914, against \$64,193,537. The imports in November, 1915, were valued at \$119,283,843, against \$51,488,733 for the same month in 1914; the exports were \$55,093,780, against \$32,728,361.

SUGAR-BEET CROP OF RUSSIA.

[Board of Trade Journal, London, Dec. 2.]

According to the Torgovo Promyshlennaya Gazetta, of November 12, 1915, it is anticipated that this year's sugar-beet crop in Russia will amount to 12,928,200 short tons. Estimating the production of sugar from beet at the average rate of 14 per cent, the amount of sugar that would be extracted from this quantity of beet comes to about 1,785,000 tons. It is estimated that the quantity of sugar left in stock from the previous year's production amounts to 195,900 tons. The total quantity of sugar that will be available for the 12 months from October, 1915, to September, 1916, will therefore aggregate 1,981,000 tons.

VALUE OF PESOS AT BANKS IN HONDURAS.

[Consul Walter F. Boyle, Puerto Cortes, Dec. 3.]

During the month of November, 1915, the banks of the Puerto Cortes district sold the Chilean, Peruvian, Salvadorean, and Honduran pesos of local circulation for 35½ cents gold, and purchased the same coins at 34½ and 35 cents gold.

TRADE STATISTICS FOR ONE WEEK.

The imports, duties collected, and exports for the week ending December 18, 1915, at the 13 principal customs districts of the United States, handling 88 per cent of total imports and 93 per cent of total exports, based on transactions in the month of October, 1915, follow:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah).....	\$73,491	\$420	\$1,835,505
Massachusetts (Boston).....	4,978,254	174,680	1,110,600
New York	18,415,835	2,458,760	56,137,073
Philadelphia	1,300,632	141,784	2,462,295
Maryland (Baltimore).....	453,178	23,265	4,015,990
Virginia (Norfolk).....	76,218	302,746	1,445,343
New Orleans	1,444,879	11,422	5,772,219
Galveston	76,703	1,713	3,276,133
San Francisco.....	2,405,682	117,553	1,572,090
Washington (Seattle).....	2,305,371	18,586	1,430,125
Buffalo	665,362	15,408	2,075,067
Chicago	431,375	131,645
Michigan (Detroit).....	544,536	24,715	3,786,408
Total	33,202,345	3,522,739	84,939,437

The cotton exported during the week at the 12 principal customs districts of the United States follows:

Districts.	Bales.	Districts.	Bales.	Districts.	Bales.
Georgia.....	73,000	Philadelphia.....	San Francisco.....	4,521
Massachusetts.....	2,130	South Carolina.....	Washington.....	4,628

New York.....	6,200	Galveston.....	27,955		
North Carolina.....	New Orleans.....	57,021		

SEA-BORNE TRADE OF BRITISH INDIA.

[Consul General James A. Smith, Calcutta, Nov. 5.]

The trade returns of British India for September, 1915, compared with those for September, 1914, show increases in the values of imports and exports, but a decrease in reexports. The value of imports in September, 1915, was nearly \$42,176,000, an increase of about \$17,844,000 compared with the same month in 1914. The total exports, including reexports and the value of wheat exported on Government account, amounted to \$55,965,000, but excluding reexports to \$54,830,000, an increase of \$30,172,000. Reexports amounted to \$1,135,000, a decrease of nearly \$136,000, as compared with September, 1914.

Imports of treasure increased by \$2,368,000 to \$4,023,000, and exports by \$908,000 to \$1,038,000.

EXPERIMENTS IN COPPER ELECTROTYPING.

At the Cleveland meeting of the Association of Electrotypers a representative of the United States Bureau of Standards described that bureau's work on electrotyping, especially the recent investigation of copper electrotyping. The results obtained aroused considerable interest and were characterized as of great practical value. An appreciation of this work and a desire for its continuance and extension were expressed in a resolution passed by the convention.

FOREIGN COTTON INDUSTRY AND SUPPLIES.

The figures given below, which were obtained from the best sources available, give the condition of the cotton industry in some of the foreign countries at the end of November, 1915, compared with the same month in 1914.

Countries.	Month ended Nov. 30.	Cotton spindles.		Mill consumption of cotton (bales of 50 pounds).	Cotton on hand (bales of 50 pounds).	Cotton goods on hand (value in U. S. currency).
		Number.	Activity (per cent).

NEW JAPANESE WOOD-PULP FACTORY.

[Board of Trade Journal, London, Dec. 2.]

The British commercial attaché at Yokohama reports that a new company, with a capital of 3,000,000 yen (about \$1,491,000), is being organized to manufacture wood pulp in Karafuto (Japanese Saghalien). It is intended to erect a factory capable of turning out 12,000 tons of pulp wood a year. Felling rights over large tracts of forests are said to have been obtained.

REPORT OF THE DIRECTOR OF THE CENSUS.

According to the annual report of Director Sam. L. Rogers, of the United States Bureau of the Census, to Secretary of Commerce Redfield, covering the fiscal year 1914-15, which has just been made public, the Census Bureau carried on a dozen lines of work during the year and issued 33 reports and bulletins having a total of over 6,600 pages. Until March 15, 1915, the Census Bureau was under the management of Hon. William J. Harris, now a member of the Federal Trade Commission.

The largest single task undertaken by the bureau during the year was the quinquennial census of manufactures, relating to the calendar year 1914. This work required the services of more than 1,300 special agents to collect reports concerning capital invested, persons employed, cost of materials, value of products, character and quantity of power used, and quantity of fuel consumed from every manufacturing establishment in the United States. The canvass, which began in January, 1915, was carried on more rapidly than at any preceding census, and was brought to practical completion early in August. Already more than 200 press summaries have been issued giving preliminary figures for individual cities and States.

An important inquiry completed during the fiscal year was that relating to public and private wealth, public debt, and taxation for the year 1913. The results were published in the form of eight separate bulletins, the contents of which were later bound together in two volumes having a total of over 1,600 pages. The aggregate wealth of the Nation is estimated at nearly \$188,000,000,000.

A 200-page bulletin was issued, in which were brought together the principal census statistics relating to the Negro race. A more carefully prepared and complete report will follow.

New work undertaken during the year includes the collection of financial statistics of States, dealing with revenues, expenditures, assets and liabilities, assessed valuations of property, and tax levies; the preparation of a series of life or mortality tables showing for each principal element of the population—male and female, white, negro, urban, rural, etc.—in certain States the death rate and expectation of life at each age; the preparation of a statistical monograph on cancer; and the taking of special censuses of cities and villages at local request and expense.

Important work planned to be begun in the coming year, if the necessary legislative authority is provided, will include inquiries relating to religious bodies, marriage and divorce, transportation by water, and forest products, and the collection of birth statistics. The Census Bureau has a permanent force of approximately 600 officials and employees. The report calls attention to the fact that in no other Federal office of equal or greater size are average salaries for the official and clerical forces so low as in the Census Bureau.

AMERICAN GLASS BOTTLES FOR ENGLAND.

A correspondent of the American commercial attaché in London calls attention to the great scarcity of glass bottles, due to the destruction of the glass-manufacturing centers of France and Belgium, and suggests that American glass manufacturers would find it decidedly worth while to open branches in London.

ANNUAL REPORT OF THE LIGHTHOUSE SERVICE.

The annual report of the Commissioner of Lighthouses to the Secretary of Commerce for the fiscal year ended June 30, 1915, has been published. A review of the work accomplished during the five years since the reorganization of the Lighthouse Service, which took effect July 1, 1910, shows that there has been a total net increase during the five-year period of 2,831, or 24 per cent, in the number of aids to navigation maintained over the corresponding number in 1910, while the total general appropriations for the support of the service during the fiscal year 1916 are about \$307,000 less than those for the fiscal year 1911. During the five years the number of gas buoys has been increased from 225 to 479, the number of oil-vapor installations at light stations from 80 to 286, fixed lights have been changed to flashing or occulting lights at 169 stations, the total number of fog signals, including sounding buoys, has been increased from 844 to 1,044, and the number of lights in Alaska from 37 to 112.

The United States Lighthouse Service maintains aids to navigation on all coasts under the jurisdiction of the United States, except the Philippine Islands and Panama, and also on the principal interior rivers. This service is charged with the maintenance of aids to navigation along 47,192 statute miles of coast line and river channel. On June 30, 1915, there were 5,792 persons employed in the Lighthouse Service, including 123 technical force, 145 clerical force, and 5,524 employees connected with depots, lighthouses, and vessels.

During the fiscal year there was a net increase of 359 in the total number of aids maintained, the total at the end of the year being 14,544. Of these 5,155 are lights of all classes and 577 are fog signals. The total number of aids in Alaska, comprising lights, fog signals, buoys, and daymarks, in commission at the close of the fiscal year was 338, including 112 lights.

Improvements in aids to navigation have been made during the year as follows: Flashing or occulting lights were installed in place of fixed lights at 29 stations; incandescent oil-vapor lights were substituted for oil-wick lamps at 21 stations; acetylene or oil gas lights were substituted for oil lights at 27 stations. Two new light vessels were completed during the year. New lighthouses, with fog signals, were established at Brandywine Shoal, Delaware Bay, Del., and Thimble Shoal, Chesapeake Bay, Va. It is believed that the systematic methods of improvement and the use of modern apparatus in increasing the number and brilliancy of aids have been of value to the safety of commerce.

Attention has been given to the improvement of various types of apparatus and equipment. Experiments were made with temporary gas lights for winter use at certain isolated stations on the Great Lakes with good results. Radio apparatus was ordered for five lighthouse tenders. Line-throwing guns have been installed at several Alaska Stations, to facilitate landing through the surf.

During the fiscal year 1915 services in saving life and property were rendered and acts of heroism performed by employees of the Lighthouse Service on 143 occasions.

AMERICAN TRADE BY COUNTRIES FOR OCTOBER.

Figures showing the total values of merchandise imported from and exported to each of the principal countries during October and the 10 months ended with October, 1915, compared with corresponding periods of the preceding year have been made public by the Bureau of Foreign and Domestic Commerce of the Department of Commerce, as follows:

Grand division and country.	Month of October—		Ten months ended with October—	
	1915	1914	1915	1914

UNPARALLELED TRADE RECORD.

A total trade of a half billion dollars in the month and of five billion dollars in the year, with exports comprising two-thirds of the whole, is the unparalleled record of American commerce in November and the 12 months ending with November. Figures made public by the Bureau of Foreign and Domestic Commerce, Department of Commerce, show that November imports were valued at \$164,319,169, as against \$126,467,062 in November, 1914, and that they exceeded by \$11,000,000 the former November record made in 1912. Twelve months' imports to November 30, 1915, aggregated \$1,730,243,229, as compared with \$1,858,645,027 in the preceding year.

November exports broke all prior records. Last month's total was \$331,144,527, as against \$328,030,281 in October, 1915, also a record. One year ago November exports aggregated \$205,878,333, and in 1912 the former record, \$278,244,191. Twelve months' exports rose to the new level of \$3,437,292,533, as against \$2,101,187,120 a year earlier, and \$2,501,138,471 two years ago.

The export balance for November was \$166,825,358, as compared with \$79,411,271 for November, 1914; and for the twelve months ending with November last, \$1,707,049,304, as against \$242,542,093 one year ago and \$738,472,118 two years ago.

Duty-free imports comprised 68.3 per cent of the November imports, compared with 62.1 per cent for November, 1914.

Gold imports during November, 1915, amounted to \$60,981,540, as against \$7,391,729 in November, 1914. Twelve months' imports of gold aggregated \$410,650,976, as compared with \$58,352,035 in the preceding year. November exports of gold were valued at \$3,661,153, as against \$14,526,482 in November, 1914; while for 12 months ending with November the total was \$19,667,557, as compared with \$233,057,825 in the preceding year. Instead of a net outward gold movement of \$174,705,790, as in the 12 months ending with November, 1914, the year just ended shows a net inward gold movement of \$390,983,419.

List of Rice Importers in Portugal.

American Consul General W. L. Lowrie, at Lisbon, Portugal, transmitted to the Bureau of Foreign and Domestic Commerce a list of importers of rice in Lisbon and Oporto. A copy of this list may be obtained at the Bureau or one of its district offices. Refer to file No. 70185.

MONACO OFFERS RELIEF FOR CONGESTED PORTS.

[Office of Commercial Attaché, Paris, France, Nov. 18.]

English merchants here recently reported that some shippers in their country were using the port of Monaco for the reception of goods destined to southern France, Switzerland, and Italy, to avoid the congestion existing at Marseille and Genoa. The British Chamber of Commerce in Paris confirmed the report, stating that some members were using Monaco to advantage; that expensive harbor dues were thus avoided; that unloading charges were most reasonable; and that there was no congestion there. The general agent of Adams Express Co. in Paris furnished a letter from the company's agent in Monaco on this subject. This letter, translated, is:

The port of Monaco is open to all international commerce, receiving at the quay ships of 7 meters (22.97 feet) draft of water. Also this harbor can receive ships drawing 8½ meters, which, however, must lighten themselves at some distance from the quay by discharging a part of their cargo into lighters, afterwards approaching and discharging at the quay. Just at present there are no discharging cranes on the quay, but plans are being made to have such cranes in the near future. Now the discharging is effected by windlasses on board the ship and by the stout backs of workmen, and discharge is about at the rate of 250 tons per day. It is also possible to rent from the port authorities for 100 francs (\$19.30) per day a movable crane which can lift 40 tons, but there is no absolute assurance that this crane can be had on a particular day or for a particular rate.

There is along the quay one railway line which connects with the main line of railway of the district. Port pilotage is not obligatory, but the authorities furnish a pilot and the necessary workmen for mooring purposes at a very reasonable charge, maximum 200 francs. There are no port dues. Water is abundant, of good quality, and costs 1½ francs per ton.

As to customs duties, these are in the charge of the French Government, and all the rules of the French customs apply to Monaco. Sanitary charges, completely distinct from pilotage charges, are 0.15 francs (15 centimes) per ton of vessel measurement.

The letter from the Adams Express Co. agent in Monaco closes with the statement: "Please take note that I am at your complete disposition for caring for all formalities in case of shipments to this port; in fact, if shipments are consigned to me, I will see to it that careful and prompt attention will be given to all deliveries or further forwarding."

The American consul general in Marseille was asked for some information on this matter, and he has transmitted the opinion of a steamship company official in Marseille, to the effect that port facilities in Monaco are rather limited, and that there are no sheds for storage purposes on the quays. Perhaps, however, the matter of using Monaco can be taken up with shippers and shipowners, and the port be used for the reception of some of the freight being sent now to very congested harbors on this side of the Atlantic.

BUREAU STUDIES PAPER-PLANT PROBLEMS.

Numerous paper plants in the Middle West and the East, including the vicinity of Montreal, have been visited recently by a representative of the United States Bureau of Standards with the purpose of getting in close touch with the manufacturing phases of the paper industry. The bureau's work on paper can be planned and carried out with a clearer comprehension of plant problems as a result of this tour.

THE TORRENS LAND SYSTEM IN CANADA.

[Consul Samuel C. Reat, Calgary, Alberta, Oct. 30.]

The system of land registration in effect in the Province of Alberta is known as the Torrens system. It has been in use in several of the States of the Commonwealth of Australia for about 60 years. The chief object of the system is the registration of transactions relating to interests in land under Government authority and with Government certificates of ownership and title. Registration districts are established, with a land-titles office for each. A registrar is appointed for each district, with as many assistant registrars, land surveyors, and clerks as may be necessary.

One of the important features of the system is an indemnity fund to compensate any person who may suffer loss by the operation of the act in the registration offices. The statute prescribes short forms for all documents used in transactions that concern interests in land and that take effect only upon registration. The documents must be in statutory form. A certificate of ownership is issued by the registrar, and a duplicate thereof is delivered to the owner. The duplicate certificate of title is *prima facie* evidence of ownership. The duplicate certificate of title must be presented to and lodged with the registrar when a mortgage is registered against the land. Generally speaking, the duplicate certificate of title must be presented to the registrar upon the registration of any document affecting the land. A memorandum of every registered document is noted on the certificate of title and on the duplicate.

When the Land Changes Hands—Tariff of Fees.

When an owner disposes of his interest in the land the certificate of title and his duplicate are canceled. The owner surrenders his duplicate, and a new certificate and duplicate are issued in the name of the new owner. These bear only such memoranda of registered instruments as have not been discharged. They are therefore issued subject only to such documents as remain against the land at the time of the change of ownership. Upon the change of ownership a payment is made to the indemnity fund previously referred to. The payment to the indemnity fund (or the "assurance fund," as it is called in the act) is made only upon the increase in value of the land since the issue of the last certificate of title and duplicate. An affidavit of value must accompany the document by which the land is conveyed. The registrar, for a small fee, must furnish any person with an abstract of title of any parcel of land.

The tariff of fees under the Land Titles Act varies, but the principal fees are: For registering a transfer and issuing a certificate of title thereon and duplicate thereof, and including fees for memoranda, searches, and inspections, \$3 where value of property does not exceed \$500 and \$4 where value of property is over \$500; for registering or filing any lease, mortgage, incumbrance, etc., \$1.50; for filing caveat and preparing and mailing notices in connection therewith, \$2; for registration of each plan of subdivision, exclusive of extra certificates of title, \$10; for certificate of title on a transmission, including fees for duplicate thereof and for registration, \$5.

IMPORTS OF CEMENT INTO SOUTHERN INDIA.

[Consul Lucien Memminger, Madras, Oct. 27.]

The imports of cement into Madras Presidency during the six months from April 1, 1915, to September 30, 1915, inclusive, were 328,432 hundredweight of 112 pounds, valued at \$330,130. During the entire fiscal year ended March 31, 1915, the imports were 334,444 hundredweight, valued at \$287,402; in 1913-14 the quantity imported was 347,981 hundredweight, valued at \$280,607.

Thus the purchases of cement from abroad have been heavy in recent months and values particularly have increased. The United Kingdom is the principal source of supply, but Denmark and Japan have been developing trade in this region, the amount sent by them now being more than was formerly supplied by Germany, Austria-Hungary, and Belgium. Japanese and Danish brands of cement underquote English brands in the local market. The customs returns credit to the United States a very small amount of the cement imported, but possibly some American cement is included in imports from the United Kingdom.

Import Figures Showing Changes in Countries of Origin.

The following table shows the imports of cement into southern India, by countries, for the year ended March 31, 1915, and the six months ended September 30, 1915:

Countries.	1914-15		Apr. 1-Sept. 30, 1915.	
	Cwt.	Value.	Cwt.	Value.
Austria-Hungary.....	1,694	\$1,173		
Belgium.....	6,415	4,460	400	\$215
Caleutta.....			837	519
Ceylon.....	4,765	5,135		
Denmark.....	584	424	33,192	\$1,913
Germany.....	23,451	17,100	1,757	1,492
Italy.....	2,708	2,013	3,013	2,482
Japan.....	549	387	11,642	9,929
Norway.....			1,675	1,440
Straits Settlements (including Labuan).....	176	174	1,788	1,460
Sweden.....			8,927	8,320
United Kingdom.....	294,100	256,513	203,130	\$01,436
United States (Atlantic coast).....	2	23		
Total.....	334,444	287,404	336,359	\$62,104

Price of Cement in Madras.

Cement is much used in southern India for construction purposes in various harbor and railroad enterprises, and also as material for buildings. Some enterprises have been affected by the war, but building in which cement is employed is proceeding in various cities. There is a Portland-cement factory of some importance at Madras that manufactures Portland cement according to the British standard requirements. It is the only establishment of its kind in southern India.

The prices for cement on October 15, 1915, as quoted by the Madras Chamber of Commerce, ranged from \$3.56 to \$4.05 per barrel for English brands; Japanese and Danish cement was \$3.24 per barrel.

[A list of cement importers in southern India may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69057.]

WHEAT AND CORN IN SPAIN.

[Consul Robertson Honey, Madrid, Nov. 1.]

Madrid newspapers of the past week have commented on the shortage of visible wheat in the grain markets of Spain and call attention to the recent rise in the price, as follows: In market of Rioseco, from 332.40 to 335.30 pesetas; in Barcelona, from 378.50 to 382.50 pesetas; in Medina del Campo, from 335.30 to 341.10 pesetas; in Valladolid, from 342.50 to 346.90 pesetas.

These quotations are on metric tons of 2,204.6 pounds; the peseta at to-day's quotation is about 19.2 cents. It is to be noted that in dealing with the farmers the unit usually employed is the fanega, which is the equivalent of about 1.57 bushels. In the open market, however, the metric unit prevails.

[Reports concerning a reduction of duty on wheat and flour in Spain and a subsequent decision to admit free 200,000 metric tons of wheat were published in COMMERCE REPORTS for Nov. 8 and Dec. 9, 1915.]

[Consul General Carl Bailey Hurst, Barcelona, Nov. 4.]

Spanish Imports of Wheat and Corn.

Official statistics published in the Gaceta de Madrid, the official organ of the Spanish Government, show that 11,281 metric tons of wheat, of 2,204.6 pounds each, were imported into Spain during the month of September last. All of this came from the United States 5,628 tons being unloaded at Barcelona. Of corn, 26,745 tons were imported during September, of which 10,190 tons were received at Barcelona. Nearly all the corn was of South American origin. Barley, rye, and oats were not imported.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	Do.	Do.
Pock, Willys R.....	Tsingtau, China.....	Jan. 31	Do.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Do.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(e)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. R.....	Cornwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washington, D. C.
Donald, George K.....	Maracaibo, Venezuela.....	Feb. 17	153 Church Street, Mobile, Ala.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

THE DAIRY INDUSTRY OF NATAL.

[Consul William W. Masterson, Durban, Natal, Union of South Africa, Oct. 23.]

The profits in dairying in the Durban district were well illustrated recently in the annual report of a Natal creamery company, in which the following encouraging figures were submitted. The balance sheet showed a turnover of \$427,879 and a gross profit of \$48,665, and \$34,065 was carried forward to the next account.

Stated in another way, this company paid a dividend of 10 per cent; in addition there was a surplus of earnings on hand sufficient to distribute a bonus of 3 per cent to farmers and others from whom the company purchases its supplies of milk and cream, as well as awarding the staff a bonus of 10 per cent on their salaries and wages. This creamery company is not the largest that is doing business in Natal, there being one other company exceeding it in output and money invested, but this company's annual report was cited simply to show what was being done along this line.

Durban District Well Adapted for Dairying.

A very considerable portion of the Durban district is well adapted to dairy farming, although until the present the upland country only has been used for that purpose. It is now claimed that the coast lands are even better adapted to grazing, as there is much more moisture and the grazing season will naturally extend that much longer. In seasons of normal rainfall cattle thrive on the open veld for eight months and sometimes nine months of the year, while in some places irrigation is being employed to enable farmers to grow forage crops for winter use. The principal crops grown for feeding dairy cattle are mealies (Indian corn), alfalfa to some extent, oats, mangolds, rye, cowpeas, and a coarse grass that is cut for hay. A small amount of ensilage is also used by some of the more progressive farmers, principally green corn and alfalfa.

In the beginning this industry suffered many discouragements, particularly in the fatal diseases among the cattle, but of late years such diseases have been overcome by the general dipping of cattle. Droughts, too, were discouraging; but with the raising of other crops for feeding and, more recently, the installation of irrigation systems, the dairy industry has been prospering. To the present European war may be ascribed much of the increased prosperity among Natal dairymen, for supplies of cheese and butter from Europe have been about cut off and the people forced to patronize home industries. Indications are that the domestic industry will shortly be so well established that it will be almost impossible for European butter and cheese ever to recover their lost market in South Africa.

Governmental Encouragement—Creameries and Cheese Factories.

The Union Department of Agriculture has established a dairying division, consisting of a superintendent of dairying, one senior inspector, one junior inspector, and four instructors. A dairy inspector is assigned to each of the four Provinces, whose duty it is to go among the farmers and instruct them in the most approved ideas of dairying. They also give lectures at convenient centers and at agricultural shows on all points connected with butter and cheese making as well as on milk and cream testing.

The establishment of creameries and cheese factories has been a wonderful stimulus to the cattle-raising and dairying industries. In 1913 (the latest year for which returns are available) there were 42 creameries in operation in the Union, 21 being run as business properties for investment and 21 being on the cooperative plan; and in the same year there were reported 41 cheese factories, the most of which were small concerns. Twelve of the cooperative creameries received grants from public funds to assist in their establishment, the money so advanced to be returned in installments carrying a low rate of interest.

Production and Exports.

In 1911 there were in the Union of South Africa 5,797,000 cattle, of which number 1,900,230 were dairy cows. A census of cattle taken this year would show a marvelous increase over the 1911 figures, particularly as to dairy cows.

South Africa's production of butter and cheese in 1913 (latest returns available) was as follows, in pounds: Butter—by creameries, 7,659,748; by farmers, sold on the market, 2,237,219; by farmers, sold to merchants, 844,778; total, 10,741,745; cheese produced by factories, public and private, 520,849. In that year there were 397,106 pounds of butter and 27,299 pounds of cheese exported from the Union.

It is impossible to give Natal's share in any of the above figures. In cheese making Cape Province probably leads, but in butter making Natal is likely abreast of the Cape, and these two far outrank the other Provinces of the Union.

DISTRICT OFFICE OF BUREAU AIDS SHIPPERS.

As a result of the large amount of work that has been done by the St. Louis district office of the Bureau of Foreign and Domestic Commerce, in explaining the details of the new shippers' export declaration, a letter has been received by Commercial Agent George W. Doonan, in charge of that office, from P. W. Coyle, traffic commissioner of the Business Men's League of St. Louis, stating that the co-operation of the bureau has assisted the league in satisfying its members as to the reasonableness and importance of complying with the regulations of the Treasury Department regarding the export declaration. This is cited by the commissioner as further evidence of the efficiency of the bureau and its value to the shipping community.

MADRID EXPECTS NEW LINE TO UNITED STATES.

[Consul Robertson Honey, Madrid, Spain, Nov. 8.]

The press of Madrid for the past three or four weeks has been printing, as news, statements that a Spanish company is contemplating the installation of a passenger and fast-freight line between Vigo and New York. Some of the articles go much further than that and enter into details as if the service were an assured fact. Many inquiries have been made at this consulate, not only by Spanish citizens but also by officials of the Spanish Government. The form of these inquiries indicates the existence of a belief that such a line is to be established, but that it is to be an American line, and not Spanish.

MARKET FOR SUGAR MACHINERY IN HONDURAS.

[Consul E. M. Lawton, Tegucigalpa.]

Many farmers in Honduras raise sugar cane, but there are only two or three small mills that are run by steam and none that treat cane not produced on their own plantations. "Panela," a dark-brown unrefined sugar, is the sugar in common use; it is made from cane treated in wooden "trapiches," and the crudest methods are employed.

Occasional mills and kettles are purchased through the local hardware dealers, but because of excessive freight charges and customs duties, together with what seems to be an undue percentage of profit for the merchant, the price of even a very modest equipment is excessive. Lacking also the mechanical training or ability, the planter usually installs such an outfit in a manner the reverse of the proper way; the crusher is often found down near the bed of a creek and the kettles on higher ground.

This consulate has recently received a number of very complete catalogues of sugar machinery and plantation accessories printed in the Spanish language; these are probably too elaborate and expensive to distribute indiscriminately. There is need of a modest catalogue or circular in Spanish, especially for small sugar plants, showing prices f. o. b. steamer, and giving simple sketches or plans for the proper installation of such plants, together with some simple suggestions and instructions for the manufacture of raw sugar and sirups. Such a catalogue could be sent direct to the small planter and would surely be received with great interest by the average farmer in Honduras. Its efficiency would not be confined to Honduras only, but it would be applicable to all Central America and parts of South America.

Lack of Mechanical Ability.

The people of Honduras, especially away from the larger towns, are very deficient in mechanical ability. It is necessary to submit plans for installing the simplest machine. Many plants have been bought in the case of which the buyer has failed entirely in assembling them; rather than acknowledge his inability, the owner permits the machinery to rust until some foreign mechanic happens along to explain how to install it.

There is submitted with this report a list of planters in the Tegucigalpa consular district who have under cultivation 10 acres each or more of sugar cane. Those having more than 25 acres are also indicated. [This list may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 57497.] If makers of sugar machinery will address a personal letter with catalogue to each of the names listed and will follow up these letters with others, endeavoring to give a personal tone to them, business relations will undoubtedly be established.

District Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1030 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative district offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Hospital stores, No. 2848.—Sealed proposals will be received at the office of the Field Medical Supply Depot, United States Army, 21 M Street NE., Washington, D. C., until January 5, 1916, for furnishing and delivering unsweetened chocolate, malted milk, nutmeg, ox-tail and mock-turtle soup in cans, granulated sugar, and Ceylon tea.

Buoy swivels, No. 2849.—Sealed proposals will be received by the Lighthouse Inspector, Tompkinsville, N. Y., until January 4, 1916, for furnishing and delivering first, second, and third class buoy swivels for Fort McHenry range lights, Maryland, and stock. Further information may be had on application to the Lighthouse Inspector, Tompkinsville, N. Y.

Construction work, No. 2850.—Sealed proposals will be received by the Commissioner of Fisheries, Department of Commerce, Washington, D. C., until January 18, 1916, for the construction of cement retaining tanks and open shed at Louisville, Ky., fisheries station. Specifications, plans, and further information may be had on application to the Commissioner of Fisheries, Washington, D. C.

Rent of Lighthouse Reservation, No. 2851.—Sealed proposals will be received by the lighthouse inspector, Buffalo, N. Y., for the use of a portion of lighthouse reservation at Charlotte, N. Y., under revocable license. Further information may be had on application to the above-named officer.

Power houses, No. 2852.—Sealed proposals will be received at the office of the United States engineer, Wheeling district, Wheeling, W. Va., until January 26, 1916, for building fireproof power houses at dams Nos. 16 and 17, Ohio River. Additional information may be had on application to the above-named office.

Construction work, No. 2853.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until January 28, 1916, for the construction of the United States post office at Washington, Iowa. Drawings and specifications may be obtained from the custodian of the site at Washington, or at the office of the Supervising Architect.

Condemned lighthouse materials, No. 2854.—Sealed proposals will be received at the office of the Lighthouse Inspector, Philadelphia, Pa., until January 28, 1916, for the purchase of condemned materials and supplies. Blank proposals and particulars may be had on application to the above-named office.

Cement, No. 2855.—Sealed proposals will be received at the office of the Superintendent of Prisons, Department of Justice, Washington, D. C., until January 17, 1916, for furnishing and delivering at the United States Penitentiary, Atlanta, Ga., 8,000 barrels of Portland cement, in accordance with specifications, copies of which, together with further information, may be had on application to the Washington office.

Cedar, juniper, or spruce logs, No. 2856.—Sealed proposals will be received at the office of the Lighthouse Inspector, New Orleans, La., for furnishing 250 cedar, juniper, or spruce logs for spar buoys. Further information may be had on application to the above-named office.

Excavating, etc., No. 2857.—Sealed proposals will be received at the office of the United States Reclamation Service, Department of the Interior, Washington, D. C., until January 18, 1916, for the construction of about 9½ miles of the Peach Valley lateral, Uncompahgre Valley project, in the vicinity of Austin, Colo. The work involves the excavation of about 50,200 cubic yards of material in open cut. For particulars address the United States Reclamation Service, Montrose, Colo.; Tramway Building, Denver, Colo.; or Washington, D. C.

Medical supplies, No. 2858.—Sealed proposals will be received at the Medical Supply Depot, United States Army, 543 Greenwich Street, New York City, until December 20, 1915, for furnishing and delivering aqua hydrogenii dioxide bottles; ether tins; chloroform tins; white-pine lumber, spruce lumber; standard packing boxes; box shooks; hand atomizers; rubber hot-water bags; rubber ice bags; rubber bandages, elastic bands; erasers; paints; varnishes, etc.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its district offices.]

- Seamless steel tubing, etc.*, No. 19615.—An American consular officer in the Far East reports that a company in his district desires to import seamless steel tubing of all kinds and tungsten filament in large quantities.
- General representation*, No. 19616.—A business man in Spain informs an American consular officer that he desires to correspond with manufacturers desiring to extend their trade in Spanish markets. Correspondence should be in Spanish. No particular line is mentioned.
- Automobiles, etc.*, No. 19617.—A report from an American consular officer states that a manufacturers' agent in Cuba has a customer for cheap and moderate-priced motor cars and trucks. The inquirer states that he also desires to represent manufacturers of machinery and supplies for sugar mills.
- Blouses, jerseys, etc.*, No. 19618.—A company in Chile informs an American consular officer that it desires to import all varieties of womens' ready-made blouses in silk and linen, jersey and sweater coats for women in silk, imitation silk, and wool; ready-made clothing, and dress models for the retail trade. Catalogues are not wanted. Samples should be sent.
- Pencils, fountain pens, etc.*, No. 19619.—An American consular officer in France reports that a business man in his district desires to obtain an agency for manufacturers of pencils, fountain pens, inks, and glue. Correspondence may be in English.
- Barbers' chairs and supplies*, No. 19620.—An American consular officer in Brazil reports that there have been inquiries for barbers' chairs and supplies, and requests that catalogues, price lists, and full information regarding terms, ability to ship, direct or through an agent, etc., be sent. Terms desired are cash against documents at port of destination. However, if 90 days' sight draft should be allowed, references will be forwarded through a bank.
- Sewing and hand knitting machines*, No. 19621.—A man in Russia requests an American consular officer to give the name and address of an agent in Russia or Sweden representing American manufacturers of sewing machines, both for domestic and factory use; also hand knitting machines. Catalogues and prices f. o. b. Russian ports for wholesale purchases, together with weights and dimensions in Russian, are requested. Correspondence may be in English. Reference is given.
- Potato seeds*, No. 19622.—A report from an American consular officer in India states that a man desires to be placed in communication with firms exporting potato seeds. Quotations for 1,000 to 2,000 bags of potato seeds, including freight, are requested.
- Dry goods, hosiery, etc.*, No. 19623.—A company in Argentina informs an American consular officer that it desires to act as agent, on a commission basis, for manufacturers or exporters of dry goods in general, hosiery, bazaar goods, chemical and pharmaceutical products, etc. Firms are requested to send catalogues, samples, and quotations. References are given. Correspondence should be in Spanish.
- Cotton goods*, No. 19624.—A commission firm in Brazil desires to represent cotton-goods manufacturers. Samples of the goods wanted may be examined at the Bureau or its district offices. (Refer to file No. 70034.) The goods are intended for the manufacture of shirts, underwear, and other dress goods. Terms desired are 120 days' sight draft from date of shipment, commission 10 per cent on total amount of sale. Bank references are given.
- Wearing apparel*, No. 19625.—An American consular officer in the Netherlands reports that an agent in the textile business desires to establish commercial relations with manufacturers of women's wearing apparel, such as hats, waists, collars, hosiery, and silk, cotton, and woollen articles in general, with a view to acting as agent on a commission basis.
- Jewelry, lighting apparatus, etc.*, No. 19626.—A manufacturer's agent informs an American consular officer that he desires to act as agent, on a commission basis, for manufacturers of real and imitation jewelry, gas and electric lighting apparatus, suit cases and other traveler's requisites, photographic accessories, perfumery, soaps, toys, etc.

LICENSE FOR BRITISH OPTICAL-INSTRUMENT TRADE.

[Cablegram from American consul general at London, dated Dec. 20.]

Minister of Munitions prohibits all dealings without license in certain optical instruments, including prismatic binoculars, monoculars, telescopes, periscopes, and compasses for reading an azimuth angle simultaneously with sighting of object.

TO RELIEVE SHIPPING CONGESTION AT GENOA.

[Cablegram from American ambassador at Rome, Italy, dated Dec. 20.]

To relieve the congestion at the port of Genoa and enable ships to get away sooner, a Royal decree has been issued empowering the Minister of Marine to cause vessels either en route to or already arrived at Genoa either to be temporarily detained at Genoa or to proceed elsewhere to be unloaded in some other Italian port in the Tyrrhenian Sea not south of the parallel of Civitavecchia.

Foreign Office circular requests that foreign shipping interests be informed of this decree through their Governments, also that necessary instructions be issued to ships already en route to Genoa to stop at Gibraltar and obtain instructions from the Italian consul there as to the precise Italian port such vessels shall proceed to from Gibraltar.

CONCESSION FOR PHILIPPINE FOREST LAND.

The Bureau of Forestry at Manila invited bids, to be opened October 1, 1915, for a long-term, exclusive concession covering the so-called "Ragay Gulf" or "Mt. Labo" tract of forest land lying to the north and northeast of the headwaters of Ragay Gulf, in the Provinces of Tayabas and Ambos Camarines. Inasmuch as no satisfactory bids were received, the Bureau of Forestry now announces that it will receive and act upon at any time any suitable application for this valuable concession.

The Bureau of Insular Affairs at Washington is prepared to furnish to those interested full information regarding this tract.

IMPORTATIONS OF WOOLEN GOODS INTO BURMA.

[Consul M. K. Moorhead, Rangoon, Nov. 4.]

An inquiry, accompanied by samples, regarding opportunities for sale in Burma of woollen fleecy fabrics has been received and a notice was inserted in the "Trade inquiry lists" which the Rangoon consulate publishes twice a month. Although these lists were sent to every dealer and commission agent in Rangoon, no responses have been received regarding the fleecy fabrics. From personal investigation it has been learned that there is a very small market in Burma for such fabrics, as there are no manufacturers of petticoats, women's underwear, wrappers, bath robes, etc. Occasionally the department stores make up such articles on special orders, but the demand is very small.

During the year ended March 31, 1915, woollen goods valued at \$980,470 were imported into the Province of Burma from all foreign countries, as compared with \$1,854,570 in the preceding year. This large decrease was due to the lack of supplies from Continental Europe after the war started. The most important item in the importation of woollen goods was in piece goods, which reached a value of \$1,120,100 during the year ended March 31, 1914, but declined to only \$646,320 in the year ended March 31, 1915.

The importations of the principal kinds of woollen goods into Burma for the two years ended March 31, 1914 and 1915, respectively, were: Yarn and knitting wool, \$58,120 and \$19,600; braids, etc., \$90,610 and \$27,230; carpets and rugs, \$251,600 and \$177,310; hosiery, \$96,820 and \$91,420; piece goods, \$1,120,100 and \$646,320; shawls, \$228,950 and \$17,570.

[A list of department stores and commission agents dealing in woollen goods in Rangoon, Burma, may be obtained from the Bureau of Foreign and Domestic Commerce or its district offices. Refer to file No. 70,173.]

TEST OF HOLLOW BUILDING TILE.

A very interesting test of hollow building tile has been made by the United States Bureau of Standards. A floor slab 6 feet wide and 30 feet long continued over three piers 15 feet apart was made of this class of material. This tile is of a special type for use in floor slabs and is made so that the bottom surface is about 2 inches wider than the top. In laying the tile in the form of a slab, the pieces touch on the bottom, but are about 2 inches apart at the top. This space continues throughout the length of the slab, and is filled with a mortar of the composition of one part of cement and two of sand, in which are placed several reinforcing rods bent up at the ends of the slab and continued through the concrete beam into the next adjacent slab.

In the present case the two slabs were allowed to age for one month. Tests were made of these, loaded uniformly with pig lead, numerous deflection readings being made as different loads were applied. One of the slabs failed at about 603 pounds per square foot. The other was able to withstand a slightly greater load, 690 pounds per square foot. Failure occurred in the mortar beams, due largely to the inferior grade of reinforcing used. One of the concrete supporting piers also failed near its base. While the load carried was not up to the expectations of the manufacturers of the tile, yet it was considerably in excess of that demanded by most building laws.

VISITORS AT BUREAU OF STANDARDS.

Interest in the scientific work that is being done by the United States Bureau of Standards is shown by the number of visitors received in the course of a month. Among those who called in November to study the bureau's technical work, or to consult those in charge, were the Secretary of the Navy, with the Secretary of Commerce; representatives of the Pennsylvania Railroad, of large department stores in New York and Philadelphia, of a large Chicago mail-order house, a Massachusetts cordage company, a western electrical company, a local paper company, a Pittsburgh electrical company, a Maine paper company, and the Forest Products Laboratory.

Lines in which these visitors were interested included specifications, new types of cloth, paper, textiles, and other materials, and the technical problems connected with them.

Members of a large zinc company called in reference to the bureau's work on properties of pure zinc, and the bureau received an invoice of exceptionally pure zinc ($99.99+\text{Zn}$) from them for use as a pyrometric melting-point standard and for determination of physical properties. The chief chemist of a leading aluminum company called to arrange for preparing pure aluminum for the same purpose.

Representatives of the District of Columbia health department and printers' union asked advice concerning protection from metal fumes in linotype baths.

The director of an industrial research laboratory consulted the bureau concerning practice to free ingots from surface blow holes for steel of which automobile bodies are shaped. The requirements are very exacting, as the slightest seam developed from blow holes causes varnish to blister.

Representatives of the Japanese naval testing laboratory called to inspect the bureau's methods of metallographic work. A representative of an electric company visited the bureau for information to aid in equipping a projected research laboratory for metals, etc.

The metallurgist of an important steel and wire company called to discuss in detail cooperation with the bureau in investigation of galvanized processes and materials.

WANTS COOKSTOVE SUITED TO USE OF CRUDE OIL.

A business firm in Guayaquil, Ecuador, has written to an American manufacturer, suggesting the possibility of placing on the market in that country a cookstove that would be adapted to the use of crude coal oil as fuel. The South American firm states that the crude oil to be used there is of about the density of that produced in Pennsylvania. The desired range, it says, should be of very light sheet steel or iron, reasonably strong and safe, and be sold at a price within the reach of persons of limited means. The name of this firm, which has been furnished by Commercial Agent Porter, at New York, may be obtained from the Bureau of Foreign and Domestic Commerce or its district offices.

PHILADELPHIA-ECUADOR STEAMSHIP LINE PROPOSED.

[Consul General Frederic W. Goding, Guayaquil, Nov. 17.]

The Congress of the Republic of Ecuador has granted a concession for a steamship line between Guayaquil and Philadelphia. The executive is authorized, in accordance with the legal requirements, to sign a contract to establish a line between the United States and Guayaquil. The corporation is to be known as the United States & Ecuadorian Steamship Co., incorporated in the State of Delaware, and the line of steamers is to be operated between one of the principal ports of the United States on the Atlantic Coast—Philadelphia preferred—and the port of Guayaquil, through the Panama Canal.

The vessels are to be registered in the Republic of Ecuador, to navigate under the Ecuadorian flag, and at least one-half of the employees are to be of that nation. The company must admit on its vessels up to six marine guards, designated by the executive, for the purpose of continuing a course of practical navigation and naval engineering, under the direction of the chiefs and officers of the company's vessels.

The company is required to establish the line within 1½ years from the signing of the contract, with two steamers of the first class for passengers and freight; after two years, two more steamers of the same class and tonnage to be added. Various specifications are provided in regard to the construction of the vessels and the service to be rendered.

[Mention was made of this project in *COMMERCE REPORTS* for Nov. 15, 1915.]

THIS YEAR'S FLAX HARVEST IN RUSSIA.

[Weekly Bulletin, Department of Trade and Commerce, Ottawa, Nov. 22.]

The Torgovo Promyshlennaya Gazetta of October 14, 1915, announces that the prospects of this year's flax harvest in Russia are satisfactory, and tests that have been made with this year's fiber also show satisfactory results. A considerable demand from abroad is anticipated. It is generally estimated that the surplus from last year will not exceed 3 per cent. It is pointed out that, though the harvest for 1914 was less than that of previous years, 5,000,000 to 6,000,000 poods (90,300 to 108,300 short tons) were left over for exportation after the home demand of 10,000,000 to 11,000,000 poods (180,600 to 198,600 tons) had been satisfied. On the assumption that the yield of flax this year will approach the average for previous years it is estimated that the harvest will amount to 17,000,000 to 19,000,000 poods (307,000 to 343,100 tons), even when allowing for only 30 per cent of the average production in the districts affected by the military operations. It is anticipated that this yield of flax will be ample for home requirements and will leave a surplus for export.

UNIVERSITY FOR MANCHURIA.

[National Review of China, Nov. 20.]

The Chiangchun of Mukden, Gen. Tuan Chihkwei, has proposed to the Chinese Ministry of Education that there should be established in Manchuria a thoroughly up-to-date university. The proposal has received the approval of the ministry, and it is expected that the university will be established and in working order before very long.

NEED OF PARCEL-POST EXCHANGE WITH SIAM.

[Consul General Frank D. Arnold, Bangkok, Oct. 11.]

The greatest drawback to the extension of American trade in Siam is the lack of a parcel-post exchange between the United States and this country. At present all parcels cost letter-postage rate, which is prohibitive, inasmuch as the sample post rate can not be used on this class of shipments.

I am informed by the postal authorities that of the 336 parcels received in Siam for the past week not one was from America. They were almost entirely from countries which have entered into parcel-post agreements with Siam, these countries being Great Britain, Germany, Denmark, Italy, and the Dutch Indies.

The Siamese look with great favor upon American goods, and, through proper shipping facilities and parcel post, they could be brought into contact with many products of American manufacturers which are at present barred by the high postal rate. Through the aid of our catalogues, magazines, and advertising pamphlets many small articles could be introduced, and this I am sure would lead to larger future shipments, especially of many articles which were formerly furnished by Germany and now are unobtainable.

The consulate general has established a reading room where magazines, trade reports, pamphlets, etc., may be consulted, and this has been taken advantage of by both Siamese and Europeans. If we had a parcel post agreement, there is no doubt that the result of such inquiries and information would lead to a great increase of American goods into Siam.

LIVE STOCK IN ARGENTINA.

The Argentine Bureau of Rural Economy and Statistics has just issued a map which shows the number of live stock in the seven Provinces of Buenos Aires, Cordoba, Corrientes, Entre Rios, Mendoza, San Luis, and Santa Fe, as follows: Cattle, 23,746,900; hogs, 2,646,761; horses, 7,515,018; mules 36,269; sheep, 52,220,871; goats, 1,715,772. The report adds that in each of the territories of La Pampa and Rio Negro there are more than 6,000,000 sheep, and in El Chaco more than 600,000 cattle. According to all estimates, there has been a decrease in the total number of live stock in Argentina in the last 10 years, but owing to the higher prices received for stock at the present time there is an increase in value over that of 10 years ago. The total sales for 1914 amounted to \$811,941, while the 1915 sales have reached \$1,300,878. [A previous note on the live-stock statistics in Argentina was published in *COMMERCE REPORTS* for Mar. 5, 1915.]

AUSTRIAN WINDOW-GLASS MARKET.

[Consul Wallace J. Young, Carlsbad.]

Despite a recent increase of 10 per cent in the price of window glass, the makers of this product in this neighborhood have so many orders that those placed by private persons are for delivery six months in advance. This abnormal demand is caused not only by the great number of barracks, permanent camps, and warehouses being built by the Government and incident to the war but also by the need for building supplies in Galicia.

IMPROVED TELEPHONE SYSTEM IN SANTIAGO DE CUBA.

[Consul P. Merrill Griffith, Santiago de Cuba, Dec. 11.]

Modern automatic telephone systems, with complete underground cables, are now in operation in Santiago de Cuba and many other Cuban cities. The old magneto system, formerly in use and very unsatisfactory, has been changed throughout the island. Long-distance service is furnished to nearly all the cities and large sugar mills.

The Cuban Telephone Co., an American concern which obtained its concession in 1909, owns and operates practically all the local and long-distance lines in Cuba. It has constructed new central offices in Santiago during the past year at a cost of \$75,000, the building being handsome in design and composed entirely of reinforced concrete. The new switchboard now being installed is for 2,000 lines, and all the material is of American manufacture.

The headquarters of the company are in Habana. The cities in which the automatic system has been installed are Habana, Cienfuegos, Cardenas, Sagua la Grande, Santiago de Cuba, and Matanzas. Those operating under the manual system are Artemisa, Bayamo, Ciego de Avilo, Guines, Guanajay, Holguin, Pinar del Rio, Plantas, San Antonio de Los Baños, San Luis, Santiago de Las Vegas, Victoria de Las Tunas, and Santa Clara.

ROOT CROPS OF ENGLAND AND WALES.

[Agricultural returns of England and Wales; transmitted by Consul John S. Armstrong, Bristol, England, No. 26.]

The following table shows the estimated total production, acreage, and yield per acre in 1914 and 1915, and the average yield per acre in the 10 years, 1905 to 1914, of the potato and other root crops of England and Wales:

Articles.	Estimated production.		Acreage.		Average yield per acre.		Average yield per acre, 1905-1914.

WEST AFRICAN COCOA INDUSTRY.

[Consul W. J. Yerby, Dakar, Senegal.]

"Cocoa" to most individuals suggests carefully and tastefully packed art boxes or tins or, in chocolate form, delightful little packages done up in neat silver paper and prettily tied with bows of silk ribbon. To some it means a welcome and fragrant breakfast or supper beverage. To few indeed does it represent anything else.

The man in the street, if he thinks at all upon investing his savings in cocoa, argues that there is a limit to human digestion, particularly where sweetmeats are concerned, and, consequently, that he need not trouble himself about "futures" in cocoa, for the field is at best a restricted one. It never occurs to him that every kind of vegetable oil and fat is becoming more in demand every day. Somehow he never asks himself why cocoa of a certain brand is 50 cents per pound and another 25 cents. He presumes—and if he tries it he knows—that the one is better than the other; but it does not occur to him that there is something in the one that is lacking in the other.

Introduction of Cocoa into West Africa.

The total world production to-day exceeds a quarter of a million tons of cocoa per annum. The East and West Indies and the great Amazonian Valley have for generations poured their supplies into Europe and America; but it is only within the last 30 years that West Africa has made its influence felt.

Given a humid atmosphere, well-watered land, and a tropical sun, experts claim that cocoa will grow almost anywhere up to a height of 1,500 feet. Of lands enjoying atmospheric conditions highly suitable for the production of cocoa there are 500,000 square miles in the tropical regions of West Africa. São Thomé and Príncipe, with less than 300 square miles under cultivation, supply to the world's markets over 30,000 tons of cocoa every year; if, therefore, but one-fourth of the potential cocoa-producing areas of West Africa could be brought under cultivation at the same rate there could be harvested over 10,000,000 tons of cocoa.

To-day cocoa is being cultivated in the German colonies of Togoland and Kamerun; in the Portuguese colonies São Thomé and Príncipe; in the Belgian Congo; in the Spanish island Fernando Po; and in the British colonies Gold Coast and Nigeria. In all these the production has distinctive features.

Cultivation in Portuguese Colonies.

From the standpoint of plantation arrangements and the application of scientific methods, the Portuguese in São Thomé are easily first. This no doubt is due to the fact that for over 25 years the planters have been concentrating their efforts upon the cocoa bean. Throughout their whole area São Thomé and Príncipe are under cocoa cultivation, and the traveler never gets away from the sour odor of fermenting cocoa.

Nowhere throughout West Africa are there such scientific and elaborate drying grounds as one sees on the Portuguese islands. The majority of cocoa planters in West Africa are satisfied with cemented drying grounds in open courtyards; some spread the beans on large grass or palm mats or on burlap. The cocoa beans are spread out to dry, and left in the open not only during the whole day but through-

out the night. On several roças (farms) the Portuguese have, at great expense, fitted up drying grounds which are mechanically moved under shelter whenever a storm threatens.

There are nearly 300 roças on the two islands, and, with one or two exceptions, they are in Portuguese hands; there is a Belgian plantation, and one or two owned by natives from Sierra Leone, whose ability to make cocoa production a financial success is demonstrated by the fact that one who died recently left about \$30,000 for the education of the children of the island of São Thomé.

Transportation in Portuguese Islands—German Colonies.

The cocoa plantations on these islands are all within such easy reach of the sea that transportation offers little difficulty. Both horses and mules thrive quite well on the islands, and these, coupled with bullock carts and some 1,000 miles of light plantation railway running out to the piers, render unnecessary the portorage that constitutes such a problem for cocoa planters in every other colony in West Africa.

In the German colonies cocoa growing is extending rapidly and, from a financial point of view, satisfactorily. The German administration in Kamerun has appeared to favor such enterprises mainly as European undertakings in which the natives are mere laborers until within recent years, when some effort has been made to encourage the natives by gifts of seed and young plants to have their own fields.

Togoland exported during 1911, 509,166 pounds of cocoa, valued at \$41,412, and during 1912, 623,862 pounds, valued at \$57,839; while the exports from Kamerun during 1910 amounted to 6,735,935 pounds, valued at \$538,875; during 1911, 7,897,876 pounds, valued at \$787,176; and during 1912, 10,034,534 pounds, valued at \$1,009,660. On account of the war other and later statistics are not available.

Purely a Native Industry in Gold Coast.

Cocoa cultivation in the Gold Coast is purely and solely a native industry, few of the plantations being more than 25 to 30 acres in extent and the majority not more than 2 to 5 acres. Few, if any, are owned by whites. The farms are not so close together as those of São Thomé, but the traveler can not walk many miles anywhere without passing through plantations of cocoa and palm trees. The atmospheric conditions resemble those of São Thomé and Príncipe, with a rainfall of 32 to 55 inches per annum; otherwise the territory is not so well watered as the Portuguese possessions. In spite of this, the colony can produce a quantity and quality of cocoa that compares well with other areas.

In 1891 the first lot (80 pounds) taken by the native to a white trader brought \$19.46; 24 years later this 80-pound shipment had grown to 119,593,600 pounds, valued at \$10,674,768. The whole of this, be it remembered, is a native industry. The Gold Coast natives are justly proud of their enterprise and assert that they will not cease extending their plantations until every acre they can cultivate is producing cocoa.

Transportation in Gold Coast.

Not the least interesting spectacle in the Gold Coast is the transport of cocoa, the bulk of the inland produce being carried by porters

to the rail head. Sometimes the roadways as far as the eye can see are one long line of cocoa bags on the heads of hundreds of carriers. This carrying trade has produced an extraordinary flow of free labor into the whole hinterland of the Gold Coast. At Adawso, a buying station nearly 15 miles from the rail head, one firm alone employs in the season 3,000 carriers, who cover the distance to the rail station at Pakro once and frequently twice a day with a 150-pound bag of cocoa.

The fame of the Gold Coast carrier traffic has spread far into the northern regions of the country, with the result that the recognized caravan routes now come right down through the Northern Territories. These carriers, many of them from around and even beyond Lake Chad, drive herds of cattle down to the Gold Coast colony about harvest time. They sell the cattle and then carry cocoa for the season. When the main harvest is over and there is little cocoa carrying, they purchase loads of kola nuts, which they take back with them to the far interior and sell en route at a considerable profit.

The transport of cocoa being chiefly in the hands of alien labor, should its flow cease from any cause whatever the cocoa industry would suffer a check from which it would take some time to recover. The coastal regions are fairly secure, for most of the districts within 20 miles of the coast are reached by a daily service of motor lorries under the management of the European cocoa-buying firms.

"Barrel Rolling"—Exports from Gold Coast.

Many of the native farmers within 30 miles of Acera, however, prefer to sell their cocoa at a higher price at the port of embarkation, and so have created the interesting system of "barrel rolling." In the cocoa season strongly bound and ponderous casks are filled with the beans and rolled to the seashore. Traveling along the somewhat primitive roads one meets at frequent intervals perspiring natives struggling with the barrel which, filled with cocoa, weighs considerably over a quarter of a ton. As a rule three men roll two casks, one relieving the other. Therefore it is evident that there is a transport problem for the producers, large consignments of cocoa being sometimes lost for lack of means of transportation.

It appears to be the policy of the Gold Coast government to keep the industry in the hands of the natives and to allow the traders to be—as they have always been—the "middlemen" between the producers and the European importers and manufacturers. The government assists the natives, in every possible way, through competent agricultural instructors.

The principal harvest months are from October to January; it is thus easily seen how the exports for 12 months ending December 31 may show considerable fluctuations from year to year. Although the quantity exported in 1912 (86,568,481 pounds) was less than in 1911, the value was about \$150,000 more, due to the higher prices ruling in the European markets. In 1913 exports jumped to 113,239,980 pounds, value \$12,112,535, and in 1914 totaled 119,593,600 pounds, value \$10,674,768.

Rapid Growth of Nigerian Industry.

The Government reports of 12 years ago gave little hope that the natives of Nigeria would become cocoa farmers, but Africa is the

land of surprises. The Acting Secretary of Southern Nigeria, in writing his 1903 report from Old Calabar, said:

It is not in the nature of the average West African to lay out capital for which there is no immediate return. He can understand the yam growing at his door; he can understand the cask of oil to be filled before his boys can return with the required cloth, pipe, or frock coat, but he will not sow for his son to reap, nor will a village work, of its own initiative, for the benefit of the next generation that is to occupy it.

The very next year the acting governor was enabled to write, "There has been an enormous development in cocoa"; and the Southern Nigerian natives, as if in unconscious protest against the 1903 report, poured into the European markets over 1,000,000 pounds of cocoa beans. Two years later exports rose to 1,500,000 pounds. In 1913, 8,111,920 pounds, value \$766,140, were exported; in 1914, 11,062,989 pounds, value \$835,564.

Methods of Cultivation in Nigeria—Other Africa.

The Nigerian Customs and Trade Journal presented some interesting remarks on the cultivation of cocoa in Nigeria. It states:

The methods of cultivation, generally, by the native producers leave much room for improvement, and it is estimated that only about one-third of the crop is harvested. An attempt is being made by the agricultural department of the colony to remedy this by affording, as far as possible, continuous supervision and advice in the planting at proper intervals, care of the plants, etc., and in the adoption of methods to prevent diseases to which the plants are liable.

It is not realized by the producer that with the exercise of greater care in the drying and curing of the bean an enhanced value can be obtained. A model fermentation and curing house has been erected at the Calabar experiment station, with a view to treating the produce for the natives before disposal to the European firms.

British West Africa's exports within 12 years have multiplied something like 21 times, i. e., in round figures from about 2,600 tons in 1903 to over 56,000 tons in 1914.

The climatic conditions and soil of Liberia are excellent for cocoa as well as for coffee. American capital could be well and profitably interested therein in cocoa farms.

Spacing and Yield—Labor.

Cocoa grows apparently with greater ease in West Africa than within any other cocoa-producing area in the world. The elaborate systems of manuring that seem imperative in most tropical colonies are not practiced by the West African producer. He piles the fermenting husks in heaps, and then, when thoroughly decayed, throws the refuse around the base of the trees.

Government authorities, especially in British West Africa, advise wide spacing—15 feet—but the natives plant close, claiming, with some reason, that it better conserves the moisture of the soil. Neither in the Gold Coast nor in Southern Nigeria do many planters space farther apart than 8 feet. Many crowd 500 to 700 trees upon a single acre. The plantations in British West Africa being almost entirely in the hands of the natives, statistics are unreliable upon the annual output per acre. One official estimates that the natives obtain about 7 pounds per tree per annum. This is regarded as very high. A native farmer in Southern Nigeria with 100,000 trees, about one-half bearing, obtained from 50,000 trees 30 tons of cocoa, an average of 1½ pounds.

As a rule there is plenty of cheap labor in each of the West African colonies, but the services rendered are "cheap," too. In Fernando Po one man per acre is employed. In the British colonies the native and his family are all employed, but one man per acre here could do the work with ease. One man ought to be able to attend as much as 5 acres.

SUGAR SITUATION IN SPAIN.

[Consul Robertson Honey, Madrid, Oct. 30.]

According to the "Revista de Economia y Hacienda," published in Madrid to-day, 9,106,885 kilos (10,040 short tons) of beet sugar have been produced between July 1 and October 1 of the present year. The output for the corresponding period of 1914 was 6,412,552 kilos (7,069 short tons). In addition to this a royal decree has been signed ordering the direct purchase from Germany of 400 metric tons (metric ton=2,204.6 pounds) of sugar-beet seed to be shipped to the Director General of Customs of Spain. This officer will distribute the seed among the various consignees. It is believed that this amount of seed is sufficient to plant the crop for 1916. Its exportation from Germany was authorized by that country, and it is hoped that still more may be liberated.

[Consul General Carl Bailey Hurst, Barcelona, Oct. 30.]

Increased Consumption Beneficial to Industry.

The reduction of the Spanish Government tax on sugar, which went into effect in July, 1914, resulted in a marked increase in the annual domestic consumption, from 120,000 metric tons of 2,204.6 pounds each to an estimated amount of 145,000 tons. This rise in consumption was highly beneficial to the sugar industry in Spain and incidentally to dependent agricultural interests. In a recent assembly of Spanish sugar manufacturers it was decided that each factory should increase its output by 30 per cent, so that during the remainder of the year 51,000 tons will be provided over and above the estimated consumption in Spain for 1915.

On the other hand, the prices of the raw material required in sugar production have increased, to the detriment of the manufacturer. Formerly sugar-beet seed coming from Germany cost 1 peseta (\$0.18) per kilo (2.2046 pounds), whereas it now costs 1.65 pesetas (\$0.29).

Customs Statistics of Production and Distribution.

The Spanish customs service publishes the following statement as to the production and distribution of sugar during corresponding periods of the years 1914 and 1915, by which it will be seen that the quantity on hand in the factories on June 30, 1915, was 61,548 tons less than at the corresponding time in 1914:

Items.	1914	1915
	<i>Metric tons.</i>	<i>Metric tons.</i>
Sugar in factories Jan. 1	102,574	108,487
Sugar produced up to June 1.....	69,870	29,155
Total.....	172,444	137,642
Distributed since Jan. 1	56,516	82,502
Sugar on hand June 30	116,928	55,140

POTATO QUARANTINE AGAINST POWDERY SCAB REMOVED.

The Federal quarantine against shipment from foreign countries of Irish potatoes affected with powdery scab is removed by an order of the Department of Agriculture, effective January 1, 1916. This permits a number of potato-producing countries to resume shipment of potatoes to the United States. In the case of Canada, the new order, in addition to removing the quarantine, provides that potatoes may be shipped in without certification by Canadian officials, under an arrangement with the Canadian Minister of Agriculture that Canada will offer for export to the United States only potatoes free from injurious diseases and insect pests.

The removal of the foreign quarantine for powdery scab follows the lifting of the domestic quarantine against this disease September 1, 1915.

Although this quarantine is removed, the regulations governing the entry of potatoes and providing for inspection at ports of entry are continued in force. These regulations provide for an adequate field inspection by recognized experts in the countries where shipments originate, and that such countries must maintain effective quarantines against entry into their territory of potatoes from any country under quarantine by the United States on account of the potato-wart disease. The inspection at the ports of entry of this country is believed to be adequate to prevent the entry into this country of objectionally diseased potatoes.

The quarantine against certain countries on account of the potato-wart disease, promulgated September 12, 1912, remains in full force and effect.

The restriction against the entry of foreign potatoes into Porto Rico is removed entirely, as it is represented that there is no potato industry in that territory, nor is there likely to be any in the future to be harmed by the entry of foreign potatoes.

Special regulations covering the export of potatoes from the States of Chihuahua and Sonora, Mexico, and from the Island of Santo Domingo provide that shipments will be permitted entry only through certain designated ports in the United States and after the issuance of a permit in accordance with department regulations.

147,000 VOLUNTEER AS CROP REPORTERS.

Nearly 150,000 volunteer crop reporters and special correspondents are now aiding the Bureau of Crop Estimates of the United States Department of Agriculture in the preparation of its estimates of crops and live-stock production of the country, according to the annual report of the bureau which has just been issued. The actual number of these volunteer assistants is 147,327. In addition, there are 151 paid employees in the service of the bureau. The total appropriation for the work for the fiscal year ended June 30, 1915, was \$275,580.

The report also calls attention to the fact that the crop figures formerly published in the "Agricultural outlook" are now printed in the "Monthly crop report."

The bureau has enlarged its work during the fiscal year by assigning one of its employees to the work of investigating truck crops.

IMPORTS AND EXPORTS OF COPPER.

The imports and exports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, Washington, and Michigan during the week ended December 11, 1915, follow:

IMPORTS.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Peck, Willis R.....	Tsingtau, China.....	Jan. 21	Do.
Messersmith, George S.....	Port Erie, Canada.....	Jan. 1	Lewes, Del.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Do.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(*) Lotus Club, 110 West Fifty-seventh Street, New York City.
Chamblain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, O. B.....	Corwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washington, D. C.
Donald, George K.....	Maracaibo, Venezuela.....	Feb. 17	153 Church Street, Mobile, Ala.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

METAL LEAF AND BRONZE POWDER IN INDIA.

[Consul Lucien Memminger, Madras, Oct. 22.]

There should be a good market for American metal leaf and bronze powders in southern India at the present time. Brass leaf and gold leaf not only are used by printers and lithographers, but have a good sale at bazaars for other purposes, particularly for certain gilded ornaments, of which natives of India are very fond.

The amount of metal leaf imported into Madras Presidency is not shown separately in customs statistics, but the following figures, based on a table showing the gross amount of customs duty received by customhouses in the Presidency upon the principal articles of merchandise subject to duty during the fiscal year ended March 31, 1915, is believed to be a correct statement of the value of imports for that year: Gold leaf, \$766; European brass, residue and leaves, \$1,064; brass, patent or yellow metal sheets, etc., new, \$869,410; brass, patent or yellow metal sheets, etc., old, \$9,882; brass sheets, flat or in rolls, \$1,071; brass wire, \$3,815; brass, all other sorts, \$9,006. Countries of origin are not stated, but the United Kingdom and Germany were the principal sources of supply. The rate of duty is 5 per cent.

These figures represent only a part of the imported metal leaf consumed in southern India, for bazaars in the interior, particularly in the large native state of Hyderabad, undoubtedly obtain some of their supply from Calcutta and Bombay. Hyderabad has a reputation for its embroideries in silk and gold and its silver tissues.

Limes Gilded with Brass and Gold Leaf.

One of the interesting uses to which brass leaf is applied in southern India is for gilding limes, the decorated fruit, according to a local custom, being exchanged by natives on festival occasions in token of esteem. The origin of this practice is apparently unknown, but it dates from a distant period and is a recognized feature of Indian life. The exchange of limes takes place on New Year's days, of which there are several in this country. Besides the English anniversary observed by the natives, the Mohammedans and the Tamil and Telugu branches of the Hindus have special New Year's days. A native calling on New Year's Day on a person to whom he or she desires to show esteem presents the host with a lime. In the case of the well to do the lime is always ornamented with brass leaf or, in a few cases, with gold leaf. The poorer classes, as a rule, give undecorated limes. The custom sometimes extends also to the ordinary "tamash" or social reunion. Thus, a good deal of brass leaf is used for gilded limes and the bazaar trade in this line throughout southern India is really considerable. The leaf is also used to some extent in the manufacture of gilded caps or "topi," worn generally by Mohammedans in southern India on their holidays and for decorations on the dresses of Mohammedan women.

Printing Establishments Offer Good Market.

Printing establishments are numerous in southern India in proportion to the size of the educated population. All enterprises of this sort, even if combining printing and lithographing, are described in official publications as printing presses. There are 3 Government printing presses at Madras, employing 1,860 persons, and 22 other printing presses in the Presidency (all but 3 of which

are in the city of Madras), employing 3,857 persons. Local custom and taste, particularly of the natives, tends to the use of a good deal of gold leaf in the printing of book covers. The educated classes of natives are fond of writing books and like to have the volumes well bound, with gold lettering on covers and gilt edging on outer surfaces. In Madras much of this work is done with gold leaves instead of by the modern deposit battery used generally in the United States. The supply of leaf in Madras formerly came largely from Germany, but trade with that country having ceased, imports from the United States would doubtless be accepted on favorable terms. Imported books of gold leaf of 24 pages, which before the war sold at 45 cents each, are now selling at 49 cents, retail price. Brass books of same size are selling retail in the bazaars at 9 cents.

Although gold is mined in this country, it is not manufactured here, but is exported.

Use of Bronze Powders.

Bronze powders are not designated in the customhouse returns, and the amount imported is therefore not ascertainable; but it is believed that a considerable amount of this product enters into use for die stamps and letterheads. Stationery with stamped letterheads or with monograms and coats of arms in bronze color is popular among certain people.

Terms should be quoted c. i. f. Madras. If possible, samples should be sent or an agency established. Reasonable credit is extended to European firms, who often act as intermediaries for native firms with regard to imports.

[A list of the printing and lithographing establishments in Madras and the names of a few commission agents or bazaar dealers most likely to be interested in imports of brass from the United States may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 69485.]

RUSSIAN MANGANESE INDUSTRY IN 1914.

[Weekly Bulletin, Department of Trade and Commerce, Ottawa, Dec. 6.]

The Journal of the Russo-British Chamber of Commerce (Petrograd) states that 730,310 short tons of Caucasian manganese ore were extracted during 1914, or 338,415 tons less than in 1913. The exports of Caucasian manganese ore by rail from the mines in 1914 were 787,655 tons, or 461,790 tons less than in 1913. The quantity of ore put on the market during 1914 was 788,216 tons, against 1,188,600 tons in 1913. The exports of Caucasian ore by Poti and Batum in 1914 were 489,005 tons and 299,210 tons, respectively, representing decreases from the exports in 1913 of 216,025 and 184,355 tons. The proportions of manganese ore exported and used for home consumption are 98½ and 1½ per cent, respectively, 771,315 tons being sent abroad and 11,900 tons being sent to the home markets. The quantities exported to the various countries during the first six months of 1914 and during the whole year were as follows: Germany, 328,610 tons in the first six months of 1914 and 365,410 tons in the whole year; Belgium, 145,245 tons and 172,925 tons during the two periods; United Kingdom, 93,965 and 119,820 tons; United States, 38,570 and 38,675 tons; Austria-Hungary, 35,985 and 36,310 tons; France, 26,815 tons for both periods, there being no exports to that country during the second half year.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Sawmill machinery, No. 19627.—An American consular officer in the Far East reports that a business man desires to correspond with manufacturers of sawmill machinery, especially handsaws.

Electric light bulbs, pumps, and apparatus, No. 19628.—A report from an American consular officer states that a man in Spain desires to act as agent for firms manufacturing electrical goods, such as electric bulbs of $\frac{1}{2}$ watt from 50 to 500 candlepower, for voltage of 110 and 220. It is stated that the inquirer can sell from 8,000 to 10,000 per month. Prices and terms are also requested for metal filament bulbs from 10 to 50 candlepower, for which there is a sale of about 25,000 per month. An agency is also desired for electric pumps and apparatus. Catalogues and correspondence should be in Spanish, but prices, if possible, should be in francs. References are given.

Dry goods, rubber goods, groceries, etc., No. 19629.—A firm in Argentina informs an American consular officer that it desires to represent manufacturers of dry goods, rubber goods, groceries, aluminum and other metals in sheets, etc. References are given. Correspondence may be in English.

Undershirts, No. 19630.—An American consular officer in Canada reports that a manufacturer's agent desires to be placed in communication with manufacturers of silk undershirts for women. Correspondence may be in English.

Chiropodist's tools, No. 19631.—A man in Spain desires to receive prices, catalogues, and terms for complete sets of chiropodist's tools and text books relative to same. Correspondence should be in Spanish.

Hardware, tinplate, wire, etc., No. 19632.—An American consular officer in Argentina reports that a business man in his district desires to extend his agencies and would like to correspond with manufacturers of hardware in general, tinplate, wire of all kinds, binder twine, strong yarn for sewing canvas, awnings, etc.; hosiery and knit goods for men and women; and fine shoe leather. Bank references are given. Correspondence may be in Spanish or English.

Hosiery, No. 19633.—A manufacturer's agent, selling only to the wholesale trade, informs an American consular officer in Canada that he desires to correspond with manufacturers of cashmere hosiery for men, women, and children. The inquirer states that he can place \$50,000 worth of these goods.

Hides and goatskins, etc., No. 19634.—A report from an American consular officer in China states that a firm in his district desires to export cow and buffalo hides, goatskins, and raw silk. Bank references are given. Correspondence may be in English.

Chemicals, cotton thread, notions, etc., No. 19635.—An American consular officer in Brazil reports that a man desires to represent manufacturers of chemicals, cotton thread, notions, such as needles, pins, etc.; paper and paper goods, celluloid goods, and leather and leather goods. It is requested that correspondence giving complete information be sent. Correspondence may be in English. References are given.

Grease for soap, pitch-rosin, and caustic soda, No. 19636.—A letter to the Bureau states that a man in Cuba desires to purchase grease for the manufacture of soap, pitch-rosin, and caustic soda.

Glazed paper, No. 19637.—The Bureau is in receipt of a letter stating that a firm in China desires to establish commercial relations with manufacturers of glazed paper of all colors. Samples of the paper desired and further information may be obtained from the Bureau or its district offices. (Refer to File No. 83.)

Machinery for manufacturing lead pencils, No. 19638.—A letter to the Bureau from a foreign consular officer states that inquiries have been made by business men in Mexico for names of manufacturers of machinery used in making lead pencils, and coffee and sugar sacks.

EIGHT-HOUR LAW IN URUGUAY.

[Consul Herman L. Spahr, Montevideo, Nov. 23.]

An act has just been passed and published limiting the actual labor of workmen and employees in Uruguay to a maximum of eight hours daily. It applies to workmen in factories, shops, yards, quarries, etc., to employees or servants of industrial or commercial establishments, and of railway and street car lines, and in general to all persons engaged in tasks similar to those mentioned. Employees in Government work are not exempt. The hours of adults may be increased in special cases, but not to exceed 48 hours for each six days of work.

For every workman violating the law the employer shall be fined \$10 the first time and \$15 for each repetition. The workmen shall be fined the amount received for the excess work, but the fine shall not exceed the excess of one month.

Twenty-five inspectors, controlled by the labor office, are to enforce the act. Inspectors in the Department of Montevideo will each receive \$1,800 per annum, and those in the other departments will be paid \$960.

The act will go into effect three months from date of passage.

RESULTS OF CONFERENCE ON ELECTRICAL SAFETY CODE.

The results of the conference held in New York to discuss and approve the national electrical safety code have stamped the meeting as undoubtedly the most important of its kind ever held in connection with the electrical industries. The United States Bureau of Standards estimates that very great good was accomplished—first, because of the valuable discussion and critical study made of the code; second, because of the educational influence it had upon the engineers in attendance, many of whom are leaders in their profession; third, because it brought about a more complete understanding of the methods of the Bureau of Standards in carrying on such work, and a higher appreciation of the quality of the work which has been done on the code.

Some of the engineers expected to show that many of the provisions of the code were unnecessary or too severe, but in most cases the result

of the discussion was to establish more firmly that the provisions of the code were reasonable and had been very well considered.

The conference was attended by a large number of engineers representing the utilities companies of the country, including light and power interests, steam and electric railways, telegraph and telephone companies, and the manufacturers. Six engineers came from the Pacific coast to attend the meeting, one representing the Industrial Accident Commission of California, and the others five of the largest power companies on the coast. There was an average attendance of 50 or 60 men at all the meetings in New York, a total of 85 having been in attendance during the two weeks.

In relation to the safety code, the conclusion was reached that further work would be necessary in developing some of the details, particularly with respect to the grades of construction required under different climatic conditions. The records of the Weather Bureau are being searched for information that will give a satisfactory basis for classification of different cities of the country according to the severity of their weather conditions with respect to wind and ice, but unfortunately the records are not very complete.

FINANCIAL MEASURES IN AUSTRALIAN PARLIAMENT.

Copies of four acts passed by the Australian Federal Parliament, relating to loans and other financial matters, have been received from Consul General J. I. Brittain at Sydney, and may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices (refer to file No. 69649). These measures are:

No. 22 of 1915.—An act to authorize the borrowing of money from the Government of the United Kingdom.

No. 23 of 1915.—An act to authorize the raising and expending of the sum of £1,500,000 (£=\$4.8665) for the construction of a railway from Kalgoolie to Port Augusta.

No. 25 of 1915.—An act to amend the treasury bills act of 1914.

No. 26 of 1915.—An act to amend the commonwealth inscribed stock act, 1911-1913.

[Extract from Melbourne Age, Nov. 5, by Commercial Attaché William C. Downa.]

Financial Statement Made by Treasurer.

In the House of Representatives yesterday the new treasurer (Mr. Higgs) made a brief financial statement setting out the means by which it is proposed to meet the obligations of the year. The statement showed that the ordinary revenue, plus the loan from the British Government and that raised in Australia, will still leave a sum of £23,779,000 to be borrowed. Of this amount it is proposed to borrow £18,000,000 forthwith, and the balance early next year.

The treasurer submitted the actual receipts for the year 1914-15, and the estimates for 1915-16, as given by Mr. Fisher in his statement of August 12 last. The estimated ordinary revenue for 1915-16 was £26,540,000; to this had to be added £10,400,000 from Imperial loan, and £13,389,000 from the recent Australian loan. This left £23,779,000 still to be raised to meet the full estimated expenditure of the year=£74,108,000. Mr. Higgs mentioned that the customs and excise revenue for the four months ended October 31 was £5,311,000, as compared with £5,433,000 received in a similar period last year. The decrease was £121,263, an amount comparatively small.

MOTION PICTURES IN HONDURAS.

[Consul E. M. Lawton, Tegucigalpa, Nov. 11.]

There is but one motion-picture establishment in the Tegucigalpa consular district, viz, the Teatro de Variedades, in this city. A number of causes combine to prevent the industry from being more successful, among which are poor transportation facilities, the small purchasing power of the masses, the sparse population generally, and the lack of electric service in all the other interior towns.

In this city performances are given three or four nights per week, commencing at 8.30 or 9 p. m. and lasting until midnight or after. Approximately 1,500 meters (about 4,900 feet) of film are shown nightly. The prices of admission vary with the quality of the film. Old films, of the regular stock sketches, are sometimes displayed at prices ranging from 10 to 30 cents United States currency, depending on the location of the seats. Other nights, when such well-known films as "Les Misérables" are run, the prices are trebled; and for ordinary new films the usual charge is about 50 cents for the best seats.

Local Firms Interested—A Field Worth Investigating.

No attempt has been made here to try continuous performances or the "tanda" idea of Mexico. [See COMMERCE REPORTS for Apr. 3, 1915.] The Tegucigalpa consulate has been endeavoring to interest persons in establishing small theaters with popular-price continuous performances. One firm, which is equipping a restaurant with a Japanese garden, has asked to be informed about films and accessories, and another firm has inquired for apparatus which can be operated by a portable light for use in towns where there is no electric service. With outfits of that sort a service might be established in some eight or ten towns within a reasonable radius of this city. The local theater rents its films from Panama on a basis of 50 per cent of the receipts. So onerous is this charge that the question naturally arises, why would it not pay some American manufacturer to send a representative to tour Central America and contract with the established theaters for film service? There are probably 20 or more theaters in the five Republics that could use films for an average of 20 programs per month, and one central office, say in Guatemala City, could attend to the distribution and service generally. The writer has no positive knowledge of conditions outside of the Tegucigalpa consular district except as told by the owner of the local theater, but the latter is greatly interested in the development of some such plan and states unequivocally that such a project is much needed and could be made very successful.

All Classes of Films are Popular.

All classes of pictures are popular, including comic, tragic, cowboy, chases, historical, war, and detective stories. Perhaps the most popular are Wild West scenes, where feats of horsemanship and quick gun play are generous components. All reading matter should be in Spanish.

[The addresses of three Tegucigalpa firms interested in motion-picture apparatus or films may be had from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 66600.]

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he has received in stock during the week ended December 18 the following new publications, which he will sell at the nominal prices affixed:

Official Register of the United States (1915 directory), commonly known as the Blue Book.—List, arranged alphabetically, of employees of the United States Government, exclusive of the Postal Service, giving names, salaries, from where appointed, etc.; containing in addition thereto an outline of the organization of the executive departments, legislative branch, the judiciary, etc., giving names of principal officers, etc. Price, cloth, \$1.50.

United States Mining Statutes, Annotated, Mines Bureau Bulletin 94, two parts.—Part 1 covers sections and statutes relating to metalliferous mining and coal mining; Part 2 covers miscellaneous mining subjects, a codification and annotation to date of the congressional enactments relating to mining. Price, cloth, \$2.50 per set.

Directory of American Sawmills. Miscellaneous Series 27, Bureau of Foreign and Domestic Commerce.—List of sawmills in the United States arranged alphabetically by States. Price, paper, 25 cents.

Trade Directory of Central America and the West Indies. Miscellaneous Series 22, Bureau of Foreign and Domestic Commerce.—Directory of business houses in Central America, arranged alphabetically by countries and industries. Price, cloth, 60 cents.

Commercial Organizations in Southern and Western Cities. Special Agents Series 79, Bureau of Foreign and Domestic Commerce.—A discussion in detail of the characteristic work of the several commercial associations in States in the South and West. Price, paper, 10 cents.

Commercial Laws of England, Scotland, Germany, and France. Special Agents Series 97, Bureau of Foreign and Domestic Commerce.—Covers administration of justice in the various countries as far as the interests of Americans are concerned, giving jurisdiction of courts, lawyers, and fees, courts, etc. Price, paper, 15 cents.

Banking Opportunities in South America. Special Agents Series 106, Bureau of Foreign and Domestic Commerce.—Comprehensive review of the banking situation in South America. Price, paper, 20 cents.

A Trade School for Girls. A Preliminary Investigation in a Typical Manufacturing City, Worcester, Mass. Education Bureau Bulletin 17, 1913.—A study of the needs and possibilities of industrial training in Worcester, Mass., covering the method of investigation, industrial opportunities, etc. Price, paper, 10 cents.

The Acarina or Mites. A Review of the Group, for the Use of Economic Entomologists, Agriculture Department Report 108.—Comprehensive classification of the acarina, with a descriptive introduction, accompanied by many illustrations. Price, paper, 30 cents.

Australasian Markets for American Lumber. Special Agents Series 109, Bureau of Foreign and Domestic Commerce.—Report on the native timber resources, imports of foreign timber, condition of market, trade, exports, tariff, and various uses of lumber in Australia and New Zealand. Price, paper, 5 cents.

Tests of Corn Varieties on the Great Plains. Agriculture Department Bulletin 307.—Covering limitations, adaptability of varieties, tests of varieties, etc. Price, paper, 5 cents.

Methods for the Examination of Bituminous Road Materials. Agriculture Department Bulletin 314.—Practical work by road experts, covering the scheme of examination, methods, and apparatus used. Price, paper, 10 cents.

Renovation of Worn-out Soils. Farmers' Bulletin 245.—Covers differences in natural fertility, nature of the soil, mineral foods, nitrogen contents, moisture, air, terracing, and methods of improvement. Price, paper, 5 cents.

Alfalfa. Farmers' Bulletin 339.—Comprehensive work on the cultivation of alfalfa, covering history, distribution, possibilities, cultivation, fertilization, utilization, and feeding value, etc. Price, paper, 5 cents.

The Use of Concrete on the Farm. Farmers' Bulletin 461.—Practical work on selection of materials, proportions, measuring, mixing, tools used, etc. Price, 5 cents.

Methods of Analyzing the Farm Business. Farmers' Bulletin 661.—Outlines a method for analyzing the farm business to determine investment, receipts, expenses, labor, income, etc. Price, paper, 5 cents.

Concrete Construction on Live-stock Farm. Farmers' Bulletin 481.—Giving practical information relative to the use of concrete in the construction of stables and other buildings on live-stock farms. Price, paper, 5 cents.

TRADE OF MADAGASCAR FOR SIX MONTHS.

[Consul James G. Carter, Tamatave.]

According to the customs statistics furnished the Tamatave, Madagascar, consulate by the local customs service, the total trade of Madagascar for the first six months of 1915 amounted to \$8,256,524, compared with \$10,713,639 in the corresponding period in 1914. The imports decreased in value from \$5,671,154 for the 1914 period to \$2,884,429 for the 1915 period, but the exports increased in value from \$5,042,485 in the first six months of 1914 to \$5,372,095 for the 1915 period.

Principal Articles of Import and Export.

The following table shows the value of the principal articles imported and exported during the first six months of 1915 compared with the corresponding period in 1914:

Articles.	Jan.-June, 1914.	Jan.-June, 1915.	Articles.	Jan.-June, 1914.	Jan.-June, 1915.
IMPORTS.			IMPORTS—continued.		
Cotton goods	\$1,706,697	\$659,734	Flour	\$91,307	\$14,975
Ordinary wine	194,896	155,952	EXPORTS.		
Tin articles	(c)	114,272	Hides	1,295,363	1,308,499
Clothing	138,412	100,230	Preserved, frozen, and salt-

Shoes	89,967	32,717			

* Figures not given.

Increase in Trade with United States.

Notwithstanding the 49 per cent decrease in the general imports of the colony in the first six months of 1915, compared with the corresponding period in 1914, the imports of United States origin were valued at \$135,179, compared with \$45,960, in the first six months of 1914, and \$106,895 for the calendar year 1914. The exports to the United States were valued at \$39,033, compared with \$26,515 in the first six months of 1914.

The principal articles imported from the United States in the first six months of 1915 were: Cotton piece goods, valued at \$37,773, against no imports for the same period in 1914; petroleum and heavy mineral oil, \$77,397 against \$39,071; tin plate for making meat and lard boxes, and empty petroleum cans, \$14,591 against \$12,653; other metal articles, \$5,030 against \$2,126.

The principal articles exported to the United States in the first six months of 1915 were: Vanilla, 6 tons, valued at \$22,589, against no exports in the first six months of 1914; graphite, 168 tons, valued at \$9,728, against 103 tons, valued at \$7,975; raffia, 56 tons, valued at \$5,932, against 30 tons, valued at \$3,128.

BRAZILIAN WOODS.

[Consul General Alfred L. Moreau Gottschalk, Rio de Janeiro, Sept. 24.]

It is a remarkable fact that the immense forest resources of the country remain almost unexploited. Not only are the vast forests of the Republic nowhere systematically worked, but, if reports are to be believed, they are in places still being ruthlessly sacrificed for common, everyday uses. Many of the railroads burn wood and make little or no selection of what valuable trees they fell for fuel; forest fires are still frequent, the farmer often finding this a cheap and practical means of clearing new plantation land. While some effort has been made to establish forest-conservation laws (the State of Parana was apparently the first to move in this direction, and other States as well as the Federal Government followed suit), little seems thus far to have been accomplished.

Valuable Woods for Ties—Little Native Wood for Pulp or Paving.

The Brazilian railroads, whose consumption of ties has been estimated at 1,500,000 per annum, the life of each tie being 5 to 6 years, use for this purpose such woods as *faveiro*, *jacaranda* (rosewood), and *peroba mirim*, which, like much of the timber employed as fuel by the railroads, would command high prices abroad could they be brought to the sea for exportation. The greater part of the paper consumed in Brazil is imported; although there exists a native paper industry, it furnishes little of what paper is used, and imports its paper pulp in large quantities from abroad. Some effort seems to have been made by certain municipalities to introduce wooden-block street paving, but this has never become common, although here again would be a clearly indicated use for many of the excellent woods of the country.

Exports of Various Hardwoods for Five Years.

The exportation of Brazilian hardwoods to foreign countries has suffered considerably from the inaccessibility of many of the forest tracts and the general high cost of labor. In certain of the individual States of Brazil taxes upon exports, production, trading rights, etc., may also have played their part in raising the cost of this article of export.

The following table shows, in kilos of 2.2046 pounds, the exports of various kinds of Brazilian woods to different countries during the last five years:

* Pieces.

b In addition, 1,179 pieces of wood were exported to Italy in 1913.

c In addition, 10 pieces of wood were exported to the United States in 1911.

It is said that an important trade in Brazilian hardwoods was beginning to develop between Germany and other countries on the Continent.

Characteristics of Brazilian Woods.

Most Brazilian hardwoods appear to be dense and close-grained, compact and heavy. The colors vary from black to almost an ivory-white, passing through intermediate shades of red, brown, yellow, and violet. The fiber (grain) often reveals exquisite designs, and the proper sawing of a log has usually in reserve a series of surprises for the furniture manufacturer.

Below is given a table, furnished by the editors of *Le Brésil Économique*, showing the specific weights of the principal hardwoods of Brazil employed in construction work or in furniture making:

Acapu	1.067	Canella sassafráz	1.082
Angellm Amargoso	.954	Cangerana	.824
Angellm pedra	1.052	Carnahubeira	.982
Angico	.907	Cedro vermelho	.506
Araca pyrauga	.997	Cedro rosa	.596
Arariba amarello	.870	Copahyba	1.078
Arariba rosa	.705	Favelo	.948
Aroeira	1.219	Goncalo alves (courbaril)	1.033
Barbatimao	1.275	Grossahy-azeite	.953
Buranhon	.869	Guarajuba	.963
Cambuihy preto	1.138	Guarautan	.908
Canella capitao-mor	.735	Guarnauma	1.164
Canella parda	.764	Guatanbu legitimo	.797
Canella preta	.877	Inga-assu	.647

Favorite Woods—Prices and Freight Rates.

Most in use here is the peroba, found abundantly in the southern portions of the country. It is of a light yellowish red. The grain in one variety has a striped effect, suggestive of a tiger's markings. The gurabu, violet wood, or goncalo alves, is one of the most precious of the Brazilian woods, handsomer, even, to the Brazilian taste than the dark jacaranda, which is sold in considerable quantities to the United States. The oleo vermelho, copahyba, massaranduba, imbuia, canella, vinhatico, and many other woods have rich dark tones and handsome veinings, and are all favorites for making furniture as well as for parquet flooring. The variety of natural tints in these woods is remarkable.

These hardwoods are usually sold by the ton, the log being freed from bark by rough adzing. Prices vary considerably, but are usually high, from \$45 to \$60 being often paid per metric ton of 2,204.6 pounds.

Normal freight rates seem to have been \$6 to \$8 per metric ton, but they have now gone as high as \$18. There seems to be no reason why wood cargoes should not find much lower freights, provided they are ordered in sufficient quantities, upon the numerous American sailing ships that come here with coal and return in ballast or go to the River Plata for cargo.

The freight rates, per metric ton of 2,204.6 pounds, on lumber in southern Brazil from interior points to the coast and vice versa may be seen in the following table, compiled from the special freight tariff of the railroad, which was approved by the Ministry of Communication and Public Works on September 27, 1915:

1 to 50 kilometers (0.621 to 31.069 miles)	\$0. 0175 to \$0. 86
51 to 100 kilometers (31.69 to 62.137 miles)	. 89 to 1. 75
101 to 200 kilometers (62.758 to 124.274 miles)	1. 77 to 3. 25
201 to 300 kilometers (124.895 to 186.411 miles)	3. 26 to 4. 50
301 to 400 kilometers (187.032 to 248.548 miles)	4. 51 to 5. 50
401 to 500 kilometers (249.169 to 310.685 miles)	5. 51 to 6. 25
501 to 600 kilometers (311.306 to 372.822 miles)	6. 28 to 6. 75
601 to 700 kilometers (373.443 to 434.959 miles)	6. 78 to 7. 25
701 to 1,000 kilometers (435.580 to 621.37 miles)	7. 28 to 8. 70
1,001 to 1,500 kilometers (621.991 to 932.055 miles)	8. 75 to 10. 78
1,501 to 2,000 kilometers (932.676 to 1,242.74 miles)	10. 81 to 12. 43
2,001 to 2,691 kilometers (1,243.361 to 1,672.107 miles)	12. 46 to 14. 53

Samples Offered by Brazilian Dealer.

A Rio dealer in hardwoods [whose name may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices; refer

to File No. 67950] states that he has recently placed a cargo of jacaranda (50 tons) with an American firm; that his banking reference is the National City Bank, of New York; and that he is prepared to send upon request to any well-known American firm small samples, measuring 14 by 6 by 1 inch, of the woods most suitable for the firm's purposes. He is also prepared to accept orders by cable, payments to be made 50 or 60 per cent of the total against documents and the remainder after inspection of the cargo upon arrival. This house also offers to submit the logs prior to shipment, at the purchaser's expense, to any agent that the purchaser may himself designate at Rio de Janeiro.

Brazilian Business Men Conservative—Need of American Investments.

There has recently been some little excitement among lumber merchants here over the news that railway sleepers or ties are needed in large quantities in one of the belligerent countries of Europe and could be furnished by Brazil. Typical of the conservative attitude toward foreign business in general in the minds of a certain class of local business men is the statement credited in a recent issue of a Rio newspaper to a large owner of timberland to whom this proposition was submitted. After saying that Brazil could undoubtedly compete with other countries—notably the United States—in furnishing the required railroad ties, he expressed the belief that it would be very difficult, indeed, for Brazilians to fill any such order, because the buyers require that samples and prices shall be submitted at European ports, because the kinds of woods of which samples should be sent are so numerous, because of war risks, and because of the lack of guarantees to the exporter. He closes with the statement that unless 70 per cent of the price were laid down in advance nothing could be done.

This incident strengthens the opinion formerly expressed from this office that while native raw products abound here our importers can not obtain them under favorable conditions without in some sense associating themselves in a partnership with the Brazilian exporter. He often needs financial help, but he also needs instruction in American business methods. An incalculable amount of business can be done here, but, as in all other Latin-American countries, it can be done only by risking some capital. These are not "poor men's countries"; our American merchants can not merely trade here—they must invest here. And there is every reason why such investment, if carefully and reasonably made, should yield a return three or four times as great as in the United States.

[Two samples of Brazilian Imbuia board may be seen at the Bureau of Foreign and Domestic Commerce or its branch offices, which will also supply a list of dealers in Brazilian woods. Refer to file No. 69138 for samples and 67950 for list.]

Samples of thread commonly sold in the Swatow (China) market have been received from Consul George C. Hanson at Swatow, and may be inspected at the Bureau of Foreign and Domestic Commerce or its district offices. Refer to file No. 69077. A dispatch published in **COMMERCE REPORTS** for December 11, 1915, told of the constantly increasing demand for foreign thread in Swatow and of existing interest in American thread.

STATUS OF UNITED STATES IN WORLD CACAO TRADE.

The United States is the world's largest consumer of cacao. In the twelvemonth ended June 30, 1915, this country imported 192,306,634 pounds of raw cocoa and reexported 28,979,054 pounds, making the apparent consumption 163,327,580 pounds. In the fiscal year 1914 the apparent consumption was 171,690,024 pounds; in 1913, 182,600,699 pounds; in 1912, 140,684,115 pounds; in 1911, 133,674,615 pounds; and in 1910, 103,859,251 pounds. Computed in the same manner, so far as available statistics will permit, the consumption of cacao beans and shells in certain European countries was:

Countries.	Imports.	Reexports.	Apparent consumption.

* The free ports of Hamburg, Cuxhaven, Bremerhaven, and Goestemunde, the island of Helgoland, and the frontier districts in Baden are not included in the German Customs Union.

Portugal's Position.

Portugal's cacao trade is almost wholly transit. In the calendar year 1912, while that Republic's special imports for consumption amounted to only 521,101 pounds, the reexports of cacao beans and shells totaled 93,406,874 pounds; in 1913 imports for consumption amounted to 583,648 pounds and reexports to 73,713,898 pounds; in the 7 months ending July, 1914, imports for consumption amounted to 405,170 pounds and reexports to 43,757,198 pounds.

From these figures it will be understood how important is Portugal's position in the world cacao trade. Portugal was one of the three countries (the other two being Ecuador and Brazil) that in 1911 attempted to valorize cacao along lines similar to those employed in the valorization scheme for Brazilian coffee; but the plan fell through, principally because, it is said, its originators overestimated the proportion of the world's supply contributed by the countries concerned.

Anomalous Conditions in Cacao Trade.

The cacao trade is one of anomalies. Practically none of the cacao is consumed in the countries in which it is produced; Hamburg handles more than any other one port (importing in 1913, 141,859,396 pounds of cacao beans and exporting 70,712,104 pounds), but prices are fixed at the London auctions; and while the United States is the largest consumer, it neither raises cacao nor fixes the price for the enormous quantities which it annually buys—and buys, it should be noted, in large measure direct from the producing countries. The United States purchased through Europe but 13 per cent of its total

supplies of raw cocoa in 1915, 22 per cent in 1914, 30 per cent in 1913, 21 per cent in 1912, 22 per cent in 1911, and 19 per cent in 1910.

This anomalous situation of direct purchases at Europe-regulated prices is due to the lack of an American cacao exchange. The need for such an institution is admitted by all the leading cacao users of the United States. There is no other commodity of like importance that does not have a regularly organized board of arbitration; and a regularly organized board of this kind would not only facilitate the settling of those disputes that inevitably arise in any trade, but once it was known that such a board existed greater care would be taken in the selection of cacao intended for the United States.

Permanent Board of Arbitration Suggested.

At present, when disputes arise between a broker and a manufacturer these two call in a third man and some agreement is then reached. In many cases this is unsatisfactory, and it seems to be the consensus of opinion that a permanent arbitration board should be established. It was suggested to a representative of the Bureau of Foreign and Domestic Commerce that this board should consist of seven members—three manufacturers, two brokers, and two merchants, to be chosen by the trade as a whole once a year.

With such a board in existence, the opinion has been expressed that New York would become the cacao center, as it has the coffee center, of the world. A small beginning has already been made, for in the year ended June 30, 1915, the United States reexported to other countries 28,979,054 pounds of raw cocoa, as contrasted with shipments totaling 4,577,622 pounds in 1914, 7,438,473 pounds in 1913, 5,284,830 pounds in 1912, 4,383,726 pounds in 1911, and 4,808,819 pounds in 1910. Even with this great gain (which can be ascribed to war conditions) the shipments form only an exceedingly small proportion of the total world trade. If the United States is ever to assume a leading position—and, as the world's chief consumer, such position is not a wildly impossible ambition—greater stability must first be given to American transactions through proper trade organization and through cooperation between the importers themselves.

American Imports During Last Six Years.

In this connection the extent and sources of the United States imports of crude cocoa during the last six fiscal years and the changes which the European war wrought in this trade in 1915 should be of special interest:

Imported from—	1910	1911	1912	1913	1914	1915

American Firms Should Try for Foreign Markets.

Nearly all of the balance was actually used in the United States, for shipments of cocoa and chocolate prepared or manufactured in the United States (exclusive of confectionery) were valued at only \$471,358 in the fiscal year 1910, \$498,694 in 1911, \$514,266 in 1912, \$376,336 in 1913, and \$336,940 in 1914. In 1915 these exports increased to \$1,934,166, but this gain, as in the case of reexports of cacao, can be attributed to war conditions, since \$862,816 worth went to Denmark (which country had bought but \$20 worth in the previous five years), \$232,434 worth to the Netherlands (against \$13,054 in 1914), and \$177,731 worth to Sweden (which country purchased no American cocoa in the five years preceding).

Of the shipments of chocolate bonbons, no separate record is kept in American official statistics. They are included with confectionery of all kinds, of which the exports in the fiscal year 1910 amounted to \$784,629; in 1911, to \$990,125; in 1912, to \$1,046,144; in 1913, to

\$1,282,196; in 1914, to \$1,329,147; and in 1915, to \$1,222,794. That this trade should receive the more earnest attention of American bonbon manufacturers has long been urged by confectionery journals, which see in the foreign field an outlet for the products of American factories that now lie practically idle several months each year because of the falling off of the domestic demand during summer.

Treatment of the Cacao Bean.

The small cacao "bean" which is consumed in such vast quantities in the United States and Europe is the product of trees of the genus *Theobroma*, the most important species of which is *Theobroma cacao*. This should not be confounded with the cocoa palm, which produces coconuts, nor with the shrub *Erythroxylon coca*, from which the alkaloid cocaine is obtained. Concerning the cacao bean and its preparation for the market a well-known reference work says:

The fruit is somewhat like a cucumber in shape and is 6 or 8 inches long, yellow, and red on the side next the sun; the rind is thick and warty; the pulp sweetish and not unpleasant; the seeds are numerous, compressed, and not unlike almonds, with a thin, pale, reddish-brown, fragile skin or shell, covering a dark-brown, oily, aromatic, bitter kernel, which consists mostly of the wrinkled cotyledons. These seeds are the cacao beans of commerce.

The cacao tree produces larger seeds in cultivation than in a wild state. The tree bears in four or five years, attains its full vigor and productiveness in 12 years, and generally yields two principal crops a year. When gathered the fruit is subjected to four to seven days' fermentation in earthen vessels or in heaps on the ground, or it is buried for a while in the earth until the pulp becomes rotten. The last-named method is said to produce the best cacao ("earthed cacao," or cacao terre). The fermentation is induced by an unorganized ferment inherent in the pod, and upon the proper handling of the bean during this period largely depends the quality of the product. After fermentation the beans are hulled and are carefully dried under uniform conditions of heat and moisture. The average yield per tree under favorable conditions will reach 7 pounds annually of cured cacao; usually, however, the yield is from 2 to 3 pounds per tree, or 400 to 600 pounds per acre.

Its Various Uses.

In manufacturing cacao the seeds are screened, roasted, and decorticated, the kernel being known as cacao-nibs. The hulls make a cheap substitute known as miserable. About two-thirds of the fat is removed and placed on the market in cakes known as cocoa butter and is used for emollients, etc. The residue of the cacao-nibs is ground, boxed, and sold as "cocoa," or is pressed into cakes after being sweetened and is known as "chocolate."

Cacao is very nutritious. The principal constituent of cacao beans is the soft, solid oil which forms more than 50 per cent of the whole shelled bean, about 22 per cent being starch, gum, mucilage, etc., and 17 per cent being gluten and albumen. They contain also a crystallizable principle called theobromine.

Nine-tenths of cocoa is assimilated in the system. For dietetic use cocoa is prepared in several ways; it is made into chocolate, it is eaten in the solid state in the form of cakes and bonbons, or is scraped down and treated with boiling water or milk. When cacao-nibs are infused in water, like coffee, they yield a highly palatable beverage. An infusion of the broken and roasted shells of cacao beans is sometimes used in the same way as tea or coffee. The pulp of the fruit is eaten in the countries in which the tree grows, and a kind of spirit is obtained from it by fermentation and distillation.

Tests of paper made by the United States Bureau of Standards during the month of November included 214 samples for the various Government departments and independent establishments, 120 samples for the Public Printer, and 2 for private firms, a total of 336 samples for the month.

THE PORT OF VLADIVOSTOK IN 1914.

[L'Économiste Européen, Nov. 5.]

The Russo-French Chamber of Commerce at Petrograd has published an interesting study of the port of Vladivostok in 1914, which is in substance as follows:

At the beginning of 1914 the great commercial activity encouraged the hope that the movement of trade would surpass the figures for 1913 and reach about 1,800,000 short tons. The realization of this hope was rendered the more probable by the fact that the financial market of Vladivostok was noticeably stronger, owing to the credits offered by the State Bank to various branches of the local industries, which were greatly depressed by the crisis of 1912-13. However, the war so disturbed business that the total movement was less than that of the preceding year. It must be noted that the activity of the port was suspended for six weeks. In September the port resumed business, but to a much more limited extent, because the customary traffic with the ports of the Black Sea ceased, and the steamers that were en route and had put in at neutral ports had to return to the ports from which they had departed. Moreover, commercial intercourse with northern Europe had for years been carried on by vessels flying the German flag, and in spite of efforts to that end Americans and Japanese were unable immediately to replace European goods. Fortunately, local merchants had stocks sufficiently large not only to prevent a crisis but to prevent prices from reaching an alarming height.

During the year 1914, 542 vessels, of 840,787 tons, entered the port of Vladivostok, against 600 vessels, of 973,609 tons, in 1913. In 1914 the number of vessels that departed from Vladivostok was 543, with a tonnage of 842,626, against 604 vessels in 1913 representing 976,296 tons.

The most important exports from Vladivostok are merchandise from Manchuria, especially beans, oil cake, and hempseed. In 1914 the exports of Manchurian products amounted to 388,000 short tons, valued at \$10,300,000. Exports of merchandise of local origin amounted to 30,700 tons, valued at \$1,751,000, an increase in value over the figure for the preceding year. The abundant fish of the northern waters could not be sold advantageously because the markets of England and Germany, which ordinarily take all that is offered, were inaccessible and the merchants had to sell caviar and fish on the interior Russian markets. Wood dealers also were in a somewhat critical position, but they were successful toward the end of the year in sending to England considerable quantities of wood of excellent quality.

Commerce with China and Japan showed some increase; there were sold considerable quantities of herrings and other fish, fertilizers, wood, and staghorns. Exports of the last-named product have considerably augmented since sufficient inducements were offered to farmers in the Ussuri district to engage in deer raising. Exports of aspen wood, which is used in Japan for making matches, fell off, owing, it is supposed, to sufficient stocks in Japan. The high freight rates also may have had some influence.

In imports at Vladivostok the first place among foreign countries was held by Japan, which supplied the following products: Copper, 3,720 tons; clean rice, 2,890 tons; cement, 2,170 tons.

NEW ZEALAND APPLES FOR SOUTH AMERICA.

[Consul General Alfred A. Winslow, Auckland, Nov. 5.]

New Zealand fruit growers market about 150,000 cases of apples annually in South America, and this Government has taken steps to see if the amount can be greatly increased. The Agricultural Department sent a commissioner to Rio de Janeiro, Montevideo, and Buenos Aires to study the markets and arrange for representatives to handle business. In his published report he says:

The total market in Argentina, Uruguay, and Brazil, for the average class of apples from New Zealand, is at present about 150,000 cases in round numbers. If, however, our apples are graded carefully for quality and packed to standard on the American system, and with reliable uniformity equal to American, then I believe that we could depend upon a market for at least 200,000 cases. I should expect the demand to increase year by year from a gradual retail cheapening of fruit and a widening popularity for the apple and a general tendency in South America toward a higher standard of living, all combined with a growing population. The market is not unlimited, as we in New Zealand sometimes have been led to believe, and our main export outlet for ordinary sized apples must be looked for in the Northern Hemisphere. South America, however, appears to me likely to be particularly valuable as providing a highly profitable market in future years for off sizes—for dessert apples above 2½ inches, which would be too large for Northern Hemisphere markets.

The apples shipped from this country are of a very fine flavor and, in the main, keep well, but are not so nicely packed as is usual at home.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Pock, Willys R.....	Tsingtau, China.....	Jan. 31	Do.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Do.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(e)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. B.....	Cornwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washington, D. C.
Donald, George K.....	Maracaibo, Venezuela.....	Feb. 17	153 Church Street, Mobile, Ala.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

District Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative district offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its district offices.]

Bunting and cloth for flags, No. 19639.—An American consular officer in Brazil reports that the consulate has had inquiries for bunting and cloth for flags. It is requested that manufacturers send at once catalogues, price lists, samples of different colors and grades of cloth, as well as all information in regard to shipment. Terms are cash against documents at port of destination. However, if 90 days' sight draft should be allowed, bank references will be given.

Machinery for paper clips, No. 19640.—An American consular officer reports that a commission firm in Portugal desires to be placed in communication with manufacturers of machinery used for making paper clips. Correspondence should be in Portuguese.

Bromide paper, No. 19641.—A report from an American consular officer in Spain states that a man desires to import monthly 200 meters of bromide paper, 18 centimeters wide by 20 meters long. Correspondence should be in Spanish.

Cheap cigars and leaf tobacco, No. 19642.—A manufacturers' agent in France informs an American consular officer that he desires to establish commercial relations with exporters of cheap cigars and leaf tobacco. Samples of the cigars desired may be inspected at the Bureau or its district offices. (Refer to File No. 70151.) Prices should be quoted c. i. f. port of destination. Samples are requested. Correspondence may be in English.

Linen thread, No. 19643.—An American consular officer in Spain reports that a business man in his district desires to import raw linen thread, in shipments of 1,000 kilos, for manufacturing canvas. Cash will be paid against documents in the United States. Correspondence should be in Spanish.

Boots and shoes, findings, etc., No. 19644.—A letter to the bureau from a commission merchant in Russia states that he is interested in corresponding with manufacturers of boots and shoes for women and children, also buttons, shoe laces, shoe dressing, etc. Bank references are given.

Gelatine capsules, metal paper fasteners, etc., No. 19645.—A report from an American consular officer in England states that a firm in that country desires to import gelatine capsules, metal paper fasteners, small cedar-wood sticks for paintbrush handles, small cakes of water-color paints, etc. It is stated that the firm is in a position to purchase these articles in large quantities. Bank references are given.

Underwear, hosiery, etc., No. 19646.—A letter to the bureau from a business man in British Guiana states that he desires to represent manufacturers of fleece-lined shirts; cheap and finer grades of hosiery for men and women; stiff finish blue drills; and prints. The inquirer states he would be glad to represent American firms interested in rice, nuts, and other products grown in that country.

Tin cans, No. 19647.—An American consular officer in France reports that a commission agent desires to purchase 20,000 tin cans used in the distribution of oil, metal polishes, varnishes, paints, and other liquids for industrial purposes. The cans are made in the shape of a bottle with a screw stopper and rubber washer, and the sizes are 1 liter (1.05668 liquid quarts), $\frac{1}{2}$ liter, $\frac{1}{4}$ liter, and $\frac{1}{8}$ liter. Inquirer is willing to open a confirmed credit account with an American bank and meet reasonable requirements in the matter of payment and shipment.

Dry goods, No. 19648.—A report from an American consular officer states that a firm in Canada desires to communicate with manufacturers of dry goods as well as other lines, with a view to representing them in that country.

General representation, No. 19649.—A letter to the Bureau from a business man in Spain states that he desires to travel in South America for American firms. He speaks English, French, Portuguese, Italian, and Spanish. References are given.

ORGANIZATION OF SWISS IMPORT SYNDICATE.

[Cablegram from American minister, Berne, received Dec. 24.]

The syndicate for the supervision of the importation of iron, steel, and other metals under the Société Suisse de Surveillance has been organized at Zurich and will begin its operations January 1, 1916.

NORWEGIAN EMBARGO ON SARDINES.

[Cablegram from American consul general, Christiansa, Dec. 22.]

Sardines preserved in oil and rubber cement have been added to products the exportation of which from Norway is prohibited.

DECREASE IN FRENCH WINE PRODUCTION.

[Cablegram from Commercial Attaché C. W. A. Veditz, Paris, Dec. 23.]

The French tax authorities report a great decline in the 1915 wine output, which is estimated at 18,100,790 hectoliters (478,181,870 gallons), as against 56,131,159 hectoliters (1,482,938,405 gallons) in the preceding year, omitting for both years figures for the territory occupied by hostile forces. With about 7,000,000 hectoliters (184,900,000) gallons left over from last year, the total now available for consumption is 25,100,000 hectoliters (663,100,000 gallons). The yield of the southern vineyards showed the greatest decrease. The Herault region produced 15,000,000 hectoliters (396,266,000 gallons) last year and 5,000,000 hectoliters (132,089,000 gallons) this year, while the Gironde production fell from 5,000,000 hectoliters (132,089,000 gallons) to 1,000,000 hectoliters (26,418,000 gallons).

[A previous estimate of this year's French wine production was published in COMMERCE REPORTS for Dec. 11, 1915.]

EMBARGO ON HAY IN CANADA.

[Consul General John G. Foster, Ottawa, Dec. 17.]

The shipment of hay from Canada to the United States was prohibited by an order of December 16, which limits the countries to which hay may be exported to the United Kingdom and British possessions and protectorates, France, Italy, Japan, and Russia (except Baltic ports). Under the former regulations the shipment of hay destined for consumption in the United States was permitted.

COST OF PRODUCTION IN HOSIERY INDUSTRY.

The following is a copy of a letter from the Secretary of Commerce, addressed to the President, submitting a report on the cost of production in the hosiery industry:

December 23, 1915.

MY DEAR MR. PRESIDENT:

I transmit to you herewith a report on the cost of production in the hosiery industry, prepared in compliance with the act of Congress approved August 23, 1912.

This is the second of a series of reports respecting the cost of production in different branches of the clothing industry. It is not, however, confined to the cost of production exclusively, but in conformity with the law deals also with working conditions, factory equipment, selling methods, imports and exports, and other trade conditions of interest in connection with the hosiery industry. It contains practical suggestions with regard to efficient factory management, and is in purpose, and I believe in fact, a scientific study of the industry in its various phases. It will be followed by several further reports covering other forms of the clothing industry.

This inquiry differs from others in the respect that investigation was opposed at the annual convention of the National Hosiery and Underwear Manufacturers, held in Philadelphia May 12-14, 1914, as is described on page 29. Because of the action of their association, 24 manufacturers refused to furnish data regarding the cost of production in their establishments. Fifteen out of these 24 were in Philadelphia. Notwithstanding this action of the convention, reports were secured from 36 members of the National Hosiery and Underwear Manufacturers who manufactured hosiery and from 14 members who manufactured knit underwear.

The report includes information obtained from 73 establishments, located in 16 States.

The average manufacturing profit on capital employed was 11.56 per cent. Details of profits and losses are fully given in the report. The salaries of active officers and partners were included in the cost of production before profits were figured, and depreciation was added as an expense before profits and losses were computed. Many establishments were found to keep no depreciation accounts and only 20 out of the 73 studied had reserves for depreciation. There were large variations in the percentages of cost of production and the percentages of profit. Some establishments have such crude systems of cost finding that they do not know exactly or even approximately their profit or loss on certain styles. The industry suffers from lack of an adequate cost-finding system. A variety of methods exists for calculating the charge for general expense, and many of the methods are very crude. This leads to unintelligent price making and ruinous competition. Most hosiery manufacturers admit that the lack of an accurate and uniform method of cost finding is a drawback which seriously interferes with the prosperity of the industry. There is absolute need of putting manufacturing establishments on an economical and efficient basis, and accurate cost accounting is an essential factor in so doing.

The industry suffers, as do other forms of the clothing trade, from such evils as cancellations, returns and allowances, deferred shipments, extra dating, etc. These have been prevalent for years and seem to increase. They have been made the subject of frank comment in the trade press. (Pp. 168-170, under heading "Trade Abuses.")

The use of antiquated machinery and the failure to keep machinery in proper condition are causes of waste of material and of the production of "seconds," which leads to manufacturing losses. This largely accounts for the excessive and keen competition of which much is heard. The manufacturer using an old type of machine, being unable to sell in normal competition with the product of improved machines, has to cut his price, and this forces competition of the cut-throat kind.

Your attention is especially invited to the facts concerning the imports and exports of hosiery given on pages 46-48. Most of the importations are of cheaper grades of full-fashioned cotton hosiery, a large part of them consisting of children's full-fashioned hose, of which but little is manufactured in the United States.

It is interesting to note the facts (p. 90) showing that profits are not necessarily coincident with low labor cost or that an establishment whose proportion

of expenditure for labor was lower than others paid less to its employees than those others. The average labor cost, based on total manufacturing and selling expense, is found to vary from 17.22 per cent for one group of factories to 33.74 per cent for another, the average for the entire 73 establishments being 28.83 per cent. The duty on imports of cotton hosiery under the existing law averages 44.00 per cent (p. 99).

Under the heading of "Manufacturing and selling" (p. 146) the views of manufacturers are stated. The competition in the industry is severe; so much so that a manufacturer who was interviewed stated that it was not so much foreign competition that was hurting the hosiery business as fierce domestic competition. But small capital is required to start making seamless hosiery, and for this reason hundreds of such plants have sprung up all over the country in recent years. During the year 1914-92 new hosiery mills went into operation, of which 42 were in Pennsylvania and 18 in North Carolina.

It has been the purpose of the department in the conduct of this inquiry to present a true picture of the industry, including the adverse conditions under which manufacturers admittedly labor, and to offer, as far as possible, suggestions that may tend to improve those conditions.

The thanks of the department are tendered to those many manufacturers who have in the broadest spirit of cooperation assisted the officers of the service in their work.

It is earnestly hoped that the studies now completed may be fruitful of good to the entire industry.

Yours, very truly,

WILLIAM C. REDFIELD, *Secretary.*

THE PRESIDENT,

The White House.

RESUMPTION OF ROUTING THROUGH PANAMA CANAL.

The following memorandum has been issued, dated December 22, 1915, by Maj. F. C. Boggs, United States Corps of Engineers:

There have been several reports recently in the newspapers regarding the passage of vessels through the Panama Canal. A cablegram asking for information was sent to the governor on the Isthmus and a reply dated December 21 has been received, from which it would seem that a temporary opportunity to pass small craft drawing about 15½ feet or less was taken advantage of and certain vessels which had been held since the canal was closed were allowed to pass the slides on December 20.

If a similar opportunity offers a few additional vessels of a greater draft, which have also been held since the closure of the canal, will probably be passed through, but the governor warns that conditions are unstable and it is impossible to estimate in advance what the probable available channel will be at any succeeding date.

The governor still states that no predictions can be made of the probable date of opening, and he is extremely anxious to prevent a premature resumption of the routing of ships via the canal which would be sure to embarrass the work and would result in the delay of the final opening of a stable channel. He also calls attention to the fact that such a premature resumption would be expensive to shipping interests on account of unavoidable delays to ships that might have to be held for an indefinite period.

When conditions are such as will permit an accurate prediction relative to the opening of the canal all interests will be promptly notified.

F. C. Boggs,
Major, Corps of Engineers, U. S. A., Chief of Office.

VESSELS ADMITTED TO AMERICAN REGISTRY.

During the four weeks ended December 18, 1915, there was admitted to American registry under the act of August 18, 1914, one vessel, the steamer *Constitucion*, formerly the Ecuadorian steamer *Hatasu*, of 3,358 gross tons, now owned by the Caribbean & Southern Steamship Co. (Inc.) (home port to be stated later). The total admitted from July 1 to December 18, 1915, was 23 vessels of 60,354 gross tons.

ANNUAL REPORT OF COMMISSIONER OF NAVIGATION.

According to the annual report of the Commissioner of Navigation to the Secretary of Commerce for the fiscal year ended June 30, 1915, which has just been issued, the merchant marine of the United States, including all kinds of documented shipping, comprised on June 30 last 26,701 vessels of 8,389,429 gross tons, as compared with 26,943 vessels of 7,928,688 gross tons one year earlier. The year's absolute increase in tonnage, 460,741 gross tons, has never been equaled in our history. While the total tonnage has increased, the number of documented vessels has decreased 242, sailing vessels alone decreasing 593 in number. The decline in the number of vessels with an increase in the total tonnage is a normal result of the development of water transportation. The size of vessels has been steadily increasing since steel and steam came into general use. In tonnage and value the merchant shipping under the American flag is surpassed only by that under the British flag, and in tonnage it equals that under any other two foreign flags combined except the British.

American shipping registered for the foreign trade, included in the figures above, numbered on June 30, 1915, 2,794 vessels of 1,871,543 gross tons, an increase during the year of 389 vessels and 795,391 gross tons. This increase is three times as great as the increase in registered tonnage during any previous year in our history.

Tonnage enrolled and licensed for the coasting or domestic trade on June 30, 1915, numbered 23,907 vessels of 6,517,886 gross tons, a decrease of 631 vessels and 334,650 gross tons since June 30, 1914.

During the past year under the ship registry act of August 18, 1914, a total of 148 vessels and of 523,361 gross tons, valued at \$33,392,756 and manned by 6,149 men, were transferred from foreign flags to the American flag and register. These transfers in most cases involved a change only in the ownership of record, made possible by the act referred to, which enabled American owners to place under their own flag ships built in foreign countries.

Shipyards on Seaboard Now Busily Employed.

During the year 1,157 vessels of 225,122 gross tons were built and documented in the United States, compared with 1,151 vessels of 316,250 gross tons for the previous year. The output is the smallest since 1898, and was anticipated in the report for last year because of the general depression in shipbuilding and other industries prevailing in the summer and early autumn of 1914. Our shipyards on the seaboard at the present time are busily employed and the output for the year, at present prospects, will probably reach 400,000 gross tons. On June 30, 1915, the seaboard yards reported that 62 steel vessels of 294,138 gross tons were under construction or under contract to be built, a tonnage which has not been approached at the corresponding date in the last 15 years except in 1901, when 63 vessels of 273,865 gross tons were so reported.

The receipts from tonnage duties during the year ended June 30, 1915, were \$1,315,425.30, compared with \$1,310,759.03 for the previous year, and are the largest annual receipts from this source in over 30 years.

The organization of the field force to carry out the laws relating to radio communication has been improved during the year, and in con-

sequence it has been possible to carry on more fully the inspection system through the seaboard States and the States bordering on the Great Lakes. The Bureau has begun to assemble records of marine casualties in which the wireless system on ships inspected by the department contributed to the saving of life and property. Incomplete returns for the past fiscal year show 36 such casualties and in every instance the apparatus worked satisfactorily, the auxiliary set taking up the work of the communication when the main set, through the nature of the casualty, was put out of commission. Radio operators have set for themselves high standards of courage and devotion to duty.

EXHIBIT AT THE UNITED STATES COAST AND GEODETIC SURVEY.

In connection with the Second Pan-American Scientific Congress the offices of the United States Coast and Geodetic Survey at 205 New Jersey Avenue southeast, will be open to the public from 9 a. m. until 5.30 p. m. every day, except Sunday, and January 1, from December 27 to January 8. Visitors will be afforded an opportunity to view the methods and the results of the work of this Bureau, and there will be some one on hand at all times to act as guide and to explain the exhibits. There will be an exhibit of nautical charts, survey plats and records, diagrams, and publications. The exhibit will also include the surveying instruments which are used by this Bureau, particularly those which have been designed in the Bureau. A tide-predicting machine which was designed and constructed at this office will be on exhibit and visitors will have an opportunity to see this machine in operation, making actual predictions for use in the next tide tables. Attached to each exhibit will be a short explanation, written in both English and Spanish.

FREE ADMISSION OF MOTOR VEHICLES IN PARAGUAY.

[Consul Samuel H. Wiley, Asuncion, Nov. 13.]

A law enacted November 8, 1915, provides that unused vehicles, including automobiles and motor trucks, together with their accessories and spare parts, shall be exempt from import duty in Paraguay for a period of two years from that date. The suspended duty on motor vehicles imported into Paraguay amounts to 62 per cent ad valorem, including surtaxes. [Under a law promulgated Sept. 16, 1914, motor vehicles were to be exempt from duty for a period of one year from that date (see Foreign Tariff Notes No. 17, p. 124).]

The official statement of the Prime Minister of the Commonwealth of Australia regarding the scheme agreed upon by the representatives of the Commonwealth and the States for dealing with the new wheat crop has been received from the American commercial attaché, William C. Downs, at Melbourne, and may be inspected at the Bureau of Foreign and Domestic Commerce or its district offices. Refer to file No. 958. Reference to this agreement was made in **COMMERCE REPORTS** for December 11, 1915.

ANNUAL REPORT OF COMMISSIONER OF FISHERIES.

The annual report of the United States Commissioner of Fisheries to the Secretary of Commerce shows that the bureau has just completed the most successful of the 45 years of its existence. The number of fish produced and distributed was greater, and the cost of production per million less than in any previous year. Fifty permanent hatcheries and 76 subhatcheries, auxiliaries, and egg-collecting stations have been conducted, and the output during the fiscal year 1915 was over four billion young fish and eggs, an increase of more than 241,000,000 over the previous year. Plants of food fishes were made in every State and territory; fish eggs were distributed to the fish commissions of 27 States; and consignments of eggs were sent to Porto Rico, Cuba, India, and Japan. The distribution of the output required more than 146,000 miles of travel by the five special cars of the bureau and 491,000 miles by detached messengers.

The introduction of the humpback salmon of the Pacific coast into Maine streams, which last year was an experiment, is now a reality, as numbers of these fish were taken during the summer of 1915 in the Maine rivers; furthermore, ripe eggs have been taken from them—a proof positive of thorough acclimatization. The counterexperiment of transplanting the Atlantic lobster in Pacific waters is still in progress.

Decline of Lobster Industry—Diminution of Shad.

The steady decline of the lobster industry has been a source of great uneasiness. The causes of this decline are well known, and a conference of fishery experts was held in Woods Hole early in July to consider just what remedy should be applied to the alarming situation. Resolutions adopted clearly point out the course that the States must pursue to arrest the decline and show the need for greater efficiency in artificial propagation.

The marked diminution of the shad also presents a serious problem. Shad are caught in every coast State from Maine to Florida and have for many years formed a substantial contribution to the food supply. Now, because of inadequate protection afforded the fish on their way from the sea to the spawning grounds, the supply is being rapidly depleted. Shad hatcheries built and maintained at great expense by the Federal Government have been put out of commission by the inability to obtain eggs for hatching purposes. The most serious condition exists in the Chesapeake Basin, where last year the fishery was the poorest ever known.

The pearl-button industry of the Mississippi Valley is reposing much faith in the output of fresh-water mussels from the Fairport (Iowa) biological station of the bureau. The fresh-water mussel begins its life as a parasite on the gills of fishes, and part of the work of the Fairport laboratory is infecting fishes with these parasites—a process which in no way injures the fish but merely provides a vehicle for transporting the mussels to the places where they mature and become of commercial value. About 300,000,000 young mussels were thus put into suitable nurseries in 1915.

Utilization of Food Fishes Heretofore Wasted.

The Bureau of Fisheries has done and is doing much for the conservation and utilization of food fishes which have heretofore been

wasted. Each year, when the Mississippi and Illinois Rivers, with their various tributaries, overflow their banks and later recede, millions of young fish are left stranded in temporary pools or where in a short time they would perish. Rescue work is, however, undertaken by the bureau, and in 1915 over eight million valuable food fish were saved and delivered to applicants, deposited in public waters, or returned to the main rivers. Another phase of this work is the exploiting of unknown or little-known food fishes and other aquatic products. The campaign carried on by the bureau put the sea mussel, a wholesome food, for centuries highly regarded in Europe, on the American market as a regular article, and established a permanent and growing industry. This work has been extended to other neglected sea foods, and still further exploitation is promised, the recent establishment of the tilefish being a case in point. Aid is given also to fisheries already established, and during the past year fishing grounds off the coasts of Washington and Oregon, whose existence was never suspected or whose precise location was unknown, have been surveyed and tested and a marked impetus has been given to local fisheries.

As the correspondence of the Bureau shows a widespread interest in frog culture, the services of a skilled investigator have been secured to study the matter and find a means for the propagation of this important species on a commercial basis. The great fisheries of Alaska, carried on in accordance with Federal laws administered by the Bureau of Fisheries, were more prosperous in 1914 than in any previous year. The catch of salmon was the largest ever made, and the output of red salmon in the Bristol Bay region was enormous.

The Alaskan seals constitute the most valuable herd of wild animals ever owned by any Government, and the Bureau of Fisheries is their custodian. The revenue to the Government from the sale of seal skins—when commercial killing is resumed—will be very large, and efforts are being made to find uses for the seal carcasses aside from the comparatively small number required by the natives for food. The old practice of using only the skin and wasting the carcass can no longer be countenanced. In February, 1915, Congress authorized the Secretary to postpone the sale of the sealskins then in his possession until a more propitious time. The Department now has several thousand skins in storage, and a plan has been consummated whereby the dyeing and dressing of the skins, heretofore done in London, will be carried on in this country, resulting in a great saving to the Government and a reduction in the price of the finished article to the consumer.

BRITISH EMBARGO CHANGES.

[Cablegram from consul general, London, Dec. 22.]

The exportation of hematite pig iron and of iron and steel smelting scrap to all destinations is prohibited, and the exportation of the following products to all destinations other than British possessions has been forbidden: Bichromate of soda, bladders, casings and sausage skins, colchicum and its preparations, solid drawn steel tubes, and wireless telegraph apparatus. Material for telegraphs and telephones, vegetable fibers and yarns made therefrom (not including linen yarns at present free from embargo restrictions) may not be exported to countries in Europe.

NEW ORLEANS TO HAVE MANY CONVENTIONS.

A list of the conventions already booked for New Orleans, La., during 1916, prepared by the convention and tourist bureau of the New Orleans Association of Commerce, has been received from Commercial Agent E. E. Judd, in charge of the New Orleans branch office of the Bureau of Foreign and Domestic Commerce. The names of the organizations and the respective secretaries or persons who can furnish detailed information are:

Rotary Clubs, district No. 12 (Louisiana and Texas), January 12-13, W. H. Richardson, jr., Austin, Tex.

Rotary Clubs, district No. 5 (Georgia, Florida, and Alabama), January 12-13, B. C. Brown, New Orleans, La.

Laymen's Missionary Convention (special), January 23-26, Rev. S. H. Werlein, chairman, 5830 Prytania Street, New Orleans, La.

"Southeastern Kansas Boosters" trip, January 24 or 27, George T. Guernsey, jr., chairman, Independence, Kans.

Gulf Foreign Freight Committee, January 24-25, E. B. Boyd, chairman, 2222 Transportation Building, Chicago, Ill.

National Foreign Trade Council, January 27-29, Robert H. Patchin, secretary, 64 Stone Street, New York City.

Southern Association of Ice Cream Manufacturers, January or February, B. C. Brown, secretary, New Orleans, La.

American Gynecological Congress, February 11-13, Dr. Leroy Brown, secretary, 148 West Seventy-seventh Street, New York City.

Southern Sociological Congress, March 27-30, J. E. McCulloch, secretary, Nashville, Tenn.

National Association of Real Estate Exchanges, March 28-31, Walter C. Piper, president, 400 Holden Building, Detroit, Mich.

Medico-Psychological Association, April 4-7, Dr. C. Pierson, Jackson, La.

Southern Conference for Education and Industry, April 18-21, A. P. Bourland, chairman, 508 MacLachlen Building, Washington, D. C.

American Nurses' Association, April 26-May 2, Miss Katherine DeWitt, secretary, 45 South Union Street, Rochester, N. Y.

National Organization for Public Health Nursing, April 26-May 2, Miss Ella Phillips Crandall, secretary, 54 East Thirty-fourth Street, New York City.

International League of Nursing—Education, April 26-May 2, Miss Emma L. Wall, 3527 Carondelet Street, New Orleans, La.

National Retail Grocers' Association, April, J. J. Ryan, secretary, 820 Commerce Building, St. Paul, Minn.

Oil Mill Machinery Manufacturers' Supply Association, May 24-26, W. H. Marshall, secretary, Chattanooga, Tenn.

National Oil Mill Superintendents' Association, May 25-28, F. P. Morris, secretary, Purcell, Okla.

Railway Development Association, May, H. O. Hartzell, secretary, care B. & O. R. R., Baltimore, Md.

Louisiana State Medical Society, spring, Dr. J. Martin, secretary, New Orleans, La.

Louisiana Railway Surgeons' Association, spring.

Order of Eastern Star (State), spring.

Tri-State Launderers' Association, spring, J. H. McCormick, secretary, Mobile, Ala.

American Society of Mechanical Engineers, spring, Calvin W. Rice, secretary, 20 West Twenty-ninth Street, New York City.

International Association of Bridge and Structural Iron Workers, September 18-27, Harry Jones, secretary, 422 Central Life Building, Indianapolis, Ind.

National Association of Fish and Game Commissioners, October 12-14.

Young Men's Business Clubs of America, October 12-14, Harold P. Nathan, Hennen Building, New Orleans, La.

American Fisheries Society, October 16-19, Ward T. Bower, secretary, Bureau of Fisheries, Washington, D. C.

American Railway Bridges and Building Association, October 17-19, C. A. Lichty, secretary, care C. & N. W. R. R., 207 North Howard Avenue, Austin Station, Chicago, Ill.

Railway Gardening Association, December 16-19, J. S. Butterfield, secretary, Lee's Summit, Mo.

Southern Agricultural Workers, fall, Prof. C. A. Wilson, secretary, Knoxville, Tenn.

National Association of Professional Baseball Clubs, fall, J. H. Farrell, secretary, Auburn, N. Y.

American Association of Dining Car Superintendents, date undecided, F. M. Dow, secretary, I. C. R. R., Chicago, Ill.

American Association of Park Superintendents, fall, Roland W. Cotterill, secretary, Seattle, Wash.

ENGLISH, NOT SPANISH, SPOKEN IN JAMAICA.

[Consular Agent Henry T. Wilcox, Port Maria.]

Many business men in the United States seem to be under the impression that Spanish is spoken in Jamaica, and some American exporters are injuring their cause by sending advertising matter to this island that is not printed in English. It is common for catalogues in Spanish to be received at this office, and occasionally the importers in this district complain of the same thing. The following letter received at this agency from one of the prominent storekeepers of Port Maria shows how the business men of Jamaica feel in regard to the matter:

I periodically receive the inclosed circular, which, as you will observe, is so much waste paper to me.

I should be glad if you would point out the absurdity of sending catalogues printed in Spanish to a British colony.

Surely your countrymen ought to realize that Jamaica belongs, and has belonged for some considerable period, to the British Empire, and if your good friends are really desirous of placing their goods on the market here they could do so much more effectively by sending catalogues printed in the language of the country.

This is the second time that the writer's attention has been called to the fact that the Spanish edition of the trade journal referred to is being sent here. On the first occasion a letter was written from this office to the publishers advising them of their mistake, but no reply was received. It is to be regretted that such incidents should occur, especially at a time when there is such a good opportunity for placing American goods in Jamaica.

While the United States already enjoys a large share of the trade of Jamaica, there is plenty of opportunity to increase it, and if American exporters are careful to see that their advertising matter and correspondence are in English they will remove one of the Jamaicans' few causes of complaint with regard to American business methods.

Unusual increases in the five years from 1909 to 1914 are shown for the city of Tulsa, Okla., in the preliminary statement on the census of manufactures, issued by the United States Bureau of the Census. In the order of their importance, from a percentage standpoint, the increases for the several items rank as follows: Salaries, 238.9 per cent; capital, 178.2; materials, 148.4; value of products, 147.7; value added by manufacture, 146.9; wages, 117.5; primary horsepower, 97.4; and wage earners, 83.1 per cent. The capital invested, as reported in 1914, was \$3,208,000, a gain of \$2,055,000 over \$1,153,000 in 1909.

CANADIAN TRADING-STAMP ACT.

[Consul General John G. Foster, Ottawa.]

The trading-stamp scheme is supposed to have originated in the United States about the year 1895. It was introduced into Canada nearly five years later. Briefly described, trading stamps consisted of printed coupons or stamps, usually about the size of postage stamps, which were sold by certain companies or individuals to merchants, who in turn gave them out to customers as premiums in proportion to the amount of goods purchased. In some cases the stamps were redeemed by the merchants themselves, but the practice that obtained almost exclusively in Canada was to have the stamps redeemed by the companies or individuals who sold them, who gave in exchange for a certain number of stamps various articles of merchandise.

It was not long after the introduction of trading stamps in Canada that complaints began to arise concerning the system. It was claimed among other things that the value given to customers was about one-half or one-third the stated value of the stamps or the prices paid by merchants for the stamps; that the stamps, being sold by the promoters of the system to only a few merchants in one locality, created a monopoly in restraint of trade in favor of a few trading-stamp people; and that the system was demoralizing in its effect upon the poorer classes of consumers, owing to the element of lottery which it contained.

Provisions of Certain Sections.

In 1901 the question of trading stamps received legislative attention in Ontario, in which year and in subsequent years the Province passed laws empowering municipalities to prohibit the giving, selling, distributing, or receiving of trading stamps, coupons, or similar devices. In the Province of Quebec, also, similar legislation was passed. The need for Dominion legislation arose from the fact that the Ontario and Quebec legislation was held to be unconstitutional on the ground that it is within the exclusive jurisdiction of the Dominion Parliament to enact laws relating to trade and commerce. During the summer of 1905 a bill was introduced into Parliament, and subsequently passed, which Act added several new sections to the Criminal Code respecting trading stamps, among them being:

"Trading stamps" includes, besides trading stamps commonly so called, any form of cash receipt, coupon, premium ticket, or other device designed or intended to be given to the purchaser of goods by the vendor thereof or his employee or agent and to represent a discount on the price of such goods or a premium to the purchaser thereof which is redeemable either:

- (I) by any person other than the vendor or the person from whom he purchased the goods, or the manufacturer of the goods, or
- (II) by the vendor or the person from whom he purchased the goods, or the manufacturer of the goods, in cash or goods not his property or not his exclusive property, or
- (III) by the vendor elsewhere than in the premises where such goods are purchased;

or which does not show upon its face the place of its delivery and the merchantable value thereof, or is not redeemable at any time.

Every one is guilty of an indictable offense and liable to one year's imprisonment and to a fine not exceeding \$500 who, by himself or his employee or agent, directly or indirectly issues, gives, sells, or otherwise disposes of, or offers to issue, give, sell, or otherwise dispose of trading stamps to a merchant or dealer in goods for use in his business.

Every one is guilty of an indictable offense and liable to six months' imprisonment and to a fine not exceeding \$200 who, being a merchant or dealer in goods, by himself or his employee or agent, directly or indirectly gives or in any way disposes of or offers to give or in any way disposes of trading stamps to a purchaser from him of any such goods.

Every one is guilty of an offense and liable, on summary conviction, to a fine not exceeding \$20 who, being a purchaser of goods from a merchant or dealer in goods, directly or indirectly receives or takes trading stamps from the vendor of such goods or his employee or agent.

COTTON WADDING FOR CANARY ISLANDS.

[Consul George K. Stiles, Tenerife, Nov. 8.]

Approximately 13,000 bales of "guata," a species of thin cotton wadding, will be required in Canary Island ports within the next eight months to assist in packing the forthcoming banana crop. As the previous source of supply, the Manchester cotton factories, are unable to furnish the entire amount needed, an excellent opportunity to dispose of American cotton would seem to be offered.

Sales made this week ran as high at \$29 spot cash per bale on the wharf in this port for a small lot from Manchester, and dealers in packing material declare the article very hard to obtain. A bale of cotton wadding weighs 156 pounds net and 168 pounds gross. The present supply is coming entirely from the Manchester cotton center, although previous to the war much came from Holland.

In addition to the general difficulties of war freights, the British Government has placed an embargo on any shipments of cotton wadding to the Canaries except under special Government orders, which are not easily obtained.

Spanish packing firms are anxious to find out if American cotton factories can supply them at the same or lower prices than are charged by the Manchester spinners.

The guata bales are made up and packed in the following manner: 120 pieces of wadding to each bale; each piece 12 yards long, weighing 22 ounces; width of wadding, 34 to 35 inches; total length in bale, 1,440 yards. These bales are wrapped in stout canvas coverings and are strongly compressed with thin iron bands.

The number of bales to the ton of 2,240 pounds is 13.3. The ocean freight rate direct from New York to Canary ports, based on figures for similar-class freight arrived in recent cargoes, should be \$17 per ton. The freight rate via Liverpool to Canary ports would approximate \$22 per ton, and via Habana should be about \$25 per ton, for this class of merchandise, unless in small quantities, when the price is decidedly higher. As, however, the present selling price of guata in this district is about \$400 per ton, the freight rate is less important than the ability to secure shipment, which is now proving difficult.

[Samples of the Manchester guata may be seen at the Bureau of Foreign and Domestic Commerce or its district offices, which will also supply a list of buyers of guata in the Canary Islands. Refer to file No. 68694.]

SWEDEN RAISES EXCHANGE RATE ON DANISH BILLS.

[American Minister Ira N. Morris, Stockholm, Nov. 17.]

In connection with the difference in value of Swedish and Danish crowns the State Bank has raised the rate of exchange on Danish bills to 1½ per cent.

THE BOOROW WOOD OF SOCIETY ISLANDS.

[Consul Thomas B. L. Layton, Papeete, Tahiti, Oct. 30.]

The *Ochroma lagopus* (the corkwood of the British West Indies, the balsa of South America, and the boorow or puran of the South Pacific Islands) is found in abundance not only in Tahiti but in nearly every island in this consular district. Two varieties are recognized—the hard and the soft—both growing from the same roots. Locally the varieties are not considered as distinct species, but their different structure is attributed to the environment of the plant—to the temperature, fertility, and degree of moisture of the soil in which it grows, and to other extrinsic influences conducive to rapid growth. Given the conditions favorable to quick development only, the softwood will be found. In less suitable surroundings both varieties may occur (the hard predominating), the degree of toughness of the wood depending in such cases upon the age of the trunks or branches themselves.

There are no dealers in boorow in this colony. The wood has no commercial value locally and has never been exported, except perhaps in very small quantities. It is chiefly used as outriggers for native canoes, owing to its lightness and great buoyancy, and for firewood. The leaves of the plant are believed to possess valuable medicinal properties, and are extensively employed by the natives in the treatment of hemorrhoids.

No Local Prices Obtainable.

Almost all of the boorow in the colony will be found growing on private property (where it is considered a pest), although it also occupies a large area of public land. The plant being valueless here, it is impossible to estimate the cost of the wood where it stands, and for the same reason the price of even 1 cord hauled and delivered on board ship can not be stated. The native landowner might be willing to dispose of the wood without profit to himself should he receive an offer to clear his acres of the encumbering growth, or suddenly finding it endowed with value he might name a prohibitive price. For boorow standing on public lands the Government would decline to quote prices offhand, but would first insist upon some form of contract or agreement.

An order for several cords placed with a native would produce unsatisfactory results. He could not be relied upon to cut and ship only the quality and length of wood required. No one else here would undertake to supply the demand unless for very large orders. The naming of an agent to purchase the wood and arrange for its forwarding before the situation had been carefully investigated would not be advisable.

How to Handle the Trade.

The only feasible method to be employed in obtaining boorow from this colony, should the demand be large enough to warrant the expense, would be to send a representative who might inquire into the local production, study the questions of labor and transportation, and enter into agreements with the Government and native landowners.

There are no railroads in any of the islands in the colony and no wagon roads except in Tahiti. The transportation of the wood from the neighboring islands to Papeete (the only port of shipment) would have to be by specially chartered sailing crafts. In Tahiti a few motor trucks owned by the merchants might be available; in the outlying islands pack mules and horses would have to be employed.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Do.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Do.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(*)
Chamberlain, George A.....	Laurence Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 116 West Fifty-seventh Street, New York City.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. R.....	Cornwall, Canada.....	Jan. 8	2607 Eleventh Street NW., Washington, D. C.
Donald, George E.....	Maracaibo, Venezuela.....	Feb. 17	153 Church Street, Mobile, Ala.
Bonney, Wilbert L.....	San Luis Potosi, Mexico.....	Feb. 13	1905 North Bush Street, Santa Ana, Cal.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canjoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

* Consul Wilbert L. Bonney shall visit San Francisco, Los Angeles, and San Diego, Cal., and San Antonio, Tex., and will advise the Chamber of Commerce in each of these cities of his arrival and address.

CANADIAN POTATOES GAIN MARKET IN CUBA.

[From American consulate, St. Stephen, New Brunswick, Dec. 15.]

An American transportation agent states that Canadian potatoes are being sold in Cuba despite the 20 per cent differential tariff reduction given to the American product. This condition, he says, is due to the particular activity of one or more commercial agents of the Canadian Government operating in or near Habana.

District Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 308 United States Customhouse; Seattle, 923 Alaska Building. Cooperative district offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

ITALIAN CEMENT INDUSTRY.

[Consul Samuel H. Shank, Palermo, Oct. 19.]

In Palermo there are two factories producing natural cement. One has an output of 30,000 tons annually and the other of 8,000 tons. The stone from which the cement is manufactured comes from a mountain at the edge of the city. About 75 per cent of it is available for making cement. The larger of the mills is contemplating the manufacture of artificial cement and desires to receive offers from American machinery manufacturers for grinding machines and rotary ovens. The capacity will be about 100 tons per day. Information may be furnished to this consulate.

Most of the cement now manufactured is used in Sicily, little being exported to the Continent. Reinforced-concrete construction has been used very little in this district, as there is a building stone available here that is cheap and durable. This stone is very soft when first taken from the quarry and may be cut with an ordinary ax, but after some months' exposure to the air it hardens and is a very durable building material.

The largest users of cement are the factories that make tiling for the floors of houses, and contractors building sidewalks. The cement-tile business has been developed to a great extent and artistic designs are produced in various colors. Most of this work is done by hand. Tiles are usually made about 8 inches square and three-fourths of an inch thick. Around a smooth steel plate is locked a frame in which is inserted the design. Liquid cement is then poured into this container to the depth of about one-fourth of an inch, the different colors being used to give the desired pattern. The steel design is then lifted out of the frame, which is filled with a mixture of sand and cement and put under a power press. The frame is then removed and the tile taken out and put on a rack for drying. It is allowed to stand for one month before being used. Instead of the various designs, broken marble sometimes gives a mosaic effect, white marble being used in red cement and red marble in gray or yellow cement. The colors are bought in France and cost about \$4.54 per 100 pounds, with the exception of green, which costs \$31.75 per 100 pounds. From red, yellow, and black other colors are produced. The cost of cement is about \$12 per metric ton of 2,204.6 pounds, and of sand \$1 per cubic yard. Most of the work is done by women, who receive \$0.30 to \$0.40 per day. The men who work in the factories receive an average of \$0.80 to \$0.90 a day. There are four factories engaged in the manufacture of these tiles, as the demand is large. Practically all floors are now made of this material. The tiling is laid so as to give the effect of a rug, and during the summer no carpets are used. By the use of a little oil, the floors may be polished like hardwood floors. The prices range from \$0.074 to \$0.25 per square foot.

Other articles made of cement are balustrades, supports for balconies, pipes, bathtubs, washbasins, feed troughs, park benches, statues, and gravestones.

[A catalogue of the largest factory, showing designs and prices, may be seen at the Bureau of Foreign and Domestic Commerce or its district offices, which will also supply upon request the name of the firm that is contemplating the manufacture of artificial cement. Refer to file No: 03884.]

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its district offices. Request for each opportunity should be on a separate sheet and the file number given.

Rubber bellows, No. 19650.—The Bureau is in receipt of a letter stating that a firm in England desires to purchase large quantities of rubber bellows made of black rubber of superior quality to be used with good class "poker machines." They are made with the hand ball connected to an air ball which has a 14-inch rubber tube attached. The two sizes required are best indicated by the size of the hand ball; No. 3 hand ball has a 2-inch diameter by 3-inch length, excluding the valve and connections; No. 7 has a 3-inch diameter by 3½-inch length, excluding the valve and connections. It is requested that samples accompany quotations. Illustration of rubber bellows wanted may be seen at the Bureau or its district branches. (Refer to File No. 84.) Bank references are given.

Tobacco pipes, No. 19651.—An American consular officer in Canada reports that a pipe company, holding American and Canadian patents on an improved tobacco pipe, desires to receive proposals from the manufacturers of pipes. The company also desires to secure the services of an agent for the purpose of placing the pipes on the market. Cuts of the pipe may be examined at the Bureau or its district offices. (Refer to File No. 70093.) Bank references are given.

Motor cycles and racing skiff, No. 19652.—A commercial agent of the Bureau states that a man in Salvador desires catalogues of motor cycles, and prices on a racing skiff for one person. Quotations should be made f. o. b. New York or San Francisco.

Repeating syringes, No. 19653.—A report from an American consular officer in England states that a firm desires to be placed in touch with manufacturers making nickel-plated repeating syringes for use in theaters, etc. Sizes wanted are: Barrel 5 inches by 1½ inches in diameter; barrel 14 inches by 1½ inches in diameter; barrel 19 inches by 1½ inches in diameter. The inquirer states it is prepared to take up the sole agency in the United Kingdom for these goods. References are given. An illustration showing sprayer wanted may be examined at the Bureau or its district offices. (Refer to File No. 69971.)

Shoes, shoe leather, and paper, No. 19654.—An American consular officer in Chile states that a company in his district desires to act as commission agent for manufacturers of shoes, shoe leather, and news print paper. The leather desired is calf, glazed kid, patent kid in light, medium, and heavy quality, the light-medium in black and yellow being the one mostly in demand. Samples and quotations f. o. b. New York are asked for on cement, linings, thread, pegs, eyelets, laces, buckles, blackings, rubber heels, and workmen's shoes to be used in the nitrate district. Samples of the shoes may be examined at the bureau or its district offices. (Refer to File No. 69981.) It is stated that 200 dozen pairs of this kind of shoe can be used per month. The sample shoe is sewed, but the class mostly sold is made with pegs.

Stationery and office novelties, No. 19655.—A letter to the Bureau states that a company in Spain desires to purchase large quantities of stationery and office novelties.

Lead seals, No. 19656.—The Bureau is in receipt of a letter from a firm in the United States asking for the names and addresses of manufacturers of machinery for making lead seals.

Cinematograph films, No. 19657.—An American consular officer in Paraguay reports that a manager of a theater desires to receive catalogues and prices of cinematograph films. Dramas in several parts are preferred. Correspondence and catalogues should be in Spanish.

Clock and gramophone springs, No. 19658.—A report from an American consular officer in England states that a firm in his district desires to obtain main-springs such as those used in clocks, gramophones, and typewriters. Bank references are given.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Navy Department supplies, No. 2859.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., for supplying the following. Firms desiring to submit proposals should make application to the Bureau of Supplies and Accounts, giving schedule numbers desired: Schedule 9141, tinned bacon, tinned string beans, California white beans, tinned corn, vanilla and lemon extracts, lard, macaroni, evaporated milk, split peas, tinned ~~peas~~ baking powder, raisins, rice, salt, sirup, sugar in sacks, tea in crated half chests, tinned tomatoes, and vinegar; schedule 9142, fireproofing girders; schedule 9143, lavatories, urinals, water-closets and tanks, and iron soil pipe and fittings; schedule 9144, nonferrous metal, accordion type bellows, and prime lard oil; schedule 9145, steel clamping bridges and bronze clamping screws; schedule 9146, sheet brass, cold rolled sheet copper, sheet iron or steel, cold rolled sheet steel, and bright tin plate; schedule 9147, coke; schedule 9148, yellow-pine creosoted piles; schedule 9149, copper stowage boxes, crank pin bushings, steel piston rings, thumb nuts and screws, No. 30 tools, and bar machine steel; schedule 9150, Port Orford cedar boat boards and cypress for boat building; schedule 9151, incandescent lamp cord; schedule 9152, No. 1 glycerin; schedule 9153, crucibles for melting composition, gauge testing outfits, solid and cored arc lamp carbons, single conductor wire, brass nuts, hot rolled sheet copper, ferromanganese, and silicate of soda; schedule 9154, silver-plated ware; schedule 9155, air hose for diving apparatus, rubber garden hose, and unlined linen hose; schedule 9156, bath and state room crockery, window glass, artificial leather, upholstery leather, cotton thread, and flax twine; schedule 9157, rivet cement, calcium carbide, lampblack in oil, dry red lead, dry litharge, yellow ochre in oil, boiled linseed oil, amber-colored mineral oil, whale oil, grade "D" lump rosin, and tallow; schedule 9158, worm-gear chain blocks, calipers, quick-adjusting clamps, portable electric drills, files, machine and wood brass screws, 1-gallon gasoline torches, vises, pipe wrenches, and screw wrenches; schedule 9159, 7-ounce thin blue flannel, and heavy quality blue flannel; schedule 9160, unannealed brass tubes; and schedule 9161, steel shelves and bins.

Removal of wreck, No. 2860.—Sealed proposals will be received at the United States Engineer Office, 401 Customhouse, San Francisco, Cal., until January 20, 1916, subject to prior removal, for removing the wreck *City of Panama* now lying in San Francisco Bay. Further information may be had on application to the Engineer Office in San Francisco.

Windlass, No. 2861.—Sealed proposals will be received by the lighthouse inspector, Tompkinsville, N. Y., until January 8, 1916, for furnishing and delivering to general lighthouse depot, Tompkinsville, one windlass for lighthouse tender *Larkspur*. Further information may be had on application to the above-named officer.

Bacon, No. 2862.—Sealed proposals will be received at the office of the depot quartermaster, Kansas City, Mo., or at the office of the depot quartermaster, Omaha, Nebr., until January 21, 1916, for furnishing and delivering on or before March 20, 1916, about 88,440 pounds of issue bacon.

Lighting, No. 2863.—Sealed proposals will be received by the lighthouse inspector, Ketchikan, Alaska, until January 31, 1916, for lighting about 400 tons of miscellaneous freight from Katalla anchorage to Cape St. Elias Light Station, Alaska. Specifications and forms for proposal may be secured by applying to the above office or to the postmasters at Katalla, Seward, or Cordova, Alaska.

Repairing, No. 2864.—Sealed proposals will be received by the lighthouse inspector, New Orleans, La., for docking and repairing lighthouse tender *Magnolia*. Further information may be had on application to the above-named office.

TARIFF REVISION IN PORTUGAL.

[Cablegram from American consul general, Lisbon, received Dec. 23.]

The Portuguese Government will revise the tariff law at the present session of Parliament.

HEMP SHIPMENTS FROM ITALY.

The American ambassador at Rome, under date of December 24, cabled that the Ministry of Finance of the Italian Government stated that the quantity of hemp free for exportation in January will be rather small.

All applications for permits for hemp from the Italian Government should be received by the Secretary of Commerce, Washington, D. C., not later than January 10, 1916. These applications should state the quantity and grade of hemp purchased, and the names of the foreign firms with whom negotiations have been carried on. As soon as these applications have been received by the Department of Commerce, a cablegram will be sent, through the Department of State, at the expense of the American purchasers of this hemp, to the American ambassador at Rome for presentation to the Italian Government.

SHIPBUILDING ACTIVITY IN SPAIN.

[Consul General Carl Bailey Hurst, Barcelona, Nov. 23.]

The shipbuilding yards of Nervion, Spain, are being enlarged to permit of the construction of vessels of 1,500 to 5,000 tons for the Spanish merchant marine.

The Peruvian Government is considering the construction of a cruiser by the Sociedad Española at Ferrol, to displace 2,850 tons, at a cost of \$1,260,000. It is not improbable that orders for other vessels will be placed there by Peru.

The new shipbuilding yards of the Sociedad Española de Construcciones Navales, of Bilbao, are shortly to begin on the building of vessels for the Compañía Transatlántica, of Barcelona.

WORKMEN'S COMPENSATION LEGISLATION.

An indication of the rapid growth of the idea of compensation of workmen for injuries received in the course of employment as a substitute for the old liability acts is given in Bulletin No. 185, issued by the Bureau of Labor Statistics of the United States Department of Labor. The bulletin presents the legislation for the years 1914 and 1915, together with amendments to a number of earlier laws, which in some cases are so extensive as to necessitate the reprinting of the entire law. This bulletin is in effect a supplement to Bulletin No. 126, issued two years ago as a complete compilation up to that date of existing legislation in this field.

The legislation of the year 1914 included three States—Kentucky, Louisiana, and Maryland. One of these laws, that of Kentucky, was declared unconstitutional before it came into operation. That of Maryland superseded an earlier statute reported as unworkable. The new laws of 1915 cover eight States—Colorado, Indiana, Maine, Montana, Oklahoma, Pennsylvania, Vermont, and Wyoming—besides the Territories of Alaska and Hawaii. The legislation of 1914 included also a presidential order providing a compensation system for employees of the Panama Canal and the Panama Railroad, while that of the current year includes a similar order extending the Federal compensation act of 1908 to workmen engaged on or about the Government railway in Alaska. With the legislation of these two years, 31 States and the Territories of Alaska and Hawaii now have compensation laws. A Federal statute covers also about one-fourth of the civilian employees of the United States. All of this legislation has been enacted since 1908, and practically all of the existing legislation in the States since 1910.

Of the new laws of 1914 and 1915, one, that of Wyoming, must be classed as a compulsory insurance law, while those of Maryland and Oklahoma are compulsory compensation laws. In the other States, eight in number, the law permits the employer to elect or reject the compensation act. In case he rejects it, however, he is deprived of the customary defenses under the liability laws.

SUMATRA COFFEE NOT TO BE LABELED "JAVA."

Food Inspection Decision No. 82, which limits the use of the term "Java," under the food and drugs act, to coffee produced on the island of Java, will not be changed, according to a forthcoming issue of the Service and Regulatory Announcements of the Bureau of Chemistry, Department of Agriculture. Certain firms in the coffee trade requested the Bureau of Chemistry to recommend the modification of Food Inspection Decision No. 82, to the extent of allowing coffee produced on the island of Sumatra, or other islands of the Dutch East Indies, to be imported and shipped into interstate commerce as Java coffee.

It was claimed by the trade that the coffee produced on the island of Sumatra was equal or superior in quality to that produced on the island of Java. The Bureau of Chemistry is of the opinion that, under the terms of the food and drugs act, even if the coffee produced on the island of Sumatra is equal or superior to that produced on the island of Java, it can not be imported into this country or shipped into interstate commerce labeled as Java coffee.

COMMUNITY COTTON GROWING IN IRRIGATED SOUTHWEST.

Stabilization, or the continuous production of a crop with a fixed high quality of fiber, is the great problem now confronting many sections of the cotton belt, says a new publication of the United States Department of Agriculture, Bulletin No. 324. Although this bulletin deals primarily with the production of Durango cotton in the Imperial Valley of California, much of the information which it contains is applicable to other cotton-growing communities.

For the Imperial Valley no other variety of long-staple upland cotton has been found as suitable as the Durango. This variety, which produces fiber from $1\frac{3}{4}$ to $1\frac{1}{2}$ inches in length, yields as well as short-staple varieties, but brings better net returns. To realize the full possibilities in the industry, however, community action is essential. It requires community action to insure an adequate supply of pure seed, to turn out from the gin a smooth sample without defects, and to establish a reputation for a consistently high quality of cotton.

These factors have been realized in the Imperial Valley, and the bulletin already mentioned points out the extent to which the development of the industry has been favored by the organization of the Imperial Valley Long-Staple Cotton Growers' Association.

The 1914 crop in the Imperial Valley consisted of 34,900 bales of short-staple cotton, 8,000 bales of long-staple Upland, and 100 bales of Egyptian. Of approximately 600 cotton growers in the Imperial Valley about 150 were producing Durango cotton. If the producers of short-staple cotton could be induced to adopt the Durango variety the problem of maintaining an adequate supply of pure seed would be greatly simplified and the interests of the entire community greatly enhanced.

FORECASTS MADE FOR VARIOUS CROPS IN INDIA.

The Bureau of Foreign and Domestic Commerce has received publications from the Departments of Land Records of the Punjab and Burma giving, respectively, the second forecast of the sugar-cane crop and the second forecast of the sesamum crop of the Punjab for 1915 and the summary of the first forecast of the rice crop in Burma for 1915-16.

In the second forecast of the sugar-cane crop of the Punjab for 1915 the revised estimate of area up to the end of September amounts to 354,032 acres (including 1,232 acres conventionally estimated), as compared with 396,090 acres in the corresponding forecast last year. In the second forecast of the sesamum crop of the Punjab for 1915 the revised estimate of area up to the end of September amounts to 106,794 acres (including 8,094 acres conventionally estimated), as compared with 154,620 acres in the corresponding forecast of last year.

The first provincial forecast of the rice crop in Burma for 1915-16 shows 10,088,472 acres, against 10,112,819 acres estimated on the corresponding date of last year, a decrease of 24,347 acres.

[These publications may be inspected at the Bureau of Foreign and Domestic Commerce or its district offices. Refer to File No. 70285. The bureau has also received other crop forecasts from India, which were offered for inspection in **COMMERCE REPORTS** for December 10, 1915.]

WORK OF THE BUREAU OF STANDARDS.

Among the unusual work done in November by the United States Bureau of Standards may be mentioned two large turnbuckles for the Geological Survey, and a tensile test upon a $3\frac{1}{4}$ -inch wire rope submitted by the Panama Canal. A 4,000-pound spring testing machine at the Washington Navy Yard was calibrated up to its full capacity. The engineering testing included 51 samples of miscellaneous materials and 29 engineering instruments.

In the experimental rubber laboratory 34 rubber compounds were mixed, of which 11 were made into tubing for service tests in the laboratory and 23 compounds were made into test sheets for a study of their physical properties.

As a result of the bureau's cooperation with the General Supply Committee of the Government, specifications have been developed for four kinds of lubricating oil which will be purchased on specification during the next year.

A photographic lens for the extreme-speed Naval motion-picture camera, a microscope objective, and several small lenses were tested for the Navy Department. A complete test of a photographic lens was made for an optical company. The radii of curvature, refractive index, and powers of 116 lenses were measured for a primary standard trial set.

Tests were made on the heat loss through the different sides of a model beehive for one of the bureaus of the Department of Agriculture. In addition the necessary apparatus was loaned and installed for measuring the temperatures in the interior of cotton bales in connection with some experiments being conducted by one of the bureaus of that department.

The Aviation Board has asked the bureau to cooperate on the question of the production and properties of noncorrosive light alloys.

The Chief of the Metallurgical Division visited a large steel company to witness the splitting of a special steel ingot and to confer regarding ingot practice; called on a representative of the Pennsylvania Railroad to confer regarding Hadfield rail tests, and inspected failed mammoth valve castings of the New York Water Board.

London Rubber Trade Statistics for October.

The statistics of the Rubber Trade Association of London for October, giving the imports into and the exports from the United Kingdom of all kinds of rubber, for the month and for the 10 months ended October, 1915, compared with similar periods in 1914 and 1913, and the imports, deliveries, and stocks in London and Liverpool for October, 1915, have been received by the Bureau of Foreign and Domestic Commerce. They may be inspected at the Bureau or its district offices. Refer to file No. 70282. The statistics for the six months preceding October were offered for inspection in the issue of COMMERCE REPORTS for December 3, 1915.

A representative of the United States Bureau of Standards has visited leading steel mills and laboratories in Pennsylvania to gather first-hand information as to chemical methods of iron and steel analysis, with special consideration of features of importance in the cooperative analysis of the bureau's standard irons and steels.

SHOEMAKING AS A TRADE FOR WOMEN.

A study of the boot and shoe industry in Massachusetts as a vocation for women is the subject of Bulletin No. 180, issued by the Bureau of Labor Statistics of the United States Department of Labor. Four important shoe centers in Massachusetts were chosen for the inquiry, namely, Boston and Chelsea, Brockton and near-by towns, Lynn and Beverly, and Marlboro.

The method of the study included visits to 80 factories in the four localities selected; rates of pay and earnings were studied, based on the pay rolls of 18 factories and over 4,400 women shoe operatives. Information in regard to the physical conditions under which the women were working and living was in all cases based upon personal inspections. The majority of women workers were employed in the stitching room, a smaller number in the packing room, while in every room table work is done by women and minors. Outside of these occupations men performed all of the operations in the factory. Massachusetts women have not yet entered the cutting rooms except at skiving. The packing-room work, formerly done by men, is now almost completely in the hands of women. Women are also found in the lasting room at assembling machines and doing eyeletting and buttonhole making.

The study of pay rolls in this investigation showed wide differences in the earnings in the several localities, the proportion earning less than \$8 in the week when the greatest number were employed, varying from 24 per cent in Brockton to 42 per cent in Lynn, while the proportions earning over \$10 a week varied from 34 per cent in Marlboro to 54 per cent in Brockton. According to Massachusetts statistics for 1911 the seasonal fluctuations in shoe factories are greater than in any other industry except the men's and women's clothing industries.

Of the women who worked 46 weeks or more, all adult, experienced, and steady workers, three-fifths earned less than \$500 a year, and not far from one-half earned only \$450 or less. Unquestionably, however, these earnings exceed those of any other large body of factory workers.

In summing up the results of the study as to earnings, the bulletin notes that three points stand out prominently: The fluctuations in the industry which debar many of the workers from steady employment; factory unemployment or temporary lack of work for those who nominally are steadily employed; and, partly as a consequence of this irregularity of work, the low weekly wage even of steady and experienced workers when earnings are distributed over the year.

COFFEE STOCKS IN DENMARK.

[Consul General E. D. Winslow, Copenhagen, Dec. 2.]

The total import of coffee into Denmark for November, 1915, was some 29,000 sacks, as compared with 43,000 sacks for October, 1915, and 20,600 sacks for November, 1914.

The stock on hand December 1, 1915, was as follows: Java coffee, 11,700 sacks; Brazilian coffee, 23,500 sacks; and other sorts, 15,700 sacks; making a total stock of 50,900 sacks.

At the close of October, 1915, the stock consisted of 48,600 sacks, as against 27,600 sacks for corresponding period in 1914.

OBSTACLES TO TRADE EXTENSION IN PORTUGAL.

[Consul General W. L. Lowrie, Lisbon, Oct. 13.]

In order to ascertain the actual working of Foreign Trade Opportunity notices, the Lisbon consulate general addressed 25 letters to concerns in Portugal which had made use of them through this office. A number of the replies contain valuable hints as to the obstacles to the development of trade with Portugal and are quoted herewith with names omitted. Regarding steel wire ropes the inquirer wrote:

Thanks to your kindness in the matter, we have received communications from the following well-known firms. * * * We fully recognize that these are the best American firms in the trade, and we are very grateful to you for having put us in touch with them.

Unfortunately our clients find the prices excessively high, and it has been impossible to get the inquiries we have on hand confirmed. We are of opinion, however, that clients will be obliged to buy sooner or later from America, as there is a great shortage of wire ropes on the market and very few ropes are finding their way to Portugal from Great Britain. We hope we shall be able to put through some orders with your American friends before long.

Another firm reported the placing of a trial order for 10 tons each of steel bands and annealed baling wire.

Wanted Direct Connections.

A wish to deal direct with the manufacturer was the reason for a Lisbon oilcloth importer's failure to make American connections. He wrote:

We beg to acknowledge receipt of your favor of the 21st instant, and in reply wish to mention that we have received offers for the supply of oilcloth from two firms, both being obviously commission merchants. Unfortunately we were not able to place orders, as the conditions were too unfavorable: Cash against documents in New York, as well as confirmed banker's credit for the value of every order. German and Belgian factories supply c. i. f. Lisbon and give 2 per cent discount for cash within either 30 days of date of shipment or 30 days after arrival.

We much regret that we can not deal with commission houses, for as soon as hostilities cease in Europe they would have to compete with factories having long-established business relations and dealing direct with the local consumers, and naturally the factories would not be long in getting the better. We are therefore obliged to treat only with manufacturers and wish to work the business on an agency basis on our own account; i. e., that the factory invoices and sells only to us at lowest prices and we resell to the customers here, thus avoiding for the factory any risks with the traders.

"Cash in New York" Not Satisfactory.

The severity of the terms imposed was complained of by several local firms in whose behalf Trade Opportunities were published in **COMMERCE REPORTS**, one of whom stated:

Payment of invoices in New York against shipping documents and the expensive banking charges for opening direct credits or through London make it very difficult to do business with America. Germany used to sell its goods on time or at least with payment in Lisbon against documents. The latter method offers sufficient guaranty, and it would be of great value if the American exporters would modify under present circumstances their demands as regards payment. Payment in Lisbon against documents would doubtless open the way for many American articles into Portugal.

I note with pleasure your desire to improve commercial relations between America and Portugal, and thank you for the kind way in which you have handled my request. I am expecting to hear from other firms that may use my services to represent them here for the sale of wheat, corn, and cotton.

Another, who received 14 offers of druggists' supplies, voiced the same complaint. An inquirer for sulphur and sulphate of copper

could get no information as to the cost of transportation, which rendered the f. o. b. prices given him quite useless.

Exchange, Freight, and Terms all Deterrents.

Portuguese importers are greatly handicapped by the low rate of exchange, extremely high freights from American ports, and the severe terms of cash before shipment demanded by many manufacturers and exporters. The conservative houses seem inclined to avoid extensive purchases as they realize the end of the war might leave them with a stock of costly merchandise on hand. Aside from actual orders placed, I am sure the advertising of American goods among Portuguese houses will be of great value in the future development of the commerce of the two countries.

ACTIVITIES OF MANCHESTER COTTON ASSOCIATION.

[Consul Ross E. Holaday, Manchester, England, Dec. 1.]

In connection with the annual report on commerce and industries of this consulate (Supplement to COMMERCE REPORTS, April 13, 1915), and the report for 1914, of the activities of the Manchester Cotton Association, contained on pages 12 and 13 of that report, the Manchester Guardian of December 1, 1915, contains an account of the meeting of this association for 1915, which was held in Manchester on November 30. At the invitation of the president and directors of the association, the American consul attended the meeting and listened to the review of the year's work by the president, who said, in part:

Despite the war the importations of American cotton last season (Aug. 1 to July 31) were the highest in the history of the association, reaching 620,487 bales, or an increase of 16.9 per cent over the preceding season, and representing 15.3 per cent of all American cotton imported into this country. So far this season 134,000 bales have been shipped to Manchester, compared with 85,000 bales at the corresponding time last season.

The Egyptian imports showed a great falling off, being, in round figures, 150,000 bales, against 230,000 bales. This was mainly accounted for by the decreased consumption, so many of the Bolton mills having to run short time owing to the export of yarn to belligerent countries being stopped. So far this season 61,000 bales have been shipped to Manchester, against 31,000 last season. Under the unfavorable conditions, and in the absence of any futures market here, the decrease in imports of Egyptian was not remarkable.

After referring to the variations in the prices of cotton, the president observed there were many people who believed that 4½d. (9 cents) would be about the ruling price for the crop, but there were various reasons why such a low price was impossible. "The American mills," he said, "are very large consumers, and they will shortly be using twice as much cotton as we do, and if, as we expect, the crop will be about 12,000,000 bales, nearly 7,000,000 bales may be consumed in America. The Continent and Japan are importing freely, and have so far taken 385,000 bales more than Great Britain."

Taking the trade as a whole, he thought Lancashire had done better than anticipated. Stocks of yarns had largely disappeared, and a distinctly more healthy feeling prevailed. The home trade had been, and continued, excellent, and the high wages earned meant more spending power to the masses of the people.

[Figures relating to Manchester's imports of raw cotton were published in COMMERCE REPORTS for September 8, 1915.]

PLANS TO AWARD PHILIPPINE SUGAR-MILL CONTRACT.

[Consul General George E. Anderson, Hongkong, Nov. 2.]

Announcement is made by the Government of the Philippines that the British firm which was successful in bidding on the erection of the new \$1,000,000 sugar central to be erected by the Government for a milling company in Isabela Province, in line with the policy adopted some time ago of Government aid for such institutions, has been unable to sign a definite contract for the construction of the mill in time for the grinding season of 1916-17, on account of the fact that the British Government may require the use of the factories in Great Britain on which the bidders relied for the machinery and supplies for the central. It is explained that while it is unlikely that these factories will actually be required by the Government of Great Britain, the latter has already commandeered materials which were to be used for the machinery for the Philippine concern, and the possibility of interference is such that the company can not definitely agree to finish the work in the islands by the required time.

It was also found impossible, or at least impracticable, to secure insurance to cover the possibility of loss in case the British concern failed to finish the central on contract time. Since the commencement of the central in Isabela by the British concern under the circumstances would at best place the whole enterprise in danger of being tied up indefinitely, the negotiations were abandoned. Bids will be called for later for the erection of the plant in time for the 1917-18 grinding season. The mill must be finished by December, 1917, if it is to be ready for the 1917-18 sugar crop.

Similar Situation All Over the Far East.

The state of affairs brought out in connection with this very important enterprise in the Philippines characterizes the situation all over the Far East. Quotations are being made by European firms for goods of many sorts which they can only agree to supply subject to war risks and the interference of the Government with their plans. This has been particularly true in machinery trades and in the trade in iron and steel and similar products.

Under the circumstances, American concerns have an advantage in the trade, which is quite apparent as regards deliveries and the ability to actually produce goods contracted for; but it is evident that under the policy followed by firms of belligerent connections the operations of American concerns in such matters are not without competition, or at least without opposition.

Business Conditions—Share of Neutral Countries in Trade.

Unfortunately, business conditions generally and financial conditions in particular are such as to encourage the postponement of nearly all lines of industrial improvement, the erection of factories, the equipment of industrial plants with new machinery, and the general advancement of the country in industrial and mechanical lines.

Other neutral countries, as well as the United States, are coming to have an increased share of the trade in all such lines, especially in machinery, including marine and other motors, dynamos, accumulators, and all kinds of electrical machinery and appliances. In practically all lines American manufacturers have the advantage, however, and, while present business is not very brisk, the concern

with established connections will undoubtedly have the trade immediately following the close of the war.

[The Bureau of Insular Affairs of the War Department, as stated in COMMERCE REPORTS for Dec. 4, 1915, has already announced that the contract for the sugar central in Isabela Province will be awarded about one month after Apr. 15, 1916. The exact time when the bids will close is not known, but these details are included in the specifications, which are now on the way from the Philippine Islands to Washington and are expected to arrive late this month or early in January, 1916.]

SPAIN'S EXPORTS AND IMPORTS FOR NINE MONTHS.

[Consul Robertson Honey, Madrid, Nov. 13.]

El Economista, published in Madrid, compares the exports and imports of Spain for the first nine months of 1915 with the trade of the first nine months of 1914 and 1913. The amounts are given in pesetas. This unit of value has fluctuated, during the periods mentioned, between 18.5 cents and 20.5 cents. The present quotation for a peseta, in United States currency, is about 19.2 cents. The figures for the three years are:

Classes of shipments.	1913	1914	1915
IMPORTS.			
Live stock.....	<i>Pesetas.</i> 21,426,611	<i>Pesetas.</i> 7,315,739	<i>Pesetas.</i> 2,296,146
Raw material.....	355,423,618	359,888,391	410,802,124
Manufactured goods.....	381,201,127	273,604,993	152,420,014
Foodstuffs.....	196,090,789	197,956,824	169,783,105
	974,145,345	838,769,916	735,301,389
Gold, coin and other.....	161,200	10,988,080	96,326,140
Silver, coin and other.....	1,459,950	2,002,030	1,498,824
Total.....	975,756,495	851,760,026	633,126,353
EXPORTS.			
Live stock.....	17,016,187	5,267,890	1,780,266
Raw material.....	259,170,752	211,164,760	162,955,610
Manufactured goods.....	191,519,010	164,204,148	468,818,622
Foodstuffs.....	308,326,742	251,303,866	278,806,412
	776,032,691	631,880,664	906,015,900
Gold, coin and other.....	568,400	234,000	215,680
Silver, coin and other.....	16,837,828	7,362,222	4,929,891
Total.....	793,438,919	639,476,966	912,061,631

The total export and import trade for September, 1915, was 159,753,462 pesetas (imports, 60,497,497, and exports, 99,255,965), as against 106,541,708 in 1914 and 200,347,735 in 1913. Marked increase is noted in receipts of gold, in imports of raw material, and in exports of manufactured goods. With reference to this last-mentioned class, exports of cotton goods increased from 29,000,000 pesetas in 1914 to 132,000,000 in 1915; woolen goods from 21,000,000 pesetas in 1914 to more than 130,000,000 in 1915; manufactured fur goods from 26,000,000 pesetas in 1914 to 73,000,000 in 1915.

BOHEMIAN GLASS SALES.

Bohemian manufacturers of the highest grades of cut and decorated and engraved glass are now finding an exceptionable market for their product in Norway, Sweden, and Denmark. Sets of wine glasses, plain and with monogram, are having an especially good market.

WELSH SHIPPING PROBLEMS AND AGRICULTURE.

[Consul William L. Jenkins, detailed as vice consul at Swansea, Nov. 9.]

Increased Price of Water for Shipping.

The Swansea water and sewers committee has decided to increase the charges for water for shipping. Previously they were 24 cents for 100 gallons for domestic purposes and 12 cents for water for boilers, and it was decided to make the charge a general one of 24 cents for 100 gallons. This new rate came into operation November 1. It is believed that it will mean, about \$5,000 a year toward the rates.

Efforts to Relieve Scarcity of Tonnage.

At a meeting of the Swansea Harbor Trust, November 8, it was stated that on the whole the trade of the port for October was slightly reverting to the shrinkage formerly suffered. The accounts for September showed a loss of \$8,370, as compared with the loss of \$28,829 in the corresponding period of last year. The chairman of the finance committee stated that it was an indication of what their earnings might be could they only obtain the necessary steamers for shipment of cargoes.

There has been such a shortage of their particular class of steamers that the coal exporters were seriously hampered. That condition extended also to the collieries, for necessarily they must keep up their output, and when they could not get ships and facilities they were placed in difficulties. Most collieries are not well provided with storage accommodations, making the difficulties very great between the carriers, the railway companies, and the Harbor Trust itself, as receivers. A committee has been appointed to inspect the work at the docks, to see if matters can be relieved in any way.

Discovery of New Seam of Coal.

A new seam of coal, believed to be a 7-foot seam, has been discovered during the sinking operations at a colliery at Port Talbot. The coal has a thickness of 4 feet 6 inches, and is reported to be of excellent quality. When fully developed the mine will give employment to about 500 men.

Report on Teaching of Agriculture.

The annual report of the board of agriculture on the distribution of grants for agricultural education and research in 1914-15 contains interesting references to Wales and Monmouthshire. Dealing with the establishment of an agricultural council for Wales, it states that arrangements have now been made by which all the counties of Wales, with the exception of Glamorgan and Monmouthshire, are grouped into areas and affiliated, respectively, with Aberystwyth and Bangor University colleges. In the counties so grouped the agricultural departments of the colleges are responsible for the whole of the agricultural work carried out in the counties. At Aberystwyth the work of the college has developed considerably in connection with the extension of farm-institute work. A special investigation has been undertaken with a view to discovering a remedy for the infertility caused by the drainage from the lead mines in the district.

PROSPECT OF MINING RESUMPTION IN MEXICO.

[Consul Wilbert L. Bonney, San Luis Potosi, Oct. 18.]

For the first time this year there appears to be a possibility of a gradual and partial resumption of mining and ore treatment in the San Luis Potosi district. The operation of these industries depends upon so many diverse factors that it is impossible to set any date for resumption, but conditions are now more favorable and the problems of operation are being taken up for solution.

The mines can not work until the smelters can take care of their product, and the smelters require regular transportation and the use of 60 to 80 cars per day continually for their operations. It is further necessary to assemble foreign employees from various parts of the United States and to have a stock on hand and a continuous inflow of supplies, such as dynamite, cyanide, coke, oil, chemicals, and repair parts which have become entirely exhausted. For the operation of the lead smelter it is necessary to purchase lead, copper, lime rock, and other ores for making the necessary combinations, and some of these ingredients must be brought from distant parts.

Transportation a Vital Question.

For the financing of all these operations it is necessary that the product be exported and sold promptly, and in order to avoid an expensive shutdown all the processes must be continuous. San Luis Potosi depends upon the Tampico Railway for nearly all of its heavy freight, and that line must be kept open if the lead smelter is to operate. The minimum steamer load of coke arriving at Tampico for the smelter is 3,000 tons, or about 150 carloads.

The experience of the smelters has been unfortunate for the last two years and attempts to operate in other districts have served to discourage the San Luis Potosi smelters. The Monterey Smelter No. 3, which has the advantage of proximity to the frontier and to the Coahuila coal fields, attempted to resume in July; and after about three weeks, during which stocks on hand were used up, it was found impossible to continue by reason of failure of transportation. The smelter company bought and paid for 25 cars of oil in Tampico, but was able to secure delivery of only 5 cars. In San Luis Potosi the cost of coke and other heavy material by rail from the frontier is prohibitive; they must come by water to Tampico.

Lack of Water—Wage Difficulties.

In addition to the necessities already named, the smelter must have a constant supply of water in its dams. The 1915 season has been dry, and there is not at present sufficient water for use of the smelter. Considerable local difficulty is experienced on account of new and increased wage demands, and careful negotiation in this respect will be necessary. Difficulties are also experienced by reason of the fluctuation of the paper money in which labor is paid.

In these circumstances individuals operating small mines will find it practicable to begin taking out ore while the large organized companies are discussing the solution of their various problems. The conditions herein described apply to the mining and smelting of silver, lead, copper, antimony, and sulphur.

CHILEAN NITRATE INDUSTRY.

[Consul General L. J. Keena, Valparaiso.]

Government Assistance to Nitrate Producers.

By decree No. 2157 of the Ministry of Hacienda the scope of the loans to nitrate producers is extended to include nitrate works renewing operation and which have not a quantity of stored nitrate on hand.

The law, No. 2918, promulgated in August, 1914, provided for a loan by the Government of 3 pesos (at present exchange of 9 pence, equal to 54 cents United States currency), per Spanish quintal (101.4 pounds) of stored nitrate held by the producers, and of 4 pesos (equal at 9 pence exchange to 72 cents United States currency) per Spanish quintal of nitrate at ports, ready for shipment.

The decree No. 2157 authorizes a Government advance to nitrate producers at the former rate, even though the nitrate oficinas have no stock on hand, on the basis of the average production in periods of three months prior to the closing of the works.

Increase in Producing Capacity of Nitrate Plants.

The "Compañía de Salitres de Antofagasta," which has its principal office in Valparaiso, has announced that it proposes to increase its producing capacity through the construction of an entirely new oficina or reduction works. This new plant will be located in the district known as Salinas Norte not far distant from Baquedano, which is the point where the Longitudinal Railway crosses the Antofagasta to Bolivia line. The new nitrate field will be connected with the Longitudinal Railway by a line about 7 kilometers (4.3 miles) long, which will be constructed by the nitrate company. It is estimated that the capacity of the new oficina will be about 2,000,000 quintals, of 101.4 pounds each, per annum.

The same company has also recently purchased the oficina "Riviera," which has not been operating for a long time. This plant has a production of about 600,000 quintals per year. This company was already the largest producer of nitrate of soda in Chile, and the two plants mentioned will place it still further in the lead. It has been stated that the new plant projected may be in operation by the end of 1916.

Completion of the new plant "Oficina Agusté Victoria," under construction for the firm of Gildemeister & Co., of Antofagasta, is now going on. Plants of other companies which have been idle since the outbreak of the war are again resuming operations, so that the nitrate supply will be able to supply any probable demand in the near future. Early estimates of the probable exportation in 1916 set the figure at 60,000,000 quintals.

Production for October.

The production of nitrate of soda in Chile during the month of October, 1915, has been reported to be about 4,873,000 quintals of 101.4 pounds each. This showed an increase of 1,381,000 quintals over September, 1915, and an increase of 1,907,000 quintals over the month of October, 1914.

For the first time since the beginning of the war the exportation was lower than the production. The shipments of nitrate during

October were 3,712,000 quintals, or 1,161,000 quintals less than the production, although the exportation during 1915 was greater by 2,199,000 quintals than in October, 1914.

The falling off in shipments was due primarily to the interruptions to traffic through the Panama Canal. The closing of the canal also had a great effect on speculative dealings in nitrate for prompt delivery. At the end of September and in the earlier days of October the market for nitrate for early delivery was firm with constantly rising prices. Transactions for 95 per cent nitrate at as high as 9s. 6d. (\$2.31) were made for deliveries within three months. At present (Nov. 18) quotations are about 8s. 7d. (\$2.08) per quintal for three months' delivery.

The interest in refined nitrate is comparatively slight and ranges in price about 3d. per quintal over the 95 per cent grade. Freights for the United States via the straits are about \$17 per ton, an increase of about \$4 per ton in cost of shipment via the Panama Canal. The increase of freight charges also had an effect in reducing the price of nitrate on this coast.

DISINFECTION OF FOREIGN COTTON SAMPLES.

To guard against the danger that the pink boll worm and other dangerous cotton insects may be introduced into this country through samples of foreign cotton lint sent by mail, the Post Office Department, at the request of the Department of Agriculture, has prohibited the use of the mails for such cotton. The only exception is that cotton samples may be sent in the mails from the Mexican States of Nuevo Leon, Coahuila, Durango, Chihuahua, Tamaulipas, and Lower California.

The Post Office instructions require postmasters to cause such foreign cotton samples from other than these Mexican States to be returned at once to the point of origin. The Federal Horticultural Board is bringing this order to the attention of cotton importers and urging them to notify their foreign shippers at once and to warn them not to make further mail sendings.

Cotton samples which have been forwarded by freight or express in compliance with the regulations of the Department of Agriculture must be disinfected by representatives of the Federal Horticultural Board, after which the disinfected samples may be distributed without any restrictions, by mail or otherwise.

In addition to the above instruction, the Federal Horticultural Board shortly will issue, as Service and Regulatory Announcements (1) forms for application for license authorizing brokers to purchase imported cotton; (2) instructions regarding the screening and safeguarding of warehouses and rooms in which imported cotton is handled in the process of opening and cleaning; and (3) instructions for safeguarding of foreign cotton in storage and process of manufacture.

Importers or manufacturers of foreign cotton may obtain these forms and regulations on application to the Federal Horticultural Board, United States Department of Agriculture, Washington, D. C.

A NEW PHILIPPINE OIL NUT.

[The Philippine Craftsman.]

A new oil nut has just been discovered by accident. Some months ago 25 bags of an oil-bearing nut were sent to Manila from Catanduanes by a person who thought he was sending lumbang nuts. The person to whom they were sent saw at a glance that they were not lumbang, but he did not know what they were. He got in touch with the Bureau of Science, which was unable to identify the plant by the nut alone, but offered to extract the oil and investigate. This bureau found that the nut produced 45 per cent of a dark, fatty, nondrying oil that made very good soap. Some time later leaves and wood were secured, and Botanist E. D. Merrill was able definitely to classify it as *Chisochiton cumingianus* (Harms) of the natural family Melicaceae, the order to which santol belongs. He also stated that the field labels indicate it as "abundant," and that no information as to the presence of oil in the seed was on hand.

The recorded native names are: In Catanduanes and Camarines, balucanag; in Benguet and Union, batuakan; in Laguna, balucanag, kalimotani, salaguin; in Cagayan, marambolo, akalsa, macalsa; in Bataan, cato; in Albay, dudoa; in Bukidnon, valita; and in Negros, malacalad. The fruit grows to the size of a double fist in very large numbers on very large forest trees, each of the fruits having four seeds or "nuts" in them. The Philippine Manufacturing Co., of Manila, has had two shipments of the nuts, one being of 288 piculs (39,600 pounds). The oil is used for soap and the company pronounces it satisfactory.

The person who investigated this product in Catanduanes states that over 30 years ago this oil was the illuminant used by everybody. Then when petroleum was introduced it was gradually abandoned until no one of the present generation even knows about it or has ever seen the oil extracted or used. Of 20 persons in one group in Virac, one old man alone remembered that the process was used in his boyhood, and described, to the surprise of the others, the press they used and the "kinki" in which they burned the oil.

A commercial bulletin has been published by the American consulate at La Guaira, Venezuela, containing the names and addresses of those firms in the United States that have asked for the assistance of the consulate in extending their foreign trade during the three months ended November 15, 1915. A copy of this publication has been received from Consul Homer Brett and may be inspected at the Bureau of Foreign and Domestic Commerce or its district offices. Refer to file No. 70,253.

District Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative district offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Madden.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Do.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewis, Del.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 403, Customhouse, New York, N. Y.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Do.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(c)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. E.....	Cornwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washington, D. C.
Donald, George K.....	Maracaibo, Venezuela.....	Feb. 17	153 Church Street, Mobile, Ala.
Booney, Wilbert L.....	San Luis Potosi, Mexico.....	Feb. 12	1905 North Bush Street, Santa Ana, Cal.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

* Consul Wilbert L. Booney shall visit San Francisco, Los Angeles, and San Diego, Cal., and San Antonio, Tex., and will advise the Chamber of Commerce in each of these cities of his arrival and address.

HOW TO FACILITATE CONSULAR INVESTIGATIONS.

[Consul Thomas D. Bowman, Fernie, Canada, Nov. 24.]

A few American manufacturers in writing to this office have submitted, by way of helpful suggestion, a list of the classes of concerns that have used or kept in stock for sale such products as the manufacturers are seeking to sell. This has proved very helpful in enabling this office to investigate more intelligently the possibilities of a market in such lines.

The consul is not familiar with the uses of every product manufactured, and sometimes he is at a loss to know in just what branches of industry he should make inquiry regarding the possibility of future trade.

BUILDING SOCIETY'S MOST SUCCESSFUL YEAR.

[Consul Franklin D. Hale, Huddersfield, England, Nov. 19.]

The fifty-first annual meeting of the Huddersfield Equitable Permanent Benefit Building Society was recently held, and the directors were able to report that the year ended August 31, 1915, was the most successful in the history of the society. The number of shareholders increased from 8,913 to 9,521; the number of shares from 25,145 to 26,021; the amount due to shareholders is \$3,018,845; the amount due to depositors, \$1,453,419; the amount loaned out, \$4,438,968. The profits enabled the directors to declare a bonus to members for the forty-second year in succession.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its district offices. Request for each opportunity should be on a separate sheet and the file number given.

Cement, iron products, malt, etc., No. 19659.—A man in Brazil informs an American consular officer that he desires to receive names and addresses of firms exporting cement, iron products, malt, hops, and essences for soap manufacture.

Paint spray machinery, No. 19660.—A firm in the United Kingdom informs an American consular officer that it desires to be placed in communication with manufacturers of paint spray machinery.

Hardware, etc., No. 19661.—An American consular officer in Paraguay reports that a firm in his district desires to purchase cartridges, axes, hatchets, nails, agateware, and calcium carbide. Correspondence and catalogues should be in Spanish and weights and measurements should be, if possible, in the metric system.

Wall paper, No. 19662.—An American consular officer in England reports that a firm in his district desires to obtain names of manufacturers of wall paper. Samples and prices are requested. Bank references are given.

Sheet and plate glass, No. 19663.—A report from an American consular officer states that a firm of wholesale glass merchants in Wales desires to receive c. i. f. quotations on plate and sheet glass, in cases containing 300 feet, each sheet being 60 by 40 inches. Plate glass, one-fourth inch in thickness, in various sizes and designs are also required.

Lumber and structural materials, No. 19664.—A firm in Kongo informs an American consular officer that it desires to establish commercial relations with exporters of pitch, white and russet pine, iron bars and cross pieces, galvanized corrugated sheet iron for roofing, Portland cement, etc. A diagram showing shape of boards desired, together with dimensions, may be examined at the bureau or its district offices. (Refer to File No. 70182.)

Women's coats, etc., No. 19665.—An American consular officer in the United Kingdom reports that a firm desires to communicate with manufacturers of women's cloaks, golf coats, dresses, and materials for making same. The inquirer states that all sales would be on a commission basis of 5 per cent or more according to arrangements. The sole agency for that country is wanted. Bank references are given.

Beer, No. 19666.—Two companies in Burma inform an American consular officer that they desire to obtain agencies for American beer. Quotations c. i. f. port of destination, with samples, are requested. Bank references are given.

Typewriters, etc., No. 19667.—A commercial agent of the bureau reports that a commission agent in Salvador desires to communicate with manufacturers of typewriters and various other articles manufactured in the United States.

Novelty, No. 19668.—A letter to the bureau states that a traveling representative of a large company desires to carry side lines of standard or novelty articles on his trips to Australia and New Zealand. References are given.

Steel plates, flour, shoes, etc., No. 19669.—A commercial agent of the bureau reports that a man in Norway desires to purchase steel plates and machinery for shipbuilding, flour, shoes, and molasses. Prices should be quoted f. o. b. New York. Correspondence may be in English.

Willow, No. 19670.—An American consular officer in Canada reports that a furniture company in his district is in the market for willow suitable for making furniture. It is stated that a carload a month can be used if the price is satisfactory. A sample of the willow desired may be examined at the bureau or its district offices. (Refer to File No. 70224.) Correspondence may be in English or French, but the latter is preferred.

Electrical supplies, No. 19671.—A firm in Siberia informs an American consular officer that it desires to be placed in communication with an electrical engineer, who would be willing to act as agent for the purchase of electrical goods. It is stated that the firm will reimburse the representative for cable and incidental outlays, and allow him a small commission on all purchases made. Correspondence may be in English.

EMBARGO ON LOGWOOD IN JAMAICA.

[Cablegram from American ambassador, London, Dec. 23.]

The foreign office states that the demand for logwood has very largely increased all over the world, which has made it imperative that the British Government prohibit the exportation (except to the United Kingdom) of dyewoods from Jamaica and British Honduras. A sufficient quantity of wood having been obtained by British consumers, the governor of Jamaica has been directed to allow the exportation of about 4,700 tons of dyewood which was awaiting shipment when the embargo was declared. The foreign office states that the United States imports this commodity largely from Mexico and Haiti and that the normal annual importation from Jamaica is below 20,000 tons. The foreign office requests me in transmitting information as to measures being taken by the British Government to facilitate the raising of the embargo in favor of American manufacturers to explain that such action must necessarily be conditional on the resumption of the exportation of reasonable quantities of logwood extract from the United States to Canada.

The Department of Commerce is informed through reliable sources that one of the principal reasons why the British Government placed an embargo upon the exportation of logwood from Jamaica and British Honduras was the fact that American manufacturers of logwood extract increased their prices materially to Canadian and

British purchasers of this material, and in some cases even repudiated contracts made with the purchasers.

The import statistics for 1914 show that approximately two-thirds of the dyewoods entering the United States (about 20,000 tons) was imported from Jamaica, the remaining supply coming largely from Haiti.

LOGWOOD IN CENTRAL AMERICA.

[Special Agent Garrard Harria.]

In November, 1914, there were many tons of logwood in British Honduras, and it had been there for a long time, the market having gone down to such a point as to make the further cutting unprofitable. A firm in Belize owns a line of power boats running up the Belize River toward The Cayo, and they can bring down the wood from the Guatemalan frontier and from the edge of Mexico. This firm in the past has dealt in logwood and is able to get it out, having an organization for the purpose. There is also in Belize a live man who is interested in marketing woods, and he could undoubtedly get some supplied out of Paya Obispo, Mexico, just above Belize. It can be brought down by light-draft boats.

Going further down, take the Lake Ysabal district, which has its outlet at Livingston, Guatemala. Consul Edward Reed can undoubtedly put inquirers in touch with parties who would be only too glad to get the contracts at this time, and for the fustic (yellow dye) as well. The Lake Ysabal district is a large one, and there is plenty of both these woods to be had there. Some of it—limited quantities—can be gotten at Puerto Barrios, Guatemala, and the consuls at Puerto Cortez, La Ceiba, and the consular agencies along the coast there, if called upon, can furnish a surprising supply by passing the word out that there is a market for it. A good deal can be gotten about Bluefields and Greytown, Nicaragua.

At San Jose, Costa Rica, I was urged particularly by a dealer to try to help him find a market for logwood and fustic; he controls large areas bearing plenty of this wood.

In Cuba there is a good deal of logwood—"palo campêche" it is termed here—and the fustic, or yellow wood, is also reasonably abundant. In times past, when the price was an inducement, it passed out of Santiago, Tunias, and Guantanamo in quantity. It can be had again if people will pay a profitable price for it.

NAVIGATION MOVEMENT OF HAVRE IN NOVEMBER.

[Consul John Ball Osborne, Havre, France, Dec. 8.]

The inward navigation movement of the port of Havre during November, 1915, follows: Vessels entered—15 French vessels, with a total tonnage of 21,055; 171 foreign vessels of 161,836 tons, including 110 British, 4 Dutch, 5 Danish, 43 Norwegian, 4 Swedish, 1 Russian, 3 Belgian, and 1 American. In the French coasting trade the number entered was 136 French vessels of 23,804 tons with cargo, and 220 vessels of 53,699 tons in ballast, all coming from French ports.

The single American vessel mentioned above as entered during the month was the *Georgiana*, of Savannah, which remains in port at this writing.

AMERICAN TRADE BY CUSTOMS DISTRICTS.

The imports, duties collected, and exports for the week ending December 25, 1915, at the 13 principal customs districts of the United States, handling 88 per cent of total imports and 93 per cent of total exports, based on transactions in the month of October, 1915, follow:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah).....	\$3,522	\$1,014	\$1,020,270
Massachusetts (Boston).....	4,395,793	98,917	2,698,524
New York.....	20,250,385	2,244,784	33,999,127
Philadelphia.....	2,075,169	110,256	501,069
Maryland (Baltimore).....	689,424	19,804	1,662,781
Virginia (Norfolk).....	25,828	3,477	1,701,698
New Orleans.....	747,405	5,662	3,148,356
Galveston.....	97,357	2,459	2,960,774
San Francisco.....	885,951	49,012	583,597
Washington (Seattle).....	606,201	7,963	2,046,886
Buffalo.....	460,425	15,166	2,118,267
Chicago.....	327,688	83,993
Michigan (Detroit).....	534,484	35,359	4,060,278
Total.....	30,799,642	2,685,966	55,530,607

The cotton exported during the week ending December 25, 1914, at the 12 principal customs districts of the United States follows:

Districts.	Bales.	Districts.	Bales.
Georgia.....	14,878	Virginia.....
Massachusetts.....	1,798	Galveston.....	33,636
Maryland.....	New Orleans.....	25,912
New York.....	14,087	San Francisco.....	1,975
North Carolina.....	12,025	Washington.....	10,938
Philadelphia.....	Total.....	121,192
South Carolina.....	5,645		

ARGENTINE RAILROAD TO ENCOURAGE COLONIZATION.

[Translation from La Prensa, Nov. 15, forwarded by Commercial Attaché Albert Hale, Buenos Aires.]

The Buenos Aires Pacific Railway has just completed a census of the large landed properties along its lines, which are uncultivated and, therefore, unproductive. The owners have been invited to take some united action regarding these tracts, and with this end in view the railway has been studying a plan of colonization by which, using the crops obtained as a basis of value, a small rental can be paid or a similar sum deposited toward the purchase by a farmer-colonist who may be induced to occupy the soil as a cultivator.

A period of 5 to 10 years will be offered during which the price, fixed in advance, may be paid. The same railway company is trying to interest the banks so that they will take steps to loan the necessary money to facilitate the distribution of seeds, and thereby to encourage the work. The company has, therefore, established an office to direct the propaganda.

There are both irrigated and unirrigated lands to be opened to cultivation. For a careful and practical study of this plan an excursion is projected in which railway officials, bankers, and agriculturists will take part.

WHOLESALE PRICES IN 1914.

According to Bulletin 181 of the Bureau of Labor Statistics of the United States Department of Labor, wholesale prices in the United States, as measured by the aggregate value in exchange of 340 representative commodities, were nearly 1 per cent lower in 1914 than in 1913. In each of four groups, viz, cloths and clothing, fuel and lighting, metals and metal products, and lumber and building materials, more than half of the commodities decreased in price from 1913 to 1914. Decided decreases occurred in the yearly average prices of cotton yarns, print cloths, storm serge, silesian cloth, worsted yarns, coke, gasoline, crude petroleum, bar iron, copper ingot, sheet copper, copper wire, iron ore, pig lead, lead pipe, pig iron, cast-iron pipe, steel billets, steel tank plates, steel sheets, structural steel, pig tin, wood screws, brick in New York City, plate glass, Douglas fir, rosin, and cedar shingles. Increases in price are shown for cotton blankets, boots and shoes, leather, 10-4 bleached sheeting, quicksilver, linseed oil, turpentine, and a few other articles in the four groups named.

A majority of the articles which increased in price between 1913 and 1914 belong to the farm products and food groups. Within these two groups, comprising 124 series of price quotations, 72 commodities or grades of commodities increased in price, 44 decreased, and 8 were unchanged. The articles showing the greatest increase were corn, oats, rye, wheat, flaxseed, New York State hops, calfskins, peanuts, tobacco, canned corn, rye flour, wheat flour, fresh and evaporated apples, prunes, raisins, corn meal, sugar, cabbage, onions, potatoes, and vinegar. Some of the articles in these two groups which decreased in price were cotton, butter, canned tomatoes, coffee, lemons, and oranges.

Of 10 commodities classed as drugs or chemicals, 5 increased in price, 4 remained stationary, and 1 decreased in price in 1914, compared with 1913. The 5 articles showing an increase were alum, glycerine, grain alcohol, opium, and quinine. The article which decreased in price was wood alcohol.

Of the 340 series of prices secured by the Bureau for 1913 and 1914, 122 series showed an increase between these two years, 154 showed a decrease, while no change occurred in the case of 64 series.

RAILROAD TO EXTEND TO ARGENTINE-BOLIVIAN FRONTIER.

[Translation from *La Nación*, Nov. 18, forwarded by Commercial Attaché Albert Hale, Buenos Aires.]

In order to act in harmony with the Bolivian Government, the President of Argentina has authorized the construction firm, Vezin & Co., to prolong northward, as far as the Argentine-Bolivian frontier, the line of the Central Northern Railway, and to place a bridge over the River La Quiaca. This work must be carried on under control of the general administration of national railways (of Argentina), which will place at the disposal of the constructing company all facilities possible to bring the work to a speedy and satisfactory conclusion.

[Articles on railway construction and development in Argentina were published in *COMMERCE REPORTS* for Jan. 6 and June 29, 1915.]

WEEKLY STATEMENT OF THE COPPER TRADE.

The imports and exports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan during the week ended December 18, 1915, follow:

IMPORTS.

Countries.	Ore, matte and regulus (copper contents).		Pigs, ingots, bars, plates, and old, etc.	
	Pounds.		Pounds.	
France.....			5,618	\$940
England.....	13,463	\$2,077	18,677	2,802
Canada.....	542,167	51,226	663,506	119,816
Panama.....			502,159	76,527
Mexico.....			1,236	100

INCREASED FARM PRODUCTION IN ONTARIO.

[Consul Fred C. Slater, Sarnia, Canada, Dec. 11.]

Comparison of the quantity of various farm products in Ontario, for the present year, with the yield of those products a year ago shows the results of the efforts that were made to secure an increase. The figures for the two years, in bushels (or tons), and the quantities per acre, are:

Products.	1914			1915		
	Acres.	Bushels.	Per acre.	Acres.	Bushels.	Per acre.
Fall wheat.....	685,602	14,333,548	20.9	811,185	24,737,011	30.5

TRAFFIC INCREASING AT GATEWAY TO MEXICO.

[Vice Consul William P. Blocker, Piedras Negras, Coahuila, Dec. 16.]

The Piedras Negras district now has trains operating to and from southern points with much greater regularity than heretofore. Notwithstanding the lack of equipment, there is a continual stream of passengers going south each day, anxious to get to the interior to resume work or investigate conditions.

There has been a large increase in the customhouse receipts in the past few weeks, both export and import. Cars are passing freely across the international bridge, loaded with American products. Three trains of freight, consisting of 69 cars, passed over the boundary line to Mexico Tuesday from Eagle Pass, and were delivered to the Mexican International Railway at Piedras Negras.

In addition to the freight going into Mexico, the first 24 carloads coming out, consigned to points in the East, arrived in Piedras Negras the morning of December 13 from interior points, and were transferred to Eagle Pass the same afternoon. This consignment consisted of ixtle, for mills in Ohio. It is reported that there are also some 1,000 cars of zinc ore awaiting shipment from the mines near Muzquiz and Cuatro Ciénegas to smelters in Oklahoma and other points in the United States, but owing to a shortage of equipment the movement is delayed. It is expected that plenty of cars will be on hand by the latter part of December, and the ore will then begin to move through this place.

Daily Additions Made to Shop Forces in Piedras Negras.

In addition to the resumption of traffic at this gateway to Mexican points, the shop forces are being increased daily at Piedras Negras. There are now about 600 men at work, with a slight increase weekly. The master mechanic of the shops advises the American consulate that eight locomotives, now in the back shops of the Mexican International Railroad in this city, are undergoing a general overhauling, and will be turned out by January 1 and placed in commission. When the engines entered the shops many parts were missing, but these have been supplied.

There is much speculation as to whether large shipments such as have been passing through here the past week will last. It is reported that there are large quantities ready for export in the interior, but the owners are meeting with considerable difficulty in getting permission from the authorities to bring out the goods.

[From American Consulate, Aguascalientes, Mexico, Dec. 16.]

Foodstuffs More Plentiful but Still High Priced in Aguascalientes.

Foodstuffs (corn and beans) are still being brought in from the States of Guanajuato and Jalisco, and although still sold at high prices (beans at 50 pesos per hectoliter—\$8.76 per bushel—and corn at 40 pesos—\$7 per bushel) they are not so scarce as in August and September.

The financial conditions have not improved. The value of the peso increased to about 9 cents, United States currency, but it has since dropped to about 6½ cents, and great difficulty and annoyance attend transactions involving the payment or receiving of Mexican cur-

rency. Some money is declared false, but there is no way to distinguish it from that which is said to be valid.

A decided improvement is observed in railroad traffic. A trip to the States which, 60 days ago, had to be made in box cars, can now be made in Pullman cars. Between San Luis Potosí and Aguascalientes, however, the service has shown no improvement, and travelers have had to make the trip in a box car. Direct railroad communication between Aguascalientes and Mexico City, by way of the central road, and from Aguascalientes to Torreón, is irregular and there is insufficient equipment. The almost total lack of rolling stock in the Republic prevents the resumption of industries and trade in the interior of Mexico.

ACCORIONS POPULAR IN MADAGASCAR.

[Consul James G. Carter, Tamatave.]

The natives of Madagascar are great lovers of music, and, in addition to their own primitive instruments, the accordion is very popular. Within the last few years, the importation of these instruments has shown a steady increase, about 20,000 being imported annually, to the value of about 150,000 francs (\$28,950). These goods have practically all been imported from Germany. In France it has not been possible to produce and place on the local market similar accordions in competition with the German article, which pays a duty of 1 franc (\$0.193) per instrument.

At Tamatave accordions are sold to the trade at 90 francs (\$17.18) per dozen. These instruments weigh about $4\frac{1}{2}$ pounds, and are 11 inches high, 10 inches long, and $5\frac{1}{2}$ inches wide. The wooden tops and bottoms are apparently of light pine, varnished, and the bellows of very cheap leather or imitation leather, while the corners of the instrument are bound with cheap and very thin nickeled tin. They have folded around them a thin brown paper, and are packed in a cardboard box 11 by $11\frac{1}{2}$ by $5\frac{1}{2}$ inches. Four dozen instruments are packed in a heavy wooden case.

Accordions from all countries other than France pay a special single customs tariff of 1 franc per instrument.

[Lists of importers of general merchandise throughout Madagascar may be obtained from the Bureau of Foreign and Domestic Commerce or its district offices; refer to file 48762.]

ARGENTINE SERVICE "FROM FARM TO KITCHEN."

[Translation from La Prensa, forwarded by Commercial Attaché Albert Hale, Buenos Aires, Nov. 26.]

The Argentine postal authorities have begun a house-to-house distribution, "from farm to kitchen," which promises to give excellent results and to help to lower the cost of living, noticeably quite as high in South America as in other parts of the world. Post offices in the interior of the country are now equipped so that they can accept produce, and in fact all articles wanted for home consumption, and deliver these packages direct to the consumer in the shortest time possible. Distribution will be made as in the case of ordinary mail matter, and at only a slightly additional cost.

[A new parcel-delivery system in Argentina, introduced by the Central Córdoba Railway, was described in COMMERCE REPORTS for May 20, 1915.]

ANNUAL REPORT OF STEAMBOAT-INSPECTION SERVICE.

In the annual report of the Supervising Inspector General of the Steamboat-Inspection Service to the Secretary of Commerce for the fiscal year ended June 30, 1915, the statistical record of work shows certificates of inspection issued to 7,232 steam, sail, and motor vessels and barges aggregating 5,612,031 gross tons; 321 foreign passenger steam vessels aggregating 2,111,008 gross tons were inspected; 18,412 officers of all grades were licensed; 62 steam vessels were granted letters of approval of designs of boilers, engines, and other operating machinery; 91 Government vessels were inspected; and 1,681 boilers in or for United States Government steamers and buildings were inspected. Reinspections of passenger and ferry steamers made by boards of local inspectors numbered 8,120. Assistant inspectors tested 2,962 marine boiler plates at the mills, and also inspected there a large number of steel bars for braces and stay bolts in marine boilers and several hundred plates for stock and repairs. Many requests from other branches and departments of the Government for tests of material at the mills were complied with, and reports rendered to the proper officials. New life preservers inspected numbered 161,335, of which 217 were rejected. During the year 5,022 applicants for original and renewal of licenses were examined for visual defects, 4,962 of whom were passed.

Reports covering casualties and violations of law by vessels subject to inspection numbered 1,669. Accidents resulting in loss of life totaled 190, which was 42 less than in the preceding year. During the year 307,848,008 passengers were carried on steam vessels required by law to report the number of passengers carried. Dividing this number by 107, the total number of passengers lost, shows 2,872,411 passengers carried for each passenger lost. The total number of lives lost from all causes, passengers and crew, was 368.

The administrative methods of the bureau are carefully described. By law the local inspectors are required, once a year at least, to carefully inspect the hull of each steam vessel within their respective districts, and to satisfy themselves that every such vessel is of a structure suitable for the service in which she is to be employed, has suitable accommodations for passengers and crew, is in a condition to warrant the belief that she may be navigated with safety to life, and that all the requirements of law in regard to equipment are faithfully complied with. They are required also to inspect the boilers and their appurtenances in all steam vessels before use, and at least once a year thereafter. There are now required (since 1908), at least three reinspections of all excursion and ferry steamers during the season of navigation, or the year for which certificated. These reinspections are hardly less important than the annual inspections required by law. In the annual inspection application is made to the inspectors to have this work done, but when a reinspection is made the inspectors visit the vessel without prior notice, and judging from reports received, it would appear that many vessels would not keep in good condition were it not for the repeated reinspections.

Great Care Exercised in Licensing of Officers.

Another principal duty of local inspectors is the licensing of officers, and great care is exercised that the person who obtains the license shall be competent to hold it. Licenses, with the single ex-

ception of license as operator of motor vessels, are issued only after the applicant has passed the necessary examination, and therefore no little responsibility for the safe navigation of vessels rests upon the licensed officers.

Supervising inspectors are required to see that the boards of local inspectors execute their duties faithfully, promptly, and as uniformly as possible. They are also required, as far as practicable, to harmonize differences of opinion existing in different local boards. However, with the limited appropriation heretofore given, it is not possible to obtain the highest efficiency or activity from the supervising inspectors. A sufficiently large appropriation would make it possible to have them make actual reinspections of vessels and follow up the work of the local inspectors to a greater extent. A most important means of obtaining uniform administration and improving the work of the service has been through the efforts of the traveling inspector. His chief duty is to ascertain whether the local inspectors have been correctly inspecting vessels; and that his appointment is justified is proven by his reports, for numerous instances of defective and imperfect inspection have been discovered.

The force of inspectors employed in this service is entirely too small. For several years the Bureau has in its estimates pointed out the necessity of additional inspectors. There are instances where inspectors work from 5 a. m. to 10 p. m., and there have been instances where dry-dock examinations have not been made because there was not a sufficient force of inspectors to make them. More clerks also are needed. With one more clerk in the office of the supervising inspector general more efficient inspection could be obtained, because there could be a more careful review of the inspection cards. At present the press of work is sometimes so great that most important work has to be slighted. Also the salaries of inspectors and clerks have not kept pace with the money paid for similar service outside of the Government. As men become trained they promptly leave and, under the circumstances, they can not be condemned for so doing.

These conditions, unfortunate as they are, do not compare with that confronting this service in June, 1915, for it was necessary, on June 10, to order that all reinspections cease. This was because the appropriation for "contingent expenses" was not large enough. Here is presented the spectacle of a great service, responsible for life and property on vessels subject to inspection, being required in one of the heaviest months of navigation to cease all reinspections.

Hull Inspection Receives Serious Attention of Bureau.

Hull inspection has received the serious attention of the Bureau, the subject being considered and recommendations made in the annual reports for the past several years. The local inspectors are required by law once a year at least, to carefully inspect the hull of each steam vessel within their respective districts, and they have the right to refuse to certificate a vessel they do not believe is of suitable structure. Nevertheless it has never been held that the Board of Supervising Inspectors has authority to lay down in detail structural tests in the same manner as has been done in the case of boiler construction, express authority in the case of boilers having been conferred by law.

The Bureau's plan has been to create in the office of the supervising inspector general a corps of experts, whose business it would be to approve proposed hull construction. In order to do this, legislation

is necessary. If the construction of a vessel could be so approved, there would result not only safe conditions with reference to construction, but also more uniformity in the matter of correct inspection and construction. Unfortunate as was the disaster to the steamer *Eastland*, the matter of hull inspection and construction is one that has not been neglected, and as a result of that terrible disaster it may be possible to obtain the larger appropriation necessary for a larger and more effective service.

Closely connected with the proposition of hull construction is that of the overloading of passenger steamers, a question also considered at length in previous annual reports. It is believed that violations of law by steamers in carrying more passengers than allowed by their certificates of inspection are comparatively few. The important question is: Have the local inspectors permitted a steamer to carry a larger number of passengers than she should be permitted to carry? In this connection not only must the stability of the vessel be considered, but also the possibility of panic and the handling of the life-saving apparatus in such event. The conclusion is that the original responsibility rests upon the local inspectors in the matter of passenger allowance. The Bureau has endeavored to impress upon them the seriousness of this responsibility and condemns in unqualified language any exercise of the great authority without full appreciation of its seriousness.

While all eyes are turned toward stability tests for vessels, other perils as terrible should not be forgotten. The possibility of fires on excursion steamers always exists, and though there may be any number of regulations in regard to fire-fighting equipment, the best way is to remove the cause and require absolute fireproof construction of excursion steamers. This can not be done until Congress acts, and the Bureau most earnestly invites attention to the necessity for legislation in this respect. In connection with fires, is to be considered the transportation of dangerous articles. The office of the Supervising Inspector General should be given authority to regulate this very dangerous practice.

IMPORTANT INCREASES IN CANADA'S TRADE.

[Ottawa dispatch in Windsor (Ontario) Record.]

Buoyant prosperity despite the war-time tendency to depression is reflected in the November statement of Canadian trade. It reached a total of \$154,000,000, as against \$126,000,000 in the corresponding month of last year. Domestic exports aggregated \$92,000,000 and imports \$45,000,000. The balance of the total was the trade in coin and bullion.

For the eight months of the fiscal year trade totaled \$863,000,000, as against \$766,000,000 in the corresponding period of 1914. Imports amounted to \$298,000,000, a decrease of \$20,000,000, while the domestic exports were \$419,000,000, as against \$269,000,000.

Exports during the month were made up principally of agricultural products, \$54,000,000; manufactures, \$13,000,000; animals and meats, \$12,000,000; minerals, \$6,500,000; lumber, \$4,500,000; and fisheries, \$2,000,000. These figures indicate an increase of \$34,000,000 in agricultural exports, \$7,000,000 in manufactured goods, and \$4,000,000 in animal products.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Peck, Willys R.....	Tsingtau, China.....	Jan. 31	Do.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewis, Del.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Do.
Summons, Thomas.....	Shanghai, China.....	Jan. 5	(e) Lotus Club, 110 West Fifty-seventh Street, New York City.
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. R.....	Cornwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washington, D. C.
Donald, George K.....	Maracaibo, Venezuela.....	Feb. 17	153 Church Street, Mobile, Ala.
Bonney, Wilbert L.....	San Luis Potosi, Mexico.....	Feb. 13	1905 North Bush Street, Santa Ana, Cal.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

* Consul Wilbert L. Bonney shall visit San Francisco, Los Angeles, and San Diego, Cal., and San Antonio, Tex., and will advise the Chamber of Commerce in each of these cities of his arrival and address.

GOVERNMENT MONOPOLY OF GERMAN INDUSTRIES.

[Commercial Attaché Erwin W. Thompson, The Hague, Dec. 4.]

Government monopoly of German industries seems to be the tendency for the future. Potash mines and coal mines for many years have been in some degree under Government control and ownership. The consolidation and ownership of all concerns engaged in generating and distributing electric power is now under consideration. This is considered a logical corollary to the ownership of coal mines, in that the electric-generating stations may be most economically operated at and in connection with the mines.

It is not yet decided whether the ownership will be by the separate German States or by the Imperial Government.

[A report that the city of Berlin had undertaken the purchase of electric lighting and power plants was published in COMMERCE REPORTS for May 8, 1915.]

EFFORTS TO REDUCE PLASTER OF PARIS MOLD LOSSES.

A representative of a pottery company recently requested the cooperation of the United States Bureau of Standards in a study of plaster of Paris mold losses. This is a matter of vital importance to all potteries, since the amount of capital invested in plaster molds is very large, and a reduction of this loss to even a slight extent will mean considerable profit to any pottery. It was possible in this case for the bureau to furnish the company with information which was of considerable practical value.

ANNUAL REPORT OF COAST AND GEODETIC SURVEY.

The annual report of the superintendent of the United States Coast and Geodetic Survey to the Secretary of Commerce discusses the work accomplished during the year, and the conditions and needs of the survey. Reference is made to the inadequacy of the present offices and the need of new buildings, properly designed and equipped. A graphic description of the hydrographic work is given on four maps, whereon the work already completed, the work partly finished, and that remaining to be done, are shown in different colors.

The lack of suitable vessels for the work of the survey is dwelt upon at length. Three of the old vessels have been condemned during the year as no longer safe, on account of age and structural weakness; two others are for the same reasons only fit for service in sheltered waters; only one vessel now in commission is altogether fit for work offshore, and she is in the Philippines. The report urges the building of two additional vessels of suitable size and equipment to take up offshore work in Alaska and elsewhere as required. Much such work is greatly needed off the coasts of California, Oregon, and Washington.

The wire-drag work has hitherto been carried on at a great expense with chartered launches ill adapted for the purpose. It is hoped to remedy this unsatisfactory condition by providing vessels and launches suitable in type, size, and equipment for the work they are to perform. Two types of vessels are therefore needed; one for offshore work, and another for inshore and inside hydrography, and wire-drag operations. Six new vessels of the smaller type, suitable for wire-drag work and for one-party inshore hydrography are needed on the Atlantic and Gulf coasts, and six more on the Pacific coast. The building of the two large vessels will permit the Survey to take up the offshore work on the Pacific coast which is greatly needed.

As a result of the increased appropriation last year, it was possible to place four wire-drag parties in the field, instead of two. The results prove the wisdom and necessity of doing this work on a much larger scale. The use of the wire drag has revolutionized hydrographic surveying. It has long been realized that soundings with the leadline, no matter how carefully and closely spaced, were not infallible, and that submerged rocks and ledges were often missed, as has been demonstrated by numerous wrecks, and frequent damage due to striking unknown rocks in surveyed waters; but with the development of the wire-drag hydrography these submerged dangers have been discovered and charted.

The importance of having the geodetic work of the country done by the Government rather than by individual States is dwelt upon at length, with the conclusion that our Government should complete the general program which is being followed by the United States Coast and Geodetic Survey. This plan is, briefly, that the primary triangulation scheme, and the precise level net should be so extended that there will be no place in the United States 100 miles distant from a primary triangulation station, or a precise level bench mark. Besides this work in the interior of the continent, triangulation is needed in the interior of Alaska, across the Alaska Peninsula, and from the Dixon Entrance to White Pass.

The purchase of Dutch Harbor, Alaska, as a Government supply base in western Alaska is advocated. This would greatly benefit the Coast and Geodetic Survey, the Bureau of Lighthouses, and the Coast Guard. Retirement for officers of the Coast and Geodetic Survey, similar to that given to the Coast Guard Service, is recommended.

AGRICULTURAL IMPLEMENTS IN RUSSIA.

[Board of Trade Journal, London, Nov. 25.]

The Torgovo Promyshlennaya Gazetta (Petrograd) of November 5 reports that a meeting was recently held by the committee that was instructed to investigate the urgent question of the supply of agricultural machinery and implements in Russia during 1916. With this end in view, inquiries were addressed to Russian manufacturers of agricultural implements, and, from the replies recently received from a total of 173 large works, the following table has been compiled showing the quantity of machines and implements that these works hold in stock and the amount that they estimate they can manufacture during 1916:

Articles.	In stock.	Estimated production in 1916.	Articles.	In stock.	Estimated production in 1916.
Plows, various.....	144,757	241,105	Sheaf-binding machines.....	236	2,275
Cultivators, etc.....	9,599	34,897	Thrashing machines, hand and power.....	2,930	12,445
Drill plows.....	5,193	14,375	Gearing (horse) for agricultural machinery.....	1,550	11,000
Scythes.....	1,040,000	1,000,000	Winnowing machines.....	2,208	10,772
Hay mowers.....	891	5,425	Chaff cutters.....	2,668	11,860
Reaping and harvesting machines.....	3,051	45,995			

The figures in the table do not include the stocks held by merchants or lying in provincial district warehouses. According to the figures given, the estimated production next year of agricultural machinery, and implements in Russia will amount to 60 per cent of the turnover in a normal year. It is anticipated, however, that the production will be increased before long, as manufacturers hope, by reason of improved conditions, to obtain a larger supply of fuel and raw material.

FAIR-RENTALS BILL IN NEW SOUTH WALES.

[Commercial Attaché William C. Downs, Melbourne, Australia, Nov. 24.]

The bill for the fixing of rentals for dwelling houses in New South Wales has already passed the Lower House of Parliament, and is now on its third reading in the Upper House. A few modifications of the original bill have been made.

[The bill mentioned was fully described in COMMERCE REPORTS for Oct. 22, 1915. It relates to any dwelling subject to a lease made before or after the time the act goes into effect, for any term not exceeding three years, at a rent not exceeding \$500 a year, and within localities appointed by the governor. It provides for the appointment by the governor of fair-rents courts, to which any lessor or lessee who has paid or tendered all rent due under his lease may apply to have the fair rent of the dwelling leased by him or to him determined. In all cases the rent determined by the courts shall be the rent of the dwelling as from the date of the application. Neither barristers nor solicitors, it is proposed, shall be allowed to appear for any party or upon any application in the courts.]

COMPLETION OF PORT WORKS AT RIO GRANDE DO SUL.

[Vice Consul Robert L. Keiser, São Paulo, Brazil, Sept. 17.]

The completion of the port works of Rio Grande do Sul, Brazil, marks an important advance in the commerce of the State of Rio Grande do Sul. It has been hampered in its development by the lack of a port of easy access. This is demonstrated by the great volume of importation and exportation of the State through the neighboring foreign ports, a condition which manifestly places the exporters and importers at a disadvantage. To the end of overcoming this situation and placing the commerce of the State on an equal basis of competition with others, the work of destroying the bar and improving the port of Rio Grande was undertaken.

Commanding great resources, and with already well-developed industry, it is impossible to foretell what the opening of the port will mean to this very wide-awake and progressive State.

Schedule of Fees and Charges Arouses Protest.

Early in August, 1915, the formal opening of the port of Rio Grande was announced. At the time of the signing of the contract, in 1906, which authorized the port work and the opening of the harbor, the various imposts and dock dues to be charged were specified. These charges, which would be paid by merchandise and vessels entering or leaving the port, were identical with those in effect at the port of Santos. When, however, in August, the French company that had the contract announced the date of the inauguration of the new port, and the decision that from that date all vessels and merchandise would be subject to the new schedule of fees and charges, irrespective of whether they entered the new port or continued to use the old port, the commercial interests of the city of Rio Grande protested, stating that the port dues, as proposed, were unjust and detrimental to the interests of local commerce.

It was claimed, and demonstrated in particular cases, that the dues as proposed and allowed by the contract of 1906 gave a decided advantage to the two other ports on the Lago dos Patos—Pelotas and Porto Alegre. In some cases it was said to be cheaper to ship merchandise past the city of Rio Grande to Pelotas, and return it from that point to Rio Grande by rail, than to pay the newly imposed dues for discharging across the new port of Rio Grande.

The commercial and industrial interests of the city combined and forwarded to the Federal Government a telegram protesting against the interpretation of that part of the contract which refers to the charges to be made to vessels and merchandise, and through the efforts of these combined interests, the Government postponed the opening of the new port until the matter could be adjusted.

Costly Improvement Under Way for Many Years.

This elaborate and costly improvement had its inception in 1874, when Sir John Hackshaw, in studying the national ports for the Brazilian Government, outlined a plan for improving the harbor of Rio Grande, and destroying the bar which had always obstructed the harbor entrance. The estimated expense was placed at \$11,730,000, and the plan described as one which would probably not prove successful.

In 1883 the Government sent Dr. H. Bicalho to make a further study of the harbor and the bar. His report was followed in 1886 by the decision of the Chamber of Deputies to carry out a project as

outlined by Dr. Bicalho. In 1890 definite steps were taken toward commencing the actual work, the result of a contract with a French company organized for the purpose. The following year the contractors were permitted to withdraw their deposit made as a guaranty of performance of contract, and were paid for the actual work done up to that time.

During 1893 and 1894 the Government itself continued in a small way the work already started. For 10 years after that time, however, nothing was done. An American engineer, Mr. Corthell, in 1904, made a resurvey of the situation which resulted in a new contract between him and the Brazilian Government, on a basis of "no cure, no pay." Mr. Corthell interested French capitalists in the project, and on September 17, 1906, the Federal Government signed the contract under which the work has since been carried on.

The work, as begun in 1909 under the contract, was divided into two distinct divisions, each undertaken by a separate company. One was the construction of the breakwaters and the improvement of the channel; the other the construction of a new port for the city of Rio Grande, to be situated 1 mile from the former port. The initial work on the breakwaters consisted of the construction of 90 miles of railways for the bringing of rock from the quarries, situated 50 miles from the bar. Approximately \$4,000,000 has been spent by the company for railroad construction.

Large Investments in the Various Enterprises.

The investment in the various enterprises connected with the construction of the port and the opening of the bar is represented by \$31,000,000. This amount is divided between various companies and contracts, although the Brazil Railway Co. holds 98 per cent of the combined stock.

There is due to the *Compagnie Française du Port de Rio Grande do Sul* at the present time \$2,948,000 from the Federal Government, representing the first payment on the part of the Government to the French company for having maintained a permanent depth of 19½ feet over the bar. This is the first amount which the company will receive from any source toward paying for the tremendous capital invested.

[This report from the vice consul at Sao Paulo is accompanied by six exhibits, which are: No. 1, blue print showing location of port and its general construction; No. 2, blue print of port works, channel, and breakwater, showing part of railroad construction; No. 3, copy of telegram of protest against port charges sent to Federal Government; No. 4, copy of tariff for new port, published by French company; Nos. 5 and 6, regulations of port covering vessels using the port and the internal government, respectively. These may be inspected on application to the Bureau of Foreign and Domestic Commerce or its district offices. Refer to file No. 69758. A more detailed review of the history of this great project has also been received by the Bureau and may be inspected by referring to the same file number. A previous account of the work at Rio Grande do Sul was published in *COMMERCE REPORTS* for May 13, 1915.]

District Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative district offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its district offices.]

- Binder twine*, No. 19672.—A company in Canada, giving bank references, desires to be placed in communication with manufacturers or exporters of binder twine for the purpose of supplying the prairie trade. It is stated that the company can handle several million pounds annually, if suitable connections can be made.
- Machinery*, No. 19673.—An American consular officer in England reports that a manufacturer's agent has received inquiries for names of manufacturers of machinery for the textile industry.
- Potatoes, fresh fruits, etc.*, No. 19674.—An American consular officer in Brazil reports that a firm in his district desires to communicate with exporters of potatoes, fresh fruits, canned and dried fruits, etc. References are given.
- Typewriters and office supplies*, No. 19675.—A report from an American consular officer states that a man in Canada desires to correspond with manufacturers of typewriters and office supplies, with a view to acting as sales agent in Canada.
- Sea moss*, No. 19676.—A letter to the Bureau from a firm in the Netherlands states that it has large quantities of sea moss for sale.
- Portland cement*, No. 19677.—A representative of a company of capitalists in the West Indies informs an American consular officer that he desires to correspond with manufacturers of Portland cement. He states that the company will use large quantities. Correspondence may be in English.
- Dry goods, foodstuffs, etc.*, No. 19678.—An American consular officer in Argentina reports that a representative of a large importing firm expects to visit the United States in the near future for the purpose of securing an agency from American manufacturers of dry goods, foodstuffs, hardware, etc.
- Incandescent mantles*, No. 19679.—The Bureau is in receipt of a letter from a company in the Far East stating that it desires names and addresses of manufacturers of incandescent mantles for use in petroleum lamps of high pressure, and soft silk mantles.
- Aluminum eyelets and fasteners*, No. 19680.—A firm in Spain informs an American consular officer that one of its representatives is in the United States for the purpose of buying aluminum eyelets and fasteners for tents. A sample of the eyelet and fastener may be examined at the Bureau or its district offices. (Refer to file No. 70264.)
- Well-drilling machinery*, No. 19681.—A report from an American consular officer in the West Indies states that there is a possible market in his district for the sale of well-drilling machinery. Correspondence may be in English.
- Meadow seeds, crude medicinal herbs*, No. 19682.—An American consular officer in Italy reports that special attention is given to the cultivation of meadow seeds and crude herbs, with a view to exporting same.
- Confectionery*, No. 19683.—A retail dealer in homemade candies has requested an American consular officer to supply quotations on sugar and chocolate suitable for making homemade varieties of confections. Agents for the sale of the confections are wanted.
- Soap, underwear, safety pins, etc.*, No. 19684.—A commercial agent of the bureau reports that a representative of a firm in the Netherlands expects to arrive in this country in the near future for the purpose of purchasing soap, underwear, safety pins, wooden pipes, clocks, rubber goods, etc. All goods will be purchased for cash.
- General representation*, No. 19685.—A report from a consular officer in Argentina states that a business man in his district contemplates making a visit to the United States for the purpose of obtaining an agency for exporters interested in extending their trade in Argentina.
- Caustic soda and cotton-seed oil*, No. 19686.—The bureau is in receipt of a letter from a commercial agent stating that a representative of a firm in the Netherlands desires to purchase, for cash, caustic soda and cottonseed oil.

Citrus-fruit production in California	1240	Foreign trade opportunities.....	1248

FRENCH EMBARGO ON BUTTER.

[Cablegram from American consul general, Paris, Dec. 28.]

An order of December 27 prohibits the exportation of butter to allied countries and to the United States.

BELGIAN COAL IN SWEDEN.

[Consul General Ernest L. Harris, Stockholm, Nov. 30.]

Owing to the embargo placed on British coal and the great difficulty Sweden is experiencing in getting coal, it is of interest to note that a cargo of coal will shortly be received in this country from Belgium, which indicates that the coal mines in that country have been in operation.

AN AMERICAN CARGO LOST AT SEA.

[Consul General Alfred A. Winslow, Auckland, New Zealand, Nov. 24.]

The steamship *Indian Monarch*, bound from New York to New Zealand ports with 4,458 tons of merchandise for this Dominion, was abandoned at sea about November 17 while on fire and is a total loss. This will be materially felt here, for most of the cargo was for immediate delivery, and this means a delay of two to three months. The vessel was on its way out via Cape of Good Hope.

The closing of the Panama Canal is materially felt here, for large shipments of merchandise were about ready to be forwarded when the slide occurred, which meant a delay of 30 to 40 days, and this means much, for stocks are exceedingly low and the trade was depending on American supplies.

An engineering firm at Hamilton, Bermuda, has been asked to submit plans for a model dairy to be installed in Bermuda. Consul Carl R. Loop at Hamilton calls attention to the possibility that orders for dairy machinery and supplies may be placed in the United States.

WOOL SALES IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Nov. 29.]

The fourth wool sale for this season in New Zealand came off in Auckland November 25, at which 9,318 bales were offered against 12,290 bales for the 1914 sale. The prices paid were greatly in advance of those ruling at the 1914 sale, as shown by the following table:

Grades.	Nov., 1914	Nov., 1915	Grades.	Nov., 1914	Nov., 1915
	<i>Cents.</i>	<i>Cents.</i>		<i>Cents.</i>	<i>Cents.</i>
Fine half-bred merino.....	22-25	34-40½	Inferior log stained and cotted.	16-17½	24-28
Fine crossbred.....	20-22	34-42	First pieces.....	15-18	23-28
Shropshire and Romney.....	22-25	30-37	Second pieces and bellies.....	11-13	15-19
Medium crossbred.....	19-21	28-34	Crutchings.....	14-16½	18-23
Coarse crossbred and Lincoln.	17½-20½	26-30	Locks.....	8-10	12-15

The bidding was spirited and led by American buyers, who took most of the better grades.

Prices at Other Sales—American Buyers.

The following table shows the comparative prices prevailing at the four wool sales that have taken place in New Zealand this season:

	Christchurch.	Wellington.	Napier.	Auckland.		Christchurch.	Wellington.	Napier.	Auckland.
	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>		<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>	<i>Cents.</i>
Halfbred:					Crossbred:				
Super.....	40½	37	37½	40½	Super.....	33½	33½	30	34
Medium.....	35½	33½	37	42	Medium.....	27½	33	37	34
Pieces.....	29	22	30	19	Coarse.....		30	31	30
Shropshire and Romney.....				37	Inferior.....	21½	25	27	28
					Pieces.....	27½	27	27½	25
					Locks.....	17½	15½	15½	15

It is estimated that American buyers secured about 30,000 bales to date and are eagerly collecting all they can locate, and some of this will be going forward soon, but there is a marked shortage of shipping space and it may be some time before there will be space to meet demands unless American shipping interests relieve the situation. In addition to wool comes sheepskins, hides, etc., which will call for much more space.

THE TUNISIAN CROPS.

[Consul General A. Gaulin, Marseille, France, Dec. 6.]

While the Tunisian grain crop was a large one, the results were somewhat unsatisfactory, owing to the abnormal proportion of straw and the comparatively small yield of grain. The September and October rains have made it possible to begin the first sowing.

The vineyards suffered from mildew and from an invasion of locusts. As a consequence, the crop was on the whole much below the average. The outlook for the coming year is unpromising, as the vines in their present state need careful treatment, and competent labor is scarce.

The autumn rains benefited the olive trees, but the crop will not be more than average size, except in the districts of Tunis and Bizerta, which report an abundant yield.

The date crop is officially reported to be of small size, but on the whole of good quality.

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he has received in stock during the week ended December 25 the following new United States Government publications, which he will sell at the nominal prices affixed:

The Condensation of Gasoline from Natural Gas, Mines Bureau Bulletin 88.—Report of investigations intended to minimize losses that occur in the mining and treatment of mineral substances, in this particular instance covering natural gas. Price, paper, 15 cents.

Extraction and Recovery of Radium, Uranium, and Vanadium from Carnotite, Mines Bureau Bulletin 104.—Covers formation of National Radium Institute, different methods of treating radium ores, Bureau of Mines method for treating carnotite, general descriptions of operations, nitric acid, radium refining, measurements, recoveries, losses, etc. Price, paper, 25 cents.

Protection of Life and Property against Lightning, Standards Technologic Paper 56.—Covers early history of lightning rod, desirability of protection against lightning, efficiency of lightning rods, characteristics of lightning flashes, costs, safeguarding of human life, etc. Price, paper, 35 cents.

Chemical Composition of American Food Materials, Experiment Stations Bulletin 28, revised edition.—Gives brief history of food analysis, with explanation of terms used, and tables showing maximum, minimum, and average composition of staple American food materials. Price, paper, 10 cents.

Infantry Drill Regulations of the United States Army, 1911, with corrections to August 23, 1915, latest edition.—Infantry Drill Regulations now in use, covering drill, combat, marches, camps, ceremonies, and inspections manuals, school of the soldier, school of the squad, school of the company, battalion, regiment, and brigade. Price, fabrikoid, 35 cents.

One Thousand Good Books for Children, Home Education Circular No. 1, issued by the United States Bureau of Education.—A classified and graded list of books prepared by National Congress of Mothers literature committee. Covers picture books for younger readers, education and life, natural history, science, and animal stories, stories of foreign lands, our own country, history, myths and legends, biography, poetry, etc. Price, paper, 5 cents.

Special Features in City School Systems, Education Bulletin 31, 1913.—Covers cooperative industrial courses, home study, honor leagues, teachers' improvement, etc., in various cities of the United States. Price, paper, 10 cents.

House Ants, Entomology Circular 34.—Gives description, habits, and life history of various species of ants infesting houses, with means of eradication. Price, paper, 5 cents.

Pineapple-canning Industry of the World, Special Agents Series 91, Bureau of Foreign and Domestic Commerce.—Gives practical information relative to pineapple industry in Hawaii, Philippine Islands, and other producing points, covering cultivation, shipment, and marketing of the pineapple. Price, paper, 5 cents.

Peanut Butter, Plant Industry Circular 98.—Covers manufacture of peanut butter, including factory equipment, roasting, blanching, blending, etc. Price, paper, 5 cents.

Some Economic Aspects of War, by Henry C. Emery. Lecture delivered before the Army War College, April 11, 1913.—Discussion by Henry C. Emery, professor of economics at Yale University, on war from standpoint of the political economist, and constitutes a general argument in favor of preparedness. Price, paper, 5 cents.

Wood Turpentine, Its Production, Refining, Properties, and Uses, Chemistry Bulletin 144.—Practical work covering methods of production, equipment for manufacture, cost of producing, etc., with a tabulation of results. Price, paper, 10 cents.

Primer of Forestry, Part 2, Practical Forestry, Farmers' Bulletin 358.—Covers forest management, work in the woods, the weather and the streams, forestry abroad and at home, etc. Price, paper, 5 cents.

The American commercial attaché at The Hague, Erwin W. Thompson, reports that the Royal Fertilizer Commission of the Netherlands has fixed the wholesale price, ex ship, of the first cargo of Chile saltpeter at 17.80 florins per 100 kilos, gross for net. At the normal equivalent of 40.2 cents per florin this is \$64.90 per short ton.

MINING IN SPANISH PROVINCES.

[Consul Wilbur T. Gracey, Seville, Oct. 30.]

In response to a request from persons in the United States interested in the Spanish mining industry, the writer prepared, from data in this office and from the annual directory of Spain, a list of the mining properties there, which was transmitted to the inquirer. Further inquiries have made it clear that this list was not accurate, as many of the mines mentioned therein are either merely projected or abandoned. A careful investigation has therefore been made, and a list prepared from returns supplied by the respective chiefs of the mining bureaus of the Provinces of Badajoz, Caceres, Cadiz, Cordoba, Huelva, and Seville, the six Provinces comprising the consular district of Seville.

[The revised list may be obtained from the Bureau of Foreign and Domestic Commerce or its district offices. Refer to file No. 69839.]

In many cases the word "parada," which means "stopped working," has been inserted after the name of the mine and address of the owners, but the mine in question is not abandoned. It is a custom in Spain with small proprietors to do a certain amount of work of an investigative nature so as to be able to show the mine to good advantage, and then suspend work pending the discovery of a company prepared to purchase.

The list shows that there is a considerable amount of mining in the Seville district, the mines producing antimony, argentiferous lead, copper and iron pyrites, coal, iron, iron pyrites, lead, manganese, phosphate, quicksilver, silver, salt, tin, wolfram, and zinc.

Distribution of Mines.

The mines located in each Province are as follows:

Antimony—4 at Trujillo, Caceres.

Argentiferous lead—8 at Santa Marta, Badajoz; 1 at La Mata, Caceres; 25 at Anora, Fuenteovejuna, Posadas, Montoro, Alcaracejos, Viso de los Pedroches, Villanueva del Duque, Villaviciosa, and Villanueva de Cordoba, Province of Cordoba; 2 at Galaroza, Province of Huelva; and 8 at Guillena, Cervigueros, Marin, and Guadalcanal, Province of Seville.

Copper and iron pyrites—1 at Feria, Badajoz; 4 at Peralda de San Roman, Caceres, Alia, Province of Caceres; 3 at Alcaracejos, Pozoblanco, and Cordoba, Province of Cordoba; 47 or more at Calanas, Zalamea la Real, Cala, Valverde del Camino, Almonaster la Real, El Cerro, Cortegana, Puebla de Guzman, Nerva, Alosno, Palmogo, Paradass, and Rio Tinto, Province of Huelva (many of these, numbered as only one mine, are really whole groups of mines under one name); 17 at Aznalcollar, Castillo de las Guardas, Parada, and Constantina, Province of Seville.

Coal—16 at Fuenteovejuna, Pueblo Nueva del Terrible, Belmez, Obejo, Adamuz, Villanueva del Rey, Espiel, Province of Cordoba; 6 at Villanueva del Rio, Cuenca del Guadalquivir, and Cantillana, Province of Seville.

Iron—21 at Fuente del Arco, Granja de Torre Hermosa, Santa Marta, Jerez de los Caballeros, Albuquerque, Bodonal, Monasterio, La Parra, Paradass, Province of Badajoz; 5 at Caceres, Valencia de Alcantara, and Allseda, Province of Caceres; 4 at Cala, Jabugo, Cumbres, and Santa Olalla, Province of Huelva; 25 at San Nicolas del Puerto, El Pedroso Cazalla de la Sierra, Guadalcanal, Castillo de las Guardas, Moron, Constantina, Province of Seville.

Iron pyrites—4 at Alajar, Zalamea, and Calanas, Province of Huelva, 3 at Constantina and Castillo de las Guardas, Province of Seville.

Lead—62 at Azuaga, Berlanga, Castuera, Capilla, Granja de Torre Hermosa, Garlitos, Valencia las Torres, Villagarcia, and Parada, Province of Badajoz; 4 at Conquista and El Almendro, Province of Huelva.

Manganese—7 at El Cerro, Zalamea la Real, Calanas, Aroche, and Aracena, Province of Huelva; 1 at Castillo de las Guardas, Seville.

Phosphate—8 at Cáceres, Logroño, and Torremocha, Province of Cáceres.

Quicksilver—2 at Usagre and Paradus, Province of Badajoz.

Silver—1 at La Vava, Huelva.

Salt (Maritimas)—3 at Huelva.

Tin—2 at Cáceres, Province of Cáceres.

Wolfram or wolframite—3 at Villa de la Serena, Campanario, and Oliva de Jerez, Province of Badajoz.

Zinc—1 at Llera, Province of Badajoz; 5 at Berzocana and Plasenzuela, Province of Cáceres.

The list shows that there are over 300 mines in the district, many of great importance. The Rio Tinto mines are said to be the largest copper mines in the world. There should, therefore, be a good opportunity for the introduction of American mining machinery on a larger scale than at present.

It is suggested that, as the address of each mine is given, it might be well for those interested in the exportation of American machinery to communicate directly with the owners in Spanish, sending them copies of such Spanish literature as they may have issued.

BAHIA MARKET FOR BEANS.

[Consul Robert Fraser, jr., Bahia, Brazil, Nov. 17.]

No beans are either imported or exported at this port. The local production is generally equal to the very large demand; when it falls short, the deficiency is supplied from the southern part of the Republic, where the chief centers of production are the States of São Paulo, Rio de Janeiro, and Minas Geraes. During the past year, however, it has not been found necessary to augment the local supply.

No statistics of production are kept, though the amount is very large, as beans constitute one of the staple articles of diet throughout this region. Every small farmer grows them, and they are frequently planted on large estates between trees or plants of other crops. The varieties chiefly grown are light coffee colored, known as "mulatinhos," and black, known as "pretos." The present wholesale price is 20 milreis per 80-liter bag, equivalent at present exchange to \$2.11 per bushel.

The nominal duty on beans imported into Brazil is 0.060 milreis per kilo, based on gross weight if packed in bags, or with an allowance of 10 per cent of the weight for tare if packed in barrels or boxes. The actual duty, based on a recent quotation of the milreis at 24 cents, and taking into consideration the 2 per cent surtax and the proportion payable in gold, is in practice considerably increased, equivalent to \$1.12 per 100 pounds.

If offers of American beans are made here, small samples should be sent, prices quoted c. i. f. Bahia (in either dollars or sterling), the metric system of weight or measurement (1 bushel equals 35.24 liters), and the Portuguese language used. If possible, some concession is advised in the matter of terms. Shipping documents might be sent through a bank attached to draft payable 30 days after sight, or payment might be asked upon arrival of goods here, but very likely a demand for cash against documents in New York would not be met.

[A list of the principal importers of foodstuffs here, all of whom enjoy good reputations, may be obtained from the Bureau of Foreign and Domestic Commerce or its district offices. Refer to file No. 69763.]

DENTAL SUPPLIES IN BRAZIL.

[Consul General Alfred L. Moreau Gottschalk, Rio de Janeiro.]

A license was recently granted a British company to manufacture within Brazil, as well as to import and to export, artificial teeth, dental supplies, scientific and surgical instruments, cutlery, photographic supplies, and a long list of other articles.

The fact is interesting because it points to an important development in international trade. Not long ago this consulate had occasion to go over the business situation with the traveling representative of an American manufacturer of collars, shirts, etc., who has a large popular sale in the United States for a certain brand of collars that sell at retail at two for 25 cents. After calculating the duties, customs charges, local merchants' profit, etc., it was found that this article can not be sold here at less than 50 cents United States currency each, thereby making it impossible to urge cheapness as a selling point. Since the cost of producing this article is low, it was suggested that the best solution, in a country like this, which produces excellent native cotton goods, was for the American manufacturer to establish himself here and manufacture locally. An article like a cheap collar of reasonably good quality would meet with immediate popular favor here, as would doubtless many other useful and well-made cheap articles of American manufacture.

It is possible that this line of thought, which seems to have appealed to the British manufacturer of dental goods, might prove useful to American manufacturers of many small articles. To be sure, there is always in Latin America some local tax on production (internal-revenue tax) to be figured upon, but this is almost always far below the figure of the import duties and the landing, clearing, and brokerage charges.

Importations of American and other dental material into Brazil were as follows: From the United States, \$197,737 in 1913 and \$96,727 in 1914; from Great Britain, \$32,281 in 1913 and \$31,358 in 1914; from Germany, \$18,812 in 1913 (no returns for 1914). The total imported from all countries was \$256,561 in 1913 and \$139,830 in 1914.

However, there are a great many American dentists practicing in this country who import a large portion of their supplies by parcel post or registered mails, and such imports are not included in the foregoing figures.

INVESTIGATE METHOD OF FIRING SANITARY PORCELAIN.

In the vicinity of the Pittsburgh laboratory of the United States Bureau of Standards a large tunnel kiln has been erected for firing sanitary porcelain. The fuel used is natural gas, which is unsatisfactory for the method usually employed in firing these kilns. The result has been rather disastrous. A representative of the company called at the bureau for advice, and while some could be given, it is considered desirable that the whole matter of tunnel kilns should be studied in further detail. The bureau recommends that an investigation of this method of firing materials be made, not so much at this particular plant, but at one or two others where facilities would be a little better for this purpose.

IMPORTS OF COTTON YARN AT SWATOW.

[Consul George C. Hanson, Swatow, China, Nov. 6.]

The Chinese Maritime Customs returns show the following imports of cotton yarn into Swatow for the years 1908 to 1915 (nine months), inclusive:

Years.	Indian yarn.	Japanese yarn.	Years.	Indian yarn.	Japanese yarn.
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
1908.....	8,573	8	1912.....	9,706	114
1909.....	9,602	4	1913.....	10,123	261
1910.....	8,541	12	1914.....	8,635	2,330
1911.....	7,955	6	1915 (9 months).....	7,249	971

It will be noticed from these figures that until 1912 Indian yarn dominated the local market. In 1912 Japan contributed 114 tons of yarn; in 1913, 261 tons; and in 1914, 2,330 tons. In 1914 the imports of Indian yarn amounted to 8,635 tons, a figure that showed Japan was cutting heavily into the trade. In 1915, during the first nine months, 7,249 tons of Indian yarn were imported, while only 971 tons of the Japanese variety reached Swatow. Of this 971 tons the greater part was imported during the first quarter of the year, some in the second quarter, and hardly any in the third quarter. As a result, Indian yarn has commenced to swing back into its former predominating position, and Chinese yarn from Shanghai, of which 3 tons were imported in 1913 and 54 tons in 1914, was imported to such an extent in 1915 that the figures for the first nine months reached 282 tons. Of this 282 tons much more than half was imported during the third quarter. Of English yarn, 1 ton was purchased in 1913, 4 tons in 1914, and 4 tons in the first nine months of 1915.

It was impossible to procure a sample of Japanese yarn.

[A sample of Indian yarn, No. 20 Parrot brand, may be seen at the Bureau of Foreign and Domestic Commerce or its district offices, which will also supply a list of Swatow firms who are interested in the importation of cotton yarn. Refer to file No. 60978.]

AMERICAN SILKS IN CUBA.

[Special Agent Garrard Harris.]

American women residing in Habana express considerable wonderment that this market is not given more attention by silk makers of the United States. It is asserted that the American silks wear longer and do not "crack" as the French silks do in this climate. Of late some small quantities of American silks have been noticed in the stores, but the prices are about three times those of the European silks. American ribbons are not to be had on the market generally, and they are high priced. In fact, all dry goods are high priced in Cuba, and it appears that unless at least 100 per cent profit can be made on an article the dealer is scarcely interested in carrying it. The American women profess to believe that if a large, first-class American dry goods, millinery, and notion store were opened in Habana, handling goods on a basis of reasonable profit, and managed like a first-class establishment in the United States, it would have an impregnable position and a tremendous trade.

CITRUS-FRUIT PRODUCTION IN CALIFORNIA.

[From Report of the General Manager of the California Fruit Growers' Exchange.]

During the year ending August 31, 1915, 40,986 cars of oranges and 6,658 cars of lemons were shipped from California. Of these, 24,232 cars of oranges and 5,577 cars of lemons (consisting of 9,648,283 boxes of oranges and 2,241,553 boxes of lemons) were shipped by the Exchange. The returns f. o. b. California will be about \$19,537,850; the market value is approximately \$30,000,000. There has been a gradual increase in the proportion of total shipments handled by the Exchange, the percentage having risen from 47 in 1905 to 62.5 in 1915.

Methods Used in Marketing Crops—Adoption of Standard Grade.

At intervals throughout the year, each association estimates the size of the crop in the orchards of its members. These combined estimates indicate to the railroads, the trade, and the industry what the size of the crop is to be, and furnish a definite basis for the business plans necessary to be made for supplies and for the distribution and sale of the crop. The total average cost of the Exchange is 7.16 cents per box. This service is an evolution of 20 years' experience, and is not only less expensive but is more comprehensive than any other crop-marketing service yet developed.

Unrestricted competition for the early market had resulted in the shipment of green, immature oranges in November and early December. A few carloads of fruit brought high prices, but consumers turned away from these oranges to other fruit more appetizing. After this experience practically all shippers in Tulare County and in the other early districts agreed not to ship oranges that were below the 8 to 1 standard, as promulgated by the Federal Department of Agriculture. No other act in recent years has done more to popularize California oranges. The early fruit shipped from the north was fine in color and good to eat, the trade pushed the sales with confidence, the consumer was pleased with the quality, and a strong demand for Sunkist oranges resulted.

Heavy Increase in Citrus-Fruit Production—Valencia Oranges.

There was an increase of 19.1 per cent over the largest preceding season in the total value of oranges and grapefruit shipped from December to February, inclusive, in 1914-15, from both Florida and California, the average shipments from the two States equaling approximately 275 carloads per day during this period. This increase was in addition to 2,000 carloads from Louisiana and Porto Rico. During the period from December, 1914, to August, 1915, inclusive, California shipments were 36,001 carloads, while Florida marketed 20,705.

Through national advertising the Fruit Growers' Exchange is popularizing the Valencia orange with the American consumer. Few people knew that California produced a summer orange of luscious eating quality. The Valencia is comparatively free from decay, it can be shipped to the mountain or seaside resorts and to the country towns with equal advantage, and yields a splendid financial return.

Opportunities for the Lemon Industry.

The California lemon crop increased 132 per cent over the crop of the preceding year. Different factors control the market for oranges and for lemons; the consumption of the latter depending primarily

on climatic conditions, Americans using them almost exclusively in cold drinks during hot weather. The exchange lemon shippers have organized a company to manufacture by-products from the lower grades of fruit. From \$1,250,000 to \$1,500,000 worth of lemon oil, citrate of lime, and other lemon by-products are imported annually into the United States; these can be manufactured successfully in California from fruit not worth shipping.

There are 20,000 acres of lemons in California four years old and under, which will soon come into bearing and will double the supply of domestic lemons; to consume this increase, and the foreign supply, it will be necessary to increase the lemon consumption of the United States by 75 to 100 per cent in the next few years. New uses of lemons will be suggested to the public, and the consumer will be educated to the advantages of this fruit as a healthful product in a great number of culinary uses, in toilet uses, and in beverages, so that lemons will be used more generally throughout the year.

RAILWAY EARNINGS IN NEW SOUTH WALES.

.[Commercial Attaché William C. Downs, Melbourne, Australia.]

The following comparative figures, showing the earnings of the railways and tramways for the State of New South Wales, are taken from the Report of the Chief Commissioner for Railways and Tramways for the quarter ended September 30, 1915, compared with the corresponding period in 1914:

Item.	Quarter ended Sept. 30—		Item.	Quarter ended Sept. 30—	
	1914	1915		1914	1915
RAILWAYS.			RAILWAYS—continued.		
Miles open.....	4,010	4,147½	Tonnage of live-stock traffic.....	180,780	198,173
Revenue:			TRAMWAYS.		
Passenger.....	\$3,865,000	\$3,988,800	Miles open.....	215	220
Merchandise.....	\$5,342,000	\$4,970,200	Revenue.....	\$2,337,400	\$2,250,600
Expenditure.....	\$6,920,300	\$6,151,200	Expenditure.....	\$1,983,160	\$1,820,300
Train miles run.....	5,211,511	5,087,302	Train miles run.....	6,542,951	6,546,653
Number of passengers....	21,726,433	22,514,040	Number of passengers....	70,782,571	68,634,124
Tonnage of goods traffic....	903,585	763,132			
Tonnage of coal and coke....	1,880,350	1,823,555			
Tonnage of other minerals..	215,563	298,142			

The principal decreases and increases in the goods traffic were in the following items: Decreases in tons—general merchandise, 12,575; hay, straw, etc., 18,906; grain, flour, etc., 122,528; coal and coke, 56,795. Increases—wool, 13,556; minerals (other than coal and coke), 82,579; live stock, 17,393.

PROGRESS MADE ON NATIONAL GAS-SAFETY CODE.

The work begun some months ago in connection with a national gas-safety code has made good progress, and the United States Bureau of Standards is now receiving the cooperation of several engineering societies which have appointed representatives for the purpose. This gas-safety code will relate to both the life and fire hazard and hence will cover the ground which, in the case of corresponding work in the electrical field, is covered by two codes—the Underwriters' Fire Code, and the National Electrical Safety Code, which is being prepared by the Bureau.

IMPORTS INTO HANKOW.

[Consul General Edwin S. Cunningham, Hankow, China, Nov. 12.]

As shown by the following table giving the amount of the principal imports into Hankow, China, from foreign countries and Chinese ports through the maritime customs, there was a decrease in the amount of a large number of articles imported during the first six months of 1915, compared with the corresponding period in 1914.

It is true that the war has closed certain markets with which products have been exchanged, and it has interrupted the regular channels of trade without materially affecting the wealth of the country—the trade exists awaiting the restoration of normal conditions of former channels or the establishment of new ones. These conditions have not yet returned nor have new connections been extensively introduced.

Principal Imports into Hankow.

The following table shows the quantity of the principal imports into Hankow for the first six months of 1914 and 1915:

Articles.	Jan.- June, 1914.	Jan.- June, 1915.	Articles.	Jan.- June, 1914.	Jan.- June, 1915.

Cotton Textiles, Needles, Aniline Dyes.

Cotton textiles should be the least affected of any group, because they are absolutely essential to the welfare of the people. Needles, in which Germany and Belgium had almost a monopoly, were imported into the whole of China to the value of \$583,261 in 1913, but none were imported into Hankow during the first half of the current year because the sources of supply had been cut off. The needles in stock have been sold on the local market at a very advanced price. Foreign Trade Opportunity No. 17798, published in COMMERCE REPORTS for August 5, 1915, called attention to this market, but only one reply was received by the inquirer, and this was not responsive. This item is small, but important, and it seems that a single item sold in a country aggregating over \$500,000 during the period of one year would be worth the attention of manufacturers who were interested in the Oriental trade.

The imports of aniline dye decreased in value from \$205,300 to \$5,606 during the periods under comparison, and the market value increased from 35 taels (\$21.26 gold) to 135 taels (\$82.01 gold) per picul (133½ pounds).

Increased Imports of American Glass—Nails, Oils, Etc.

It is evident that American manufacturers of glass have given their attention to the opportunities in the Hankow market for the sale of this article, as there were at least two large arrivals at this port within a week, to be followed by others; and this, no doubt, marks the beginning of an important trade should the American product be delivered in a sound condition and packed in a manner satisfactory to the local trade.

Wire cut nails were imported in increased quantities—from 990 to 1,071 tons; bags of all kinds had a substantial increase of 900,000 pieces and aggregate for the 1915 period 1,971,283 bags. The imports of kerosene oil increased from 8,487,174 to 10,735,335 gallons. Engine oil was imported during the first six months of 1915, amounting to 170,037 gallons, an increase of 106,840 gallons over the corresponding period in 1914. It is not a good indication in the development of the trade of the country to find that machinery of all kinds declined from \$488,411 to \$57,936, and almost equally unfavorable indication is the decrease in the value of electrical material and fittings from \$101,357 to \$30,932.

Opportunity to Extend American Trade.

There is no question but that American manufacturers are beginning to realize the present favorable conditions for the exploitation of this market and have taken some steps to obtain in certain lines their share of the trade, but it is equally certain that the great majority of them have an inadequate idea of the potentialities of the Chinese market and the wonderful opportunities which the world's political conditions have given them to participate in one of the world's greatest markets. Our part in the China trade has been trifling compared to what we should have had and to what we can get with but little exertion and at a small per cent of the introductory expenditure.

TRADE-PROMOTION SUGGESTIONS FROM PARAGUAY.

[Consul Samuel Hamilton Wiley, Asuncion, Oct. 25.]

With a view to obtaining information that would be useful in promoting commercial interchange between the United States and the Republic of Paraguay, I sent out to the principal importing and exporting houses in the Asuncion district circular letters asking what goods they bought from or sold to the United States, whether they desired to enter into direct connections with American firms interested in their lines, what trade difficulties they had encountered, and what suggestions, if any, they could offer looking toward a betterment of existing commercial conditions. Of 29 letters sent, 14 were answered; and, as giving the Paraguayan point of view, two of the replies are quoted.

A general importer of Concepcion, who stated that he bought no merchandise from the United States, thus explained his position:

I am accustomed, as are nearly all importers here, to purchase my goods in Germany, Italy, England, and France, but especially in Germany, on account of the great advantages offered by commercial houses there. For one thing, those exporting houses of Hamburg that do not keep permanent representatives here send travelers with samples of articles specially manufactured for the needs and tastes of this market and patterned after samples taken beforehand by these exporting houses. The German exporting houses accept any order, no matter how small, and send goods direct to Paraguayan ports, thus relieving the dealer of all bother of transshipment in Buenos Aires or Montevideo.

Convenient Payment Arrangements.

Payment for goods ordered from Germany is arranged in an excellent manner for importers here. The exporting houses draw on the Concepcion merchant at 180 days from date, or generally 180 days sight, for the value of goods and freight and other expenses. These notes are discounted by banks here or in Germany. The interest charged by German houses has not been more than 5 per cent per annum since the beginning of the war.

All these facilities are not given to importers here by American exporters, who are accustomed to send illustrated catalogues in English instead of traveling representatives and to demand cash with order before importers have an opportunity to examine the goods. Besides all this, American wares are much dearer than are goods of German manufacture.

It is therefore necessary, if American manufacturers and exporters wish to compete with those of Europe, that they adopt the system used by their competitors and give equal facilities in the matter of credits, shipments, etc. As the quality of the American merchandise is far superior to that of European goods, there is no doubt that if equal facilities as mentioned are given, importers here will buy American goods in preference to those of Europe, even at a higher price.

Several others voiced the same opinion as to the need for meeting terms offered by European competitors.

Credit Information—C. I. F. Prices.

The establishment of an American credit-information bureau and the quotation of c. i. f. prices were suggested by an Asuncion importer of construction material:

To facilitate the commercial interchange between importers here and exporters in the United States it would be well to establish a bureau of credit information, and by furnishing to American inquirers information regarding local houses give responsible Asuncion firms an opportunity to purchase American goods without being obliged to send cash with order.

It would aid commercial interchange if American firms would quote prices c. i. f. Buenos Aires or, better still, c. i. f. Asuncion. The exporters in American ports are in a better position to obtain low ocean freight rates than are the importers in Asuncion, 1,100 miles from an ocean port. This would benefit the purchasers here and give the exporters in the United States a wider margin to compete with European exporters.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of leave.	Address.
Summers, Maddin.....	São Paulo, Brasil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Peck, Willys E.....	Tsingtau, China.....	Jan. 31	Do.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Do.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(e)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. R.....	Cornwall, Canada.....	Jan. 5	2607 Eleventh Street NW., Washington, D. C.
Donald, George K.....	Maracaibo, Venezuela.....	Feb. 17	153 Church Street, Mobile, Ala.
Bonney, Wilbert L. ^b	San Luis Potosi, Mexico.....	Feb. 13	1905 North Bush Street, Santa Ana, Cal.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

^b Consul Wilbert L. Bonney shall visit San Francisco, Los Angeles, and San Diego, Cal., and San Antonio, Tex., and will advise the Chamber of Commerce in each of these cities of his arrival and address.

CONDITION OF THE MATCH INDUSTRY IN SWEDEN.

[Consul General Ernest L. Harris, Stockholm, Nov. 30.]

The match industry in Sweden at present is flourishing more than during any previous time. The output has been greatly increased, and it is estimated that prices have also increased by at least 100 per cent. Before the war prices were quoted c. i. f. all foreign countries, but now the manufacturers demand f. o. b. factory. Owing to the elimination of the match production in Belgium and other countries at war, the Swedish match has practically no competition and the exports to England and France have been doubled. The Swedish mills are working under high pressure and there appears to be, for the present at least, no indication of a rebound in the prices asked and obtained. It is certain that the Swedish match industry will prosper in an increasing degree during the next year.

A SPANISH COMMERCIAL MISSION IN SWEDEN.

[Consul General Ernest L. Harris, Stockholm, Nov. 29.]

A commercial mission from Spain is now in Sweden for the purpose of studying the country industrially and also for the purpose of ordering goods which on account of the war can not be imported into Spain from Germany, England, and France. This commission has already visited some of the largest electrical and gas machinery manufacturing plants and shipbuilding yards in the country, and placed an order amounting to 5,000,000 crowns, or \$1,340,000.

ONTARIO SHOWS LARGE PURCHASING POWER.

[Consul Fred C. Slater, Sarnia, Dec. 9.]

Trade in Ontario is much more encouraging than a year ago. Not only is the public more optimistic, but the buying power appears greater than at any time since the beginning of the war. Particularly is this manifested as the holiday season approaches.

In some lines a shortage is noted on the market. But, of course, the commodities in which a shortage is experienced in Canada are in many instances similarly scarce in the United States. Agriculturally the whole Dominion has, with few exceptions, enjoyed abundance. This, with the prevailing high prices, will make the people good buyers for some time. In Ontario, however, there is a minor shortage in hay, potatoes, and apples. The war situation has affected the drug business more than any other line, but the effects are analogous to those in the United States.

Articles in Which Scarcity Has Been Felt Recently.

The hardware trade thus far has suffered little, except in cutlery and glass, while galvanized iron and sheet metals are becoming scarce. Grocers advise that raisins, currants, peels, grapes, and pickles are becoming scarce, while the dry-goods line reports a rapidly approaching scarcity of linen, woolen dress goods, and linoleum, which have increased to the consumer by 25 to 50 per cent over two years ago. Stationers report a scarcity in indelible pencils and crêpe paper. A shortage is also apparent in china, crockery, toys, dolls, and in some novelties, prices having increased by 25 to 50 per cent. Notwithstanding all expectations to the contrary, men's clothing has, if anything, been cheaper the past year than before the war.

A newspaper man remarked that Americans did not advertise as much in Canada as in former years. He suggested that perhaps the opinion prevailed in the United States that there was no money in Canada on account of the war. He was asked if it were not likely that many American firms experienced such a demand for their goods as to make it unnecessary to advertise to the same extent as in former years. A local firm recently wrote to an American firm with a view to negotiations relative to purchasing certain machinery. The firm replied that it had so many orders on file as to make it impossible to consider new customers for the time being.

DYEWOODS IN HONDURAS.

[Consul Walter F. Boyle, Puerto Cortes, Dec. 20.]

The shortage of dyestuffs in the United States has led to several inquiries as to the possibility of securing logwood in this district.

Although logwood can not be found here in commercial quantities, there is a considerable supply of fustic, and the consulate is in a position to place those who may desire this dyewood in touch with shippers of the same.

[A report on the effect of the embargo on logwood from Jamaica and British Honduras was published in *COMMERCIAL REPORTS* for Dec. 29; also a report on the logwood supplies in Central America.]

AMERICAN MOTOR CARS IN INDIA.

[Consul James Oliver Laing, Karachi, Nov. 10.]

The Department of Statistics for India has just published figures covering the importation of motor cars into India. It is stated that 620 cars from the United States were imported in the six months from April to September, 1915, while 407 came from the United Kingdom. The figures for the last four months are:

Months.	From United Kingdom.		From United States.		Total from all countries.	
	No.	Value.	No.	Value.	No.	Value.
June	65	\$93, 112	155	\$105, 116	241	\$225, 157
July	85	87, 597	44	35, 363	124	133, 342
August	32	36, 012	85	66, 154	140	134, 533
September	29	42, 176	157	142, 426	196	198, 229

Of the imports of tires and tubes in these months, 34 per cent came from Italy, 21 per cent from Japan, and 20 per cent from France. The imports from the United Kingdom were 21 per cent and from the United States about 3 per cent.

MANCHESTER DISTRICT EXPERIENCES TRADE BOOM.

[Consul Ross E. Holaday, Manchester, England, Dec. 7.]

The Manchester district is experiencing a trade boom which a local newspaper states is almost unprecedented. Since the earlier part of the war there has been a noticeable and steady revival, and at the present time the general trade situation is considered to have upset the calculations even of the leading commercial authorities in Lancashire. In nearly every branch of trade there has been a marked improvement. The returns of the Manchester Bankers' Clearing House provide a reliable guide to the business position and tend to show the extent of the present economic prosperity. The statistics for the week ended December 4, 1915, show that the total amount which passed through the Manchester Bankers' Clearing House was \$39,987,884, or nearly as high as the amount in 1913, which was a record year. Then the total amount reached \$40,362,721, or \$374,837 more than the week ended December 4, 1915, and nearly \$9,733,000 more than in the corresponding week a year ago.

CUBAN MARKET SHORT OF THREAD.

[Special Agent Garrard Harris.]

There is a shortage of cotton thread for sewing purposes in the Cuban market at present, in numbers 60, 70, 80, and 90. The supply of thread comes mainly from England, and a spool of thread of the established brand, which is called "Cardena," retails for 10 cents gold. Efforts have been made in the past to get American thread on the market, but these were met with considerable competition and price cutting on the part of the British spinners; and thread has been known to sell as low as 2 cents per spool. These methods have apparently caused American manufacturers to leave the market in possession of the British manufacturers. It may be that at this time a further advance can be made by American exporters, and such a strong position obtained that it can be retained. Many other varieties and yarns come from England almost entirely, and it would seem to be a good field for the American manufacturer to cultivate.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Advertising novelties, buttons, musical instruments, etc., No. 19687.—A letter to the bureau states that a firm in India desires samples and quotations on advertising novelties, buttons, musical instruments, cement, clocks, glassware, paper and paper goods, toys, and soap and perfumery. References are given.

General representation, No. 19688.—The Bureau is informed that a man who has been engaged in the import and export business for a number of years, with offices in New York and Paris, intends to locate in Paris permanently and would like to represent several American manufacturers of noncompeting lines. He desires to pool expenses, such as office rental, advertising charges, etc.

Shoe laces, No. 19689.—An American consular officer in Ireland reports that there is a demand in his district for shoe laces. It is suggested that manufacturers of such articles send quotations and full information as soon as possible.

Drainage and irrigation machinery, No. 19690.—A report from an American consular officer in South America states that a representative of several private interests is in the United States with the object of purchasing drainage and irrigation machinery for large and small canal dredging, machinery for the transportation of earth, bridge connections, etc. The representative also desires to meet electrical construction engineers and manufacturers of water-power electric machinery. Quotations on water-power and electric-transmission equipment, as well as offers for the construction of a large capacity water-power electric plant are requested. Bank references are given.

Filtering plant, No. 19691.—The Dunedin City Council has called for tenders for the supply and erection, in full working order, of a mechanical filtering and aerating plant for the public baths (contract No. 376). Copies of specifications and conditions with form of tender, together with drawings, may be obtained from the City Engineer, Town Hall, Dunedin, New Zealand, on payment of \$9.75, which amount will be refunded upon the return of the documents in good condition by February 28. Sealed tenders, on the proper forms, will be received at the office of the Town Clerk, Dunedin, until February 9, 1916. Tenders must be accompanied by a marked check or cash to the amount of 10 per cent of the value of the tender. The bureau has no further information relative to this opportunity.

Sheet and plate glass, No. 19692.—An American consular officer in Wales reports that a firm of wholesale glass merchants desires to receive c. l. f. quotations on sheet glass in lots of 400 to 800 cases, 300 square feet in each case, the size of the sheets being 56 by 40 inches. Quotations are also desired on plate glass of different sizes, with plain and beveled edges, prices expressed by the square foot. It is stated that the plate glass which is in demand is about $\frac{1}{4}$ inch thick and is 150 by 80 or 90 inches. Bank references are given.

Glucose and corn starch, No. 19693.—A commercial agent of the bureau reports that a firm is interested in making business connections with exporters for the sale of corn starch and glucose in Mediterranean countries.

Railway supplies, No. 19694.—A report from an American consular officer in Denmark states that tenders have been invited for 135,000 fishplate bolts, 10,000 joint-sleeper bolts, 550,000 nut locks for fishplate bolts, 800,000 spikes, and 1,100,000 wood screws. Specifications, general conditions, together with drawings may be examined at the Bureau or its district offices. (Refer to file No. 70274.)

Railway, No. 19695.—An American consular officer in England reports that quotations will be received at the "Direccion-General de Obras Publicas, Ministerio de Fomento," Madrid, Spain, until May 21, 1916, for the construction of a secondary railway from Palencia to Aranda de Duero. The line will be of meter gauge and the average cost per kilometer must not exceed 100,000 pesetas (about \$19,466). The minimum weight per meter of the rails to be used will be 66 pounds. The Bureau has no further information relative to this opportunity.

SUGGESTIONS FOR AMERICAN EXPORTERS TO SPAIN.

[Consul Robertson Honey, Madrid, Nov. 14.]

Americans intending to export to this district, in order to facilitate the introduction of their products, should comply with each of the following suggestions. There is a decrease in underpaid postage in this district, but typewritten signatures are on the increase; this latter habit, according to Madrid merchants, is indulged in by Americans, but otherwise is absolutely unknown here, and is interpreted as lack of interest in the matter in hand. The suggestions are as follows:

- (1) Postage to Spain is on the basis of 5 cents—not on the basis of 2 cents.
- (2) The introduction of American products will be facilitated if correspondence is in Spanish and if weights and measures are reduced to the metric system.
- (3) Signatures to correspondence should be in ink or indelible pencil—not typewritten.
- (4) Business will probably not ensue if quotations are limited to f. o. b. American port. The Madrid merchant will accompany an order with a sight draft for one-third of the invoice total; he will forward one-third more on receipt of the goods and he will forward the remainder 90 days thereafter. He will probably have no dealings on any credit basis other than the above.
- (5) The consulate would appreciate information from American houses as to the results of negotiations initiated by the consulate on behalf of American exporters.

Exporters Should State Nationality.

Consul General John P. Bray, of Singapore, reports that it is highly desirable that Americans wishing to open trade connections in the Straits Settlements should plainly state the nationality of the firms they represent. The need for such action has been brought to the consular officer's attention on several occasions, and he urges that the point mentioned be carefully observed by American exporters.

CONDITIONS IN AUSTRIAN AND GERMAN HOP DISTRICTS.

[Translation from article by Theodor Gauba, director of Saaz Hop Growers' Association, in Prager Tagblatt, Nov. 10.]

It has frequently been pointed out that while other products of the soil are mostly used for food and have, through the war, in the last two years risen to enormous prices, with hops the contrary is the case, because hops are products of the soil which are exclusively used for making beer. Austria-Hungary and Germany, as is well known, produce, as the principal hop-growing districts of the world, not only what is annually required for local (national) use for making beer, but are also obliged, according to their crops, to export 50 to 75 per cent of their product.

In consequence of the war the export has been stopped for months. The production of beer has, in both countries, been restricted to 40 per cent of the normal output, and the inland demand for hops has dropped by thousands of centners, whereas in 1914, principally in Germany but also in Austria, there were record hop crops. (Centner=50 kilos, 110 pounds.)

Prices Do Not Cover Increased Expenses of Production.

Although the year 1915 produced but comparatively small crops in both countries, the reserve had become large, so that the prices for 1915, which now vary between 20 and 70 marks (mark=\$0.238) in Germany, between 55 and 80 kronen (krone=\$0.203) for Austrian hops, and between 80 and 125 kronen for Saaz hops, do not cover, by far, considering the small crops, the increased expenses of growing. The hop producers of Austria-Hungary and Germany were therefore working in both years of the war at a loss which may be estimated at millions.

The total loss for Austria-Hungary to the hop trade for the year 1914 may be figured to amount to more than \$3,400,000. For both the years of the war the total loss to the trade may be placed at \$10,000,000. The loss to the hop trade in Germany rises even higher than with us, and it would be a task for a competent person even approximately to estimate it. The consequence of these unfortunate conditions which for the present are only ascribed to the hop trade will also hurt the breweries, but not before a year or two has passed. Forced by two unprofitable years, the hop trade of Austria-Hungary and Germany will of course be obliged further to restrict the hop acreage.

Hop Growers Will Turn to Other Crops.

The hop growers will turn to the culture of other products of the soil, principally grain, turnips, and other foods, as these products will quite certainly, for the next few years, show good and profitable prices.

In Austria-Hungary and Germany we may count on a decrease of acreage of perhaps 25 to 30 per cent, and the largest percentage of this reduction will have to be borne by those districts which in 1915 either could not sell their hops or sold them at very low prices, as Upper Austria, Galicia, Hungary, and districts in Bavaria, Wurttemberg, Baden, and Alsace-Lorraine.

[Consul Wallace J. Young, Carlsbad, Austria, Nov. 20.]

Labor Supply for Hop Picking and Wages Paid.

Through an arrangement between the Saaz Hop Growers' Association and the Bohemian Registry and Employment Bureau, a suffi-

cient number of hop pickers was obtained to take care of the crop. The fee of the bureau had to be paid. These pickers, who came mostly from the "Bohemian Forest" or the Erzgebirge (Ore Mountains), were furnished with transportation from their homes to the hop district the first of the season, and at its close were given free transportation home. Their employers furnished them with living sheds, and daily with soup, bread, and potatoes.

This year the wage for picking was \$4.80 per centner of 110 pounds; last year it was \$4. In 1914 the average cost, per centner, for growing hops in the Saaß District was \$13.20. This year, on account of the greatly increased cost of labor, etc., the cost per centner averages \$22.12. About three-fourths of the Saaß crop of this year has been sold, the buyers being mostly middlemen.

[Previous dispatches relating to this year's production of hops were published in *COMMERCE REPORTS* for July 30, Sept. 13, Sept. 27, and Oct. 20, 1915.]

NEW ZEALAND PUBLIC-WORKS LOAN.

[Consul General Alfred A. Winslow, Auckland, Nov. 17.]

The 4½ per cent public-works loan of \$9,733,000 authorized by the New Zealand Government has just more than twice over been subscribed at par, and financial conditions in general are in splendid shape and the monetary outlook is good. In speaking of the loan Sir Joseph Ward, minister of finance, had the following to say:

It will be a considerable time before the Government goes upon the New Zealand market for another loan. In all human probability we shall not have completed the expenditure of this money on public works when the war reaches its conclusion. War-loan money, which has been coming into the country at the rate of £500,000 (\$2,433,250) a month, or £6,000,000 (\$29,199,000) a year, will then have ceased to reach us, and the question of future borrowing and where it shall be effected will be considered at that time. The Government will continue to assist settlers and workers by advancing money at low rates of interest in comparison to what we are paying to investors. We will continue to make advances to local bodies also, the limit in that branch being £5,000 (\$24,332) for a single advance. This certainly should have a steadying effect on the money market.

The loan was extensively taken by the small investor, which speaks well for the credit of the country and the patriotism of the people, when loans in other parts of the world are made at 5 per cent or higher.

It is proposed to use the proceeds of the loan solely for internal improvements, public and private, as indicated above by the minister of finance. The advances made by the Government are often of great benefit to private undertakings and aid materially in developing industrial and agricultural developments, that must languish without it.

Interchange of American-Chilean Commodities.

In the September quarter 2,000 barrels of Portland cement were imported from the United States and large quantities of American rice were contracted for by Valparaíso firms as a direct result of the trade-extension efforts of Consul General L. J. Keena. During the same period 600 barrels of Chilean honey were sold to American purchasers through the medium of a Trade Opportunity submitted by Mr. Keena and published in *COMMERCE REPORTS*.

QUICKSILVER PRODUCTION MORE THAN DOUBLED IN VALUE.

The domestic output of quicksilver in 1915, based on preliminary figures collected from the individual producers by the United States Geological Survey, was 20,681 flasks of 75 pounds each, valued at the average domestic price for the year at San Francisco (estimated at \$85.50 a flask) at \$1,768,225. Compared with the survey's final statistics for 1914, which gave a production of 16,548 flasks, valued at \$811,680 (the smallest since 1860), the output of 1915 shows an increase of 4,133 flasks in quantity and of \$956,545 in value. The value therefore more than doubled, owing to the greatly increased prices demanded, but the quantity increased only about 25 per cent. The production was the largest in value since 1881 and the greatest in quantity since 1912. On comparing the production of 1881 with that of 1915 in value, it is interesting to note that it required 60,851 flasks at the average price of \$29.83 per flask for that year to exceed in value the much smaller output at the greatly enhanced average price for 1915.

The estimated output for California in 1915 was 13,916 flasks, valued at \$1,189,818, against 11,303 flasks, valued at \$554,414 in 1914. The chief producers in California in 1915 were the New Idria mines, of San Benito County; the New Guadalupe and New Almaden, of Santa Clara County; the Oceanic, of San Luis Obispo County; the St. John, of Solano County; and the Oat Hill, of Napa County. Among other producers were the Mercy, of Fresno County; Great Western, Wall Street, and Helen, of Lake; Parkfield, of Monterey; the Knoxville and the Aetna mines, of Napa; the Wonder and Hernandez, of San Benito; the Cambria and Karl, of San Luis Obispo; the Los Prietos, of Santa Barbara; the Phoenix, of Santa Clara; the Great Eastern and Cloverdale, of Sonoma; and the Reed, of Yolo.

No production of quicksilver was reported to the survey from Arizona, Oregon, Utah, or Washington in 1915, although some development work was reported from Arizona and Oregon. In Nevada, active prospecting and development continued in 1915, and the total output increased. The combined output of quicksilver in Nevada and Texas was 6,765 flasks, valued at \$578,407, in 1915, against 5,233 flasks, valued at \$256,678, in 1914.

The European war directly affected the domestic quicksilver industry—first, by greatly increasing the demand for the metal in the manufacture of fulminate for explosives, and second, by reducing the imports of foreign supplies into the United States. The net result has been steadily increasing prices and encouragement to producers to operate at maximum capacity. For the first time in many years the demand has called for more than the output. The productive capacity of the domestic quicksilver mines is small but has averaged, in recent years, more than the demand, which has fallen off since cyanidation has so largely replaced amalgamation in the recovery of gold and silver from their ores.

The average San Francisco domestic market price is estimated at \$85.50 for 1915, against \$49.05 for 1914. With the exception of the year 1874, when the average price was \$105.18 per flask of 76½ pounds, the average price of 1915 was the highest since the beginning of the industry in 1850, when the average for the year was given as \$99.45.

The records of the Bureau of Foreign and Domestic Commerce show that the exports of quicksilver from the United States for the calendar year 1915 were about 3,300 flasks, valued at an average of about \$67.73 per flask, against exports of 1,446 flasks in 1914. The imports entered for consumption are estimated for 1915 at 5,200 flasks, valued at about \$52.70 per flask, against 8,198 flasks in 1914.

BRADFORD EXPORTS TO UNITED STATES.

[Consul Augustus E. Ingram, Bradford, England, Dec. 9.]

The declared exports from the Bradford consular district to the United States during November were larger than during any month since the outbreak of the war. They amounted to \$2,888,910, as compared with \$1,138,475 in November, 1914. The increase was due largely to the export of raw material, the value of wool exported being \$1,772,590 and wool noils and waste, \$56,785. These items were larger than in the preceding month; when the embargo was raised, while in November, 1914, no raw wool was shipped, owing to the strictness of the embargo. Exports of wool tops, which were shipped in small quantities in October for the first time since last June, amounted to \$30,009.

The shipments of worsted and mohair yarns appear, however, to be steadily decreasing, the totals for November being practically negligible, while prior to the war they were over \$100,000 each month. Exports of wool and mohair cloths amounted in November to \$436,949, a decrease of \$248,832, as compared with the same month in 1914, while, on the other hand, cotton cloths (being mostly dyed cloths such as linings) amounted to \$376,096, an increase of \$249,543 over the same period in 1914. Large American orders for spun silk yarn have been placed in this district, and the shipments in November amounted to \$77,294. The embargo on Tussah silk noils is still in effect and no shipments have been made, though stocks here appear to be in excess of local demand.

The total value of the declared exports from Bradford to the United States for the first 11 months of 1915 amounted to \$17,576,218, a big decrease as compared with \$29,089,903 for the same period of the previous year. The feature so far in 1915 has been that during the last two quarters of the year the exports have been steadily increasing, while last year, owing to the embargo, there was a great falling off in the last three months.

TO STUDY USE OF LIME HYDRATE IN CONCRETE.

The use of lime hydrate in Portland-cement concrete has been advocated so vigorously that the United States Bureau of Standards recently advocated the calling of a conference at which a number of engineers and chemists vitally interested in Portland cement and lime hydrate would present their views, including those engineers and chemists who are more or less neutral on this subject. Such a meeting has been held at Pittsburgh, and about 20 from outside of the city attended. The use of this material in concrete was discussed, and an investigation was outlined to include all phases of the question.

HONGKONG FLOUR PROSPECTS UNCERTAIN.

[Consul General George E. Anderson, Hongkong, China, Nov. 8.]

The flour situation in China has been in a very uncertain state during the closing months of 1915, and the prospects for the coming season are fully as uncertain. The imports of American flour into Hongkong during the first nine months of 1915 have amounted to only a fraction of the number of bags imported in the corresponding period of 1914, but aside from the decreased imports, which have been due in the first place to the high price of flour in the United States and the high freight rates obtaining on the Pacific, the decrease has been due very largely to the operations of the Yangtze Valley and northern Chinese mills, which have been shipping flour into Canton, Swatow, Amoy, Foochow, and the Hongkong import field generally, and have also been exporting considerable quantities into the Straits Settlements, the Malay States, Java, and various other portions of the East Indies.

This actual competition on the part of the Chinese product with American and other imported flour, which has been anticipated and more or less discounted, is complicated, however, by various local considerations which have made it difficult if not impossible to deal with the situation successfully from an American standpoint.

Results of Irregularity in Supply of Chinese Flour.

The supply of Chinese flour is irregular at all times, particularly because of irregular supplies of Chinese wheat. The result is that whereas Chinese sellers may be in the market one day with a considerable supply of flour, they may be out of the market entirely the next day. Chinese buyers, accordingly are disposed to buy only for immediate needs, and American sellers find it difficult, if not impossible, to anticipate in any degree of accuracy what the requirements of the Chinese in the near future are likely to be. Inasmuch as it is impossible to ship flour across the Pacific at present, except on advance engagements of tonnage in trans-Pacific steamers, which must be paid for, the situation becomes almost an impossible one. Business is done more or less on a hand-to-mouth basis, and is irregular and unsatisfactory at best.

Special Tax Upon Certain Exports of Flour.

In actual Chinese competition with Chinese flour, also, serious irregularities are met with. By Chinese law the export of flour from China to any foreign country is prohibited, but in practice the export from certain ports and under certain conditions is allowed upon the payment of a special tax. This tax on the export of flour from Shanghai at the present time, for example, is 60 cents a bag upon a fixed and agreed amount of flour, and flour shipped from Shanghai to Hongkong or Singapore, for example, pays that tax. However, flour can be shipped from Shanghai to Amoy or Swatow or other Chinese port without the payment of this special tax, and it can there be transhipped and sent on to Hongkong or Singapore at a tax of about 15 cents a sack. The general understanding is that when the amount of flour upon which a tax of 60 cents per sack had been established is shipped from Shanghai, the tax will be lowered, but there seems to be disagreement among the authorities as to the point to which it will be lowered, since both 25 cents per bag and 32½ cents per bag are given as the amount of the new tax.

Stocks in Hongkong at Present Unusually Small.

All these considerations affect directly the sale of American flour in this field, especially the sale of American flour in southern and East Indian ports from Hongkong stocks. Stocks in Hongkong at the present time are unusually small, amounting to no more than 220,000 bags. Considerable shipments are enroute from the United States, but much of the flour now coming has been brought over as against possible freight difficulties.

It is already apparent that Australian competition with American flour will be unusually keen in the East Indies, and perhaps even in the Chinese portion of Hongkong's field, during the next few months. Crops in Australia are reported very large. American flour, through Hongkong jobbers, has been going freely to the East Indies during the past year.

[Previous articles on the flour situation in China were published in *COMMERCE REPORTS* for Sept. 28 and Dec. 8, 1915.]

TRAFFIC IN WATER-SOAKED OYSTERS.

Inspectors of the Department of Agriculture, in giving special attention to the heavy traffic in oysters during the holiday season, have found that it is the practice of some dealers to add fresh water to shucked oysters in such a way as to greatly increase the size of the oysters. The oyster when brought in contact with fresh water for several hours will "drink" or absorb a considerable quantity of the water, and will increase in size in exact proportion to the amount of water which it "drinks." As oysters are usually sold by the pint or quart, any increase in their size, due to the addition of water, enables the dealer to fill the pint or quart measure with a smaller number of oysters.

In order to increase the size, oysters must be soaked in fresh water or water that is only slightly salty. They will not "drink" enough of the salt water in which they are grown to increase materially in bulk. Nor will oysters increase in bulk to any extent from being washed in fresh water if they are allowed to remain for only the few minutes necessary to cleanse them.

The practice of increasing the bulk by the addition of water is not confined to shucked oysters. Some dealers float the oysters for several hours while yet in the shell, in fresh water or water that is much less salty than the water in which the oysters were grown.

The addition of water to oysters lowers their food value, and such oysters are adulterated under section 7 of the food and drugs act, which provides that food is adulterated if a "substance has been mixed and packed with it so as to reduce or lower or injuriously affect its quality or strength," and also if "a substance has been substituted in whole or in part for the article." The shipment of such oysters in interstate commerce or their sale in the District of Columbia or the Territories of the United States constitutes in the department's opinion a violation of the food and drugs act. The Oyster Growers' and Dealers' Association of North America is cooperating with the Department of Agriculture in stopping interstate traffic in oysters adulterated in this manner. State officials are also cooperating.

CHINESE GUILDS POPULAR IN SWATOW'S TRADE.

[Consul George C. Hanson, Swatow, China, Nov. 3.]

Chinese guilds are established to decide any questions which affect generally the merchants belonging to them, to settle trade disputes and questions of collection of debts among their members, or disputes between members and outsiders. Each guild has its own particular days of meeting, or, rather, "dinners," in which all members join. The guild also levies a kind of contribution for its support and for a reserve fund. There is an admission fee as well as a regular levy. Any firm may be admitted into a guild, provided it is willing to pay the fees and obey the guild rules.

Until the revolution large importing firms did not join the guilds, as the advantage they could get was small and the fees were heavy. (The fees are based on the amount of business transacted and amount to about one-tenth of 1 per cent of the business done.) During the revolution the commanding officer of the troops stationed at Swatow appealed to the chamber of commerce for support for his soldiers, and these importers were then compelled to join and pay dues.

Some Chinese Guilds Have Special Functions.

There are certain guilds which have special functions. For instance, the banking guild fixes the rate of exchange and rate of interest daily; the sugar merchants' guild takes charge of and loans the guild's official steelyards for weighing sugar, etc.

In everyday business dealings there is no difference between a member and a nonmember merchant. The members of the guild compete among themselves as well as against outsiders; that is to say, the guilds lay no restrictions on the routine transaction of business.

Some of the principal lines of business having guilds in Swatow, with the customary lengths of credit granted by the firms engaged in these lines, are:

Business.	Terms of credit.	Places to or from which goods are shipped.
Beancake and bean merchants.....	1 month.....	From North China.
Cereal merchants.....	do.....	From North China and South Seas.
Piece-goods merchants.....	One-third per month until settlement.	From Hongkong.
Hongkong import and export merchants....	60 days.....	Do.
Cotton and yarn merchants.....	1 month.....	From North China and Hongkong.
Drug merchants.....	Settled each year.....	Do.
Sugar merchants.....	60 per cent cash, balance 15 days.	To North China.
North China sundries merchants.....	Various.....	From North China.
Match merchants.....	1 month.....	From Japan.
Fruit merchants.....	Cash.....	To South Seas.
Sundries merchants.....	Festival or end of year.....	Various places.
Wine merchants.....	1 month.....	From North China.
Oil, bean, and peanut merchants.....	Cash.....	To Hongkong and locally.
Dry-provision merchants.....	25 per cent per month.....	To Singapore, Siam, etc.
South Sea merchants.....	From various places.
Salt-fish merchants.....	From Hoihow.
Hoihow merchants.....

[Consul Lawrence P. Briggs, Saigon, French Indo-China, Oct. 22.]

Contracts to be Let for Irrigation and Navigation Project in Tonkin.

As a preliminary to the letting of contracts for the mixed irrigation and navigation project on the left bank of the Rouge and both banks of the Claire River, in the Province of Vinh-yen, just north of Vietri,

the Government has, on its own account, been making experiments in constructing embankments, floodgates, and irrigation and drainage ditches.

In December, 1914, excavation was begun on a retaining wall, and a floodgate 30 meters (98.4 feet) wide, on the left bank of a small stream at Lien-Son, about 25 miles above Vietri. The excavation presented no difficulties, and it was found that the soil was firm enough to support retaining walls of masonry. These walls had reached a height of about 2 meters (6.56 feet), when the work was interrupted by the unprecedented floods of July and August. They will be rebuilt immediately. On the left bank attention was given to constructing a floodgate, and draining about 25 square meters of land which seemed to present the greatest difficulties. The attempt was successful, and has demonstrated the possibility of constructing concrete floodgates.

No contracts have yet been made for the construction of dikes and canals in connection with the project; but the specifications are now in preparation for the first set of contracts, and sealed bids will soon be called for. These contracts will call for the construction of 13 miles of principal and 18 miles of secondary canals. Subsequent contracts will be granted for 30 miles of principal and 12 miles of secondary canals.

This project, involving an expense of nearly \$300,000 (U. S. currency), was approved by the Government December 26, 1913. The construction work will be mainly of reinforced concrete, and as cement is one of the principal exports of Tonkin there will be little opportunity for foreign exporters of this product. The machinery most in demand for this work will be concrete mixers and excavating machinery. Further information may be obtained from l'Ingenieur en Chef, Bureau des Travaux Publics, Hanoi. Correspondence should be in French.

IMPORTANT ROAD IMPROVEMENT IN CUBA.

[Consul P. Merrill Griffith, Santiago de Cuba, Dec. 9.]

Considerable interest is manifested here by many prominent citizens in the construction of a public road between Santiago de Cuba and Guantanamo. The distance represented by the proposed route is about 60 miles and the work as far as Moron has already been completed, that portion from Santiago de Cuba to Cristo being in excellent condition. It was built during the American intervention.

Work is now going on in the vicinity of Moron, and in order, if possible, to secure an additional appropriation from the Federal Government through the present Congress, a mass meeting was held at La Maya on November 30. It was attended by more than 1,000 persons, special delegates being sent by all the municipalities along the proposed route.

The remainder of the distance from Moron to Guantanamo is through a mountainous section of the country, and it is stated that the cost of construction will amount to about \$15,000 per mile.

It is hoped that the enterprise may be successfully carried out, inasmuch as it would prove of inestimable value to the commercial and industrial interests of this section of the island. The president of the executive committee elected at the mass meeting is Mr. Luis Hechavarria, whose address is Santiago de Cuba.

SPANISH MARKET FOR COAL.

[Consul Percival Gassett, Malaga, Oct. 30.]

The amount of coal consumed in Malaga, about 150,000 tons a year, has not been reduced on account of the war, with the exception perhaps of bunker coal; but what has been affected by it has been the kind of coal consumed; that is, the importation of English and Welsh coal.

According to the customhouse statistics, in the calendar year of 1912 (figures for 1913 are not available), there were imported into Malaga 101,479 metric tons (1 metric ton=2,204.6 pounds) of coal and during 1914, 63,788 tons. This was all English and Welsh coal, for no other kind has ever been imported, as far as is known. When coal is cheap—about 23 shillings (\$5.60) for Newcastle, and 28 shillings (\$6.81) for Cardiff, c. i. f. Malaga—a good deal is sent from here to interior points of this Province. But now that prices are high—about 45 shillings (\$10.95) for Newcastle, and 50 shillings (\$12.17) for Cardiff, c. i. f. Malaga—Spanish coal from the mines at Peñarroya, near Cordova, about 125 miles from here, is brought to Malaga and used instead whenever possible. This native coal is of fair quality and somewhat resembles the English Newcastle; the best grades of it, Cabezas de Vaca and Graso, are estimated to be only about one-third less in steam-producing value than Newcastle or Cardiff. This Spanish coal costs 39 pesetas a ton (\$7.22) at the mines and can be laid down in Malaga for 50 pesetas. At the present rate of exchange of 5.40 pesetas to the \$1, this is equivalent to about \$9.25 a ton.

Terms Offered by American Firm Refused.

Welsh coal at the end of July, 1914, was quoted at 19 shillings (\$4.62) f. o. b. Cardiff; freight to Malaga was then about 8 shillings (\$1.95), making a total cost of \$6.57. As stated previously, the price of Cardiff, c. i. f. Malaga, is now about 50 shillings (\$12.17). The quotation for a cargo of 1,750 tons of American coal (the place of origin of the coal was undecipherable in the telegram) made recently to a leading wholesale dealer here to be sent by sailing vessel was 50 pesetas (\$9.25), c. i. f. Malaga. The offer was not accepted, the remark of the dealer to the writer being as follows:

As far as the purchase of American coal is concerned while the war is on—for competition is not possible with English coal when it is cheap—the merchants here can have their choice of English and Welsh coal at certain high prices, or, if they prefer, Spanish coal at a low price; all of which they have tried and know about. They don't want to pay cash for an American coal they don't know anything about and have never tried. Suppose they did order a cargo and it didn't turn out as was expected, it would mean a loss to the importer. We prefer not to take the chance. If Americans can supply as good coal as Cardiff and Newcastle for less money and can demonstrate its quality to us as well, they can do a good business here. The coal trade of Spain is worth having.

Users of Coal in Malaga.

Malaga has few manufactories, and the majority of these use electricity as motive power, which is supplied very cheap from the falls of El Chorro. The use of coal by the people generally is small, as on account of the mild climate no heat is used in the houses and cooking is done mostly by gas, coke, and charcoal. The consumption

of coal in Malaga is confined almost entirely to the Correos de Africa steamers, the gas company, the railroads, three sugar refineries, and a couple of fishing companies.

One railroad, of which the main office is at Paris but which is managed by a board of directors in Malaga, has a contract with the Peñarrova coal mines. It formerly owned these coal mines and on selling them to a French syndicate in 1900 made a contract by which the mine owners have to supply them with a large quantity of coal annually, about all they need, at a price said to be 37 pesetas (\$6.85) a ton. In return, the railroad company agreed to carry all coal from the mines to Malaga, for individual needs, at the rate, it is said, of 13 pesetas (\$2.41) a ton. The freight on the same quantity from Malaga to the mines, or any similar distance, would be about 20 pesetas (\$3.70).

The amount of coal consumed annually by the railroad is about 100,000 tons; before the war the company used to buy 15,000 to 20,000 tons of Cardiff each year for special service, such as express trains, and store it, part in Cadiz and part in Malaga. It is now using Spanish coal only. The director of the road stated that he was in receipt of numerous letters from American exporters of coal and that the latter could do nothing more at present than keep him posted at regular intervals by quotations, c. i. f. Malaga preferred. All plans for purchases of coal for this railroad are first agreed upon by the board of directors in Malaga and then submitted to the head office in Paris for ratification.

Railroad Needs—Gas Company—Coal for Steamers.

A Belgian railroad company of Malaga before the war imported the small quantity of coal it uses on its two lines, about 1,800 tons a year, from Belgium and Germany and paid 44 pesetas (\$8.14) a ton for it placed in Malaga. Last year Cardiff was substituted, and on the same conditions the price paid was 58 pesetas a ton (\$10.73). Next year the first section of the Malaga-Algeciras-Cadiz railroad will be finished, and the quantity of coal needed will be increased to probably 2,500 tons a year.

The gas company in 1914, before the war, purchased 10,000 tons of Newcastle at 25.72 pesetas (\$4.76) c. i. f. Malaga and now pays 50 shillings (\$12.17) a ton for it. The manager said that they have not tried American coal so far because of the uncertainty regarding its quality and especially the date when it can be delivered in Malaga. Gas coal, as is well known, can not be stored much over six months without danger of spontaneous combustion, so that the stock on hand of the company must be renewed every six months. Uncertainty as to the time of arrival of an order would cause the company serious inconvenience and embarrassment.

Purchases of coal for the gas company are made from Europe by an agent in Lyon, France, who annually contracts for about 200,000 tons. Of this amount 10,000 tons are delivered in Malaga and the remainder is distributed among a chain of companies in which the agent is interested at Venice, Florence, and Rome. It would be worth while for American exporters to make an effort to see him personally or at least communicate with him.

The steamship line known as the Correos de Africa, which has a daily service between Malaga and Melilla, the Spanish colony in

Africa, is a Valencia company. It maintains an agent in Liverpool whose business it is, among other duties, to buy coal. In 1914, 60,000 tons of English coal were purchased for the exclusive use of the steamers, 20,000 tons of which were sent to Malaga and 1,250 tons to Almeria, the rest being divided among the ports of Cadiz, Valencia, and Barcelona. Contracts are made by the board of directors in Valencia.

Bunker coal for tramp steamers is purchased from one of the wholesale dealers in Malaga.

Sugar Refineries—Fishing Companies—Iron Foundry.

The largest of the three sugar refineries in Malaga buys about 10,000 tons of English coal a year and will have to continue using as good a kind. Each of the other two refineries in 1914 imported about 3,000 tons of English coal, but this year the factories are closed and they use only enough for their agricultural machinery—about 1,000 tons a year each.

There are also one or two fishing companies in Malaga that maintain a fleet of about 25 steam trawlers. Before the war their managers imported English and German coal, but they are now using Spanish coal entirely; their imports were not large.

An iron foundry which failed some years ago has resumed operations this month by means of capital provided by a Belgian living in Nice, who is the largest shareholder in the new company.

Discharging Facilities—Freight Rates.

The port works of enlarging and improving the harbor, commenced in 1888, were finished a year or two ago. Three new piers, along which ships of the largest draft can lie, are available for loading and unloading cargoes; large cranes also have been sent up, and railroad tracks connecting the harbor with the station of the two railroads have been laid down the whole length of two of the piers. The facilities for discharging coal in Malaga are adequate.

The price of English and Welsh coal is possibly no higher in Great Britain than it was before the war; the whole of the advance in the price of this commodity in Spain is due to the great increase in the cost of freight on coal from Great Britain to Malaga; before the war it was about \$2.07 a ton and it is now \$6.07 to \$7.30, while \$7.79 was paid recently by the sugar refinery.

It remains to be seen whether there will be the same increase in freight on coal from the United States to Malaga. But if American exporters of coal can quote c. i. f. to Spanish ports cheaper than British coal exporters can, the former will be able to do a fair business. Freights should always be quoted c. i. f. Malaga in preference to f. o. b. American ports. British coal dealers who have studied the question of exporting to Spain try to save importers as much trouble as possible. The writer has a circular letter from one of them in which, in addition to the prices quoted on the coal, the freight rates from Cardiff and London to all the principal ports in Spain are given.

Suggestions for American Exporters.

As American coal has not been tried in Malaga, it would be well for exporters who write to Malaga making quotations to bear in mind that the names of the various coal districts in the United States mentioned by them in their letters, to indicate the kinds of coal on which

they are quoting, such as: Pocahontas, New River, Kanawha, etc., do not convey any idea to the minds of Malaga coal importers of the quality of the coal offered for sale. They probably have never heard the names before. In fact, it is doubtful whether the names of the coal-producing States in the United States are much better known. It is suggested, therefore, that when letters are sent to Spanish importers quoting prices for American coal, an analysis should be given of each kind offered, so that they may get an idea of the quality. It would be better still if a cargo could be consigned to a dealer to be sold at a minimum price. In all cases personal interviews should be arranged, if possible, with large importers; if letters are sent, they should be written in Spanish.

[The names and addresses of wholesale coal dealers in Malaga, the two railroad companies, the gas company and its agent in Lyon, the steamship company, the sugar refineries, and the iron foundry referred to may be obtained from the Bureau of Foreign and Domestic Commerce or its district offices. Refer to file No. 69885.]

BAHIA MARKET FOR CODFISH.

[Consul Robert Frazer, jr., Bahia, Brazil, Nov. 17.]

An important business is done at Bahia in codfish, of which 129,000 drums were imported in 1914, a year of exceptionally depressed financial conditions and small imports. Customhouse figures show the following values of imports of codfish here during the past three years: 1912, \$1,161,750; 1913, \$1,296,864; 1914, \$1,220,232. Perhaps 90 per cent of the fish come from St. Johns, Newfoundland, and Halifax by sailing vessels direct, and some via New York by steamer from the same origin. Before the European war some codfish came from Norway via Hamburg. The Newfoundland fish arrive in drums of 128 pounds and half drums of 64 pounds net, while those from Norway were packed in cases. Nearly all the business is now done through Liverpool firms, who have branch houses or agents at St. Johns and Harbor Grace.

Before the war the price paid by importers varied between 40 and 45 shillings (\$9.73 and \$10.95) per drum c. i. f. Bahia, and is now said to be 48 to 52 shillings (equivalent to \$11.68 to \$12.65 at the normal rate of \$4.8665 per pound). The price at which cod is now being wholesaled here is about 56 milreis (\$13.44) per drum. The qualities preferred are known as "prime dry" and "seconds," the latter selling at 2s. 6d. (\$0.61) per drum less than the former.

The Brazilian tariff provides for a duty on codfish of 60 reis per kilo, less an arbitrary tare of 10 per cent in weight deducted when the fish are packed in drums. The actual duty, however, taking into consideration the 2 per cent surtax and the proportion of the duty payable in gold, is equivalent to \$0.99 per 100 pounds (1 milreis = \$0.24; 1 kilo = 2.2046 pounds). According to a bill covering a recent importation, 5.3 milreis (\$1.27) was paid per drum. This included customhouse broker's fee and all expenses connected with the customhouse.

Hake and pollock are not now known here, but if prepared and packed in the same way as codfish and offered at a competitive price, they might find acceptance in this market.

[The names of the leading importers of provisions at Bahia may be obtained from the Bureau of Foreign and Domestic Commerce or its district offices. Refer to file No. 69764.]

ECONOMIC CONDITIONS IN NORWAY.

[American Minister A. G. Schmedeman, Christiania, Oct. 2.]

The cost of living in Norway since the war began has gone up enormously, some articles 100 per cent. It is estimated that the average increase is about one-third of 1 per cent. This is due to various causes. In some cases the producers are taking advantage of the situation to make large profits; then, again, it is impossible to import many products which were available formerly from other countries. As Norway is dependent on foreign countries for a great many of the necessities of life, the prices of some goods imported are greatly increased, owing to excessive shipping and insurance rates.

The Provision Commission (Proviantcommission) appointed by the Norwegian Government has for some time past endeavored to cope with the situation with a view to procuring stores of supplies and regulating the prices of all kinds of foodstuffs. The commission has asked permission of the Government to import frozen and conserved meat from Argentina, where a Norwegian firm has agreed to erect the necessary establishment for the freezing and conservation of slaughtered meat provided this permission be granted. Should this be brought about, the meat could be sold in Christiania at approximately 50 per cent cheaper than the present prices, whereas at present the prices are 50 per cent higher than before the outbreak of the war. Coal and coke, which latter is largely used for the heating of domestic stoves, have gone up over 100 per cent.

Increased Bank Deposits—Industrial and Agricultural Conditions.

There is an important increase in bank deposits. The bank statements in September, 1915, showed that the gold reserve was the largest in the history of the country. At the outbreak of the war the Norwegian Government obtained a loan of 11,000,000 kroner (\$2,948,000) in England, which will be paid back on the 7th instant.

Industrial conditions are normal. The output of the majority of the factories is rather above the average and labor is being well employed. The wood-pulp and paper factories have greatly increased their turnover, owing to increased shipments of paper to certain countries not in a position to supply their demands. The shipyards are likewise active and the canning factories are doing a large amount of business.

The crops are about the average. It had always been believed that it was impossible to grow wheat on the west coast of Norway, but it was tried for the first time this year with excellent results and the quality was found to be superior to that raised in the southeastern part of the country.

Telegraphic and Shipping Services.

Telegraphic conditions have improved, but are far from satisfactory. The "Proviantcommission" takes charge of the sending of commercial telegrams whenever required.

Notwithstanding that approximately 2 per cent of the Norwegian merchant vessels had been lost or sunk since the outbreak of the war, up to July 3, 1915, the Norwegian merchant marine is practically as large as it has ever been, as the shipowners purchase new vessels whenever they require them. Many such vessels are bought second-hand from different countries.

Export and Import Trade.

It is true that the list of goods of which the exportation is prohibited is considerable, but continuous and regular shipments take place of such goods as are not prohibited, more especially paper and timber and salted fish.

As previously stated, Norway has always been largely dependent on foreign countries for its supplies. Since the outbreak of the war the supplies from Russia and Germany have to a great extent been cut off, whereas the imports from the United States and Great Britain have greatly increased. Those from the United States consist chiefly of wheat, flour, meat, and lard. According to information received from the customs authorities here, it is estimated that the customs receipts this year will show a decrease of 4,000,000 kroner (\$1,072,000) as compared with last year. Coffee, sugar, raw tobacco, and other colonial products have lately been imported in large quantities.

AMERICAN CONSULAR OFFICERS ON LEAVE OF ABSENCE.

The following American consular officers are on leave of absence in the United States and will be glad to confer with business men and commercial organizations relative to conditions in their respective jurisdictions:

Name.	Post.	Expiration of venue.	Address.
Summers, Maddin.....	São Paulo, Brazil.....	Dec. 31	Department of State, Washington, D. C.
Maynard, Lester.....	Amoy, China.....	do.	Do.
Pock, Willys R.....	Tsingtau, China.....	Jan. 31	Do.
Messersmith, George S.....	Fort Erie, Canada.....	Jan. 1	Lewes, Del.
Cheshire, Fleming D.....	Canton, China.....	Jan. 31	Bureau of Foreign and Domestic Commerce, Room 409, Customhouse, New York, N. Y.
			Do.
Robertson, W. Henry.....	Buenos Aires, Argentina.....	Dec. 31	Do.
Sammons, Thomas.....	Shanghai, China.....	Jan. 5	(*)
Chamberlain, George A.....	Lourenco Marques, Portuguese East Africa.....	Dec. 31	Lotus Club, 110 West Fifty-seventh Street, New York City.
Canada, William W.....	Vera Cruz, Mexico.....	Feb. 1	Winchester, Ind.
Taggart, G. R.....	Cornwall, Canada.....	Jan. 5	207 Eleventh Street NW., Washington, D. C.
Donald, George K.....	Maracaibo, Venezuela.....	Feb. 17	153 Church Street, Mobile, Ala.
Bonney, Wilbert L.....	San Luis Potosi, Mex.co.....	Feb. 13	1903 North Bush Street, Santa Ana, Cal.

* The tour of American cities by Consul General Thomas Sammons, of Shanghai, includes Rochester, Albany, Canajoharie, New York, Detroit, Chicago, Seattle, Tacoma, Portland, and San Francisco, concluding at the latter place Jan. 4, 1916. He will confer with business men at these places who are interested in trade in China.

Consul Wilbert L. Bonney shall visit San Francisco, Los Angeles, and San Diego, Cal., and San Antonio, Tex., and will advise the Chamber of Commerce in each of these cities of his arrival and address.

AMERICAN INSURANCE FOR CANADIAN SCHOOLS.

Vice Consul Gorman at Montreal, Canada, has received a letter from the treasurer of the municipality of Westmount, near Montreal, asking for the names of reliable fire insurance companies in the United States, with which insurance of the school buildings of the city against fire might be placed. A similar request has been made previously, without result. The official mentioned would be pleased to hear from American insurance companies which are prepared to offer rates for these public buildings in the Canadian city.

BRITISH COLUMBIA RAILWAY NOTES.

[Consul General] H. E. Mansfield, Vancouver, British Columbia, Canada, Dec. 11.]

Construction of Car Ferries.

The contract for the construction of one of the two large car ferries to be used by the Canadian Northern Railway for the service between Vancouver Island and the mainland has been let to a ship-building company at Lewis, Quebec, at a cost of \$400,000. The boat will be 310 feet long, 52 feet wide, and 20-foot draft, with a capacity for carrying 25 of the largest railway cars, in addition to passenger accommodations. The ferry will have a speed of 14 knots an hour, and will be propelled with double screws at each end. The contract calls for completion the 1st of July, 1916, and when completed the ferry will be brought to the Pacific coast via the Panama Canal.

Through Service Inaugurated on the Canadian Northern.

Transcontinental service was recently inaugurated on the Canadian Northern Railway, the first through train from Vancouver to the east leaving this port on November 25. This is the third railway in the Dominion to establish a regular ocean to ocean service, the first being the Canadian Pacific which has maintained a transcontinental service since 1885. The Grand Trunk, with Pacific terminals at Prince Rupert, British Columbia, was completed and a through service established last summer. The Canadian Northern, the last of the Dominion railways to enter the list of competitors for transcontinental business, has its terminals in this port. The Grand Trunk will also have railway terminals in Vancouver, and connections with the main line over a branch road now in the course of construction. At present the Vancouver connection is by steamer service with the company's fleet operating between Vancouver and Prince Rupert.

New Terminal Stations for the Great Northern.

Plans for the Great Northern Railway terminal passenger station in Vancouver have been submitted to the municipal authorities for approval, and the construction work on the foundations for the building will be started at once. The Northern Pacific, which has an operating agreement with the Great Northern, will also use the same station in Vancouver.

The terminals will consist of two units, a main building and an "L" for baggage, mail, and express business, thus dividing the utilities from the regular passenger facilities. The main structure will cover a ground area of 60 by 228 feet, and the "L" will be 40 by 130 feet.

The buildings will be of brick on a granite base, with terra-cotta trimmings. They will be erected on a pile foundation, and will be constructed of reinforced concrete.

The station itself will consist of a large waiting room, 60 feet wide and 100 feet long, which will contain the general passenger facilities. This room will be flanked by wings two stories high. On the lower level will be the smoking rooms, immigration rooms, ticket office, telegraph and telephone rooms, etc., and a large exhibit room. Quarters for the operating and traffic staffs and the administrative officials will be located on the upper stories. The Great Northern officials will occupy one wing and the Northern Pacific the other.

Prosperity for Canadian Roads.

The abundant crops in the prairie Provinces this year, the handling of which has taxed the capacity of the railways, and the interruption

of traffic through the Panama Canal on account of landslides has resulted in unusual activity in Canadian railway business, a condition especially favorable to the two new roads, the Grand Trunk and Canadian Northern, which have recently established through service from eastern ports to the Pacific coast. The passenger traffic was exceptionally good during the summer and autumn, due to the large number of people from the east visiting the Panama-Pacific Exposition, a considerable percentage of which made the trip, either going or coming, by way of Canada.

OPIMUM FOR HONGKONG.

[Consul General George E. Anderson, Hongkong, British China, Nov. 2; supplementing discussion in COMMERCE REPORTS for Apr. 25, 1914, and Feb. 11, 1915.]

A further step in the process of more completely controlling the opium trade in the future, and especially after the end of the period in which the drug can be legally imported into China, has been taken by the government of Hongkong in connection with the opium "farm" or monopoly. It is announced that hereafter the Hongkong government, instead of buying raw opium in the open market in India, will purchase its supply direct from the Indian Government at a fixed price. The contract will go into force on January 1, 1916, and is to run for five years. A similar arrangement has also been effected by the government of Singapore in behalf of the opium monopoly there.

The Hongkong government takes 360 chests and the Straits Settlements 3,000 chests. These quantities are to be sold by the Indian Government in addition to the 820 chests per month which has been fixed as the amount to be disposed of by that Government in the calendar year 1916. The arrangement not only enables the governments concerned to control the sale and use of opium in their respective territories by enabling them to secure the drug at a much lower price than other buyers, but at the same time it will increase their revenues immensely without materially affecting the revenues of India, since the purchases of the two governments are exclusive of and in excess of the limitation of sales of the drug already fixed.

Large Earnings of Hongkong Monopoly.

Incidental to the arrangement attention is again called to the immense profit earned by the Hongkong "farm" since it was taken over by the colonial government. The earnings last year amounted to \$3,741,500 instead of the \$1,183,200 of the previous year and \$1,426,800 more than was estimated when the monopoly was assumed by the Government. A further increase in earnings was estimated for the current year and this estimate has been somewhat exceeded, while the estimates for the coming financial year include an additional \$50,000 of profit from this source. Under the monopoly arrangement being effected for the control of opium consumption in South China, it is probable that the Hongkong monopoly will receive further benefit in that the use of the drug in Chinese and British territory will be more nearly upon the same conditions.

The opium monopoly in the Portuguese colony of Macao still takes 520 chests of opium per year, of which 260 chests are for local consumption and the rest for export to countries that still permit the trade.

MATÉ "TEA" PRODUCTION IN SOUTHERN BRAZIL.

[Consul Maddin Summers, Sao Paulo.]

Yerba maté, or Paraguay tea, constitutes one of the sources of wealth in Southern Brazil. It is the largest article of export from Parana and one of the largest from Rio Grande do Sul and Santa Catharina. The principal markets are Argentina, Uruguay, Chile, Paraguay, and Bolivia, in the order mentioned. In these countries maté is the popular drink of the people, almost to the exclusion of coffee and tea. It is supposed to have two great advantages over either coffee or tea—it is less stimulating and very much cheaper.

The maté tree is between 10 and 12 feet in height, the leaves resembling those of a pear tree. The grades of maté depend upon the amount of wood in the leaf. The following are the classifications: No. 1 maté, from Paraguay; No. 2, from Matto Grosso; No. 3, from Missoes Argentinas; No. 4, from Parana; No. 5, from Rio Grande and Santa Catharina.

Total Exportation of Maté to All Countries.

The total consumption of maté in Argentina alone amounts to 50,000 tons annually, of which Parana furnishes 18,000 and Santa Catharina 2,000 tons annually. Exact statistics are not available. The total exportation to all countries in 1913 was:

Exporting State.	Amount.	Value.
	<i>Tons.</i>	
Parana.....	49 538	\$7,740 440
Santa Catharina.....	3,793	307 000
Rio Grande do Sul.....	2,174	679,500
Total.....	55,505	8,726,940

The exportations from Santa Catharina have fallen off very greatly during the past 10 years and the quality of the tea is not as good as that of Parana maté.

Maté is prepared in the same way as tea, and may be taken with sugar and milk. In powder, it is prepared by infusion, putting it into a small vessel (a cuia) and pouring thereon a sufficient amount of boiling water. As the dust does not fall to the bottom of the vessel, the maté can be taken only by means of a "sucker," that is, a tube terminating in a small hollow ball pierced with holes. Travellers to Argentina have doubtless noticed many quaint maté pots, of silver and other metals, lavishly ornamented.

The Germans in Curitiba (the capital of the State of Parana) prepare it in the following manner: They heat the water, and when it is boiling add the maté. When the water begins to boil again they pour in a sufficient amount of cold water to stop the boiling. The dust then settles and the maté is taken pure.

Component Parts, as Compared with Tea and Coffee.

The component parts of maté, compared with tea and coffee, as prepared by Dr. Caminha, professor of the faculty of medicine at Rio de Janeiro, are:

In 1,000 parts.	Green tea.	Black tea.	Coffee.	Maté.
Essential oil.....	7.90	6.00	0.41	0.01
Chlorophyll.....	22.20	18.14	11.05	62.00
Resin.....	22.20	20.40	13.66	20.60
Tannin.....	178.00	128.80	115.20	12.20
Theine or caffeine.....	4.30	4.60	2.66	2.50
Extract and coloring matter.....	404.00	390.00	270.67	238.63
Fibers and cellulose.....	175.80	200.20	174.83	180.00
Ash.....	85.60	54.40	25.61	36.10

A firm in Curitiba, State of Parana, quotes a price on maté of 7 cents per pound f. o. b. Paranagua; in barrels of 220, 145, 75, and 25 pounds the cost of barrels and tare is: Of 220 pounds, 80 cents; of 145 pounds, 65 cents; of 75 pounds, 46 cents; 25 pounds, 30 cents.

Of two other exporters, one gives prices slightly in excess of the firm mentioned, while a third gives slightly lower prices. Another's quotations are 7 to 7½ cents per pound in large quantities f. o. b. Paranagua for the marks "M. Macedo" and "Gracita," respectively. Quotations as low as 6½ cents are given.

The Funch Edye Line stops at Paranagua on its outward voyage to southern Brazil. Arrangements for space can be made with the agents of the line in New York.

JAPANESE COMPETE FOR NEW ZEALAND'S TRADE.

[Consul General Alfred A. Winslow, Auckland, Nov. 15.]

A strong effort is being made to have the Japanese steamship line, Nippon Yusen Kaisha, extend its sailings to New Zealand ports. This would greatly advance Japanese interests in New Zealand, just as an American steamship service between Atlantic ports of the United States and Australasian ports would advance American interests in this part of the world. The New Zealand Herald, a leading daily of this city, says:

In a letter to the mayor of Wellington, Dr. Miura, a member of the Japanese trade mission which visited New Zealand a few months ago, says:

"Japanese commercial men whom I met on my return to Japan were glad to have all the information acquired by the mission in New Zealand. They are sorely in need, however, of a direct line to New Zealand. The Nippon Yusen Kaisha runs to Sydney and Melbourne, but although endeavors have been made to induce the company to extend the Australian service to New Zealand, this country is still isolated, all eastern cargo having to be transhipped in Australia. Even so, an astonishing quantity of Japanese goods are finding their way into this market.

"It is a mistake to imagine because Japan can sell many manufactures at prices with which not even Germany could compete that it follows that such are very cheap. The Japanese merchant understands the principles of good marketing, and will never greatly undersell in any commodity that is fetching a good price. Those who come into contact with Japanese manufactures competing with similar goods of British, American, and German origin describe them as rougher, if cheaper, lacking finish, and not seriously affecting the values of the German quality of goods.

"The Japanese are genuinely anxious to buy as well as to sell. They have topped the market in certain descriptions of wool crutchings, and now promise to become in time an important factor in respect to the purchase of the best descriptions of Merinos, half-bred, and medium to superior crossbreds. They are extensive users, too, of leather for fancy goods and other manufactures. Consequently they are prospective purchasers of skins and hides. What they buy from us is infinitesimal compared with what we buy from them, and they are extending their influence in this country by seeking to acquire the trade that Germany can not now do, and some which the British, for the time being, are not able to do."

CONSTRUCTION WORK ABROAD.**CHINA.**

[Far Eastern Review, October.]

Proposed Chinese Railway.

The construction of the long-talked-of Tsitsihar-Aigun Railway has been decided to be taken in hand early next spring, as reported after a consultation of Military Commissioner Chu, of Heilungkiang, with the Chinese Government.

CHOSŌN (KOREA).

[Far Eastern Review, October.]

Railways of Chosen.

In Seoul the completion of 1,000 miles of railway track in Chosen (Korea) was celebrated recently by a ceremony held in Kyongpook Palace grounds in the presence of Prince Kan-in, of Japan. Since 1906 railway building has been continuous, and the Pyongyang-Chinnampo line and iron bridge over the Yalu soon were completed. On the completion of the Antung-Mukden Railway connection was effected between the railway system in Korea and Manchuria, and the trunk railway in Korea became the shortest route from Europe and east Asia, the journey being much facilitated by the new harbor works at Fusan.

Among railway works undertaken since the annexation was the Hanam line. Begun in October, 1910, its trunk and branch lines, totaling 175 miles, were finished in January, 1914. No less important a work was the Seoul-Wonsan line, connecting the trunk railway with the eastern coast of the peninsula. It measured 138 miles in length, and was finished in August, 1914. With a view to having a railway through South and North Hamkyong Provinces, a plan had been laid down for two local lines, one from Wonsan to Yanheung and the other from Chongjin to Hoiryong, and work was commenced last October, with the result that the section from Wonsan to Munchon, a distance of 12 miles, was completed on August 1 last. The total mileage of Korean railways has thus reached 1,006.

INDIA.

[Far Eastern Review, October.]

Indian Railway and Irrigation Projects.

The Mayurbhanj Railway project is an undertaking to acquire the existing Mayurbhanj (light) Railway and to provide funds for the extension of this line to Talbund. The length of the existing railway is 32.41 miles of 2 foot 6 inch gauge connecting Rupsa, on the Bengal-Nagpur Railway main line, with Baripada, the capital of Mayurbhanj State. The length of the proposed extension from Baripada to Talbund is 38.69 miles, to make with the existing railway a total length of 72 miles on the 2 foot 6 inch gauge.

The proposed extension will run mostly through low forest. An irrigation scheme is nearing completion and already practically irrigates 10,964 acres. This should be completed during 1915. A further scheme is under contemplation which, with the area already irrigated, should command above 600 square miles; it is expected that out of this new area 180 square miles will be irrigated.

There are extensive forests beyond Baripada, the present terminus of the line, which have hitherto been practically unexploited owing to the prohibitive cost of carting.

One of the main objects of the extension is to provide an outlet for the large supply of excellent timber for sleepers and building purposes which the Simlipahar forest will supply. These forests are capable of producing 500,000 cubic feet of timber annually.

The extension will also render marketable other forest produce such as myrobalans, etc., which are not exported now owing to the prohibitive cost of cartage.

JAPAN.

[Far Eastern Review, October.]

Japanese Railway Program.

The Imperial Railway Board, of Japan, has been framing its own special budget to be introduced in the Diet this fall. A statement made by an official of the department is that the whole expenditure for the second year of the seven-year plan of improvement started last year will be \$19,920,000. Of this amount \$5,229,000 will be devoted to construction work and \$14,691,000 for repair work. As for revenue, the board estimates that traffic receipts will amount to \$60,607,000 and miscellaneous receipts to about \$1,245,000, totaling \$61,852,000. Expenditures will amount to \$53,137,000, the balance of \$8,715,000 to constitute a net profit of the board. To this profit will be added \$9,960,000 from the redemption fund. Then there will be about \$1,245,000 that can be transferred for the use of the board, making in all \$19,920,000.

Lines will be built as follows: Twenty-five miles between Hamada and Masuda, 88 miles between Miyazaki and Saiki, 34 miles between Yamada and Suzaki, 19 miles between Yamagata and Sazawa, 87 miles between Ootonefui and Wakanai.

SPAIN.

[Consul Percival Gassett, Malaga, Nov. 3.]

Railway Construction in Malaga.

Construction work on the railway that is being built by a Belgian company from Malaga to Algeciras and Cadiz, which was suspended on account of the cessation of funds from Belgium after the outbreak of the war, was renewed in September. It was thought a few months ago that, on account of the impossibility of finding the necessary capital to continue the work, the railway would not be completed in the six years specified in the contract with the Spanish Government and that the latter would have to take it over. An arrangement, however, has been made whereby the Spanish Government has released, of the 4,800,000 pesetas (about \$890,000 at the present exchange rate of \$0.185 to the peseta) deposited as guaranty for the construction, the sum of 800,000 pesetas (\$148,000). This amount represents the value of the construction already completed on the first section of the line, from Malaga to Fuengirola, a distance of 30 kilometers (18.6 miles). On the completion of this section the company will have again to look for new funds or the help of the Spanish Government for the further completion of the road.

The total cost of the railroad from Malaga to Cadiz will be 48,000,000 pesetas (about \$8,900,000), on which sum the Spanish Govern-

ment guarantees 5 per cent interest annually, and as each of the five sections to be built is finished interest will begin on the amount of its cost.

The projected line after leaving Malaga will pass through the towns of Torremolinos, Benalmadena, Fuengirola, Marbella, Estepona, Tesorillo, Almorema (where there will be a branch line to Algeciras), Alcala, Medina-Sidonia, and San Fernando to Cadiz. The whole of this section of Andalusia is rich and productive and should prove very profitable to the railroad. Fuengirola has 15,000 people, and exports quantities of fish, raisins, and olives. Marbella has 25,000 inhabitants, and ships olives and vegetables, besides much iron and lead. An English mining company is located there. Estepona has 20,000 people, and exports raisins, figs, vegetables, and a great deal of cork. Tesorillo is of importance because near by is located the largest sugar refinery in the Province, whose imports and exports of merchandise of various kinds are very heavy. Alcala and Medina-Sidonia are towns of 10,000 inhabitants each, in the vicinity of which much live stock is raised.

The completion of this railroad will, it is thought, prove of importance to Malaga in that tourists who now go from Algeciras to Granada via Bobadilla (263 miles), an all-day journey owing to many long and tedious waits at small stations, will not only save some hours' time by taking the new route, which is to pass along the Mediterranean coast, but will also see some charming scenery.

Of the total cost of the complete line the proportion that will be expended in the purchase of the rolling stock is estimated to be 2,000,000 pesetas (about \$370,000). If American capitalists could be found who would provide the amount necessary for the completion of the road, it could be made a condition of the loan that this rolling stock should be purchased in the United States. Communications should be in French or Spanish.

[The name of the official of the railroad company to whom communications should be addressed may be obtained from the Bureau of Foreign and Domestic Commerce or its district offices. Refer to file No. 69756.]

REPORT OF CHAMBER OF COMMERCE OF ROTTERDAM.

The report of the Chamber of Commerce of Rotterdam for 1914, translated from the Dutch into English, is a volume of 286 pages, and contains a review of commercial conditions during the first few months of the European war, with discussions of the various measures taken to overcome difficulties that arose. Chapters are devoted to the money market, shipping traffic, and trade reviews relating to general merchandise, coffee, tea, cacao, rice, spices, sugar, tobacco, oleomargarine and cottonseed oil, gum elastic, rubber, honey, hides, fibers, tin, coal, ores, iron and steel, and the general inland trade. The appendix presents a list of the regular steamship lines from Rotterdam in 1914, the return of seagoing vessels entered at Rotterdam during 1914, showing countries of nationality, and general imports into the Netherlands and at Rotterdam. A copy of this report may be inspected at the Bureau of Foreign and Domestic Commerce. Refer to file No. 70261.

THE MEXICAN OIL FIELDS.

[Vice Consul Thomas H. Bevan, Tampico, Dec. 10.]

The attention of the oil interests during the past week has centered on the well of the Pan American Oil Co., at Panuco, which was brought in on the first of the month and has been conservatively estimated to have a production of 2,000 barrels per day. Oil was first struck at a depth of 1,760 feet and drilling was immediately suspended. As soon as earthen storage is constructed, the well will be drilled deeper. The chances are good that a gusher will be struck at a deeper level. Practically all of the stock of the Pan American Oil Co. is controlled by Americans residing in Tampico. The well is located about 400 yards from the Harmon and Corona Oil Co. gushers.

Leasing of Oil Lands.

There has been considerable leasing of oil lands in the southern fields during the past two months. A number of companies that now have production in the Panuco field have taken up leases in the Tuxpam fields where a lighter gravity of oil is found. Most of the oil that has been produced in the Panuco field is about 12.5 gravity, while the oil produced in the Tuxpam fields is between 18 and 20 gravity. The Compania Mexicana de Petroleo "El Aguila" S. A. is now making preparations to commence drilling again in the State of San Luis Potosi near Valles. The company drilled three wells in this territory over two years ago, which are the deepest oil wells in Mexico. The first one was drilled to a depth of 4,000 feet, where a production of several barrels a day of 47 gravity oil was obtained. Owing to the high gravity of the oil in that vicinity, the company has decided to again start exploration work and endeavor to secure a larger production.

Dredging Tampico Bar—Oil Shipments to United States.

The government dredge *Tampico* is now at work on the bar at the mouth of the Panuco River, but so far no appreciable improvement has been effected, although the pilots now consent to ships being loaded to a depth of 19 feet 6 inches, which is 6 inches more than they would allow the previous month. They state that the current has washed the bar out sufficient to allow this added depth.

The shipments of crude oil from Tampico to the United States during November amounted to 778,225 barrels, as compared with 1,106,248 barrels during the same month the preceding year. This decrease is due to a great extent to the condition of the harbor. Ships that carried 22 feet over the bar last year can take but 19 feet 6 inches at the present time.

The shipments for November were as follows: 96,904 barrels to Galveston, Tex.; 91,228 to Port Aransas, Tex.; 88,515 to Port Arthur, Tex.; 78,556 to New York; 77,000 to Baltimore; 74,986 to New Orleans; 66,772 to Providence, R. I.; 62,000 to Philadelphia; 28,772 to Lynchburg, Tex.; 28,000 to Sabine, Tex.; 25,000 to Baton Rouge, La.; 20,000 to Key West; 17,000 to Tampa; 15,992 to Freeport, Tex.; and 7,000 barrels to Jacksonville, Fla.

The Huasteca Petroleum Co. shipped 325,264 barrels of this amount to the United States; the Standard Oil Co. of New Jersey, 149,000 barrels; the Texas Co., 120,499 barrels; the East Coast Oil Co., 96,904

barrels; the Freeport & Mexican Fuel Oil Co., 45,558 barrels; the Mexican Gulf Oil Co., 34,000 barrels; and the Pierce Oil Corporation, 7,000 barrels.

The Huasteca Petroleum Co. also made one shipment to Iquique, Chile, amounting to 70,405 barrels and made deliveries of 254,237 barrels to companies in Tampico.

Shipments from Tuxpam to United States.

During November 491,378 barrels were shipped from Tuxpam, Mexico, to the United States by the Compañía de Petróleo "El Aguila" S. A. and the Penn Mex Fuel Co.

The shipments of the Compañía de Petróleo "El Aguila" S. A. were as follows: 100,783 barrels to Galveston; 66,593 to Baltimore; 38,713 to Port Tampa, Fla.; 21,180 to Sabine, Tex.; and 7,000 to Jacksonville, Fla. Besides the amount shipped to the United States the Compañía de Petróleo "El Aguila" S. A. made a number of shipments to England and also to its refinery at Minatitlan, Mexico.

The Penn Mex Fuel Co. made the following deliveries to United States ports: 133,207 barrels to Baton Rouge, La.; 50,413 to Baltimore; and 56,484 to New York.

SIZES OF CASES FOR AUSTRALIAN FRUIT.

[Commercial Attaché William C. Downs, Melbourne.]

The Government of the State of Queensland, under the authority of the fruit-cases act, has put into effect the following regulations:

All cases for the Queensland trade must be new or clean and free from insect or fungus diseases.

New cases only must be used for fruit exported to any of the other Australian States.

It is also provided that each case, whether the fruit is for sale in Queensland or any other Australian State, must have legibly and durably on one end of the outside of the case:

The name and address of the packer of the case.

The words "guaranteed by packer to contain one Imperial bushel," or as the size of the case may warrant.

In the case of the tropical-fruit case the guarantee should be:

Guaranteed by maker to contain not less than 3,564 cubic inches.

The above name, address, and guarantee should be at least 5 inches long and 2 inches wide; but stamps 3 inches by 1½ inches and upward will be accepted.

The following sizes have been established as standard for the packages used in the State. The dimensions are the same as those required by the New South Wales laws that are already in force. Any case must be of one of the following inside measurements, clear of any divisions:

Kind.	Length, inches.	Depth, inches.	Width, inches.	Kind.	Length, inches.	Depth, inches.	Width, inches.
1 bushel	18	14½	8½	½ bushel	18	5½	11½
Do.	26	14½	6	¾ bushel	13½	4	10½
Do.	20	10	11½	Tropical-fruit case (for pineapples, etc.)	24½	12	12
¾ bushel	18	7½	8½				
Do.	26	7½	6				

REVIVING THE NATURAL INDIGO INDUSTRY IN INDIA.

[From Consul James Oliver Laing, Karachi, Nov. 10.]

A serious effort is being made in India to provide a lasting market for natural indigo. This was one of the most valuable products of India before synthetic dyes became of commercial value. In recent years the natural indigo production has been reduced; plantations have been abandoned; and many others have had a difficult task to keep their heads above water. The war having cut off Continental synthetic dyes, however, natural indigo has once more come to the front.

Results of Conference to Discuss the Industry.

As far back as last February an indigo conference was held in Delhi to discuss the industry from three standpoints—agricultural, research, and commercial. As a result of this conference a report has just been made by scientists covering the agricultural and botanical side of this industry stating that it can be developed on scientific methods as follows:

- (a) The production of an ample supply of good, well-grown seed at the lowest possible cost and with the least trouble to the planter.
- (b) The production of the maximum yield of indigo and of seed from the plant now grown.
- (c) The improvement of the plant by selection so that the yield of indigo and of seed can be still further increased.
- (d) The preparation of finished indigo, in a standard form of high purity, suitable for the home dyes.
- (e) Indirect improvements, such as the production of more valuable cover crops for Java indigo and the discovery of methods of increasing the efficiency of seed as a manure.

Dyeing Qualities of Natural Indigo.

Perhaps the most important problem for the natural indigo trade to solve is the marketing of the dye in the form most suited to the dyers. Bihar indigo, according to a British dyer whose views are entitled to respect, dyes a fuller shade than either synthetic indigotin or indigos refined from plant indigos. It is further stated that 60 per cent of Bihar indigo dyes a fuller shade than 70 per cent Dutch Java. This statement is interesting because it points to indigotin as differing in its dyeing properties, if not in its chemical composition. The remedial measures suggested by this authority are:

(a) Selling in paste form, but on standard shade patterns. All other dyes are sold on their shades of color, not on their percentage tests, as has been the case with natural indigo since synthetic indigotin was commercially introduced.

(b) Applying the practical knowledge gained in the working of the dyers and woad fermentation vats, in which the fermentation is controlled, to the practical working of the planters' fermentation vats, in which the fermentation is not controlled, the experience of the woad fermentation vats proving that without control great losses of the dye will take place.

The authority referred to who, it may be added, is officially connected with the British Dyers' Guild, sums up his recommendation in one single paragraph, which will bear quotation:

Botanical research should continue to the securing of good plant and leaf yield. Chemical research, properly applied, will help further to a better yield at

the mill. Most of all, however, it must be impressed on those whose interests are with natural indigo that they must supply it to the dyers fairly well standardized and in the condition ready for use, just as the synthetic is. The planters, etc., will need to combine to this end. It can easily be done and is of such importance that I say this: If they will not do it, they can close their books as soon as synthetic comes into competition again. If, however, they will do it, they have the industry again, a profitable one, as the reason they were beaten out (almost) before and so quickly was not that synthetic was so much the better value, but that it was supplied in a condition ready for the dyers to use.

Dealers here say that reports have come to them that the indigo plantations of China, particularly in the Nanking district, are being worked after many years of practical abandonment. They do not believe, however, that the Chinese natural-indigo industry will be profitable when normal times return.

[Consul Lucien Memminger, Madras, Nov. 11.]

Increased Area Under Indigo.

The first indigo forecast for 1915-16 issued by the Department of Statistics of India shows greatly increased sowings of indigo in Madras Province. The total area under indigo in British India this year is estimated at 258,100 acres, of which 31.2 per cent, or 126,000 acres, is sown in Madras Province, as against 38,500 acres estimated at this time last year, or an increase of 212 per cent. The Department of Statistics bulletin says that after allowance has been made for seed of next year probably 113,600 acres of the indigo produced in Madras Province will be used in extracting dye. The districts in which the manufacture of indigo persisted longest and where old vats in moderate state of repair were still available report this year a very great increase in the acreage under the crop—all north of Madras, in the Decan and the East Coast districts.

The fluctuation in the price of groundnut diverted the attention of the cultivators to indigo. At sowing time seed were selling at exceptionally high rates, but very inferior seed were sold, with the result that the germination of many of the earlier crops was poor: and although the season has been generally favorable, this has militated against uniformly good stands. The outturn is estimated roughly at 24,000 hundredweight.

[Previous articles on the subject of the natural-indigo industry of India appeared in COMMERCE REPORTS for Nov. 10, 1914; Jan. 8 and 28 and Oct. 11, 1915.]

TRADE ACROSS BORDER REACHES SONORA MARKET.

[Consul Frederick Simpich, Nogales, Mexico, Dec. 17.]

A safe way to handle Sonora trade in any proven line is to establish a jobbing house in one of the American border towns, and fill orders promptly, for cash.

No automobile agencies exist in any of the towns of northern Sonora. The use of automobiles and trucks is confined to American miners and ranchers and officials of the State government. Sparse population, poverty, and bad roads are the three main reasons why this district affords no opening for automobile agents. Such few as buy cars merely cross the line to Arizona towns, like Douglas, Tucson, or Nogales, where many agencies are established.

TRADE METHODS OF FOREIGN COUNTRIES IN RUSSIA.

[Weekly Bulletin, Department of Trade and Commerce, Ottawa, Nov. 22.]

Germany, Great Britain, and the United States, in the order named, being the principal countries from which Russia derives its imports, it is of interest to note the methods used by each to capture the trade of that market.

German manufacturers, after due trial, have abandoned the practice of establishing branch houses in Russia; it proved unprofitable. They subsequently developed the market with travelers, who covered not only the chief cities, like Petrograd, Moscow, Riga, Kief, Odessa, Rostof-on-Don, etc., but also the larger provincial towns. These travelers carried elaborate collections of samples of a wide range of articles, often representing different industries, and, above all, catalogues printed in Russian, with prices in Russian currency. They quoted f. o. b. Russian port or frontier station, and were ready to meet the provincial wholesale dealer and the local stores by quoting similar terms with duty paid and, if pressed, including delivery at the local station. As a further accommodation they conceded extended credits to suit the individual customer, with the aid of the German banks. German success in Russia started from the ability to supply cheap articles for the peasant population; but they were able, through the circumstances of their competition and their clever adaptation of business methods, to obtain gradually the Russian market for better-class articles.

British and American Methods.

Twenty years ago Great Britain practically monopolized the Russian market for manufactured articles, but it has since been overtaken by Germany, owing largely to the latter country's more generous credit terms. Progress was also hampered by ultraconservative methods of business and unwillingness to quote in Russian currency and weights and measures or to follow the German example of quoting delivery at the frontier with duty paid. It is said that the use of travelers to keep in touch with customers was neglected, and that British manufacturers declined to intrust their interests to export houses. Thus the direct business became limited to the largest dealers in the Russian centers, and it might be said that the business Great Britain was doing in Russia until recently was due largely to the fact that British goods were actually demanded by customers rather than that they were pushed. Evidences of a change in this respect are now at hand.

The methods employed by United States manufacturers have been one of the two following: Either to appoint a sole selling agent for Russia and Siberia or to intrust their export trade to exporting houses in the United States and Hamburg, this second method appearing to be more in favor. United States manufacturers have obtained better results with the Hamburg firms than with those in the United States, because the former worked Russia intensively with travelers along the German lines. For the American house thus relieved of Russian credit risks, the business was easy and convenient, but it was necessarily of restricted proportions, the growth of which the manufacturer could not influence. Moreover, the advantage was not obtained of the high prices in Russia. The chief concern of the

German firm was to give his Russian customer a wide choice of goods from all countries, and he had therefore no special reason to push the goods of any particular firm. Like his English colleague, the United States manufacturer was opposed to granting long credits.

Summary of Possible Trade Methods.

The possible methods open to manufacturers proposing to share in Russian trade may be stated as follows:

(1) By correspondence. Business may be done in this way, but it can hardly be recommended as satisfactory. Correspondence would have to be in Russian or French, catalogues printed in Russian would be indispensable, and prices would have to be quoted in rubles c. i. f. Russian port or on railway car, i. e., including sea freight and duty.

(2) Through export houses. This plan of action is of interest only to the manufacturer who wishes to avoid the risks and trouble that a more profitable direct business would involve.

(3) By appointing Russian firms as agents. This is undoubtedly a much more satisfactory plan than the export house, because the prices to wholesalers will be less and the volume of business will consequently be greater. Agents are of two classes:

(a) Those who work on a commission basis, some of whom are ready to undertake a full or partial guarantee of accounts for a corresponding additional commission.

(b) Merchants doing a wholesale business who take the financial risk and quote such prices as they think necessary.

There are many such agents in Russia. Before the war the majority of the more desirable already represented manufacturers and were not free. It is believed that now the difficulty of securing suitable representatives may be overcome, though many of the best agents, who were of German nationality, have left the country.

(4) Through a resident representative of grouped industries, correlated but not intercompetitive. While the initial expenditure for such a representative would be large, by being shared it would fall lightly on the individual firms interested. After the arrangements for agencies in the centers had been made and were in working order, a periodical supervision at longer or shorter intervals should suffice. There are two examples of this method in Russia that are working satisfactorily—one American and the other British. The former represents a combination of hardware and tool manufacturers, which included at the outset 20 firms and has since been increased to 62. The organization is financed by a prominent New York banking house, through which all payments by the agents in Russia are made. A representative visits annually the 15 centers at which the "com-bino" maintains its agents, who are mainly merchants buying on open account and not on commission. The British concern handles general machinery and maintains its own local representatives, who are Russian-speaking Englishmen having a technical knowledge of engineering.

Distribution of Imports in Russia.

The distribution of imports in Russia is in the hands of two or three classes of wholesale houses, all of which are grouped in a few of the chief cities. Moscow is preeminent as a center of this character and handles about 50 per cent of Russian imports. The general

character of the imports handled by Moscow are of a class that appeals to a peasant market, as against the business transacted from Petrograd, where the trade is of a high standard and where Government purchases and contracts are settled for the whole Empire. The large cities have wholesale houses, which employ travelers to work the surrounding Provinces. The orders as received are combined and transferred to the foreign manufacturers concerned, the merchants themselves carrying very little stock. Wholesale houses in the Provinces are few in number and of relatively small account. The wholesale dealers in the cities sell direct to the provincial retailers. The selling firms belong to the class that offer exclusively the goods of the foreign manufacturers they represent.

Another class of wholesalers have no travelers and rely upon catalogues; they have their regular clientele throughout the Provinces, mainly retailers, who effect their purchases by correspondence or in person. A few other firms have branch houses in different towns in Russia, which send out travelers in their respective districts, but these firms specialize, as a rule, in a few lines. All wholesalers do a large retail trade with users of goods, such as factories, railroads, etc. Travelers for the Provinces carry ample collections of samples, together with catalogues. Their catalogues are of two kinds; some houses issue only retail catalogues and sell at the prices quoted, less a certain discount, whereas others issue wholesale catalogues only and sell at net prices to provincial dealers, these wholesale catalogues being restricted to the trade.

The Far Eastern business, in the Transbaikial and Amur regions, is in the hands of a few large firms with headquarters at Vladivostok. It is a specialized business not touched by the ordinary Russian houses. The Vladivostok firms do a large trade with their magnificent stores and well organized wholesale departments, sending out travelers who cover the whole of the Far East. Each of the largest two has a purchasing house in Moscow, and one has also a house in London. Vladivostok is suggested as a good place for representation on the group plan.

Granting of Credit Necessary.

In Russian dealings the question of credit is of great importance and calls for careful investigation. The Russian wholesaler is compelled to allow his customer credit in practically all lines, sometimes for as much as 12 months. A cash payment of not more than 25 to 30 per cent is common. In many cases, however, the wholesaler is satisfied if his client will pay railway freight and expenses to destination. Manufacturers should be prepared to grant liberal credits to dealers—3, 6, 9, or 12 months, according to the article and the customer. Thus the foreign manufacturer is asked to help to carry trade, because the majority of the wholesale dealers have not sufficient capital to pay for their imports until the ultimate users of these goods, in the main the peasant consumers, are able to discharge their obligations to the retailer, which they can do only after gathering the crops. As has been seen, the German houses were assisted by the cooperation of the banks in meeting the situation. Careful investigation of the credit position of wholesalers is of unusual importance, even in the case of large buyers. Commercial law in Russia is still in the formative stage; the recovery of debts is surrounded

with difficulties, and procedure in Russian courts, while just and sure, is slow. A good deal may be effected, however, by tactful pressure and compromise. Sales made on the installment plan are considered safe, and are generally adopted in the case of machinery, which remains the property of the vendor until the last cent has been paid.

The building up of an export trade is at best a slow process, but there is no question that with ordinary caution and judgment it should be possible to make solid connections in Russia and develop a stable and profitable business for some of the many lines of supplies that are indispensable to the Russian people.

AMERICAN GLASS IN WALES.

[Vice Consul Hamilton C. Claiborne, Swansea, Dec. 2.]

Owing to the curtailment of continental supplies of glass a brisk trade in American glassware has developed recently. Local merchants speak highly of the careful packing of American glass and also report that the quality of American plate glass is excellent, and, although the sheet glass in certain instances contains more defects than the Belgian, it is fairly satisfactory.

There is, however, considerable dissatisfaction over the methods of payment required by American dealers, and several Swansea merchants are of the opinion that the recently won trade in American plate and sheet glass will immediately revert to Belgium at the end of hostilities.

It appears that Belgian dealers allowed three months' credit or 14 per cent cash against receipt of documents, while it is stated that American exporters usually require whole or part payment at the time of order, which, in the instances under observation, amounted to settlement of the account a month or six weeks prior to the receipt of the merchandise.

British dealers are willing to furnish financial references, pay cash against the receipt of documents, and a small premium for long credits, but the present usage is contrary to the precedents of the trade established by continental dealers and will hardly prove adequate to retain present customers when normal conditions prevail.

SWEDISH COMMERCIAL PROGRESS IN RUSSIA.

[Consul General Ernest L. Harris, Stockholm, Nov. 30.]

There are many indications that Swedish business men are determined to utilize the present situation in order to get well established in Russia as soon as the war closes. With this object in view a Swedish newspaper is to be published in Petrograd, as well as an early establishment of a Swedish chamber of commerce. A short time after the outbreak of the war in 1914 an enterprising firm in this city started the publication of a Russian newspaper in Stockholm. It is reported that a committee of organization for the chamber of commerce in Petrograd has already been named.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its district offices.]

- Motor trucks, No. 19096.**—An American consular officer in Venezuela reports that a firm in his district is interested in motor trucks of from 1 to 2 tons capacity, and desires to receive catalogues, prices, and discounts. Correspondence may be in English.
- Buttons, No. 19097.**—A report from an American consular officer in China states that a firm desires to establish commercial relations with manufacturers of porcelain buttons. Only c. i. f. quotations will be accepted. Bank references are given.
- Machinery, No. 19098.**—A firm of commission agents in South America informs an American consular officer that it desires to correspond with manufacturers and exporters of aerated water machinery. Agencies for several countries are desired. Correspondence may be in English or Spanish, and quotations may be made f. o. b. New York.
- Corsets and corset covers, No. 19099.**—A merchant in Denmark desires to communicate with American manufacturers of corsets and corset covers. Correspondence may be in English.
- Sulphate of copper, zinc wire, iron bars, etc., No. 19700.**—An importing agency in Portugal informs an American consular officer that it desires to purchase sulphate of copper, zinc wire, iron bars for construction purposes; iron wire for nails, quebracho extract, liquid or solid; iron sheets, refined sugar, etc. Catalogues and price lists, together with full information, are desired.
- Paper bags, No. 19701.**—An American consular officer in Italy reports that samples of paper bags of various sizes and qualities are desired. Prices, c. i. f. port of destination, should be quoted, if possible.
- Printing ink, paper, stationery, etc., No. 19702.**—A representative of a firm in Brazil, which deals in metal types and printing machinery, desires to obtain an agency for manufactures of printing ink, printing paper, stationery, metal plates, and bronze powder for engraving, etc. Bank references are given.
- Photographic and optical goods, wrapping paper, tobacco, No. 19703.**—A firm of commission merchants in British Guiana desires to be placed in communication with manufacturers of photographic and optical goods, wrapping paper, and tobacco. Correspondence may be in English or Spanish, and prices quoted f. o. b. New York.
- Moving-picture films, No. 19704.**—A director of a moving-picture establishment in the Far East desires to purchase second-hand films of all kinds. Comic scenes are preferred. Correspondence in French is preferred, but not essential.
- Needles, No. 19705.**—A report from an American consular officer in China states that an importing commission house desires to establish commercial relations with manufacturers of needles in sizes 1 to 12, with 25 needles in each packet, which should be wrapped in tin foil with brown paper on the outside; 40 packets to a bundle, and 10 bundles packed in air-tight hermetically sealed tins with 25 tins to a tin-lined case. Only c. i. f. quotations will be accepted. Bank references are given.
- Machine tools, light railway locomotives, motorcycles, etc., No. 19706.**—A commercial agent of the bureau reports that a firm in the United States desires quotations on machine tools, light railway locomotives, motorcycles, gas and oil engines, hardware of all descriptions, electrical goods, electrical machinery, and steel and iron sections for a firm in Siam.

District Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative district offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Supplies, No. 2865.—Sealed proposals will be received at the office of the Quartermaster, United States Army, 308 Gumbel Building, Kansas City, Mo., until January 4, 1916, for furnishing and delivering prunes, evaporated peaches, lard substitute, oleomargarine, sirup, breakfast bacon, cheese, R. & G. coffee, sugar-cured ham, sales lard, listerine, taploca, and effervescent water.

Surgical instruments, No. 2866.—Sealed proposals will be received at the Medical Supply Depot, United States Army, Fort Mason, San Francisco, Cal., for furnishing and delivering at Warehouse "D," Transport Dock, Fort Mason, body hot-air apparatus, Betz No. 8NS70, equipped with gas heaters; electric light bath cabinet, with mirrors and foot warmer, Betz No. 9N2063; and pack table, with Tennessee marble top, Betz No. 6N693.

Signal Corps supplies, No. 2867.—Sealed proposals will be received at the office of the Chief Signal Officer, United States Army, Washington, D. C., until January 6, 1916, for furnishing telephones, condensers, connecting plugs, and complete ringers.

Subsistence supplies, No. 2868.—Sealed proposals will be received at the office of the Depot Quartermaster, United States Army, 115-123 East Ontario Street, Chicago, Ill., at the office of the Depot Quartermaster, United States Army, Kansas City, Mo., or at the office of the Depot Quartermaster, United States Army, Omaha, Nebr., until January 4, 1916, for furnishing and delivering breakfast bacon, sugar-cured ham, and sales lard.

Construction work, No. 2869.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until January 31, 1916, for the construction complete of the surgeon's and attendants' quarters and a morgue for the United States Marine Hospital, Key West, Fla. Drawings and specifications may be obtained from the custodian of the site at Key West or from the Supervising Architect, Washington.

Tin cans for sale, No. 2870.—Sealed proposals will be received at the office of the Lighthouse Inspector, Tompkinsville, N. Y., for the purchase of empty 5-gallon round tin cans in wooden boxes. Further information may be had on application to the above-named office.

Navy Department supplies, No. 2871.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., for supplying the following. Firms desiring to submit proposals should make application to the Bureau of Supplies and Accounts, giving schedule numbers desired: Schedule 9162, acetylene and oxygen tanks and equipment; schedule 9163, furnishing and erecting passenger and freight elevator; schedule 9164, flexible metallic hose, merchantable spruce, acid-proof stoneware, etc., glass acid traps and tubes, mineral wool, sheet copper, and cold-drawn machinery steel; schedule 9165, 12-inch powder conveyor hoists; schedule 9166, electrically operated ice-cream freezers; schedule 9167, portable ship lighting cable, and chestnut and oak railroad ties; schedule 9168, chemical sounding tubes; schedule 9169, pig lead, hot rolled or forged carbon steel, special carbon steel, and pure sperm oil; schedule 9170, rubber fire hose, plate-glass mirrors, wrought pipe, 32 and 36 inch mattress ticking, steel bolts and nuts, and rod copper; schedule 9171, paint drier, lampblack in oil, white lead in oil, raw and boiled linseed oil, aluminum mixing varnish; schedule 9172, steel boiler tubes, sheet brass, and castor oil; schedule 9173, pig iron; schedule 9174, candles, rubber wash deck hose, chrome green in oil, and aluminum paint; schedule 9175, portable platform scales, steel cup screws, and brass machine and wood screws; schedule 9176, engine-room clocks, and angle and gate valves; schedule 9177, accumulator pumps and accessories; schedule 9178, worm-gearage chain blocks; schedule 9179, furnishing and installing cold-storage insulation (cork); schedule 9180, 12-inch by 14-inch emery grinders, handworkers' lathes, 24-inch drill presses, 26-inch band saws, and 12-inch saw tables; and schedule 9181, electric food grinders.

INDEX

TO

COMMERCE REPORTS

FOR

NOS. 230 TO 306, VOLUME 4, EIGHTEENTH YEAR,
OCTOBER, NOVEMBER, AND DECEMBER, 1915.

The following table shows in what serial number of the **COMMERCE REPORTS** the page number appearing in the index is included:

Pages.	Serial No.	Pages.	Serial No.	Pages.	Serial No.	Pages.	Serial No.	Pages.	Serial No.
